LARC 2130. Sustainable Urban Site Design. (6 Hours)
Focuses on site planning and design with an emphasis on parks and open-space systems in the adaptive reuse of urban sites. Projects focus on the creation and cultivation of public space, transformation of site conditions, and development of sustainable site materials. Emphasizes site analysis, development of an individual design process, and design communication strategies. This studio course introduces students to urban design precedents, site research, and remediation methods through case studies, lectures, site visits, and workshops.

Prerequisite(s): LARC 1110 with a minimum grade of D-; LARC 1120 with a minimum grade of D-

LARC 2140. Designed Urban Ecologies. (6 Hours)
Continues LARC 2130. Focuses on sustainable community/campus/neighborhood design at the intersection of large-scale urban and environmental systems. Primary topics include mixed-use programming and open space systems ranging from zoning and transit to the material flows of human and wildlife habitats. This studio course introduces basic geographic information systems (GIS) and application of landscape ecology principles. Projects examine the role of landscape systems and the formation and reformulation of land development scenarios.

Prerequisite(s): LARC 2130 with a minimum grade of D-

Attribute(s): NUpath Natural/Designed World

LARC 2230. Introduction to Sustainable Site Planning and Design. (4 Hours)
Addresses fundamental techniques of sustainable site design in the built environment, including earthworks, water, and soils, using contemporary stormwater management techniques. Primary topics include topography, siting, regional and local climate conditions, and stormwater considerations in urban and other built environments. Introduces students to urban tree planting techniques, graphic communications, basic site materials, and construction details.

Attribute(s): NUpath Natural/Designed World

LARC 2240. Sustainable Site Construction and Detailing. (4 Hours)
Continues LARC 2230. Focuses on construction technologies, methods, and materials for sustainable site elements, including environmental performance infrastructures, circulation systems, and basic site structures. Introduces structural systems for site work via lecture and in-class exercises.

Attribute(s): NUpath Natural/Designed World

LARC 2330. Cities, Landscape, and Modern Culture. (4 Hours)
Seeks to instill basic landscape literacy enabling students to read urban landscapes and recognize different ways of knowing landscapes, including everyday landscapes. Presents key concepts, ethical debates, and iconic works that gave shape to modernism in landscape architecture and urbanism. Focusing on eighteenth-century through mid-twentieth-century projects and designers, examines contextual factors and resulting formal, spatial, organizational, and material characteristics of built works. Using case studies, challenges students to analyze the entangled histories of landscape preservation and urban segregation and to apply theories of environmental ethics and environmental justice to questions about the built environment and the relationship between natural and social systems. Offers students an opportunity to practice formulation of a critical design perspective and landscape interpretation via reading responses, project analysis, written work, podcasts, and StoryMaps.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions, NUpath Writing Intensive

LARC 2340. Cities, Landscape, and Contemporary Culture. (4 Hours)
Presents the core themes, social theories, ethical debates, and iconic works that shape the field of contemporary landscape architecture and urban design, particularly in the context of environmental change and climate disruption. Focuses on contemporary projects and designers to examine formal characteristics of built works and contextual factors, including social, political, and economic systems and institutions. Challenges students to apply theories of environmental ethics and environmental justice to questions about the built environment and the relationship between natural and social systems. Designed to prepare students to address complex sociocultural and environmental issues through thoughtful inquiry and creative expression. Offers students an opportunity to formulate critical design perspectives via reading responses, project analyses, written work, and podcasts.

Prerequisite(s): ENGL 1111 with a minimum grade of C or ENGL 1102 with a minimum grade of C or ENGW 1111 with a minimum grade of C or ENGW 1102 with a minimum grade of C

Attribute(s): NUpath Ethical Reasoning, NUpath Societies/Institutions, NUpath Writing Intensive

LARC 2430. Plants, People, and Landscape Change. (4 Hours)
Uses the study of New England's plant communities and plant identification as a framework to consider the evolution of the New England landscape from European colonization to the present. Combines field study with lectures and class discussion. Human activity, land use, and settlement patterns all influence the development of landscape, and our cultural history is expressed in the species demographics, land forms, and ecosystem dynamics of our environment.

Attribute(s): NUpath Natural/Designed World

LARC 2440. Planting Design. (4 Hours)
Combines horticultural and ecological field study with studio design exercises to deliver introductory to advanced planting design techniques. Primary topics include how to design phytoremediation strategies for contaminated sites, seasonal planting considerations, strategic phasing, and maintenance techniques. This is a workshop-based course.

Attribute(s): NUpath Natural/Designed World
LARC 2990. Elective. (1-4 Hours)
Offers elective credit for courses taken at consortium institutions. May be repeated without limit.

LARC 3170. Landscape Planning and Urbanism Studio. (6 Hours)
Introduces sustainable landscape planning techniques with an emphasis on adaptive urbanism. Key topics include the designed and managed relationship of cities to their regional ecologies, such as sub/urbanized watersheds and coastal zones, as well as the spatial, material, and programmatic roles of environmental infrastructures in the civic landscape. Particularly emphasizes the market-based integration of recreation, transit, food, housing, and industrial networks with living systems such as urban forests, riparian corridors, managed habitats, and constructed wetlands.

Prerequisite(s): LARC 2140 with a minimum grade of D- or ARCH 2140 with a minimum grade of D-
LARC 3990. Elective. (1-4 Hours)
Offers elective credit for courses taken at consortium institutions. May be repeated without limit.

LARC 5110. Advanced Design for Urban Environments Studio. (6 Hours)
Focusses on ecological, economic, and social resiliency of designed urban environments in response to globalization. Contemporary case studies of urban change provide the basis for design investigation into issues such as the impact of shifting industries on Detroit (deurbanization) or Shenzhen (rapid densification); shifting weather and water patterns in densely populated regions; societal shifts, from generational demographics to political upheavals and militarization/demilitarization of the urban landscape. Emphasizes the integration of interdisciplinary perspectives and advanced design analysis, conceptualization, and visualization skills into development of a global perspective on managing change in the built environment.

Prerequisite(s): ARCH 3170 with a minimum grade of D- or LARC 3170 with a minimum grade of D-
LARC 5120. Comprehensive Design Studio. (6 Hours)
Offers students an opportunity to design and develop a site or district including all of its requisite systems. Students draw on their landscape architectural education to produce a design both responsive to specific criteria and prototypical of ways to build sustainable and adaptable public landscapes—often described as “resilience.” Projects are expected to respond to and integrate their contexts (urban, environmental, climatic, and economic); meet spatial, performative, and programmatic requirements and technical demands (materials, implementation and management strategies); and dynamic processes at play within and around the project site.

Prerequisite(s): ARCH 3170 with a minimum grade of D- or LARC 3170 with a minimum grade of D-

LARC 5220. Sustainable Landscape Practices. (4 Hours)
Offers a lecture/workshop/field-based course that builds upon landscape technology skills introduced in LARC 2230 and LARC 2240, with a focus on ecotechnologies operating in the built environment. Core topics include design and implementation metrics, material life-cycle management, funding models, and aesthetic and cultural aspects. Potential topics include green roofs, green walls, bioswales, pervious pavements, constructed wetlands, “complete street” elements, geosensor networks, alternative waste management, water detention and energy generation methods, and living infrastructures for coastal environments.

Prerequisite(s): LARC 2240 with a minimum grade of D- or ARCH 2240 with a minimum grade of D-

LARC 5310. Urban Landscape Seminar. (4 Hours)
Offers a discussion-based seminar focusing on case studies of influential works in contemporary landscape, urbanism, and sustainable environmental design. Encourages students to seek interdisciplinary perspectives toward development of critical-thinking skills in relation to forces shaping urban environments in contemporary global culture. A diverse range of material from published design criticism to open-source social media engagement provides basis for discussion and written and oral presentations.

Attribute(s): NUpath Interpreting Culture
LARC 5420. Professional Practice in Landscape Architecture. (4 Hours)
Offers a lecture- and case-study-based course focusing on strategic planning, business models, organizational structures, logistics, and regulatory paradigms associated with professional practice in landscape architecture. Core topics provide an overview of common technical and business procedures, including RFQs; RFPs; marketing, public relations, and client management; hiring and human resource management; review board/regulatory boards; permitting; and licensure.
