Provides training for middle school teachers integrating an innovative robotics curriculum with concepts in engineering and technology. The engineering and technology concepts are derived from components of the Massachusetts Science and Technology/Engineering Curriculum Frameworks. Offers participants an opportunity to learn to identify a problem, design a robotic solution, and program and test their design during the course in preparation of delivering the concepts to students.
GSE 6503. Robotics: Engineering Technology in Practice. 4 Hours.
Offers students an opportunity to complete a practical implementation working with middle school students from the local school district who design and build robotic devices. The course provides an enrichment opportunity for children in a laboratory environment involving participating teachers who practice concepts and techniques learned in GSE 6502.

GSE 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

GSE 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GSE 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

GSE 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

GSE 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

GSE 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

GSE 6983. Topics. 1-4 Hours.
Covers special topics in graduate engineering. May be repeated without limit.

GSE 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

GREEK (GREK)

GREEK 1101. Elementary Modern Greek 1. 4 Hours.
Designed for students with very little or no prior knowledge of modern Greek, this course provides a lively introduction to basic oral expression, listening comprehension, and elementary reading and writing. Uses an instructional approach, with practical vocabulary drawn from realistic situations, and aims at good pronunciation and ease in response. Incorporates helpful information about daily life in Greece and the varied cultures within the world of Greek speakers. Uses extracurricular practice to complement class work, enable students to work aloud at their own speed, reinforce their acquisition of essential structures, and acquaint them with a vast library of audiovisual resources.

GREEK 1102. Elementary Modern Greek 2. 4 Hours.
Continues GREK 1101. Reviews and continues the study of grammar and basic language skills. Offers progressively more intensive practice in oral and written communication. Uses laboratory practice to complement class work, enable students to work aloud at their own speed, reinforce their acquisition of essential structures, and acquaint them with a vast library of audiovisual resources.

GREEK 1301. Elementary Greek Immersion 1. 4 Hours.
Designed for students who are in a Greek-speaking country, this is an off-campus immersion course. Offers students an opportunity to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

GREEK 1302. Elementary Greek Immersion 2. 4 Hours.
Designed for students who are in a Greek-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

GREEK 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GREEK 2101. Intermediate Greek 1. 4 Hours.
Emphasizes further vocabulary building. Offers students an opportunity to master the fine points of grammar through written composition, prepared oral reports, and reading and discussion from contemporary Greek materials.

GREEK 2102. Intermediate Greek 2. 4 Hours.
Builds on GREK 2101 and focuses on further development of vocabulary. Offers students an opportunity to continue to master the fine points of grammar through written composition, prepared oral reports, and reading and discussion from contemporary Greek materials.

GREEK 2301. Intermediate Greek Immersion 1. 4 Hours.
Designed for students who are in a Greek-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

GREEK 2302. Intermediate Greek Immersion 2. 4 Hours.
Designed for students who are in a Greek-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

GREEK 2900. Specialized Instruction in Greek. 1-4 Hours.
Designed for individuals whose language skills are at the intermediate level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Students must have at least an elementary level of competence in the language. May be repeated without limit.

GREEK 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GREEK 3101. Advanced Greek 1. 4 Hours.
Continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

GREEK 3102. Advanced Greek 2. 4 Hours.
Builds on GREK 3101 and continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

GREEK 3301. Advanced Greek Immersion 1. 4 Hours.
Designed for students who are in a Greek-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence.
GREK 3302. Advanced Greek Immersion 2. 4 Hours.
Designed for students who are in a Greek-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence.

GREK 3800. Special Topics in Greek. 1-4 Hours.
Focuses on a unique aspect of the Greek language. The specific topics are chosen to reflect current developments in the language and expressive student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an intermediate level of skill in the language. May be repeated up to three times.

GREK 3900. Specialized Instruction in Greek. 1-4 Hours.
Designed for individuals whose language skills are at an advanced level and who seek specifically focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Requires at least an advanced level of competence in the language. May be repeated without limit.

GREK 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GREK 4800. Special Topics in Greek. 1-4 Hours.
Focuses on a unique aspect of the Greek language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an advanced level of skill in the language. May be repeated up to four times.

GREK 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

GREK 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

GREK 4992. Directed Study. 1-4 Hours.
Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

GREK 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to three times.

GREK 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

GREK 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

GREK 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HINF 0200. Health and Medicine for Nonclinicians. 3 Hours.
Examines the social organization of healthcare in the United States, including discussion of the settings in which healthcare is provided and the role of public and private organizations in funding and regulating healthcare. Provides an overview of how the biological aspects of the body integrate with the psychological and social aspects of the mind to influence both health behavior and healthcare delivery. Offers an opportunity to gain an understanding of how individuals, healthy and ill, access the healthcare system and move within the system to secure the appropriate level of care. Introduces basic healthcare terminology.

HINF 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HINF 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HINF 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HINF 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HINF 5101. Introduction to Health Informatics and Health Information Systems. 3 Hours.
Introduces the history and current status of information systems in healthcare: information architectures, administrative and clinical applications, information retrieval, decision support systems, security and confidentiality, bioinformatics, information systems cycles, the electronic health record, key health information systems and standards, and medical devices. Requires enrollment in Graduate Health Informatics Program.

HINF 5102. Data Management in Healthcare. 3 Hours.
Explores issues of data representation in healthcare systems, including patient and provider identification, audit trails, authentication, and reconciliation. Discusses underlying design of repositories for electronic health records (EHRs) and computerized provider order entry (CPOE) systems. Includes an overview of privacy issues, legislation, regulations, and accreditation standards unique to healthcare.

HINF 5105. The American Healthcare System. 3 Hours.
Covers the organization, financing, and outcomes of the U.S. healthcare system. Studies opportunities and challenges to improve the cost and quality of healthcare and expand adequate coverage to all. Non–health informatics students may be able to take the course with permission of the program director.

HINF 5110. Global Health Information Management. 3 Hours.
Studies the challenges of managing health information systems in the United States, Canada, India, China, the United Kingdom, Saudi Arabia, Singapore, Taiwan, Ghana, and Malawi. Differences in healthcare systems and national regulations make the process slightly different in each country. By exploring environments with varying degrees of regulation, students have an opportunity to think critically about the impact that a nation’s environment has on health information management. Discusses case studies to encourage students to think about health informatics from a managerial perspective across private companies, government, and nongovernment organizations.
HINF 5200. Theoretical Foundations in Personal Health Informatics. 4 Hours.
Offers an introduction to and foundation for personal health informatics by reviewing major theories and models of health behavior change and health education at individual, interpersonal, and community levels in a wide variety of settings and populations. Health behavior change is arguably our greatest hope for reducing the burden of preventable physical and mental disease and death around the world. A thorough understanding of health behavior change theories is thus essential to developing and translating personal health interface technologies into practice and policy that can result in more powerful interventions and more robust theories. Emphasizes cultural and health disparities, global applications, advances in health communications, and the use of electronic media (e-health) and mobile media (m-health). Open to students with senior standing with permission of instructor.

HINF 5300. Personal Health Interface Design and Development. 4 Hours.
Explores the design of innovative personal health human-computer interface technologies. Examples include assistive technologies that aid persons with disabilities, consumer wellness promotion applications, patient education and counseling systems, interfaces for reviewing personal health records, and elder care and social network systems that monitor health and support independent living. Offers students an opportunity to work in teams to build a prototype personal health interface system to solve a real problem. Topics include needs assessment and participatory research, iterative user interface design methods for health interface development, computational sensing of health states and behavior, software architectures for iteratively testing prototype personal health interface technologies, human-computer interaction issues related to personal health technology, and technology transfer requirements to support future validation studies of technology.

HINF 5301. Personal Health Technologies: Field Deployment and System Evaluation. 4 Hours.
Explores the deployment and evaluation of innovative personal health technologies. In this project-based course, students work in teams to deploy and evaluate a prototype personal health technology that has been previously developed by students in HINF 5300. Offers students an opportunity to develop a research plan to measure the effectiveness, usability, and/or feasibility of the technology; recruit study participants; deploy the technology; and analyze the data collected. Also offers students an opportunity to learn about each of these steps and work toward producing a publishable-quality research paper on the technology and results of the efficacy study, as well as to prepare a grant application that extends the technology and research methodology. Additional topics include technology transfer and implications on health policy.

HINF 5976. Directed Study. 3 Hours.
Offers students an opportunity to examine standard health informatics material in fresh ways or new health informatics material that is not covered in formal courses. May be repeated up to two times.

Reviews the concepts, issues, and practices of organizational behavior at the individual, group, and organizational levels. Offers an opportunity to learn how to gather information from users and understand the users’ point of view and problems. Examines processes and work flow in healthcare environments. Seeks to explain organizational structures and analyze business processes and how they are translated into specifications to build a RFP for vendors. Also examines fundamentals of organizational behavior and change management.

HINF 6202. Business of Healthcare Informatics. 3 Hours.
Focuses on the business practices relating to health information technology. Includes departmental design and management, capital and operating budgets, the budget planning process, and infrastructure design and strategic planning. Other topics include evaluation of vendors, vendor selection, clinical administration systems, and the design and management of integrated delivery networks.

HINF 6205. Creation and Application of Medical Knowledge. 3 Hours.
Explores the relationship between clinical data and knowledge and how both are developed and deployed in organizations to support improvements in patient care and research. Topics covered include what medical data is available and how it should be accessed, analyzed, and organized to support evidence-based medicine and research. Analyzes current and future approaches to clinical decision support and expert system development and how they can be deployed via new or existing knowledge-management infrastructures.

HINF 6210. Data Management in Healthcare. 3 Hours.
Explores issues of data representation and retrieval in healthcare systems, including patient and provider identification, clinical data, audit trails, authentication, and reconciliation. Discusses underlying design of repositories for electronic health records (EHR), computerized provider order entry (CPOE), and enterprise data warehousing and reporting systems and mechanisms for data sharing and transfer. Includes an overview of privacy issues, legislation, regulations, and accreditation standards unique to healthcare.

HINF 6215. Project Management. 3 Hours.
Introduces students to managing healthcare informatics projects, including the tools and techniques used to manage small, medium, and large software and systems projects. Topics include project planning, project management tools, estimating, budgeting, human resource management, and the like. All phases of a project are discussed, and students are required to develop a project plan for a health informatics project as part of the course.

HINF 6220. Database Design, Access, Modeling, and Security. 3 Hours.
Designed to provide an introduction to the theory and application of database management systems. Topics covered include the relational model, basic and intermediate query formulation using structured query language, database design using the entity relational model, and database normalization and optimization. In addition to these traditional topics, this course covers a sample of emerging topics relevant to the healthcare professional, including personal health information, privacy and security considerations, XML as a data model, and clinical data warehousing and mining.

HINF 6225. Health Systems Lab. 3 Hours.
Provides an in-depth, small-group, and class experience in the process of identification, evaluation, and selection of healthcare technology systems to improve the quality and efficiency of healthcare and generate maximal return on investment for organizations in healthcare. Requires enrollment in Graduate Health Informatics Program or permission of program director.

HINF 6230. Strategic Topics in Programming For Health Professionals. 3 Hours.
Designed to provide an introduction to the theory and application of object-oriented programming. Topics related to the process of programming include establishing an environment, naming conventions, and troubleshooting. Coverage of principles of programming include variables, operators, and flow control. Object-oriented principles of inheritance, encapsulation, and polymorphism are implemented using Java. Requires enrollment in Graduate Health Informatics Program or permission of program director.
HINF 6240. Improving the Patient Experience through Informatics. 3 Hours.
Explores the current and future dynamics influencing care for patients. The patient experience is a key differentiator in delivery of healthcare. Technology makes a difference for the patient in both the delivery of advanced care applications and innovation. Discusses and explores technology and workflow enhancements that could work to improve the patient experience from a cost, quality, and care perspective. Examines best practices and organizations and evaluates how they are using informatics to deliver a better patient experience. Analyzes change management and why change is difficult within healthcare and explores case studies on how to make change happen and the role that change plays in connection with technology. People, process, and technology all need to be present to offer an ideal experience.

HINF 6325. Legal and Social Issues in Health Informatics. 3 Hours.
Introduces the ethical, legal, and social issues arising in the use of computerized technology and information systems in the delivery of healthcare. Case studies are used to discuss the role of law in the design and implementation of health informatics systems; the U.S. healthcare regulatory environment; and the structure, concepts, and process of decision making on health matters in legislative, administrative, and judicial bodies. Requires prior completion of HINF 5101; full-time students can take HINF 6325 concurrently with HINF 5101 with permission of program director.

HINF 6330. Emerging Technologies in Healthcare. 3 Hours.
Examines trends and drivers of innovation in general and in healthcare and how emerging technologies are adapted and evaluated. Introduces students to how emerging technologies are being applied to improve electronic health records, computerized provider order entry systems, regional health information organizations, personal health records, telemedicine, new imaging systems, robotic surgery, pharmacogenomics, and national-level biosurveillance. Requires prior completion of HINF 5101.

HINF 6335. Management Issues in Healthcare Information Technology. 3 Hours.
Uses case studies to identify typical issues confronting chief information officers in healthcare organizations, including human resource management, strategic planning, project management, vendor contract negotiations, budgeting, service levels, etc. Requires prior completion of HINF 5101.

HINF 6340. Introduction to Genomics and Bioinformatics. 3 Hours.
Introduces the study of genes and their function and the principles, concepts, methods, and tools used to process data from biological experiments, focusing particularly on biological sequence data. Includes topics such as DNA and protein sequence alignment and analysis, sequence analysis software, and database searching. Requires prior completion of HINF 5101.

HINF 6345. Design for Usability in Healthcare. 3 Hours.
Focuses on the design of usable, user-centered information technology (IT), particularly healthcare IT applications. Covers interaction design principles and methods and the role, function, and appropriate use of various design approaches. Non–health informatics students may be able to take the course with permission of the program director.

HINF 6350. Public Health Surveillance and Informatics. 3 Hours.
Offers students an opportunity to learn how public health information is generated, collected, transferred, and shared. Discusses the principles and practice of public health surveillance as well as the application of health informatics standards and methods in the design of surveillance systems. Also reviews the core components of analysis and interpretation of population data. Non–health informatics students may be able to take the course with permission of the program director.

HINF 6355. Key Standards in Health Informatics Systems. 3 Hours.
Reviews the different healthcare informatics standards for storing and exchanging data in healthcare technology systems. Covers where and how they are used, where and why they are not used, and an overview of some of the types of products available to facilitate their use. Seeks to demystify the details behind the standards. Offers students an opportunity to work through examples in small groups in class and discuss issues involving the standards’ adoption and use. Non–health informatics students may be able to take the course with permission of the program director.

HINF 6400. Introduction to Health Data Analytics. 3 Hours.
Introduces the field of health data analytics. Topics include understanding stakeholder needs; the variety of types of health data; software tools; as well as case studies from pharma, public health, electronic health records, claims data, and home-monitoring data. Emphasizes the importance of understanding the complexity and potential biases in how health data (direct or indirect) is collected and represented. Presents all data-analytic discussions within a context of health data and stakeholder information needs. Offers students an opportunity to practice presenting the results of analyses.

HINF 6404. Patient Engagement Informatics and Analytics. 3 Hours.
Studies patient engagement and health informatics systems and analyses of data collected from these systems. Patient engagement is the ability and willingness of patients to manage their own health and care combined with interventions to increase patient involvement in their own health and care, as well as other positive health behaviors. In these interventions, health informatics systems and analyses of data are used. Offers students an opportunity to engage in data analytic exercises to investigate the underlying design and implementation of health informatics systems used in patient engagement initiatives. Presents an overview of the current state, new technologies, and other areas (health reform, legal, privacy, quantified self) influencing the future direction of patient engagement.

HINF 6405. Quantifying the Value of Informatics. 3 Hours.
Examines the various ways in which health informatics delivers value to organizations. Organizations invest in informatics because they believe that doing so will enable them to meet their objectives. The course offers students a series of tools to use to quantify value, which can help them to articulate and assess the value of potential investments in informatics. Examines case studies to offer students an opportunity to practice articulating the value of informatics in real settings.

HINF 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HINF 7370. Health Informatics Internship. 1 Hour.
Offers a form of experiential learning in which students do unpaid work off-campus in healthcare-related workplace settings. It is appropriate for students without professional experience in a healthcare-related organization who are not enrolling in co-op. Students are expected to work collaboratively with the instructor to identify an appropriate site placement. Faculty members provide guidance and mentoring and work collaboratively with on-site supervisors. Students should consult with the program director and determine a site placement prior to registering for this course.
systems as well as other agencies and external stakeholders. The complex human relationships that exist within HSOs and health maintaining a competitive position and how managers seek to manage roles played by quality, productivity, and technology in establishing and problems, make decisions, and conduct strategic planning. Studies the health systems environment. Emphasizes how health managers solve managerial tools and techniques for managing effectively in the HSO/health systems from management functions, concepts, and principles. Examines the management of health services organizations (HSOs) and HMG 1100. Foundations of Healthcare Management. 3 Hours. Examines the management of health services organizations (HSOs) and health systems from management functions, concepts, and principles to managerial roles, skills, and competencies within the context of HSOs and health systems and their external environment. Introduces managerial tools and techniques for managing effectively in the HSO/health systems environment. Emphasizes how health managers solve problems, make decisions, and conduct strategic planning. Studies the roles played by quality, productivity, and technology in establishing and maintaining a competitive position and how managers seek to manage the complex human relationships that exist within HSOs and health systems as well as other agencies and external stakeholders.

HMG 1990. Elective. 1-4 Hours. Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HMG 2100. Healthcare Operations. 3 Hours. Focuses on operations management planning and execution. Explores the challenges of restructuring and control common to hospitals and other health services organizations.

HMG 2110. Health Law and Regulation. 3 Hours. Examines the impact of health law and regulation on healthcare systems. Explores how to assess liability in the workplace, the impact of medical malpractice, risk management, and current ethical and legal dilemmas in the practice of medicine. Discusses how to manage the risk of the employer and patient through the use of medical records and specific behavior patterns, how to determine personal risk, and how to recognize potential litigious issues in the practice of medicine.

HMG 2990. Elective. 1-4 Hours. Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HMG 3210. Health Informatics. 3 Hours. Focuses on information systems in healthcare. Topics include information architectures, administrative and clinical applications, evidence-based medicine, information retrieval, decision support systems, security and confidentiality, the electronic health record, integration of key health information systems, and medical devices.

HMG 3220. Risk Management and Quality Assurance. 3 Hours. Explores aspects of quality management within the healthcare arena. Studies legislative mandates, healthcare agencies’ requirements, and methods of assessing and improving the quality of care. Emphasizes the procedures utilized to monitor physician and professional staff reappointment and credentialing. Discusses integration of the research process to conduct performance monitoring, quality improvement, and risk assessment. Emphasizes using statistical analysis to inform decision making.

HMG 3225. Public Health. 3 Hours. Introduces the history and principles of public health and their application to the development of activities that benefit the health status of populations. Explores the roles of epidemiological studies, biostatistics, healthcare planning and policy development, healthcare administration, and community organization in addressing public health needs.

HMG 3990. Elective. 1-4 Hours. Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HMG 4210. Healthcare Policy. 3 Hours. Examines the healthcare policy environment, including the economics and politics of healthcare policy. Explores institutional, local, regional, national, and international approaches to public health, health systems, and determination of research and development priorities. Discusses a variety of critical, contemporary policy issues such as health insurance, Medicare and Medicaid, the increase of medical expenditures, the malpractice crisis, the evolution of managed care, and a comparison of other nations’ healthcare systems.

HMG 4850. Healthcare Management Capstone. 3 Hours. Offers students an opportunity to integrate knowledge gained in the classroom with real-world problems. Consists of practical work and research in a major area of healthcare management. Students initiate and design capstone projects in consultation with faculty and working professionals.
HMG 4896. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major.

HMG 4950. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

HMG 4955. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

HMG 4983. Topics. 1-4 Hours.
Covers special topics in health management. May be repeated without limit.

HMG 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HMG 4991. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

HMG 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

HMG 4993. Independent Study. 1-4 Hours.
Offers students an opportunity to undertake special research.

HMG 4994. Internship. 3 Hours.
Offers students an opportunity to participate in an internship in a healthcare organization.

HMG 4995. Practicum. 1-4 Hours.
Offers students an opportunity to perform independent work within an administrative setting, working in conjunction with a preceptor. Projects include problem identification, data gathering, analysis of alternatives, and implementation of a plan of action.

HMG 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

HMG 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

HMG 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

HMG 6110. Organization, Administration, Financing, and History of Healthcare. 3 Hours.
Provides a historical context for the current healthcare system, the current economic drivers, the leading integrated delivery systems, political pressures, ethical issues, and the roles of insurance and pharmaceutical companies.

HMG 6120. Human Resource Management in Healthcare. 3 Hours.
Examines the complexities and multiple issues involved in human resources management in healthcare organizations. Offers healthcare managers an opportunity to obtain the knowledge and tools to manage people in all aspects of their work from recruiting, to the hiring interview, to compensation and benefits, to motivational strategies and performance appraisals, to promotions and terminations. Seeks to provide the healthcare manager with current thinking, theory, and best practices for the effective management of people in healthcare organizations.

HMG 6130. Healthcare Strategic Management. 3 Hours.
Focuses on analyzing, planning, negotiating, problem solving, and decision making for healthcare systems managers in a risk-based environment. Strategic management as practiced in healthcare functional units, clinics, and hospitals is rapidly changing in today’s technology-driven environment. Planning and management strategy at all levels are essential to the organization.

HMG 6140. Principles of Population-Based Management. 3 Hours.
Covers epidemiological analysis of health and health services with an emphasis on assessment of cost and benefits of population-based interventions. Special topics include community health assessments, the monitoring of community health indicators, and the evaluation of community health improvement activities. Includes strategies for the analysis of potential and actual health-risk factors and the discovery and implementation of appropriate risk-reduction strategies.

HMG 6150. Seminar in Health Services Research: Issues and Research. 2 Hours.
Acquaints students with the rich array of data available and potential support for research locally, nationally, and globally. Explores the problems that these resources can assist in addressing.

HMG 6160. Healthcare Information Systems Management. 3 Hours.
Offers students an opportunity to understand how to manage high-technology systems, tools, and products and to provide a conceptual framework for understanding how to use technology to reduce costs and improve productivity, efficiency, and effectiveness in their current and future work situations. Today’s health practitioner has to use technology to find medical information and use accounting systems, personal systems, health insurance company systems, inventory systems, patient billing systems, purchasing systems, as well as input and retrieve data. Focuses on the business of healthcare and how to understand, use, and manage technology and information systems that have become an integral part of the health delivery spectrum in a medical environment.

HMG 6170. Health Law, Politics, and Policy. 3 Hours.
Surveys the legal foundations of healthcare and applies current case law to contemporary situations. Topics include legal aspects of legislation, patient rights, data security, professional liability, labor relations, and the politics of healthcare reform. Issues include the high price of prescription drugs and why they are less expensive in Canada and overseas. Do rising medical costs produce better health? How should a Medicare prescription drug benefit be designed? Should kidneys and other organs be bought and sold? Includes case studies and group projects related to these questions and/or others as they emerge.

HMG 6191. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

HMG 6192. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HMG 6194. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

HMG 6196. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

HMG 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

HMG 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.
HMG 6983. Topics. 1-4 Hours.
Covers special topics in health management. May be repeated without limit.

HMG 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

HMG 7130. Statistics for Health Professions. 4 Hours.
Introduces probability and statistics for students in health sciences. Includes descriptive and inferential statistics; discussion of the origin of various data, for example, a “random sample” from some population. Understanding of probability is an essential part of this course, including the concept of the probability of an event; axioms of probability; concepts of random variables and their expectation; probability distributions; theoretical results of probability, such as the central limit theorem and its use to approximate deviations of the sample mean. Demonstrates how to use data to estimate parameters of interest and test a statistical hypothesis. Introduces regression, analysis of variance, and goodness of fit tests, which can be used to test whether a proposed model is consistent with data. Describes some nonparametric hypothesis tests.

HMG 7150. Healthcare Organizations and Systems. 4 Hours.
Presents an overview of the various types of U.S. healthcare organizations and the systems within these organizations. Examines governance, patient care systems, interorganizational networks, managerial process, and organizational cultures.

HMG 7961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

HMG 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.

HMG 7976. Directed Study. 1-4 Hours.
Offers students an opportunity to carry out an individual reading and research project under the supervision of a faculty member. The directed study format allows for the in-depth analysis of a particular topic not covered in-depth or the study of a subject not typically covered in the curriculum. A directed study proposal must be approved in advance by the faculty sponsor, division head, and dean of academic affairs.

HMG 7978. Independent Study. 1-4 Hours.
Offers independent study under the direction of members of the department on a chosen topic.

HMG 7983. Topics. 1-4 Hours.
Covers special topics in health management. May be repeated without limit.

HMG 7990. Thesis. 1-4 Hours.
Offers thesis supervision by members of the department.

HMG 7994. Thesis Continuation—PT. 0 Hours.
Offers continuing thesis supervision by members of the department.

HMG 7995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

HMG 7996. Thesis Continuation. 0 Hours.
Offers continuing thesis supervision by members of the department.

HSCI 1000. College: An Introduction. 1 Hour.
Provides an introduction to the University, college, and health professions to enhance students’ understanding of self and the decisions they make academically and socially as members of the University’s diverse, multicultural community. Group activities and individual assignments along with active participation in a learning community help students adjust to life on an urban campus, develop a better understanding of the learning process, acquire essential academic skills, and make connections with the faculty and students in the college.

HSCI 1105. Nutrition. 4 Hours.
Explores the fundamental role of nutrition in promoting health and introduces the use of two different diet assessment tools to assist individuals in selecting food for health promotion. Explores the nutrient composition and purposes of the food pyramid guide. Covers the physiological functions of energy-providing nutrients in the body and interrelationships.

HSCI 1106. Contemporary Issues in Nutrition. 4 Hours.
Explores the fundamental role of nutrition in promoting health. Offers an overview of nutrient functions, compositions, and digestion/absorption. Relates concepts covered in class to current topics of interest in nutrition. Offers students an opportunity to discuss their dietary behaviors in relation to the Dietary Guidelines for Americans.

HSCI 1107. Nutrition Service Learning. 4 Hours.
Offers an introductory human nutrition course exploring the fundamental role of nutrition in promoting health. Discusses the essential nutrient functions, composition, and digestion/absorption. Utilizes principles from the humanities and sciences in developing nutrition concepts. Explains food nutrition labeling and presents its role in assisting the public with food selection. Emphasizes the relevance of food choices throughout life and their impact on long-term health. Engages students in hands-on service roles. Offers students an opportunity to learn and apply course concepts while addressing the needs/interests identified by community partners. This activity involves planning and participating with after-school programs providing nutrition workshops.

HSCI 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSCI 2000. Professional Development for Bouvé Co-op. 1 Hour.
Introduces students to the Bouvé Cooperative Education Program and provides them with the opportunity to develop job-search and career-management skills. Offers students an opportunity to perform assessments of their workplace skills, interests, and values and discuss how they impact personal career decisions. Students also have an opportunity to prepare a professional-style résumé, learn proper interviewing techniques, and gain an understanding of the opportunities available to them for co-op. Introduces career paths, choices, and career decision making. Familiarizes students with workplace issues relative to their field of study and teaches them to use myNEUCOOL database in the job-search and referral process. Presents and discusses co-op policies, procedures, and expectations of the Bouvé Cooperative Education Program and co-op employers.

HSCI 2850. Special Topics. 4 Hours.
Offers students an opportunity to participate in a small seminar to explore selected topics within the vast subject of healthcare. May be repeated up to two times.

HSCI 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
HSCI 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSCI 4509. Healthcare Ethics Abroad. 4 Hours.
Provides students with the opportunity to explore complex ethical issues that arise in clinical practice in the health professions in the United States and study country. Directs particular attention at the concepts of do no harm, quality of life, and conflict resolution. Patients’ rights and the protection of their confidentiality, privacy, and personal prerogatives are central to the course. Analyzes established legal cases to assess the presence of ethical considerations. Explores the role of the health professional in fostering a patient’s autonomy and implementing his or her own domain of professional responsibility in the United States and the study country.

HSCI 4510. Healthcare Ethics. 4 Hours.
Provides students with the opportunity to explore complex ethical issues that arise in clinical practice in the health professions. Particular attention is directed at the concepts of “do no harm,” quality of life, and conflict resolution. Patients’ rights and the protection of their confidentiality, privacy, and personal prerogatives are central to the course. Established legal cases are explored to assess the presence of ethical considerations. The role of the health professional in fostering a patient’s autonomy and implementing his/her own domain of professional responsibility is explored.

HSCI 4700. Health Science Capstone Introduction. 0 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a project that results in a written report and presentation regarding an issue within the field of health or healthcare, a culminating experience in the health science program. May include working with a mentor in a field experience in public health education or health policy, public affairs, social service, or other healthcare environment in which the student is qualified, ending with a presentation to the seminar class. Presenting to the agency or group students are working with on their projects may be required.

HSCI 4710. Health Science Capstone. 4 Hours.
Provides students with the opportunity to integrate their course work, knowledge, and experiences into a project that results in a written report and presentation regarding an issue within the field of health or healthcare. The project is either research based or service based and is a culminating experience in the health science program. Upon completion and approval of the proposal, the student works with a mentor or mentors to implement their project in HSCI 4720 or HSCI 4730.

HSCI 4720. Health Science Capstone—Service. 4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a project that results in a written report and presentation regarding an issue within the field of health or healthcare. The project is a culminating experience in the health science program. Includes working with a mentor in a field experience in public health education or health policy, public affairs, social service, or other healthcare environment in which the student is qualified. Requires students to present their projects to the seminar class and possibly to the agency or group with which they are working.

HSCI 4730. Health Science Capstone—Research. 4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a project that results in a written report and presentation regarding an issue within the field of health or healthcare. The project is a culminating experience in the health science program. Students may choose to participate in an ongoing research project or create and implement their own research project as their capstone project. Requires students to present their projects to the seminar class and possibly to present a poster at a professional/research expo.

HSCI 4950. Seminar. 4 Hours.
Offers students an opportunity for an in-depth study of selected topics within healthcare.

HSCI 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

HSCI 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

HSCI 4983. Topics. 4 Hours.
Offers students an opportunity to study contemporary issues in healthcare and to expand their breadth of knowledge and engage diverse perspectives.

HSCI 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSCI 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

HSCI 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HSCI 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HSCI 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

HSCI 4995. Practicum. 1-4 Hours.
Offers eligible students an opportunity for practical experience. May be repeated without limit.

HSCI 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using the course to fulfill their experiential education requirement. May be repeated without limit.

HSCI 5230. Clinical Nutrition Applications in Health and Disease. 3,4 Hours.
Prepares health professionals to effectively communicate principles of diet and nutrition to their clients and the public. Covers public health promotion strategies, techniques used to teach diet and nutrition, and behavioral theories used in diet and nutrition intervention. Emphasizes clinical applications for the treatment of weight disorders, diabetes, cardiovascular disease, eating disorders, and nutrition in the life cycle.
HSCI 5300. Patient-Centered Health Informatics. 3 Hours.
Introduces students to the ways in which personal health technologies (interactive computing applications used directly by nonprofessionals —social networking applications, mobile apps, and online communities)—can support health promotion. This technology is transforming health promotion and management, and increased access presents opportunities as well as challenges. Covers three broad topics: the current state of disruptive technology in healthcare, empirical methods for establishing requirements for the design of new technologies, and designing innovative personal health technologies. Offers students an opportunity to learn the ways in which technology is transforming self-care and self-management and the skills to identify opportunities for future technological innovation.

HSCI 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSC 0210. Basic Nutrition. 2 Hours.
Introduces nutrition science, foods, and major nutrients. Focuses on current scientific knowledge of nutrition and a critical review of the literature and experimental data on which principles of human nutrition are based.

HSC 1200. Nutrition. 3 Hours.
Explores the fundamental role of nutrition in promoting health, wellness, and prevention of chronic disease. Topics include nutrients and nutritional needs across the life span; food safety and security; body weight regulation; and the genetic, social, and environmental influences on food choices and nutrition status.

HSC 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSC 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSC 3300. Epidemiology. 3 Hours.
Introduces the principles, concepts, and methods of population-based epidemiology—the study of patterns and determinants of disease in different populations. Topics include the dynamic behavior of disease; measures of disease frequency and effect; uses of rates, proportions, and other statistics to describe the health of populations; epidemiologic study designs; and bias in investigating the extent of disease problems and the associations between risk factors and disease outcomes.

HSC 3310. Pathophysiology. 3 Hours.
Examines human physiology related to oxygenation, nutrition, elimination, protective mechanisms, neurological functions, endocrine functions, and skin integrity. Topics include neurophysiology; immunology; cardiovascular, respiratory, renal, and gastrointestinal physiology; and endocrinology. Explores how the human body uses its adaptive powers to maintain equilibrium and how alterations affect normal processes.

HSC 3320. Pharmacology. 3 Hours.
Offers the fundamentals of pharmacology to students entering the health professions. Topics include the general principles of drug action, drug distribution, and drug elimination. Focuses on principles of pharmacology and the major drug classifications in relation to the treatment of health problems. Emphasizes dose response, side effects/drug interactions, route of administration, and place in clinical therapy. Drugs are presented according to therapeutic or functional classification.

Health Science - CPS (HSC)

HSC 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSC 4850. Project in Health Science. 3 Hours.
Offers students an opportunity to integrate knowledge gained in the classroom with real-world problems. Students initiate and design a capstone project in health science in consultation with faculty and working professionals.

HSC 4896. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major.

HSC 4950. Seminar. 1-4 Hours.
Offers students the opportunity to select a topic from any area of their health science studies. Students read current research and prepare an oral presentation and paper, including analysis of both the science perspective and the health perspective. The oral presentation requires students to apply knowledge gained in prior course work, to understand and integrate classroom learning in their research, and to communicate their findings effectively to their peers and instructors. The final paper can be written as a review of current research progress, identifying current challenges and projections about future research directions, or as a well-defined and researched grant proposal. Group seminars focus on how to read and interpret a health/scientific paper, how to research an emerging topic, and how to write a professional paper of publication quality.

HSC 4955. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

HSC 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSC 4991. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

HSC 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

HSC 4993. Independent Study. 1-4 Hours.
Offers students an opportunity to design and complete a research project in the health sciences.

HSC 4994. Internship. 1-4 Hours.
Provides students with an opportunity for internship work.

HSC 4995. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.
Health Science - Interdisciplinary (HLTH)

HLTH 1010. From the Community to the Intensive Care Unit: Approaching Interdisciplinary Research in the Elderly. 1 Hour.
Exposes students to the current interdisciplinary research activities of Bouvé faculty from several professions (e.g., pharmacy, nursing, physical therapy, and counseling psychology) focused on improving the health of the elderly. The dramatic increase in the proportion of Americans who are elderly provides healthcare professionals with a golden opportunity to improve the health outcome of this population through interdisciplinary research efforts. Uses a seminar-discussion format designed to help increase the awareness among students of the importance of clinical research in the elderly and the unique role that different healthcare professionals can play in leading interdisciplinary research teams across a spectrum of different clinical settings.

HLTH 1200. Basic Skills for the Healthcare Professional. 2 Hours.
Introduces health science students to the basic skills necessary to be successful in entry-level healthcare positions. These skills include: Basic Life Support, safe patient handling, vital signs, oxygen transport and safety, and EKG prep and placement. Also covers basic medical terminology, appropriate professional behaviors, and communication skills.

HLTH 1201. Lab for HLTH 1200. 1 Hour.
Accompanies HLTH 1200. Provides students with hands-on opportunities to learn skills in Basic Life Support, safe patient handling, determining vital signs, oxygen transport and safety, EKG prep and placement, and related clinical skills.

HLTH 1510. Introduction to Healthcare Ethics. 4 Hours.
Explores ethical issues in contemporary healthcare. Introduces theories and applies frameworks for analyzing and deciding ethical dilemmas. Considers biomedical, clinical, social, and legal issues related to ethical issues and integrates such considerations into ethical decision making. Offers students an opportunity to explore ethical issues and experiences of individual interest to assist in clarifying professional values and ethics.

HLTH 1555. Special Topics in Healthcare. 4 Hours.
Offers an introductory-level study of contemporary issues in healthcare. Draws upon a variety of perspectives. Offers students an opportunity to expand their breadth of knowledge and to facilitate their understanding of various themes grounded in a particular area of healthcare. May be repeated once.

HLTH 2000. Foundations of Coordinated Patient Care. 2 Hours.
Introduces the opportunities and challenges of interprofessional collaborative practice in healthcare. Sessions focus on the dynamics of interprofessional teams and teamwork, values and ethics, communication, and roles and responsibilities in influencing patient care. Interprofessional collaborative practice is an important mechanism for improving patient outcomes.

HLTH 2200. Emergency Medical Technician Training. 6 Hours.
Offers students an opportunity to learn basic healthcare clinical skills and seeks to prepare students to function as emergency medical technicians (EMTs) at the basic life support level. EMTs are an essential component of prehospital emergency medical service (EMS) systems. This course seeks to establish a solid foundation in EMS, broadly including patient assessments, medical emergencies, trauma emergencies, relevant pharmacology, special populations, and EMS operations.

HLTH 2240. Human Development. 2 Hours.
Studies typical development and maturation from intrauterine life through old age (senescence). Considers the interaction of body system development and growth on acquisition of and changes in typical skill development. Students are encouraged to apply developmental concepts to case studies and hypothetical clinical situations. Particular attention is paid to infant, childhood, and early adult development as a foundation to the changes that occur later in adulthood and senescence. Addresses physical assessment of the infant and child. Students who do not meet course prerequisites may seek permission of instructor; physical therapy students should have completed PSYC 3404.

HLTH 2302. Alternative Medicine. 4 Hours.
Presents an objective assessment and discussion of alternative and complementary medical approaches used in the United States and their significant historical, cultural, and cross-cultural implications. The majority of alternative and complementary medical strategies were developed in a specific historical and cultural context. Some of the therapies have had an impact on human health for thousands of years. Others have become popular only recently. Many methods discussed are fused with different cultural practices, such as the concept of “vitalism,” a force that modern science does not recognize but is an important attribute in certain cultural practices. Some methods have long and successful histories based upon sophisticated ancient medical theories, such as “Chi,” found in Chinese medicine.

HLTH 2555. Special Topics in Healthcare. 4 Hours.
Offers an intermediate-level study of contemporary issues in healthcare. Draws upon a variety of perspectives. Offers students an opportunity to expand their breadth of knowledge and to facilitate their understanding of various themes grounded in a particular area of healthcare. May be repeated once.

HLTH 4525. Community Service Learning. 3 Hours.
Addresses topics of public policy, advocacy, and cultural diversity within the context of physical therapy and the populations it serves. Combines class discussion regarding these topics with service to community partners and local underserved populations, such as the urban poor, elderly, children, and minorities. Students perform one to two hours of approved volunteer community service per week. May be taken in place of PT 5227.

HLTH 4526. Community Service Learning 2. 3 Hours.
Students not continuing from HLTH 4525 have the option to join an existing project or begin a project at a new site, selected with the assistance of an instructor. Students continue with the service learning projects developed in HLTH 4525, adding health-promotion material and critically applying information from the previous course to develop a decision memo addressing a public or social issue relevant to their project site. Students perform one to two hours of approved volunteer community service per week.

HLTH 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HLTH 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HLTH 5000. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

HLTH 5001. Recitation for HLTH 5000. 0 Hours.
Provides small-group discussion format to cover material in HLTH 5000.
HLTH 5002. Mindfulness: Theory and Practice. 3 Hours.
Studies key aspects of theory and practical principles of mindfulness practice. Mindfulness is a particular way of paying attention to experiences that has been scientifically researched and found to decrease habitual and destructive cycles of thought and emotion. This course is highly experiential and daily homework practice consists of at least 20 minutes of mindfulness practice. Instructions for the various practices are provided throughout the course. Each class typically includes a didactic portion, a mindfulness practice, and a group discussion. The benefits of mindfulness practice include reduced stress, improved attention, reduced emotional reactivity, and greater mind-body awareness. Offers students an opportunity to develop practical skills of relational mindfulness in interactions with others and to cultivate positive emotions.

HLTH 5005. Introduction to Health and Aging. 3 Hours.
Offers students an opportunity to obtain core knowledge of health and aging from an interprofessional perspective. Using current literature and research, this course integrates the sociological, legal, psychological, physical, cognitive-communicative, and sensory (e.g., auditory) aspects of aging in multicultural, political, and economic ecological contexts.

HLTH 5010. Health and Aging: Special Considerations. 3 Hours.
Uses the World Health Organization’s International Classification of Functioning, Disability, and Health to continue with the themes introduced in HLTH 5005. Focuses in greater depth on health and aging from typical and atypical perspectives. Using current literature and research, this course integrates the sociological, legal, psychological, physical, cognitive-communicative, and sensory aspects of aging in multicultural, political, and economic ecological contexts.

HLTH 5015. Health Assessment in Older Adults. 3 Hours.
Offers an overview of health assessment in older adults by encompassing physical, psychosocial, cognitive-communicative, sensory, and emotional health domains. It is important to consider each of these domains and how they contribute to the individual’s overall functioning and quality of life. Geriatric health assessment assists in identifying health-related problems, coordinating care, determining need for long-term care, developing treatment plans, and evaluating optimal use of healthcare resources.

HLTH 5020. Seminar and Capstone Project: Contemporary Issues in Aging. 3 Hours.
Offers students an opportunity to integrate the material from HLTH 5005, HLTH 5010, and HLTH 5015 into their areas of particular interest and discipline specialty—to integrate the mental, spiritual, physical, cognitive-communicative, multicultural context, and sensory (e.g., auditory) aspects of aging into current theory, research, and application.

HLTH 5101. Professional Development for Bouvé Graduate Co-op. 1 Hour.
Introduces graduate students to the Bouvé Cooperative Education Program and provides them with the opportunity to develop job-search and career-management skills. Offers students an opportunity to perform assessments of their workplace skills, interests, and values and to discuss how they impact personal career decisions. Students also have an opportunity to prepare a professional-style resume, learn proper interviewing techniques, and gain an understanding of the opportunities available to them for co-op. Introduces career paths, choices, and career decision making. Seeks to familiarize students with workplace issues relative to their field of study and to teach them to use myNEU COOL database in the job-search and referral process. Presents and discusses co-op policies, procedures, and expectations of the Bouvé Cooperative Education Program and co-op employers.

HLTH 5105. Introduction to Early Intervention. 3,4 Hours.
Introduces students to the field of early intervention. Covers the principles of early intervention, including the interdisciplinary nature of the services to infants and toddlers with disabilities and their families and the team formats in which services are provided. Students are also introduced to the Massachusetts EI (early intervention) standards, eligibility criteria, and the legislation that underlies EI services. Uses a case-based approach, with role-play, to explore some aspects of the developmental approach to assessment and intervention. Taught by a number of faculty from different disciplines on the early intervention team and open to all students in the Bouvé College of Health Sciences.

HLTH 5135. Developing an Interdisciplinary Approach to Health Management for Older Adults. 4 Hours.
Focuses on health management for older adults, a major issue in contemporary society. Policy, economics, organizational structure, and clinical care are intermingled in responding on societal, institutional, and clinical levels. Challenges the inquisitive and creative student to approach the health of the older adult by addressing these complex issues. Focuses on effective outcomes and understanding the range of roles professionals may adopt. Provides the knowledge base and skill set necessary for interdisciplinary professional practice. Contact the course coordinator at least one month prior to the start of the course for admission.

HLTH 5160. Psychosocial Considerations for Healthcare Professionals. 3 Hours.
Examines interpersonal relationships among patients, families, health professionals, and society, with reference to the impact of and reaction to illness and disability. Students explore the role and impact of self-awareness on the dynamics of healthcare interactions. Methodologies are utilized to demonstrate the roles of the various health professions and importance of interdisciplinary collaboration to maximize patient/client outcomes in this interdisciplinary course.

HLTH 5174. Psychosocial Management. 2 Hours.
Examines the diverse and cultural variations on patients’/clients’ responses to disability and illness. Offers students the opportunity to reflect on the provider’s behavior in relation to clients’ behaviors.

HLTH 5280. The (in)Visibility of (dis)Ability in Society. 3,4 Hours.
Addresses the issues of disability relative to culture, public policy, rights, and advocacy. Focuses class discussion on the experiences of people with disabilities living in our current society as well as from a historical perspective. Explores the following topics: who is disabled, social attitudes toward people with disabilities, and images and stigma in the media. Also covers the language of disability, disability culture, and the forgotten minority. Affords students an opportunity to gain a broad understanding of the complex and dynamic issues and themes concerning people with disabilities.

HLTH 5450. Healthcare Research. 4 Hours.
Provides an overview of the research process and its application in clinical arenas. Emphasizes the role of the health professional as a consumer of research, with concern for the ethical management and treatment of patients and their families. Elements of research design and their implications in clinical settings provide the framework for the analysis of research and the development of a research proposal. Also emphasizes the use of research findings for evidence-based practice. Encourages interdisciplinary projects.

HLTH 5451. Recitation for HLTH 5450. 0 Hours.
Provides small-group discussion format to cover material in HLTH 5450.
HLTH 5555. Special Topics in Healthcare. 1-4 Hours.
Offers an advanced-level study of contemporary issues in healthcare. Draws upon a variety of perspectives. Offers students an opportunity to expand their breadth of knowledge and to facilitate their understanding of various themes grounded in a particular area of healthcare. May be repeated up to five times for up to 6 total credits.

HLTH 5984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

HLTH 6243. Aging and Illness. 3 Hours.
Focuses on the distinction between normal aging and disease. Covers age-related physiological/pathophysiological changes at the level of the individual, organ system, organ, tissue, and cell. Includes a consideration of the lexicon of aging, major biological theories of aging, as well as alteration of physiological parameters in aging. Emphasis is on disease states commonly encountered in older adults. Also includes psychosocial theories of aging, discussion of “successful aging,” and the physical and psychosocial risks of hospitalization for the elderly. Presents characteristics of the ill older adult including acute confusion. Considers health promotion and levels of disease prevention in the geriatric client. Uses a case-based approach to develop critical-thinking skills related to the pragmatics of care for the elderly who are ill.

HLTH 6335. Health Law. 2 Hours.
This course examines the legal regulation of the provision of healthcare services. Much of the focus is on the relationship between law and healthcare policy. Topics include access to health insurance and healthcare, healthcare financing, malpractice liability, the organization and responsibility of healthcare institutions, especially hospitals, the regulation of the quality of care and the formulation of health policy. This course is highly recommended for all students enrolled in the JD/MPH dual degree program, but is open to others as well.

HLTH 6411. Biotechnology Internship Reflection Seminar. 1 Hour.
Designed to complement learning during or after graduate co-op placement. Students participate in activities to integrate academic learning and experiential learning, including written reflections and weekly reports that do not have to include company confidential information.

HLTH 6512. Problems in Public Health Law. 2 Hours.
This course will explore the rationales for using law to protect and preserve the public’s health, the legal tools that may be used to achieve that end, and the conflicts and problems that may result from legal interventions. Topics discussed will include the use of law to reduce the spread of HIV and other infectious diseases, control of tobacco and other hazardous products, bioterrorism, and the threats TO CIVIL LIBERTIES AND MINORITY GROUPS engendered by all such legal efforts. This course is highly recommended for all students enrolled in the J.D./M.P.H. dual degree program, but is open to other students as well.

HLTH 6600. Current Issues in Health Law and Policy. 2 Hours.
This seminar will examine recent debates in health law and policy through discussion of current events, proposed legislation, and scholarly articles in the legal, medical, and public policy literatures. Weekly topics will depend in part on student interest, but will likely include federal healthcare reform, malpractice liability reform, obesity, health disparities, regulation of pharmaceutical promotion, and other issues related to healthcare access, quality, and financing. Requirements include weekly readings, weekly attendance and participation, a brief presentation of one health law-related current event, a research paper of at least 20 pages on any approved health law-related topic, and an oral presentation of the research paper. Previous health-related coursework or work experience is recommended but not required.

HLTH 6606. Drug Law and Policy. 2 Hours.
The field of Drug Law is vast, spanning the discovery, manufacture, distribution, and consumption of chemical agents designed to alter the human condition. This course focuses on three domains of the broader subject: the evolution and current state of the Federal Food, Drug, and Cosmetic Act; the architecture of the drug regulation system in the U.S., including the distinct space occupied by the Food and Drug Administration, the Department of Agriculture, and the Drug Enforcement Agency; and the role of regulation and tort litigation in harmonizing drug policy with science. Designed around legal and policy case studies, this course is intended for students expecting to become involved in clinical practice involving pharmaceuticals as well those generally interested in the interplay of law and public health.

HLTH 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HLTH 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

Hebrew (HBRW)

HBRW 1101. Elementary Hebrew 1. 4 Hours.
Designed for students with little or no prior knowledge of Hebrew. Presents a lively introduction to basic oral expression, listening comprehension, and elementary reading and writing. Uses practical vocabulary drawn from realistic situations, and aims at good pronunciation and ease in response.

HBRW 1102. Elementary Hebrew 2. 4 Hours.
Continues HBRW 1101. Includes continued focus on oral expression, listening comprehension, and elementary reading and writing. Expands functional and practical vocabulary base drawn from realistic situations and focuses on grammatical accuracy. Continues to focus on good pronunciation and ease of response.

HBRW 1301. Elementary Hebrew Immersion 1. 4 Hours.
Designed for students who are in a Hebrew-speaking country, this is an off-campus immersion course. Focuses on standard Hebrew. Offers students an opportunity to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

HBRW 1302. Elementary Hebrew Immersion 2. 4 Hours.
Designed for students who are in a Hebrew-speaking country, this is an off-campus immersion course. Focuses on standard Hebrew. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

HBRW 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HBRW 2101. Intermediate Hebrew 1. 4 Hours.
Emphasizes further vocabulary building. Offers students an opportunity to master the fine points of grammar through written composition, prepared oral reports, and reading and discussion from contemporary Hebrew materials.

HBRW 2102. Intermediate Hebrew 2. 4 Hours.
Builds on HBRW 2101 and focuses on further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through written composition, prepared oral reports, and reading and discussion from contemporary Hebrew materials.
HBRW 2301. Intermediate Hebrew Immersion 1. 4 Hours.
Designed for students who are in a Hebrew-speaking country, this is an off-campus immersion course. Focuses on standard Hebrew. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

HBRW 2302. Intermediate Hebrew Immersion 2. 4 Hours.
Designed for students who are in a Hebrew-speaking country, this is an off-campus immersion course. Focuses on standard Hebrew. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

HBRW 2900. Specialized Instruction in Hebrew. 1-4 Hours.
Designed for individuals whose language skills are at the intermediate level and who seek specially focused language instruction. Such instruction might be focused on specific conversational nuances of the language. Requires at least an intermediate level of skill in the language. May be repeated without limit.

HBRW 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HBRW 3101. Advanced Hebrew 1. 4 Hours.
Continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

HBRW 3102. Advanced Hebrew 2. 4 Hours.
Builds on HBRW 3101 and continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

HBRW 3301. Advanced Hebrew Immersion 1. 4 Hours.
Designed for students who are in a Hebrew-speaking country. Offers students an opportunity to continue to develop grammatical and conversational competence.

HBRW 3302. Advanced Hebrew Immersion 2. 4 Hours.
Designed for students who are in a Hebrew-speaking country. This is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence.

HBRW 3800. Special Topics in Hebrew. 1-4 Hours.
Focuses on a unique aspect of the Hebrew language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an intermediate level of skill in the language. May be repeated up to three times.

HBRW 3900. Specialized Instruction in Hebrew. 1-4 Hours.
Designed for individuals whose language skills are at an advanced level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Requires at least an advanced level of competence in the language. May be repeated without limit.

HBRW 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HBRW 4800. Special Topics in Hebrew. 1-4 Hours.
Focuses on a unique aspect of the Hebrew language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an advanced level of skill in the language. May be repeated up to four times.

HBRW 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HBRW 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

HBRW 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to three times.

HBRW 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HBRW 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HBRW 5962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HIST 1000. History at Northeastern. 1 Hour.
Intended for first-year students in the College of Social Sciences and Humanities. Seeks to introduce first-year students to the liberal arts in general, to familiarize them with their history major, to provide grounding in the culture and values of the university community, and to help them develop interpersonal skills.

HIST 1110. Introduction to World History. 4 Hours.
Emphasizes large-scale patterns, long-term changes, and interconnections of world history. Provides a different way of looking at the past than national histories, one that is appropriate for the increasing globalization and multiculturalism of today's world. The course may begin as early as the first settled towns or written documents, the appearance of the first humanoid species, or even the beginning of the universe. Examines the great continuities and changes that have brought us to where we are today. Explores links between global processes and individual experiences through primary documents, autobiographies, and stories.
HIST 1120. Public History, Public Memory. 4 Hours.
Explores the politics surrounding the creation and consumption of history outside the classroom. Draws on contemporary debates over memorials, museum displays, television and film, and other popular sources of historical information to answer the questions: How does memory become history? How, where, and why do people encounter and interpret history outside of the classroom? Why are certain versions of the past so controversial? Through readings, discussion, field trips, and assignments, offers students an opportunity to gain a deeper understanding of public history's challenges and opportunities and to develop more informed opinions about its philosophical, ethical, and practical aspects.

HIST 1130. Introduction to the History of the United States. 4 Hours.
Engages with the major issues in U.S. history. Topics include the interaction of native populations with European settlers, the American Revolution and the Constitution, slavery, the Civil War, industrialization and migration, the growth of government and rise of the welfare state, media and mass culture, struggles for civil rights and liberation, and America's role in the world from independence to the Iraq wars.

HIST 1131. Recitation for HIST 1130. 0 Hours.
Provides small-group discussion format to cover material in HIST 1130.

HIST 1140. Introduction to African-American History. 4 Hours.
Surveys the development of African Americans in the United States from their African background to the present. Covers medieval and early modern societies in West and Central Africa; the transatlantic slave trade; the evolution of slavery from the colonial period through the Civil War; free blacks; Reconstruction; migration; civil rights; and black nationalism. Considers gender relations throughout the entire period and emphasizes how an historical perspective helps to inform discussions of contemporary issues.

HIST 1150. East Asian Studies. 4 Hours.
Seeks to provide an understanding of the constituent characteristics that originally linked East Asia as a region and the nature of the transformations that have occurred in the region over the last two thousand years. Concentrates on China and Japan, and addresses Korea and Vietnam where possible. Also seeks to provide students with effective interdisciplinary analytical skills as well as historical, ethical, cultural diversity, and aesthetic perspectives. ASNS 1150 and HIST 1150 are cross-listed.

HIST 1170. Europe: Empires, Revolutions, Wars, and Their Aftermath. 4 Hours.
Examines major themes in the history of Europe from 1500 to the present, emphasizing the conceptual tools historians use to think about European history, and drawing on historical documents, literature, and film. Examines the emergence of states and nations as theoretical constructs and political realities; men's and women's experience of social conflict-rebellions, revolutions, and wars-and the complex relationships between Europeans and non-Europeans. Attention is given to how race, class, and gender shaped the way people made and understood their history.

HIST 1171. Recitation for HIST 1170. 0 Hours.
Provides small-group discussion format to cover material in HIST 1170.

HIST 1180. African History. 4 Hours.
Explores the history of the African continent from 1000 C.E. to the present era. Topics include medieval kingdoms (Ghana, Mali, Songhai, Zimbabwe, the city-states of East Africa, and the Kongo kingdom); slave trades (Indian Ocean, trans-Saharan, and transatlantic); the partition of Africa and European colonization; and the decolonization process. Emphasizes the interactions of African peoples with the rest of the world, particularly the relations between Africa and Europe after 1500 C.E.

HIST 1185. Introduction to Middle Eastern History. 4 Hours.
Relies on historical and literary sources, as well as such other cultural artifacts as architecture and photography, and focuses on interaction and changing relations and perceptions between Europe and the Middle East. Surveys the major political and economic events that have linked the trajectory of both civilizations, as well as broad patterns of human activity, such as migrations, conversions, and, cultural exchange. Emphasizes the commonality of encounters, and analyzes the construction of an “other” and its enduring legacy in modern times.

HIST 1187. Introduction to Latin American History. 4 Hours.
Surveys major themes in Latin American history from the arrival of the first human inhabitants until the present through a diversity of primary and secondary sources. Examines the social, cultural, political, and economic transformations that shaped Latin America during this period. Emphasizes how concepts of race, class, gender, and sexuality informed these changes and the people's experiences of them. Topics include migration, colonialism and postcolonialism, war and revolution, slavery and abolition, nationalism and nation building, democracy and despotism, urbanization, modernization, religion, imperialism and underdevelopment, human rights, drug policy and international relations, labor, the arts, popular culture, and the environment.

HIST 1189. Introduction to South Asian History. 4 Hours.
Investigates the history of modern India and the debates surrounding the histories of the south Asian subcontinent. Examines topics such as the Mughal dynasties, the British Raj, the Indian nationalist movement, the influence of Mahatma Gandhi, independence, the partition of India into the new states of India and Pakistan, post–1947 India, and the effects of globalization and development initiatives in the Indian subcontinent. Engages themes that include colonialism, resistance, gender, social organization, religion, nationalism, development, and diaspora. Addresses popular conceptions of India as it has been represented in the West over time. Also draws upon Indian popular culture, literature, film, music, and media.

HIST 1190. Picturing Modernity: The Photographic Image in Culture and Society. 4 Hours.
Explores the role of the photographic image in culture and society from the early nineteenth century to the present day. Examines how the photographic image has altered cultural and perceptual patterns across the globe and investigates how cultural and social power have been influenced by photographs. Offers students an opportunity to read a cross-section of criticism, theory, and history and to study images and exhibitions to analyze how culture and history have been affected by and reflected in photographic images.

HIST 1200. Historical Research and Writing. 1 Hour.
Offered in conjunction with HIST 1201. Introduces incoming history freshmen to the history major in the context of other disciplines within the college and University. Offers students an opportunity to learn and to practice methods and conventions of research and historical writing.

HIST 1201. First-Year Seminar. 4 Hours.
Provides an introduction to historical methods, research, writing, and argument in which all students produce a substantial research project that passes through at least two revisions, and that is presented publicly to other members of the colloquium.
HIST 1206. Drug Trade and Drug War: History, Security, Culture. 4 Hours.
Analyzes the role of drugs in world history. From the early use of stimulants such as coca and sugar to the "war on drugs" and narcoterrorism, the course examines drugs as commodities in the world economy. Focuses primarily on opiates, stimulants, and hallucinogens from the nineteenth century to the present, considering how changing social and cultural mores led different drugs to be coded as licit and illicit. Topics include traditional uses, early medical use, trade networks, prohibition, black market, and drug cultures, as well as the role of drugs in the histories of industrialization, imperialism, and cold war geopolitics. Sources include historical scholarship, declassified intelligence reports, documentaries, novels, movies, songs, and art.

HIST 1212. History of Race. 4 Hours.
Explores the creation, modification, and clash of racial identities in the modern world. Shows the worldwide patterns of racial discrimination and reform in the past three centuries, and how they are changing today. Discusses development of racial categories and ideas and practices in racial mixing. Explores racial desegregation and persecution, and campaigns against racial discrimination. Includes background on human evolution and debates on the origins and meaning of physical differences among humans.

HIST 1213. History of Violence. 4 Hours.
Traces the global history of violence since the late Middle Ages. Topics include the Inquisition, the European witch craze, revolution, pornography, violent crime and punishment, media violence, lynching, race, racism, genocide, war, torture, gender violence, and terrorism. Explores the modern emergence of a popular culture of violence, approaching themes from the perspectives of perpetrators, victims, and bystanders alike.

HIST 1215. Origins of Today: Historical Roots of Contemporary Issues. 4 Hours.
Focuses on the historical roots of four pressing contemporary issues with global implications. Our world has grown increasingly complex and interconnected, and the planet’s diverse peoples are facing common problems that have tremendous impact on the immediate future. They are (1) globalization, from its origins in the sixteenth century to the present; (2) the potential for global pandemics to alter the course of history, from bubonic plague in the fifth century to H1N1; (3) racial inequality, from religious interpretations in the early modern period to science in the modern era; and (4) gender inequality, from the agricultural revolution forward. For each issue, studies cases and locations spread across the world, examines the links between past and present, and attempts to identify ways forward.

HIST 1218. Pirates, Planters, and Patriots: Making the Americas, 1492–1804. 4 Hours.
Seeks to challenge students to understand more than the outlines of American history—Pilgrims, patriots, plantations—in the broader contexts of events that unfolded in and around the Atlantic Ocean in the Americas, Europe, and Africa. Covers Columbus’s first landing in the Caribbean to the Haitian declaration of independence in 1804 and includes the Atlantic trade, piracy, slavery and other forms of labor, cultural and ecological exchange, and independence and emancipation.

HIST 1225. Gender, Race, and Medicine. 4 Hours.
Examines the basic tenets of “scientific objectivity” and foundational scientific ideas about race, sex, and gender and what these have meant for marginalized groups in society, particularly when they seek medical care. Introduces feminist science theories ranging from linguistic metaphors of the immune system, to the medicalization of race, to critiques of the sexual binary. Emphasizes contemporary as well as historical moments to trace the evolution of “scientific truth” and its impact on the U.S. cultural landscape. Offers students an opportunity to develop the skills to critically question what they “know” about science and the scientific process and revisit their disciplinary training as a site for critical analysis. AFAM 1225, HIST 1225, and WMNS 1225 are cross-listed.

HIST 1228. Americans in the World: Trade, Travel, and Diplomacy. 4 Hours.
Offers a broad introduction to the history of the United States and the global world. Explores the United States within a larger framework of world historical events and activities, examining connections between local and global histories. Drawing on historical and literary sources as well as print, film, and other media sources, this course surveys the global United States and the political, social, cultural, and economic relationships that shaped its development. Topics include colonialism and imperialism; industrialization and globalization; war, independence, and national movements; and racial and gendered identities and politics.

HIST 1229. Military History of the United States. 4 Hours.
Examines the role of the military in the development of the United States. Begins with the arrival of Europeans and the ensuing conflicts with Native Americans as well as the colonial wars and the American Revolution. Reviews the constitutional foundations for the military and the creation of a regular army, including the establishment of West Point. Focuses on the War of 1812 and the Mexican War followed by an in-depth analysis of the Civil War and its aftermath. Covers America’s rise to world power status and the role of the military in this process. Surveys the twentieth century with particular emphasis on World War II, the Cold War, and the military’s role in nontraditional environments, including peacekeeping and terrorism.

HIST 1230. Contemporary America. 4 Hours.
Covers the emergence of the politics of dissent; thawing of the Cold War; military adventures in Asia, the Middle East, and the Balkans; decline of the presidency; growth of electronic media; and changes in race, gender, and class.

HIST 1233. The United States: Revolution to Reconstruction. 4 Hours.
Examines patterns of social, cultural, economic, political, and diplomatic history of the United States to 1877.

HIST 1234. United States since 1877. 4 Hours.
Examines patterns of social, cultural, economic, political, and diplomatic history of the United States from 1877 to the present.

HIST 1239. History of American Education in World Perspective. 4 Hours.
Examines, in a comparative context, the expansion of public education from the passage of compulsory schooling laws to the establishment of the multiuniversity, the impacts of desegregation, the revival of home schooling, and the problems facing American education today. Gives attention to views that common schooling and land-grant colleges were part of the larger movement to extend democracy. Examines challenges to these propositions.

HIST 1246. World War II in the Pacific. 4 Hours.
Studies World War II, the most devastating war in history, which began in Asia and had a great long-term impact there. Using historical and literary texts, examines the causes, decisive battles, and lingering significance of the conflict on both sides of the Pacific.
HIST 1252. Japanese Literature and Culture. 4 Hours.
Explores major works of Japanese fiction and poetry in historical and cultural context. All readings are in English translation.

HIST 1253. History of Vietnam Wars. 4 Hours.
Presents a history of military conflicts on the Indocheinese peninsula from its precolonial settlement, internal developments and divisions, its stormy relationship with China, French colonization and the resistance to it, the rise of the Viet Minh during World War II, the postwar struggle against the French, the impact of the Cold War, and the involvement of the United States after 1950 in the creation of two Vietnams and in the conflict that engulfed it and its neighbors, Laos and Cambodia, in the decades that followed. Emphasizes the roles of nationalism and communism in the twentieth-century conflicts and the motives for American intervention. Films revealing the reactions of Americans to the escalating conflict are shown and evaluated.

HIST 1254. Mao's China and After. 4 Hours.
Assesses the impact of the Chinese Communist Revolution of 1949 on state-societal relations. Focuses on the efforts during the Mao era to transform Chinese society through social mobilization campaigns, political culture, industrialization, and rural collectivization. Examines the impact of the Economic Reform Era policies, paying close attention to the rise of a consumer culture, the development of a legal system, and the heightened tensions between the dominant Han Chinese population and the minorities, especially in Tibet and Xinjiang.

HIST 1255. Chinese Civilization in Her Eyes. 4 Hours.
Presents an historical analysis of gender dynamics and roles in China from late imperial times to the present. Examines notions of masculinity and femininity in Confucian culture, patriarchal practices including foot binding, chastity arches, and arranged marriages, and the ways in which the Chinese empire becomes feminized in the eyes of its elite as a result of Western intrusions. Explores women's efforts to acquire "personhood" and the rights of citizens during the period of nation building and to negotiate state regulatory powers over their labor, sexuality, and reproduction in recent times.

HIST 1256. Women in Jewish Culture. 4 Hours.
Uses some of the tools of contemporary feminist theory and methodology to focus on questions about the resurgence of ethnic/racial identities in the United States and the meaning of this for contemporary Jewish women. Analyzes the changing relationship of women to Judaism by trying to recover Jewish women's experiences in America since the turn of the century. Accomplishes this by looking at some key institutions-work, family, religion, the feminist movement, the media, literature, and film.

HIST 1260. Modern Latin America. 4 Hours.
Traces the developments in this region since independence and the inception of nationhood. Topics include state formation and society in the nineteenth century; economic development and underdevelopment in the region; race, class, and ideology; United States/Latin American relations; populism; the roots of revolution and authoritarianism; and the contemporary experiments with neoliberal policies.

HIST 1270. Ancient Greece. 4 Hours.
Studies the Greek achievement from proto-Indo-European migrations through the Minoan and Mycenaean bronze age, to the evolution of Homeric and Hellenic societies in the iron age, to the rise of the city-states and the age of Alexander. Topics include the coexistence of the rational and the irrational; the paradox of ethical philosophies and exclusionary political systems; the tensions between particularism and cultural unity; and gender ideology and what has been termed "the reign of the phallus."

HIST 1271. Ancient Rome. 4 Hours.
Studies the establishment and origins of civilization in the Italian peninsula from Etruscan, Latin, and Greek foundations through the rise and institutionalization of the republic, to the achievement of empire, to Rome's interactions with diverse peoples and its decline and collapse. Themes include diversity, tolerance, uses and dangers of power, Rome's legalistic legacy, and the Latinization of Christianity.

HIST 1272. Europe in the Middle Ages, 500–1500. 4 Hours.
Examines the history of medieval Europe in a period of tremendous fluidity, migration, and flux. Studies the experiences of men and women in European societies before clearly defined nation-states had emerged. Topics include forms of political and cultural integration; the contacts between Europeans and non-Europeans in the Mediterranean and beyond; and the place of religion, art, and ideology, with attention to how Europeans' experiences varied according to their gender, class, and race.

HIST 1279. History of the American Film Industry. 4 Hours.
Examines and analyzes the artistic, commercial, cultural, and political history of the American film industry from its beginnings around 1900 to the present day. Emphasizes the development of the financial and artistic model of the classic "studio system" at the major Hollywood studios. Readings and lectures focus on economic factors that changed this system over time, such as labor-management relations and the rise and fall of the "star system." Studies major genres and styles of film and their evolution, as well as their relationship to American historical and political trends: the Depression, World War II, the cold war, and the impact of the cultural revolution of the 1960s. Considers the changing role of the actor and of the director in Hollywood filmmaking.

HIST 1285. Introduction to Russian Civilization. 4 Hours.
Surveys social, political, economic, demographic, and cultural developments in the former Soviet Union since 1917: the legacies of war and revolution, the civil war between the communists and the anti-communists, famine, the New Economic Policy, competing perspectives on the new regime, the rise of Stalin, the Cultural Revolution, collectivization and industrialization, the Purges, World War II and its impact, the "two camps" and the origins of the Cold War, the Soviet Union and the new East European system, Kruschev, destalinization, intellectuals and the "thaw," the Cuban missile crisis, the demise of Kruschev, Brezhnev and the period of stagnation, the Gorbachev Revolution, Yeltsin, nationalism, and the dissolution.

HIST 1290. Modern Middle East. 4 Hours.
Studies Middle Eastern politics, culture, and society from the mid-nineteenth century to the present.

HIST 1292. Jerusalem: Space and Image. 4 Hours.
Concentrates on significant moments in the development of Jerusalem from ancient times to the present. Explores the ways people throughout history have imagined the city in texts and images and examines the political context and the characteristics of the contemporary city. The word "Jerusalem" has long piqued the human imagination. The sacred texts of the three major monotheistic religions deal with the "history" and the stories of the city. Based on these descriptions, countless individuals, artists, researchers, and armies have tried to capture the city for their peoples. Many of these figures have caused bloodshed or lost their life or sanity for the city, while others have used its amazing inspiration to enrich the human experience and imagination.
Examines cultural, religious, political, and economic developments in European Jewish life between 1750 and 1945. Emphasizes the diversity of Jewish experiences in Europe and the significant changes in Jewish identity that occurred as many Jews became increasingly integrated into their surrounding populations. Includes topics such as “Haskalah,” or “Jewish Enlightenment”; the development of Reform Judaism; political and economic emancipation; changes in gender norms; Zionism; and anti-Semitism and the Holocaust. Includes films, memoirs, and cartoons and graphic novels, as well as important texts in Jewish history. HIST 1294 and JWSS 1294 are cross-listed.
HIST 1304. Topics in History. 4 Hours.
Covers special topics in history, selected by the instructor.
HIST 1334. History of New England. 4 Hours.
Examines the history of New England from earliest times to the present. Focuses on native peoples and early European settlement and development. Examines the role of New England in the establishment of the U.S. republic and the region’s influence on U.S. political, economic, and cultural history.
HIST 1389. History of Espionage 1: Antiquity to World War II. 4 Hours.
Explores the history of espionage through a series of case studies from ancient Rome, Greece, and China; the Reformation; the Age of Discovery; the French Revolution; the American Civil War; World War I and the Russian Revolution; and World War II. Commonly referred to as the world’s “second oldest profession,” espionage is an intrinsic part of the relationships between communities, institutions, and states. Draws from a wide variety of published and unpublished primary and secondary sources, supplemented by modern theoretical and social science perspectives, literature, and films.
HIST 1390. History of Espionage 2: Cold War Spies. 4 Hours.
Explores the history of espionage during the Cold War era (1943–1991) through a series of case studies. Draws from a wide variety of published and unpublished primary and secondary sources, supplemented by modern theoretical and social science perspectives, literature, and films. Students work individually and in teams to explore the history of covert operations, including the following subthemes: the origins of the Cold War in World War II, the postwar battle for German scientists, containment and rollback, Venona and code breaking, nuclear spies, defectors, proxy wars, insurgencies and counterinsurgencies, terrorism, and technology.
HIST 1500. Modern Chinese History and Culture. 4 Hours.
Introduces modern Chinese history and culture through literary works, films, and historical texts. Examines political, social, and cultural changes in China since 1800: the decline of empire; the New Culture Movement of the 1920s; the rise of nationalism and rural revolution; the changing roles of women; the Cultural Revolution of the 1960s; and China’s cinematic, literary, and economic engagement with the world since 1978. Taught in English and open to all undergraduates. CLTR 1500 and HIST 1500 are cross-listed.
HIST 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
Introduces the Indigenous peoples of North America and the academic field of Native American and Indigenous studies. Combines public history and public art, field trips, and original research to focus on the ongoing resistance to colonization and erasure and the resilience of Indian nations in New England and beyond. Covers particular themes, including the present-day impact of historical treaties and policies including land allotment, relocation, termination, boarding schools, and natural resource extraction.
HIST 2211. The World Since 1945. 4 Hours.
Examines the political, economic, social, and cultural relationship between the developed and developing world since the end of World War II. Topics include the Cold War, independence and national movements in developing countries, the globalization of the world economy, scientific and technological innovations, wealth and poverty, the eradication of some diseases and the spread of others, the fall of the Soviet Union, Middle East turmoil, and the enduring conflict between Israel and Palestine.
HIST 2212. Cultural Responses to Catastrophe. 4 Hours.
Surveys the broad history of natural disasters from ancient times to the present. Readings and discussions explore the diverse array of cultural responses to natural disasters across civilizations and historical epochs, concluding with a focus on cultural, political, and economic responses to major catastrophes in the modern age. Topics include ancient accounts and interpretations of deluges, earthquakes, famines, and volcanic eruptions; notorious disasters of modern history such as the Lisbon earthquake of 1755 and Krakatoa eruption of 1883; and, finally, the often disputed distinction between natural and man-made disasters in contemporary times.
HIST 2214. War in the Modern World. 4 Hours.
Provides an analysis of the political and economic revolutions that produced modern industrial warfare, and explores the causes, prosecutions, and effects of the major wars fought since the mid-nineteenth century. Large portions of the course focus on World Wars I and II, but attention is also paid to the smaller wars of this period, to unconventional and nonmilitary forms of warfare, to the international trade in arms and training, and to terrorism, both state-sponsored and transnational. Using films, simulations, and team projects, students explore the diplomatic, political, economic, social, cultural, and psychological impacts of these wars as well as their military and technological aspects.
HIST 2215. Recitation for HIST 2211. 0 Hours.
Provides small-group discussion format to cover material in HIST 2211.
HIST 2222. History of Science and Technology. 4 Hours.
Offers a global interdisciplinary survey of the separate developments of science and technology, and the complex relationships between them, integrating theories of the philosophy and sociology of science within an historical framework. Emphasizes the environmental and ideological conditions that contribute to the birth and growth of the various sciences and to the relation between these conditions and technological innovation.
HIST 2232. History of Boston. 4 Hours.
Explores the history of Boston from colonial times to the present, with attention to the topographical growth and the ethnic composition of the city. Includes visits to historical sites and museums in the area.
HIST 2241. History of Media in America. 4 Hours.
Focuses on mass communications in American history, with attention to the roles of books, newspapers, magazines, films, radio, and television.
HIST 2243. American Images of China. 4 Hours.
Examines the relationship between Sino-American international relations and changes in American popular perceptions of China as revealed in the media and literature. Focuses on Sino-American relations since the nineteenth century, including the period of the missionaries and opium traders; the era of special privileges; the Open Door policy; the first half of the twentieth century, when China became America’s favorite protégé; and the years of strain, warfare, and finally accommodation after the Chinese communists came to power in 1949.

HIST 2280. Hitler, Germany, and the Holocaust. 4 Hours.
Studies historical developments from Germany’s defeat in World War I to the end of World War II. Topics include the failure of Weimar democracy; Weimar culture; the rise to power of Hitler and National Socialism; Nazi culture and racial wars against alleged “degenerates”; the roles of party leaders, business and cultural elites, and ordinary Germans in supporting and legitimizing the Nazi dictatorship.

HIST 2282. The Holocaust and Comparative Genocide. 4 Hours.
Examines the origins of the Holocaust, perpetrators and victims, and changing efforts to come to terms with this genocide. The Holocaust, the murder of six million Jews by Germans in Nazi-occupied Europe during World War II, is one of the crucial events of modern history. Investigates the uniqueness of the Holocaust relative to other acts of ethnic cleansing or genocide, including mass death in the New World and mass murder in Armenia, Bosnia, and Rwanda.

HIST 2285. America and the Holocaust. 4 Hours.
Examines the American response to the Holocaust, in terms of both contemporaneous knowledge and actions and the lasting impact on policy and culture. Starts with early twentieth-century events, such as the Armenian genocide, that shaped later attitudes. Explores the prewar period, particularly U.S. immigration and isolationist policies. Assesses Americans’ knowledge of European events as the extermination campaign unfolded and fights ensued over rescue possibilities. Examines changing depictions of the Holocaust that emerged in the postwar period as a result of critical events such as the Eichmann trial and popular television and film portrayals. Finally, considers how perceptions of the Holocaust have shaped subsequent U.S. responses to genocide. HIST 2285, JRNL 2285, and JWSS 2285 are cross-listed.

HIST 2299. Uses and Abuses of History: Historical Reasoning in U.S. Global and Domestic Policy. 4 Hours.
Studies how historical information influenced decision making in the United States during four policymaking episodes of the post–World War II era: the confrontation with the Soviet Union during the Cold War; the expansion of the welfare state during the 1960s; the war in Vietnam; and the Reagan “revolution.” Focuses on decisions made by policymakers as these four episodes evolved. Analyzes why decision makers did what they did; what extent they were guided by their understanding of history; how accurate their historical information was; and how usefully they applied their historical understanding to the situation at hand.

HIST 2300. Race, Religion, Ethnicity: The Example of Jewishness. 4 Hours.
Explores the relationship between Judaism and race from ancient times, through the birth of modern anti-Semitism in the nineteenth century and the Holocaust in the twentieth, to the resurgence of biologically based ideas of Jewish identity in recent decades. Seeks to answer the questions of what Jewishness is—race, religion, or ethnicity—and how and why Jews, along with other groups such as Italians, Irish, and Slavs, moved from being seen as racially “other” in nineteenth-century America to being considered “white” in the twentieth century. Through the lens of the Jewish experience, offers students an opportunity to acquire a deeper understanding of the historically changing meanings of such important concepts as race, ethnicity, and peoplehood. HIST 2300 and JWSS 2300 are cross-listed.

HIST 2301. The History Seminar. 4 Hours.
Introduces history majors to advanced techniques of historical practice in research and writing. Offers students an opportunity to conduct original research and write an original research paper. Seminar themes vary; students should check with the Department of History for a list of each year’s seminar offerings. May be repeated without limit.

HIST 2302. Historical Writing. 1 Hour.
Covers learning and practicing methods and conventions of historical writing for publication. Adjuncted to a Seminar in History, which fulfills the Advanced Writing in the Disciplines requirement.

HIST 2303. Gender and Reproductive Justice. 4 Hours.
Introduces the social, legal, and economic barriers to accessing reproductive healthcare domestically and internationally. Draws on various theoretical and analytic tools including critical race theory, critical legal theory, sociology of science, human rights, feminist theory, and a range of public health methods. Access to reproductive health services, including abortion, is one of the most contested political, social, cultural, and religious issues today. Covers domestic, regional, and international legal and regulatory frameworks on sexual reproductive health. HIST 2303, SOCL 2303, and WMNS 2303 are cross-listed.

HIST 2304. Topics in History. 4 Hours.
Covers special topics in history, selected by the instructor. May be repeated up to three times.

HIST 2306. The World in a Decade: The 1990s. 4 Hours.
Examines the political, economic, and social dynamics of the first post–Cold War decade. Topics include the geopolitical aftermath of the Cold War, democracy and development in developing countries, the globalization of the world economy and its impacts, the rise of nationalism, genocide, the rise of China as an economic power, and the varieties of Islamic movements.

HIST 2308. Law, Justice, and Society in Modern China. 4 Hours.
Offers an overview of the historical development and function of law in Chinese society from the late imperial era to today and in comparison with other bodies of jurisprudence. Reading a wide range of scholarly articles and monographs, the course looks at “law” beyond jurisprudence and legal codes to examine its changing relationship with social customs, political institutions, religious traditions, popular culture, family and gender relations, and economic exchanges.
HIST 2310. Spread of Buddhism. 4 Hours.
Focuses on Buddhism both as a set of spiritual ideas and as a living practice. From its origins in northern India more than 2,500 years ago to its current status as the fastest-growing religion in North America, Buddhism has had a lasting influence over much of world history. Examines the historical context in which Buddhism first developed, and how it adapted to different social and political situations throughout the world. Also engages in "practice-oriented" activities with contemporary Boston-area Buddhism in order to understand Buddhism's continued relevance in today's world.

HIST 2311. Colonialism/Imperialism. 4 Hours.
Examines the military, economic, political, and cultural expansion of world powers since the fifteenth century, and the ways in which colonized peoples were ruled. Why did colonialist countries feel the need to conquer and dominate, how did they do it, and why did they retreat on some fronts? How did people resist and cooperate with colonialism? How did colonialism affect national and cultural identities? Colonialism is examined as a global phenomenon and from a comparative perspective that looks at particular case studies. Also examines decolonization in the twentieth century.

HIST 2312. Global Migration. 4 Hours.
Examines human mobility from the early modern period to the present. Challenging popular assumptions about who migrates and why, the course explores mobility as a fundamental element of how empires, states, and societies function. Emphasizes cross-cultural connections made possible by migrant populations, questioning whether "globalization" is only a twentieth-century phenomenon. Looking at historical sources and firsthand accounts, offers students an opportunity to obtain a basic knowledge of major global migration movements from the Mongols and the Silk Road to the Atlantic slave trade; twentieth-century labor migrations; and contemporary issues such as trafficking, statelessness, and diaspora politics.

HIST 2315. Approaches to World History. 4 Hours.
Focuses on interpreting major patterns and connections in world history through discussion and assignments.

HIST 2317. Comparative Urban Histories. 4 Hours.
Focuses on a number of cities around the world from the mid-19th century until present times. Examines such themes as urban identity and citizenship; mechanisms of exclusion and inclusion within the city, especially in terms of class, race, and gender; and typologies of cities, such as colonial, global, and port cities.

HIST 2327. The Civil Rights Movement in United States History. 4 Hours.
Explores the origins, ideologies, path, and legacy of the long civil rights movement in U.S. history. Examines primary and secondary sources to trace the origins of the civil rights movement from the post-Reconstruction era in the United States through the triumphs and defeats of the struggle to end racial segregation and the culmination of civil rights legislation in the 1960s. Investigates how the legacies and memory of the movement shape our current understanding of civil rights. While this is a lecture-based course, students' participation in weekly discussions based on the readings and in-class lectures determines a part of the overall course grade.

HIST 2330. Colonial and Revolutionary America. 4 Hours.
Covers the discovery and exploration of the New World, the settlement of the English, French, Dutch, Swedish, Spanish, and Russian colonies on the North American mainland, their development to 1763, the origins of their clashes with England, and the American Revolution.
HIST 2342. Environmental History of North America. 4 Hours.
Introduces students to the study of environmental history in North America. American history has unfolded as an ongoing dialogue between diverse peoples and their equally diverse surroundings. Environmental history has sought to place this dialogue at the center of our understanding of the past. Including the place of plants, animals, geographic features, and climate has nuanced our understanding of the role of these actors in our histories. Surveys the varied roles that the natural world has played in American history. Focuses on understanding how these stories are told and examines the close connections between the fields of environmental history and historical ecology.

HIST 2343. History of Business in America. 4 Hours.
Traces the development of business from the colonial era to the present, with an emphasis on the industrial era (1840-1920s) and the modern period. Examines the factors that shaped commercialism and consumerism in the United States.

HIST 2344. U.S. Urban History. 4 Hours.
Examines the development of urban society in the United States in the nineteenth and twentieth centuries, with emphasis on the effects of immigration and industrialization upon the politics, thought, and society of American cities.

HIST 2346. The American Empire. 4 Hours.
Examines American expansionism from the Monroe Doctrine and manifest destiny to recent neo-imperialism and “globalization,” with an emphasis on early twentieth-century expansion into Cuba, Hawaii, the Panama Canal Zone, the Philippines, Puerto Rico, Samoa, and other Pacific islands. Focuses on cultural encounters, political debates, the economic impact of imperialism, and the perspectives of colonized peoples.

HIST 2348. America and the Sea. 4 Hours.
Studies the importance of the oceanic environment in its cultural, economic, political, and naval aspects to U.S. history. Investigates the impact of the oceans on native peoples in the period before the European encounter, followed by an examination of the motives driving Europeans seaward and their methods and technology for oceanic exploration and navigation. Follows the development of the Atlantic maritime world in the postcolonial period, including the rise of the United States as a maritime power and the extension of U.S. maritime influence across the Pacific. Focuses on the evolution of maritime communities in which fishing, trading, and shipbuilding played a role in crafting a cultural environment, including the influence of the sea on literature and art. Examines the role in diplomacy and war of the United States Navy.

HIST 2351. Modern Japan. 4 Hours.
Examines state formation, economic growth, imperialism and colonialism, war and defeat, and contemporary culture.

HIST 2352. Dictators and Democracy in Japan and Korea. 4 Hours.
Covers Japan and Korea since 1945, including military occupation, the Korean War, economic growth, social change, and international relations.

HIST 2360. History of Capitalism in East Asia. 4 Hours.
Traces capitalism’s transformation of economic life in East Asia from the early modern era to the contemporary world. Explores changes in the human participation of production, exchange, and consumption. Reading a wide range of scholarly articles and monographs, the course examines key topics, including the great divergence debate, commodification of labor, consumer cultures, birth of industrialization, resilience of family enterprises, gender and the economy, and the role of the developmental state.

HIST 2370. Renaissance to Enlightenment. 4 Hours.
Covers the social, economic, political, and cultural transformations of Europe from the Renaissance to the French Revolution. Traces the rebirth of Catholic Europe from 1300; the Reformation; the religious wars; struggles over religious and scientific beliefs; advances in technology, science, and warfare; overseas expansion; the scientific revolution; and the Enlightenment.

HIST 2371. Europe 1870–1921. 4 Hours.
Focuses on Europe from the Franco-Prussian War to the post-World War I settlement: the growing tensions and rivalries and the declining certainties of the end of the nineteenth century, the origins of World War I, the war itself, the Russian Revolution, and the Peace of Paris.

HIST 2372. Gender and Society in Modern Europe. 4 Hours.
Examines the importance of gender difference in European societies from 1700 to the present. Explores the historical development of masculinity and femininity in European societies, with attention to social class and national differences. Looks at the importance of gender in the emergence of nation-states, in major democratic and socialist revolutions, in economic change, in claims for and the exercise of citizenship rights, and in the policies of welfare states. Explores how gender and race shaped women’s agency, their engagement with imperialism and contacts with non-Europeans, women’s participation in war and totalitarian regimes, their private lives and sexuality, and the significance of European Union policies for gender equality today.

HIST 2373. Gender and Sexuality in World History. 4 Hours.
Introduces key concepts in the fields of gender and identity studies as they apply to world history since about 1800. Offers students an opportunity to understand the critical significance of gender, sex, sexuality, and identity to world events and how these contentious subjects influence the contemporary world. Surveys a series of major movements in geopolitics, labor, economics, culture, and society in order to analyze how individual and group identities, as well as mass assumptions about behavior and performance, have shaped these events. Gender, sex, and sexuality are integral to class discussions of work, welfare, art, culture, violence, war, and activism. HIST 2373 and WMNS 2373 are cross-listed.

HIST 2375. The Tudors, the Stuarts, and the Birth of Modern Britain. 4 Hours.
Examines the history of early modern England as well as Ireland, Wales, and Scotland. Follows the development of England from a small backwater to one of the most powerful European nations by the end of the seventeenth century. Analyzes the constantly shifting relationships between the various cultural identities within Britain. Concentrates on British history not only from the perspective of the elites but also the ordinary people whose names have often been lost to history. Key themes include the growth of the British Empire, issues of gender, the interactions between England and the Celtic fringes, and participation in the political franchise.

HIST 2376. Britain and the British Empire. 4 Hours.
Studies the history of the empire on which the sun never set from the 18th century through the 20th century. Traces the rise of Britain as a major world power. Topics include nationalism; the growth of capitalism and the international economy; and the role of women and gender, scientific racism, and anticolonial resistance movements.

HIST 2386. History of Soviet Cinema. 4 Hours.
Surveys the emergence and development of the film industry in the USSR. Examines the political, economic, ideological, and artistic sources of Soviet cinema and their relationship to Russian culture and history. Directors include Eisenstein, Vertov, Pudovkin, Dovzhenko, Kozintsev, Kalatozov, and Tarkovsky.
HIST 2387. Soviet Secret Police. 4 Hours.
Explores a vast array of primary and secondary sources, supplemented by literature and film, and traces the roles of the domestic and international branches of the Soviet secret police throughout its seventy-year history. Explores the role of ideology in Soviet clandestine organizations; the foundations of Soviet policing; political terror and denunciations; informants' networks; recruitment of agents at home and abroad; the British spy scandals of the 1930s-1950s; Soviet intelligence successes and failures in World War II; the origins of the Cold War; the atom spy networks; the popular culture of "spy mania" in the McCarthy era; the Cuban missile crisis; the Brezhnev era; the KGB and the Soviet collapse; and spies and spying in the post-Soviet era.

HIST 2388. Borderlands: World War II in Eastern Europe. 4 Hours.
Devoted to the study of Russia's western borderlands before, during, and immediately following the Second World War, 1939-1948. Drawing from a variety of original documents, films, and recent scholarly studies, evaluates the impact of World War II on the Soviet Union and Eastern Europe. Examines the basic history of World War II in the East, followed by several weeks of readings on special themes: Soviet occupation policy (1939-1941); Ostpolitik; German occupation policy in Soviet territory, 1941-1945; genocide and the Holocaust; partisans and collaborators; nationalism; ethnic reprisals after the Soviet liberation of occupied zones; and the origins of the Cold War.

HIST 2390. Africa and the World in Early Times. 4 Hours.
Examines the place of Africa in the world from 1000 C.E. to the mid-19th century. Investigates the histories of ancient Egypt, the savannah and forest regions of West Africa, coastal and interior East Africa, and southern Africa. Explores the rise of medieval city-states and empires, the activities of the Atlantic slave trade and the trans-Saharan and Indian Ocean slave trades, debates over mass migration and the spread of language groups, the rise of agriculture, the development of nonstate political structures, the growth of trading societies, and the development of new cultural forms. Links Africa's early histories to current debates about the role of history in contemporary politics and to present understandings of Africa's historical place in world affairs.

HIST 2391. Modern African Civilization. 4 Hours.
Explores African history and culture from the early 1500s to the present era. Emphasizes the relationship between Europe and Africa, the circumstances surrounding the imperialist partition of Africa, and the decolonization process.

HIST 2394. Islamic Nationalism. 4 Hours.
Traces the historical antecedents to contemporary resurgent Islamic nationalism.

HIST 2397. Modern Africa. 4 Hours.
Covers the history of modern Africa. From the late-19th century to the present day, Africans have shaped, and have been shaped by, transformative events. By the early 20th century, European powers had colonized most of the African continent. By the mid-1960s, most Africans were free from colonial rule; colonialism on the continent did not conclude until the 1990s with the fall of the apartheid state in South Africa. Africans have aimed to achieve political and economic stability, to negotiate cold war politics, harness international development support, and thrive in a globalized world. They have experienced brutal wars, devastating epidemics, and grave natural disasters but have also inspired the world with their rich cultures, profound histories, creative emerging economies, and vibrant democratic movements.

HIST 2398. Radicals, Terrorists, and Insurgents. 4 Hours.
Analyzes various movements that have turned to violence as a means of achieving political ends. Traces the history of political violence from the eighteenth century to the present, focusing on the ideologies and tactics employed by anti-colonial, anti-imperial, and other movements. The terms "radical," "terrorist," and "insurgent" have become catchphrases almost devoid of meaning. We attempt to understand what rationales lead people to political violence as well as what commonalities are shared by diverse movements.

HIST 2431. Immigration and Identity in the American Jewish Experience. 4 Hours.
Examines Jewish political, social, and cultural history from the arrival of the first group of Jews at New Amsterdam in 1654 to the present. Themes include immigration, adaptation, family life, religion, anti-Semitism, Zionism, the Holocaust, and American-Israeli relations. HIST 2431 and JWSS 2431 are cross-listed.

HIST 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HIST 2991. Research Practicum. 2-4 Hours.
Involves students in collaborative research under the supervision of a faculty member. Offers students an opportunity to learn basic research methods in the discipline. Open to students with freshman standing with permission of instructor. May be repeated once for up to 4 total credits.

HIST 3304. Topics in History. 4 Hours.
Covers special topics in history, selected by the instructor. May be repeated up to three times.

HIST 3322. The History of Medicine in North America. 4 Hours.
Surveys the history of medicine in what is now the United States between the arrival of European explorers in the 16th century and the end of the Second World War. Introduces exemplary moments in the history of medicine as it is practiced today and examines how these histories connect to the experience of the dispossessed, the enslaved, and the economically and culturally marginalized in American history. Encourages students to consider how the history of medicine has been written both by historians and practitioners. Explores the history of medicine both as a series of events, places, and people and as a method for opening up American history more broadly.

HIST 3330. The Global Cold War. 4 Hours.
Examines the Cold War, emphasizing how the Soviet-American struggle for global preeminence intersected with decolonization and the rise of the "Third World." Uses primary sources, monographs, and scholarly articles to trace the major events and developments of the Cold War—ideological differences between the capitalist and socialist systems, the Cuban Missile Crisis, the construction of the Berlin Wall, the Vietnam War—while also exploring how and why the Cold War came to pervade economic, cultural, and social relations globally. Examines how unexpected actors—Cuban doctors and Peace Corps volunteers—responded to and shaped superpower rivalry. Considers how the Cold War continues to shape the world today.
HIST 3412. Global Environmental History. 4 Hours.
Examines the impact of four significant human transitions on the environment of the planet Earth. They include the transition from hunter/gathering to settlement and the invention of agriculture about 10,000 years ago. The agricultural or neolithic revolution was followed thousands of years later by the urban revolution and ultimately the Industrial Revolution. These three important developments in world environmental history happened within specific millennia and simultaneously in different parts of the world. In the beginning, they were not the product of physical or cultural diffusion. Urbanization and industrialization, however, promoted worldwide migration that disrupted and changed the world's ecology and environment in significant ways. Also explores the electronic revolution of the past centuries, which has had its own set of environmental impacts.

HIST 3421. History through Film. 4 Hours.
Explores various historical issues as seen through the eyes of historians and filmmakers. Presents both acted and documentary films in combination with readings from a variety of sources and interpretive materials. Through a series of case studies, the first half of the course looks at the ways in which filmmakers use (and abuse) history as a source of dramatic “stories,” while the second uses the same approach to understand the ways that historians use visual media to understand the politics and culture of the times they were made and as historical evidence.

HIST 3422. Recitation for HIST 3421. 0 Hours.
Provides small-group discussion format to cover material in HIST 3421.

HIST 3452. Global Chinese Migration. 4 Hours.
Explores how the Chinese have been moving and creating communities around the world for centuries. What, if anything, makes them “Chinese” despite such a large variety of historical experiences? Attempts to understand this migration both in terms of large-scale trends and the unique experiences of local communities and cultural change. Also examines Chinese business networks, which are sometimes thought to present a powerful challenge to Western forms of capitalism. Is Chinese capitalism different from other capitalist business, and does Chinese culture play a role in shaping it?

HIST 3485. Vienna, Prague, Budapest. 4 Hours.
Examines the intellectual and cultural history of these three closely linked capitals of Central Europe, their relationship to empires, multinationalism, and the development of modernism before and after World War I.

HIST 3486. Commissars and Managers: Soviet Economic History. 4 Hours.
Provides an economic history of the Soviet Union from 1917 to the present. Working in lectures and the computer lab, students use tactics and methods of modern business, economics, and management strategy as a means to understand, interpret, and evaluate Soviet economic policies and the history of Soviet economic development. Special themes include discussions of the purge of industrial managers as “wreckers,” the labor incentives of Stakhanovism—the Stalinist star system for extraordinary labor productivity, the economics of forced labor and the Gulag, the Second World War, financing the Cold War, the black market, corruption, and the central role played by former communists in the transition to capitalism (nomenklatura privatization).

HIST 3487. Central European Capitals on the Eve of World War I. 4 Hours.
Examines the intellectual and cultural history of three closely linked capitals of central Europe—Vienna, Prague, and Budapest—and their relationship to empires, multinationalism, and the development of modernism before and after World War I.

HIST 3800. American Conservatism from the New Deal to the Present. 4 Hours.
Explores the history of the modern American Right, from the New Deal to the present. Despite its widespread use as a political label, the term “conservative” is far from self-evident as a subject of historical inquiry. Emphasizes the fact that conservatism is not a fixed set of ideas but a complex social, political, intellectual, and cultural phenomenon. Examines groups and individuals who have claimed the label conservative as well as those who have had the label thrust upon them. Combines readings from the past and present in order to help students more accurately assess and reflect on U.S. political discourse from FDR to the present.

HIST 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HIST 4600. Topics in Women's History. 4 Hours.
Covers special topics in the history of women and gender. May be repeated without limit.

HIST 4610. Topics in World History. 4 Hours.
Covers special topics in world history. May be repeated without limit.

HIST 4620. Topics in Historical Geography. 4 Hours.
Covers special topics in the ways in which geographic, climatic, environmental, and demographic factors have affected the course of history. Tools such as GIS (geographic information systems) are introduced and explored to enhance understanding of these complex interrelationships. May be repeated without limit.

HIST 4630. Topics in American History. 4 Hours.
Covers special topics in the history of America in the nineteenth and twentieth centuries. May be repeated without limit.

HIST 4631. Topics in Public History. 4 Hours.
Covers special topics in public history. May be repeated without limit.

HIST 4640. Topics in African-American History. 4 Hours.
Covers special topics in African-American history. May be repeated without limit.

HIST 4650. Topics in Asian History. 4 Hours.
Covers special topics in Asian history. May be repeated without limit.

HIST 4660. Topics in Latin American History. 4 Hours.
Covers special topics in the history of the Caribbean and Latin America. May be repeated without limit.

HIST 4670. Topics in European History. 4 Hours.
Covers topics in European history from antiquity to the present. May be repeated without limit.

HIST 4680. Topics in Russian History. 4 Hours.
Covers special topics in Russian history. May be repeated without limit.

HIST 4681. Topics in Soviet History. 4 Hours.
Covers special topics in Soviet history. May be repeated without limit.

HIST 4682. Topics in East European History. 4 Hours.
Covers special topics in East European history. May be repeated without limit.

HIST 4690. Topics in African History. 4 Hours.
Covers special topics in African history. May be repeated without limit.

HIST 4691. Topics in Middle Eastern History. 4 Hours.
Covers special topics in Middle Eastern history. May be repeated without limit.
HIST 4701. Capstone Seminar. 4 Hours.
Offers students an opportunity to make use of advanced techniques of historical methodology to conduct original research and write a major, original research paper as the culmination of their work toward the history degree. This is a capstone research and writing seminar for history majors. Not open to students who are receiving credit for HIST 4911, HIST 4912, HIST 4970, or HIST 4971.

HIST 4903. Fieldwork in History 1. 4 Hours.
Offers directed work in historical societies, archives, museums, and other historical agencies. Please consult the department for details.

HIST 4904. Fieldwork in History 2. 4 Hours.
Offers directed work in historical societies, archives, museums, and other historical agencies. Please consult the department for details.

HIST 4911. Senior Project 1. 4 Hours.
Offers advanced directed research under the guidance of history faculty.

HIST 4912. Senior Project 2. 4 Hours.
Offers advanced directed research under the guidance of history faculty.

HIST 4929. Directed Study in Media and History. 4 Hours.
Permits students who have completed course work on this subject to undertake advanced individual applications projects in media and history. May be repeated without limit.

HIST 4930. Directed Study in Managing Nonprofit Organizations. 4 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 4931. Directed Study in Historical Societies and Archives. 4 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 4932. Directed Study in Historical Exhibits and Museums. 4 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 4933. Directed Study in Historical Editing. 4 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 4934. Directed Study in Historical Consulting. 4 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 4936. Directed Study in Historic Preservation. 4 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 4937. Directed Study in Material Culture. 4 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 4938. Directed Study in Historical Analysis of Public Policy. 4 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 4939. Directed Study in Publishing for Nonprofits. 4 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 4940. Directed Study in Oral History. 4 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 4941. Directed Study in Genealogical Research. 4 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 4942. East Asian Cultural History Abroad. 4 Hours.
Designed to provide students with an in-depth understanding of the cultural history of East Asia through a total-immersion learning experience. Coupled with a Dialogue of Civilizations course, introduces students to East Asian cultural history through guest lectures, films, on-site visits, and the study of a broad array of written materials. Offers students many opportunities to participate in dialogues with university students and faculty in the region of study. Facilitates student independent research through faculty mentoring, reading, and field trips. Emphasizes independent work on a research project. May be repeated without limit.

HIST 4944. Middle Eastern History and Culture Independent Field Research Abroad. 4 Hours.
Designed to provide students with an in-depth understanding of Middle Eastern history, culture, society, and politics. Includes lectures, talks, discussions, and visits to historic and cultural sites in the country of study. Examines both historical and modern-day issues, attitudes, and ideologies. Offers an opportunity for students to engage in sustained dialogue with university students, professors, and politicians in the country of study. Emphasizes independent work on a research project. May be repeated without limit.

HIST 4945. North African History Abroad. 4 Hours.
Seeks to provide students with an in-depth understanding of the history, culture, and political economy of Morocco. Combines exposure to both urban and rural settings to analyze current issues facing the Kingdom of Morocco in the twenty-first century in the context of its rich history. Investigates a number of key historical and cultural sites as well as providing a variety of lectures. Offers students an opportunity to dialogue with people from various sectors of Moroccan society as well as experience the ethnic, religious, and cultural diversity of the region. Emphasizes student engagement in independent research projects.

HIST 4946. Independent Field Research Abroad: Central Europe. 4 Hours.
Provides an introduction to the political, cultural, and intellectual history of major central European countries. Issues discussed include the influence of geography on historical and political destiny, development of each city as a major center within a multinational empire, the flowering of culture in each city at the fin de siècle, and the relationship of political to intellectual and cultural history. Includes visits to major historical and cultural sites in the cities of study. May be repeated without limit.

HIST 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

HIST 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

HIST 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HIST 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

HIST 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.
HIST 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HIST 4994. Internship in World History. 4 Hours.
Offers a formal internship at the World History Resource Center for preservice teachers of history during the fall semester of the fourth year. Students read curriculum units prepared by other teachers and develop at least one substantial, multilesson unit of world history curriculum, under supervision of a history faculty member and in consultation with a practicing teacher. Fulfills experiential education requirement. May be repeated without limit.

HIST 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement. May be repeated once.

HIST 5101. Theory and Methodology 1. 3 Hours.
Examines the following questions in the context of major issues in current historical research and debate. Where do historical questions come from, and how do we answer them? How do we produce knowledge about historical events and processes? What theoretical models guide historians work? Emphasizes interdisciplinary approaches as well as concrete techniques in historical research. Required of all first-year graduate students.

HIST 5102. Theory and Methodology 2. 3 Hours.
 Continues HIST 5101. Offers an advanced exploration of the theories and methods used by historians to develop students’ ability to understand and critique the work of other historians. Emphasis is on theories and methods in world history, such as comparative models, systemic approaches, and focus on interconnections. Explores what it means to have a local, national, or global perspective, and how world history fits in with other fields of historical scholarship. Required of all PhD students.

HIST 5111. Money, Markets, Commodities: Global Economic History. 3 Hours.
Studies money, markets, and commodities in world history. Focuses on the questions that historians have asked about economic phenomena and relations and the different strategies they have developed to address those questions. Broadly, the works analyzed fall into the historiographical categories of social history, political economy, history from below, economic history, and cultural history. These boundaries, however, are challenged as quickly as they are defined. Topics include debt and credit; market economies and consumer societies; formal, informal, legal, and illegal trade networks; and the transformation of the global economy by specific commodities.

HIST 5237. Issues and Methods in Public History. 3 Hours.
Examines and analyzes major issues and methods in public history in the United States and the world. Topics include the nature and meaning of national memory and myth, the theory and practice of historic preservation, rural and land preservation and the organizational structures and activities associated with those efforts, the interrelationship of historical museums and popular culture, the history and organization of historic house museums, historical documentary filmmaking, historical archaeology in world perspective, interpreting “ordinary” landscapes, and the impact of politics on public history.

HIST 5238. Managing Nonprofit Organizations. 3 Hours.
Examines the management of nonprofit organizations, which include historical agencies, museums, archives, historic houses, and various special historical collections. The literature on historical administration is lacking in sufficient conceptual rigor to generalize about the inner and outer workings of a complex management organization. Since historical agencies and museums are complex organizations with missions and goals, and with policies and procedures for involving various “publics” in their activities, explores them as part of the changing and evolving organizational structure of a modern society. Covers public management with all of its institutional components and human complexities. Studies planning in the public sector, budgeting, fundraising, conflict resolution, and the human relations literature as it relates to becoming a functional and successful manager.

HIST 5239. Media and History. 3 Hours.
Introduces students to the variety of chemical and electronic media, and the appropriate uses of these media for teaching, preservation, outreach, and primary research documents. Each student engages in research related to the selection and evaluation of existing media, and on the deconstruction, analysis, evaluation, and assembly of documentary presentations. Students then form research and production teams for the creation of actuality media production, which takes place during the semester. Topics include media preservation, production budgeting, marketing, and intellectual property.

HIST 5240. Historical Societies and Archives. 3 Hours.
Analyzes the varieties of historical societies (local, state, and national) and the kinds of private (business, college, and church) and public (local, state, and national) archives; their activities and procedures; and their similarities and differences.

HIST 5241. Exhibits and Museums. 3 Hours.
Considers the history of museums and exhibitions from a transnational perspective in order to examine the various roles museums have played in historical and contemporary global culture. Explores museums as cultural institutions and institutional cultures through historical and theoretical readings, museum visits, and the development of students’ own exhibitions. Currently among the world’s most popular sites of education and leisure, museums have held a wide range of social, political, and cultural roles over the past 500 years. Offers students an opportunity to develop more acute insight into the ways museums and their exhibitions have made and reflected ideas about history, science, art, identity, and culture.

HIST 5242. Historical Editing. 3 Hours.
Introduces the practice and skills of historical editing. Emphasis is on identification and explication of documents within their historical context in preparation for publication. Presents a laboratory for the study and practice of historical editing. Introduces the major collections of edited papers and instructs students in editing historical documents. Gives each student a historical document to prepare for publication. Also covers the editing of history books and journals.

HIST 5243. Industrial Archaeology. 3 Hours.
Introduces the history, practice, and place of industrial archaeology. Plans examination of techniques and procedures used to unearth the industrial past and offers field trips to local industrial sites.

HIST 5244. Historic Preservation. 3 Hours.
Introduces historic preservation, with attention to the history, the philosophy, and the practical problems of preservation.

HIST 5245. Historical Analysis of Public Policy. 3 Hours.
Introduces the historical study of public policy, concentrating on the theoretical and methodological issues. Substantive illustrations focus mainly on the United States.
HIST 5246. Oral History. 3 Hours.
Discusses the theory and practice of creating, processing, and using primary source material obtained by taping interviews with people whose role in history would otherwise go unrecorded.

HIST 5247. Historical Reenactment. 3 Hours.
Explores the methodologies and approaches involved in historic reenactment. Introduces students to live representation of a historic individual within the context of the correlating historical time period. Historical reenactment synthesizes the tools of historical research with those of live performance and audience interaction.

HIST 5248. Historical Administration. 3 Hours.
Examines complex, formal organizations, with emphasis on historical agencies. Topics include personnel relationships, the characteristics of successful managers, and strategic planning. Issues of finance, budgeting, and proposal writing are priorities in this professional course for public history majors.

HIST 5295. Population in History. 3 Hours.
Examines through population studies and historical demography the causes and consequences of changes in human marriage, birth, death, and migration rates from the Stone Age to the present on a global scale. Focuses on the role of the environment, relative economic growth, differential nutritional status, epidemic disease, family systems, and public administration in tracing the modern population explosion, highlighting the process through which human agency brought contagious diseases under better control and extended human life expectancies, before medicine could cure disease.

HIST 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

HIST 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HIST 5984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

HIST 6870. Directed Study in Chinese History. 3 Hours.
Offers graduate students an opportunity to undertake advanced study in Chinese history. May be repeated up to two times.

HIST 6871. Directed Study in World History. 3 Hours.
Offers graduate students an opportunity to undertake advanced study in topics in world history. May be repeated up to two times.

HIST 6960. Exam Preparation—Master's. 0 Hours.
Offers the student the opportunity to prepare for the master's qualifying exam under faculty supervision.

HIST 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HIST 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

HIST 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

HIST 7000. Qualifying Exam. 0 Hours.
Provides eligible students with an opportunity to take the master's qualifying exam.

HIST 7201. European Social History 1650–1850. 3 Hours.
Designed to help history graduate students develop a research/teaching subfield in European social history, 1650-1850. The goal is to work as a collective to inform fellow students about the special problems, sources, and themes in European social history.

HIST 7202. Topics in Russian History. 3 Hours.
Offers reading and discussion on the historiography of special themes in Russian history. Student papers and presentations are based on reading in selected subfields. May be repeated without limit.

HIST 7203. Topics in Soviet History. 3 Hours.
Offers reading and discussion on the historiography of special themes in Soviet history. Student papers and presentations are based on reading in selected subfields. May be repeated without limit.

HIST 7204. Topics in East European History. 3 Hours.
Offers reading and discussion on the historiography of special themes in East European history. Student papers and presentations are based on reading in selected subfields. May be repeated without limit.

HIST 7205. Nations and Nationalism. 3 Hours.
Reviews a selection of the current literature on state building and nationalism from roughly 1789 to 1950. Considers Europe as its primary field of inquiry, but also ventures outside of Europe to examine the relationship between European state building, nationalism, imperialism, and colonialism. Examines nationalism and the processes of state building both as discourses and as political practices, looking at foundational texts on the nation, nationalism, and state policy. Emphasis is on the intersections of gender, class, and race in creating and maintaining national identities.

HIST 7206. Gender, Colonialism, and Postcolonialism. 3 Hours.
Examines how gender, race, and class influenced the experience of colonialism (for both colonial subjects and European colonizers); how colonialism operated with respect to gender, race, and sexuality; and how gender and race differences shaped postcolonial societies and individuals' experiences. Topics include theoretical frameworks for study of the intersections of gender, race, sexuality, and colonialism; sexuality and empire; race, feminism, and colonialism; and the feminization of the labor force in global capitalism. Students gain experience reading primary sources including the reports of missionaries, diaries and journals of travelers, legal texts, and newspapers that attempted to represent and regulate the relations between Europeans and non-Europeans.

HIST 7207. The Renaissance. 3 Hours.
Discusses European political and cultural life from the thirteenth to the seventeenth centuries, with emphasis on humanism and to the rebirth of classicism in literature and the arts.

HIST 7208. Topics in Early Modern Europe. 3 Hours.
Examines recent interpretations of and approaches to such topics as the Renaissance and Reformation; the “crisis” in Europe, 1540-1660; gender roles; the French Revolution; and popular culture. Emphasizes recent monographs and journal literature. Requires oral presentations and short critical essays. May be repeated without limit.

HIST 7209. World War I. 3 Hours.
Provides a global analysis of the causes, prosecution, and outcomes of the twentieth century's pivotal conflict, focusing on historiographic frameworks and controversies and on current research on the subject. Explores strategic and military, diplomatic and domestic political, economic and financial, social and psychological, cultural, intellectual, and religious aspects of the war, and their mutual impacts on one another.
HIST 7210. Atlantic Revolutions. 3 Hours.
Studies the earliest revolutions of the seventeenth and eighteenth centuries in order to understand better how revolution became an integral part of modern consciousness and ideology. Beginning in England, the early revolutions flared on both sides of the Atlantic, moving from England to the thirteen colonies, to France, and to Haiti. Examines the way in which these early revolutions influenced and cross-fertilized one another, extending their implications to the political, social, and cultural spheres. Like ships, goods, diseases, and human beings, ideologies flowed across the ocean, changing human consciousness in the process. With the development of revolutionary philosophies, radical participatory politics had become an integral part of modernity. Students read selections from a number of works that discuss these early revolutions and their implications and write a research paper.

HIST 7211. Anthropology and History. 3 Hours.
Studies a number of works by anthropologists who have been particularly influential upon historiography, such as Douglas, Geertz, Sahlins, Bordieu, and others. Discusses the application of this body of works to historical writing, and also questions the applicability of the anthropological approach. Students write a research paper illustrating the use of anthropological history to address a particular historical problem.

HIST 7212. Comparative State Building. 3 Hours.
Examines the development of nation-states, emphasizing the period between 1760 and 1940. Emphasis is on militarism, economic growth and its consequences, the rise of classes, nationalism, the evolution of welfare states, and administrative government.

HIST 7213. Political Reform in America. 3 Hours.
Examines movements to reform government in the United States and their results since the late nineteenth century. Emphasis is on responses to industrialism during the Gilded Age, Populism, Progressive Era, the New Deal, the Great Society, and the Reagan Revolution. Analyzes transnational influences on political change.

HIST 7214. Wealth and Poverty in the Modern World. 3 Hours.
Traces the history of industrialization and analyzes the impact of economic growth on individual standards of living in the affluent and lesser developed nations between 1815 and the present.

HIST 7215. Colonial American: 18th Century. 3 Hours.
Studies expansion of European colonies in North America, conflicts among European nations and with indigenous people, development of social, economic, and political institutions, and resulting development of an American awareness.

HIST 7216. American Education in World Perspective. 3 Hours.
Examines the expansion of public education from the passage of compulsory schooling laws to the establishment of the multiuniversity and the problems facing American education in the 1990s. Gives attention to views that common schooling and land-grant colleges were part of the larger movement to extend democracy. Examines challenges to these propositions in detail.

HIST 7217. Modern American Social History. 3 Hours.
Examines recent historical literature on changes in American society over the last hundred years. Possible topics include race, ethnicity, class, gender, migration, demography, deviance, and social policy.

HIST 7218. Cultural History of the U.S.. 3 Hours.
Analyzes recent major works in the cultural history of the United States. Readings include examples of the various methodological components in the practice of what has been termed “the new cultural history.” These include works that draw upon folklore and folk life studies, material culture studies, literary theory, cultural anthropology, architectural history, art history, and social and intellectual history. Sources include both popular and elite cultural forms.

HIST 7219. Topics in Cultural History. 3 Hours.
Offers special topics in cultural history. May be repeated without limit.

HIST 7220. North American Environmental History. 3 Hours.
Analyzes recent major works in the environmental history of North America. Readings include the works of historians that transcend nation boundaries and focus on the effects of human activities on changing the land, forests, wildlife and wildlife habitat, and water and air quality. Many of these works are multidisciplinary and include the writings of natural scientists and social scientists.

HIST 7221. Topics in World History. 3 Hours.
Offers readings on selected themes and issues in world history. May be repeated without limit.

HIST 7222. Approaches to World History. 3 Hours.
Offers a graduate-level survey of world history, intended for prospective teachers of world history at secondary and introductory college levels. Reviews the subject matter and teaching materials for world history and emphasizes narrative, major themes, analytical approaches, debates, texts, collateral readings, and multimedia resources.

HIST 7223. Global Environmental History. 3 Hours.
Designed for students committed to studying the broad sweep of global history from an environmental perspective. Focuses on the dynamic relationship between human communities, civilizations, and the earth itself. Addresses the history of climate change, agriculture, industrialization, globalization, and the evolution of energy technologies in an environmental context that cuts across both national boundaries and broad historical time periods from ancient times to the present.

HIST 7224. Global Japan. 3 Hours.
Examines the history of Japan in regional and global context from prehistory to recent times. Topics include the archaeological record of archaic East Asia, the incorporation of Japan into the cultural zone in the sixth to eighth centuries C.E., Japan as a center of Buddhism, early contacts with Europe in the sixteenth century, Japan as an early-modern East Asian empire, state formation under European influence in the late nineteenth century, imperialism, colonialism, war and defeat, and the rise of Japan as a global economy in the twentieth century. Readings in primary and secondary sources are in English translation.

HIST 7225. Contemporary Japan. 3 Hours.
Examines Japanese society, economics, and politics from the institution of the American Occupation until the end of the century. Emphasis is on the rebuilding of Japan after the war, the rise of a thriving consumer culture in the 1970s, Japan’s emergence as an economic superpower in the 1980s, urban culture, the LDP, Japanese-American relations, and the status of Koreans and other minorities.

HIST 7226. Engendering China. 3 Hours.
Explores gender dynamics and roles in China from the sixteenth century to the present. Pays particular attention to social constructions of masculinity and femininity in Confucian culture, the operations of patriarchy, marriage practices, female agency, and the male critique of women’s subordination in late imperial times. Examines how these cultural and social practices were transformed or inscribed during the turbulent twentieth century.
HIST 7227. 20th-Century China: Revolutionary Change in a Global Context. 3 Hours.
Assesses the impact of the Chinese Communist Revolution of 1949 on state-societal relations. Focuses initially on the Mao era, particularly state-sponsored efforts to transform Chinese society through social mobilization campaigns, political culture, industrialization, and rural collectivization. Explores the impact of the economic reform policies initiated after 1978, emphasizing the social impact of globalizing economic forces, the rise of a consumer culture, the development of a legal system, and the ethnic relations between Han Chinese and minority populations, especially in Tibet and Xinjiang.

HIST 7228. Atlantic Connections. 3 Hours.
Explores the interactions of Europe, the Americas, and Africa from the fifteenth through the seventeenth centuries. With background on societies in each region, the course proceeds through study of the developing concepts and practices of power, race, and gender as these emerged out of the initial encounters and early colonization, and as they led to reshaping of life in each region.

HIST 7229. History of Exploration. 3 Hours.
Offers a comprehensive survey of planetary exploration from ancient times to the present, with emphasis on the ways in which historians have reconstructed the motives of the explorers and the institutions that supported them, the technologies developed and utilized in the process, the impacts of the contacts made on both the regions discovered and on the explorers' home societies, and on the cultural and environmental impacts of the contacts on the world in general.

HIST 7230. Life at Sea. 3 Hours.
Examines the role of the individual at sea through history and literature. Emphasizes the concepts of shipboard law and authority as well as observations on the notion of the "voyage" and the maturation process. Requires an all-day Saturday field trip.

HIST 7231. African-American History 1. 3 Hours.
Covers the history of African-Americans to 1900, with emphasis on the role of black people in slavery and freedom.

HIST 7232. African-American History 2. 3 Hours.
Considers African-American history since 1900.

HIST 7233. Latino/a History in the U.S.. 3 Hours.
Explores the Latino/a population, the fastest-growing ethnic population in the United States. Despite all the recent media attention given to these groups, their history remains largely obscure. Furthermore, the diversity within the Latino/a population is seldom studied. Explores the historiography about Latinos/as in the United States and compares it with that of other immigrant and ethnic communities. Discusses the question of Latino/a ethnic identity.

HIST 7234. The African Diaspora. 3 Hours.
Provides an exploration of Africa and the African diaspora in the modern period. Focuses on two sets of themes, each within a distinct time frame. Addresses the peopling of the African diaspora through the slave trade and other movements, for the period from the sixteenth to the nineteenth centuries, as well as the cultural patterns and changes of various diaspora communities, and the relationship of culture in the diaspora to that on the African continent. Also addresses pan-African politics and identity in the nineteenth and twentieth centuries including nationalism and nation-building in Africa and abroad, as well as other elements of pan-African identity as reflected in music, dress, and speech.

HIST 7235. Third World Women. 3 Hours.
Offers a critical examination of the complex gender dynamics shaping the lives of women in nonwestern societies from colonial times until the present. Deconstructs the term "Third World" and sees how it can be read against the context of imperialism. Examines gender constructs in relationship to racial and class hierarchies. Other topics include patterns of gender domination and female resistance, the interplay of imperialist and patriarchal forms of domination under colonial rule, the western gaze and representations of Third World "primitive" women, and the feminization of labor and the global economy.

HIST 7236. Caribbean History. 3 Hours.
Studies the history of the Caribbean region in the modern period. Focuses on political, social, and cultural history. Develops and compares the historical experiences of Spanish-, English-, and French-speaking territories. Topics include colonial rule, comparative slave societies, abolition and emancipation, cultural life, social movements, twentieth-century authoritarian politics and economic development models, industrialization and urbanization, and immigration.

HIST 7237. Legal History around the World. 3 Hours.
Offers an overview of major topics and approaches in the field of legal history. Draws from readings examining the many uses, purposes, and meanings of law in different contexts around the world from the early modern period into the twentieth century. Explores the dynamics and tensions between law as centered in the state (top-down) and law as practiced in society (bottom-up) to seek to understand law's many manifestations. Surveys the diverse methodologies of legal history—the ways scholars have used legal codes, cases, and events to understand and chart social, cultural, economic, and historical change.

HIST 7238. Colonialism in Contemporary Africa. 3 Hours.
Introduces the various sources, methodologies, and theories employed by Africanist scholars. Traces the development of African studies and of key frameworks within the discipline. Focuses on what kinds of sources Africanists mobilize and how this source base has changed over time; the change in issues that Africanists focus on; how Africanist scholarship fits within history overall; recommendations Africanist scholars make about "doing" history; how Africanist scholarship engages with theory and other "areas" or disciplines; and what sorts of problems theory helps Africanists address.

HIST 7239. Space and Place. 3 Hours.
Examines the role of space and place in the constitution of society and culture through a set of key readings. Themes include the geographical production of class, gender, and race/ethnicity in modernity and postmodernity as well as the role of space and place in debates around postcolonialism. The ways in which space and place are implicated in the practice of power and resistance are key to the course.

HIST 7240. Visual and Material Culture. 3 Hours.
Explores approaches to and issues in the history of material and visual culture from 1700 to the present. Through formal analysis of objects and images; readings in criticism, theory, and history; and site visits, considers questions of cultural and social reproduction, capitalism and consumption, materiality; intermediation, technology, spectatorship, and media specificity. Offers students an opportunity to obtain a more sophisticated understanding of the ways that visual and material culture have altered cultural, social, and perceptual customs; have more confidence interpreting such sources as historical evidence; and be able to employ such sources in the practice of public history.
HIST 7249. Publishing: History and Practice. 3 Hours.
Designed to instill a healthy skepticism for the printed word and to help students become better producers and consumers of historical materials. In the course’s “History of the Book” component, students have an opportunity to examine the evolution of publishing in the United States as it involved relationships among writers, publishers, editors, printers, booksellers, readers, and librarians. Throughout the course, students have opportunities to develop and practice publishing skills. After having the opportunity to achieve a basic competency in the history and practice of publishing, students then weigh in on current problems in the trade: electronic distribution and its impact on traditional publishing; open access and editorial gate keeping; copyright infringement and plagiarism; for-profit versus nonprofit publishing; and the shifting role of libraries.

HIST 7250. Topics in Public History. 3 Hours.
Offers readings, class work, and projects on selected themes and issues in public history.

HIST 7251. Topics in American History. 3 Hours.
Focuses on one or more topics in the history of the United States. May be repeated up to two times.

HIST 7252. Topics in Middle Eastern History. 3 Hours.
Offers students an opportunity to read and discuss the historiography of special themes in Middle Eastern history. Student papers and presentations are based on reading in selected subfields. May be repeated once.

HIST 7255. American Urban History. 3 Hours.
Explores the history of U.S. cities from 1630 to the present with an emphasis on more recent history. While the topics covered include race, class, gender, violence, globalization, and disasters, the major themes are physical planning and urban infrastructure.

HIST 7257. Race and Gender Encounters: U.S. Encounters with Empire. 3 Hours.
Examines the influence of race and gender identities and ideologies in the U.S.’s encounter with empire from the mid-nineteenth century through the twentieth century. Uses course-directed readings to examine how race, gender, class, and other factors help promote a U.S. national identity in the international world. Also explores how these factors shape and influence U.S. foreign policy as well as intimate, everyday interactions between men, women, and children.

HIST 7260. The Mediterranean World: Historiographic Approaches. 3 Hours.
Begins with Fernand Braudel’s landmark work on the Mediterranean in the sixteenth century and goes on to explore the historiography surrounding Mediterranean studies. Themes include the Mediterranean as a continuous space for exchange, interaction, and synthesis in the ancient, medieval, and modern periods; migrational patterns and labor movements across the Mediterranean; the Mediterranean as a site for colonial encounters; the discourse about the Mediterranean during the fascist period; the postcolonial construct of a “North/South” divide; and the issues of a common Mediterranean culture, environment, and heritage.

HIST 7290. Race and Gender Frontiers: U.S. Encounters with Empire. 3 Hours.
Examines the influence of race and gender identities and ideologies in the United States’ encounter with empire from the mid-nineteenth century through the twentieth century. Uses course-directed readings to examine how race, gender, class, and other factors help promote a U.S. national identity in the international world. Offers students an opportunity to explore how these factors shaped and influenced not only U.S. foreign policy but also intimate, everyday interactions between men, women, and children.

HIST 7296. The Ocean: Trans-Regional Histories, Routes, and Discourses. 3 Hours.
Addresses the communicative, transactional, and transitional aspects of oceanic space. The sea gives shape to and is shaped by cultural, economic, and political processes. Surveys the ways in which the ocean has been a medium for sustenance and transformation; a plane of integration and a route for human interaction; a place of contemplation, confrontation, pleasure, and subjection. Considers the discursive and legal divisions of the sea but keeps in mind that the ocean has been a critical means of global integration precisely because it is a single body.

HIST 7297. The British Atlantic. 3 Hours.
Examines the context of British encounters in the Atlantic during the seventeenth through the nineteenth centuries, focusing on an analysis of developments in society and culture, politics, economics, race, gender, and class. Considers contacts and connections between cultures, and the consequences of those interactions, and investigates how Britons experienced their empire both in the metropole and in the peripheries. Also studies the movement of peoples and ideas across the Atlantic and compares the British imperial project to the colonizing endeavors of the Spanish, French, and Dutch.

HIST 7301. Research Seminar in Russian History. 3 Hours.
Offers a seminar on selected themes of Russian history.

HIST 7302. Research Seminar in Soviet History. 3 Hours.
Offers a seminar on selected themes of Soviet history.

HIST 7303. Research Seminar in East European History. 3 Hours.
Offers a seminar on selected themes of East European history.

HIST 7304. Research Seminar in Gender and Society in the Modern World. 3 Hours.
Studies feminists’ claims-making; the meanings of masculinity at work and in arguments for citizenship; sexuality and rights; masculinity and femininity; and examines how gender, as a system of cultural practices and power relations, intersected with class and race to influence the meanings of citizenship, work, state policy, and sexuality. Discusses the social practices and political consequences of those meanings. Considers topics such as gender and the “democratic” European revolutions of the eighteenth and nineteenth centuries; the ways in which gender shaped the meanings of work, skill, and the body; the importance of race in European war; and the emergence of modern welfare states. Although this course takes Europe as its point of departure, it also explores how Europeans operated as part of a transnational, if not global, economic and political system from the late eighteenth century to the 1950s.

HIST 7305. Research Seminar in Society and Culture in Modern Europe. 3 Hours.
Explores a variety of themes and debates in the social and cultural history of Europe in the nineteenth and twentieth centuries. Discusses new thinking about the emergence of industrial societies, middle-class and working-class culture, consumption and consumer culture, the development of national identities, and debates about the notion of class in European history. Examines the impact of imperialism on European culture and society, the broad cultural and social consequences of war on the home front, and commemoration of war. Students conduct research using primary sources, such as newspapers, government documents (such as Parliamentary papers), and other published documentary collections, diaries, and visual materials.
HIST 7306. Research Seminar in 20th-Century Europe. 3 Hours.
Offers a seminar in which the faculty selects a single topic in contemporary history on which the course is focused. The classes themselves analyze and evaluate the history, historiography, issues, and current research agendas of the subject, while individual class members undertake and complete research papers on particular aspects of the topic of interest to them. Past topics have included the Great Depression, the rise of Fascism, the Holocaust, and the Cold War in Europe.

HIST 7307. Research Seminar in Travel Literature. 3 Hours.
Studies some of the major theoretical works on travel literature and on encounters with the "other" in general. Travel literature is a crucial source that historians can utilize to examine a number of topics extending from national identity to the development of ethnography to perceptions of gender. Examines some of the sources available to graduate students in a variety of fields in preparation for writing papers, and discusses a variety of methodological approaches for analyzing primary source material. Then concentrates on a research paper to be turned in at the end of the semester, with students presenting their research sequentially through the course of the term.

HIST 7308. Research Seminar in Autobiographies and Life Statements. 3 Hours.
Examines how cultural or political historians often find that autobiographies, diaries, letters, and various other life statements provide one of their richest sources because of their comprehensiveness and detail. Yet these sources also present difficulties because of problems of veracity and because they present a narrative that may in the end run counter to that of the historian. Explores some of the attempts to overcome these problems and to use such sources in a historical narrative. In the second part of the course, students write a research paper, presenting their research sequentially through the course of the term.

HIST 7309. Research Seminar in Colonial and Revolutionary America. 3 Hours.
Offers an in-depth examination of particular topics of the period, with an emphasis on bibliographic development and the use of archival materials.

HIST 7310. Research Seminar in North American History. 3 Hours.
Offers individual projects on an aspect of North American history, leading to a documented research paper.

HIST 7311. Research Seminar in Urban History. 3 Hours.
Examines the history of the modern city, with a focus on America and on Boston, and discusses local history sources and their analysis.

HIST 7312. Research Seminar in American History. 3 Hours.
Offers research and writing on selected aspects of American history.

HIST 7313. Research Seminar in Recent American History. 3 Hours.
Studies special topics from the period 1896 to the present in detail. Requires presenting a research paper on a major person, action, or movement.

HIST 7314. Research Seminar in World History. 3 Hours.
Gives students the opportunity to do research and write a paper that addresses historical issues and processes significant at a global scale. Discussions focus on what it means to be significant on a global scale, how to find and utilize relevant source material, and on previous scholarship relevant in helping shape questions and issues in our own work. Students also read and critique one another's work. May be repeated up to four times.

HIST 7315. Research Seminar in Global Social History. 3 Hours.
Offers a research seminar addressing major issues in social history at the global level. Topics include family, demography, community, ethnicity, gender, class, race, and nation. Research papers link a selection of these issues across national and continental boundaries. Recently, the seminar focused on issues of gender, colonialism, and postcolonialism. It examined how gender influenced the experience of colonialism (for both colonial subjects and white colonizers), how colonialism operated with respect to gender and sexuality, and how gender differences were manifested within postcolonial contexts. Considers theoretical frameworks for the study of gender, race, class, and colonialism; notions of masculinity and "machismo"; colonial women subjects; sexuality and empire; the position of white European women as colonizers and as feminists; the postcolonial state as a regulator of sexuality and marriage; and the feminization of the labor force in global capitalism.

HIST 7316. Research Seminar in Global Environmental History. 3 Hours.
Gives students the opportunity to do research and write a paper that addresses historical environmental issues and processes significant at a global scale. Discussions focus on what it means to be environmental on a global scale, how to find and utilize relevant source material, and on how previous scholarship is relevant in helping shape questions and issues in our own work. Students also read and critique one another's work.

HIST 7317. Research Seminar in Western Perceptions of China. 3 Hours.
Offers a research seminar on the production and uses of a vast array of Western cultural myths and stereotypes about China from the sixteenth century until the present. These images are identified and analyzed in a wide range of primary sources including travelers' literature, missionary records and letters, fiction, journalistic accounts, visual representations, and scholarly studies.

HIST 7318. Research Seminar in Issues of Teaching Social Issues. 3 Hours.
Using a specific "real world" issue as a case study, the seminar explores the problem from a variety of social science disciplines, each bringing its own methodologies and approaches to bear on the issue. Students from participating departments work on interdisciplinary research teams to produce coherent analyses of the problem and (where appropriate) action plans. Required of all students for Standard Certification in Social Studies.

HIST 7319. Research Seminar in African-American History. 3 Hours.
Offers research and writing on an aspect of African-American history.

HIST 7320. Research Seminar in Cultural History of the United States. 3 Hours.
Requires students to conduct research and write an original paper that addresses historical issues in the cultural history—in particular the material culture—of North America.

HIST 7321. Sail and Steam: The Atlantic 1815–1914. 3 Hours.
Focuses on the interconnections of the Atlantic world from 1450–1900. Examines the consequences of exploration, conquest, and colonization in the New World as well as in the old. During this period ships, goods, diseases, human beings, and ideas flowed across the ocean, tying together the Atlantic basin in a complex web of relationships. We read a number of secondary works discussing the theoretical and comparative analysis of the Atlantic world, focusing upon central cultural themes such as gender, colonialism, social developments, the economy, and the growth and spread of ideologies. Requires students to research and write an original paper about connections in the Atlantic world.
HIST 7322. Seminar: 1968 in Global Perspective. 3 Hours.
Examines the significance of 1968, when a worldwide wave of largely student-driven unrest signaled that "something happened" during that year. From London to Tokyo, from Chicago to Prague, from Mexico City to Paris, the young generation of the late sixties challenged the old order. But why? Engages students with the growing interdisciplinary theoretical literature on international protest movements, before going on to examine a number of national "1968s." Uses primary and secondary sources to seek to understand what these events meant locally, how they were connected globally, and to what extent they can fit into a larger pattern of a world event known as "1968." Requires a significant research paper dealing with one of these or another question determined in consultation with the instructor.

HIST 7323. Seminar: Modern Colonialism. 3 Hours.
Focuses on modern colonialism from the seventeenth to the mid-twentieth century, concentrating primarily on European colonialism. Students have an opportunity in this research seminar to investigate many aspects of the colonial project, such as the techniques and practices of empire, the production of knowledge, orientalism and othering, the construction of race and gender, environmental impacts, the growth of nationalism and other forms of resistance, and decolonization. Students are expected to use the methodological and theoretical approaches explored in the course to produce an independent research paper based on primary sources.

HIST 7324. Seminar in Transnational Animal-Human Relations. 3 Hours.
Includes topics such as hunting, the origins of domestication, myth and religion, benign and companion animals (pets), animals as threats, ecosystem modifications (such as the Columbian Exchange), real and imagined cyborgs, biological modification by humans, and animals as food.

HIST 7325. Research Seminar: Modern Africa. 3 Hours.
Examines major issues in African history from 1500 to the present. Explores a variety of topics relating to the African continent's engagement with the world, including labor, religion, sexuality, and violence. Addresses theoretical and methodological frameworks for understanding colonialism and postcolonialism. Concentrates on the development of Africanist historiography from the 1950s onward. Offers students an opportunity for training in the theories and methods of primary source research using archival documents, literature, oral histories, and media. Requires students to write research papers that examine issues in African history across national and regional boundaries, incorporating the theories and methods considered in class.

HIST 7370. Texts, Maps, and Networks: Readings and Methods for Digital History. 3 Hours.
Introduces the methods and practice of history in a digital age. Offers students an opportunity to see the wide variety of work being done computationally by historians and other humanists today and to obtain the background to be creative producers of new work and critical consumers of existing projects. The rise of computing technology and the Internet has the potential to reshape all parts of historical practice, from curation to research to dissemination. Examines the historian's craft in three primary domains: the creation of digital sources, the algorithmic transformations that computers can enact on cultural materials like texts, and the new ecologies of publishing and scholarly communication made possible by new media.

HIST 7550. Professionalization and Pedagogy for Historians. 1 Hour.
Offers students an opportunity to attend lectures and workshops organized by faculty members on the topics of professionalization and pedagogy. Topics covered include publishing, conference presentation, CV preparation, grant application, archival research, undergraduate course design, lecture preparation, grading, and discussion leading. May be repeated up to two times.

HIST 7701. Advanced Research Seminar in World History. 3 Hours.
Entails research and preparation of a world history paper intended to be part of a larger dissertation. Includes intensive historiographical reading related to the research topic.

HIST 7702. Advanced Seminar in Global Environmental History. 3 Hours.
Entails research and preparation of a global environmental history paper intended to be part of a larger dissertation. Includes intensive historiographical reading related to the research topic.

HIST 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HIST 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

HIST 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HIST 7990. Thesis. 1-4 Hours.
Offers thesis supervision by members of the department. May be repeated without limit.

HIST 7996. Thesis Continuation. 0 Hours.
Offers continuing thesis supervision by members of the department.

HIST 8400. Assigned Readings in Historical Geography. 3 Hours.
Offers directed study in geography's impact on history. This course may be used to help satisfy teacher certification demands for history, political science and political philosophy, and social studies that has course work in geography. May be repeated without limit.

HIST 8405. Directed Study. 3 Hours.
Offers assigned reading under the supervision of a faculty member. May be repeated without limit.

HIST 8406. Directed Study. 3 Hours.
Offers assigned reading under the supervision of a faculty member. May be repeated without limit.

HIST 8407. Directed Study in Women's History. 3 Hours.
Offers assigned reading in women's history under the supervision of a faculty member. May be repeated without limit.

HIST 8408. Teaching Methodology Adjunct. 3 Hours.
Offers a M.A.T. program course adjunct connected to any graduate history course to permit students to consider the curricular and teaching implications of the history course content.

HIST 8409. Practicum in Teaching. 1 Hour.
Offers students the opportunity to teach individual college-level courses within the Department of History under the general supervision of a senior faculty member. Open to doctoral students.

HIST 8410. Fieldwork in History. 1. 3 Hours.
Offers students the opportunity to get practical experience in historical agencies including historical societies, archives, museums, exhibits, restorations, preservation projects, and the like. Requires students to work in the agency ten hours a week for one semester under the direction of an agency supervisor and departmental adviser.
HIST 8411. Fieldwork in History 2. 3 Hours.
Gives students a second opportunity to acquire practical experience in an historical agency. Requires ten hours a week for one semester under the direction of an agency supervisor and a departmental adviser.

HIST 8412. Fieldwork in History 3. 3 Hours.
Gives students a third opportunity to acquire practical experience in an historical agency. Requires ten hours a week for one semester under the direction of an agency supervisor and a departmental adviser.

HIST 8416. Directed Study in Managing Nonprofit Organizations. 3 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 8417. Directed Study in Historical Societies and Archives. 3 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 8418. Directed Study in Historical Exhibits and Museums. 3 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 8419. Directed Study in Historical Editing. 3 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 8420. Directed Study in Historical Consulting. 3 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 8421. Directed Study in Industrial Archaeology. 3 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 8422. Directed Study in Historic Preservation. 3 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 8423. Directed Study in Material Culture. 3 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 8424. Directed Study in Historical Analysis of Public Policy. 3 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 8425. Directed Study in Publishing for Nonprofits. 3 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 8426. Directed Study in Oral History. 3 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 8427. Directed Study in Genealogical Research. 3 Hours.
Permits students who have completed course work on this subject to undertake advanced applications of study. May be repeated without limit.

HIST 8428. Directed Study in Media and History. 3 Hours.
Permits students who have completed course work on this subject to undertake advanced individual applications projects in media and history. May be repeated without limit.

HIST 8674. Master’s Project in Public History. 3 Hours.
Offers research, development, and completion of a significant project, usually in conjunction with a public history agency, that can be utilized as part of the ongoing programs of such agencies.

HIST 8960. Exam Preparation—Doctoral. 0 Hours.
Intended to show full-time status during the semester of the PhD qualifying exam. Students are expected to carry a full load of research and/or teaching responsibilities in addition to this course.

HIST 8966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

HIST 8982. Readings. 1-4 Hours.
Offers selected readings under the supervision of a faculty member. May be repeated without limit.

HIST 8984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

HIST 8986. Research. 0 Hours.
Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

HIST 9000. PhD Candidacy Achieved. 0 Hours.
Indicates successful completion of the doctoral comprehensive exam.

HIST 9984. Research. 1-4 Hours.
Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

HIST 9986. Research. 0 Hours.
Offers the student the opportunity to conduct full-time research. May be repeated without limit.

HIST 9990. Dissertation. 0 Hours.
Offers dissertation supervision by members of the department. May be repeated once.

HIST 9996. Dissertation Continuation. 0 Hours.
Offers dissertation supervision by members of the department. May be repeated without limit.

HST 0244. Historical Preservation. 4.5 Hours.
Description unavailable.

HST 0250. Topics in Public History: Folklife. 4.5 Hours.
Offers students the opportunity to read, do class work, and complete projects on selected themes and issues in public history.

HST 0410. Fieldwork in History 1. 4.5 Hours.
Description unavailable.

HST 0902. Contemporary Global Issues. 6.8 Hours.
Investigates historical events by looking at contemporary issues in Africa, the Americas, Asia, and Europe. Focuses on the peoples in these regions and their efforts to take control of these events in their communities. Examines the changing definition of communities as people seek to solve problems relating to access to adequate food, healthcare, and other of life's necessities. Explores strategies that these populations have used to overcome unfair systems that have led to injustice, overpopulation, and political corruption.

HST 0905. Teaching for Historical Understanding: Engaging Students. 6.8 Hours.
Emphasizes how history can and should be engaging to a range of students through the rigorous exploration of rich content and creative classroom exercises. Explores some of the latest international research and best practices in the field of teaching history to diverse learners.
HST 0910. What Is Worth Fighting For? An Examination of Conflict in 20th-Century America. 6.8 Hours.
Examines the issue of conflict as it relates to America in the twentieth century, arguably one of the most contentious periods in our nation’s history. Analyzes America’s role in war, economic depression, and foreign and domestic relations in the contemporary world. Examines the changing and contrasting public sentiment in two world wars and the Vietnam conflict and juxtaposes the era of depression with our current financial crisis. Studies social conflicts around race, gender, equity, and their progressive change throughout the century. Through cutting-edge technology, film analysis, Socratic dialogue, and interdisciplinary connections, offers students an opportunity to glean strategies and methods of examining and addressing issues related to conflict both in and out of the classroom by answering the thought-provoking question: What is worth fighting for?

HST 0915. History Is Alive! Promoting Authenticity and Differentiation in Social Studies. 6.8 Hours.
Explores the multiple and varied methods of creating and implementing an engaging social studies curriculum that taps into the learning styles of all students. Introduces varied and effective strategies to engage students in the study of history through interdisciplinary connections, technology, authentic assessments, exhibitions, seminars, and current events. In addition, offers participants an opportunity to engage in the backwards design model in creating their own curriculum, utilizing a differentiated approach to teaching and learning that is designed to make history come alive in their own classrooms.

HST 1100. History of the World 1: Prehistory to the Renaissance. 3 Hours.
Examines the key factors and events that shaped world history from its earliest recordings to the age of the Renaissance. Analyzes history from a thematic and geographic perspective, examining the major moments in the ancient, medieval, and early modern periods. Studies how these periods in history led to the modern era.

HST 1150. History of the World 2: From Renaissance to the Present. 3 Hours.
Examines the key factors and events that shaped world history from the Renaissance to the present. Analyzes history from a thematic and geographic perspective, examining the major moments in history since the Renaissance. Offers students an opportunity to learn how major periods in history, including the Age of Revolution, the Enlightenment, and the Age of Industrialization, led to the world we live in today.

HST 1200. American History 1: Precontact to the Civil War. 3 Hours.
Examines American history from the precolonial period up to the end of the American Civil War. From the time of the earliest settlers through the Civil War, religious, ethnic, racial, and cultural differences were important factors in the development of the U.S. as a pluralistic democracy. The important role played by these many differences are explored as students analyze history from social, cultural, and political perspectives and examine key moments and turning points in American history.

HST 1250. American History 2: Reconstruction to the Present. 3 Hours.
Examines American history from the start of Reconstruction up to the present. Analyzes history from social, cultural, and political perspectives and examines key moments and turning points in U.S. history. Explores the important role played by religious, ethnic, racial, and cultural differences in shaping the continuing evolution of the United States.

HST 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HST 2125. 20th-Century World Wars. 3 Hours.
Examines the major causes, events, and outcomes of World War I and World War II. Analyzes the period of history prior to World War I to discover the causes of the Great War and then studies the end of the war and the events of the interwar period as a pretext for World War II. Offers students an opportunity to learn how the events of history from 1914–1945 shaped the world we live in today.

HST 2150. The World Since 1945. 3 Hours.
Examines major historical events since 1945. Analyzes the political, social, cultural, and economic relationship between the developed and developing world as a backdrop for major moments in history since the end of World War II. Major topics include the end of World War II, the Cold War, decolonization, the fall of the Soviet Union, the Middle East, and the role of nationalism and globalization in recent historical events. Emphasizes the role of difference—ethnic, racial, gender, religious, etc.—in determining the geopolitical reality.

HST 2425. Coming to America: The American Immigrant Experience. 3 Hours.
Examines the migration of people to North America. Analyzes the migration of Native Americans in ancient times, the arrival of European settlers and explorers, and the various waves of immigration to the United States from Europe, Africa, Asia, and Latin America. Emphasizes the diverse cultures that came, their reasons for coming, their reasons for settling in particular places, and the processes by which they resolved issues related to “Americanization.”

HST 2450. History of International Sport. 3 Hours.
Examines the history of international sports from their earliest beginnings in Ancient History up through the Modern Olympics, the World Cup, and other major international sporting events. Topics include the political and cultural origins of sports domestically and internationally, the ancient Olympics, the Modern Olympic movement, and the role of sports in international politics during and after the cold war. Studies major issues in modern sports history, including amateurism, doping, gender equality, and governance. Analyzes the role of international sports in intercultural communication and international politics.

HST 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HST 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HST 4400. Senior Seminar/Project. 3 Hours.
Offers history majors an opportunity to integrate knowledge and abilities gained throughout the program. Concludes with a detailed research project.

HST 4896. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major.

HST 4955. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

HST 4983. Topics. 1-4 Hours.
Covers special topics in history. May be repeated without limit.

HST 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
HST 4991. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

HST 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

HST 4993. Independent Study. 1-4 Hours.
Offers students an opportunity to undertake special research.

HST 4994. Internship. 1-4 Hours.
Provides students with an opportunity for internship work.

HST 4995. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

HST 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

HST 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

HST 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

HST 6200. Holocaust and Human Behavior. 3 Hours.
Examines the events that led to the Holocaust, which raise profound moral questions about the consequences of one’s actions and beliefs and how we make distinctions between right and wrong, good and evil. Begins with an exploration of questions of identity in our lives today and then moves to questions of group membership in history. These sessions lay the foundation for an intensive examination of the steps that led to the Holocaust. Asks students to think about questions of judgment and memory, considering who bears responsibility for crimes against humanity and how to confront or memorialize the past. Concludes by challenging participants to reflect on questions about what it means to participate responsibly in a civil society.

HST 6210. Choices in Little Rock. 3 Hours.
Explores the 1957 desegregation of Central High School in Little Rock, Arkansas. Traces the legal and personal struggles of African-Americans from Jim Crow America through the landmark Supreme Court decision on Brown v. Board of Education and, ultimately, to the courageous actions of nine young men and women determined to make desegregation a reality. Their efforts would lead to a crisis that historian Taylor Branch once described as “the most severe test of the Constitution since the Civil War.”

HST 6501. Teaching and Learning at the Crossroads, South Africa. 4 Hours.
Examines South African primary and secondary education curriculum and pedagogy by visiting schools and classrooms to observe (and even teach) classroom instruction and compare teaching techniques and strategies with South African teachers. Explores literacy, social studies/history, mathematics, science, technology, and education policy. Students review and analyze curriculum content in their respective disciplines and are required to prepare a teaching module for a specific curriculum topic in their field connected to this journey. Students also attend briefings with the Ministry of Education to discuss South African education policy and the University of Cape Town to discuss teacher training practices. Offers students an opportunity to obtain curriculum ideas, photographs, and teaching resources useful in their classroom.

HST 6502. Contemporary Global Issues. 4 Hours.
Investigates historical events by looking at contemporary issues in Africa, the Americas, Asia, and Europe. Focuses on the peoples in these regions and their efforts to take control of these events in their communities. Considers the changing definition of communities as people seek to solve problems relating to access to adequate food, healthcare, and other of life’s necessities. Explores strategies that these populations have used to overcome unfair systems that have led to injustice, overpopulation, and political corruption.

HST 6503. We the People. 4 Hours.
Designed to encourage civic competence and engagement. Offers students an opportunity to obtain an understanding of the Constitution and the Bill of Rights and of the rights and responsibilities of citizens in a constitutional democracy.

Offers teachers an opportunity to obtain an in-depth understanding of Japan during WWII and the U.S. occupation. These topics complement an American history or world history curriculum and are essential to appreciating historical and contemporary Japan. Explores teaching strategies, primary and secondary courses, and curriculum materials related to Japan.

HST 6505. Teaching for Historical Understanding: Engaging Students. 4 Hours.
Offers students an opportunity to explore some of the latest international research and best practices in the field of teaching history to diverse learners. Emphasizes how history can and should be engaging to a range of students through the rigorous exploration of rich content and creative classroom exercises.

HST 6506. Empowering Teachers for Democracy. 4 Hours.
Offers teachers and administrators an opportunity to explore, develop, and address the two areas most essential to children and the improvement of our civic democracy—the ability of our citizens to think critically and live ethically. Explores one or more of the following: critical thinking and the Socratic method, ethics and character education, Plato’s Republic, Aristotle’s Nicomachean Ethics, democracy-building skills, and building an ethical culture in school.

HST 6507. Forgotten Stories: Women in History. 4 Hours.
Offers students an opportunity to explore multiple ways to bring women into the U.S. history and the world history classroom, to expand their knowledge base about the experiences of women and the role of gender in history, and to reconsider the ways they organize and conceptualize history. Examines various resources that are available to help teach about women and gender in history: primary sources, biographies, literature, Web sites.

HST 6508. Seeing the Art in History. 2 Hours.
Explores resources and methods for integrating art objects into primary-source-based lessons. Offers students an opportunity to discover how to use visual materials and museum resources and methods to bring new excitement to their classrooms and to better prepare their students for standardized testing. Emphasizes helping students understand the historical process through analysis of painting, sculpture, and artifacts, in conjunction with documentary sources.
HST 6509. Teaching the Constitution. 4 Hours.
Explores "We The Students," a secondary-level civics curriculum that focuses on Supreme Court cases dealing with education and the rights of students. Focuses on freedom of expression under the First Amendment and equal protection of the laws under the Fourteenth Amendment. Offers students an opportunity to learn effective strategies for teaching this material to secondary students and to design a teaching unit appropriate to a given class setting.

HST 6510. What Is Worth Fighting For? An Examination of Conflict in 20th-Century America. 4 Hours.
Examines the issue of conflict as it relates to America in the twentieth century, arguably one of the most contentious periods in our nation's history. Analyzes America's role in war, economic depression, and foreign and domestic relations in the contemporary world. Examines the changing and contrasting public sentiment in two world wars and the Vietnam conflict and juxtaposes the era of depression with our current financial crisis. Studies social conflicts around race, gender, equity, and their progressive change throughout the century. Through cutting-edge technology, film analysis, Socratic dialogue, and interdisciplinary connections, offers students an opportunity to glean strategies and methods of examining and addressing issues related to conflict both in and out of the classroom by answering the thought-provoking question: What is worth fighting for?

HST 6513. World Religions Today. 4 Hours.
Explores four contemporary religions—Buddhism, Judaism, Christianity, and Islam—in relation to common human themes with an in-depth study of nonviolence as it is expressed in these religions. Consists of lecture, presentations, discussion, and written theological reflections drawing on traditional and contemporary texts.

HST 6514. Irish History. 4 Hours.
Examines how the Irish built a coherent narrative of resistance and adaptation during their interaction with their nearest neighbor, England, from the time of the Norman invasion to the Peace Accord in Northern Ireland. Ireland’s history is one of colonialism, enslavement, transplantation, and a vibrant diaspora stretching over most of the world. Culturally, this small nation, the most western point of Europe, has maintained its tradition of music, poetry, art, and literature and has placed its stamp on the history of the world. Emphasizes the role of women in Irish society and the part they have played throughout Irish history as leaders and nurturers.

HST 6515. History Is Alive! Promoting Authenticity and Differentiation in Social Studies. 4 Hours.
Explores the multiple and varied methods of creating and implementing an engaging social studies curriculum that taps into the learning styles of all students. Introduces varied and effective strategies to engage students in the study of history through interdisciplinary connections, technology, authentic assessments, exhibitions, seminars, and current events. In addition, offers participants an opportunity to engage in the backwards design model in creating their own curriculum, utilizing a differentiated approach to teaching and learning that is designed to make history come alive in their own classrooms.

HST 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

HST 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HST 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

HST 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

HST 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

HST 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

HST 6983. Topics. 1-4 Hours.
Covers special topics in history. May be repeated without limit.

HST 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

HLS 6000. Introduction to Homeland Security. 3 Hours.
Offers an overview of the essential ideas that constitute the emerging discipline of homeland security. Seeks to expand the way participants think, analyze, and communicate about homeland security and to assess knowledge in critical homeland security knowledge domains, including strategy, history, terrorism, fear management, crisis communication, conventional and unconventional threats, network leadership, weapons of mass destruction, lessons learned from other nations, civil liberties and security, intelligence and information, homeland security technology, and analytics. The course is organized around an evolving narrative about what homeland security leaders need and how the Center for Homeland Defense and Security program helps address those needs.

HLS 6010. The Unconventional Threat to Homeland Security. 3 Hours.
Introduces the operational and organizational dynamics of terrorism. Considers those who act as individuals, in small groups, or in large organizations and indigenous actors, as well as those who come to the United States to raise money, recruit, or commit their acts of violence. In every instance, the focus is on violent clandestine activity that, whatever its motivation, has a political purpose or effect. Addresses such specific topics as suicide terrorism, the role of the media, innovation and technology acquisition, the decline of terrorism, and ways of measuring the effect of counterterrorism policies and strategies. The course also looks briefly at sabotage.

HLS 6020. Technology for Homeland Security. 3 Hours.
Offers individuals involved in homeland security a broad overview of homeland security technology, information systems, inspection and surveillance technology, communication, knowledge management, and information security. Government agencies in today’s information age are more dependent than ever on technology and information sharing. Focuses on technology as a tool to support homeland security personnel regardless of functional specialty. The methodology used in the course frames technology in terms of its contribution to deterrence, preemption, prevention, protection, and response after an attack.
HLS 6030. Intelligence for Homeland Security. 3 Hours.
Examines key questions and issues facing the U.S. intelligence community and its role in homeland security. The September 11, 2001, terrorist attacks on the World Trade Center and Pentagon and the ensuing war on terror have focused the nation's attention on homeland security. Addresses policy, organizational, and substantive issues regarding homeland intelligence support. Course reference materials provide an overview of diverse intelligence disciplines and how the intelligence community operates. Emphasizes issues affecting policy, oversight, and intelligence support to homeland security and national decision making. Covers the 2004 Intelligence Reform and Prevention of Terrorism Act and focuses on homeland intelligence support issues at the state/local/tribal levels.

HLS 6035. Advanced Intelligence Applications for Homeland Security. 4 Hours.
Builds upon the analytical techniques discussed in HLS 6030 and develops actionable intelligence products. Offers students an opportunity to obtain an understanding of how intelligence is gathered and operationalized to support standing requirements and to support specific operations. One of the key roles of intelligence, especially in periods of active war and counterterrorism operations, is the nature, strengths, and weaknesses of intelligence intended to support operations in the field. This course describes how operational requirements are derived, transmitted to, and responded to by intelligence elements and how operational intelligence is collected, analyzed, and then used via practical, real-world situations. Open to U.S. citizens who hold a clearance of secret or higher.

HLS 6040. Critical Infrastructure: Vulnerability Analysis and Protection. 3 Hours.
Focuses largely on protecting the most fundamental critical infrastructures, one of the cornerstones of homeland security. Develops a network theory of vulnerability analysis and risk assessment called "model-based vulnerability analysis," which is used to extract the critical nodes from each sector, model the nodes' vulnerabilities by representing them in the form of a fault tree, and then applying fault and financial risk-reduction techniques to derive the optimal strategy for protection of each sector. At the completion of the course, students should be able to apply the model-based vulnerability technique to any critical infrastructure within their multijurisdictional region, derive optimal strategies, and draft policies for prevention of future terrorist attacks.

HLS 6050. Multidisciplinary Approaches to Homeland Security. 3 Hours.
Explores the homeland security project in relation to the laws that both support and constrain it. Homeland security efforts in the United States constitute a project framed by the rule of law. Constitutional concerns, civil rights issues, and the roles of the various disciplines engaged in the effort are driven and impacted by the various local, state, and federal systems of law. Uses both historical and contemporary references to unpack the various issues and answer related questions. While military, law enforcement, and judicial issues are a central concern of the course, considers the range of issues in relation to many other disciplines engaged in homeland security and defense.

HLS 6060. Strategic Planning and Budgeting. 3 Hours.
Examines a resource management system that allows decision makers to see the long-term implications of the decisions they are making today. Homeland security requires programs in such disparate areas as counterterrorism, information security, border security, counterdrug activities, etc. It also requires coordination of programs at the federal, state, and local levels. Covers how decision makers at the various levels decide which of these programs should be funded, the size approved programs should be and how they fit together, and how plans are translated into budgets. Studies an analytic approach to allocating resources in order to provide maximum security with limited budgets.

HLS 6070. Emergency Management and Geographic Information Systems. 3 Hours.
Explores how emergency management activities can best utilize geographic information technologies (GIT) to solve real-world issues in emergency management. This includes planning and response for both natural disasters and man-made events (accidental and terrorism-related incidents). Through the use of a variety of tools and analytical techniques, demonstrates and explores the nexus between emergency management and GIT. Exposes students to an understanding and appreciation for that relationship as well as the tools and skills for appropriate utilization of them.

HLS 6080. Continuity of Operations and Planning. 3 Hours.
Seeks to enable students to develop and implement continuity of operations (COOP) plans. COOP is a federal initiative, required by presidential directive, to ensure that executive branch departments and agencies are able to continue to perform their essential function under a broad range of circumstances. Today's changing threat environment and recent emergencies have increased the need for COOP capabilities and plans. Topics include what COOP is and why it is important; how COOP differs from continuity of government (COG); the roles and responsibilities of key players in COOP planning; and family support measures to take in case of COOP implementation.

HLS 6090. Organization and Structural Continuity Planning. 3 Hours.
Covers the importance of protecting critical infrastructure and key resources (CIKR) for continuity planning. Identifies the relevant authorities and roles for CIKR protection efforts and describes the National Infrastructure Protection Plan unifying structure for the integration of CIKR protection efforts, including the sector security partnership model, the risk-management framework, and the information-sharing process. Offers students an opportunity to summarize critical infrastructure responsibilities; identify the range of critical infrastructure protection government and private-sector partners at the state, local, tribal, territorial, regional, and federal levels; describe processes for effective information sharing with critical infrastructure partners; and identify various methods for assessing and validating information as well as planning for continuity in the event of an emergency.

HLS 6100. Maritime and Port Security 1. 4 Hours.
Focuses on the elements of U.S. maritime and port security. With over 95 percent of the trade essential to U.S. economic well-being passing through hundreds of U.S. ports, the protection of port and waterways security is critical to homeland security. Examines U.S. and international policies, laws, and agreements governing maritime security, such as the Maritime Transportation Security Act and the International Ship and Port Security Code. Investigates the organizations responsible for maritime and port security in the United States as well as the potential U.S. and global impact of maritime security failures. Offers students an opportunity to explore the response and planning mechanisms for port security as well as irregular and transnational maritime security issues and their relation to the U.S. maritime transportation system.

HLS 6110. Maritime and Port Security 2. 4 Hours.
Develops the concepts covered in HLS 6100. Describes the International Port Security Program, which seeks to reduce risk to U.S. maritime interests, including U.S. ports and ships, and facilitates secure maritime trade globally. Discusses port security best practices and the development of mutual interests in securing ships coming to the United States, both U.S. port security and the security of the global maritime transport system. Discusses a port state’s implementation of the International Ship and Port Facility Code (ISPS Code) and other international maritime security standards to enhance port security measures beyond the minimum requirements of the code. Additionally, addresses the needs of foreign ports to provide mutual benefits to the United States and our maritime trading partners.
HLS 6120. Aviation Security 1. 4 Hours.
Analyzes the procedures, programs, systems, and security equipment that is currently used in the aviation industry. Reviews relevant legislation pertaining to aviation security from a historical and modern perspective. Also covers the history of terrorism in the aviation sector internationally and how these events have had an effect on aviation security to date and on the future of aviation security. Includes an overview of the many professional associations that play a large role in aviation security from an industry perspective and how they interact with the federal agencies that provide oversight of the aviation security industry. Emphasizes the structure and roles of the federal agencies involved in aviation security, physical security, and aviation legislation.

HLS 6130. Aviation Security 2. 4 Hours.
Continues HLS 6120. Introduces background and specific knowledge of the Transportation Security Agency (TSA), United States regulations, and the International Civil Aviation Organization (ICAO). The course is aimed at training airport executives and supervisory airport managers involved with establishing the direction, mutual aid agreement, and general security of the airport facility and operations. Focuses on planning, developing, and evaluating procedures and methods to secure the airport. Reviews specific content of the 49 Code of Federal Regulations 1542 (Airport Security) and ICAO Annex 17 (Safeguarding International Civil Aviation). Topics include airport security activities and awareness training, case study of practical crisis management exercises, and methodology and processes of law enforcement personnel in airport security.

HLS 6140. Port Security Capstone. 4 Hours.
Offers students an opportunity to utilize all of the port security (maritime and aviation) skills they have acquired to evaluate port and aviation security processes and outcomes of a single event throughout the entire event life cycle. Examines both quantitative and qualitative methodologies, with an emphasis on tactical approaches and strategic/long-range planning. Also examines stakeholder analysis and practical techniques for reporting performance results.

HLS 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HLS 6983. Topics in Homeland Security. 1-4 Hours.
Introduces selected and substantive issues in homeland security. Topics vary from one offering of the course to the next. May be repeated up to seven times for up to 8 total credits.

HLS 7000. Domestic Emergency Practicum in Homeland Security 1. 3 Hours.
Explores the history, features, principles, and organizational structure of the Incident Command System (ICS) and the relationship between ICS and the National Incident Management System (NIMS). Recognizes organizational culture, emphasizing the politically charged atmosphere in which it operates. Offers students an opportunity to obtain a clear understanding of how to operate efficiently during an incident or event within the ICS and the integration of the roles for primary departments and/or agencies during a local, state, and federal response, as well as the knowledge of how to apply critical resources for personnel who are likely to assume a supervisory position within the ICS.

HLS 7010. Domestic Emergency Practicum in Homeland Security 2. 3 Hours.
Introduces the National Incident Management System (NIMS), which provides a consistent nationwide template to enable all government, private-sector, and nongovernmental organizations to work together during domestic incidents. Also introduces the Multiagency Coordination Systems (MACS) as described within NIMS, which consists of a combination of the following elements: personnel, procedures, protocols, business practices, and communications integrated into one common system. Guides students through the National Response Framework, focusing on the principles that enable all response partners to prepare for and provide a unified national response to disasters/emergencies. Offers students an opportunity to learn how to improve the overall coordination with, and support for, incident management by developing and operating within MAC Systems.

HLS 7020. Domestic Emergency Practicum in Homeland Security 3. 3 Hours.
Explores unified command, incident/event assessment and objective development, the Incident Command System (ICS) planning process, incident/event resource management, transfer of command, and demobilization. Focuses on how major incidents create special management challenges, the circumstances in which an Area Command is established, and circumstances in which multiagency coordination systems are established. Examines the key players, their roles and responsibilities within ICS, processes for requesting and obtaining federal assistance, and understanding the emergency support functions that group federal resources and capabilities into functional areas to serve as the primary mechanisms for providing assistance essential in supporting all critical incidents.

HLS 7030. Domestic Emergency Practicum in Homeland Security 4. 3 Hours.
Seeks to familiarize students with Department of Defense (DOD) and other agency personnel in Defense Support of Civilian Authorities (DSCA) for domestic operations. Introduces national, state, local, and DOD statutes, directives, plans, command and control relationships, and capabilities with regard to DOD support for domestic emergencies, for designated law enforcement, and for disaster and emergency response. Focuses on interagency response to enhance the command leadership through specific decision-making processes. Finally, seeks to familiarize students with the plans and systems guiding the nation’s emergency response activities to provide a clear understanding of DSCA operations.

HLS 7040. Domestic Emergency Practicum in Homeland Security 5. 3 Hours.
Offers students an opportunity to develop leadership skills and organizational capabilities to respond to twenty-first-century homeland security emergencies. Uses intensive case-study-based discussion of recent events to develop concepts and frameworks for the design and execution of response in complex, multi-jurisdictional and multisectoral environments. Focuses on leadership and explores what leaders need to do before an event, how they need to operate during an event, and how they make the greatest possible contribution to the nation’s security. The course seeks to improve society’s capacity to deal with natural disasters; infrastructure, technology, and systems failures; infectious disease; terrorism; and to prepare emergency managers for success before, during, and after a catastrophic event.

Honors Program (HONR)

HONR 1101. Honors Discovery Supplement. 0 Hours.
Designed to supplement HONR 1102.
HONR 1102. Honors Discovery. 1 Hour.
Offers a team-taught course required for all first-year honors students. Designed to help students prepare for their campus honors years and create a sense of community within the first-year honors experience. During the semester, students have an opportunity to explore the goals of the University Honors Program: taking part in a living learning community, learning through an interdisciplinary perspective, establishing a research focus, participating in experiential learning, experiencing global awareness, and contributing to civic engagement.

HONR 1200. Comparative Study of Cultures. 4 Hours.
Designed to provide an honors introduction to the issues surrounding specific diversity concerns. Grounded in a discipline focus, the course may use a historical and/or contemporary perspective to analyze diversity as it relates to one or more of the following issues: religion, race, class, gender, ethnicity, age, sexual orientation, or disability. These diversity themes are designed to facilitate and challenge our understanding of an increasingly pluralistic and diverse world. Course may include non-Western, European, and/or American examples. May be repeated once.

HONR 1201. Recitation for HONR 1200. 0 Hours.
Provides small-group discussion format to cover material in HONR 1200. May be repeated once.

HONR 1205. Inquiries in Social Science. 4 Hours.
Designed to provide an honors introductory-level study in the social sciences. Draws upon perspectives in anthropology, sociology, psychology, political science, history, economics, education, interdisciplinary studies, African-American studies, international affairs, or criminal justice to expand individual breadth of knowledge and facilitate our understanding of various themes grounded in a particular discipline. May be repeated once.

HONR 1206. Inquiries in Science and Technology. 4 Hours.
Designed to provide an honors introductory-level study in science and technology. Draws upon perspectives in math; sciences including biology, chemistry, physics, and earth and environmental studies; computer and information sciences; engineering; or various health science fields to expand individual breadth of knowledge and facilitate our understanding of various themes grounded in a particular discipline. May be repeated once.

HONR 1207. Inquiries in Mathematical/Analytical Thinking. 4 Hours.
Focuses on a particular way in which mathematical and analytical thinking manifests itself, physically and intellectually, in the arts, sciences, or humanities. Topics are chosen that have both a rich mathematical/analytical thinking component and an impact on our lives and experiences. Students should be confident in their mathematical/analytical skills and prepared to engage in mathematical/analytical thinking and activity. May be repeated once.

HONR 1208. Inquiries in Arts. 4 Hours.
Designed to provide an honors introductory-level study in the arts. Draws upon perspectives in music, architecture, interdisciplinary studies, or the performing and visual arts to expand individual breadth of knowledge and facilitate our understanding of various themes grounded in a particular discipline. May be repeated up to two times.

HONR 1209. Inquiries in Humanities. 4 Hours.
Designed to provide an honors introductory-level study in the humanities. Draws upon perspectives in literature, philosophy and religion, language, or interdisciplinary studies to expand individual breadth of knowledge and facilitate our understanding of various themes grounded in a particular discipline. May be repeated up to two times.

HONR 1310. Honors Inquiry. 4 Hours.
Designed to provide an honors introductory-level experience. Draws upon an interdisciplinary perspective to expand individual knowledge and facilitate a deeper understanding of issues. Similar to a topics course, each section of the course offers a new and unique academic experience. May be repeated without limit.

HONR 3309. Honors Seminar Abroad. 4 Hours.
Seeks to promote knowledge, understanding, and global engagement through course work, language acquisition, travel, and participation in a Northeastern University designed and delivered international academic experience. Targeted toward honors students who may not have the opportunity to complete international work later on in their academic career or who want to have an early international experience prior to a more traditional study abroad or international co-op experience. May be repeated without limit.

HONR 4915. Honors Teaching Experience. 4 Hours.
Offers advanced honors students pedagogical experience in course design and implementation of honors classes. Teaching assistants are attached to particular courses where they are mentored by senior faculty. Includes ongoing discussions with the faculty mentor, observation and participation in an undergraduate course, leading discussion groups, and additional classroom responsibilities as defined by the faculty mentor.

HONR 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of the department on a chosen topic. Course content depends on instructor. Requires Honors Program participation. May be repeated without limit.

HONR 4997. Honors Interdisciplinary Thesis. 4 Hours.
Represents a culmination of the diverse topics students encounter while enrolled in the University Honors Program. Offers students an opportunity to work closely with a faculty mentor to conduct intensive original research that includes an interdisciplinary perspective and produces a significant body of work. The thesis should utilize a cross-discipline perspective that includes at least two disciplines, allowing students to express their academic creativity, to discover new ways of synthesizing information, and to test the traditional boundaries between disciplines.

Hospitality Administration - CPS (HPA)

HPA 6010. Hospitality Budgeting and Financial Controls. 3 Hours.
Provides a strategic overview of the financial system within the hospitality industry. Topics include hospitality accounting systems and internal control, financial statement analysis and interpretation, operational analysis, cost behavior, budgeting and forecasting, pricing, and feasibility analysis. Focuses special attention on the Uniform Code of Accounts that is widely utilized by the industry.

HPA 6020. Cases in Hospitality Law. 3 Hours.
Examines legal implications of civil laws, areas of tort and contracts, along with the law and legal relationships that exist in the hospitality context. Also covers a real case law that has impacted the hospitality industry, its outcomes, and its current organization. Relies heavily on case studies and the analysis of those issues.
HPA 6030. Corporate Strategy for Hospitality. 3 Hours.
Focuses on the stage of the strategy process model devoted to putting the best strategy into action so that hospitality professionals will ensure successful results. Also explores why strategies fail in their implementation and how strategic control systems can ensure that strategic objectives are being met. Other topics include implementation of an action plan, building capabilities to manage stakeholder relationships, and organizational resources to implement and manage a strategy to create competitive advantage.

HPA 6040. Service Strategies in the Hospitality Industry. 3 Hours.
Focuses on the principles required to successfully manage in a service environment. Examines analysis, planning, and problem-solving strategies. Offers students an opportunity to improve their understanding of organizations in the service sector and to identify quality customer service. Also discusses the service revolution, the competitive edge, service strategies, and service evaluation. Emphasizes customer diversity related to providing high-quality service.

HPA 6050. Design Concepts for Hospitality. 3 Hours.
Introduces the importance of design considerations within all aspects of the hospitality industry while keeping an environmental and sustainability focus. Every touch point of a hospitality experience can be enhanced through the lens of design: construction, concept development, guest service, marketing, products, and the environment.

HPA 6060. Sustainable Operations and Planning. 3 Hours.
Covers the topic of infusing sustainability initiatives into all aspects of a hospitality operation through the use of case studies and planning exercises. Topics include the establishment of systems, development of training, and the provision of continuing education to guests. Offers students an opportunity to develop an understanding, vocabulary, and plan to support a new or existing sustainable facility that can be managed operationally and in an environmentally friendly manner.

HPA 6070. Contemporary Design and Sustainability Issues. 3 Hours.
Seeks to introduce and/or expand the knowledge base of students through an opportunity to design sustainability elements into a new, renovated, or refreshed facility through a variety of sustainability audit systems, including the Land Environment Economic Development (LEED) certification. Covers the associated costs and benefits of various levels of sustainability.

HPA 6080. Master’s Project. 3 Hours.
Focuses on an in-depth project in which the student conducts research or produces a product related to the student’s major field.

Human Resources Management (HRMG)

HRMG 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

HRMG 5978. Independent Study. 1-4 Hours.
Allows students who have received approval to undertake independent study in lieu of any course required in the various concentrations. Students present proposals to an Independent Studies Committee for evaluation and approval. Every proposal requires a detailed outline of the objectives and plan of study and must be accompanied by a supporting statement from the supervising faculty member under whose direction the study takes place. A copy of the final report prepared by the student is presented to the appropriate Independent Studies Committee. Further information about the Independent Studies Program can be obtained from concentration coordinators. May be repeated without limit.

HRMG 6200. Managing People and Organizations. 3 Hours.
Examines today’s evolving environment, in which effective utilization of human resources is a source of competitive advantage. To maximize the contribution of organizational members, managers must be able to understand, diagnose, and influence workplace behavior in the context of change. Topics include management of cross-functional teams and boundaryless organizations. Emphasis is on the role of corporate culture and distributed leadership.

HRMG 6208. Effective Organizational and Human Behavior. 3 Hours.
Introduces theories and concepts designed to help students diagnose, understand, and predict behavior in organizations. Managing the “people” side of organizations has always been one of the greatest challenges for organizations. With today’s knowledge workers, flatter, decentralized structures; and rapidly changing competitive conditions, the “human behavior” issues are of even greater strategic importance to organizational success. Among the topics addressed are interpersonal communication, groups and teams, motivation, leadership, organizational culture, and change. In conjunction with BUSN 6201 and other first-year activities, students focus not only on the concepts as applied to others but also on their personal skills and how these can be developed for more productive behavior in organizations.

HRMG 6210. Managing Professionals and High Performance Teams. 3 Hours.
Designed to improve the managerial and leadership effectiveness of individuals who have increasing responsibility over the performance of creative individual contributors and project teams working for them. Covers both micro concerns (individuals and groups) and macro issues (organizational structure and interfunctional relationships). Topics include creating and sustaining the motivational commitment and performance of professional employees, dealing with complacency and routine performance, managing organizational reward systems and career paths of professionals, overseeing effective conflict management and leadership of decision-making processes, managing pressures between product development and schedule, staffing and managing the critical roles and cross-functional relationships in the innovation process, managing the communication and transfer of information and technology effectively across organizational structures, and effecting organizational diagnosis for systemic change.

HRMG 6212. Creating an Innovative Organization. 3 Hours.
Examines the actions that managers must take to stimulate innovation and direct it in ways that allow the organization to accomplish its goals. Topics include what organization forms are most conducive to innovation, what factors hinder innovativeness and how can they be overcome, and what role managers play in bringing about innovation. Focuses on the actions that companies and their managers can take to design their organizations and systems effectively in order to foster innovativeness. Elements of an organization’s infrastructure include design, reward mechanisms, communication patterns, boundary spanning, control systems, leadership at all levels, and the organization’s culture.

HRMG 6213. Leadership. 3 Hours.
Built on the premise that everyone is capable of leadership. Exposes students to a series of alternative perspectives of leadership, including some contemporary collaborative models. From careful consideration of these perspectives, as well as from practicing them using the course’s experiential methods, students have an opportunity to build a personal model of leadership upon which they can expand as they continue to develop as leaders.
HRMG 6214. A Management Perspective of Human Resource Management. 3 Hours.
Takes a general manager’s perspective on human resource management. Global competitive challenges are forcing organizations to become increasingly flexible. Workplace trends such as telecommuting, increased information technology, contingent workers, and diversity hiring designed to address this flexibility are fundamentally altering the realm of human resource management in the United States. Explores how these issues affect the management of people in organizations through case analyses, small-group exercises, videos, and lectures. Examines topics traditionally related to the human resources management function, such as planning, staffing, evaluating, and rewarding. Also examines employee rights, labor relations, and international human resources management.

HRMG 6216. Leading Global Organizations. 3 Hours.
Addresses design and diagnosis, training, human resource flows, structure, and reward systems as tools to achieve effective behavior in global organizations. Effective global organizations require leadership to resolve the challenges inherent in dynamically complex contexts.

HRMG 6217. Virtual, Vicious Teams: Building and Leading High-Performance Teams. 3 Hours.
Offers an opportunity to learn how to build and lead different types of teams, including co-located, virtual, global, and top management teams. Asks students to identify the roles and responsibilities of team members and leaders and to develop effective communication, collaboration, and commitment among team members and other constituencies. Also examines how to effectively facilitate coordination across functionally distinct teams.

HRMG 6218. Great Companies. 3 Hours.
Studies and debates the criteria for a great company. As suppliers, customers, employees, or students, everyone has experience with a range of organizations. Some are admired, some are mediocre, and some are dreadful. This course focuses on companies with management practices that produce and sustain extraordinary outcomes such as low cost, amazing service, fast growth, and exceptional quality. Often, these companies are great because they dare to be different and the key question is: “How do they do it?” Explores such topics as organizational culture, organizational design, empowerment, business process improvement, reward systems, and employee and organizational learning. Uses a variety of learning approaches, including case studies, articles, lecture/discussion, videos, and exercises.

HRMG 6219. Leadership for Environmental Sustainability. 3 Hours.
Explores how organizational leaders use scientific knowledge to develop effective sustainability strategies around such global issues as climate change and energy depletion. Also explores how key stakeholders—businesses, governments, gray sector organizations, and communities—interact on issues of global sustainability. The course objective is to develop leaders who can research and communicate effectively about global environmental sustainability.

HRMG 6220. Health Organization Management. 3 Hours.
Covers key issues and introduces management principles in health organization management. Offers students an opportunity to apply important theoretical ideas, such as systems thinking and organizational learning, to meet challenges effectively, to learn how the healthcare workplace functions, and how to manage in these workplaces. Emphasizes case-based learning, critical thinking, and evidence-based management using individual and group projects. Introduces cutting-edge tools in areas such as work redesign, performance management, brand enhancement, and quality improvement. Addresses the management imperatives of today’s healthcare organizations and how to implement strategies and programs to meet those imperatives effectively. Intended for anyone interested in working or managing within the healthcare industry, including the field of public health.

HRMG 6221. Power and Influence. 3 Hours.
Introduces students to the uses of power and influence in the surroundings in which they work, working with and managing people, and achieving the goals they set for themselves. Offers students an opportunity to make sense of their own on-the-job learning experiences and to explore basic diagnostic and action-planning skills that they can later use on the job. Explores students to a variety of cases that demonstrate the effective and ineffective uses of power in different types of organizational contexts and at different points in a manager’s career and how to consider difficult ethical questions as well.

HRMG 6223. Global Talent Management. 3 Hours.
Offers students an opportunity to obtain the insights, frameworks, and tools to effectively manage and develop talent in teams and organizations. Also explores promotion and cross-functional systems that strengthen the organization as well as retention strategies to promote and reward high-quality talent. Managing and developing talent is one of the top three issues on the minds of CEOs from around the world. In fact, CEOs cite managing and developing their leadership talent as the issue that is most important to the future success of their business but that their organizations are least capable of addressing effectively. Offers students an opportunity to engage in various activities intended to illustrate and practice the skills involved in implementing talent management systems.

HRMG 6260. Advanced Topics in Human Resource Management. 3 Hours.
Offers an in-depth examination of selected issues and problems in human resource management that are of current interest to faculty and students. Specific topics alternate depending on faculty availability and interest as well as student enrollment criteria.

HRMG 6280. The Human Side of Innovation. 3 Hours.
Examines the leadership and managerial skills required for effectively managing multifunctional teams engaged in product, service, and business process innovation. Incorporates fieldwork, corporate visits, and other experiential learning opportunities. Explores strategies for recruiting, motivating, and retaining high-performance people. Introduces models for leading systematic innovative change within established corporate cultures, including understanding senior management attitudes toward innovation and how to create executive sponsors and mentors.

HRMG 6281. Leading and Implementing Innovation in Organizations. 3 Hours.
Offers a framework for understanding the organizational impact of adopting a new business model as well as an analytic guide to planning and implementing required changes. Examines the role of organizational diagnosis and visioning and the role of top management as an agent and advocate for change. Offers students an opportunity to approach piloting organizational innovations before scaling them across the enterprise.
HRMG 6290. Building High Performance Teams. 2 Hours.
Explores the elements necessary to build, manage, and maintain effective
teams. Also explores how teams function and the elements that foster
optimal interactions. Classroom exercises introduce class members to
one another and assist in forming study groups.

HRMG 6291. Leveraging Organizational Development, Motivation, and
Leadership for Organizational Effectiveness. 2 Hours.
Focuses on both the entire organizational system (organizational design
and organizational culture) and individual behavior/interpersonal issues.
Offers students an opportunity to increase their understanding of the
elements of organizational design and organizational culture and the
ways they impact human behavior and organizational effectiveness; to
improve their ability to diagnose situations in organizations; to increase
their understanding of principles of motivation and leadership styles,
providing insight into their own approach to leadership; and to improve
their own interpersonal skills in giving feedback.

HRMG 6292. Using Human Resource Management for Competitive
Advantage. 2 Hours.
Focuses on the strategic, rather than administrative, side of human
resource management (HRM). Although many companies view HRM as
primarily administrative, there are others that recognize that effective
HRM is a key to their competitiveness. Emphasizes and illustrates the
ways in which different HRM practices support and enable different
business strategies. Studies key components and principles of talent
management, including recruitment and selection, reward systems,
training and development, and retention.

HRMG 6293. Developing and Applying Personal Leadership Skills. 2,3
Hours.
Offers students an opportunity to identify the real challenges in their
professional lives, to assess their own leadership skills, and to identify
strengths and areas needing further development. Facilitated by
faculty and supported by the student’s learning team, students have
an opportunity to capture the everyday challenges of the workplace
and plan effective responses in the form of increased leadership skills
and behaviors. Students work individually and together to accomplish
their development goals. After workplace application, offers students an
opportunity to reflect on how successful their efforts were, identifying
additional strategies to further improve their leadership skills, and to
learn to deal with their own and other’s emotional reactions to stresses
presented by leadership challenges.

HRMG 6294. Hallmarks of Effective Leadership. 2 Hours.
Offers students an opportunity to examine and critique behavior in
established firms and entrepreneurial ventures so they can better predict
performance outcomes, define leader-related problems, and provide
solutions. Examines the middle as well as the top of the organization,
suggesting how aspiring leaders can expedite career ascension by
developing and deploying power through a perception of competency and
a propensity for collaboration. Offers students an opportunity to increase
their understanding of leadership theory, skills, and practice. Introduces
factors that influence the decision-making process, such as followers,
gender/cultural diversity, and the organizational environment.

HRMG 6960. Exam Preparation—Master’s. 0 Hours.
Offers the student the opportunity to prepare for the master’s qualifying
exam under faculty supervision.

HRMG 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.
May be repeated without limit.

HRMG 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May
be repeated without limit.

HRMG 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the
department on chosen topics. May be repeated without limit.

Human Resources Management - CPS (HRM)

HRM 0100. Essentials of Human Resources Management. 1.5 Hour.
Designed for employees with management responsibilities who need
to know basic human resource concepts before disciplinary action is
required and formal HR staff members have to get involved. Offers an
opportunity to increase knowledge and to help to reduce potentially
costly lawsuits. Seeks to answer questions such as why some are paid
overtime and others are not; what questions can and cannot be asked as
part of an interview; and how your company’s risk of high-cost litigation
can be reduced.

HRM 0102. Introduction to Employee Assistance (EAP) . 1.6 Hour.
Introduces the conceptual framework for EAPs. Examines the history
of EAPs, their essential components, employee education and training,
program modules, and EAP account management. Offers students an
opportunity to learn about policy development, legal issues, pricing, and
funding for EAPs .

HRM 0107. Addictions. 1.6 Hour.
Provides an overview of the concept of addiction from a disease
model perspective. Includes discussion around alcoholism, drug
dependence, eating disorders, gambling, obesity, and pornography
addiction. Addresses screening instruments as well as current
psychopharmacological treatments.

HRM 0301. Organizational Behavior. 2 Hours.
Examines individual learning and motivation, as well as interpersonal
communication, conflict management, group roles and dynamics, and
how to determine the levels of each factor. Organization members
and leaders seek the elusive goals of a highly motivated, innovative
workforce committed to ethical contribution to individuals and society.
Uses techniques to analyze, apply knowledge, and develop personal
insight and skills. Knowledge or prior experience in human resources
recommended.

HRM 0590. SHRM Learning System. 3 Hours.
Offers HR professionals an opportunity to prepare for the PHR
(Professional in Human Resources) or SPHR (Senior Professional
in Human Resources) certification exams, as well as to gain a solid
foundation and the comprehensive knowledge to effectively manage
the HR challenges in today’s demanding workplace. The SHRM Learning
System is offered in cooperation with the Society for Human Resource
Management (SHRM) .

HRM 0593. SHRM Learning System. 2.4 Hours.
Offers HR professionals an opportunity to prepare for the PHR
(Professional in Human Resources) or SPHR (Senior Professional
in Human Resources) certification exams, as well as to gain a solid
foundation and the comprehensive knowledge to effectively manage
the HR challenges in today’s demanding workplace. The SHRM Learning
System is offered in cooperation with the Society for Human Resource
Management (SHRM) .
HRM 0594. SHRM Global. 3 Hours.
Offers students an opportunity to prepare for the Global Professional in Human Resources (GPHR) certification exam. The Society for Human Resource Management (SHRM) Global Learning System is a comprehensive test-preparation system for the GPHR exam and serves as a reference tool for HR professionals with international and cross-border responsibilities. Designed to maximize one's experience, education, and skill set to provide students with the best chance to pass the GPHR exam.

HRM 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HRM 2320. Human Resources Management. 3 Hours.
Examines and applies principles, practices, and current issues facing organizations as related to attracting, selecting, motivating, and keeping the most talented organizational members in today's competitive environment. Focuses on human resource management strategy, organizational staffing, employee and labor relations, and organizational safety and security. Emphasizes current legal considerations and issues.

HRM 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HRM 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HRM 4896. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student's approved experiential activity and integrates it with study in the academic major.

HRM 4950. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

HRM 4955. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

HRM 4983. Topics. 1-4 Hours.
Covers special topics in human resources management. May be repeated without limit.

HRM 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HRM 4991. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

HRM 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

HRM 4993. Independent Study. 1-4 Hours.
Offers students an opportunity to undertake special research.

HRM 4994. Internship. 1-4 Hours.
Provides students with an opportunity for internship work.

HRM 4995. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

HRM 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

HRM 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

HRM 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

HRM 6005. Creating a High-Performance Organization: Strategic Organizational and HRM Choices. 3 Hours.
Covers the choices that are critical and central to a growing organization and the role that HRM plays in the decision-making process. As our global and domestic environments grow more complex, organizations seeking excellence are faced with a myriad of strategic choices, and many of those choices are the responsibility of the HR manager. Major topics include motivation, perception, interpersonal communication, leadership, power and influence, decision making, group dynamics, team building, corporate culture, and socialization. Offers students an opportunity to learn how to motivate employees and create a team-based culture of support, learning, and renewal. Emphasizes the practical application of specific skills, theories, and concepts that empower students to become effective HR managers and leaders in their organizations.

HRM 6010. Total Compensation. 3 Hours.
Examines how leading organizations determine their merit and incentive plans, wage and salary structures, and compensation methods to give students a close-up look at team-based reward systems, flexible benefits plans, and indirect compensation. Designing the right mix of compensation and benefits is critical to attracting and retaining quality employees. Offers students an opportunity to explore new and emerging ways of constructing the compensation and benefits mix that provides the foundation and confidence they need to design innovative, comprehensive, and cost-effective benefits packages for their organizations.

HRM 6020. Strategic Recruitment, Training, and Performance Management. 3 Hours.
Offers students an opportunity to learn how to clarify an organization's employee needs, as well as the best practices for attracting, developing, and retaining the right employees. A business strategy alone is not enough to provide an organization with the competitive edge. Success depends on hiring the right mix of people, a central role of the HR manager. Other topics include how to design and assess the selection process, determine training and retraining needs, and manage performance.

HRM 6030. Employee Rights and Employer Obligations. 3 Hours.
Examines the legal relationship between employer and employee. Addresses issues and topics such as discrimination, affirmative action, the Americans with Disabilities Act, sexual harassment, health and safety, AIDS in the workplace, compliance issues, and legal issues related to downsizing and terminations. Today's HR manager works in a highly complex environment with constantly changing laws and legislation that govern employee rights and employer obligations.
HRM 6040. High-Performance Human Resources Systems and Development. 3 Hours.
Examines the critical role played by human resources in planning and managing talent within the organization. A twenty-first-century workplace defined by constant change has resulted in increased demands for HR managers to act as strategic planners and internal consultants within their organizations. Understanding business strategy, using data to understand and predict labor shortages, and creating employee development plans to manage labor shortages are critical needs in customer- and client-centered organizations. Linking human resource planning and employee development to the strategic business plan is vital to meeting changing organizational demands for adaptation and movement.

HRM 6045. Change, Challenge, and Competence. 3 Hours.
Covers cultural diversity, changing work/family patterns, worker burnout and stress, and the need for workplace flexibility. HR managers and professionals must address new tensions and challenges arising from employer demands for higher productivity within complex and increasingly competitive environments. Addresses these changes in the workplace, from internationalization to reorganization and the impact of downsizing.

HRM 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

HRM 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HRM 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

HRM 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

HRM 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

HRM 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

HRM 6983. Topics. 1-4 Hours.
Covers special topics in human resources management. May be repeated without limit.

HRM 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

HUSV 1000. Human Services at Northeastern. 1 Hour.
Intended for first-year students in the College of Social Sciences and Humanities. Introduces students to liberal arts; familiarizes them with their major; develops the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community; and helps to develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

HUSV 1101. Human Services Professions. 4 Hours.
Offers students an opportunity to obtain a foundation for understanding social inequality and for practicing in the human services field. Introduces students to a range of specializations in the area of human services through lectures, service-learning, group work, individual projects, papers, debates, and presentations. Analyzes and applies ethical frames for practice using case studies and service-learning experiences. Additionally, students are expected to develop an understanding of the history of nonprofit and government responses to inequality and the social, political, and economic forces that influence social professionals.

HUSV 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HUSV 2300. Counseling in Human Services. 4 Hours.
Presents an overview of the major theoretical approaches to counseling and therapeutic interventions. Focuses on developing clinical skills and competency in intentional interviewing. Combines systemic group exercises and experiential activities to practice interviewing techniques. Cross-cultural issues in counseling are integrated throughout the course.

HUSV 2320. Techniques in Individual and Group Counseling in Human Services. 4 Hours.
Provides in-depth understanding of clinical practice with individuals, groups, and families. Focuses on developing practice skills through presentations, case studies, and self-reflection journals. Examines the role of spirituality within one’s clinical practice. Explores theoretical techniques and their applications in a variety of settings, with particular attention to populations at risk.

HUSV 2350. Ethnic Relations, Cultural Identity, and Human Services. 4 Hours.
Introduces and sensitizes students to the forms, practices, and effects of racism and discrimination on the various populations in the United States and presents frameworks for understanding and working with people with histories of discrimination and different cultural identities. Pays special attention to human services with diverse populations in schools, prisons, and employment assistance programs.

HUSV 2700. Exploring Adoption: Family, Kinship, and Identity in Contemporary America. 4 Hours.
Explores the phenomenon of adoption in the United States today from the perspective of all members of the adoption triad (adoptive parents, birth parents, and birth parents). Over the past several decades, the institution and experience of adoption have changed dramatically. Examines topics relating to domestic and international adoption, transracial adoption, open adoption and birth family contact, special needs adoption, adoption from foster care, adoption by gay parents, and the role of social class in adoption. Encourages students to think critically about the meaning of family, kinship, and identity in contemporary society.

HUSV 2800. Sexual Orientation and Gender Expression in Practice and Policy. 4 Hours.
Introduces students to efforts among social and nonprofit organizations working to reduce heterosexism, homophobia, and transphobia in institutions, communities, and the society as a whole. Discusses practice across the life span for social professionals (social workers, counselors, advocates, and educators) in varied settings such as criminal justice, mental health, adoption, adult day health, and residential programs. Applying theories and current scholarship on LGBTQ identity development, social movements, media, and advocacy, offers students an opportunity to evaluate contemporary issues of controversy for institutions, social practitioners, and policy. HUSV 2800 and WMNS 2800 are cross-listed.
HUSV 2900. Gender Violence: Bystander Education Theory and Practice. 4 Hours.
Offers participants an opportunity to learn about the theoretical and practice models used to understand and respond to gender-based violence. Focuses on bystander models of prevention. This interactive course is designed for students who are interested in research and practice directed at youth. Explores topics such as battery, gender roles, teen dating violence, sexual harassment, sexual assault/rape, and homophobia as facets of men’s violence against women. Emphasizes trainer skill development for public health and social professionals. Studies how to effectively convene and facilitate public discourse about gender-based violence utilizing the Mentors in Violence Prevention curriculum with high school and college populations. Offers students an opportunity to apply these concepts in service-learning settings.

HUSV 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HUSV 3414. The Sociology of Campus Life. 4 Hours.
Focuses on campus life through the lens of classic sociological concerns of race, class, and gender. Offers students an opportunity to address core contemporary issues in higher education; to develop an understanding of campus life from the perspective of learning that occurs both inside and outside the classroom; and to assess how that learning impacts their views of themselves and their larger context. Also offers students an opportunity to develop an understanding of student commitment to issues of social change and social justice. HUSV 3414 and SOCL 3414 are cross-listed.

HUSV 3510. Special Topics in HS. 4 Hours.
Reviews and discusses selected human services topics. May be repeated without limit.

HUSV 3520. Child Intervention and Treatment. 4 Hours.
Compares and contrasts primary, secondary, and tertiary levels of intervention as they pertain to child welfare systems. Examines specifically the effectiveness and efficiency of home-visiting-based interventions, school-based interventions, child welfare interventions, and programs and practices targeted to reduce and eliminate juvenile delinquency. Considers the availability, distribution, and effectiveness of these prevention, intervention, and treatment programs as they apply to children and their families. Hands-on service learning in the field of child intervention is designed to link the course work on research and theory to human service practice.

HUSV 3540. Services and Treatments for Chemical Dependencies. 4 Hours.
Explores students’ personal and cultural perspectives about substance use, abuse, and addiction through the use of readings, films, and case studies. Students evaluate the causes of chemical dependence, and methods of recognition, intervention, and treatment. Offers students the opportunity to investigate the effects of chemical dependency on the family. CRIM 3540 and HUSV 3540 are cross-listed.

HUSV 3550. Social Policy, Advocacy, and Activism. 4 Hours.
Covers the fundamentals of advocacy and activism while developing a knowledge base in the areas of housing law and domestic violence. Lectures give an overview of the legal system while exploring its relationship to the social service system. Discusses the history of advocacy and activism, basic legal strategies, lobbying, court procedures, housing code violations, tenant/landlord laws, and restraining orders.

HUSV 3570. The Nonprofit Sector, Philanthropy, and Social Change. 4 Hours.
Offers students an opportunity to explore the nonprofit sector’s multifaceted role in U.S. society and its relationship to democracy and social change. Introduces theoretical and practical frameworks for examining contemporary models of nonprofit and philanthropic practice and examines the ethical implications of engaging in and funding activities designed to effect social change. Offers students an opportunity to apply these concepts by mapping the complex systems within which social challenges emerge and by making real dollar grants to local nonprofit organizations.

HUSV 3580. Sexual Violence: Counseling, Programs, and Policy. 4 Hours.
Offers an in-depth examination of sexual violence, its effects, and the resources available to assist survivors. Presents an overview of the criminal justice, medical, legal, and counseling systems and the impact these interweaving systems have on survivors. Offers students an opportunity to develop crisis counseling competency through group exercises and experiential activities. HUSV 3580 and WMNS 3580 are cross-listed.

HUSV 3590. Nonprofit Communications. 4 Hours.
Seeks to provide an understanding of the role of strategic communications in the nonprofit sector and to bridge theory with practice to develop communications strategies that support organizational goals and effectively move targeted audiences to action through appropriate and measured tactics. Examines case studies and engages in group work and individual papers that connect mission and goal setting with audience identification and segmentation, issue framing, message development, and communication. Offers students an opportunity to apply the course concepts in a service-learning partnership with an area nonprofit organization.

HUSV 3700. Research Methods for Human Services. 4 Hours.
Offers an introduction to social science research that examines the theoretical and ethical foundations of social research methods. Highlights foundation knowledge and skills in hypothesis testing, research design, sampling strategies, measurement techniques, and basic data analysis and interpretation. Focuses on program evaluation to provide an opportunity for students to link social science research methods to direct human service practice.

HUSV 3900. Introduction to Social Policy. 4 Hours.
Examines how social policy influences children, family, and community development. Provides a historical overview and a contemporary examination of many social problems, including poverty, health and mental health issues, child welfare, educational inequality, and consequences of juvenile and adult crime. Examines the policies and programs that help or hinder positive individual, family, and community development and considers the role of human service values and ethics on the American response to social policy. Offers students an opportunity to examine and critique the implementation or lack of implementation of formal social policies at the local, state, and federal level and to suggest initiatives to meet the needs of intergenerational families.

HUSV 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HUSV 4700. Senior Seminar in Human Services. 4 Hours.
Examines emerging roles and career options within the human services field. Focuses on self-examination of attitudes and values affecting delivery of services, exploration of ethical issues and dilemmas relevant to human services, grant and funding issues, staff supervision and development within human services agencies, and refinement of group leadership skills.
HUSV 4866. Intercultural Studies through Human Services. 4 Hours.
Focuses on students developing an understanding of the social, political, historical, and economic conditions in settings abroad and the corresponding social service and educational interventions. Uses an intensive, integrated study program that includes lectures, visits to cultural sites and government institutions, and a service-learning experience in a human-services or educational setting. May be repeated without limit.

HUSV 4919. Program Preparation: International Human Services. 1 Hour.
Introduces students to the fundamentals of budgeting and program preparation in the field of human services. Intended to be taken prior to HUSV 4920.

HUSV 4920. International Human Services. 4 Hours.
Examines human service organizations from an international perspective. Through classroom lectures, guest speakers, and field experience, students are exposed to how culturally relevant human service programming is developed/administered. Students participate in lectures, small-group work, and field experience. Field experience consists of a one-week intensive learning experience in an international setting or an equivalent intercultural experience.

HUSV 4945. Leadership and International Program Development. 4 Hours.
Introduces event-planning, program-planning/development, and management skills that are essential to the implementation of domestic and international programs. Critiques leadership models and practices in these settings using theory and case studies. Offers students an opportunity to apply planning theories/models and evaluation techniques in service-learning settings. Considers the elements of successful partnerships and collaborations through the execution of a final project. May be repeated without limit.

HUSV 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

HUSV 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

HUSV 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HUSV 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

HUSV 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HUSV 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

HUSV 4994. Human Services Internship. 6 Hours.
Requires students to fulfill one internship placement during the last two years of the program. Consists of required field site hours and varies according to the students’ interests. Examples of placement sites include community centers, nursing homes, vocational workshops, state and federal agencies for children, and recreational facilities. Experiences are supervised by internship supervisor to maximize the student’s learning opportunities. Fulfills the Arts and Sciences experiential education requirement. May be repeated without limit.

HUSV 5100. Sexual Violence: Counseling, Programs, and Policy. 3 Hours.
Offers an in-depth examination of sexual violence, its effects, and the resources available to assist survivors. Presents an overview of the criminal justice, medical, legal, and counseling systems and the impact these interweaving systems have on survivors. Offers students an opportunity to develop crisis counseling competency through group exercises and experiential activities.

Human Services - CPS (HSV)

HSV 0160. Introduction to Employee Assistance Programs. 3 Hours.
Introduces the conceptual framework of EAPs. Examines the history of EAPs, their essential components, employee education and supervisory training, program models, marketing, and EAP account management. Offers students an opportunity to learn about policy development, legal issues, pricing, and funding EAPs. This course serves as an EAP primer and should be taken as the first course in the certificate program.

HSV 0161. Quantitative and Qualitative Evaluation of EAPs. 3.2 Hours.
Focuses on techniques of client-satisfaction reporting and how to reconcile specific company reports with one’s book of business. Topics include how to audit telephone call centers and instruments and how to audit clinical records with appropriate confidentiality protections, as well as the procedures and instruments for reviews. Management information system reporting, including specific utilization counts and comparing results with a program’s book-of-business data, are broken down by industry type and presented. Emphasizes cost-benefit analysis. Addresses how to determine and calculate cost drivers from health insurance, disability, workers compensation payments, and prescription drug costs.

HSV 0163. Clinical Components of EAP Services. 3.2 Hours.
Focuses on the understanding and management of clinical and service delivery aspects of EAPs. Topics include telephone access, assessment/referral and short-term counseling, appropriate screening instruments, clinical supervision, confidential record keeping, resource referral networks, and counselor credentialing. Includes appropriate protocols for telephone and e-counseling.

HSV 0164. International EAPs. 3.2 Hours.
Explores global trends in EAPs and reviews the work of over twenty-four internationally known EA professionals and programs from a number of other countries and in various settings. Reviews and discusses several EAP service models, both public and private, that are currently in use around the world.

HSV 0165. Addictions in the Workplace. 3.2 Hours.
Approaches the concept of addiction from a disease model perspective. Provides a historical overview of alcohol and substance abuse in the workplace and focuses on the historical role of EAPs in addressing workplace substance abuse and associated negative effects on health and productivity. Surveys and explores newer waves of illegal workplace drug use, eating disorders, gambling, and Internet pornography addiction. Presents effective policy development, procedures for interventions, appropriate screening instruments, and current best practices and psychopharmacological treatments.
HSV 0166. EAP Accreditation/Quality Management. 3.2 Hours.  
Introduces participants to the concept of and procedures for evaluating EAPs. Topics include total quality management and accreditation of EAPs. Presents in detail the accreditation process from the application stage to writing the self-study and reviewing all the standards.

HSV 1100. Introduction to Human Services. 3 Hours.  
Serves as an overview to the field of social work and human services, including the skills, abilities, attitudes, and values necessary to be successful; the range of roles and areas of specialization available to those in this profession (counseling, criminal justice, healthcare administration, advocacy, group work, community services); and current issues impacting the field today. Covers community support, case management, crisis intervention, and biopsychosocial rehabilitation best practices to meet the demands for community-based outreach and prevention and treatment programs.

HSV 1990. Elective. 1-4 Hours.  
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSV 2200. Introduction to Clinical Practice. 3 Hours.  
Presents an overview of the major theoretical approaches to clinical practice. Offers students an opportunity to develop values, skills, dispositions, and competencies needed to serve a wide range of populations, particularly those who are vulnerable. Considers the influence of listening, emotional intelligence, interdisciplinary engagement, and cultural responsiveness on their work with clients.

HSV 2240. Human Behavior in the Social Environment. 3 Hours.  
Offers students a foundation for understanding behavior as it applies within the context of dynamic human systems. Interactions with individuals, families, groups, organizations, and communities are at the core of practice. Explores the interrelationship between human development and behavior across the life span, focusing on the impact of surroundings such as culture, community, and social systems. Introduces research-oriented and practice-based perspectives to enhance students’ development with regard to professional values, ethics, assessment, and intervention strategies. Emphasizes diverse and at-risk populations.

HSV 2990. Elective. 1-4 Hours.  
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSV 3200. Techniques in Individual and Group Counseling. 3 Hours.  
Explores clinical practice with individuals, groups, and families. Focuses on developing 21st-century practice skills relevant in today’s global social and health services market through a variety of classroom methods. Explores theoretical frameworks and their applications in a variety of settings. Emphasizes marginalized, vulnerable, and underserved populations.

HSV 3220. Health Services Organizations, Opportunities, and Challenges. 3 Hours.  
Examines the role of changing systems, such as organizations and communities. Topics include the spectrum of macro practice realms, such as planning, program development, community organizing, advocacy, education, and human services management. Explores a diverse range of macro practice arenas with a wide range of populations. Emphasizes underserved populations such as veterans, children, families, and aging populations.

Explores how social policy influences various aspects of child, family, and community development and welfare. Offers students an opportunity to examine the influence of social policies at the local, state, and federal level, including their impact on service delivery and various populations. Identifies key values, attitudes, skills, and dispositions needed for change agency and to advocate for those who are underserved.

HSV 3350. Research Methods in Human Services. 3 Hours.  
Offers a hands-on examination of social and behavioral science research and how it informs and guides practice. Topics include defining problems of practice, research design, theoretical frameworks, surveying of scholarly literature, and applying ethical principles toward prevention and intervention-based program development and evaluation.

HSV 3400. Human Services Volunteer Practicum. 3 Hours.  
Offers students an opportunity to engage in a community placement in the field of human services/social work, where they obtain hands-on experience to support the development of necessary skills, attitudes, and dispositions in working with others. Students are supported in finding opportunities within their proximity and are expected to volunteer, participate in discussions, and submit the required writing assignments and documentation of completed hours. May be repeated once.

HSV 3990. Elective. 1-4 Hours.  
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSV 4850. Human Services Capstone. 3 Hours.  
Offers students an opportunity to reflect on professional identity and development within the field of human services. Students are supported in finding opportunities to engage in agency settings to bolster professional competencies needed to serve individuals, groups, organizations, and communities in our global 21st century. Students end the course by presenting a professional-brand portfolio to demonstrate mastery of content and to clarify ongoing professional goals.

HSV 4950. Seminar. 1-4 Hours.  
Offers an in-depth study of selected topics.

HSV 4955. Project. 1-4 Hours.  
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

HSV 4983. Topics. 1-4 Hours.  
Covers special topics in human services. May be repeated without limit.

HSV 4990. Elective. 1-4 Hours.  
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSV 4991. Research. 1-4 Hours.  
Offers students an opportunity to conduct research under faculty supervision.

HSV 4992. Directed Study. 1-4 Hours.  
Offers independent work under the direction of members of the department on a chosen topic.

HSV 4993. Independent Study. 1-4 Hours.  
Offers independent work under the direction of members of the department on a chosen topic.

HSV 4994. Internship. 1-4 Hours.  
Provides students with an opportunity for internship work.
HSV 4995. Practicum. 1-4 Hours.
Offers students an opportunity to perform independent work within an administrative setting, working in conjunction with a preceptor. Projects include problem identification, data gathering, analysis of alternatives, and implementation of a plan of action.

HSV 4996. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major.

HSV 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

HSV 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

HSV 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

HSV 6100. Theory and Practice of Human Services. 3 Hours.
Examines the development of human service policies and organizations in the United States. Offers students an opportunity to learn the basic issues in contemporary human services and the basic principles of research utilized by human service professionals.

HSV 6110. Human Services Management and Development. 3 Hours.
Explores the issues of organizational behavior and leadership in human service organizations. Offers students an opportunity to learn about issues in human resource theory, policy, planning, and evaluation.

HSV 6120. Social Inequality, Social Change, and Community Building. 3 Hours.
Examines methods for involving community residents in decision-making systems at the local level. Features ways in which residents are empowered through community-based business and economic development, health and human services, and housing and neighborhood revitalization projects. Offers students an opportunity to learn methods for facilitating community involvement, constructively engaging diverse groups of stakeholders in strategic partnerships, and building communities.

HSV 6160. Introduction to Employee Assistance Programs. 3 Hours.
Introduces the history and conceptual framework of Employee Assistance Programs (EAPs), their essential components, program models, and EAP account management. Offers students an opportunity to learn about policy development, legal issues, pricing, and funding EAPs.

HSV 6162. EAP Services. 4 Hours.
Focuses on managing EAP services and includes familiarizing the participant with the various service options offered by EAPs. Discusses specific work/life offerings, including child care and elder care resources and referral services, legal and financial resources and referral services, wellness programs, organizational behavior services, coaching, mediation, and conflict resolution.

HSV 6163. Clinical Components of EAP Services. 4 Hours.
Focuses on the understanding and management of clinical and service delivery aspects of EAPs. Topics covered include telephone access, assessment/referral and short-term counseling, appropriate screening instruments, clinical supervision, confidential record keeping, resource referral networks, and counselor credentialing. Includes appropriate protocols for telephone and e-counseling.

HSV 6164. International EAPs. 4 Hours.
Explores global trends in EAPs and reviews the work of over twenty-four internationally known EAP professionals and programs from a number of other countries and in various settings. Reviews and discusses several EAP service models, both public and private, that are currently in use around the world.

HSV 6165. Addictions in the Workplace. 4 Hours.
Approaches the concept of addiction from a disease model perspective. Provides a historical overview of alcohol and substance abuse in the workplace and focuses on the historical role of EAPs in addressing workplace substance abuse and associated negative effects on health and productivity. Surveys and explores newer waves of illegal workplace drug use, eating disorders, gambling, and Internet pornography addiction. Presents effective policy development, procedures for interventions, appropriate screening instruments, and current best practices and psychopharmacological treatments.

HSV 6610. Quantitative and Qualitative Evaluation of EAPs. 4 Hours.
Focuses on techniques of client-satisfaction reporting and how to reconcile specific company reports with one’s book of business. Includes how to audit telephone call centers and instruments and how to audit clinical records with appropriate confidentiality protections, as well as the procedures and instruments for reviews. Management information system reporting, including specific utilization counts and comparing results with a program’s book-of-business data, is broken down by industry type and presented. Emphasizes cost-benefit analysis. Addresses the question of how to determine and calculate cost drivers from health insurance, disability, workers’ compensation payments, and prescription drug costs.

HSV 6620. EAP Accreditation/Quality Management. 4 Hours.
Introduces the concept of and procedures for evaluating EAPs. Topics include total quality management and accreditation of employee assistance programs. Presents in detail the accreditation process from the application stage to writing the self-study and reviewing all the standards.

HSV 6630. Research and Evaluation in Human Services. 3 Hours.
Surveys current theoretical and methodological practices across the field of human services and examines the applicability of the scientific research approach to the field of professional human service work. Addresses key approaches and practices in the area of evaluative research, including design, implementation, and assessment.

HSV 6640. Policy Issues in Human Services. 3 Hours.
Examines current social policy issues in the realm of human services. Possible topics include privatization of welfare, trends in mental healthcare, the impact of immigration, issues in education, and issues in reproductive rights.

HSV 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

HSV 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HSV 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

HSV 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

HSV 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.
HUM 6980. Capstone. 1-4 Hours.
Provides students with an opportunity to complete a service-learning project. Covers how to conduct a community needs assessment of a community and how to develop skill and sophistication in assessing community strengths and identifying community needs. The final project requires drafting a program proposal and making policy recommendations.

HUM 6983. Topics. 1-4 Hours.
Covers special topics in human services. May be repeated without limit.

HUM 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

HSV 7961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

HSV 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.

HSV 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

HSV 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

HSV 7980. Capstone. 1-4 Hours.
Provides students with an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

HSV 7983. Topics. 1-4 Hours.
Covers special topics in human services. May be repeated without limit.

HSV 7990. Thesis. 1-4 Hours.
Offers thesis supervision by members of the department.

HSV 7994. Thesis Continuation—PT. 0 Hours.
Offers continuing thesis supervision by members of the department.

HSV 7995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

HSV 7996. Thesis Continuation. 0 Hours.
Offers continuing thesis supervision by members of the department.

HUM 6100. The Philosophical Understanding. 4 Hours.
Surveys the theories and arguments of classical and contemporary philosophers. Emphasizes the skills and techniques of reasoning, stressing applications to issues in diverse professional, personal, and social contexts. Topics include the basis of morality, free will vs. determinism, the existence of God, the problem of suffering, and the nature of knowledge.

HUM 6110. Issues in Historical Thinking. 4 Hours.
Examines the following questions in the context of major issues in current historical research and debate: Where do historical questions come from, and how do we answer them? How do we produce knowledge about historical events and processes? What theoretical models guide historians’ work? Emphasizes interdisciplinary approaches as well as concrete techniques in historical research.

HUM 6120. Issues in Critical Theory. 4 Hours.
Introduces the terms and discourses of literary theory as it is currently practiced and debated and provides the historical context for such practices and debates.

HUM 6240. Historical Perspectives on Current Events. 4 Hours.
Offers students an opportunity to develop an understanding of the historical contexts of contemporary controversies. Topics change from year to year, but generally students work through case books of concentrated readings in selected primary and secondary sources on targeted issues: racism, violence, crime, the abortion debate, and so on. Also designed for students in the education program, the course addresses major issues in history, humanities, and the social sciences. Using the curriculum and materials developed by Educators for Social Responsibility, the course addresses controversial issues in past and present and introduces students to the dilemmas and techniques for effective teaching on difficult issues.

HUM 6245. The Way of World History. 4 Hours.
Focuses on interpreting major patterns and connections in world history through discussion and assignments.

HUM 6250. Public History. 4 Hours.
Examines and analyzes major problems in public history in the United States and the world. Topics include the nature and meaning of national memory and myth; the theory and practice of historic preservation, rural and land preservation, and the organizational structures and activities associated with those efforts; the interrelationship of historical museums and popular culture; the history and organization of historic house museums; historical documentary filmmaking; historical archaeology; in world perspective, interpreting “ordinary” landscapes; and the impact of politics on public history.

HUM 6260. Urban Sociology. 4 Hours.
Discusses theories of the development of urban life. Compares preindustrial and industrialized urban areas. Presents methods for the study of urban social structure and change. Evaluates contemporary metropolitan action programs.

HUM 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

HUM 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

HUM 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

HUM 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.
Industrial Engineering (IE)

IE 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IE 2310. Introduction to Industrial Engineering. 4 Hours.
Provides an overview of the history of industrial engineering and of the most common methods that industrial engineers use to solve problems and design efficient processes. The emphasis is on how these methods are used to study, improve, and/or optimize a product or process. Topics include work design, ergonomic design, engineering statistics, quality engineering, engineering economics, project management, and process optimization. Also discusses the design of the production processes, facilities, and material handling systems. Studies applications in manufacturing, product design, and service industries. Laboratory experiments and written reports are required.

IE 2311. Recitation for IE 2310. 0 Hours.
Provides small group demonstration and hands-on labs for IE 2310.

IE 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IE 3412. Engineering Probability and Statistics. 4 Hours.
Presents probability theory axiomatically, with emphasis on sample space presentation of continuous and discrete random variables. Covers descriptive statistics, expected value of random variables, covariance and correlation, sampling distribution, and point and interval estimations. Introduces hypothesis testing including tests for means, variances, and proportions.

IE 3420. Computers and Information Systems. 4 Hours.
Examines the design and implementation of computer-based information systems. Presents the techniques of the development life cycle of these systems. Introduces the students to available Web tools that are relevant to the use, design, development, and implementation of information systems in the context of the Internet and World Wide Web. Emphasizes the use and applications of information systems in engineering including design and manufacturing. Topics include the value of information, information and decision making, tools of system analysis and design, basic and advanced HTML, and JavaScript.

IE 3425. Engineering Database Systems. 4 Hours.
Examines the representation of data and its creation and management in engineering enterprises. Discusses the client/server model of database access. Presents the fundamentals of data modeling and management, data mining and warehousing, multitier applications, and the use of the SQL query language. Emphasizes the use and applications of database systems in engineering including design and manufacturing. Topics include design schema of tables, records and fields of databases, SQL statements, security issues, and the use of a scripting language such as Perl or Visual Basic.

IE 3426. Recitation for IE 3425. 0 Hours.
Provides small group demonstration and problem solving for IE 3425.

IE 3430. Object Oriented Engineering Applications. 4 Hours.
Examines the object-oriented programming (OOP) paradigm and its use in engineering applications, computations, and problem solving. Presents object-oriented concepts that are used to build these applications. Covers the basics of Java and how to use it in object-oriented engineering programming. Topics include objects, Java programs, GUIs, client/server engineering applications, database access, and problem solving.

IE 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
IE 4510. Simulation Modeling and Analysis. 4 Hours.
Covers process model design and development, validation, and experimentation for discrete-event simulation models. Topics include problem formulation, data collection and analysis, random-variable generation, model development, scenario experimentation, statistical analysis of output, and resultant decision management. Utilizes a major industry-standard simulation software application with animation capabilities. Requires prior completion of IE 3412, MATH 3081, or equivalent.

IE 4512. Engineering Economy. 4 Hours.
Introduces students to economic modeling and analysis techniques for selecting alternatives from potential solutions to an engineering problem. Presents basic methods of economic comparison such as present worth, annual worth, rate of return, and benefit/cost techniques. Studies effects of taxes on investment analysis. Also covers decision tree analysis and statistical decision techniques.

IE 4515. Operations Research. 4 Hours.
Introduces deterministic models including linear programming; duality and postoptimality analysis; transportation and assignment problems; and network flow problems such as the shortest path, minimum spanning tree, and maximum flow.

IE 4516. Quality Assurance. 4 Hours.
Reviews the distributions and statistical approximations commonly applied in statistical quality control methods. Introduces analysis of variance and simple linear regression. Covers basic principles to state-of-the-art concepts and application of statistical process control and design. Applies principles to a variety of products. Topics include product quality measures and controls, Shewhart control charts, quality cost, Pareto analysis, discrete and variable sampling, and military standards in quality control.

IE 4520. Stochastic Modeling. 4 Hours.
Covers the analytical development and solution to stochastic models in operations research. Topics include Markov chains, queuing theory, and dynamic programming.

IE 4522. Human Machine Systems. 4 Hours.
Emphasizes human sensory/motor performance, information processing capabilities, learning, memory, and skilled-task performance. Topics include an introduction to the experiment as a source of knowledge of human performance characteristics; vision, visual performance, visual display design; audition, noise, hearing damage, auditory signals; principles of somesthesia; information processing; signal detection; aging effects; and system development. Environments and equipment are subjected to usability tests that take into account principles of human-computer interaction and human anthropometric characteristics. Laboratory experiences include experimental design, data collection and analysis, and laboratory reports generation.

IE 4523. Lab for IE 4522. 1 Hour.
Accompanies IE 4522. Covers topics from the course through various activities.

IE 4525. Logistics and Supply Chain Management. 4 Hours.
Introduces the analysis, design, control, and operation of logistics and supply chain management systems. Includes the integration of supply chain components, logistics information systems, forecasting, production scheduling, inventory management, transportation and warehousing, and facility location planning.

IE 4530. Manufacturing Systems and Techniques. 4 Hours.
Focuses on manufacturing and design and their impact on each other. Covers the basics of design-manufacturing integration, manufacturing systems, manufacturing processes and techniques, manufacturing automation, and production planning and control. Topics include concurrent engineering, design for assembly, design for manufacturability, rapid prototyping, mechanical tolerancing, bill of materials, group technology, computer-aided process planning, NC part programming, programmable logic controllers, flexible manufacturing systems, computer-integrated manufacturing, and just-in-time philosophy. Topics also include traditional manufacturing processes such as casting, forming, machining, welding, molding, and particulate processing, and nontraditional manufacturing processes such as electrical discharge machining, laser machining, and water-jet machining. Students are required to conduct manufacturing-related experiments in the manufacturing lab to gain hands-on experience.

IE 4531. Lab for IE 4530. 1 Hour.
Accompanies IE 4530. Covers topics from the course through various activities.

IE 4600. Systems Design for Sustainability. 4 Hours.
Covers the fundamental process of designing and building systems, from systems identification to the entire systems life cycle. Discusses sustainability, functionality, and capability of systems with respect to systems’ objectives. Presents factors affecting systems design, operation, and sustainability. Focusing on design of sustainable systems and improvement of systems, encompasses communications, defense, logistics, manufacturing, transportation, and others. Discusses concept and preliminary design phases to detail, production, and operation phases of design. Seeks to provide the concepts, methodologies, models, and tools needed to understand and implement a total life-cycle approach to systems analysis. Includes different categories of systems, various applications of analytical methods, and related problems and cases. Students who do not meet course prerequisites may seek permission of instructor.

IE 4615. Expert Systems and Neural Networks. 4 Hours.
Covers the theory and applications of expert systems and neural networks in engineering. Topics include knowledge representation (semantic networks, frames, production rules, and logic systems), problem-solving methods (heuristic search algorithms, forward and backward chaining, constraint handling, truth, and maintenance), approximate reasoning methods (Bayesian, Dempster-Shafer, fuzzy logic, and certainty factors), and expert system shells. Reviews background material on important neural network architectures such as feed-forward neural networks, Kohonen’s feature maps, radial basis function networks, and adaptive resonance theory networks. Discusses neural network applications in several areas including group technology; part family formation; manufacturing systems design, process, and machine tool monitoring and diagnosis, system identification and control; and product inspection.

IE 4625. Facilities Planning and Material Handling. 4 Hours.
Explores engineering tools, techniques, and concepts for the design of facilities. The term facility is defined broadly. Industrial plants, schools, hospitals, or places in which things are produced or services are provided to a customer are all considered facilities. Provide students with a broad but practical understanding of the facilities planning and design process. The critical nature of material handling is discussed and approaches to designing optimal handling systems are examined. The tools of operations, research, statistical methods, and software applications are the focus of the problem-solving activities.
IE 4699. Special Topics in Industrial Engineering. 4 Hours.
Focuses on advanced industrial engineering project agreed upon between the student and instructor. May be repeated without limit.

IE 4710. Industrial Engineering Research 1. 4 Hours.
Focuses on scientific research in industrial engineering agreed upon between the student and instructor. May be repeated without limit.

IE 4711. Industrial Engineering Research 2. 4 Hours.
Focuses on in-depth scientific research in industrial engineering agreed upon between the student and instructor. May be repeated without limit.

IE 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

IE 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

IE 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IE 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

IE 4992. Directed Study. 1-4 Hours.
Offers theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

IE 4993. Independent Study. 1-4 Hours.
Offers theoretical or experimental work under individual faculty supervision. May be repeated without limit.

IE 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

IE 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using the course to fulfill their experiential education requirement. May be repeated without limit.

IE 5374. Special Topics in Industrial Engineering. 4 Hours.
Offers topics of current interest in industrial engineering. May be repeated up to two times.

IE 5400. Healthcare Systems Modeling and Analysis. 4 Hours.
Discusses the key functions of healthcare operations management, such as patient and process flow, process improvement, facility layout, staffing and scheduling, capacity planning, and resource allocation. Focuses on analysis, design, management, and control of health systems and processes that are necessary to provide clinical care. The applications of systems engineering methods, such as optimization, simulation, and queuing models, are discussed through papers and case studies in different care settings (e.g., hospitals, emergency departments, surgery departments, and outpatient clinics) for different diseases (e.g., diabetes, cancer, mental health, cardiovascular disease). Uses spreadsheet tools to model and solve simulation and optimization problems. Requires equivalent course work if prerequisites are not met.

IE 5500. Systems Engineering in Public Programs. 4 Hours.
Introduces the design, development, analysis, and application of mathematical modeling for addressing public programs and societal needs. Systems engineering and mathematical models form the basis for decision making in both public and private applications. Focusing on societal applications, offers students an opportunity to discover how to incorporate public objectives and characteristics of large systems in the development of models and policies. Examines applications in the operation of public programs (e.g., public health systems, government programs) and public safety (e.g., security, emergency preparedness, and disaster response). Modeling techniques include game theory, data envelopment analysis, cost-benefit analysis, simulation, differential equations, and stochastic optimization. Requires equivalent course work if prerequisites are not met.

IE 5617. Lean Concepts and Applications. 4 Hours.
Designed to give students an understanding of the fundamentals of lean thinking and train them in applying this knowledge to practical problems. Uses case studies from different disciplines to help students learn lean principles and develop skills to implement them in practice. Covers theory and applications of lean six sigma, in which lean focuses on waste reduction while six sigma strives to eliminate defects. A knowledge-driven and customer-focused approach to creating value, lean thinking calls for process changes to eliminate waste, shorten product delivery time, improve product quality, and curtail costs. Key tenants of lean thinking are value, value stream, flow, pull, and perfection. Lean thinking is imperative for organizations aspiring to stay competitive by creating and delivering products in less time while improving customer satisfaction.

IE 5620. Mass Customization. 4 Hours.
Provides students with conceptual understanding and implementation strategies of mass customization (MC). MC is both a business and production paradigm where a company provides the customers with goods and services that suit their individual needs but does so with the efficiency and costs of mass production. MC is important in many sectors including computers, automotive, healthcare, banking, insurance, and tourism. It is based on principles of industrial engineering, mechanical engineering, management science, and marketing. Topics include typology of mass-customized production systems, manufacturing processes for MC, information needs of MC, customer focus, marketing issues, technology enablers, implementation methods, and case studies. Methodology includes lectures, case discussions, plant visits, guest lectures, and a term project. Cross-disciplinary activities, particularly between engineering and business students, are encouraged wherever possible.

IE 5630. Biosensor and Human Behavior Measurement. 4 Hours.
Emphasizes the measurement of human behavior in complex human-machine interaction. Topics include introduction of complex human-machine interactions; research methods in complex human-machine interactions; various kinds of human psychophysiological signals/cues, including physiological cues, facial expressions, eye-gaze movement, head movement, contextual cues; human cues and behavior relationship; transducers and measurement for these human cues/signals; basic principles of biosensors; general classification of biosensors; current technologies for building biosensors; conventional transducers and new technologies including micro-/nanotechnology; general systematic design process for biosensors; application of biosensors to understand human behavior in human-machine interactions. Also introduces the latest relevant research advancements in sensor fusion, affective computing, and emotion recognition.
IE 5640. Data Mining for Engineering Applications. 4 Hours. 
Introduces data mining concepts and statistics/machine learning techniques for analyzing and discovering knowledge from large data sets that occur in engineering domains such as manufacturing, healthcare, sustainability, and energy. Topics include data reduction, data exploration, data visualization, concept description, mining association rules, classification, prediction, and clustering. Discusses data mining case studies that are drawn from manufacturing, retail, healthcare, biomedical, telecommunication, and other sectors.

IE 5976. Directed Study. 1-4 Hours. 
Offers theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

IE 5978. Independent Study. 1-4 Hours. 
Offers theoretical or experimental work under individual faculty supervision. May be repeated without limit.

IE 5984. Research. 1-4 Hours. 
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

IE 6200. Engineering Probability and Statistics. 4 Hours. 
Studies fundamental concepts of probability. Topics include events, sample space, and discrete and continuous random variables; density functions, mass functions, cumulative probability distributions, and moment generating functions; expectation of random variables; common discrete and continuous probability distributions including binomial, Poisson, geometric, uniform, exponential, and normal; multivariate probability distributions, covariance, and independence of random variables; sampling and descriptive statistics; and parameter estimation, confidence intervals, and hypothesis testing. Also introduces analysis of variance. Requires knowledge of multivariate calculus.

IE 6300. Manufacturing Methods and Processes. 4 Hours. 
Focuses on manufacturing and its relationship to design and computers. Examines the relationship between design and various aspects of manufacturing. Covers manufacturing systems, manufacturing processes, bill of materials, group technology, mechanical tolerancing, QC, SPC, QPC, TQM, process planning and CAPP, NC part programming, supply chain management, production scheduling, JIT, lean manufacturing, flexible manufacturing systems, CIM cells, and manufacturing control via, say, programmable logic controllers.

IE 6962. Elective. 1-4 Hours. 
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IE 6964. Co-op Work Experience. 0 Hours. 
Provides eligible students with an opportunity for work experience. May be repeated without limit.

IE 6965. Co-op Work Experience Abroad. 0 Hours. 
Provides eligible students with an opportunity for work experience abroad. May be repeated without limit.

IE 7200. Supply Chain Engineering. 4 Hours. 
Presents modern quantitative techniques for designing, analyzing, managing, and improving supply chains using deterministic and probabilistic models. Topics include a macro view of supply chains, demand forecasting, aggregate planning, sequencing and scheduling, inventory analysis and control, materials requirement planning, pricing and revenue management, contracts decisions, transportation decisions, location and distribution decisions, supplier selection methods, and global supply chains.

IE 7215. Simulation Analysis. 4 Hours. 
Covers elementary queueing models, simulation and modeling, simulation model design, a survey of simulation languages with one language covered in detail, input data analysis and distribution fitting, model verification and validation, output analysis and transient/steady-state response, terminating/nonterminating systems, model experimentation and optimization, random number/random variate generation, and variance reduction techniques.

IE 7255. Manufacturing Processes. 4 Hours. 
Covers the structures of metals, polymers, and ceramics and their manufacturing processes. Manufacturing processes include casting, forming, machining, welding, molding, and particulate processing. Discusses nontraditional manufacturing processes including electrical discharge machining, laser machining, and water jet machining. Also covers manufacturing processes for the electronics industry, such as processing integrated circuits, and electronic assembly and packaging.

IE 7270. Intelligent Manufacturing. 4 Hours. 
Covers several advanced and contemporary topics in manufacturing. Includes applications of computational methods including experts systems, neural networks, and multiagents in manufacturing. Discusses the methods related to distributed and Web-enabled manufacturing.

IE 7275. Data Mining in Engineering. 4 Hours. 
Covers the theory and applications of data mining in engineering. Reviews fundamentals and key concepts of data mining, discusses important data mining techniques, and presents algorithms for implementing these techniques. Specifically covers data mining techniques for data preprocessing, association rule extraction, classification, prediction, clustering, and complex data exploration. Discusses data mining applications in several areas, including manufacturing, healthcare, medicine, business, and other service sectors. Students who do not meet course prerequisites may seek permission of instructor.

IE 7280. Statistical Methods in Engineering. 4 Hours. 
Discusses statistical models for analysis and prediction of random phenomena. Topics include review of descriptive statistics and hypothesis testing, linear models, both regression and ANOVA. Introduces design of experiments. Covers experiments with single and multiple factors of interest, and considers experiments with high-order experimental restrictions.

IE 7285. Statistical Quality Control. 4 Hours. 
Designed to study the fundamental concepts of quality planning and improvements. Studies analysis and application of modern statistical process control methods including cusum, EWMA, multivariate, and modified control charts. Covers inspection error and design of sampling plans. Topics include software quality assurance, and study of the concepts of Deming, Ishikawa, Feigenbun, and Taguchi’s approach in quality planning, organization, and improvement.

IE 7290. Reliability Analysis and Risk Assessment. 4 Hours. 
Studies principles of the methods of risk assessment and reliability analysis including fault trees, decision trees, and reliability block diagrams. Discusses classical, Bayesian, and median rank methods for analysis of components and systems reliability. Presents various factors that determine the stress and strength of components and their impact on system reliability. Uses practical applications, examples, and problems to cover a broad range of engineering fields, such as mechanical, electrical, industrial, computer, structures, and automatic control systems.
IE 7315. Human Factors Engineering. 4 Hours.
Offers students an opportunity to acquire the necessary knowledge and skills to recognize and analyze existing or potential human factors problems and to identify, design, and possibly implement feasible solutions. Includes introduction to human factors and ergonomics; engineering anthropometry and biomechanics; physiology related to human factors and workstation design; cognition and information processing; decision making, attention, and workload; human error and accidents; human-machine interface design; controls and displays; and human factors applications in transportation, aerospace, consumer product design, and so forth.

IE 7374. Special Topics in Industrial Engineering. 4 Hours.
Offers topics of interest to the staff member conducting this class for advanced study. May be repeated without limit.

IE 7440. Industrial Engineering Leadership Challenge Project 1. 4 Hours.
Offers students an opportunity to develop and present a plan for the demonstration of a marketable technology product or prototype with an industrial-engineering focus. Constitutes the first half of a thesis-scale project in technology commercialization. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological and engineering depth and fostering the student's leadership development.

IE 7442. Industrial Engineering Leadership Challenge Project 2. 4 Hours.
Continues IE 7440, further developing a thesis-scale project in technology commercialization. Offers students an opportunity to demonstrate their development of a marketable technology product or prototype with an industrial engineering focus and produce a written documentary report on the project to the satisfaction of an advisory committee. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student's technological and engineering depth and fostering the student's leadership development.

IE 7615. Neural Networks in Engineering. 4 Hours.
Covers the theory and applications of neural networks in engineering. Reviews basics of machine learning, discusses important neural network architectures, and presents neural network training methods and algorithms. The specific neural network models covered in this course include feedforward neural networks, radial basis function networks, support vector machines, self-organizing feature maps, and recurrent networks. Discusses neural network applications in several areas including manufacturing, healthcare, medicine, business, and diagnostics and prognostics.

IE 7945. Master's Project. 4 Hours.
Offers theoretical or experimental work under individual faculty supervision.

IE 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IE 7978. Independent Study. 1-4 Hours.
Offers theoretical or experimental work under individual faculty supervision. An independent study must be petitioned and approved by the academic advisor. The petition must clearly state the reason for taking the course; a brief description of goals; as well as the expected outcomes, deliverables, and grading scheme. Master's degree students in thesis or project options are not eligible to take independent study.

IE 7990. Thesis. 1-8 Hours.
Offers analytical and/or experimental work conducted under the direction of the faculty in fulfillment of the requirements for the degree. Requires first-year students to attend a graduate seminar program that introduces the students to the methods of choosing a research topic, conducting research, and preparing a thesis. Requires successful completion of the seminar program. May be repeated without limit.

IE 7994. Thesis Continuation—Part Time. 0 Hours.
Continues thesis work conducted under the supervision of a departmental faculty member. May be repeated without limit.

IE 7996. Thesis Continuation. 0 Hours.
Continues thesis work conducted under the supervision of a departmental faculty member.

IE 8960. Candidacy Preparation—Doctoral. 0 Hours.
Offers students an opportunity to prepare for the PhD qualifying exam under faculty supervision. Intended for students who have completed all required PhD course work and have not yet achieved PhD candidacy; students who have not completed all required PhD course work are not allowed to register for this course. May be repeated once.

IE 8964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

IE 8986. Research. 0 Hours.
Offers students an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

IE 9000. PhD Candidacy Achieved. 0 Hours.
Indicates successful completion of program requirements for PhD candidacy.

IE 9986. Research. 0 Hours.
Offers students an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

IE 9990. Dissertation. 0 Hours.
Offers dissertation supervision under individual faculty supervision. May be taken twice for course credit. May be repeated once.

IE 9996. Dissertation Continuation. 0 Hours.
Offers continuing dissertation supervision under individual faculty supervision. May be repeated without limit.

Information Assurance (IA)

IA 5001. Cyberspace Technology and Applications. 3 Hours.
Seeks to provide a systematic understanding of cyberspace technology and applications deployed in the global digital infrastructure. Covers topics in PC hardware architectures, server architectures, and operating systems. Designed to provide an understanding of computer and networking standards, such as Open Systems Interconnection Model and wireless family of IEEE standards dealing with local area networks and metropolitan area networks. Discusses relational database technology and storage systems. Gives an overview of virtualization technologies and cloud computing models. Students not in the information assurance ALIGN program may require instructor permission to enroll.
IA 5002. Concrete Mathematics. 3 Hours.
Offers students an opportunity to obtain a systematic understanding of mathematics necessary for mastering cyberspace tools and methods. Seeks to train students in mathematical concepts and the pragmatic use of these concepts in the field of information assurance and cybersecurity. Covers theory and hands-on exercises. Combines lectures with computer-based examples and assignments. Students not in the information assurance ALIGN program may require instructor approval for enrollment.

IA 5004. Introduction to Cyberspace Programming 1. 3 Hours.
Offers students an opportunity to obtain a systematic understanding of cyberspace programming languages and methods. Seeks to train students in Python using command-line interface-based editors and compilers, as well as integrated development environments, with industry-standard operating systems running on virtual machines. Trains students by implementing programming principles and methods, spanning the evolution of computer systems. Combines lectures with multiple computer-based exercises. Students not in the information assurance ALIGN program may require instructor approval for enrollment.

IA 5010. Foundations of Information Assurance. 4 Hours.
Builds a common cross-disciplinary understanding in the foundations of information assurance. Presents an overview of basic principles and security concepts related to information systems, including workstation security, system security, and communications security. Introduces information security via database technology. Discusses legal infrastructure such as DMCA, Telecommunications Act, wire fraud, and other ethical issues. Covers security methods, controls, procedures, economics of cybercrime, criminal procedure, and forensics. Describes the use of cryptography as a tool, software development processes, and protection. Preq. Restricted to students in the College of Computer and Information Science and in the College of Engineering or by permission of instructor.

IA 5040. Introduction to Cyberspace Programming. 4 Hours.
Seeks to provide a systematic understanding of cyberspace programming languages and methods. Trains students in Python and C using command-line interface-based editors and compilers, as well as integrated development environments, with industry-standard operating systems running on virtual machines. Offers students an opportunity to implement programming principles and methods, spanning the evolution of computer systems. Lectures are combined with multiple computer-based exercises. Preq. Restricted to students in the College of Computer and Information Science and in the College of Engineering or by permission of instructor.

IA 5050. Data Mining in Cyberspace. 4 Hours.
Focuses on the basics of the technical, legal, social, and ethical issues implicit in commercial data mining ventures. Introduces the key concepts of data science with specific emphasis on applications in information assurance and the ethical treatment of privacy in data mining. Centers on principles and methods covering the process from envisioning the problem to applying data science techniques to deploy the results to improve information assurance. Topics include an introduction of canonical data mining tasks, spam and fraud detection, Sybil attacks, privacy in data mining, privacy in social networks, and management of information assurance in data science projects. Preq. Restricted to students in the College of Computer and Information Science and in the College of Engineering or by permission of instructor.

IA 5100. Computer Systems and Networks. 4 Hours.
Introduces the basic concepts underlying computer operating systems and computer networks. Covers the basic structure of an operating system such as application interfaces, processes, threads, synchronization, interprocess communication, processor allocation, deadlocks, memory management, file systems, and input/output control. Introduces network architectures, network topologies, network protocols, layering concepts (for example, ISO/OSI, TCP/IP reference models), communication paradigms (point-to-point vs. multicast/broadcast, connectionless vs. connection oriented), and networking APIs (sockets). Uses examples from real operating systems and networks (UNIX, MSDOS, Windows, TCP/IP, Ethernet) to reinforce concepts.

IA 5120. Applied Cryptography. 4 Hours.
Surveys the principles and the practices of cryptography. Overviews the core cryptographic algorithms: symmetric encryption schemes (e.g., DES and AES); public key cryptosystems (e.g., RSA and discrete logarithm); and hash functions (e.g., the SHA family). Discusses core information assurance building blocks, such as authentication, digital signatures, key management, and digital certificates. Finally, applies these concepts to important security architectures, including the IP network stack (e.g., IPsec and SSL/TLS), the cellular system, and broadcast media. Preq. Restricted to students in the College of Computer and Information Science and in the College of Engineering or by permission of instructor.

IA 5130. Computer System Security. 4 Hours.
Explores issues involved in the security of computer systems. Topics include security models, authentication issues, access control, intrusion detection, and damage control. Includes case studies and laboratory exercises. Preq. Restricted to students in the College of Computer and Information Science and in the College of Engineering or by permission of instructor.

IA 5131. Lab for IA 5130. 0 Hours.
Offers small-group laboratory format to cover lab requirements in IA 5130.

IA 5150. Network Security Practices. 4 Hours.
Explores issues involved in the security of computer networks. Topics include firewalls, viruses, virtual private networks, Internet security, and wireless security. Includes case studies and laboratory exercises. Preq. Restricted to students in the College of Computer and Information Science and in the College of Engineering or by permission of instructor.

IA 5151. Lab for IA 5150. 0 Hours.
Offers a small-group laboratory format to cover lab requirements for IA 5150.

IA 5200. Security Risk Management and Assessment. 4 Hours.
Creates the opportunity for competency in the development of information security policies and plans including controls for physical, software, and networks. Discusses different malicious attacks, such as viruses and Trojan horses, detection strategies, countermeasures, damage assessment, and control. Covers information system risk analysis and management, audits, and log files. Uses case studies, site visits, and works with commercial products. Preq. CS 2550, IA 5010, or graduate standing; restricted to junior, senior, and graduate students in the College of Computer and Information Science or by permission of instructor.
IA 5210. Information System Forensics. 4 Hours.
Designed to allow students to explore the techniques used in computer forensic examinations. Examines computer hardware, physical and logical disk structure, and computer forensic techniques. Conducts hands-on experiences on DOS, Windows operating systems, Macintosh, Novell, and Unix/Linux platforms. Builds on basic computer skills and affords hands-on experience with the tools and techniques to investigate, seize, and analyze computer-based evidence using a variety of specialized forensic software in an IBM-PC environment. Preq. CS 2550, IA 5010, or graduate standing; restricted to junior, senior, and graduate students in the College of Computer and Information Science and in the College of Engineering or by permission of instructor.

IA 5211. Lab for IA 5210. 0 Hours.
Offers a small-group laboratory format to cover lab requirements for IA 5210.

IA 5240. Cyberlaw: Privacy, Ethics, and Digital Rights. 4 Hours.
Describes the legal and ethical issues associated with information security including access, use, and dissemination. Emphasizes legal infrastructure relating to information assurance, such as the Digital Millenium Copyright Act and Telecommunications Decency Act, and emerging technologies for management of digital rights. Examines the role of information security in various domains such as healthcare, scientific research, and personal communications such as email. Examines criminal activities such as computer fraud and abuse, desktop forgery, embezzlement, child pornography, computer trespass, and computer piracy. Preq. (a) CS 2550, IA 5010, or graduate standing and (b) junior, senior, or graduate standing; restricted to students in the College of Computer and Information Science and in the College of Engineering or by permission of instructor.

IA 5241. Information Assurance Readings in Cyber Law. 1 Hour.
Involves conducting research on a number of cyber law topics with a focus on how these topics specifically apply to the information assurance professional. Topics include banking/financial services, healthcare, cyber crime, copyright, and information security. Includes weekly summaries of topical readings with posted comments. Offers students an opportunity to present at least one completed topic/paper for class discussion and to research and post blog submissions to the professor’s blog on relevant and news worthy cyber law topics.

IA 5250. Decision Making for Critical Infrastructure. 4 Hours.
Focuses on the art and science of security program management leadership in the context of critical infrastructure protection programs. Includes selected readings, review of decision-making models in crisis, lectures and insights from accomplished leaders in infrastructure protection, and examination of the students’ own unique background and experiences. Trains students on the interaction of vulnerabilities, threats, and countermeasures and how to apply this knowledge to the protection of critical infrastructure using research and analysis of national and global strategies, historical and current legislation, and policies. Also seeks to give students a working knowledge of federal, state, and private-sector critical infrastructure protection resources and programs. Preq. Restricted to students in the College of Computer and Information Science and in the College of Engineering or by permission of instructor.

IA 5976. Directed Study. 1-4 Hours.
Seeks to provide information assurance (IA) students with the training experience of working on a specific IA project under the direction of an IA instructor. The instructor provides students with a plan of seminar sessions, including lectures, research, and development of project deliverables and with direction to complete the course. May be repeated without limit.

IA 5978. Independent Study. 2-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

IA 5984. Research. 2-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

IA 6120. Software Security Practices. 4 Hours.
Explores the principles and methodologies for addressing software security risk issues in organizations. Offers students an opportunity to learn software security vulnerabilities and to create software solutions to address software security issues in accordance with information assurance requirements and in compliance with U.S. and international laws, federal systems guidelines, standards, directives, and industry best practices. Preq. Restricted to students in the College of Computer and Information Science and in the College of Engineering or by permission of instructor.

IA 6121. Lab for IA 6120. 0 Hours.
Offers a small-group laboratory format to cover lab requirements for IA 6120.

IA 6960. Exam Preparation—Master’s. 0 Hours.
Offers the student the opportunity to prepare for the master’s qualifying exam under faculty supervision.

IA 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IA 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

IA 6966. Practicum. 2-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

IA 7900. Capstone Project/Seminar. 4 Hours.
Draws together candidates from diverse backgrounds (technical, legal, and/or law enforcement) in a collaborative activity to address one or more security issues from an integrated perspective. Requires a project proposal, generally industrially oriented, to be submitted and accepted prior to the semester in which the project is to be undertaken. Preq. Restricted to students in the College of Computer and Information Science or by permission of instructor.

IA 7962. Elective. 2-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IA 7976. Directed Study. 2-4 Hours.
Focuses on student examining standard information assurance material in fresh ways or new information science material that is not covered in formal courses. May be repeated without limit.

IA 7978. Independent Study. 2-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

IA 7990. Thesis. 2-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

IA 7994. Thesis Continuation—Part Time. 0 Hours.
Offers continued thesis work conducted under the supervision of a departmental faculty. May be repeated without limit.
IA 7996. Thesis Continuation. 0 Hours.
Offers continued thesis work conducted under the supervision of a departmental faculty.

IA 8660. Research Project in National Information Security. 4 Hours.
Engages students in national cybersecurity/information systems security problems. Offers students an opportunity to learn how to apply research techniques, think clearly about these issues, formulate and analyze potential solutions, and communicate their results. Working in small groups under the mentorship of technical clients from government and industry, each student has an opportunity to formulate, carry out, and present original research on current cybersecurity/information assurance problems of interest to the nation. Requires permission of instructor. May be repeated once.

IA 8964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

IA 8982. Readings. 1-4 Hours.
Offers selected readings under the supervision of a faculty member. May be repeated without limit.

IA 9990. Dissertation. 4 Hours.
Offers selected work with the agreement of a thesis supervisor. May be repeated once.

IA 9996. Dissertation Continuation. 0 Hours.
Continues work with the agreement of a thesis supervisor. May be repeated without limit.

Information Resources Management - CPS (IRM)

IRM 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

IRM 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

IRM 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

IRM 6110. Network Security Management. 4 Hours.
Examines planning strategically to achieve the appropriate level of security, including cost-effectiveness—selecting an appropriate solution; scalability—adapting to expanding requirements; and flexibility—identifying compatible solutions. With the proliferation of knowledge over the Internet and other networks, organizations are always in danger of data corruption, theft, or loss. Topics include security architectures, including encryption, secure logon, control network access, precluding physical tampering, and authentication/nonrepudiation. Finally, examines the business benefit of information security, including return on investment and the role of audit in security management.

IRM 6120. Emerging Technologies and Their Application. 4 Hours.
Focuses on emerging technologies and the strategic value they bring to an organization, including competitive advantage, efficiencies, and improved internal and external communications. Technology evolutions have always expanded communication possibilities and access to information and information services. Today, new applications and services based on emerging technologies offer advanced possibilities to facilitate everyday routines and improve business processes. Technologies covered include wireless connections, protocols, bandwidth, voice and data integration, next-generation networks, and Web services. Topics change as new technologies emerge.

IRM 6130. Enterprise Application Integration. 4 Hours.
Focuses on various alternative, and often competing, methodologies in customer, business, and application integration technologies and e-business solution frameworks. The problem of integrating existing and new applications to create solutions with reasonable costs and effort is one of today’s most challenging needs in the IT industry. Illustrates application to real business problems with specific examples of integrated industry solutions, such as: (1) providing a major healthcare corporation with real-time transaction performance for their SAP R/3 Oracle/UNIX implementation; (2) a supply chain solution for an electronics manufacturer showing how subcontracted manufacturing processes can be integrated across the Web to the primary manufacturer; and (3) an order processing/CRM interenterprise customer-facing solution showing effective “make or buy” delivery response to customers and vendors outside of the core enterprise.

IRM 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

IRM 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IRM 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

IRM 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

IRM 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

IRM 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

IRM 6983. Topics. 1-4 Hours.
Covers special topics in information resources management. May be repeated without limit.

IRM 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

Information Science (IS)

IS 1500. Introduction to Web Development. 4 Hours.
Introduces Web development and networks. Discusses HTML5, CSS, and client-side scripting with JavaScript and jQuery; embedding of media: images, video, and sound; the use of back-end data (either from databases or XML) to create dynamic Web sites; Web hosting, operating systems, and network infrastructure; and the automation of website construction using content management systems. Considers the construction of Web forms and the underlying protocols for information exchange: HTTP and HTTPS. Emphasizes the need for testing both correctness and usability. Offers a brief introduction to server-side scripting. Surveys the security problems faced by dynamic websites. Hands-on laboratory work is built into the course. May be taken as a general elective by CCIS students but does not count as a CS or IS elective.

IS 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
Introduces information science. Examines how information is used to solve problems both for individuals and organizations and how information systems interface with their users. Considers the technical, economic, social, and ethical issues that arise when working with information. Discusses how to collect, manage, classify, store, encode, transmit, retrieve, and evaluate data and information with appropriate security and privacy. Storage models include lists, tables, and trees (hierarchies). Examines applications of information: visualization, presentation, categorization, decision making, and predictive modeling. Introduces key concepts in probability. Explains Bayesian analysis for information classification and modeling. Teaches intensive programming in Excel, including VBA macro development. Introduces programming in R.

IS 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IS 3500. Information System Design and Development. 4 Hours.
Discusses the planning, analysis, design, and implementation of computer-based information systems, focusing on the methodologies and procedures used in organizational problem solving and systems development. Topics include the systems development life cycle; project management; requirements analysis and specification; feasibility and cost-benefit analysis; logical and physical design; prototyping; and system validation, deployment, and postimplementation review. Additional topics may include platform and database selection and integration issues; CASE tools; end-user training; maintenance; and object-oriented analysis and design. IS 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

IS 4200. Information Retrieval. 4 Hours.
Introduces information retrieval (IR) systems and different approaches to IR. Topics covered include evaluation of IR systems; retrieval, language, and indexing models; file organization; compression; relevance feedback; clustering; distributed retrieval and metasearch; probabilistic approaches to IR; Web retrieval; filtering, collaborative filtering, and recommendation systems; cross-language IR; multimedia IR; and machine learning for IR.

IS 4300. Human Computer Interaction. 4 Hours.
Studies the principles of human-computer interaction and the practice of user interface design. Discusses the major human information processing subsystems (perception, memory, attention, and problem solving), and how the properties of these systems influence the design of interactive systems. Reviews guidelines and specification languages for designing user interfaces, with an emphasis on tool kits of standard graphical user interface (GUI) objects. Introduces usability metrics and evaluation methods. Additional topics may include World Wide Web design principles and tools; wireless/mobile device interfaces; computer-supported cooperative work; information visualization; and virtual reality. Course work includes designing user interfaces, creating working prototypes using a GUI tool kit, and evaluating existing interfaces using the methods studied.

IS 4500. Software Quality Assurance. 4 Hours.
Introduces the main concepts and techniques of software quality assurance (SQA). Quality assurance and control are integral elements of the software development life cycle. Examines the difference between quality assurance and quality control and explores techniques used for both. Focuses on practical approaches framed within industry standards. Presents processes and techniques that ensure the delivery of reliable software to end users. Covers quality factors, testing strategies, writing of test cases and test plans, SQA standards, defect tracking, and automated testing platforms. Discusses quality control practices for verification and validation, including reviews, inspections, audits, and metrics. While the course concentrates on black-box testing, white-box testing and defensive coding strategies are addressed as well.

IS 4600. Software Project Management. 4 Hours.
Covers both technical and managerial aspects of software project management, which is critical to the success of software projects. Emphasizes the differences between traditional software life-cycle models and modern iterative and agile practices. Includes project manager responsibilities, stakeholder management, staffing, resource allocation, estimation, activity scheduling, budget control, quality management, risk assessment, communication, scope control, and project metrics. Introduces standard project management tools combined with control mechanisms including PERT, burn-down, and Gantt charts. Examines these methods in the context of standard frameworks, including the Project Management Body of Knowledge (PMBOK), applicable IEEE Standards, ISO 9001, CMMI, Unified Process, Scrum, and Kanban-driven continuous delivery models.

IS 4700. Social Information Systems. 4 Hours.
Analyzes popular social information systems, including online social networks, blogging platforms, recommendation engines, and content sharing sites. Studies the objectives, user interaction modes, policies, and design issues for social information systems. Introduces relevant theories, both computational and sociological, that model the behavior of social networks and their users. Offers students an opportunity to learn to apply such models, both theoretically and by analyzing real-world interaction data from social information systems, to answer questions such as: What causes users to form links? What mechanisms work best for encouraging collaboration? How does information spread through cyberspace? How can security and privacy goals be achieved?

IS 4800. Empirical Research Methods. 4 Hours.
Evaluates and conducts empirical research, focusing on students’ use of empirical methods to study the effectiveness and organizational/social impact of information systems and technologies. Empirical research involves a number of broad steps including identifying problems; developing specific hypotheses; collecting data relevant to the hypotheses; analyzing the data; and considering alternative explanations for the empirical findings. Some of the most commonly used research techniques, such as surveys, experiments, and ethnographic methods, are discussed. Additional topics include the ethics of data collection and experimentation in behavioral science. Although the course focuses primarily on the relationship between formulating research questions and implementing the appropriate methods to answer them, students can expect to apply the statistical techniques learned in the course prerequisites.

IS 4900. Information Science Senior Project. 5 Hours.
Helps students develop a sophisticated understanding of the interaction between technology and its context. Students write an in-depth research paper that reflects upon and analyzes the observations and experiences of the field study using the information science literature to interpret and better understand those experiences. Students then participate in a seminar in which they present the results of their research.
Covers the basics of Java programming such as arrays, control structures, class definitions, class hierarchies, inheritance, objects, streams, constructors, collections, and GUI components. Describes how to develop and execute Java applications and incorporates several programming projects, which strengthen the understanding of object-based and event-driven programming. Provides the student with the opportunity to achieve a strong working competency in object-oriented programming using the Java programming language.

INFO 5101. Lab for INFO 5100. 0 Hours.
Accompanies INFO 5100. Provides additional instruction in Java programming.

INFO 5976. Directed Study. 1-4 Hours.
Offers theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

INFO 5978. Independent Study. 1-4 Hours.
Offers work performed under individual faculty supervision. May be repeated without limit.

INFO 5984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

INFO 6150. Web Design and User Experience Engineering. 4 Hours.
Exposes students to both conceptual and technical aspects of Web design. User experience design is the discipline of creating a useful and usable website or application that is easily navigated and meets the needs of both the site owner and its users. Covers Web standards and best practices. Studies the fundamental concepts, techniques, practices, work flows, and tools associated with the practice of user-experience design in Web interfaces. Offers students an opportunity to learn the core principles of information architecture, usability, marketing hierarchy, and user experience for contextual, value-driven websites. Additional areas of focus include typography, color theory and composition, responsive design, CSS3 concepts, basic scripting, and JavaScript libraries to create functional, effective, and visually appealing websites.

INFO 6205. Program Structure and Algorithms. 4 Hours.
Presents data structures and related algorithms, beginning with a brief review of dynamic memory allocation. Discusses the fundamental data structures in detail, including the abstract representation, supporting algorithms, and implementation methods. Focuses on understanding the application of the abstract data structure and the circumstances that affect implementation decisions. Covers lists, stacks, queues, trees, hash tables, and graphs. Covers recursion and searching and sorting algorithms in detail. Emphasizes data abstraction and encapsulation in code design. Explores external storage structures, time permitting.

INFO 6210. Data Management and Database Design. 4 Hours.
Studies design of information systems from a data perspective for engineering and business applications; data modeling, including entity-relationship (E-R) and object approaches; user-centric information requirements and data sharing; fundamental concepts of database management systems (DBMS) and their applications; alternative data models, with emphasis on relational design; SQL; data normalization; data-driven application design for personal computer, server-based, enterprisewide, and Internet databases; and distributed data applications.
INFO 6215. Business Analysis and Information Engineering. 4 Hours.
Covers computer information systems and the decision-making process, determination of information requirements, system development life cycle, and system modeling and analysis. Uses a hands-on approach to introduce the student to software engineering methodologies and practices, business requirements specification, business process design, model-driven object-oriented design, software development, and maintenance. Emphasizes the effective leverage of the Unified Modeling Language (UML) to transform business issues and objectives to concrete software solutions that meet business needs and usability and user interface design as critical elements of a successful software engineering engagement.

INFO 6240. C++ Object-Oriented Design. 4 Hours.
Introduces the basic concepts of C++ and object-oriented design for engineering software design and information systems. Topics include data abstraction, constructors and destructors, inheritance, the C++ I/O library, overloaded operators, virtual functions and polymorphism, and the reference data type. Applications of C++ programming are shown in order to emphasize the use of classes in problem solving with computers.

INFO 6245. Planning and Managing Information Systems Development. 4 Hours.
Provides an overview of the most popular information systems needs' assessment methodologies including portfolio analysis, stage assessment, business systems planning, and the Alloway survey technique. Topics include utilities IS strategic plan prioritization techniques of business goal alignment, architectural compatibility, and cost/benefit and risk analysis to demonstrate how businesses match needs to budgetary constraints. Describes and evaluates options for the placement of the IS function within the organization and a variety of methods to manage the function. Introduces a generic application development and project planning methodology used as a model to facilitate the development of a four-stage project plan for a prototype project. Uses the Project Management Institute's PMBOK and Harvard Business School case studies extensively.

INFO 6250. Web Development Tools and Methods. 4 Hours.
Explores advanced server-side technologies and tools necessary to design and engineer complete web-based enterprise applications quickly. Designed to build on previous experience to cover the life cycle of a web-based application. Focuses on MVC web development frameworks to build server-side, data-intensive, and multitier web applications. Additionally, discusses designing rich internet applications (RIA) using AJAX and service-oriented architecture (SOA) using REST.

INFO 6251. Lab for INFO 6250. 0 Hours.
Accompanies INFO 6250. Offers additional instruction in Web tools discussed in class.

INFO 6255. Software Quality Control and Management. 4 Hours.
Examines techniques for the management and evolution of software systems. Topics include managing software as an asset; life cycle development and rapid development technologies; maintainability; quality assurance of software systems including testing strategies and problem analysis; software risk analysis; analysis of software project failures; process models, such as CMM and ISO 9001; configuration management; and the impact of new development technologies on software management.

INFO 6260. Business Process Engineering and Management. 4 Hours.
Provides a practical laboratory class, applying what students have learned in database design, Web programming, and software development to a series of real projects for real users. Students are asked to work in teams to carry through the implementation of Web-based database applications from analysis of existing systems or prototypes, consideration of alternative designs and implementation, through comprehensive software and database development, to testing and deployment. Teams present their designs, implementation plans, and progress for peer review by the class and others. The objective is to have these real projects fully functional and deployed on the Web by the end of the semester.

INFO 6350. Smartphones-Based Web Development. 4 Hours.
Covers application development for mobile devices using advanced development platforms. Focuses on how to write mobile applications using cross-platform development tools and processes. Topics include user interfaces, the software life cycle, persistent storage, networking using HTTP and other REST interfaces, and mobile/handheld data applications. Requires a final project.

INFO 6640. People, Processes, and Products: Ethics for Engineers. 2 Hours.
Addresses the topic of ethical engineering and the various contexts in which ethical situations present themselves. Analyzes the three major normative ethical theories—virtue ethics, deontology, and utilitarianism—and discusses various cases in which a moral dilemma is created.

Addresses subjects that support successful engineering careers by offering students an applied understanding of the fundamentals of intellectual property and the American legal system. Topics include an introduction to types of intellectual property (patents, trade secrets, trademarks, copyrights) and fundamentals of the American legal system (sources of American law, contracts, torts, intellectual property, antitrust). Covers at minimum the difference between “freedom to operate” patent analysis and patentability analysis, best practices for obtaining valuable patent coverage, and the role of patents in developing successful business planning. Also seeks to develop students’ verbal and written communication skills.

INFO 6660. Business Ethics and Intellectual Property for Engineers. 4 Hours.
Seeks to support successful engineering careers by offering students an applied understanding of ethical principles in the workplace and fundamentals of intellectual property and the American legal system. Topics include an introduction to types of intellectual property (patents, trade secrets, trademarks, copyrights) and fundamentals of the American legal system (sources of American law, contracts, torts, intellectual property, antitrust). Covers at minimum the difference between “freedom to operate” patent analysis and patentability analysis, best practices for obtaining valuable patent coverage, and the role of patents in developing successful business planning. Also seeks to develop students’ applied critical thinking, communication, and presentation skills.

Addresses subjects that support successful engineering careers by offering students an applied understanding of the fundamentals of intellectual property and the American legal system. Topics include an introduction to types of intellectual property (patents, trade secrets, trademarks, copyrights) and fundamentals of the American legal system (sources of American law, contracts, torts, intellectual property, antitrust). Covers at minimum the difference between “freedom to operate” patent analysis and patentability analysis, best practices for obtaining valuable patent coverage, and the role of patents in developing successful business planning. Also seeks to develop students’ verbal and written communication skills.
INFO 7260. Business Process Engineering. 4 Hours.
Addresses the question of how to understand and specify the flow of work responsibility and movement of information throughout the enterprise. For businesses to maximize the benefits of technology, they must transform their ad-hoc and often poorly defined ways of doing things to formal business processes. Analyzes the specification and implementation of complex information systems that integrate well into core business operations. Offers students an opportunity to learn how to use agile process specification techniques, dynamic process execution, and real-time measurement and reporting to support continuous business improvement and change.

INFO 7265. Enterprise Systems Architecture and Engineering. 4 Hours.
Extends the rudiments of C and Unix covered in . Geared for students who want to explore the Unix operating system and deepen their understanding of the fundamentals of Unix. Topics include popular Unix tools and programs (vi, emacs, pipes, grep, and so on); Unix system calls (fork, exec, read, and write); introduction to Unix shells and scripting; static and dynamic libraries; use of make files; and software engineering project management from the perspective of the system developer. Requires a major term project using coding with advanced C/Unix techniques.

INFO 7270. PERL Programming. 4 Hours.
Focuses on PERL programming language fundamentals. Discusses and demonstrates applications of the language using programming assignments and projects. Topics include data types, control structures, subroutines and functions, string manipulation, file processing, networking, and CGI. Recommended for students who are pursuing a career in Unix/Windows programming, Web development, or system administration.

INFO 7275. Advanced Database Management Systems. 4 Hours.
Introduces the skill set required to become a serious database applications developer. Offers an overview of the Oracle9i object-relational database system for those who have mastered the fundamental principles of database design and are competent with basic SQL. Gives students the opportunity to develop a strong understanding of the PL/SQL programming language, which is used to create triggers, user-generated functions, stored procedures, and packages for programming Oracle objects. Emphasizes advanced SQL features and Oracle-specific SQL enhancements. Covers optimization and tuning issues. Covers corresponding material for Transact-SQL (used for Microsoft SQL Server and Sybase database systems) as time and resources permit.

INFO 7280. Model-Driven Architecture. 4 Hours.
Develops the skills to utilize new software modeling and management techniques in each state of the life cycle of component-based software systems. Applies and extends a basic knowledge of the Unified Modeling Language (UML). Introduces and applies metamodel management concepts using the OMG metaobject facility as a technology baseline. Develops a component-based software project throughout the course using C++ or Java; grading primarily based on the software project and its public presentation.
INFO 7285. Organizational Change and IT. 4 Hours.
Focuses on the change effort needed to integrate a project into the firm's organizational structure, culture, business, and process metrics. Geared for students undertaking enterprise resource planning systems, or those involved in small or large organizational reengineering projects designed to make IT a primary focus of the firm's business strategy. Topics include management theories and organizational design principles; strategy and critical success factor formulation; methods to reach information systems maturity; business process modeling techniques; quality, the mindset, and the problem-solving tools; human resource, cultural, and technical change enablers; how to plan a business reengineering project; and implementation of major organizational change.

INFO 7290. Data Warehousing and Business Intelligence. 4 Hours.
Examines the technical and management aspects of building a data warehouse. Explores the architecture, infrastructure, processes, data quality, database design, and data analysis involved in building the data warehouse for business analysis. Management issues include business goals, tool selection, project management, personnel skills, training, and user requirements. Topics include dimensional data modeling, extraction/ transformation/load processes, data quality problems, datamarts, operational data stores (ODS), staging databases, and online analytic processing (OLAP).

INFO 7300. Engineering Cybersecure Software Systems. 4 Hours.
Addresses design and implementation issues critical to producing cybersecurity software systems by using a software development perspective. Deals with the question of how to make the requirements for confidentiality, integrity, and availability integral to the software development process from requirements gathering to design, development, configuration, deployment, and ongoing maintenance. Covers emerging software life-cycle practices that address both cybersecurity problems caused by bad software practices that leave software vulnerable to cyberattack and other software vulnerabilities that are caused by deficiencies in modeling of security requirements, architecture, and design issues.

INFO 7305. System Architecture and Technology Management. 4 Hours.
Aimed at information systems students aspiring to become software project managers or system or product architects in software and high-technology organizations. Designed to deepen the student's understanding of system architectures and engineering, product development processes, and dynamics of innovation in high-technology industries. Responds to the question of how technology managers and software architects might work together to oversee and control these three critical areas. Covers the following topics in detail: software product design and engineering processes, systems architecture, modular and integral product paradigms, commonality and reuse, options thinking and prioritization strategies, as well as the identification and delivery of value for the user.

INFO 7310. Introduction to Distributed Security. 4 Hours.
Provides the student with the skills to understand and solve the difficult problems associated with securing broadly distributed systems. Examines the new security paradigms that have been developed to solve the problem of securing Web Services and compares and contrasts them with the more traditional security paradigms. Covers both the theory and practical aspects of basic distributed security principals, transport and message-based security, trust management, PKI, security specifications, risk management as applied to security, advanced access control, digital signature, XML encryption, security policy, and privacy.

INFO 7315. Web Services/Service-Oriented Architecture. 4 Hours.
Describes how a solid foundation to support a true electronic business infrastructure is being laid using new paradigms, such as an interoperable language and a new architectural way of looking at electronic business. Supporting these paradigms are Service Oriented Architecture (SOA) and Web Services. Covers the latest heterogeneous models for carrying out large-scale distributed computing for Web Services. The models use loose coupling based on XML, which is independent of computing platform and language. Explores the fundamentals of XML, XML schema, and SOAP using tools from Microsoft, IBM, and Sun. Uses the principals of an SOA and Web Services to describe how to architect large-scale distributed systems.

INFO 7320. Global Technology Outsourcing. 3 Hours.
Examines the critical issues in global outsourcing of technology: Why outsource, what can be outsourced, criteria for identifying elements for outsourcing, organizing for outsourcing, where to outsource, and managing the outsourcing operation to maximize global profit. Today, large numbers of white-collar and highly technical jobs, including software development and research activities, are increasingly being performed offshore. This practice could become even more pervasive and perhaps a standard feature of all businesses in the United States. Offered jointly by the D’Amore-McKim School of Business and the College of Engineering, this course is team taught by professors from both colleges with supplemental guest lecturers from appropriate industries.

INFO 7325. Introduction to Information Technology Auditing. 4 Hours.
Designed to provide a foundation for the study and professional career development of information technology (IT) auditing. Introduces the fundamentals of IT auditing, core reasons why this is a specialized area of auditing, and the principle objectives of IT auditing and its relationship to integrated financial or operational auditing. Offers an insight into management’s objectives regarding IT risk management. Uses the Cobit governance and control framework to emphasize management issues regarding control of IT and the achievement of value through managed IT processes. Introduces three primary types of IT audits: the audits of computerized information systems, IT processing environments, and the process of developing and implementing information systems.

INFO 7330. Information Systems for Healthcare-Services Delivery. 4 Hours.
Addresses the important information systems questions facing the delivery and assessment of healthcare services from administrative, financial, and clinical perspectives. These include the use of electronic medical records; health information exchanges; and performance evaluation of providers, patients, and payers. Provides an introduction on how healthcare is delivered. Also focuses on various information management tools being implemented as well as those needed to move care delivery and quality forward.

INFO 7356. Enterprise Architecture Planning and Management. 4 Hours.
Defines IT strategies for implementing business-driven and technology-based modernization programs, companywide. Covers how to institute improved IT infrastructures to facilitate strategically informed decisions, at all hierarchical levels, across all business units and functional boundaries. Studies the strategies, programs and projects, business models, methods, and technologies needed to bring about deliberate enterprise-scale change as business strategies evolve. Offers students an opportunity to learn how to construct enterprise architectures and use them as road maps to budget scarce capital investment resources to IT development projects. Topics include system interoperability, business and technology alignment, system flexibility and adaptability to change, IT planning, and effective communication with the management leadership.
INFO 7374. Special Topics in Information Systems. 1-4 Hours.
Covers state-of-the-art material of current interest. May be repeated without limit.

INFO 7385. Managerial Communications for Engineers. 4 Hours.
Focuses on communication strategies and tactics for engineers at the interpersonal, team, and organizational level. Course topics include forms (oral and written), styles, and differences in communication; coaching and giving feedback to staff; and building teams, managing conflict, and special topics in organizational communication. The primary goal is to strengthen the students' social and emotional intelligence skills to help them progress along their engineering career path. Combines academic content with practical skill-building activities.

INFO 7390. Advances in Data Sciences and Architecture. 4 Hours.
Covers a wide range of skills and responsibilities that are necessary for managing complex business performance and operational data. Such data tend to be fragmented, poorly organized, and often flawed. Offers students an opportunity to learn how to navigate up-to-date mapping of complex data works and to be alerted to the care and attention they must give to such a task as well as the implications of the results. Covers best practices for managing all aspects of the data transformation life cycle, covering broad areas such as requirements gathering, meta-model design, data integration and transformation, as well as implementation and ongoing operations. Discusses tools for mapping fragmented data into business intelligence solutions that guide successful strategies.

INFO 7405. Advances in Engineering Medical Information Systems. 4 Hours.
Focuses on the fundamentals of engineering patient medical records as timelines of medical encounters that capture critical clinical decisions made in various contexts such as assessments, diagnoses, treatments, etc. Emphasizes semantically rich clinical information models to support predictive analysis in order to recognize patterns of disease early. Record systems typically focus on data recording for legal purposes, ignoring the critical needs of patients and caregivers. Introduces innovative software design and architecture techniques that recognize the complex interaction between patients and caregivers, provide immediately available detailed information for both, and thus invigorate clinical workplaces. Covers techniques for engineering medical applications as sociotechnical systems that promote the safety, effectiveness, and efficiency of core clinical operations.

INFO 7420. Drug Development Processes and Information Systems Compliance. 4 Hours.
Beginning with the recognition that information technology (IT) has transformed the way that new drugs are developed today. From preclinical studies to small Phase-I clinical trials all the way up to large global Phase-II pivotal trials, virtually every aspect of drug development is evolving due to technological advances. Each of these advances carries with it technological, procedural, and regulatory challenges and uncertainties. This course explores many of today’s most pressing and challenging IT questions facing the pharmaceutical/biotechnology industry and the FDA regarding the use of electronic records, databases, and information management systems that have become an integral part of development programs and regulatory submissions.

INFO 7500. Cryptocurrency and Smart Contract Engineering. 4 Hours.
Seeks to provide a detailed understanding of the function and deployment of smart contracts using the Solidity language. Digs deep into the technical design and operation of blockchain platforms and specifically the implementation of smart contracts for operationalizing business processes. Offers students an opportunity to practice the development of decentralized autonomous organization applications using blockchain scripting languages.

INFO 7510. Smart Contract Application Engineering and Development. 4 Hours.
Emphasizes the essential coding skills for implementing self-enforcing, multiparty, mutually beneficial, contractual rights and obligations on top of blockchain technologies. Offers students an opportunity to learn how to leverage the principles and mechanisms of "decentralized autonomous organization" to programmatically coordinate the interaction between participating parties at a global scale without the need for trusting a third party and how to build blockchain-type applications that automate the interaction of a network of participating entities such as buyers, sellers, suppliers, insurance, and finance.

INFO 7525. Regulatory Aspects of Smart Contract Automation. 2 Hours.
Addresses the legal implication of using the blockchain to transfer and exchange money, perform trade transactions, maintain ownership of property, and enforce contractual obligations in secure and cost-effective ways. These applications present significant legal challenges in finance, property rights, and general commercial contracts in all industries. Offers students an opportunity to acquire the tools to engineer systems that adhere to existing and evolving regulatory frameworks. Highlights challenges around the issues of taxation, financial crimes, and money laundering, since blockchain technologies were designed to facilitate cross-border transactions.

INFO 7530. Engineering Multiparty Autonomous Agent Systems. 2 Hours.
Examines how to extend multiagent distributed systems methods and tools to solve complex problems meant to run on the blockchain using smart-contract programming languages such as Solidity and others. Blockchain technology and multiagent distributed systems theory share common ground. Both are characterized by autonomy, localized knowledge, and independence. Offers students an opportunity to deepen their studies of how to build systems that deliver system-level results through the interaction of simple agents or participants. Each party independently determines its response to the state of its local environment and the interactions with other parties on the blockchain.

INFO 7535. Digital Smart Contracts Product Innovations. 2 Hours.
Addresses the issue of how blockchain technology creates new ways of doing business. Blockchain technology uses bitcoin cryptocurrency to create value in a virtual setting. By linking the blockchain with real currency and the financial system, data, as well as business processes, a new breed of products and services can be realized. Explores innovative and disruptive applications of the blockchain.

INFO 7610. Special Topics in Natural Language Engineering Methods and Tools. 4 Hours.
Covers the latest techniques in natural language processing with applications to unstructured data.

INFO 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INFO 7976. Directed Study. 1-4 Hours.
Offers theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

INFO 7978. Independent Study. 1-4 Hours.
Offers work performed under individual faculty supervision. May be repeated without limit.

INFO 7990. Thesis. 1-8 Hours.
Offers theoretical and experimental work conducted under the supervision of a departmental faculty. May be repeated without limit.

INFO 7994. Thesis Continuation—Part Time. 0 Hours.
Continues thesis work conducted under the supervision of a departmental faculty member. May be repeated without limit.
INFO 7996. Thesis Continuation. 0 Hours.
Continues theoretical and experimental work conducted under departmental faculty supervision.

Information Technology - CPS (ITC)

ITC 0103. Security Incident Management. 0.7 Hours.
Covers the nontechnical aspects of incident management, including establishment of a computer incident response team (CIRT) capability, investigative techniques, preservation of evidentiary materials, conducting incident postmortems, and establishing relationships with external parties. In today's business climate, quick and accurate handling of security incidents is critical. Organizations need to determine if a system outage is based on equipment or software failure or if it is truly under cyber attack. Students may receive CPP recertification credits for this course through their ASIS chapter certification office.

ITC 0301. Overview of Mainframe: z/OS Basics. 3.2 Hours.
Offers students of information systems technology an opportunity to acquire the background, knowledge, and skills necessary to begin using the basic facilities of a mainframe computer. Topics covered include the mainframe in business today, including mainframe job roles; mainframe interfaces; Job Control Language; mainframe hardware and architecture; and middleware for the mainframe. Includes lectures and lab exercises.

ITC 0304. Server Introduction to Programming OS/390 JCL. 2.4 Hours.
Demonstrates how to use z/OS and OS/390 JCL and selected utility programs. Topics include JCL statements and syntax, analyzing job output, conditional processing, procedures, modifying parameters, symbolic parameters, creating procedures, and utilities. Includes four labs and five sets of test questions.

ITC 0904. Teaching with Technology. 6.8 Hours.
Focuses on both the theory and practice of educational technology. Blends lecture, technology instruction, and directed computer lab time in a workshop setting. Offers students an opportunity to learn about educational technology; evaluate existing technology-based curriculum aids; and, using the technology skills acquired in the course, design one of the following four projects: Web quest activity, course home page, Web page for communicating with parents, or PowerPoint tutorial.

ITC 0913. Using Social Networking and Web 2.0 Technologies in the Classroom. 6.8 Hours.
Offers students an opportunity to engage in social networking while learning the fundamentals of Web 2.0 technologies that foster cohesion, connect classrooms globally, and generate content via social interaction. Explores social networking resources that are available to educators and how these technologies can transform teaching and learning. Offers students an opportunity to learn to create professional learning networks that integrate into the classroom. Examples of social networking sites include Ning, Twitter, and wikis. Focuses on multimedia tools for teaching and learning that integrate with social networking tools. Students spend time face-to-face and online designing and sharing curriculum-based activities that incorporate these newer Web 2.0 tools.

ITC 0980. Information and Communication Technology (ICT) Literacy. 1-3 Hours.
Offers students an opportunity to use ICT tools to locate, evaluate, and use information in digital environments. Includes search engines; databases; and productivity tools such as Microsoft Word, Excel, and PowerPoint. Consists of in-class demonstrations by the instructor. Students are expected to use personal laptops and to complete in-class and out-of-class assignments.

ITC 1000. Computer Applications. 3 Hours.
Offers a beginning course in computer productivity tools for those with little or no prior experience. Introduces basic elements of organizing computer files and folders and of creating word processing documents, spreadsheets, and presentations. Requires a Windows environment.

ITC 1100. Human-Computer Interaction. 3 Hours.
Surveys human-computer interaction concepts, theory, and practice, focusing on its interdisciplinary nature. Describes the principles of human-computer interaction and the practice of user interface design. Discusses the major human information processing subsystems (perception, memory, attention, and problem solving), and introduces usability metrics and evaluation methods.

ITC 1200. Operating Systems Concepts. 3 Hours.
Introduces students to the basic structure and organization of computer operating systems. Examines the functional characteristics of major computer components and their relationship to control by software. Topics include general computer organization and configuration. Compares characteristics of different operating systems such as Windows and UNIX.

ITC 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Introduces the methodologies, models, tools, and techniques used in modern system development. Topics covered include: project life-cycle models, project management techniques, requirements elicitation, use-case analysis, business rules, system design approaches, and graphic modeling with the Unified Modeling Language (UML). Offers students an opportunity to analyze and document a business case; complete a system analysis; and design, model, and prepare a project plan.

ITC 2016. End-User Data Analysis Tools. 3 Hours.
Focuses on technical skills used for acquiring and analyzing data with advanced spreadsheet tools and with end-user database software. Students use advanced word processing techniques to present the results of data analysis. Expects students to already have basic skills in word processing and spreadsheet applications. Course uses Windows-based applications.

ITC 2020. Digital Collaboration and Team Building. 3 Hours.
Offers a course for students with advanced skills in productivity tools who would benefit from learning about effective strategies in using online collaboration tools in order to be more effective communicating with classmates and colleagues who are not colocated. Utilizes the main functionalities of collaborative platforms. Emphasizes data gathering, analysis, and sharing.

ITC 2100. Introduction to Programming (Java). 3 Hours.
Offers a hands-on first programming course for those with no prior programming experience. Covers basic programming logic and syntax. Uses object-oriented programming concepts, including arrays, methods, classes, and instantiation. Offers students an opportunity to code stand-alone computer applications with graphical user interfaces (GUI) using modern interactive development tools.

ITC 2200. Networking Foundations. 3 Hours.
Introduces principles of computer networks, network architectures, network topologies, network protocols, and layering concepts. Addresses both theoretical aspects, such as performance modeling and analysis, and practical considerations of implementing Internet protocols.
ITC 2300. Database Management Systems. 3 Hours.
Introduces Structured Query Language (SQL). Topics include designing normalized data tables for use in a relational database management system, creating entity-relationship models, database transaction processing, and security.

ITC 2400. Web and Mobile Development. 3 Hours.
Studies modern markup languages and standards (HTML5 and CSS) for cross-platform webpage applications. Through lectures, discussions, and hands-on projects, offers students an opportunity to learn common best practices in graphical interface design and usability for different target audiences. They then have an opportunity to apply these design skills by refining creative designs into websites through an iterative process of creating hand-drawn storyboards, then coding wireframes, adding basic web content, and finally making pages responsive so that they are suitable for a variety of mobile devices. Webpage artifacts include tables, images, links, and simple apps.

ITC 2430. E-Commerce Systems. 3 Hours.
Introduces the theory and practice of doing business on the Internet. Begins with the infrastructure that makes e-commerce possible, including Internet protocols, Internet applications, and Internet languages. Examines e-commerce software, e-commerce security issues, and e-commerce payment systems. Topics in business strategies for e-commerce include purchasing, electronic data interchange, supply chain management, virtual communities, and Web portals. Offers students an opportunity to understand how tools and strategies may be applied to e-business models, including business-to-business (B2B) and business-to-consumer (B2C). Examines international, legal, and ethical issues as they relate to e-commerce.

ITC 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITC 3100. Advanced Applications Development. 3 Hours.
Extends introductory programming concepts. Focuses on developing complex end-user applications that address a business problem or opportunity. Topics include utilizing database interfaces and managing user sessions.

ITC 3150. Database Websites with PHP/MySQL. 3 Hours.
Offers students an opportunity to integrate relational databases into Web pages. Covers how to query, update, and manage MySQL databases. Emphasizes using basic PHP techniques (loops, conditionals, built-in functions) to interact with existing relational databases. All software used in the course is open source and runs on a variety of platforms.

ITC 3200. Mobile and Wireless Networking. 3 Hours.
Covers technologies used for wireless and mobile business applications. Topics include wireless network protocols, cellular phone carriers, wireless platform operating systems, and wireless security issues.

ITC 3250. UNIX Systems Administration. 3 Hours.
Covers the essential skills needed to manage the day-by-day operations of a UNIX computer system. Topics include techniques for adding new users and groups and management of the file system, focusing on access controls. Covers backup plans and techniques as well as job scheduling and basic networking in the UNIX environment. Offers students an opportunity to build shell scripting skills.

ITC 3300. Structured Query Language (SQL). 3 Hours.
Covers concepts and techniques for manipulating relational databases. Offers students an opportunity to learn to code native SQL for creating and accessing data tables, indexing, arithmetic operations, loops, arrays, multiple table processing, I/P operations, data-type conversions, and views.

ITC 3320. Data Warehousing Technologies. 3 Hours.
Offers students an opportunity to learn how organizations construct and maintain data warehouses built from operational databases. Topics include a comparison of data warehouse architectures, how to build a data warehouse, and how to structure databases for efficient data analysis.

ITC 3400. Web Design and Multimedia. 3 Hours.
Covers the history of multimedia technology, focusing on the uses of multimedia in website development. Examines the technical and design aspects of basic components of multimedia: text, audio, graphics, video, sound, animation, and virtual reality. Emphasizes the use of multimedia in user interfaces. This is a hands-on course in which students practice techniques throughout the course.

ITC 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITC 4200. Network Security. 3 Hours.
Explores the theory and practice of computer security, focusing on the security aspects of multiuser systems and the Internet. Topics include cryptography concepts, firewalls; viruses; two-tier authentication; Trojan horses; password security; biometrics; VPNs; Internet protocols such as SSL, IPsec, PGP, SNMP, SSH; and others.

ITC 4210. Web Server Administration. 3 Hours.
Examines the details of web-based administration, including installation and troubleshooting techniques for various hardware and software configurations. Discusses optimization issues regarding performance, storage use, and security, from both a hardware and software perspective. Demonstrates policy and account issues, including change management, in a practical laboratory environment.

ITC 4260. Database Administration. 3 Hours.
Covers the tools and techniques used to manage information technology (IT) projects. Topics include project planning, scheduling, and budgeting and project management tools (PERT/CPM/Gantt). Discusses all phases of IT projects from proposal evaluation through postimplementation reviews. Offers students an opportunity to plan and develop a project that provides a practical application of the topics covered in class.

ITC 4500. IT Project Management. 3 Hours.
Covers the tools and techniques used to manage information technology (IT) projects. Topics include project planning, scheduling, and budgeting and project management tools (PERT/CPM/Gantt). Discusses all phases of IT projects from proposal evaluation through postimplementation reviews. Offers students an opportunity to plan and develop a project that provides a practical application of the topics covered in class.

ITC 4600. Information Security Management. 3 Hours.
Covers management issues occurring within the field of information security. Topics include asset classification and control (protecting the most valuable information of the organization); personnel security (employee awareness); security as a part of everyday communications and operations; business continuity management; and compliance (legal, internal/external, audit, and other concerns).

ITC 4650. Compliance and Risk Issues in Information Technology. 3 Hours.
Explores questions such as: Are your IT systems built, used, and managed according to organizational policies? Are they in compliance with international, national, and local legal requirements? What are the potential risks and legal liabilities associated with your IT systems and procedures? Seeks to develop frameworks for assessing gaps between what your organization is doing and should be doing to protect the organization and its stakeholders.
ITC 4840. Preparation for Information Technology Project. 3 Hours.
Offers students an opportunity to apply their knowledge of systems analysis to develop a comprehensive written business case for an IT project. Reviews the principles of developing a business case and high-level solution model. Working closely with the instructor, students are asked to identify a technological need of actual interest for local companies, communities, or students’ workplace; research the legal, marketing, social, and organizational viability of providing a solution; and follow the systems analysis process to develop a comprehensive written proposal that documents user requirements, alternative solutions, and the selection of the most appropriate solution. The goal is to develop a formal project plan for actual execution of the solution.

ITC 4850. Information Technology Project. 3 Hours.
Offers students an opportunity to apply their knowledge of systems analysis to develop a comprehensive written business case for an IT project. Reviews the principles of developing a business case and high-level solution model. Working closely with the instructor, students are asked to identify a technological need of actual interest for local companies, communities, or students’ workplace; research the legal, marketing, social, and organizational viability of providing a solution; and follow the systems analysis process to develop a comprehensive written proposal that documents user requirements, alternative solutions, and the selection of the most appropriate solution. A formal project plan is then developed for actual execution of the solution.

ITC 4950. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

ITC 4955. Project. 1-4 Hours.
Provides students with an opportunity to demonstrate the skills they have learned throughout the program by developing an end-to-end proposal and plan for an IT application and the infrastructure it relies on. The project requires a justification, a budget, an architecture document, a presentation, and a project plan. May be repeated without limit.

ITC 4983. Topics. 1-4 Hours.
Covers special topics in information technology. May be repeated without limit.

ITC 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITC 4991. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

ITC 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

ITC 4993. Independent Study. 1-4 Hours.
Offers students an opportunity to undertake special research.

ITC 4994. Internship. 1-4 Hours.
Provides students with an opportunity for internship work.

ITC 4995. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

ITC 4996. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major.

ITC 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

ITC 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

ITC 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

ITC 6000. Database Management Systems. 3 Hours.
Covers the use and capabilities of modern database management systems with an emphasis on performance and reliability. After a brief review of conceptual data models and database design, the focus moves to the underlying technology—database engines, storage and indexing, memory use, the relational model, normalization/de-normalization, query processing, and SQL. Also discusses the need for and design of concurrency control, integrity, security, and recovery capabilities.

ITC 6010. Information Technology Strategy and Governance. 3 Hours.
Focuses on the strategic use of information technology (IT) from a business perspective at the enterprise level. Covers business fundamentals and a strategic framework for aligning organizational strategy, core competencies, and information systems. Covers strategic IT management, including IT policy and governance, accountability frameworks, financial analysis, risk management, and legal compliance issues.

ITC 6015. Enterprise Information Architecture. 3 Hours.
Introduces the theory, framework/model, methodology, and tools that enhance business and organizations’ ability to discover, access, and understand data and to integrate IT and information resources, with an ultimate goal to produce information needed to make critical decisions and support business functions. Data and information management is critical to modern businesses. Covers best practices using cases studies in a more practical, comprehensive approach to delivering the subject matter involving the application of tools.

ITC 6020. Information Systems Design and Development. 3 Hours.
Discusses the planning, analysis, design, and implementation of computer-based information systems, focusing on the methodologies and procedures used in organizational problem solving and systems development. Topics include the systems development life cycle; project management; requirements analysis and specification; feasibility and cost-benefit analysis; logical and physical design; prototyping; system validation, deployment, and postimplementation review. Additional topics may include platform and database selection and integration issues, CASE tools, end-user training, maintenance, and object-oriented analysis and design.

ITC 6025. Design for Usability. 3 Hours.
Covers the up-to-date methods that are evolving to deal with the complexity of design in the IT world. Focuses on both hard and soft design approaches, such as user-centered design, participatory design, contextual design, and ethnography. Offers students an opportunity to expand their analysis and design repertoire by developing an understanding of the role, function, and use of various design approaches and when to use which approach.

ITC 6030. Computer Systems and Networks. 3 Hours.
Introduces the basic concepts of computer systems and networks. Covers operating system services, file systems, resource management, synchronization, the concept of a process, and process cooperation and interference. Introduces networks, including network architectures, network protocols, and communication paradigms (point-to-point, multicasting, and connectionless vs. connection-oriented). Uses examples from real operating systems and networks (Unix, Linux, Windows, TCP/IP, and Ethernet) to reinforce the concepts.
ITC 6335. Information Technology Project Management. 3 Hours.
Covers the tools and techniques used to manage information technology (IT) projects. Topics include project planning, scheduling, and budgeting; project management tools (i.e., PERT/CPM/GANTT); and human resources management. Discusses all phases of IT projects from proposal writing through postrelease maintenance issues. Offers students an opportunity to plan and develop a project that provides a practical application of the topics covered in class.

ITC 6040. Informatics Capstone. 3 Hours.
Offers students an opportunity to produce a polished paper, presentation, or product that reflects their training and focus in the fields of information systems (IS) and information technology (IT). Emphasizes aspects of integrating IS systems, technical architectures, and enterprise functions. Also offers students an opportunity to incorporate issues involving research and development or business and market strategies. Strongly encourages students to create a portfolio piece that can be shown to potential employers or current supervisors.

ITC 6045. Information Technology Policy, Ethics, and Social Responsibility. 3 Hours.
Explores the policy choices, ethical issues, and legal obligations faced by organizations in the information age. Topics include intellectual property, freedom of expression, privacy, national security, impact of information technology (IT) on the work and home lives of employees, and ethical codes of conduct for IT professionals. Intended to sensitize IT managers and professionals to the issues that arise when doing business in an interrelated world and to develop an understanding of how to ethically and legally operate and use modern computer systems and networks.

ITC 6300. Foundations of Information Security. 3 Hours.
Offers an overview of the threats to the security of information systems, the responsibilities and basic tools for information security, and the levels of training and expertise needed in organizations to reach and maintain a state of acceptable security. Topics include an introduction to confidentiality, integrity and availability, authentication, encryption and access controls, intrusion detection and response, social engineering, physical security, policy formation and enforcement, legal and social issues, and risk management.

ITC 6301. An Overview of Mainframe: z/OS Basics. 4 Hours.
Offers students of information systems technology an opportunity to acquire the background, knowledge, and skills necessary to begin using the basic facilities of a mainframe computer. Topics covered include the mainframe in business today, including mainframe job roles; mainframe interfaces; Job Control Language; mainframe hardware and architecture; and middleware for the mainframe. The course includes lectures and lab exercises.

ITC 6302. Introduction to the Mainframe. 4 Hours.
Continues ITC 6301. Covers system programming on the mainframe, security on z/OS, network communications on z/OS and parallel systems. Also provides an introduction to basic ISPF interfaces and a basic understanding of the VSAM access method as it is used in the z/OS environment. The course uses a combination of lectures and labs.

ITC 6304. Enterprise Server Introduction to Programming OS/390. 4 Hours.
Covers how to use z/OS and OS/390 JCL and selected utility programs. Topics include JCL statements and syntax, analyzing job output, conditional processing, procedures, modifying parameters, symbolic parameters, creating procedures, and utilities.

ITC 6305. IT Infrastructure (Systems, Networks, Telecom). 3 Hours.
Introduces the elements of IT infrastructure—systems, networks, and telecommunications. Telecommunication fundamentals include data, voice, image, and video. Covers the concepts, models, architectures, protocols, standards, and security for the design, implementation, and management of digital networks. Discusses the essentials of local area networks (LANs), metropolitan area networks (MANs), and wide area networks (WANs).

ITC 6310. Information Security Governance. 3 Hours.
Covers the foundations for the policy, law, regulatory, and ethical accountability frameworks that information security risk managers must work within. Information security governance is an overarching consideration in all risk-management-related endeavors, and it is understood to be of supreme importance for information security since many issues have legal, regulatory, policy, and ethical considerations.

ITC 6315. Information Security Risk Management. 3 Hours.
Focuses on assessing, modeling, communicating, and addressing risk issues. Covers statistical, financial, technical, and other risk-assessment and risk-modeling techniques and tools. Explores policy and governance frameworks for information security risk management and the legal, behavioral, and social issues that arise in implementing security policies. Offers students an opportunity to develop risk assessments and present and justify mitigation proposals.

ITC 6320. Information Security Technology. 3 Hours.
Covers key information security technologies and the context needed for deploying them successfully. Security technology has come a long way, and organizations need to deploy a variety of security devices and tools, such as intrusion detection systems and firewalls, to solve the most pressing information security problems.

ITC 6325. CISA Preparation. 3 Hours.
Includes all seven domains that make up the body of knowledge covered by the CISA examination. Offers students an opportunity to obtain the knowledge and technical concepts required to achieve this certification. Topics include technical infrastructure and operations, management planning and organization of information systems, applications development, protection of information assets, business process evaluations and risk management, disaster recovery planning, and the formal audit process.

ITC 6330. CISSP Preparation. 3 Hours.
Includes all ten domains that make up the body of knowledge covered by the CISSP examination. Offers students an opportunity to obtain the knowledge and technical concepts required to achieve this certification. Topics include technical infrastructure and operations, security architecture and models; operations security; applications and systems development; business continuity planning and disaster recovery planning; law, investigation, and ethics; and physical security. The CISSP certification is governed by the International Information System Security Certifications Consortium and is universally recognized as a key component in the selection process for management-level information security positions.

ITC 6335. Data Warehousing and Data Mining. 3 Hours.
Focuses on the management, mining, and interpretation of patterns in large databases. Offers students an opportunity to learn how organizations construct data warehouses from operational databases, about different data warehouse architectures, how to build a data warehouse, and how to structure databases for efficient data mining. Introduces data mining techniques such as rule-based learning, decision trees, association rule mining, and statistical analysis. Also covers interpretation of the mined patterns using visualization techniques.
ITC 6340. Mobile and Wireless Networks and Applications. 3 Hours.
Presents the latest in wireless technologies and mobile business (m-business). Topics include wireless networks, wireless carriers, location-based technologies, wireless platform operating systems and micro-browsers, wireless marketing and customer/client relationship management, wireless security issues, and Wireless Application Protocol (WAP). Offers students an opportunity to engage in the applied design and development of mobile applications using Web technologies and tools.

ITC 6345. Systems and Network Administration. 3 Hours.
Focuses on the skills, tools, and best practices required to provide and support computing infrastructure and services. Covers system installation and configuration, defining users and groups, user authentication, file systems, configuring and managing system and network services, client/server systems, and Web site administration. Also discusses troubleshooting, backup/recovery, security issues and policies, user/customer interaction, and the ethical and legal responsibilities of a system administrator.

ITC 6350. Information Architecture for e-Business and e-Government. 3 Hours.
Focuses on identifying, defining, analyzing, structuring, and modeling information for use in information systems for e-business and e-government. Offers students an opportunity to learn how information is organized, navigated, tagged, and searched in Web applications, search engines, and databases. Emphasizes visual data modeling for application and report design, data storage, and user interaction. Covers different approaches to data modeling and shows how that process can be used to identify and document business rules.

ITC 6355. Web Application Design and Development. 3 Hours.
Introduces the development of Web applications. Topics covered include Web servers, Web application servers, Web application development methods, client-side and server-side scripting, and Web application development techniques. Offers students an opportunity to learn to construct and maintain a well-designed Web site and use state-of-the-art Web application development tools and languages to develop Web applications. Other topics include Web application security, session management, design patterns, and reusable Web application components.

ITC 6400. Foundations of Informatics. 3 Hours.
Introduces the fundamental properties of information, technologies, and people within an increasingly complex infrastructure and social system. Offers students an opportunity to learn theoretical foundations and applications of informatics and to explore technical and social issues—including policy choices, ethical issues, and legal obligations—with IT applications and solutions in various specific settings, such as business, education, healthcare, and government. Offers students a broad perspective and understanding of informatics as both a scientific field as well as a highly applied discipline in specific contexts that may help direct them to future career concentrations.

ITC 6410. Fundamentals of Human Behaviors for Interactive Systems. 3 Hours.
Introduces basic principles of cognitive and social psychology relevant to the design and use of interactive systems and applications. Offers students an opportunity to examine topics including human perception (e.g., how we identify, organize, and interpret information); human memory capacity and operation (e.g., how we recognize and recall information, and how we learn to develop skills and expertise); and human reasoning and decision making. Understanding how the human mind works and the limitation of our mental capacities may ultimately provide valuable insights to apply user-centered approaches in interface design as well as interactive systems development.

ITC 6420. Introduction to Cloud Computing Applications and Management. 3 Hours.
Offers an overview of theoretical and practical aspects of distributed systems and cloud computing. Cloud computing and web services are creating a huge demand for IT professionals to manage large-scale infrastructure and vast networks. Examines frameworks, techniques, and existing IT solutions to manage internet services at different levels (infrastructure, platform, and software) and to support the key characteristics of cloud computing, including virtualization, requirement for high reliability and security, extendability, and versatility.

ITC 6430. Enterprise Information Technology Service Management. 3 Hours.
Examines frameworks and strategic approaches for the life cycle management of IT products—including planning, designing, developing, delivering—and for improving the IT services from a higher-level enterprise perspective—including managing disparate servers throughout the organization. In the context of cloud computing, this course focuses on the strategic management of IT infrastructure, agile IT service, configuration, data and information security, and disaster recovery. Explores the strategies to provide values to customers.

ITC 6504. Teaching with Technology. 4 Hours.
Focuses on both the theory and practice of educational technology. Blends lecture, technology instruction, and directed computer lab time in a workshop setting. Offers students an opportunity to learn about educational technology; evaluate existing technology-based curriculum aids; and, using the technology skills acquired in the course, design one of the following four projects: Web quest activity, course home page, Web page for communicating with parents, or PowerPoint tutorial.

ITC 6510. Technology Leadership and Evaluation 1. 2 Hours.
Offers students an opportunity to explore and develop the skills and strategies necessary to effectively lead and manage technology-infused learning activities in a twenty-first-century learning environment. Based on the new NETS standards, this two-part course sequence engages students in investigating the five key performance indicators: leadership and vision; learning and teaching; productivity and professional practice; support, management, and operations; and assessment and evaluation. Emphasizes leadership and vision, and support, management, and operations.

ITC 6511. Technology Leadership and Evaluation 2. 2 Hours.
Offers students an opportunity to develop the skills and strategies to effectively lead and manage technology-infused learning activities in a twenty-first-century learning environment. Based on the new NETS standards, part two continues to engage students in investigating the five key performance indicators addressed in part one: leadership and vision; learning and teaching; productivity and professional practice; support, management, and operations; and assessment and evaluation. Emphasizes leadership and teaching, productivity and professional practice, and assessment and evaluation.

ITC 6512. New Digital Technologies to Improve Teaching and Learning. 4 Hours.
Offers students an opportunity to investigate the use of newer technologies to improve teaching and learning and to research effective strategies and to report their findings. Focuses on twenty-first-century tools for the classroom using Smart Boards, interactive response clickers, iPods/MP3 players, and videoconferencing using webcams with Skype/iChat. Exposes students to a variety of Web 2.0 tools such as RSS, Google tools, blogs, wikis, and podcasting/iTunes, along with tools that integrate into blogs/wikis (TeacherTube; YouTube; SlideShare; VoiceThread; online photo content tools such as Flickr, BubbleShare, etc.). Students participate in an online community and create their own Web 2.0 environment model after the K12 Online Conference Teasers.
ITC 6513. Using Social Networking and Web 2.0 Technologies in the Classroom. 4 Hours.
Offers students an opportunity to engage in social networking while learning the fundamentals of Web 2.0 technologies that foster cohesion, connect classrooms globally, and generate content via social interaction. Explores social networking resources that are available to educators and how these technologies can transform teaching and learning. Offers students an opportunity to learn to create professional learning networks that integrate into the classroom. Examples of social networking sites include Ning, Twitter, and wikis. Focuses on multimedia tools for teaching and learning that integrate with social networking tools. Students spend time face-to-face and online designing and sharing curriculum-based activities that incorporate these newer Web 2.0 tools.

ITC 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

ITC 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITC 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

ITC 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

ITC 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

ITC 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

ITC 6983. Topics. 1-4 Hours.
Covers special topics in information technology. May be repeated without limit.

ITC 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

ITC 7100. Introduction to Healthcare Informatics. 3 Hours.
Presents an overview of health informatics. Focuses on the application of computerized information systems to the activities within healthcare organizations, including patient care delivery, patient records, administration, research, security, and what is needed to design and implement an appropriate health information infrastructure.

ITC 7105. Emerging Technologies in Healthcare. 3 Hours.
Focuses on emerging technologies involved in healthcare information technology. Explores hardware, categories of software, standardized language lexicons, computer-based patient records, database management systems, telehealth, decision support systems, wireless technology, and communication technologies.

ITC 7110. Legal and Social Issues in Healthcare Informatics. 3 Hours.
Explores the complex social and legal issues in today's healthcare organizations and their impact on information systems. Examines the laws and ethics dictating systems needed to ensure legal compliance, patient confidentiality, and security.

ITC 7120. Healthcare Information Systems. 3 Hours.
Explores the administrative and research applications of computers in today's healthcare delivery system. Discusses emerging trends in the field of healthcare informatics.

ITC 7961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

ITC 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.

ITC 7976. Directed Study. 1-4 Hours.
Offers students an opportunity to carry out an individual reading and research project under the supervision of a faculty member. The directed study format allows for the in-depth analysis of a particular topic not covered in-depth or the study of a subject not typically covered in the curriculum. A directed study proposal must be approved by the faculty sponsor, division head, and senior associate dean for academic affairs. May be repeated up to five times.

ITC 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

ITC 7980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

ITC 7983. Topics. 1-4 Hours.
Covers special topics in information technology. May be repeated without limit.

ITC 7990. Thesis. 1-4 Hours.
Offers students an opportunity to prepare for the Automobile Damage Appraisal License Examination administered by the Commonwealth of Massachusetts. A Certificate of Completion and five Continuing Education Units (CEUs) are awarded to each participant upon successful completion.

INS 0800. Automobile Damage Appraisal. 5 Hours.
Offers insurance claims professionals, auto body technicians, and others an opportunity to pursue the Automobile Damage Appraisal License. This course prepares participants for the Administration of the Automobile Damage Appraisal License Examination administered by the Commonwealth of Massachusetts. A Certificate of Completion and five Continuing Education Units (CEUs) are awarded to each participant upon successful completion.

ITP 5976. Directed Study—PT. 0 Hours.
Offers continuing thesis supervision by members of the department.

ITP 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department.

ITP 5979. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

ITP 5980. Capstone. 1-4 Hours.
Offers students an opportunity to pursue the Automobile Damage Appraisal License. This course prepares participants for the Administration of the Automobile Damage Appraisal License Examination administered by the Commonwealth of Massachusetts. A Certificate of Completion and five Continuing Education Units (CEUs) are awarded to each participant upon successful completion.

ITP 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.
ITP 6210. Introduction to Intellectual Property: Trade Secrets. 4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

ITP 6220. Copyright Law. 4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

ITP 6230. Patent Law. 4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

ITP 6240. Business Aspects of Intellectual Property. 4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

ITP 6305. Technology Licensing. 4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

ITP 6966. Practicum. 1-4 Hours.
Provides students with an opportunity for practical experience. May be repeated without limit.

ITP 6983. Topics. 1-4 Hours.
Provides students with an opportunity for practical experience. May be repeated without limit.

ITP 6995. Project. 1-4 Hours.
Provides students with an opportunity for practical experience. May be repeated without limit.

INT 0108. SAT Preparation. 0 Hours.
Provides an independent study designed to allow students to reflect on both
the theoretical knowledge that they have learned while pursuing their
degree at Northeastern University and the practical experience that they
have gained in an internship.

INT 6000. Writing Lab. 1 Hour.
Provides an independent study designed to allow students to reflect on both
the theoretical knowledge that they have learned while pursuing their
degree at Northeastern University and the practical experience that they
have gained in an internship.

INT 6900. International Field Study Experience. 3,4 Hours.
Provides an independent study designed to allow students to reflect on both
the theoretical knowledge that they have learned while pursuing their
degree at Northeastern University and the practical experience that they
have gained in an internship.
INT 6940. Experiential Learning Projects for Professionals. 1-4 Hours.
Offers students an opportunity to apply knowledge and skills gained through their master’s program to work on challenging short-term projects under faculty supervision. Students are matched with discipline-specific consulting projects provided by a wide range of sponsoring organizations in the private and nonprofit sectors. Students develop a project plan, conduct research, develop and deliver recommendations to sponsoring organizations, and reflect on lessons learned. Mapping academic course concepts and skills to the consultative process is a primary learning goal. Requires an application process.

INT 6943. Integrative Experiential Learning. 3 Hours.
Offers students an opportunity to clarify their vision of a successful professional future, identify goals to achieve that vision, and assess career growth opportunities. Explores how to frame a growth strategy using internal and external scanning mechanisms, negotiation and persuasion, research, and critical reflection. Students refine an applied research topic, perform research, develop recommendations for addressing a key performance area within their existing workplace, and create a plan for implementing their recommendations. Students review “lessons learned” and incorporate suggestions from this review to improve and finalize their integrated plan. With permission from their host organization, students may go on to implement elements of their project in a current or upcoming project, where feedback is provided from stakeholders, including their corporate sponsor.

INT 7976. Directed Study. 1-4 Hours.
Offers students an opportunity to carry out an individual reading and research project under the supervision of a faculty member. The directed-study format allows for the in-depth analysis of a particular topic not covered in-depth in the curriculum or the study of a subject not typically covered in the curriculum. A directed study proposal must be approved by the faculty sponsor, division head, and dean of academic affairs. May be repeated up to seven times for up to 8 total credits.

Interdisciplinary Studies in Arts, Media, and Design (INAM)

INAM 0100. Skills for Success. 1 Hour.
Offers students an opportunity to gain and practice skills for better study strategies, test taking, stress management, and general academic practices as a student in the College of Arts, Media and Design. Offers students an opportunity to discuss techniques for managing their work, preparing for exams, and reflecting on their own learning styles. Participation is a key element in addition to practicing new skills covered in the course.

INAM 1000. Arts, Media and Design at Northeastern. 1 Hour.
Intended for freshmen in the College of Arts, Media and Design. Offers students an opportunity to become familiar with the liberal arts in general and with their major; to develop the academic skills necessary to succeed (analytical ability and critical thinking); to become grounded in the culture and values of the university community; and to develop interpersonal skills—in short, to familiarize themselves with all skills needed to become a successful university student. Requires advisor approval for students outside of the College of Arts, Media and Design.

INAM 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INAM 2015. Creativity Lab. 4 Hours.
Offers students an opportunity to learn an iterative and collaborative studio practice of making, critiquing, and presenting finished original work based upon their individual and collective ideas and intentions. Students meet as a group and also attend individual and small group sessions with mentors in their field as they exercise their talents in art, architecture, communication, media, design, music, journalism, and/or theatre. Restricted to students who are completing their first year at Northeastern and whose Creativity Lab application has been accepted. Students should contact their academic advisor for application information.

INAM 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INAM 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INAM 4699. Advanced Television Production. 4 Hours.
Designed to provide students with guidance in the development and implementation of special projects in television and video production. Includes studies and creative experiential practices in advanced directing (both in the studio and in the field), lighting, scriptwriting, editing, graphics, and postproduction technology.

INAM 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INAM 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

INAM 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

INAM 6965. Co-op Work Experience Abroad. 0 Hours.
Provides eligible students with an opportunity for work experience abroad. May be repeated without limit.

Interdisciplinary Studies in Science (INSC)

INSC 1000. Science at Northeastern. 1 Hour.
Introduces first-year students with majors in the College of Science to the liberal arts in general. Offers students an opportunity to become familiar with their college and majors; to develop the academic skills necessary to succeed (analytical ability and critical thinking); to become grounded in the culture and values of the University community; and to develop interpersonal skills—in short, presents students with the skills needed to become a successful university student.
INSH 1180. Science: Creation of Knowledge—Opportunities for Undergraduate Research. 1 Hour.
Designed primarily for undeclared freshmen and sophomore students with an interest in science. Through presentations, discussions, and projects with research faculty and student mentors, offers students an opportunity to learn from examples how new scientific knowledge is created, how scientists decide what questions to ask, and how to investigate them. Focuses on some of the new frontiers in science research at Northeastern and the opportunities for discovery and research available to undergraduate students in science at Northeastern. Seeks to help students explore whether a major in science is appropriate for them and to provide them with possible paths to pursue undergraduate research with faculty, in labs on campus, and through research on co-op.

INSH 1190. Exploration and Research with Applications from Mathematics, Physics, and Biology. 1 Hour.
Intended primarily for first- and second-year students interested in science and mathematics but open to all students. Offers students an opportunity to learn about the nature and progress of research conducted by faculty in mathematics, biology, and physics and to work on team research projects mentored by undergraduate and graduate students in science. Projects can be provided by faculty or be self-generated, with a prize for the best and most innovative projects. Possible topics include networks for modeling, Boolean networks for learning and memory, quantum information for cryptography and security, diffusion-limited aggregation for snowflakes and branching in nature, synchronization of oscillators as a basis in rhythmic movements, and probability in genome scale phylogeny for tracking the ancestry of living forms back in time.

INSH 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INSC 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INSC 3990. Elective. 1-4 Hours.
May be repeated without limit.

INSC 4990. Elective. 1-4 Hours.
May be repeated without limit.

INSH 1000. Social Sciences and Humanities at Northeastern. 1 Hour.
Intended for freshmen in the College of Social Sciences and Humanities. Introduces freshmen to the liberal arts in general. Offers students an opportunity to become familiar with their major, to develop the academic skills necessary to succeed (analytical ability and critical thinking), to become grounded in the culture and values of the university community, and to develop interpersonal skills—in short, to become familiar with all the skills needed to become a successful university student.

INSH 1101. Picturing the World (or How We Came to Understand What Nature Is). 4 Hours.
Offers a multidisciplinary introduction to how we represent the world and the natural environment through hands-on study of early modern maps, art prints, and books. Examines how the invention of the scientific method (and fields from geography to botany) interfaces with the personal observations and experiences of travelers from Marco Polo to Charles Darwin. Further examines the way modern technologies, such as cinema, television, and digital media, are once again changing the way we see and understand the world.

INSH 1102. Food in Contemporary Context. 4 Hours.
Covers a multidisciplinary set of perspectives on an intrinsic part of daily life—food. Food is not just about survival—it is about being human. Producing it, making it, eating it, obsessing about it is woven throughout our lives. It defines, and is defined by, culture. It is the basis of economies, has produced great fortunes, defines entire communities, and is the cause of conflicts. It is at once natural and artificial, grown and manufactured. It nourishes us, and it makes us sick. It is the source of sublime pleasure and no small anxiety. Food defines us, as much as we define it. With these considerations, this course uses food as a lens into contemporary life.

INSH 1210. Special Topics in Social Sciences. 4 Hours.
Focuses on topics that are concerned with the organization and functioning of societies and cultures. May be repeated up to two times.

INSH 1220. Special Topics in the Humanities. 4 Hours.
Focuses on topics that are concerned with the expression of human experience and values and that foster critical and analytical thinking. May be repeated up to two times.

INSH 1300. Introduction to Health and Humanities. 4 Hours.
Explores the ways in which narrative and other forms of creative and cultural expression help shape conceptions of illness, healing, and the body. Offers students opportunities to consider the health and humanities through a variety of interdisciplinary perspectives and genres. Includes small-group and classwide experiential field outings. Culminates in the composition of reflective responses, a medical ethics/medical journalism piece, and a team-based experiential e-portfolio project. Course objectives include differentiating between healing and curing; knowing how to elicit, listen to, and analyze stories to determine how participants in the healthcare system experience illness and healing; being able to articulate the ways health is a cultural construct; and using this analysis to identify an empathic response as a future professional.

INSH 1500. Digital Methods for Social Sciences and Humanities. 4 Hours.
Introduces programming skills and computational methods through application to topics in the social sciences and humanities. Methods include computational text analysis, network analysis, mapping software and analysis, computational approaches to data, big data, and/or social simulation. Offers students an opportunity to develop an understanding of the use and significance of computational tools for social sciences and humanities. No previous programming experience required.

INSH 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
INSH 2101. Love and Hate: Social, Psychological, and Literary Approaches. 4 Hours.
Studies materials that define and describe love and hate from the fields of literature and literary criticism, social psychology, and criminology and criminal justice. "Love" and "hate" are small words describing powerful emotions with profound effects on individuals and on social groups. Focusing largely on contemporary examples, offers students an opportunity to analyze the differences and areas of overlap in the above fields’ approaches to love and hate, to discuss societal responses to these emotions, and to apply the methodologies of each field to research questions of their own. INSH 2101 and PSYC 2101 are cross-listed.

INSH 2102. Bostonography: The City through Data, Texts, Maps, and Networks. 4 Hours.
Uses Boston as a case study for integrating computational methods with the social sciences and humanities to provide new insights into major cultural, historical, and societal questions as they relate to and extend beyond the city of Boston. Through lectures, discussions, and labs, the course examines a variety of data sets that measure geographic, historical, literary, political, civic, and institutional landscapes. Offers students an opportunity to combine analytical tools, such as geospatial mapping, data visualization, and network science, with readings, hands-on class activities, and museum or site visits, enabling a comprehensive view of complex cultural and social phenomena.

INSH 2104. Statistics in the Social and Political World. 4 Hours.
Offers an introductory course in statistics for the social sciences. Topics include descriptive statistics, samples and populations, estimation, hypothesis testing of differences between groups, and measures of association among variables. Uses basic tools in SPSS to assist students in analyzing existing data sets relevant to the social sciences.

INSH 2105. Recitation for INSH 2104. 0 Hours.
Provides small-group discussion format to cover material in INSH 2104.

INSH 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INSH 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INSH 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INSH 6300. Research Methods in the Social Sciences. 3 Hours.
Surveys methods of social research, including field study and participant observation techniques, survey techniques, interviewing and questionnaire construction, sampling procedures, experimental design, content analysis, and use of available data.

INSH 6302. Qualitative Methods. 3 Hours.
Introduces the principles and use of common qualitative methods with a particular focus on their application in the social sciences. Offers students an opportunity to engage in primary data collection and to learn how to use a variety of analytic techniques, including transcription, field-note preparation, memos, development of coding schemes and conceptual frameworks, and data-verifying techniques.

INSH 6404. Computational Social Science. 3 Hours.
Introduces the fundamental techniques of quantitative data analysis, ranging from foundational skills—such as data description and visualization, probability, and statistics—to the workhorse of data analysis and regression, to more advanced topics—such as machine learning and networks. Emphasizes real-world data and applications using the R statistical computing language. Offers students an opportunity to finish the course ready to apply a wide variety of analytic methods to data problems, present their results to nonexperts, and progress to more advanced course work delving into the many topics introduced here.

INSH 6406. Analyzing Complex Digitized Data. 3 Hours.
Introduces cutting-edge ways of structuring and analyzing complex data or digitized text-as-data using the open-source programming language Python. Scholars across multiple disciplines are finding themselves face-to-face with massive amounts of digitized data. In the humanities and social sciences, these data are often in the form of unstructured text and un- or under-structured data. Encourages students to think about novel ways they can apply these techniques to their own data and research questions and to apply the methods in their own research, whether it be in academia or in industry.

INSH 6500. Quantitative Analysis. 3 Hours.
Studies the use of social science quantitative techniques, emphasizing applications of value to public-sector analysts and scholars alike. Introduces probability and statistical analysis. Topics include measures of central tendency and dispersion, probability and probability distributions, sampling distributions and hypothesis testing, bivariate correlation, regression, and forecasting. Examines how to generate and interpret statistical analyses.

INSH 6864. Experiential Integration. 3 Hours.
Offers an integration course providing an opportunity for students on experiential placement to connect conceptual course material to experiential components. Students are expected to interact with students from other disciplines, to apply knowledge and skills across educational and experiential contexts, to connect experiential components to different disciplines and domains of knowledge, and to situate experiential components in the context of their own field and beyond. May be repeated once for up to 6 total credits.

INSH 6900. Internship. 0 Hours.
Offers field placement in an agency involving administrative, research, teaching, and related activities. Provides students with an opportunity to apply theoretical concepts in a practical, applied fashion by observing and contributing to the daily activities of operating agencies and organizations. Expects all students to work on at least one specific project at their field placement, and the results of this project are submitted to the graduate director. May be repeated once.

INSH 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated once.

INSH 7500. Advanced Quantitative Analysis. 3 Hours.
Designed to build upon the foundations provided by INSH 6404, INSH 6500, or an equivalent introductory statistics course with the goal of students becoming proficient with selected quantitative multivariate analysis techniques. Covers the ordinary least squares (OLS) regression model and the assumptions underlying it in detail, as well as the techniques for analyzing data when OLS assumptions do not apply, such as simultaneous equation models, time-series models, and maximum likelihood techniques for limited and discrete dependent variables. Requires prior completion of INSH 6404, INSH 6500, or an equivalent introductory statistics course.
INSH 7910. NULab Project Seminar. 1 Hour.
Offers students an opportunity to learn and use digital humanities methods with others in groups and across disciplines in the collaborative space of the NULab seminar. May be repeated up to three times.

Interdisciplinary Studies - Office of the Provost (INPR)

INPR 0081. College Mathematics. 0 Hours.
Covers the laws of exponents; roots; linear, polynomial, exponential, and logarithmic functions; and operations of functions. Emphasizes understanding and manipulating these basic functions and their inverses and compositions. If time permits, additional topics such as complex numbers and matrices are also covered.

INPR 0082. Academic Writing and Critical Reading. 0 Hours.
Involves a thorough examination of writing as a means of self-expression and refining one’s thinking to achieve academic success at the college level. Rests on the assumption that good writers are good readers; therefore, emphasizes developing critical reading strategies in order to interpret texts based on content, meaning, and style. Offers students an opportunity to experience breaking down, processing, taking notes on, and reflecting on the types of challenging texts ahead of them in the college years.

INPR 0083. Immersion College Seminar. 0 Hours.
Designed for Torch Scholars. Seeks to prepare each student for the transition from high school to college. Offers students an opportunity to learn about the Northeastern culture and what it takes to be a successful Torch Scholar. Seeks to provide students with the support necessary to excel during their time at the university as well as the tools to build strong and empowering relationships with their peers, faculty, advisors, and mentors. The assignments of the course offer students opportunities to explore their resources on campus and beyond and learn vital skills for college success. Restricted to Torch Scholars and other Opportunity Scholars by invitation only.

INPR 1100. University Scholars Seminar on Innovation and Research. 0 Hours.
Offers a weekly seminar designed to introduce University Scholars to the most innovative research, best ideas, and provocative people at Northeastern. May be repeated once.

International Affairs (INTL)

INTL 1000. International Affairs at Northeastern. 1 Hour.
Introduces first-year international affairs students to the majors, the departments servicing IAF, and the university as a whole; familiarizes students with the skills needed for success as a university student.

INTL 1101. Globalization and International Affairs. 4 Hours.
Offers an interdisciplinary approach to analyzing global/international affairs. Examines the politics, economics, culture, and history of current international issues through lectures, guest lectures, film, case studies, and readings across the disciplines.

INTL 1115. The Mediterranean World: An Overview. 4 Hours.
Introduces problems currently facing the nations of the Mediterranean region, the sources of these problems, how they are affecting the rest of the world, and what the future of the region may be. The Mediterranean is a region of significant international geopolitical importance where three major religions and continents meet, very different demographic patterns interact, the challenge of adapting to global economic and social forces is being faced, and security and terrorism are major problems. Surveys the Mediterranean region, its characteristics and significance, the changes it has experienced, and the ways in which societies around the Mediterranean currently interact and influence each other.

INTL 1160. Middle East Studies. 4 Hours.
Concentrates on the twentieth and twenty-first centuries of the “Middle East” (Arab World, Israel, Turkey, and Iran), the links with southwest Asia (Pakistan, Afghanistan), and U.S. engagement with the Middle East. This course seeks to provide students with effective interdisciplinary analytical skills as well as historical, political, ethical, social, cultural, religious, and economic perspectives on the Middle East.

INTL 1185. Gender in the African Diaspora. 4 Hours.
Studies variations in gender roles throughout the African Diaspora, from precolonial Africa to the modern United States. Areas of the African Diaspora include Africa, the West Indies, Latin America, Europe, and the Islamic world. Issues include sexuality, labor, reproduction, and social constructions of gender. AFRS 1185, INTL 1185, and WMNS 1185 are cross-listed.

INTL 1215. Society and Culture in Russia. 4 Hours.
Focuses on contemporary Russian society. Emphasizes the current and recent social, economic, and political characteristics of Russia and the ways in which it has evolved in the post–Soviet period. INTL 1215 and SOCL 1215 are cross-listed.

INTL 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTL 2011. The Arab Spring and Its Aftermath: Domestic, Regional, and International Challenges. 4 Hours.
Aims to explain and understand the divergent outcomes of the Arab uprisings by framing the uprisings within domestic, regional, and international developments. Critically and systematically analyzes the events that continue to affect governance across the Middle East and North Africa and neighboring Mediterranean states.

INTL 2100. Modern Israel. 4 Hours.
Introduces students to an Israel rarely seen in the news: Films, art, music, short stories, food, and spiritual movements show Israel from a different point of view and expose students to the questions Israelis ask themselves in order to define their own identity. Modern Israel is a fascinating, vibrant,talented, imperfect nation of people from 100 different countries. Thus, conflicts, tensions and contradictions lie at its heart: Ashkenazi Jews complain the country is too Levantine; Sephardi Jews complain about deprivation, Israeli Arabs complain about their position in the nation; Orthodox Jews say the state is not sufficiently religious; seculars consider it antiquated in nature. Immigrants from Russia and Ethiopia, foreign guest workers, water crises, and the Arab-Israeli conflict also figure in the story.
INTL 2200. America and the Middle East. 4 Hours.
Focuses on U.S. engagement with the Middle East, primarily with Muslim societies, and with the Christian and Jewish communities across the region. Emphasizes Egypt, Syria, Iran, Iraq, Turkey, Israel/Palestine, and Lebanon. From America’s first proselytizing adventure to the Ottoman Empire in 1820 to the embrace of Saudi Arabia in the 1940s to the overthrow of the democratically elected prime minister in Iran in 1953 to the attacks of September 11, 2001, to the invasion and occupation of Iraq in 2003 to America’s response to the “Arab Awakening” in 2011 and beyond, the course covers history, politics, oil, war, and peacemaking within the framework of U.S. involvement in the Middle East.

INTL 2240. Global Population and Development. 4 Hours.
Examines the reasons for global population growth and its economic, political, and social challenges. Topics include relation between population and development, environmental consequences, global imbalance in populations, influence of gender on population and development, attempts to control population growth in China and other countries, effects of aging population on economic growth and political life, population and labor force opportunities, population and migration, and the influence of population issues on international relations and global security. In 2012 the world’s population reached 7 billion, with an additional billion being added every 20 years. Emphasizes how issues in national and international affairs are intimately linked with population, focusing on its effects on attempts to improve the quality of life across the globe.

INTL 2300. Religion in International Affairs. 4 Hours.
Explores the alternative roles religious actors, groups, and movements play in the international realm. When religion enters the international realm, it is primarily identified as a confrontational, radical, and violent political actor. This course challenges this predominant focus. Studies the patterns of interaction between religions and global politics; how religious movements travel across nation-states and regions and which role(s) they play in shaping, diluting, and/or avoiding conflict in international affairs; and the strengths and weaknesses of religious communities, such as Jewish and Muslim Diaspora, in building cooperation and conflict across the world. Emphasizes the role of religion in transition politics in general and in the Arab Spring in particular.

INTL 2350. Nationalism, Religion, and Minorities in the Modern Middle East. 4 Hours.
Introduces the ethno-religious mosaic of Islam, Christianity, and Judaism in the contemporary Middle East, with a focus on nationalism. Based on historical-political research and documentaries, the course discusses the emergence of nationalism as influenced by the West since the late-nineteenth century in countries such as Egypt, Israel, Palestine, Syria, Lebanon, Jordan, Iran, Iraq, and Turkey. Discusses local nationalism vs. Pan Arabism and their various expressions in the newly established nation-states of the area and also studies Zionism in its various incarnations. Have secular nationalism and the modern nation-state accommodated the ethno-religious mosaic of the Middle East? Finally, the course discusses the resurgence of Islamic fundamentalism, its origins, and its impact on the Middle East.

INTL 2360. Human Rights in the Middle East. 4 Hours.
Focuses on human rights in the Middle East. Emphasizes civil and political rights. Explores the development of human rights and briefly reviews basic definitions, concepts, legal texts, as well as mechanisms for enforcement and remedies. Offers students an opportunity to learn about human rights issues in the Middle East from a thematic and comparative perspective, examining issues of torture, extrajudicial and similar killings, liberty and security of persons, the right to vote, free speech, and freedom of the press. Explores current topics pertinent to international affairs such as counterterrorism/terrorism; democratization; and issues of interdependence with economic, social, and cultural rights. Requires permission of instructor for students of freshman standing.

INTL 2370. World Regions. 4 Hours.
Introduces students to the regions of the world. Surveys the most important physical, social, economic, and cultural characteristics, emphasizing the diversity within large geographical areas such as Africa and South America. Also considers the complex connections between regions.

INTL 2400. Politics of Islam and Gender. 4 Hours.
Rethinks critically the gender dynamics in Muslim societies. Readings pull together interdisciplinary debates surrounding gender politics in Islam. Emphasizes the pessimist (critiques), optimist (apologetics), as well as critical feminist works, to explore feminism’s contested relationship to Islam. Presents multiple perspectives on contentious issues—including head scarf controversy, violence against women, and sexuality—to encourage critical thinking and constructive discussion.

INTL 2480. Women and World Politics. 4 Hours.
Introduces a variety of issues facing women across the globe. Focuses on the gender dynamics of key issues in international affairs. These could include economic policy, conflict and war, human rights/women’s rights, political power, and collective action. Draws on examples from various world regions since the twentieth century to analyze similarities and differences across cases around the globe. INTL 2480 and WMNS 2480 are cross-listed.

INTL 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTL 3200. Cities in a Global Context. 4 Hours.
Examines the roots of the urbanization process, major ways of thinking about it, and the development of world cities and megacities. The twenty-first century will be a century in which urbanism is a central problem and opportunity. Considers the economic, political, cultural, and environmental dimensions of urbanism across the globe. Includes specific case studies from around the world. Encourages students to develop a knowledge of particular cities in order to examine the key themes of the course.

INTL 3201. Cities in a Global Context (Abroad). 4 Hours.
Focuses on the character of space, place, and culture of a contemporary world (global) city. Explores the material transformations of the city and how people understand and imagine the places, spaces, times, and environments they inhabit. Addresses issues of global geographies of cultural change, especially the relationship between the local and the global; questions of place, identity, and landscape, especially at the local level; the significance of place and space in the invention of modern traditions, including places of memory (memorials, museums); the nature of public space and its relations to citizenship; gentrification and the role of art in the city and nature-society relations as expressed in urban parks. Includes a combination of lectures and guided and self-directed field trips in the selected global city. May be repeated without limit.
INTL 3250. Democracy and Development in North Africa and the Mediterranean. 4 Hours.
Examines regional and national developments over the last several decades. Explores the persistence of authoritarian rule and the prospects for democratization, the role of Islamic movements in society and politics, the causes and consequences of neoliberal economic policies, the goals and strategies of North African women’s movements, and the role the region plays in the international system.

INTL 3300. Covering Conflicts: Peace, War, and the Media. 4 Hours.
Examines the media’s portrayal of conflicts and the peace process in the Middle East, Northern Ireland, Bosnia, Rwanda, and elsewhere. Evaluates the limits of fairness, balance, and accuracy in the coverage. Looks at the U.S. and international media—print, broadcast, and online—and some of the major stories in recent years and attempts to put these stories in historical, political, and social context. Analyzes the wide-ranging criticism of coverage from a variety of perspectives. INTL 3300 and JRNL 3300 are cross-listed.

INTL 3400. International Conflict and Negotiation. 4 Hours.
Offers an interdisciplinary approach to analyzing international conflict and negotiations: how conflicts evolve, are managed, and/or resolved. In dealing with different types of regional and international conflicts, students focus on historical, ethnic, religious, geographic, and political aspects of a variety of conflicts and the consequences these conflicts hold for regional and international actors.

INTL 3460. Transnational Activism in Global Civil Society. 4 Hours.
Examines transnational advocacy and activism from both theoretical and practical aspects. Explores the growing literature of transnational activism. Focuses upon the impact of such movements upon global and local civil society and issues of democratization. Also includes a training component in grassroots organization and NGO development. Offers students an opportunity to research local and global problems and organize a community development project over the course of the semester to address these issues.

INTL 3565. Morocco: History, Cultures, and Economic Development in the Mediterranean Basin. 4 Hours.
Offers students the opportunity to (1) better understand the origins and contemporary practice of Islam; (2) investigate the dynamics of Morocco as a multicultural society: Arab, Berber, African, and European; (3) explore the unique aspects of the major historical eras in Morocco: Islamic, French Imperialist, postcolonial; (4) consider the complex relationship between local economy and global economic trends; (5) identify the promises and problems involved in modernization in the postcolonial African-Islamic/Arab world(s); and (6) consider the dilemmas facing women as Morocco confronts the twenty-first century. Optional travel to Morocco by permission of instructor.

INTL 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTL 4350. Ethnography of Southeast Asia. 4 Hours.
Offers a seminar on the societies and cultures of Southeast Asia. Uses an interdisciplinary approach to this diverse and dynamic geopolitical region, with readings from anthropology, history, political science, and literature. Covers the major political and cultural changes that have shaped Southeast Asia in relation to the world—from the age of colonial expansion, to the rise of nation-states, to the present global era. Examines central questions in the ethnography of Southeast Asia, emphasizing the postcolonial legacies of Southeast Asia, states and violence, culture and mobility, and pressing contemporary issues in globalizing Southeast Asia. ANTH 4350 and INTL 4350 are cross-listed.

INTL 4500. Latin American Society and Development. 4 Hours.
Explores the processes of social, economic, and cultural change in Latin America. While concentrating on the present, traces class formation, agrarian structures, ethnic identity, ceremonial organization, gender roles, and political conflict since the colonial era in a range of countries. Emphasizes the relationship of communities and national political and economic systems. May emphasize Central America and Mexico or countries in South America through case studies. ANTH 4500 and INTL 4500 are cross-listed.

INTL 4510. Anthropology of Africa. 4 Hours.
Explores Africa’s changing place in the world. Studies the history of Africa and explores the role of ethnography in the making of colonial Africa and the cultural transformations and continuities produced by the emergence of African cities during and after colonialism. Studies postcolonial Africa to critically and comparatively engage with contemporary issues facing African societies. Considers the efflorescence of new cultural forms of music, art, film, and literature, in conjunction with new sources of identity such as nationality, religion, ethnicity, consumption, and migration. ANTH 4510 and INTL 4510 are cross-listed.

INTL 4515. Culture and Politics in Modern India. 4 Hours.
Introduces the histories, cultures, and peoples of India. Seeks to convey a sense of how knowledge has been constructed about the region and how the subcontinent has been shaped by its engagements with the world through such processes as colonization, state building, and globalization. Uses readings, films, and class discussions to examine themes and topics that include Orientalism, postcolonialism, caste and community, gender and sexualities, conflict and violence, development and resistance, and transnational structures and processes. Critically evaluates some commonly held assumptions, including classical understandings of tradition and modernity, cohesion and conflict, and nation and identity. ANTH 4515 and INTL 4515 are cross-listed.

INTL 4700. Senior Capstone Seminar in International Affairs. 4 Hours.
Offers a senior research and writing seminar that integrates and assesses the knowledge and skills developed by students participating in the international affairs curriculum, including both experiential (co-op, Dialogue of Civilizations, study abroad, internship, or other approved international experience) and classroom-based components. Requires student self-reflection as well as new research, analysis, and writing, which culminate in a final paper and presentation. Topics include contemporary global issues and draw on relevant literature in the disciplines relating to international affairs.

INTL 4904. Special Topics. 4 Hours.
Covers selected topics in current events in global affairs and international studies. May be repeated without limit.

INTL 4940. Global Corps Practicum. 4 Hours.
Offers students an opportunity to participate in an intensive practicum on global civil society in an international setting and to live and work with international students in a host country. Covers the essentials of global citizenship and how to form a nongovernment organization to respond to local and global problems. May be repeated without limit.
INTL 4944. Dialogue of Civilizations: Regional Engagement. 4 Hours.
Engages students with the cultures, societies, and peoples of particular countries and localities in one primary geographic region. Offers students an in-depth and on-site experience and an opportunity to learn about various aspects of the region, which may include politics, sociology, law, history, philosophy, culture, music, arts, literature, theatre, economics, and/or business. Students may connect with their peers in each locality and across societies, therein to gain an international experience designed to enhance their academic studies on campus in Boston. Culminating projects may include a research paper, an artistic expression piece (i.e., film or photos), or other assignment determined by the professor. May be repeated without limit.

INTL 4945. Dialogue of Civilizations: Global Issues in Comparative Perspective. 4 Hours.
Focuses on transnational issues, cross-cultural communications, and human interactions across regions in the global marketplace of ideas and action. Offers students an in-depth and on-site experience and an opportunity to learn about a cross-cutting thematic issue through a comparative perspective (i.e., human rights, diplomacy, advocacy, etc.). Students may connect with their peers in each country/society and gain an international experience designed to enhance their academic studies on campus in Boston. Culminating projects may include a research paper, an artistic expression piece (i.e., film or photos), or other assignment as determined by the professor. May be repeated without limit.

INTL 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

INTL 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

INTL 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTL 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

INTL 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

INTL 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

INTL 4994. Internship. 4,8 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

INTL 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement. May be repeated without limit.

INTL 5200. Political Economy: Interdisciplinary Perspectives. 3 Hours.
Examines how states, institutions, policy choices, and social forces shape—and are influenced by—the global economy and the world polity. Examines changes in relations among and between the countries of the Global North and the Global South. Draws on concepts, propositions, and theories from various disciplinary approaches to (international) political economy, as well as Marxist, world-systems, and feminist theories.

INTL 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTL 7338. Dialogue of Civilizations: Globalization and Social Sciences. 4 Hours.
Offers students an opportunity to “engage” with the culture, civilization, and people of the countries studied and visited that enhances their academic studies on campus in Boston. Seeks to provide students with an in-depth and on-site experience researching politics, sociology, journalism, human services, law, public policy, and/or economics and business in the country of study. Students connect with their peers in each country/society. Culminates in an independent research project conducted by the students before, during, and after their time in-country. (Note that tuition via graduate awards is not permitted to cover the costs of this course.) The student’s department determines the applicability of the course within the curriculum and must approve of the student’s enrollment prior to registration. May be repeated up to two times.

INTL 7344. Dialogue of Civilizations: Regional Engagement. 4 Hours.
Engages students with the cultures, societies, and peoples of particular countries and localities in one primary geographic region. Offers students an in-depth and on-site experience and an opportunity to learn about various aspects of the region, which may include politics, sociology, law, history, philosophy, culture, music, arts, literature, theatre, economics, and/or business. Students may connect with their peers in each locality and across societies, therein to gain an international experience designed to enhance their academic studies on campus in Boston. Culminating projects may include a research paper, an artistic expression piece (i.e., film or photos), or other assignment as determined by the professor. May be repeated without limit.

International Business (INTB)

INTB 1202. Becoming a Global Manager. 4 Hours.
Offers an introduction to global business. Functions as a foundational, “cornerstone” course that frames the BSIB course of study and maps the way forward. Covers frameworks for understanding the context of global business and the competencies required of global managers. Students work in teams to complete a global business project. Assessments are used to develop self-awareness and establish a baseline for subsequent development. Offers students an opportunity to develop a four-year professional development plan (PDP) to guide their study and development during their time at Northeastern and to develop the global mind-set necessary for becoming an effective global manager. The PDP is referenced in subsequent courses.

INTB 1203. International Business and Global Social Responsibility. 4 Hours.
Introduces the student to forces and issues confronted in our era of rapid globalization. Managers must understand forces from interconnected social, political, and economic national environments that affect their company’s operations. At the same time they need to draw on their ethical foundations to address and act on social responsibility imperatives across national borders.
INTB 1209. International Business and Global Social Responsibility. 4 Hours.

Does not count as credit for business majors. Counts as INTB 1203 for business minors only.

INTB 1990. Elective. 1-4 Hours.

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTB 2202. Analyzing the Global Business Environment. 4 Hours.

Analyzes the global business environment—political, economic, sociocultural—and the use of various frameworks to aid in analysis and decision making. Introduces the global business environment in which firms have to compete. Specifically examines contemporary issues over the political, social, and economic consequences of the globalization of markets and industries. Also examines the responses of multinational enterprises to the challenges of globalization. Offers students an opportunity to review and revise their professional development plans (PDPs).

INTB 2501. Competing to Win in Emerging Markets. 4 Hours.

Presents an introduction to emerging markets, focusing on the BRIC countries of Brazil, Russia, India, and China. Takes the perspective of U.S. companies and what they must do to be successful in emerging markets. Discusses the differences between doing business in an emerging vs. a domestic market, the opportunities and potential of an emerging market, and the risks of operating in such a market. Then looks at the world from the perspective of emerging markets and discusses steps that their governments, companies, and entrepreneurs must take to succeed in the world economy. Analyzes what emerging markets must do to raise wages and incomes, accelerate wealth creation, and reduce poverty.

INTB 2990. Elective. 1-4 Hours.

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTB 3202. Managing the International Assignment. 4 Hours.

Seeks to help students prepare for and succeed in an international assignment. Begins with classroom work during the semester before students leave for their expatriate year, continues throughout their year overseas, and concludes with debriefing sessions upon return. Requires monthly reports while overseas to document their academic and co-op learning. Exposes students to cultural diversity and the pervasive, but hidden, influence of culture on how people live, work, and manage. Offers students an opportunity to (1) develop abilities needed to function effectively in situations of cultural diversity; (2) develop an appreciation of the issues that they may confront; (3) create awareness of the personal impact of an international assignment while they are living and working abroad.

INTB 3310. Cultural Aspects of International Business. 4 Hours.

Helps develop awareness of the hidden influence of culture on behavior, particularly with respect to management and management practices. With the increasing globalization of business, many managers find themselves being managed by, or collaborating with, people of different nationalities and cultures. Develops the ability to recognize, understand, and work with the cultural diversity that affects business conducted across national and cultural boundaries.

INTB 3316. Economic, Social, and Political Dimensions of Doing Business in Brazil. 4 Hours.

Explores cultural, political, and social dimensions of doing business in Brazil. Investigates Brazil's role in the global economy as well as the role of multinationals in this rapidly developing economy. Discusses the challenges facing companies that operate in a developing country as the country balances economic growth with environmental and social concerns.

INTB 3318. Field Research in Emerging Markets in Brazil. 4 Hours.

Offers students an opportunity to learn how Brazilian companies contribute to Brazilian economic development while being profitable. Studies for-profit companies, exploring how they address issues of sustainability and corporate responsibility within the context of running a company in a rapidly growing economy. Also examines the role played by nonprofits, nongovernmental organizations, and government agencies in reducing poverty and illiteracy and in protecting the environment.

INTB 3320. International Business Management and Environment. 4 Hours.

Examines contemporary issues that confront today's global managers. Explores the responses multinational enterprises have to the challenges of globalization. Seeks to build an understanding of the environment of international business while addressing the competencies required of global managers. Offers students an opportunity to develop a four-year professional development plan to guide their study and to help them develop the global mind-set necessary for becoming an effective global manager. Analyzes the political, economic, and sociocultural environment in which global businesses operate.

INTB 3990. Elective. 1-4 Hours.

Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTB 4202. Executing Global Strategy. 4 Hours.

Emphasizes global strategy and execution as well as the leadership requirements necessary to execute global strategy. Offers a capstone, "big picture" course that draws on and integrates all business fields and presents a global manager's perspective. Uses the knowledge acquired in core courses—such as finance, accounting, operations, marketing, and organizational behavior—along with their international dimensions, to study how global managers reach strategic management decisions for the firm and its role in society. Offers students an opportunity to review and revise their professional development plans (PDPs) following their return from the expatriate experience and begin to develop post-Northeastern PDPs.

INTB 4310. Managing the Global Firm. 4 Hours.

Offers students an opportunity to obtain a conceptual foundation for understanding global trends that affect global competitiveness: the importance of the complex interplay of company-level competencies, cross-national sources of advantage in a technologically driven global competitive environment; and the need to analyze and respond effectively to ethical challenges of a globalizing world.

INTB 4860. Special Topics in International Business. 4 Hours.

Examines areas of current interest and special topics in the field of international business. May be repeated up to two times.

INTB 4861. Developing Cultural Agility. 4 Hours.

Helps develop awareness of the hidden influence of culture on behavior, particularly with respect to management and management practices. With the increasing globalization of business, many managers find themselves being managed by, or collaborating with, people of different nationalities and cultures. Develops the ability to recognize, understand, and work with the cultural diversity that affects business conducted across national and cultural boundaries.

INTB 4862. International Business and Global Social Responsibility. 4 Hours.

Offers elective credit for courses taken at other academic institutions. Does not count as credit for business majors. Counts as INTB 1203 for business minors only.

INTB 4865. Global Management. 4 Hours.

Examines the perspectives and challenges of managing international organizations. Explores the responses multinational enterprises have to the challenges of globalization. Seeks to build an understanding of the environment of international business while addressing the competencies required of global managers. Offers students an opportunity to develop a four-year professional development plan to guide their study and to help them develop the global mind-set necessary for becoming an effective global manager. Analyzes the political, economic, and sociocultural environment in which global businesses operate.

INTB 4866. Global Business Environment. 4 Hours.

Examines the perspectives and challenges of managing international organizations. Explores the responses multinational enterprises have to the challenges of globalization. Seeks to build an understanding of the environment of international business while addressing the competencies required of global managers. Offers students an opportunity to develop a four-year professional development plan to guide their study and to help them develop the global mind-set necessary for becoming an effective global manager. Analyzes the political, economic, and sociocultural environment in which global businesses operate.

INTB 4870. International Business and Global Social Responsibility. 4 Hours.

Offers elective credit for courses taken at other academic institutions. Does not count as credit for business majors. Counts as INTB 1203 for business minors only.

INTB 4871. Global Management. 4 Hours.

Examines the perspectives and challenges of managing international organizations. Explores the responses multinational enterprises have to the challenges of globalization. Seeks to build an understanding of the environment of international business while addressing the competencies required of global managers. Offers students an opportunity to develop a four-year professional development plan to guide their study and to help them develop the global mind-set necessary for becoming an effective global manager. Analyzes the political, economic, and sociocultural environment in which global businesses operate.

INTB 4872. Global Business Environment. 4 Hours.

Examines the perspectives and challenges of managing international organizations. Explores the responses multinational enterprises have to the challenges of globalization. Seeks to build an understanding of the environment of international business while addressing the competencies required of global managers. Offers students an opportunity to develop a four-year professional development plan to guide their study and to help them develop the global mind-set necessary for becoming an effective global manager. Analyzes the political, economic, and sociocultural environment in which global businesses operate.
Covers key international business topics from international strategy, management, and organizational behavior such as globalization, national business environment analysis, cultural and ethical differences across borders, politics and law in international business, regional economic integration, motivations for going international, foreign direct investment, mode of entry selection, international organizational structure, MNC strategy, principles of international marketing, managing international operations, and international human resource management. Students read selected international business works, analyze and discuss cases, conduct international feasibility projects, and discuss current developments in the field.

INTB 6210. Multinational Management: Strategies and Operations. 3 Hours.
Focuses on international management, dealing with modes of entry into international operations including exporting, licensing, international marketing subsidiaries, foreign direct investment and joint ventures, and organizing for multinational operations. Cases deal with a variety of industries and country environments, with services and high-technology industries, and topics such as business-government relations in an international context.

INTB 6211. Managing in Transitional Economies. 1.5 Hour.
Examines companies that are engaged in business in countries with transitional economies, which face unique challenges and opportunities. By some measures, people who live and work in such countries (often referred to as developing) account for approximately 80 percent of the world’s population. These people represent a large, growing market and labor force, spread among countries that are extremely diverse and produce a wide array of products and services. Discusses economic forces that are powering globalization and the reactions they engender among governments and populations in developing countries. Also examines some of the differences between developed and developing countries, and consider how they impact managers.

INTB 6212. Cultural Aspects of International Business. 3 Hours.
Focuses on issues that arise when a firm operates in multiple countries with cultures that are different from its home country. Principally addresses the perspectives of U.S. firms operating overseas, but also explores other national firms operating in the United States and in third-country environments. A central issue is how corporate cultures evolve in the context of national cultures.

INTB 6213. Doing Business in Eastern Europe. 6 Hours.
Explores the economies of transition in Eastern Europe as students visit companies in several countries there. Focuses on implications of current economic reforms, foreign trade organizations, and government agency roles, as well as issues related to business culture in the countries visited.
INTB 6215. Economic and Business Development in China. 6 Hours. Designed to expose students to the transitional economy and the business environment in China. For several years, China has been the fastest-growing economy in the world and it has recently been admitted to the WTO. Through visits and seminars at host universities and companies in China, students gain firsthand knowledge of the structure of the Chinese economy and how domestic and foreign companies do business there. Students travel to a number of cities in China and have opportunities to directly interact with Chinese government officials, company executives, and university faculty and students.

INTB 6216. Marketing Innovations in Europe. 3 Hours. Exposes students to marketing innovations in a global setting. Examines the relationship between marketing and technology in an international setting by comparing a technologically advanced country, Finland, and an emerging market, Estonia. Covers factors that influence the marketing of technological innovations and factors that accelerate, and those that impede, the diffusion of technological innovation. Examines how companies market innovations in these countries, how consumer behavior evolves with the introduction of technological innovations, and how the nature of competition changes with the evolution of innovations. Exposes students to the socioeconomic and cultural context of innovations. Describes how organizations such as the European Union impact the marketing of innovations.

INTB 6217. Creating Sustainable Competitive Advantage through Global Innovation. 3 Hours. Offers students an opportunity to learn about how companies overcome the barriers to managing global new-product development. Studies how distance, along with differences in culture, capabilities, costs, and customers, make the task of managing global new-product development efforts incredibly difficult and delicate. Also studies how firms develop and execute global innovation strategies, build and leverage global networks, create R&D capabilities abroad, manage distributed projects and virtual teams, and how emerging market firms innovate globally.

INTB 6218. Leadership and Organizational Behavior in a Global Environment. 3 Hours. Aims to create awareness, understanding, and knowledge of how organizations select, develop, and train global leaders. Begins with a review of culture and its differences across national borders. Then studies multicultural team building (face-to-face and virtual), intercultural communication, international career development and management from the organization's and the executive's point of view, and broader organizational behavior challenges across borders.

INTB 6222. Cultural and Global Strategy Implementation. 2 Hours. Focuses on the manager's need to recognize, understand, and work with aspects of cultural differences in order to implement strategy effectively across national borders. Offers students an opportunity to map cultural differences using a number of conceptual frameworks that are used by managers. The implications of these differences and the use of guest speakers increase the range of learning opportunities.

INTB 6224. Competing to Win in Emerging Markets. 3 Hours. Offers students an opportunity to develop an understanding of emerging markets. Studies how U.S. firms can and do compete with emerging markets, how emerging-market companies compete with developed companies, and how companies in emerging markets compete with each other. Explores the future of emerging markets and the steps they need to take to ensure their future viability and success, as well as the threats they face.

INTB 6226. Becoming a Global Leader. 3 Hours. Seeks to help students build the cross-cultural skills necessary to comfortably and effectively work in different cultures and with people from different cultures. Discusses the alignment between the firm's business strategy and the leader's responses in a multicultural environment along with the methods for leadership effectiveness in multicultural teams and virtual environments. Using online, experiential, and discussion-based methods, offers students an opportunity to gain the self-awareness needed to generate a plan for their own global leadership development.

INTB 6230. International Field Study. 3 Hours. Designed to give students intense exposure to the global business environment by immersing them in the business practices and culture of a country or region outside the United States. The course is taught primarily in the country or region of interest and involves a mix of classes, company site visits, and cultural activities. Fulfills the globalization requirement in the full-time MBA program. May be repeated without limit.

INTB 6231. Global Leadership Development. 3 Hours. Presents a management-oriented approach to understanding global management and leadership. Exposes participants to the complexity contained within multicultural environments; one’s own leadership style and cultural competencies; how culture influences an organization’s strategy and operations; and how organizations attract, retain, and develop culturally agile talent. Designed to help corporate managers develop a global mind-set and build the cultural competencies required for global leadership.

INTB 6232. Doing Business in Emerging Markets. 3 Hours. Takes the perspective of managers who are considering the best ways to enter and succeed in emerging markets such as Brazil, Russia, India, China, South Africa, and others that offer varying institutional opportunities and challenges. Examines how their action choices compare to those appropriate for entering advanced markets like the United States, Western Europe, or Japan. Emphasizes how socioeconomic, ethical, political, regulatory, and technological complexities affect the strategy choices that multinational firms, from and in emerging markets, make to succeed at home and abroad.

INTB 6238. Global Project. 3 Hours. Offers students an opportunity to work on faculty-led teams to address a current issue facing a global corporate partner organization. Students interact directly with organizational leaders and employees to scope the project and work as a consulting team, harnessing campus and corporate resources to solve a problem and/or make recommendations. Faculty travel with the students to an international site to continue research, interviews, etc., and report findings to local corporate representatives. Feedback on the project reports is incorporated, and the final project report takes place post-travel with the corporate/sponsoring organizations' representatives.

INTB 6260. Advanced Topics in Global Management and Strategy. 3 Hours. Offers topics of current interest in the international business arena, emphasizing managing in emerging markets, analyzing global expansion, and developing analytical and quantitative modeling skills for the international business arena, often in the context of developing presentation and writing skills in a case competition format. Instructor interests will shape course format and meeting schedules. May be repeated without limit.
INTB 6280. Managing Innovation and Marketing in the Global Enterprise. 3 Hours.
Extends the principles of new product and service innovation and the marketing of these innovations to offshore markets, including the European Union; Brazil, Russia, India, and China (BRIC); and other emerging markets. Explores differences in business culture, government regulation, consumer/customer preferences, and employee management in these various contexts. Through cases and Web database research projects, offers students an opportunity to extend their innovative thinking to the world’s fastest-growing markets.

INTB 6290. Managing in Diverse Cultures to Execute Global Strategy. 3 Hours.
Offers students an opportunity to develop the knowledge and skills they need to manage in diverse cultural environments and to work effectively with people from other cultures. Specifically, offers students an opportunity to develop awareness of the pervasive and hidden influence of culture on behavior, particularly with respect to management practices in global operations; to develop familiarity with the types of situations and issues that managers often confront when working globally; to develop skill in using selected tools and frameworks that can guide managers working with diverse cultures; and to develop self-awareness of their own capabilities to work effectively in culturally diverse contexts.

INTB 6291. Expanding Globally for New Competitive Advantage. 1.5,2 Hour.
Explores geographic expansion and strategies to grow businesses worldwide while protecting domestic markets. Examines why firms globalize and identifies challenges companies face in transferring competitive advantages across borders. Emphasizes how firms manage global expansion, including choice of markets, pace of expansion, methods of entry, competition with local firms, and relations with host governments. Explores emerging market opportunities and competition. Investigates how global firms exploit their global presence to create new competitive advantages in matters such as promoting efficiency, developing talent, streamlining sourcing, exploiting scale, and driving innovation. Offers students an opportunity to gain a global mind-set by integrating lessons from international management, cultural, and strategy courses to address complex global strategy and implementation issues.

INTB 6292. Global Economic and Political Environments. 2 Hours.
Offers students an opportunity to learn about how the global economy functions; what challenges each region of the world faces; how those regions are interconnected; and the international agreements and institutions—such as the World Trade Organization, the World Bank, and the International Monetary Fund—through which those interdependencies are managed. Introduces the political forces that shape relations among countries and, therefore, the context in which firms make decisions. Examines the significance to companies of issues such as long-term trends in U.S. competitiveness in the global economy, the long-term implications of the rise of countries like China and India, and the importance of Europe as a market for U.S. companies.

INTB 6293. International Residency in Mexico City. 3 Hours.
Offers students an opportunity to travel to Mexico City to participate in International Week at IPADE, Mexico’s premier, internationally ranked business school. Students are grouped in small teams comprised of participants from multiple countries. Teams prepare and discuss case studies on important business issues, contributing their different perspectives and outlooks, and leading thinkers and managers from Latin America and elsewhere share their business experience. The week includes visits to leading Mexican companies and cultural and historical sites and social events where participants meet and exchange views with peers from different companies, industries, and cultures.

INTB 6294. International Residency in China and Hong Kong. 3 Hours.
Designed to give students firsthand experience with the business environment and managerial practices of China and Hong Kong, as well as to experience Chinese culture, society, and values through sightseeing and cultural activities. Students hear from local experts and visit a number of companies. They are able to interact with senior managers, local entrepreneurs, and government officials from different cultures in formal and informal settings. Offers students an opportunity to understand the difference in markets, firms, governments, and institutions, comparing the U.S. economy to that of China and Hong Kong, and to understand the nature of the long-term challenges and opportunities that China represents for U.S. companies and managers.

INTB 6960. Exam Preparation—Master’s. 0 Hours.
Offers the student the opportunity to prepare for the master’s qualifying exam under faculty supervision.

INTB 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

INTB 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

INTB 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

Interpreting (INTP)

INTP 1000. American Sign Language at Northeastern. 1 Hour.
Intended for freshmen in the College of Social Sciences and Humanities. Introduces freshmen to the liberal arts in general; familiarizes them with their major; helps them develop the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community, and helps them develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

INTP 3500. The Interpreting Profession. 2 Hours.
Presents an overview of the interpreting profession: responsibilities, ethics, and aptitudes of interpreters; professional associations; law and business of interpreting; the bilingual and bicultural context; basic translation and interpretation; environment and audience; special populations; freelance vs. in-house positions; and evaluation and certification.

INTP 3510. Interpreting Inquiry Texts. 4 Hours.
Presents theoretical models of interpretation, but the primary focus is the interpretation of inquiry texts (job interviews, case histories, and applications) and the development of strategic decision-making skills within the context of dedicated and embedded inquiry texts. Presents an overview of linguistic and sociolinguistic factors, facets, and aspects of inquiry texts, and then seeks to develop in students the cognitive processes and skills involved in translation, consecutive interpretation, and simultaneous interpretation. The goal is that students develop the cognitive processes and decision-making skills needed to apply these differing strategies for achieving cross-cultural mediation.
INTP 4650. ASL-English Contrastive Analysis. 4 Hours.
Examines and contrasts the major linguistic features of American Sign Language and English. Systematically analyzes the two languages using the analytic and descriptive tools of linguistics to examine various dimensions of the languages such as phonology, morphology, and syntax. Also seeks to develop in students an ability to use the analytic and contrastive tools of linguistics as an aid in understanding novel linguistic constructions in each language.

INTP 4650. Ethical Decision Making. 4 Hours.
Explores ethical standards and dilemmas in American Sign Language—English interpreting and other professions through discussions, hypothetical situations, and role-playing. Topics include culturally objective standards, ethics and professional principles, power relations within groups, and the Registry of Interpreters for the Deaf (RID) code of ethics. Students examine various alternatives to a duty-based approach to the RID code and draw upon ethical fieldwork experience to analyze the principles that guide ethical decision making among professional interpreters.

INTP 4651. Ethical Fieldwork. 2 Hours.
Comprises the fieldwork component of INTP 4650. Students are placed in practical interpreting experiences in educational settings, agencies serving Deaf people, and with freelance interpreters. Focuses on ethical questions and dilemmas and decision making in a biweekly seminar format. Students are required to maintain a log and participate in online discussions. Fulfills the experiential education requirement for ASL majors.

INTP 4940. Interpreting Research Practicum. 4 Hours.
Requires students to undertake a research project focused on some aspect of American Sign Language-English interpretation. Students work in research teams (with approval) and may begin their research project once enrolled in INTP 3510. In consultation with a faculty adviser, students select a research question, design and implement the data-collection component of the project, analyze results, and write up their research findings. In addition to a written report, students also present their research results to ASL majors at an annual "in-house" ASL research symposium.

INTP 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

INTP 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

INTP 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

INTP 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

INTP 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

INTP 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

INTP 4995. Interpreting Practicum. 4 Hours.
Places students in practical interpreting experiences in educational settings, agencies serving Deaf people, and with freelance interpreters. Students are required to record a set number of hours interpreting with supervision and analyzing their work with the supervising interpreter. Students maintain a log and participate in online discussions. Students present case studies drawn from their supervised work experience in biweekly seminars. Fulfills the experiential education requirement for ASL majors. May be repeated without limit.

INTP 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.
ITALIAN (ITLN)

ITLN 1101. Elementary Italian 1. 4 Hours.  
Designed for students with very little or no prior knowledge of Italian. Provides a lively introduction to basic oral expression, listening comprehension, and elementary reading and writing. The audiolingual approach, using practical vocabulary drawn from realistic situations, aims at good pronunciation and ease in response. Each lesson incorporates helpful information about daily life in Italy and the varied cultures within the world of Italian speakers. Laboratory practice complements class work, enables students to work aloud at their own speed, reinforces their acquisition of essential structures, and acquaints them with a vast library of audio-visual resources.

ITLN 1102. Elementary Italian 2. 4 Hours.  
Continues ITLN 1101. Reviews and continues the study of grammar and basic language skills. Offers progressively more intensive practice in oral and written communication. Laboratory practice complements class work, enables students to work aloud at their own speed, reinforces their acquisition of essential structures, and acquaints them with a vast library of audio-visual resources.

ITLN 1201. Elementary Italian 1—BSIB. 4 Hours.  
Designed to meet the special needs of international business students. Designed for students with little or no prior knowledge of Italian. Presents essentials of correct Italian usage through acquisition of basic skills in reading, writing, speaking, and aural comprehension.

ITLN 1202. Elementary Italian 2—BSIB. 4 Hours.  
Continues ITLN 1201. Designed to meet the special needs of international business students. Includes completion of basic grammatical usage, reading of contemporary Italian material, and increased stress on oral and aural skills.

ITLN 1301. Elementary Italian Immersion 1. 4 Hours.  
Designed for students who are in an Italian-speaking country, this is an off-campus immersion course. Offers students an opportunity to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

ITLN 1302. Elementary Italian Immersion 2. 4 Hours.  
Designed for students who are in an Italian-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

ITLN 1990. Elective. 1-4 Hours.  
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITLN 2101. Intermediate Italian 1. 4 Hours.  
Emphasizes further vocabulary building and mastery of fine points of grammar through written composition, prepared oral reports, and reading and discussion from current Italian periodicals.

ITLN 2102. Intermediate Italian 2. 4 Hours.  
Continues ITLN 2101. Emphasizes further vocabulary building and mastery of fine points of grammar through written composition, prepared oral reports, and reading and discussion from current Italian periodicals.

ITLN 2101. Intermediate Italian for Business Purposes. 4 Hours.  
Introduces the study of the language, registers, and conventions used in the world of Italian business, focusing on the lexis of Italian commerce, industry, and commercial law. Explores Italian business culture, its entrepreneurship, and the "made in Italy" brands. Emphasizes how business is conducted in Italy, taking into account language, customs, regional differences, and politics. Offers students an opportunity to develop the basic communication skills necessary for interviews, meetings, negotiations, and presentations and to function adequately in an Italian business environment. Students who do not meet course prerequisites may seek permission of instructor.

ITLN 2201. Intermediate Italian 1—BSIB. 4 Hours.  
Designed for the special needs of international business students. Offers advanced grammar topics and continued stress on aural/oral acquisition. Provides some reading of literary, business, and popular texts.

ITLN 2202. Intermediate Italian 2—BSIB. 4 Hours.  
Continues ITLN 2201. Designed to meet the needs of international business students. Continues acquisition of all major skills in Italian. Provides increased readings of literary and popular texts. Also includes student projects.

ITLN 2301. Intermediate Italian Immersion 1. 4 Hours.  
Designed for students who are in an Italian-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

ITLN 2302. Intermediate Italian Immersion 2. 4 Hours.  
Designed for students who are in an Italian-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

ITLN 2900. Specialized Instruction in Italian. 1-4 Hours.  
Designed for individuals whose language skills are at the intermediate level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Students must have at least an elementary level of competence in the language. May be repeated without limit.

ITLN 3101. Advanced Italian 1. 4 Hours.  
Stresses the fundamentals of Italian to promote effective self-expression through speaking and writing and to explore the idiomatic aspects of the language. Through progressive class discussions and oral and written commentaries, students analyze a contemporary Italian novel or a Italian cultural reader, screenplay, or collection of short stories. The course strives, first, to help students read and comprehend modern Italian writing with confidence and to be able to talk and write about it in good Italian; and second, to provide preparation for advanced courses.

ITLN 3102. Advanced Italian 2. 4 Hours.  
Continues ITLN 3101. Enhances and reinforces those practical language and communication skills that students encounter when they are abroad.

ITLN 3201. Advanced Italian 1—BSIB. 4 Hours.  
Offers advanced grammar review and expanded student participation to meet the special needs of international business students. Stresses active use of the language. Includes weekly composition and speaking assignments as well as grammar review when needed.
ITLN 3202. Advanced Italian 2—BSIB. 4 Hours.
Continues ITLN 3201. Offers advanced conversation and composition work for international business students and is the final course before students go abroad. Enhances and reinforces those practical language and communication skills students encounter abroad.

ITLN 3301. Advanced Italian Immersion 1. 4 Hours.
Designed for students who are in an Italian-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence.

ITLN 3302. Advanced Italian Immersion 2. 4 Hours.
Designed for students who are in an Italian-speaking country, this is an off-campus immersion course. Focuses on standard Italian as well as the local dialect. Offers students an opportunity to continue to develop grammatical and conversational competence.

ITLN 3800. Special Topics in Italian. 1-4 Hours.
Focuses on a unique aspect of the Italian language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an intermediate level of skill in the language. May be repeated up to three times.

ITLN 3900. Specialized Instruction in Italian. 1-4 Hours.
Designed for individuals whose language skills are at an advanced level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Requires at least an advanced level of competence in the language. May be repeated without limit.

ITLN 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITLN 4201. Advanced Proficiency Italian 1—BSIB. 4 Hours.
Designed to meet the special needs of international business students. Builds on ITLN 3202. Offers students an opportunity to continue to build vocabulary and master the fine points of grammar through written composition, prepared oral reports, and reading and discussion based on assigned material. Restricted to international business majors only.

ITLN 4202. Advanced Proficiency Italian 2—BSIB. 4 Hours.
Designed to meet the special needs of international business students. Builds on ITLN 4201. Offers students an opportunity to continue to build vocabulary and master the fine points of grammar through written composition, prepared oral reports, and reading and discussion based on assigned material. Restricted to international business majors only.

ITLN 4800. Special Topics in Italian. 1-4 Hours.
Focuses on a unique aspect of the Italian language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an advanced level of skill in the language. May be repeated up to four times.

ITLN 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ITLN 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

ITLN 4992. Directed Study. 1-4 Hours.
Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

ITLN 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to three times.

ITLN 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

ITLN 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

ITLN 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Japanese (JPNS)

JPNS 1101. Elementary Japanese 1. 4 Hours.
Introduces basic grammar, sentence patterns, and vocabulary of Japanese with emphasis on spoken Japanese. Includes an introduction to the hiragana and katakana syllabaries in the written component. Designed for students with no previous knowledge of Japanese.

JPNS 1102. Elementary Japanese Immersion 1. 4 Hours.
Continues JPNS 1101. Emphasizes the development of oral skills; secondary emphasis is on reading. Offers students the opportunity to learn basic grammatical patterns, expand vocabulary, and improve communication skills in modern Japanese. Includes the introduction to kanji characters in the written component.

JPNS 1301. Elementary Japanese Immersion 1. 4 Hours.
Designed for students who are in a Japanese-speaking country, this is an off-campus immersion course. Focuses on standard Japanese. Offers students an opportunity to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

JPNS 1302. Elementary Japanese Immersion 2. 4 Hours.
Designed for students who are in a Japanese-speaking country, this is an off-campus immersion course. Focuses on standard Japanese. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

JPNS 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JPNS 2101. Intermediate Japanese 1. 4 Hours.
Emphasizes further vocabulary building. Offers students an opportunity to master the fine points of grammar through written composition, prepared oral reports, and reading and discussion from contemporary Japanese materials.

JPNS 2102. Intermediate Japanese 2. 4 Hours.
Builds on JPNS 2101 and focuses on further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through written composition, prepared oral reports, and reading and discussion from contemporary Japanese materials.
JPNS 2301. Intermediate Japanese Immersion. 1-4 Hours.
Designed for students who are in a Japanese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

JPNS 2302. Intermediate Japanese Immersion. 2-4 Hours.
Designed for students who are in a Japanese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

JPNS 2900. Specialized Instruction in Japanese. 1-4 Hours.
Designed for individuals whose language skills are at the intermediate level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Students must have at least an elementary level of competence in the language. May be repeated without limit.

JPNS 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JPNS 3101. Advanced Japanese. 1-4 Hours.
Continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

JPNS 3102. Advanced Japanese. 2. 4 Hours.
Builds on JPNS 3101 and continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

JPNS 3301. Advanced Japanese Immersion. 1-4 Hours.
Designed for students who are in a Japanese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence.

JPNS 3302. Advanced Japanese Immersion. 2. 4 Hours.
Designed for students who are in a Japanese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence.

JPNS 3800. Special Topics in Japanese. 1-4 Hours.
Focuses on a unique aspect of the Japanese language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an intermediate level of skill in the language. May be repeated up to three times.

JPNS 3900. Specialized Instruction in Japanese. 1-4 Hours.
Designed for individuals whose language skills are at an advanced level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Requires at least an advanced level of competence in the language. May be repeated without limit.

JPNS 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JPNS 4800. Special Topics in Japanese. 1-4 Hours.
Focuses on a unique aspect of the Japanese language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an advanced level of skill in the language. May be repeated up to four times.

JPNS 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JPNS 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

JPNS 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to three times.

JPNS 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

JPNS 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

JPNS 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
JWSS 1520. Jewish Film. 4 Hours.
Explores major themes and issues in American Jewish life—assimilation and intermarriage, anti-Semitism, the Holocaust—through the lens of popular film. Includes weekly screenings of films such as *Annie Hall* and *The Producers* and readings, lectures, and discussions.

JWSS 1575. Jewish Film and Fiction. 4 Hours.
Examines books and short stories with Jewish themes, such as *Goodbye Columbus* and *The Chosen*, and some of the films based on those works. Offers students an opportunity to develop critical knowledge of key issues in modern Jewish identity—immigration, assimilation and intermarriage, anti-Semitism, and the Holocaust—through the lens of fiction and film. CLTR 1575 and JWSS 1575 are cross-listed.

JWSS 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JWSS 2259. Sex and Gender in the Jewish Experience. 4 Hours.
Explores how sexuality and gender have shaped Jewish culture and religion throughout history. Studies how ideas about masculinity and femininity have varied dramatically over time and place within the Jewish community and have often departed considerably from those of non-Jewish society. Begins with the role of biblical texts in the construction of Western conceptions of gender and sexuality and continues through medieval and early modern Europe, up to contemporary feminist Judaism and current Jewish ideas about “queerness” and non-normative ways of living. Uses a wide range of primary sources (memoirs, fiction, religious texts, etc.) and secondary literature from multiple disciplines. Seeks to answer: Does ethnicity have a sex? Is religious identity gendered? What do “Jewish femininity” and “Jewish masculinity” mean? JWSS 2259 and WMNS 2259 are cross-listed.

JWSS 2269. Jews and American Popular Culture. 4 Hours.
Examines why Jews, despite their small numbers, have had such a central influence on American popular entertainment. Jewish “moguls” essentially created the American radio, film, and television industries. Other Jews assumed prominence in the fields of popular song, jazz, folk music, vaudeville, Broadway, literature, literary criticism, stand-up comedy, as well as comic strips and books. Jews excelled in sports, particularly baseball, basketball, and boxing, and Jewish gangsters made an indelible mark on the dark side of the American imagination. Jewish department store moguls, fashion designers, and toy manufacturers helped shape the American Dream. Explores social history as well as works of popular culture to perceive the nuanced Jewish influence operating at the heart of Jewish-American creativity.

JWSS 2285. America and the Holocaust. 4 Hours.
Examines the American response to the Holocaust, in terms of both contemporaneous knowledge and actions and the lasting impact on policy and culture. Starts with early twenty-century events, such as the Armenian genocide, that shaped later attitudes. Explores the prewar period, particularly U.S. immigration and isolationist policies. Assesses Americans’ knowledge of European events as the extermination campaign unfolded and fights ensued over rescue possibilities. Examines changing depictions of the Holocaust that emerged in the postwar period as a result of critical events such as the Eichmann trial and popular television and film portrayals. Finally, considers how perceptions of the Holocaust have shaped subsequent U.S. responses to genocide. HIST 2285, JRNL 2285, and JWSS 2285 are cross-listed.

JWSS 2300. Race, Religion, Ethnicity: The Example of Jewishness. 4 Hours.
Explores the relationship between Judaism and race from ancient times, through the birth of modern anti-Semitism in the nineteenth century and the Holocaust in the twentieth, to the resurgence of biologically based ideas of Jewish identity in recent decades. Seeks to answer the questions of what Jewishness is—race, religion, or ethnicity—and how and why Jews, along with other groups such as Italians, Irish, and Slavs, moved from being seen as racially “other” in nineteenth-century America to being considered “white” in the twentieth century. Through the lens of the Jewish experience, offers students an opportunity to acquire a deeper understanding of the historically changing meanings of such important concepts as race, ethnicity, and peoplehood. HIST 2300 and JWSS 2300 are cross-listed.

JWSS 2313. Exploring the Jewish Diaspora—From Mountain Jews to Crypto-Jews. 4 Hours.
Explores vibrant Jewish life in foreign lands, including Argentina, Brazil, Canada, and South Africa, as well as unusual Jewish communities in places such as Uganda and northeastern India. Covers topics such as how Jewish religion and identity are reshaped by other cultures, the emergence of secret Jews who fled the Iberian peninsula more than five centuries ago, and a brief history of Jewish life in the modern diaspora. Includes presentations and discussion of diaspora art, literature, film, and music. JWSS 2313 and PHIL 2313 are cross-listed.

JWSS 2431. Immigration and Identity in the American Jewish Experience. 4 Hours.
Examines Jewish political, social, and cultural history from the arrival of the first group of Jews at New Amsterdam in 1654 to the present. Themes include immigration, adaptation, family life, religion, anti-Semitism, Zionism, the Holocaust, and American-Israeli relations. HIST 2431 and JWSS 2431 are cross-listed.

JWSS 2500. Zionism and the Challenges of Jewish Statehood. 4 Hours.
Examines the birth and development of political, religious, cultural, and social movements that gave rise to the modern state of Israel in 1948 and continue to shape Israeli society and politics today. Readings are drawn from Zionism’s founders and early opponents in nineteenth-century Europe (Herzl, Ha’Am, Buber, etc.); the state’s founders, leaders, and critics (Ben Gurion, Kook, etc.); and ends with contemporary thinkers in Israel and the United States (Morris, Hartman, Eisen, etc.). Emphasizes historical context as well as comparative analysis with other forms of nationalism, other movements of Judaism, and more.

JWSS 2610. Contemporary Israeli Literature and Art Abroad. 4 Hours.
Explores contemporary Israeli culture through literature and art. Focuses on the tensions, pains, and pleasures of existence from various Israeli points of view. Takes place in Israel during the summer term, offering students an opportunity to meet with contemporary Israeli writers, visit sites of the literary settings, and explore art galleries and museums. Readings include short stories and poetry by major Israeli and Palestinian writers from 1948 through the present. ENGL 2610 and JWSS 2610 are cross-listed.

JWSS 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JWSS 3447. Topics in Jewish Studies. 4 Hours.
Covers special topics in Jewish studies. May be repeated without limit.
JWSS 3678. Bedrooms and Battlefields: Hebrew Bible and the Origins of Sex, Gender, and Ethnicity. 4 Hours.
Considers stories from Hebrew Scripture in English translation, beginning with the Garden of Eden through the Book of Ruth, asking how these foundational narratives establish the categories that have come to define our humanity. Analyzes how the Bible’s patterns of representation construct sexual and ethnic identities and naturalize ideas about such social institutions as “the family.” ENGL 3678, JWSS 3678, and WMNS 3678 are cross-listed.

JWSS 3685. From Kafka to Kushner: Modern and Contemporary Jewish Literature. 4 Hours.
Surveys Jewish literature from the late modern (1880–1948) and contemporary (1948–present) periods. Considers themes of immigration and cross-cultural influences and issues of religious, ethnic, and gender identity. Emphasizes American and European literatures to begin to define an international Jewish literary canon, including Yiddish poets and playwrights, Russian Jewish writers, and modern writers. ENGL 3685 and JWSS 3685 are cross-listed.

JWSS 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JWSS 4660. Jewish Studies Module. 1 Hour.
Permits specialized Jewish studies topics to be studied as part of more general courses. Restricted to junior, senior, or graduate standing. May be repeated without limit.

JWSS 4992. Directed Study. 1-4 Hours.
Offers students an opportunity for special readings and research in Jewish studies. May be repeated for up to 8 total credits.

Jewish Studies - CPS (JLS)

JLS 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

JLS 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

JLS 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

JLS 6100. Jewish Leaders, Past and Present. 3 Hours.
Explores models of past leadership in the Jewish community, tracing its history from the biblical and Talmudic periods through early modern leadership models. Covers contemporary issues in Jewish communal leadership, such as the decline of rabbinical influence, modern synagogue leadership, denominational leadership, and secular leadership.

JLS 6110. Jewish Polity and Organizational Life. 3 Hours.
Examines the Jewish community and its organizations as a dynamic evolving system. Throughout history, Jews have responded to unique challenges by organizing and founding mission-driven institutions and developing infrastructures that have enhanced the overall strength of the community. Topics include key Jewish commentaries on community and polity; the historical roots of modern Jewish organizations; the nature and role of political power in the contemporary Jewish community; the role of competition, conflict, and creative tension in contributing to Jewish life; new forms of governance and organizational structures; and challenges that lie ahead for the organized Jewish community.

JLS 6120. Ethical Leadership and Jewish Law. 3 Hours.
Examines how leaders in Jewish communities incorporate the legal and ethical writings of Judaism in developing context-sensitive leadership practices. Covers the classical forms of leadership in Jewish communities, the types of ethical and legal backgrounds and training required to qualify a person as a leader, how a leader should interact with his or her community and with other religious and secular communities, and how leaders in Jewish communities are bound by non-Judaic traditions and laws. Analyzes various rabbinic texts and codes of ethics. Offers students an opportunity to explore a broad range of leadership issues, asking how these writings might be applicable to the contemporary world.

JLS 6130. Strategic Leadership in Jewish Communal Settings. 3 Hours.
Offers students an opportunity to learn about the essential traits of strategic leaders who attempt to mobilize significant change within their institutions and communities, as well as to gain an understanding of the impact of leadership on individual and organizational performance. A key aspect of leadership is strategic foresight—the ability to foresee where the community must go and the ability to formulate the strategy(ies) to get there. Strategic leaders in the Jewish community must not only be able to forge compelling visions for their organizations, they must also have the skills to overcome multiple hurdles in order to bring new visions into reality. Uses Jewish source materials, discussions, group exercises, and examples of Jewish leadership at work.

JLS 6140. Contemporary Israeli-Diaspora Relations. 3 Hours.
Examines some of the foundational documents in the rise of the state of Israel, as well as some of the classics of Zionist writing. Themes include relations with the Diaspora, the position of women, integration of immigrants, and relations with the Arab world. Addresses tensions related to the emergence of Israel and the traditional attitudes of the Diaspora in responding to the financial and other needs of Israel.

JLS 6150. Contemporary Jewish Political Thought. 3 Hours.
Examines some of the most important political movements that influenced modern Judaism and modern Jewish thought. These include Zionism, socialism, secularism, pluralism, and anti-Semitism. The course also deals with the issue of separation of church and state in the United States, Jewish-American identity, and the effects of increased globalization on Jewish political movements.

JLS 6160. Jewish Philanthropy and Fund-Raising. 3 Hours.
Examines Jewish fund-raising. In the modern era, Jewish fund-raising is unprecedented for its scope and success. From the local temple to major international efforts, Jews are raising funds for an impressive range of causes. Examines the core values that drive the energy and motives that sustain Jewish philanthropy; the recent and newest trends and the implications for the future of Jewish giving; and fund-raising techniques and methods employed by successful Jewish organizations. Utilizes a skills-based curriculum that offers students an opportunity to obtain the confidence and know-how to raise funds within the Jewish community.

JLS 6170. Introduction to Judaism, Christianity, and Islam. 3 Hours.
Seeks to build a foundation for genuine dialogue between Judaism, Christianity, and Islam by posing fundamental theological questions in a comparative context. Interreligious dialogue requires interreligious understanding. Offers students an opportunity to gain an understanding of the other traditions, while deepening the understanding of their own. Discussions revolve around such matters as the human experience of God, the purpose of human existence, the nature of religious community, and the ways that contemporary and ancient communities have responded to and do respond to ancient and contemporary challenges.
JLS 6260. Jewish Education in the 21st Century. 3 Hours.
Explores specific challenges that face leaders of Jewish educational institutions and how successful leaders confront them. Examines utilization of technology, creativity, and integrated and differentiated approaches to education as a myriad of tools for exploring the next best practices for educational ventures in the twenty-first century.

JLS 6180. Secular Institutions and Jewish Values. 3 Hours.
Explores personal, interpersonal, and communal values that are central to Judaism, such as self-control, humility, justice, righteousness, peace, compassion (tzedaka and gemilut hasadim), repentance and forgiveness, social responsibility, study of Torah, and the relationship between Torah study and practice. Discusses the theological underpinnings of these values but focuses on interactions and relationships in the human sphere—specifically, how conflicts between different systems of values (e.g., corporate and Jewish values) get resolved. Uses a wide range of primary and secondary sources from the biblical, rabbinic, medieval, modern, and contemporary periods.

JLS 6190. History of the State of Israel: Zionism to the Present. 3 Hours.
Explores the history of Zionism as well as contemporary issues regarding the State of Israel. Covers the scope and content of modern Jewish nationalism vis-à-vis other forms of modern Jewish identity, culture, and community. Specific topics include Zion in traditional Jewish thought; socialism and revisionism; religious Zionism; Jewish fundamentalism in Israel, including models of religious violence; Jews and Arabs; Israel and the Diaspora; and Israeli ethnicity.

JLS 6220. The Nexus of Vision, Curriculum, and Leadership in Jewish Education. 3 Hours.
Covers curriculum development and how its implementation forms the core of the educational enterprise. Explores how Jewish educators derive curricular priorities from the interplay of belief, theory, research, and practice. Examines how the educational leader guides curricular concept toward its translation to the classroom and beyond.

JLS 6230. Philosophical and Spiritual Questions in Jewish Education. 3 Hours.
Explores a range of philosophies of American Jewish education. Considers their theoretical assumptions and rationales, objectives, approaches to curriculum, pedagogic methods, and educational environments and contexts to which they are applicable. How are the ideologies and philosophies of Orthodox, Conservative, Reform, Reconstructionist, communal (nondenominational), and humanist approaches to contemporary Judaism reflected in day and afternoon schools and in informal educational settings that are affiliated with each orientation? Also explores how Jewish educational philosophies draw from and relate to contemporary philosophies of education in America.

JLS 6240. Research Trends in Jewish Education. 3 Hours.
Explores the emergent questions for research in Jewish education in both quantitative and qualitative educational research. Examines techniques for collecting, analyzing, sharing, and utilizing research data. Identifies ways that one can apply and analyze institutional assessment modalities in the applied practice of assessment.

JLS 6250. Leadership Challenges for Particular Jewish Education Settings. 3 Hours.
Introduces complex issues facing Jewish educational leaders and their institutions in the twenty-first century. Utilizing the methods of case study analysis in a project-based learning model, explores the ways educational entrepreneurs draw on general approaches to transformation and change in their Jewish educational venues. Topics include implementation of educational vision, relationships and communication with professional and lay leaders, creation of educational culture, and community engagement.

JLS 6270. The History and Landscape of Jewish Education in the United States. 3 Hours.
Examines the history, structure, functions, and overall landscape of Jewish educational institutions in the United States of America. Addresses Jewish education in all its forms—day school education, synagogue-based or supplemental Jewish education, denominationally based education, community schools, and those that specifically define themselves as pluralistic or nondenominational. Examines the institutional dynamics of Jewish education—organization, function, interinstitutional dynamics, communal norms, patterns of leadership, and decision making. Also looks at how the Jewish community has responded to different age cohorts and special-needs students.

JLS 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

JLS 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JLS 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

JLS 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

JLS 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

JLS 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

JLS 6983. Topics. 1-4 Hours.
Covers special topics in Jewish studies. May be repeated without limit.

JLS 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

Journalism (JRNL)

JRNL 1000. Journalism at Northeastern. 1 Hour.
Intended for first-year students in the College of Arts, Media and Design. Introduces students to liberal arts; familiarizes them with their major; develops the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community; and helps to develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

JRNL 1101. Journalism 1: Fundamentals of Reporting. 4 Hours.
Covers foundations of news writing for print media, including leads, story structure, objective tone, and attribution. Introduces fundamental reporting skills such as interviewing, researching, and observation. It then asks students, in their reporting, to step back and analyze the institutions they are writing about and the media itself in order to understand how societies and its institutions function and the validity of theories that explain these processes.
JRNL 1150. Interpreting the Day’s News. 4 Hours.
Examines the media institutions that shape the news and how the challenges of economics, politics, diversity, and globalization change the function of the website, newspaper, news magazine, and news broadcasts. Examines stories and news decisions from different perspectives to evaluate national, political, local, foreign, sports, and science news in the U.S. media. Topics include responsibilities of the press and the changing ways news is gathered, processed, and disseminated. Explores how other societies in different parts of the world view the news; freedom of the press; and the role of reporters, producers, and editors.

JRNL 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JRNL 2201. Journalism 2: Intermediate Reporting. 4 Hours.
Continues JRNL 1101. This is the second writing course for undergraduate journalism students with an emphasis on learning how to report news stories. Offers students the opportunity to find sources and interview them, do background research, and use public records. Developing story ideas using computer-assisted reporting will be covered. Examines how to develop a story idea and then focus and organize it. Covers basic principles of online journalism including writing, design, and integration of visuals and text for the Web. Introduces elements of design and layout.

JRNL 2285. America and the Holocaust. 4 Hours.
Examines the American response to the Holocaust, in terms of both contemporaneous knowledge and actions and the lasting impact on policy and culture. Starts with early twentieth-century events, such as the Armenian genocide, that shaped later attitudes. Explores the prewar period, particularly U.S. immigration and isolationist policies. Assesses Americans' knowledge of European events as the extermination campaign unfolded and fights ensued over rescue possibilities. Examines changing depictions of the Holocaust that emerged in the postwar period as a result of critical events such as the Eichmann trial and popular television and film portrayals. Finally, considers how perceptions of the Holocaust have shaped subsequent U.S. responses to genocide. HIST 2285, JRNL 2285, and JWSS 2285 are cross-listed.

JRNL 2301. Visual Storytelling in Journalism. 4 Hours.
Continues JRNL 2201. Covers basic principles of journalistic storytelling with video, sound, and still images. Introduces students to the foundations of writing with audio and video, and explores the concept of "convergence," preparing stories for presentation in different formats. Fulfills the Advanced Writing in the Disciplines requirement for journalism majors.

JRNL 2350. History of Journalism. 4 Hours.
Traces the development of American journalism from its European and English beginnings. Topics include the colonial press, the great personal journalists of the nineteenth century, and the impact of major technological changes in mass communications media in the twentieth century.

JRNL 2410. Radio News Gathering and Reporting. 4 Hours.
Covers writing and editing news for radio, with practice in interviewing, organizing news scripts, and integrating audio materials into broadcast.

JRNL 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JRNL 3000. Covering Conflicts: Peace, War, and the Media. 4 Hours.
Examines the media's portrayal of conflicts and the peace process in the Middle East, Northern Ireland, Bosnia, Rwanda, and elsewhere. Evaluates the limits of fairness, balance, and accuracy in the coverage. Looks at the U.S. and international media—print, broadcast, and online—and some of the major stories in recent years and attempts to put these stories in historical, political, and social context. Analyzes the wide-ranging criticism of coverage from a variety of perspectives. INTL 3300 and JRNL 3300 are cross-listed.

JRNL 3305. Special Topics. 4 Hours.
Offers specialized topics in journalism for the twenty-first century. Topic matter changes each semester. May be repeated up to four times.

JRNL 3425. Public Relations Principles. 4 Hours.
Presents the principles, history, and methods of public relations; processes of influencing public opinion; responsibilities of the public relations practitioner; and analyses of public relations programs. Through case studies and class discussions, offers students an opportunity to confront real-life ethical dilemmas and learn to apply ethical frameworks to evaluate and resolve them. COMM 3425 and JRNL 3425 are cross-listed.

JRNL 3430. Local Reporting. 4 Hours.
Discusses coverage of town/city government, with emphasis on the "beat" approach to reporting public affairs. Focuses on practical, in-the-field experience with town meetings, meetings of boards of selectmen, and other governmental agencies.

JRNL 3435. Techniques of Journalism. 4 Hours.
Provides practice in writing in-depth and multiple-source stories requiring significant research. Provides an introduction to investigative reporting, practice in feature writing, and a review of legal issues.

JRNL 3440. Editing. 4 Hours.
Provides practice in copyediting, headline writing, and origination editing. Presents assignments in photo selection, cropping, and cutline writing. Introduces page layout and discusses the principles of online editing.

JRNL 3455. Sports Writing. 4 Hours.
Provides practice in journalistic coverage of amateur and professional athletics. Focuses on the role of sports writing in the news media and examines such topics as game coverage, feature profiles, and opinion columns.

JRNL 3550. Law of the Press. 4 Hours.
Examines legal problems of libel, invasion of privacy, and access to government information; discusses the balance between private rights and the public’s “need to know.”

JRNL 3610. Digital Storytelling and Social Media. 4 Hours.
Offers students an opportunity to learn the fundamentals of digital journalism. Emphasizes hands-on instruction in multimedia skills. Topics may include blogging, photography, video and audio production, use of social media as a reporting tool, and mapping and data visualization. Guest speakers and a consideration of the future of news may also be part of the course. Requires students to produce a final project that consists of storytelling across a range of platforms—for example, a written article, a photo story, and a video.

JRNL 3615. Advanced Digital Storytelling. 4 Hours.
Continues JRNL 3610. Journalists now have access to more storytelling tools—blogs, smartphones, high-quality DSLRs, Facebook—than at any other time in our industry’s history. Offers students an opportunity to learn advanced techniques in using video and audio production, social media, and crowdsourcing to create compelling, professional-grade multimedia stories. Students who do not meet course prerequisites may seek permission of instructor.
JRNL 3625. Public Relations Practice. 4 Hours.
Demonstrates practices and techniques employed in the field including organization of events and functions. Studies campaign planning, research, and media relationships. COMM 3625 and JRNL 3625 are cross-listed.

JRNL 3627. Critical Thinking about Public Relations Strategies. 4 Hours.
Designed to bring together upper-level students from multiple disciplines who are interested in taking a microscopic view of how issues are purposefully driven by professionals interested in promoting causes, political candidates, public policy, and corporate image. Examines how corporations and others make decisions and which theories of institutional behavior best explain those choices. Are companies motivated solely by economics as Marx would argue, or do they approach their image in a more functional way? Are the messages of politicians determined by race and class, or do they respond to a different framework? Requires students to follow current issues and dissect significant past campaigns. Knowledge of public relations tactics is helpful but not necessary. COMM 3627 and JRNL 3627 are cross-listed.

JRNL 3630. Magazine Writing. 4 Hours.
Covers writing and freelancing magazine articles; analyzing magazines as markets; and selecting the best feature format—how-to-do-it, profile, personal experience, human interest, interpretive pieces, and others. Requires a firm grasp of journalistic concepts, including advanced reporting and writing skills; a prior journalistic co-op or internship or experience writing for a school, online, or professional publication is preferred.

JRNL 3680. Advanced Reporting. 4 Hours.
Offers students an opportunity to learn and apply advanced reporting techniques of the kind that editors and producers expect of their best reporters, especially those who cover demanding beats such as politics, government, healthcare, education, science, and business. Studies how to see and apply data and data visualization techniques, to develop and interview sources, to locate and decipher public records, to identify and conceptualize important stories, and to discuss and apply ethical theories to reporting to justify choices that may inflame or antagonize sources or readers. An assignment to do substantial enterprise stories for publication in major media outlets is part of the course.

JRNL 3945. Internship. 1-4 Hours.
Comprises academic credit for internship work in journalism. May be repeated without limit.

JRNL 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JRNL 4650. Journalism Ethics and Issues. 4 Hours.
Discusses the responsibilities of news media and ethical problems confronting decision makers in various journalistic fields and the principles found in codes of various professional societies. Requires students to write a paper on an ethical problem they faced while working in the media and place it in a framework of at least two ethical theories, for example, utilitarianism and deontology.

JRNL 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

JRNL 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

JRNL 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JRNL 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

JRNL 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

JRNL 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

JRNL 5214. The Online Newsroom Experience. 4 Hours.
Offers students an opportunity to report and write for publication, take photos, and edit news copy for the e-Bulletin, the online news site for the New England Newspaper and Press Association. The e-Bulletin, a news Web site after a transition from a printed newspaper, reports news for journalists at about 800 newspapers in New England and their online operations. It is also a multimedia site, offering all the news-delivery methods of the modern newsroom—video, audio, still photos, and text. This course seeks to prepare students for co-op jobs and provide networking opportunities with New England journalists. May be repeated without limit.

JRNL 5306. Beat Reporting. 4 Hours.
Covers advanced reporting in specific topic areas. Topics change from semester to semester. May be repeated without limit.

JRNL 5307. Video Newswriting. 4 Hours.
Focuses on the fundamentals of journalistic writing with video, audio, narration, and graphics. Emphasizes writing and producing in various television news formats.

JRNL 5309. Documentary Production. 4 Hours.
Offers students an opportunity to research, write, and produce a short video documentary and acquaint themselves with a range of professional documentary styles through screenings and discussions. Analyzes and addresses the ethical challenges facing documentary filmmakers and their interaction with subjects historically and in the new media age. Requires experience shooting video and editing on nonlinear editing software such as Final Cut Pro X, Adobe Premiere, or Avid.

JRNL 5310. Photojournalism. 4 Hours.
Covers camera procedures along with cropping, assignment techniques, theory, and photo-caption methods. Engages students in the ethical choices photojournalists face in covering wars, disasters, and vulnerable people in societies—both historically and in the new media environment.

JRNL 5311. Design and Graphics. 4 Hours.
Introduces graphic design terminology and principles using software packages and leading desktop and web publishing programs. Covers how to plan a publication based on audience and budget. Design assignments include newspapers, magazines, brochures, advertisements, and corporate identity programs. Strict attention is paid to deadlines and quality of the printed publication.
JRNL 5314. Video News Production 1. 4 Hours.
Offers students hands-on opportunities to produce news stories for dissemination across video and several multimedia platforms. Seeks to engage students in the ethical challenges facing journalists historically and in the new media age. Students experiment with techniques used by TV and electronic news producers, including reporting, writing, videotaping, and editing on nonlinear digital editing equipment. Offers students an opportunity to create news stories and upload them to their websites with a variety of software programs, in line with journalistic and ethical standards.

JRNL 5315. Video News Production 2. 4 Hours.
Continues JRNL 5314. Offers advanced study of video news gathering including shooting, interviewing, writing, editing, and field producing.

JRNL 5360. Global Reporting. 4 Hours.
Discusses coverage of global issues and international public affairs and the function of the media in a global context. Topics include how news is gathered, processed, and disseminated by the various media abroad and how the media reflect culture, religion, and politics around the world. Focuses on practical, in-the-field experience with global governmental, business, and societal leaders. This course is part of the Dialogue of Civilizations program abroad. Graduate awards do not apply toward this program. International students wishing to register need to speak to the International Student and Scholar Institute prior to registration. May be repeated without limit.

JRNL 6100. Reporting and Writing Fundamentals. 1 Hour.
Introduces the basics of news reporting and writing. Runs for three weeks beginning in mid-August.

JRNL 6200. Enterprise Reporting 1. 4 Hours.
Defines and sharpens research, interviewing, and analytical skills necessary for good reporting. Focuses on learning to develop story ideas and conduct primary and secondary research for a major enterprise article. Skills are developed through an analysis of outstanding reportage, in-class discussion and exercises, and out-of-class assignments.

JRNL 6201. Enterprise Reporting 2. 4 Hours.
Builds on skills and concepts covered in JRNL 6200. Covers a variety of Web-based and traditional resources. Employs computer-assisted reporting methodologies to assist students in investigating areas such as government corruption, safety and environmental risks, criminal justice, education, healthcare, real estate, campaign financing, and business and financial transactions. Offers students an opportunity to learn how to access public databases, to reference materials, and to analyze the information.

JRNL 6202. Perspective on Journalism Ethics. 4 Hours.
Offers a seminar involving readings and discussions about philosophical and moral principles developed by Mill, Hume, and others, and their application to case studies and work experience in print and broadcast journalism. Issues include deception, conflict of interest, privacy, and corporate ownership. Students also evaluate the role of journalism reviews, codes of ethics, ombudsmen, and news councils.

JRNL 6300. First Amendment in Digital Age. 4 Hours.
Acquaints students with legal issues journalists encounter from the common law of libel to communicating on the Internet; from prior restraint to protecting sources. Also serves as an introduction to legal analysis, showing how law develops through statutes and judicial opinions.

JRNL 6301. Historical Perspective on Media. 4 Hours.
Examines the people and practices in American and foreign journalism that have exerted special influences on the formation of the contemporary press. Particular attention is paid to the development and evolution of the First Amendment and other legal protections for free expression. Offers a discussion and seminar format. Student research projects require work in original sources such as documents, interviews, and the examination of broadcasts in their contemporary contexts.

JRNL 6302. Literature of Journalism. 4 Hours.
Examines some of the great twentieth-century journalists including John Hersey, Susan Sheehan, and J. Anthony Lukas, and introduces students to the techniques of literary nonfiction. Also analyzes the potential conflicts between creative writing and journalistic accuracy.

JRNL 6303. Seminar. 4 Hours.
Offers students the opportunity to discuss and analyze a major issue in journalism and write articles on that topic for publication in journalism reviews. Recent seminars have covered such issues as civic journalism, international reporting, and the impact of *The New York Times* on American and foreign journalism.

JRNL 6305. Topics. 4 Hours.
Requires advanced work to develop media skills not covered in other classes. May be repeated without limit.

JRNL 6306. Media Innovation Studio 1. 4 Hours.
Constitutes the first of a two-course studio sequence designed to prepare experienced journalists to create new forms of journalism in the digital age. Offers students an opportunity to work with faculty members and peers via class exercises and peer-to-peer project collaboration to identify and develop the subject of a signature master’s project. Incorporates lectures on emerging media practices, including parallax scrolling, and instruction on digital journalism tools, including DSLR cameras, as well as reviews and critiques of professional and studio work by faculty and guest speakers.

JRNL 6307. Media Innovation Studio 2. 4 Hours.
Offers students an opportunity to integrate knowledge and skills derived from foundation courses to develop a master’s project. Creates a newsroom environment in which each student project is advanced through a journalistic collaborative process that features critiques from instructors and peers and integrates expertise from guest lecturers. Following the “teaching hospital” model, students work with the instructor, each other, and partnered media innovation visitors to develop their work.

JRNL 6310. Multimedia Journalism. 4 Hours.
Covers all the latest tools and tricks of multimedia journalism. Gone are the days when a journalist might be expected to start a story at 9:00 AM, file his or her copy by 4:00 PM, and then see it in the next day’s paper. We now have access to more storytelling tools—blogs, smartphones, high-quality DSLRs, Facebook—than at any other time in our industry’s history. Learning to use all these tools can be daunting, but it shouldn’t be. This course offers students an opportunity to tell one story across a range of media and, in the process, learn to create everything from epic tweets to compelling video.

JRNL 6340. Fundamentals of Digital Journalism. 4 Hours.
Offers students an opportunity to learn the fundamentals of digital journalism and to place those skills within the context of a changing media environment. Studies multimedia tools within an intellectual framework—i.e., offers students an opportunity to learn hands-on skills and also to study best practices and theory. May include guest speakers and a consideration of the future of news. Requires students to produce a final project that consists of storytelling across a range of digital platforms.
JRNL 6341. Telling Your Story with Data. 4 Hours.
Explores select topics in data journalism and support data-driven storytelling projects of various kinds. Offers students an opportunity to learn how to navigate the often-competing demands of rigorous analysis and accessible narrative and storytelling. Course units are designed to foster moderate technical learning of applications and software, incorporate theories from relevant fields in data visualization and data science, and emphasize storytelling for broad public audiences.

JRNL 6352. Nonfiction Writing. 4 Hours.
Concentrates on techniques that distinguish magazine writing from other types of journalism including first-person voice, strong point of view, observation-participation, and complex organizational structures. Also introduces students to the magazine market through an analysis of overall trends and a look at individual magazine's mission and modus operandi.

JRNL 6354. Public Policy and the Press. 4 Hours.
Offers students an opportunity to learn how public policy decisions are made and how they can do informed reporting for print, broadcast, or online media. Explores the legislative and executive decision-making process at federal, state, and local levels of government. Special attention is given to the formulation of policy choices in such areas as transportation, housing, healthcare, immigration, and the environment. The course examines how budgetary decisions and fiscal policy are made. Analyzes the relationship between government and the press. Intended for students in the master's program in journalism and for other graduate students who are interested in government and media.

JRNL 6355. Seminar in Investigative Reporting. 4 Hours.
Introduces students to the world of investigative reporting as it is practiced at major metropolitan newspapers. Asks students to work as members of investigative reporting teams and introduces them to advanced reporting techniques and standards in the classroom. Provides an opportunity to learn how ideas for investigative reporting projects are developed; how to identify and interpret public records and online databases; and how to do interviews and write investigative stories. Working in small teams, the students are given an opportunity to develop and write investigative stories for publication.

JRNL 6400. News Internship. 4 Hours.
Provides students with the opportunity to report on public policy issues for newspapers, magazines, and legal affairs publications in Massachusetts and New England. Supplements live reporting with in-class discussion, including speakers in government, media, and the law. May be repeated without limit.

JRNL 6405. Journalism Applications. 1 Hour.
Supplements courses taken outside of the School of Journalism by requiring students to apply what they are learning in the course to the practice of journalism. May be repeated without limit.

JRNL 6960. Exam Preparation—Master’s. 0 Hours.
Offers the student the opportunity to prepare for the master's qualifying exam under faculty supervision.

JRNL 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

JRNL 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

JRNL 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

JRNL 6978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

JRNL 7976. Directed Study. 1-4 Hours.
Offers students work on individual projects under the supervision of an instructor. May be repeated without limit.

JRNL 7990. Thesis. 4 Hours.
Focuses on preparing a master's thesis under supervision of a faculty committee. May be repeated without limit.

JRNL 7996. Thesis Continuation. 0 Hours.
Continues thesis work conducted under the supervision of a departmental faculty.

Knowledge Management - CPS (KMG)

KMG 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

KMG 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

KMG 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

KMG 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

KMG 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

KMG 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

KMG 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

KMG 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

KMG 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

KMG 6983. Topics. 1-4 Hours.
Covers special topics in knowledge management. May be repeated without limit.

KMG 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.
LARC 1330. Designed Ecologies of the City. 4 Hours.
Introduces the emerging field of urban ecology and ecologically inspired urbanism. Offers students an opportunity to develop contemporary insights about resilient urban form and speculative frameworks, ecological patterns and processes, urban ecosystems, and methods of urban habitat analysis. Covers urban hydrology, geomorphology, and soils; urban regions and ecoregions; urban effects on climate; ecosystem services; landscape ecology and infrastructural adaptation; postindustrial landscapes; and the theory of landscape and ecological urbanism. Other lecture topics address urban waterfront resilience, sea-level rise, waste, contamination, remediation, and ecological disturbance and succession.

LARC 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LARC 2130. Sustainable Urban Site Design. 6 Hours.
Focuses on site planning and design with an emphasis on parks and open-space systems in the adaptive reuse of urban sites. Projects focus on the creation and cultivation of public space, transformation of site conditions, and development of sustainable site materials. Emphasizes site analysis, development of an individual design process, and design communication strategies. This studio course introduces students to urban design precedents, site research, and remediation methods through case studies, lectures, site visits, and workshops.

LARC 2140. Designed Urban Ecologies. 6 Hours.
Continues LARC 2130. Focuses on sustainable community/campus/neighborhood design at the intersection of large-scale urban and environmental systems. Primary topics include mixed-use programming in relation to systems ranging from zoning and transit to the material flows of human and wildlife habitats. This studio course introduces basic geographical information systems (GIS) and application of landscape ecology principles. Projects examine the role of landscape systems and the formation and reformulation of land development scenarios.

LARC 2230. Site Materials and Methods. 4 Hours.
Introduces fundamental techniques of sustainable site engineering in the urban realm, including earthworks, water, and vegetal systems. Primary topics include grading, storm water management, urban plants, and basic site elements such as retaining walls, paving systems, and landscape on structure.

LARC 2240. Sustainable Site Construction and Detailing. 4 Hours.
Continues LARC 2230. Focuses on construction technologies, methods, and materials for sustainable site elements, including environmental performance infrastructures, circulation systems, and basic site structures. Introduces structural systems for site work via lecture and in-class exercises.

LARC 2330. Cities, Landscape, and Modern Culture. 4 Hours.
Presents the themes, core theories, and iconic works that gave shape to modernism in landscape architecture and urbanism. Focusing on the eighteenth-century through mid-twentieth-century projects and designers, lectures examine contextual factors and resulting formal, spatial, organizational, and material characteristics of built works. Offers students an opportunity to practice formulation of a critical design perspective via reading responses, project analysis, written work, and exams.

LARC 2340. Cities, Landscape, and Contemporary Culture. 4 Hours.
Presents the themes, core theories, and iconic works that shape the field of contemporary landscape architecture and urbanism. Focusing on the late twentieth century through contemporary projects and designers, lectures examine contextual factors and resulting formal, spatial, organizational, and material characteristics of built works. Offers students an opportunity to practice formulation of a critical design perspective via reading responses, project analysis, written work, and exams.

LARC 2430. Plant Identification. 4 Hours.
Focuses on identification of structural, growth, and community characteristics of woody plant materials. Presents plant materials as design elements with diverse cultural uses as well as ecological agents of environmental change. Combines lectures with field visits.

LARC 2440. Planting Design. 4 Hours.
Combines horticultural and ecological field study with studio design exercises to deliver introductory to advanced planting design techniques. Primary topics include how to design phytoremediation strategies for contaminated sites, seasonal planting considerations, strategic phasing, and maintenance techniques. This is a workshop-based course.

LARC 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at consortium institutions. May be repeated without limit.

LARC 3155. Studio Abroad. 6 Hours.
Offers students an opportunity to learn sustainable landscape and urban design techniques in an international setting. Key topics include cultural influences on urban revitalization and ecological restoration, innovative material and site technologies, regional best management practices (BMPs), and integration of diverse historical influences into the design process.

LARC 3170. Landscape Planning and Urbanism Studio. 6 Hours.
Introduces sustainable landscape planning techniques with an emphasis on adaptive urbanism. Key topics include the designed and managed relationship of cities to their regional ecologies, such as sub/urbanized watersheds and coastal zones, as well as the spatial, material, and programmatic roles of environmental infrastructures in the civic landscape. Particularly emphasizes the market-based integration of recreation, transit, food, housing, and industrial networks with living systems such as urban forests, riparian corridors, managed habitats, and constructed wetlands.

LARC 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at consortium institutions. May be repeated without limit.

LARC 4970. Junior/Senior Honors Project 1. 4 Hours.
Offers students an opportunity to develop research toward an in-depth project related to the student’s major. Can be combined with Junior/Senior Honors Project 2 or a college-defined equivalent for an 8-credit honors project.

LARC 4971. Junior/Senior Honors Project 2. 4 Hours.
Offers students an opportunity to complete a research or design project related to the student’s major.

LARC 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.
LARC 4993. Independent Study. 1-4 Hours.
Offers students an opportunity for independent work under the direction of members of the department. Course content determined by instructor in relation to student's course of study. May be repeated up to 15 times for up to 16 total credits.

LARC 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated up to three times.

LARC 4996. Experiential Education Directed Study. 4 Hours.
Offers students an opportunity to integrate directed study work overseen by department faculty with approved experiential experience(s). Restricted to students using the course to fulfill the experiential education requirement. May be repeated up to three times.

LARC 5110. Advanced Design for Urban Environments Studio. 6 Hours.
Focuses on ecological, economic, and social resiliency of designed urban environments in response to globalization. Contemporary case studies of urban change provide the basis for design investigation into issues such as the impact of shifting industries on Detroit (deurbanization) or Shenzhen (rapid densification); shifting weather and water patterns in densely populated regions; societal shifts, from generational demographics to political upheavals and militarization/demilitarization of the urban landscape. Emphasizes the integration of interdisciplinary perspectives and advanced design analysis, conceptualization, and visualization skills into development of a global perspective on managing change in the built environment.

LARC 5120. Comprehensive Design Studio. 6 Hours.
Offers students an opportunity to design and develop a site or district including all of its requisite systems. Students draw on their landscape architectural education to produce a design both responsive to specific criteria and prototypical of ways to build sustainable and adaptable public landscapes—often described as “resilience.” Projects are expected to respond to and integrate their contexts (urban, environmental, climatic, and economic); meet spatial, performative, and programmatic requirements and technical demands (materials, implementation and management strategies); and dynamic processes at play within and around the project site.

LARC 5210. Landscape Ecology. 4 Hours.
Introduces fundamental-to-advanced concepts in the field of landscape and urban ecology. Focuses on the landscape-scale spatial structure, temporal patterns, and geographic ranges produced by the intersection of large-scale environmental and human processes. Emphasizes spatial taxonomies (patch, corridor, mosaic, granularity, edge, ecotone) produced across diverse landscape types influenced by human development and landscape dynamics in the built environment (disturbance, fragmentation, accumulation, and succession). Incorporates basic techniques in geographic-information-system software.

LARC 5220. Sustainable Landscape Practices. 4 Hours.
Offers a lecture/workshop/field-based course that builds upon landscape technology skills introduced in LARC 2230 and LARC 2240, with a focus on ecotechnologies operating in the built environment. Core topics include design and implementation metrics, material life-cycle management, funding models, and aesthetic and cultural aspects. Potential topics include green roofs, green walls, bioswales, pervious pavements, constructed wetlands, “complete street” elements, geosensor networks, alternative waste management, water detention and energy generation methods, and living infrastructures for coastal environments.

LARC 5310. Urban Landscape Seminar. 4 Hours.
Offers a discussion-based seminar focusing on case studies of influential works in contemporary landscape, urbanism, and sustainable environmental design. Encourages students to seek interdisciplinary perspectives toward development of critical-thinking skills in relation to forces shaping urban environments in contemporary global culture. A diverse range of material from published design criticism to open-source social media engagement provides basis for discussion and written and oral presentations.

LARC 5420. Professional Practice in Landscape Architecture. 4 Hours.
Offers a lecture- and case-study-based course focusing on strategic planning, business models, organizational structures, logistics, and regulatory paradigms associated with professional practice in landscape architecture. Core topics provide an overview of common technical and business procedures, including RFQs; RFPs; marketing, public relations, and client management; hiring and human resource management; review board/regulatory boards; permitting; and licensure.

Language - General (LANG)

LANG 1000. Languages, Literatures, and Cultures at Northeastern. 1 Hour.
Intended for first-year students in the College of Social Sciences and Humanities. Introduces students to liberal arts. Offers students an opportunity to become familiar with their major; develop the academic skills necessary to succeed (analytical ability and critical thinking); obtain grounding in the culture and values of the University community; and develop interpersonal skills—in short, to develop the skills needed to become a successful university student.

LANG 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LANG 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LANG 3432. Romance Linguistics. 4 Hours.
Provides a general linguistic introduction to one of the most important language families. Discusses the structural characteristics of several Romance languages. Includes defining a language family, how and why languages change, and the relationship of standard and nonstandard linguistic varieties. Studies contemporary theoretical issues in Romance linguistics including object-pronoun placement, word order, creolization, and subject-pronoun use. Conducted in English. Requires reading knowledge of one Romance language or permission of instructor; LING 1150 recommended.

LANG 3434. Bilingualism. 4 Hours.
Focuses on the fact that half of the world’s population is bilingual, that is, uses two or more languages on a regular basis. Also explores the fact that bilingualism remains a poorly understood phenomenon surrounded by a number of myths: those that hold that bilinguals are found in bilingual countries and are equally fluent in both languages; that bilingual children suffer from cognitive impoverishment; and that bilingual education hinders the assimilation of minority groups. Reviews all aspects of bilingualism (in the world, in society, in the child, and in the adult). Discusses topics such as biculturalism and language change.

LANG 3434. Bilingualism. 4 Hours.
Focuses on the fact that half of the world’s population is bilingual, that is, uses two or more languages on a regular basis. Also explores the fact that bilingualism remains a poorly understood phenomenon surrounded by a number of myths: those that hold that bilinguals are found in bilingual countries and are equally fluent in both languages; that bilingual children suffer from cognitive impoverishment; and that bilingual education hinders the assimilation of minority groups. Reviews all aspects of bilingualism (in the world, in society, in the child, and in the adult). Discusses topics such as biculturalism and language change.
LANG 3438. Structure of French. 4 Hours.
Looks at the French language from a linguistic point of view, focusing on elements of French phonology (sound system), morphology (word structure), and syntax (sentence structure). Topics include how French compares with other Romance languages, as well as with non-Romance languages like English.

LANG 3500. Introduction to Translation Studies. 4 Hours.
Offers an introduction to translation studies and practice. Explores the following themes: translation as intercultural communication; linguistic, functionalist, and other theories of translation; translation and gender; translation and philosophy; translation and politics; and the ethics of translation. Students undertake translations that are germane to the themes described above. Requires completion of a language course at the 2102-level or permission of department.

LANG 3510. Translation and the Business World. 4 Hours.
Focuses on translation in the business world (commerce, computers, law, finance, trade, and economics). Dwells first on possible intercultural differences in doing business in a foreign environment and then moves on to practical exercises of business letters, résumés, annual reports, and texts related to international finance, trade, management information systems, and contracts. Requires completion of a language course at the 2102-level or permission of department.

LANG 3520. Translation and Literature. 4 Hours.
Delves briefly into some of the major concerns of literary translation of prose, poetry, and drama. Discusses different approaches (word-to-word vs. sense-to-sense, the visibility or invisibility of the translator, the pitfalls of translating historically or culturally remote texts, translation as creative rewriting, etc.). Discusses authors such as Borges, García Márquez, Neruda, Günter Grass, Canetti, Proust, Césaire, Beckett, Nabokov, and Pirandello. Requires completion of a language course at the 2102-level or permission of department.

LANG 3800. Special Topics in Language. 1-4 Hours.
Focuses on a particular theme of language and society that involves several languages (e.g., common literary themes, treatment of fairy tales, or folklore). The specific topic is chosen to reflect relevant comparative themes and expressed student interests. Requires an intermediate level of skill in a language. May be repeated without limit.

LANG 4670. Topics in French. 4 Hours.
Provides in-depth study of a specific topic in French studies. Topic to be chosen each year the course is offered. May be repeated without limit.

LANG 4700. Capstone Seminar. 4 Hours.
Provides the graduating student the opportunity to integrate the intellectual aspects of the program with its experiential elements, especially the study-abroad portion of the students' program.

LANG 4800. Special Topics in Language. 1-4 Hours.
Focuses on a particular theme of language and society that involves several languages (e.g., common literary themes, treatment of fairy tales, or folklore). The specific topic is chosen to reflect relevant comparative themes and expressed student interests. Requires an advanced level of skill in a language. May be repeated without limit.

LANG 4920. Foreign Language Teaching: Theory and Practice. 4 Hours.
Intended for students who want to improve their understanding of how learners learn a second/foreign language and develop an approach to language teaching that is theoretically sound. Some of the topics included in the course are: theories of language acquisition, learning strategies, individual differences in language acquisition, the role of the environment, and the role of formal instruction. The course provides hands-on experience in the design of language teaching activities, unit and daily lesson planning, and long- and short-range objectives that are consonant with the National Standards for Foreign Language Learning. The ultimate goal of the course is to help students to develop the investigative and decision-making skills needed to foster professional growth.

LANG 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

LANG 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

LANG 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LANG 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated up to two times.

LANG 4992. Directed Study. 1-4 Hours.
Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

LANG 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

LANG 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

LANG 4996. Experiential Education Directed Study. 4 Hours.
Offers an interdisciplinary introduction to Latinos and people of Latin American and Caribbean origin in the United States as well as to the regions of Latin America and the Caribbean. Dispels a series of powerful myths associated with U.S. Latinos and in Latin American and Caribbean society, such as racial inferiority, poverty, machismo, and violence. Introduces the construction of Latino, Latin American, and Caribbean identities as well as the politics, economics, history, and culture.
LW 1200. How Lawyers Think: An Introduction to American Legal Thought. 4 Hours.
Introduces students to legal analysis by exploring the history of American legal thought. Perhaps more than any other, American society is governed by lawyers. Explores how innovations in legal theory both emerged from and helped shape policy responses to some of America's biggest governance challenges, including economic concentration and corporate power, the New Deal and the rise of the welfare state, the replacement of Jim Crow with civil rights guarantees, and the emergence of identity politics. As is true for many academic fields—such as economics, political science, or literary studies—expertise in law is gained through mastery of the discipline's analytic techniques, which, in turn, shape how lawyers imagine possibilities, make policy, and engage in professional practice. Presumes no prior legal study.

LW 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LW 7303. Antitrust. 3 Hours.
The federal antitrust laws, first created to break apart the powerful business "trusts" of the late 1800s, have since been applied to markets as diverse as utilities, ski areas, sports leagues, copy machine repair services and computer hardware and software. This course will explore the core principles of antitrust law, with an emphasis on three substantive areas: monopolization, horizontal merger analysis, and agreements among competitors. Because antitrust cases and scholarship rely heavily upon economics, the course begins with an introduction to firm and market economics, and economic analysis plays a significant role in our discussions.

LW 7304. Bill of Rights. 3 Hours.
Description unavailable.

LW 7305. Civil Advocacy. 7 Hours.
Description unavailable.

LW 7323. Corporations. 4 Hours.
This course relates to the formation, financial structure, and governance of business enterprises, especially incorporated businesses. Partnerships, limited partnerships, limited liability companies and limited liability partnerships are also explored, principally as they compare to the corporate form. The topics studied include: rights of creditors to hold principals of the enterprise liable; distribution of control within the corporation; fiduciary duties of directors and officers; key aspects of the federal securities laws (including the regulation of insider trading and proxies); organic changes (such as mergers); shifts in control (such as takeovers and freeze-outs); and legal implications of the roles of corporations in society. The course introduces some of the specialized concepts explored in detail in courses on Securities Regulation and Corporate Finance.

LW 7329. Environmental Law. 3 Hours.
This course focuses on federal and state environmental laws. Topics include pollution control, waste management, and cleanup of contaminated land and water. The course explores legislative policy and regulatory decisions as well as enforcement issues. We will give attention to questions of environmental justice and to the strategic use of legal tools in working to ensure safe and healthy surroundings for diverse groups of people.

LW 7333. Family Law. 3 Hours.
This is a basic course in family law and family policy. The first half of the course explores state regulation of intimate relationships, asking what purposes marriage serves, and looking at the law of incest, polygamy and same sex marriage. The second half of the course examines practical problems in family law: cohabitants' rights; common law marriage; and the many issues relating to divorce, with a particular focus on money and children.

LW 7335. Health Law. 3 Hours.
This course examines the legal regulation of the provision of healthcare services. Much of the focus is on the relationship between law and healthcare policy. Topics include access to health insurance and healthcare, healthcare financing, malpractice liability, the organization and responsibility of healthcare institutions, especially hospitals, the regulation of the quality of care and the formulation of health policy. This course is highly recommended for all students enrolled in the JD/MPH dual degree program, but is open to others as well.

LW 7336. Immigration Law. 3 Hours.
This course is designed to give the student an overview of U.S. immigration law. The focus is on the day-to-day practice of immigration law, including an examination of the substantive and procedural aspects of this practice, and a historical analysis of the changes in our immigration laws and policies. Topics covered include non-immigrant and immigrant classifications, the preference system for immigrants, grounds of inadmissibility and deportability, relief from removal, asylum, citizenship, administrative and judicial review, and the immigration consequences of crimes.

LW 7338. International Law. 3 Hours.
This course introduces students to fundamental concepts and unresolved problems in international law. We discuss historical and contemporary theoretical debates about the roles and utility of international law. Students are introduced to the sources of international law and to methods of international dispute resolution in domestic and international fora. This course explores the part that international law has played (or failed to play) in the prevention or conduct of war, the promotion of human rights and international economic development.

LW 7340. Labor Law 1. 3 Hours.
A general introduction to the law of labor relations through an examination of the National Labor Relations Act and leading cases, in conjunction with historical, social and economic materials. Topics include organization, union recognition, unfair labor practices and collective bargaining.

LW 7358. Social Welfare Law. 3 Hours.
This course examines American public assistance as a legal institution. After reviewing the historical, sociological and juridical roots of the welfare system, students examine the laws governing major assistance programs, especially eligibility requirements, rules governing grant determination, work and family rules, and procedural rights. Primary emphasis is on statutory and regulatory construction. The course explores methods by which lawyers can deal with the system: advocacy in the administrative process, litigation, legislative reform and representation of recipient organizations.

LW 7369. Intellectual Property. 3 Hours.
In our modern day 'information economy,' the law of intellectual property has taken on enormous importance to both creators and users of intellectual creations. This course introduces students to the classic principles of copyright, patent, trademark, and trade secret law and explores the ways in which those principles are shifting and adapting in response to new technology.
LW 7394. Land Use. 3 Hours.
A survey of legal doctrines, techniques and institutions relating to regulation of the use of real property. Topics covered include constitutional questions of takings by public agencies, the scope of the police power as it affects land use and the basic techniques of zoning and subdivision control. Students study, among other issues, recent cases on exclusion of low income housing, current techniques to encourage housing development (inclusionary or "linkage" regulations) and First Amendment questions arising from land use controls.

LW 7396. Legislation. 3 Hours.
This course deals with the distinctive nature of legislation as a source of law. Topics for study include the legislative process, the role of legislatures and the theory and practice of statutory interpretation. Materials and lectures will be based in part on case studies taken from recent Supreme Court and Congressional actions, particularly in the area of civil rights. One session will be a simulated legislative session. Several short legislative drafting assignments will be required.

LW 7417. Entertainment Law. 3 Hours.
Entertainment law involves the study of business practices and legal principles applicable to the entertainment and sports industries. The course will emphasize practical application of those principles and practices in negotiation and litigation. Topics will include the antitrust environment of the sports and entertainment industries, Title IX in college athletics, antitrust control, ownership of creative work and compensation. Students should have a sound understanding of contract law.

LW 7423. State Local Taxation. 3 Hours.
This course surveys the variety of regimes deployed by various states to fund state and municipal government, with primary attention to state income taxation of individuals and businesses, property taxation and sales taxes. Among the topics to be covered are federal and state constitutional constraints on state and local tax structures, alternative methods of state business taxation, and issues relating to the taxation of interstate activity. The course will approach these topics from the viewpoints both of state tax policy-making and of taxpayer planning and representation.

LW 7424. Labor Law 1. 4 Hours.
A general introduction to the law of labor relations through an examination of the National Labor Relations Act and leading cases, in conjunction with historical, social and economic materials. Topics include organization, union recognition, unfair labor practices and collective bargaining.

LW 7428. State and Local Government. 3 Hours.
This course offers an introduction to the workings of state and local governments, and to the roles of law and of lawyers in shaping and controlling their operation. Topics to be covered include: the sources and scope of state and of local lawmaking authority, intergovernmental relationships, modes of citizen participation in and control over the governing process, and state and municipal fiscal structure and operations. In exploring these topics, the course will focus both on the practical roles played by attorneys (employed inside or outside of government) in the governmental processes and on the place of decentralized governmental units within the vision of a democratic polity.

LW 7434. Secured Transactions. 4 Hours.
This course has as its principal focus the way that most credit in America is extended. The transactions covered range from the purchase by consumers of automobiles or large household goods on credit to mortgage loans by banks to large corporations. The primary law studied is Article 9 of the Uniform Commercial Code as well as certain sections of the federal Bankruptcy Code. The course also seeks to introduce students to commercial law generally and to further their facility with issues of statutory construction.

LW 7444. Modern Real Estate Development. 3 Hours.
This course explores the basic elements of commercial real estate transactions, with a focus on the acquisition and financing of real estate development. We discuss the economic considerations (including basic tax benefits) and risk elements of real estate development, as well as some of the emerging trends in real estate development and their theoretical implications. We give limited consideration to residential real estate transactions. A complex real estate transaction serves as the basis for the course discussions. Course materials include typical transactional documents. During the term, one or more in-class drafting exercises are included to help focus the discussion of the issues.

LW 7453. Women, Feminism, and the Law. 3 Hours.
Description unavailable.

LW 7456. International Business Transactions and Trade. 3 Hours.
Description unavailable.

LW 7458. Employment Discrimination. 4 Hours.
This course focuses on the rights of workers to be free of discrimination in the workplace, and the obligations of employers to provide a discrimination-free workplace. Emphasis is placed on the scope and limitations of fair employment statutes, including definitions of employee and employer, types of actionable discrimination, shifting burdens of proof and other definitional or procedural issues that frequently determine the outcome of cases. The course will primarily address Title VII of the 1964 Civil Rights Act, but will also cover other state and federal anti-discrimination laws. We will not only discuss litigation, but will also address approaches that responsible employers might take to develop effective anti-discrimination policies.

LW 7463. Nonprofit Organizations. 3 Hours.
This course is about federal regulation of nonprofit organizations. Why does the government exempt certain organizations from tax? What are the rules that non-profit organizations must follow in order to retain their tax-exempt status? What activities by non-profit organizations are prohibited by federal law? These and other questions about non-profit organizations will be discussed. The course will focus on relevant Federal tax law, but there is no prerequisite for the course. Although the course is about the Internal Revenue Code, the concepts of income taxation (what is income? when is it income? etc.) are irrelevant because nonprofit organizations are exempt from tax.

LW 7464. Battered Women and the Law. 3 Hours.
This course begins with a focus on the dynamics of violence in intimate relationships, and on the cultural context in which abusive relationships are embedded. Later classes will examine those aspects of the legal system having the most immediate relevance to a woman seeking to protect herself against the violence of a partner, or to end an abusive relationship. Specifically, we will look at family law, alternative dispute resolution, abuse prevention legislation, criminal law and the criminal justice system, recent developments in tort law, the new federal Violence Against Women Act and violence against women as a violation of international human rights. The course will end with a look at the particular challenges faced by advocates working with battered women, and some innovative programmatic responses to the needs of battered women on the part of both public and private agencies and organizations.
LW 7465. Employment Law. 4 Hours.
This course surveys common law, statutory and administrative regulation of the employment relationship and current policy issues concerning paid employment. Topics discussed include labor market theory, job security, mass dismissals and plant closings, employer control of employee behavior, employee privacy, minimum wage and maximum hour regulation, child labor, international labor standards, sweatshops, part-time and contingent employment relationships, child care, leave policy, issues for parents and other caretakers who enter paid labor markets, unemployment insurance, healthcare insurance, retirement income, and the regulation of pension and benefit plans. Legal and policy issues of concern to low-wage workers receive particular emphasis.

LW 7469. Disability Law. 3 Hours.
This course explores how the law treats individuals with disabilities. We will analyze what is meant by the term “disability” and consider constitutional review of state actions discriminating against individuals with disabilities. Particular attention will be given to the rights and obligations created by the Rehabilitation Act, the Americans with Disabilities Act and the Individuals with Disabilities Education Act. The rights of individuals with disabilities to be educated, work, receive healthcare, and enjoy public accommodations will be considered in depth. This course is designed for students wishing to represent individuals with disabilities as well as students who may represent employers and public accommodations.

LW 7475. First Amendment. 3 Hours.
This course examines several rights protected by the First Amendment to the Constitution. The focus is on the principles and processes developed by the judiciary to protect various forms of speech, expression and association. The course does NOT deal with the free exercise of religion or the establishment clause. The course also focuses on integrating doctrine with the core values of the First Amendment as well as emphasizing the need for students to develop their own preferred approach to protecting free expression. The course does not, except tangentially, deal with other parts of the Bill of Rights.

LW 7477. International Human Rights Law. 3 Hours.
This course focuses on important themes and concerns in international human rights law. It provides a historical overview of the human rights movement and explores major theoretical and practical challenges that movement posed by cultural relativism, state sovereignty, structural barriers to implementation, and globalization. Students will be introduced to instruments comprising the International Bill of Rights (including civil, political, economic, social, and cultural rights standards) as well as to other treaties addressing specific rights violations. We will also examine regional approaches to human rights or human dignity. There is no prerequisite for this course.

LW 7482. Law, Policy Society. 3 Hours.
This seminar is offered on a limited enrollment basis to law students, as well as to Ph.D. students in the Law, Policy and Society Program. Northeastern University faculty members lecture on their work in, and particular approach to, the field of law, policy and society. Seminar discussions focus on the meaning and usefulness of interdisciplinary research. Two papers evaluating various paradigms for analyzing issues in law, policy and society are required. *This course follows the university’s academic calendar.

LW 7488. Sexuality, Gender and the Law. 3 Hours.
This course uses case law and theory to address doctrinal problems and justice concerns associated with gender and sexuality. The syllabus is organized around notions such as privacy, identity and consent, all of which are conceptual pillars upon which arguments in the domain of sexuality and gender typically rely. Doctrinal topics include same-sex marriage, sodomy, sexual harassment, discrimination, among others, but the course is not a doctrinal survey; it is a critical inquiry into key concepts that cut across doctrinal areas. Students should expect to write a paper and share some of what they have learned with the class.

LW 7491. International Human Rights and the Global Economy. 3 Hours.
Can recognizing “the right to housing” make the demands of homeless persons for adequate housing more effective? Does the right to maintain cultural or religious traditions conflict with the right to be free from gender discrimination? This course highlights the growing influence of the international economic, social, and cultural rights framework as well as the implications of globalization for all international human rights. We will begin by examining the history and theoretical origins of socioeconomic and cultural rights such as rights to food, housing, health, education, and cultural expression. We then engage the legal framework under major international and regional human rights treaties and leading interpretations of them by international, regional, and domestic courts and other actors. Finally, we grapple with the tensions among collective rights, cultural imperatives, and traditional human rights. There is no prerequisite for this course.

LW 7494. Bioethics and the Law. 3 Hours.
This course will focus on the intersection of law and bioethics and will consider how different ethical theories may guide legal decisions. Topics will include physician-assisted suicide, testing for HIV, reproductive technology, and rationing of healthcare. Students will be expected to write a research paper and share some of what they have learned with the class.

LW 7497. Children’s Law. 3 Hours.
This course will explore the legal position and legal needs of American children. We will consider parental control over and responsibility for children, and the constitutional dimensions of “family privacy.” The course covers the broad topic of child abuse and neglect, including mandated reporting, cultural issues in abuse and neglect, the foster care system and termination of parental rights. We will also consider issues particularly germane to older children, such as access to medical care without parental consent, rights in school and emancipation.

LW 7501. Patent Law. 3 Hours.
This course will provide an in-depth review of patent law and practice. The course will cover the administrative process for obtaining patents, including the requirements for patentability. The course will also cover enforcement of patent rights and the defense of patent infringement suits. The course will be presented in a simple, non-technical manner so that students of all disciplines can learn and understand the concepts.

LW 7512. Problems in Public Health Law. 3 Hours.
This course will explore the rationales for using law to protect and preserve the public’s health, the legal tools that may be used to achieve that end, and the conflicts and problems that may result from legal interventions. Topics discussed will include the use of law to reduce the spread of HIV and other infectious diseases, control of tobacco and other hazardous products, bioterrorism, and the threats TO CIVIL LIBERTIES AND MINORITY GROUPS engendered by all such legal efforts. This course is highly recommended for all students enrolled in the J.D./M.P.H. dual degree program, but is open to other students as well.
LW 7513. Trade Secret Law. 3 Hours.
The course addresses these issues, among others: Should the state protect trade secrets? If so, why? When is information entitled to protection as a trade secret? What constitutes the “misappropriation” of trade secrets? How do courts balance the “rights” of firms to protect their trade secrets and the “rights” of the firms’ former employees to obtain employment in their fields? Do courts enforce non-competition agreements in order to protect trade secrets? If so, under what circumstances? Should courts enjoin individuals from taking certain jobs based on the “theory” that those individuals “inevitably” will disclose the secrets of their former employers? What remedies are available to the victims of trade secret misappropriation? Should civil trade secret law, like patent, copyright and trademark law, be federalized? Why has the federal government criminalized trade secret theft, and how does federal law impact state trade secret law? In addition to participating in class discussions, students will prepare a brief in support of or opposition to a motion to preliminarily enjoin a hypothetical company’s former employee from working for or disclosing the company’s trade secrets to its competitor.

LW 7514. Natural Resources Law. 3 Hours.
This course addresses legal requirements and institutions dealing with animal and plant species, biological resources, habitats, and ecosystems. Major themes include biological diversity, endangered and threatened species, public and private rights in migratory resources, public trust doctrine, the allocation of power among federal, state, and local governments, and the roles of administrative agencies in ecosystem management. The course provides opportunities to explore specific topics of interest such as environmental ethics, wetlands protection, fisheries law, Native American hunting rights and fishing rights, and management of national parks, forests, and grazing lands.

LW 7518. Affordable Housing Law—Theory and Practice. 3 Hours.
This course will explore how and why Federal law supports the production, finance and operation of affordable housing, and the consequences, both intended and unintended, of historical shifts in Federal housing policy. Students will examine in detail the ways in which both housing regulation and the tax code affect the structure and documentation of complex transactions, and will analyze the “real world” impact of changing policies and legal requirements on the practice of affordable housing law.

LW 7519. Community Economic Development. 3 Hours.
Description unavailable.

LW 7523. International Business Regulation. 3 Hours.
This course examines international and domestic law regulating multinational enterprises. It is intended for students interested in the work of international lawyers representing corporations and other economic actors, serving in relevant government agencies and international organizations, and engaged in the public interest work of NGOs. The course will cover, among other things, the role of lawyers in the international business environment, legal aspects of multinational enterprises, the international sale of goods, foreign investment issues, select international aspects of mergers and acquisitions, and international joint venturing.

LW 7525. Law and Economic Development. 3 Hours.
This course will examine the prevailing economic theories of and strategies for economic development since World War II and the legal and institutional frameworks devised to implement these strategies. Questions we will explore will include: What kinds of legal and institutional arrangements best facilitate economic growth? How does law structure and shape markets? What is “development” and how can it best be measured? Can legal instruments be used effectively to address underdevelopment in a structural way? While the focus will be on development in the so-called “developing world,” we will also explore some strategies for addressing development in a local community context. We will conclude the course by applying what we have learned to address several development case studies posing particular problems in particular regions and contexts.

LW 7528. Balancing Liberty and Security Seminar. 3 Hours.
This course will examine the challenges, obstacles and issues presented in the struggle to create a balance between securing our homeland and respecting the rights of all of those who call this land home. We will examine recent Supreme Court decisions (Handi, Rasul, and Padilla) as well as international perspectives on counterterrorism strategies. The course will include a discussion of the privacy and human rights issues that have arisen since September 11th and the ethical responsibility of lawyers adjudicating those issues. Students will take a take-home exam at the end of the quarter.

LW 7539. Employment Law—Job Security and Rights. 3 Hours.
This course surveys legal and policy issues concerning job security, focusing primarily on law governing the termination of private sector employment. Students develop an understanding of the history and scope of the underlying employment-at-will doctrine and the primary ways in which the at-will doctrine has been modified through common law and statute.

LW 7540. Employment Law—Compensation, Benefits, and Retirement. 3 Hours.
This course surveys the legal and policy issues concerning minimum wage and wage-payment laws, regulation of working time and overtime premiums, family medical leave, unemployment insurance, COBRA, Social Security and pensions and ERISA. It stresses close reading of statutes and administrative regulations. The problems of low-wage workers receive special emphasis.

LW 7541. Global AIDS Policy Seminar. 3 Hours.
The global HIV/AIDS pandemic, the preeminent public health and human rights challenge of our time, is structured by biological, economic, social, and cultural forces ranging from the arcane structures of the international intellectual property regime to the cultural norms that prefigure sexual intimacy. This seminar will explore selected policy options for reversing and responding to the tide of infection. Pharmaceutical research, development, and access, neo-liberal economic and trade policies, gender relations and prevention policies, global health initiatives and primary health systems, healthcare policy and health worker migration – these and many other topics will be the subject of classroom discussion and student research papers.
LW 7549. Comparative Law: Law, Markets, and Democracy in East Asia. 3 Hours.
Today, we see a variety of market developments and rule of law programs around the world promulgated by such international institutions as the World Bank, the International Monetary Fund, and the Asian Development Bank. Markets are viewed as the panacea to the ills associated with economic development, and “rule of law” is synonymous with democracy, equality, and universal rights. This course examines the truth of the above assumptions by a study of legal systems in East Asian countries, selected for their varying stages of economic development. The course will examine three areas: cultural forces behind legal systems; forces of economic development and political, social and legal institutions established to promote this national goal; and finally, the intended and unintended consequences of these legal institutions.

LW 7550. Refugee and Asylum Law. 3 Hours.
This course will explore the law of asylum and refugees. The primary focus will be on U.S. law as it has evolved since passage of the Refugee Act of 1980. This will include legislation and case law—both administrative and federal court cases. It will also look at relevant international law and standards utilized in other countries by way of comparison with U.S. Law. We will also examine the process of asylum adjudications to analyze issues of due process, credibility, cross cultural communication and integrity of the various legal procedures. We will explore new and emerging theories of asylum eligibility and policy developments which impact asylum seekers in the United States.

LW 7551. Private Litigation in the Public Interest. 3 Hours.
How can lawyers working in the “private” arena influence public policy? This course looks at tort-based litigation that impacts tobacco control, climate change, and other policy arenas. It considers the financial consequences of “mass torts”, class actions and punitive damages on plaintiffs’ attorneys as well as on defendants, and examines doctrinal, ethical and practical issues raised by the effort to use civil remedies to achieve social change.

LW 7560. Community Economic Development. 3 Hours.
Community economic development has been the subject of intense work and innovative approaches to poverty alleviation in the last several decades. But CED efforts have thus far lagged behind in producing sustainable forms of income generation for poor people. This seminar will examine current efforts to develop sustainable forms of income generation in Boston and nationwide. The students will then undertake the process of developing a new model for sustainable income development. In doing so, we will ask how the law can support such a model. Students will write research reports describing and critiquing current income generation programs in Boston.

LW 7588. Reproductive and Sexual Rights and Health. 3 Hours.
This course will examine how sexual and reproductive health laws impede or increase access to sexual and reproductive healthcare and shape how we understand what constitutes sexual and reproductive health. Attention will be paid to understanding legal doctrine, public health research, and critically assessing issues arising from sexual and reproductive health law. The course will draw on various tools of analysis including critical race theory, critical legal theory, human rights, and a range of public health methods. Topics covered will include, amongst others, sexual and reproductive health law as it pertains to abortion, sexuality, pregnancy, marriage, healthcare in prisons, immigrants, HIV/AIDS, and sex education.

LW 7595. Interdisciplinary Approaches to Policy and Advocacy. 3 Hours.
This course introduces students to the judicious use of studies done in various disciplines for policymaking and advocacy. Through the concept of “paradigm” students learn to identify the conceptual structure and methodologies underlying different disciplines and to understand the uses to which work within each paradigm can properly be put. The course examines the differences between science, law, policymaking, and advocacy, including the role of normative judgments in each. The justification of normative judgments, including concepts of social justice, will be considered. The use of studies from different disciplines for policymaking and advocacy with respect to tobacco control and obesity prevention will provide illustrative examples.

LW 7597. Civil Rights and Restorative Justice Clinic. 1-6 Hours.
The CRRJ (Civil Rights and Restorative Justice) Clinic engages students in legal research, litigation and legislative initiatives relating to anti-civil rights violence in the United States. CRRJ clinic students assist law enforcement agencies considering criminal investigation and pursue civil litigation against government entities. One of CRRJ’s projects, Reconstructing Cases of Racial Violence, involves researching cases where criminal prosecution may not be an option. Students reconstruct legal proceedings and conduct factual investigations. The project focuses on practical legal research skills and helps students integrate the law of torts, civil procedure, federal courts, criminal law, and constitutional law. Faculty will provide individual supervision of each student.

LW 7617. Economic Perspectives on Health Policy. 4 Hours.
Uses basic economic concepts to illuminate the many factors that shape health, healthcare, and the healthcare system in the United States. Examines the role of these concepts in explaining the challenges faced in achieving three core goals of the healthcare system: increasing access, limiting cost, and improving quality. Explores how policy makers, market participants, and others can remedy access, cost, and quality deficiencies. Illustrates how economic concepts can be applied to the study of health and health behaviors.

LW 7619. Healthcare Fraud and Abuse Law. 3 Hours.
This course provides an overview of the law relating to healthcare fraud. It will provide an overview of the healthcare fraud and abuse laws, emphasizing the role of whistleblowers, qui tam actions, criminal investigative techniques, trial issues inherent in white collar criminal prosecutions, innovative resolutions of corporate fraud including compliance programs, and sentencing. Topics will include an overview of the healthcare payment system, the frauds visited on that system, and the interplay of criminal prosecutions with the FDA regulation. This course is highly recommended for students in the JD/MPH program, LLM students specializing in health policy and law, and students interested in criminal law, but is open to others as well. Health Law is recommended but not required.

LW 7620. Human Behavior, Legal Doctrine, and Policy Design. 3 Hours.
This course will compare accounts of human behavior, including the Utilitarian/Law and Economics view of man as a rational calculator of his self-interest, with classical and contemporary alternatives to that description, including Behavioral Economics. We will evaluate the reasons for doubting or crediting these competing accounts, and will then consider their implications for determining appropriate legal doctrines and regulatory approaches. For example, we may consider whether the views of human behavior which shape consumer protection case law and the Supreme Court’s commercial speech doctrine are justified, and whether – and in what circumstances—regulations are appropriate which seek to help people by prescribing, proscribing, or “nudging” their behavior. Students are expected to participate in class and write a research paper which may satisfy the writing requirement.
and narratives. Reforms are needed to address the problems illuminated by their research and op-eds to educate the public about this particular topic and what particular criminal laws and policies. Finally, they will create podcasts to investigate and develop narratives describing the community impact of our criminal justice systems. Class sessions will examine specific topics and discuss class readings on those topics. Each student will choose one topic to investigate and explore. Students will write papers identifying and analyzing the issues germane to their topic. In addition, they will investigate and develop narratives describing the community impact of particular criminal laws and policies. Finally, they will create podcasts and op-eds to educate the public about this particular topic and what reforms are needed to address the problems illuminated by their research and narratives.

LW 7654. Race, Justice, and Reform. 3 Hours.
This seminar will focus on: how the criminal justice system impacts community members; how laws, policies and practices disparately impact communities of color and perpetuate structural economic inequality; and how Massachusetts and other states struggle to reform our criminal justice systems. Class sessions will examine specific topics and discuss class readings on those topics. Each student will choose one topic to investigate and explore. Students will write papers identifying and analyzing the issues germane to their topic. In addition, they will investigate and develop narratives describing the community impact of particular criminal laws and policies. Finally, they will create podcasts and op-eds to educate the public about this particular topic and what reforms are needed to address the problems illuminated by their research and narratives.

LW 7655. Advancing Economic and Social Equity through Municipal Policy and Law. 2 Hours.
Strong-market cities fuel the American Economy. They are experiencing employment and population growth, private sector investment and new, wealthier demographics attracted to urban living. But the benefits of urban prosperity are not shared equitably across races or incomes. Federal disinvestment and state/federal roadblocks have spurred municipal innovation to address income inequality and to defend or advance inclusion for communities like immigrants and LGBT individuals. This course will examine trends in equitable city policy through case studies on civil rights, wages, worker protections, safety net funding like affordable housing and more. It will also explore legal-policy intersections like home rule, pre-emption, the limits of federal coercion and constitutional considerations. Taught by a municipal elected official, policy discussions will be grounded within real-world civic and political contexts.

Law (LAW)

LAW 6100. Civil Procedure. 5 Hours.
This course introduces students to the procedural rules that courts in the United States use to handle non-criminal disputes. The purpose of this course is to provide a working knowledge of the Federal Rules of Civil Procedure and typical state rules, along with an introduction to federalism, statutory analysis, advocacy and methods of dispute resolution. The course also examines procedure within its historical context. May be repeated once.

LAW 6101. Constitutional Law. 4 Hours.
This course studies the techniques of constitutional interpretation and some of the principal themes of constitutional law: federalism, separation of powers, public vs. private spheres, equality theory and rights analysis. The first part of the course is about the powers of government. The second part is an in-depth analysis of the 14th Amendment.

LAW 6102. Contracts. 5 Hours.
This course examines the legal concepts governing consensual and promissory relationships, with emphasis on the historical development and institutional implementation of contract theory, its relationship and continuing adaptation to the needs and practice of commerce, and its serviceability in a variety of non-commercial contexts. Topics covered include contract formation, the doctrine of consideration, remedies for breach of contracts, modification of contract rights resulting from such factors as fraud, mistake and unforeseen circumstances, and the modern adaptation of contract law to consumer problems. This course also introduces students to the analysis of a complex statute: the Uniform Commercial Code. May be repeated once.

LAW 6103. Criminal Justice. 4 Hours.
In this course, students are introduced to the fundamental principles that guide the development, interpretation and analysis of the law of crimes. They are also exposed to the statutory texts—primarily the Model Penal Code, but also state statutes. In addition, students are introduced to the rules and principles used to apportion blame and responsibility in the criminal justice system. Finally, students examine the limits and potential of law as an instrument of social control. May be repeated once.

LAW 6105. Property. 4 Hours.
This course covers personal property, estates in land, landlord-tenant relationships, mortgages, real estate financing and the doctrine of future interests. The course concludes with the study of private restrictions on land use and a detailed examination of zoning law.
LAW 6106. Torts. 4 Hours. 
This course introduces students to theories of liability and the primary doctrines limiting liability, which are studied both doctrinally and in historical and social context. The course includes a brief consideration of civil remedies for intentional harms, but mainly focuses on the problem of accidental injury to persons and property. It also provides an introductory look at alternative systems for controlling risk and allocating the cost of accidents in advanced industrial societies.

LAW 6160. Legal Skills in Social Context. 2 Hours. 
The LSSC Social Justice component immediately applies students’ legal research and writing skills in using law as a tool for social change. LSSC links students’ pre-law school thinking with the new legal culture in which they find themselves. In the first semester, they begin by forging their own team lawyering dynamic in discussing assigned readings and in preparing, and presenting, several advocacy exercises and written assignments. In the second semester, students apply and consolidate their new legal research and writing skills in addressing an intensive real-life social justice project for a selected client organization. LSSC student teams develop their legal and cooperative problem-solving skills and knowledge while producing real client work of a quality that far exceeds the ordinary expectations of first-year law students. May be repeated once.

LAW 6165. LSSC: Legal Research and Writing Component. 2 Hours. 
Competent and effective legal research and writing skills are the foundation for students’ success in law school and in their legal careers. In LSSC’s Legal Research and Writing component, students learn about the organization of the American legal system, the sources and construction of laws, and how the application of laws may vary with the specific factual situation. Students learn how to research the law to find applicable legal rules, how to analyze and apply those rules to a factual situation, and how to communicate their legal analysis clearly and concisely to different audiences. A real life opportunity to practice these skills is provided in the concurrent LSSC Social Justice class in which students research and write a project for a real client.

LAW 6301. Intensive Introduction to American Law and Legal Institutions. 3 Hours. 
This course is a general introduction to the American legal system for graduates of law programs outside the United States. The focus will be on the distinctive features of the American system, including how the U.S. common-law system differs from the civil-law system in place in most other countries. The three branches of government, federalism, the federal-state relationship, the constitutional protection of individual rights, civil and criminal procedure, and statutory and regulatory law will all be discussed. LLM students only.

LAW 6302. Intensive Introduction to Legal Research and Writing for LLM Students. 3 Hours. 
This course introduces graduates of law programs outside the United States to the principles of U.S. legal discourse and to the basics of manual and electronic U.S. legal research. Students will have an opportunity to practice researching complex questions of U.S. law and writing memoranda based on their research. LLM students only.

LAW 6307. Elements of Experiential Legal Pedagogy 1. 3 Hours. 
This course provides the LLM student with a foundation in experiential legal pedagogy. It introduces the student to the elements of experiential legal pedagogy, including history, theory, and basic methodologies in teaching and supervision techniques. LLM students only.

LAW 6308. Elements of Experiential Legal Pedagogy 2. 3 Hours. 
This course continues to provide the LLM student with a foundation in experiential legal pedagogy. It elaborates upon the elements of experiential legal pedagogy and methodologies. LLM students only.

LAW 6309. Advanced Capstone Tutorial in Experiential Legal Pedagogy 1. 2 Hours. 
This course provides the LLM Candidate and Faculty Advisor the opportunity to engage in a critical dialogue about experiential legal pedagogy, with a focus on its application to the LLM candidate’s particular area of interest. The tutorial is an exploration of innovative ways of designing, implementing, and evaluating experiential legal pedagogies. LLM students only.

LAW 6310. Advanced Capstone Tutorial in Experiential Legal Pedagogy 2. 4 Hours. 
This course continues the LLM Candidate’s advanced study of the application of experiential legal pedagogy to the LLM candidate’s particular area of interest. The tutorial continues to explore innovative ways of designing, implementing, and evaluating experiential legal pedagogies. LLM students only. LLM students only.

LAW 6311. Experiential Legal Scholarship Seminar. 4 Hours. 
Under the supervision of the Faculty Advisor, the LLM candidate will develop and produce a scholarly paper of publishable quality on an aspect of experiential legal learning. LLM students only.

LAW 6312. Intensive Experiential Legal Placement. 3 Hours. 
The LLM candidate will engage in experiential legal education at the law school, developing and delivering curricula and supervising students. LLM students only. May be repeated up to five times.

LAW 6313. Introduction to the Law of Contracts. 3 Hours. 
This course is designed to provide international LLM students with an introduction to U.S. contract law, with a special focus upon contracts for the sale of goods. Topics may include formation of contracts, contract interpretation, performance, and breach, remedies, and Articles 1 and 2 of the Uniform Commercial Code. This course is especially recommended for LLM students who wish to take a U.S. bar exam. This course is not open to JD students.

LAW 6314. Introduction to U.S. Constitutional Law. 3 Hours. 
This course is designed to provide international LLM students with an introduction to U.S. constitutional law. The course is especially recommended for LLM students who wish to take a U.S. bar exam. Topics may include judicial review, separation of powers, federalism, equal protection, state action, due process and fundamental rights, and the First Amendment. J.D. students may take this course only with permission of the Associate Dean for Academic Affairs.

LAW 6315. Legal Research and Writing for LLM Students: Preparing for Co-op. 2 Hours. 
This course introduces graduates of law programs outside the United States to the practical application of U.S. legal discourse and legal research in the workplace. Students will have an opportunity to apply what they have learned about U.S. legal writing and research to the sort of tasks that they will be called upon to complete during their Co-op internship work experience. LLM students only.

LAW 6316. Introduction to Civil Procedure. 3 Hours. 
This course is designed to provide international LLM students with an overall introduction to U.S. civil procedure. Topics will include personal and subject-matter jurisdiction, pleadings, discovery, choice of law (the Erie Doctrine), finality and preclusion, and class actions. The course is designed to emphasize the practical application of civil procedure law, and is especially recommended for LLM students who wish to take a U.S. bar exam. Not open to JD students.
LAW 6330. Global Legal Practice. 1-8 Hours.
In this course, LLM students receive practical training by working with real-world clients on real-world cases obtained from Boston-area legal services organizations, under the legal supervision of licensed attorneys working in the LLM program at the Law School. LLM students only. May be repeated up to seven times for up to 8 total credits.

LAW 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LAW 7300. Administrative Law. 3 Hours.
This course provides an introduction to the legal doctrines designed to empower and constrain government agencies and officials in their daily practice of governance. Topics include the constitutional status of administrative agencies, due process, the Administrative Procedure Act and the availability and standards of judicial review of agency actions. The course emphasizes the historical evolution of the modern administrative state and the regulatory agency's peculiar role in our system of governance.

LAW 7301. Advanced Criminal Procedure: Adjudication. 3 Hours.
This course closely examines some of the constitutional complexities in the prosecution and defense of criminal cases in state and federal courts. Students investigate how the law fashions the adjudicatory process and how the law evaluates what is "fair" and what is "legitimate" in formally deciding on whom to impose punishment. The course covers, among other things, pretrial detention, right to counsel, plea bargaining, discovery, trial processes, and sentencing.

LAW 7303. Antitrust. 3 Hours.
The federal antitrust laws, first created to break apart the powerful business "trusts" of the late 1800s, have since been applied to markets as diverse as utilities, ski areas, sports leagues, copy machine repair services and computer hardware and software. This course will explore the core principles of antitrust law, with an emphasis on three substantive areas: monopolization, horizontal merger analysis, and agreements among competitors. Because antitrust cases and scholarship rely heavily upon economics, the course begins with an introduction to firm and market economics, and economic analysis plays a significant role in our discussions.

LAW 7306. Civil Trial Practice. 2 Hours.
An introduction to the tactical and strategic problems commonly encountered in the trial of cases is the main objective of this course. Although the focus of class discussion is directed toward civil litigation, the techniques and problems are common to criminal cases. Attention is given to the forensic aspects of trial practice, techniques of direct and cross-examination, and opening and closing summations.

LAW 7308. Payment Systems. 3 Hours.
When money changes hands by check, credit card or electric transfer, and when notes or drafts change hands prior to their payment, the movement of funds or paper is itself a commercial transaction. This course studies the law of payments, primarily Articles 3, 4 and 4A of the Uniform Commercial Code. Topics include the negotiability of commercial paper, the consequences of negotiability for merchants, consumers and banks; how check clear through banks; and who bears the loss in the event of fraud, theft or mistake.

LAW 7313. Secured Transactions. 3 Hours.
A survey of commercial lending transactions, with particular emphasis on Article 9 of the Uniform Commercial Code, consumer legislation, relationship to real estate mortgage transactions, relationship to bankruptcy problems, fraudulent conveyances, federal tax liens, etc.

LAW 7315. Consumer Bankruptcy. 3 Hours.
This course explores basic principles of consumer bankruptcy. We examine how the bankruptcy process works, the underlying policies that purport to justify the way the law is written and construed, and the mechanics of applying key sections of the federal Bankruptcy Code. To convey the liveliness and volatility of bankruptcy practice, and to provide an introduction to strategic thinking in bankruptcy, the course relies primarily on problem solving and discussion.

LAW 7317. Conflicts of Law. 3 Hours.
"Conflict of laws" problems arise when two or more judicial or legislative jurisdictions seem to have a claim to govern some set of events. This course will concentrate on the debate among the various approaches to deciding "which law" applies to the events in question. The course will examine the history of this debate as a case study in the history of American legal theory, from Formalism to the many forms of Post-Realism. Students will learn the variety of styles of legal reasoning that this history has bequeathed to us. The course will also examine some international conflict of laws problems, a field sometimes called "private international law." Throughout, the course will attempt to disprove the description of conflict of laws offered by a noted commentator: "The realm of the conflict of laws is a dismal swamp, filled with quaking quagmires, and inhabited by learned but eccentric professors, who theorize about mysterious matters in a strange and incomprehensible jargon. The ordinary court, or lawyer, is quite lost when engulfed and entangled in it."

LAW 7320. Constitutional Litigation. 3 Hours.
In the first phase of the course, the class considers strategic and tactical decision-making in constitutional litigation. In the second phase, students report on the process of litigating cases involving constitutional issues. Relying on briefs, court records and interviews with counsel, students report to the class and prepare a research paper setting out their findings. The paper is a major commitment of time and energy; only students with a significant interest in litigation of constitutional questions should apply. Papers are eligible to satisfy the writing requirement.

LAW 7322. Corporate Taxation. 3 Hours.
Description unavailable.

LAW 7323. Corporations. 4 Hours.
This course relates to the formation, financial structure, and governance of business enterprises, especially incorporated businesses. Partnerships, limited partnerships, limited liability companies and limited liability partnerships are also explored, principally as they compare to the corporate form. The topics studied include: the formation of a corporation; fiduciary duties of directors and officers; key aspects of the federal securities laws (including the regulation of insider trading and proxy solicitations); organic changes (such as mergers); shifts in control (such as takeovers and freeze-outs); and legal implications of the roles of corporations in society. The course introduces some of the specialized concepts explored in detail in courses on Securities Regulation and Corporate Finance.
LAW 7324. Securities Regulation. 3 Hours.
Federal regulation of securities transactions originated in the New Deal investor protection legislation of the early 1930s and must now adapt to the changes and challenges of the 21st century. This course surveys major issues in the registration of initial public offerings ("IPOs") under the Securities Act of 1933 and relevant provisions of the Securities Exchange Act of 1934, civil liability provisions, and the major exemptions from registration. Students will engage in detailed statutory analysis, as well as analysis of judicial and administrative decisions. The material covered in the course also raises important public policy issues such as "market democracy" and the role of regulation, disclosure policy with regard to corporate accountability and social responsibility, and the implications of internet disclosure.

LAW 7326. Criminal Trial Practice. 2 Hours.
Lectures on cases tried in state and federal courts, from arrest to appeal, are used to highlight criminal trial practice. One case is used throughout in which students are assigned roles including defense attorney, prosecutor, judge, witness (expert and lay), juror, clerk and defendant. Materials are based on actual cases. Emphasis is on federal criminal trials.

LAW 7329. Environmental Law. 3 Hours.
This course focuses on federal and state environmental laws. Topics include pollution control, waste management, and cleanup of contaminated land and water. The course explores legislative policy and regulatory decisions as well as enforcement issues. We will give attention to questions of environmental justice and to the strategic use of legal tools in working to ensure safe and healthy surroundings for diverse groups of people.

LAW 7331. Estate Planning. 3 Hours.
This basic upper-level course weaves together three strands that make up the discipline of estate planning. Strand 1 is an introduction to key elements of relevant law: property; creditor/debtor; wills, estates, and trusts; estate and gift tax; trust income taxation; and a touch of public benefits. Strand 2 introduces the tools and key components of an estate plan, such as Wills, Trusts, asset titling, and death beneficiary designations. Strand 3 weaves these together with and applies them to real-world frequently encountered situations using classroom hypotheticals to teach sound practice management, ethical considerations, blended family issues, and a mindset that plans for the knowable unknowns (e.g., not all potential beneficiaries may in the future be healthy, financially secure, still living, or even born yet).

LAW 7332. Evidence. 4 Hours.
This course examines how courtroom lawyers use the evidence rules to present their cases—notably, rules regarding relevance, hearsay, impeachment, character, and experts. The approach to the study of evidence will be primarily through the "problem" method—that is, applying the provisions of the Federal Rules of Evidence to concrete courtroom situations. Theoretical issues will be explored as a way to deepen the student's appreciation of how the evidence rules can and ought to be used in litigation.

LAW 7333. Family Law. 3 Hours.
This is a basic course in family law and family policy. The first half of the course explores state regulation of intimate relationships, asking what purposes marriage serves, and looking at the law of incest, polygamy and same sex marriage. The second half of the course examines practical problems in family law: cohabitants' rights; common law marriage; and the many issues relating to divorce, with a particular focus on money and children.

LAW 7335. Health Law. 3 Hours.
This course examines the legal regulation of the provision of healthcare services. Much of the focus is on the relationship between law and healthcare policy. Topics include access to health insurance and healthcare, healthcare financing, malpractice liability, the organization and responsibility of healthcare institutions, especially hospitals, the regulation of the quality of care and the formulation of health policy. This course is highly recommended for all students enrolled in the JD/MPH dual degree program, but is open to others as well.

LAW 7336. Immigration Law. 3 Hours.
This course is designed to give the student an overview of U.S. immigration law. The focus is on the day-to-day practice of immigration law, including an examination of the substantive and procedural aspects of this practice, and a historical analysis of the changes in our immigration laws and policies. Topics covered include non-immigrant and immigrant classifications, the preference system for immigrants, grounds of inadmissibility and deportability, relief from removal, asylum, citizenship, administrative and judicial review, and the immigration consequences of crimes.

LAW 7338. International Law. 3 Hours.
This course introduces students to fundamental concepts and unresolved problems in international law. We discuss historical and contemporary theoretical debates about the roles and utility of international law. Students are introduced to the sources of international law and to methods of international dispute resolution in domestic and international fora. This course explores the part that international law has played (or failed to play) in the prevention or conduct of war, the promotion of human rights and international economic development.

LAW 7340. Labor Law 1. 3 Hours.
A general introduction to the law of labor relations through an examination of the National Labor Relations Act and leading cases, in conjunction with historical, social and economic materials. Topics include organization, union recognition, unfair labor practices and collective bargaining.

LAW 7344. Legal Accounting. 3 Hours.
Accounting is described as the language of business. This course may be of interest to students seeking to understand accounting, finance, auditing, financial reporting, taxation, or exempt organization management commonly encountered by attorneys. The course introduces objectives and mechanics of financial reporting and accounting. In addition to traditional textual and case materials, we examine financial statements of a local public company including the balance sheet, income statement, statement of shareholders' equity, statement of cash flows, footnotes and management disclosure and analysis. We perform fundamental comparative financial analysis from an investor’s viewpoint to determine each company’s financial strengths and weaknesses. The course addresses the relationship between lawyer and auditor and reviews and analyzes recent financial reporting and financial scandals and audit failures.
**LAW 7350. Negotiation. 3 Hours.**
Negotiation is a course where students engage in simulated disputes and transactions, which are then debriefed in class. Through frequent in-class mini-negotiations and major simulations, the course focuses on: (1) negotiation planning, (2) case preparation and evaluation, (3) client counseling and informed client consent, (4) analysis of the bargaining range and principled concession patterns, (5) competitive, cooperative and problem-solving strategies, (6) information bargaining, (7) ethics and (8) critiques of negotiation patterns and institutions. Students are required to turn in preparation materials and to keep weekly journals, reviewed by the instructor, addressing their experiences in, and thoughts about, negotiations. Students are encouraged to internalize habits of analysis, prediction, preparation, and flexibility and to become more self-evaluative for their future negotiating experiences.

**LAW 7351. Prisoners’ Rights Clinic. 6 Hours.**
This clinical course is offered during both the fall and winter quarters. It provides upper-level students with an opportunity to develop and refine valuable advocacy skills under the close supervision of two experienced practitioners. Typically, each student gets to handle, from beginning to end, either an adversarial hearing (final parole revocation), or a non-adversarial parole release hearing for an inmate serving a life sentence. Through this experience, students learn how to properly conduct client/witness interviews and thorough factual investigations, to examine and cross-examine witnesses effectively and to make persuasive opening and closing statements. Students also learn how to write winning administrative appeals. The skills students learn in this course are easily transferable to any civil or criminal practice after law school. The course also presents a survey of the constitutional law relating to the sentencing process and the rights of prisoners while incarcerated and while on parole.

**LAW 7358. Social Welfare Law. 3 Hours.**
This course examines American public assistance as a legal institution. After reviewing the historical, sociological and juridical roots of the welfare system, students examine the laws governing major assistance programs, especially eligibility requirements, rules governing grant determination, work and family rules, and procedural rights. Primary emphasis is on statutory and regulatory construction. The course explores methods by which lawyers can deal with the system: advocacy in the administrative process, litigation, legislative reform and representation of recipient organizations.

**LAW 7362. Poverty Law and Practice Clinic. 6 Hours.**
The twenty hours a week spent in the clinic provides an opportunity for students to provide direct representation to clients confronting legal challenges as they try to balance family and work responsibilities. Students have complete responsibility for a range of clients under the supervision of a faculty member. Students interview, research, plan, investigate, counsel, negotiate, and advocate for their clients. The clinic encourages students to maintain a client-centered focus and looks to extend the experience beyond the problem of the individual to the benefit for the community. The clinic also provides an opportunity to work in collaboration with a community organization in order to experience collaborative efforts for systemic change for low income clients.

**LAW 7367. Labor Law 2. 4 Hours.**
An advanced labor law course focusing on the law of the collective bargaining agreement. The course compares collective bargaining rights to other workplace rights systems, such as individual statutory entitlement and public employee constitutional rights.
LAW 7417. Entertainment Law. 3 Hours.
Entertainment Law involves the study of legal principles and business practices of the entertainment industry, with a focus on such matters as they exist in the film, television, and music industries, as well as publishing, video games, emerging media, and the Internet. The course is divided generally into four segments: Intellectual Property (including idea submissions, copyright, trademark, and privacy and publicity rights); Representation of Entertainers (including the roles of agents, managers, lawyers, and unions); Contracts, Credits, and Compensation; and Restrictions on Entertainment Content (including defamation, discrimination, obscenity and indecency, and violence). The focus is on the practical application of the legal principles, including an awareness of issues that arise in negotiations, contracts, and litigation involving entertainment companies and creative talent.

LAW 7422. Human Rights Seminar: Race, Gender, and Culture. 3 Hours.
This research, writing, and discussion seminar uses interdisciplinary theoretical approaches (i.e., post-colonial theory, cultural studies, feminist studies, critical race theory, migration studies) to explore and critique the possibilities and limits of the international human rights legal framework. Students will be asked to choose and research a relevant and narrowly-tailored topic relating to the implications of identity (race, gender, class, national or migration status, sexuality, disability, etc.) for an international human rights issue in a specific practical or theoretical context. In addition to submitting a preliminary topic, bibliography, outline, and draft section, each student will present their research to other members of the seminar for discussion and feedback from other students and the instructor before submitting the final paper at the end of the quarter. Readings include a range of primary documents from UN and regional human rights systems, law review articles and books primarily drawn from the “Third World Approaches to International Law” movement, as well as a reader on post-colonial theory.

LAW 7423. State Local Taxation. 3 Hours.
This course surveys the variety of regimes deployed by various states to fund state and municipal government, with primary attention to state income taxation of individuals and businesses, property taxation and sales taxes. Among the topics to be covered are federal and state constitutional constraints on state and local tax structures, alternative methods of state business taxation, and issues relating to the taxation of interstate activity. The course will approach these topics from the viewpoints both of state tax policy-making and of taxpayer planning and representation.

LAW 7424. Labor Law 1. 4 Hours.
A general introduction to the law of labor relations through an examination of the National Labor Relations Act and leading cases, in conjunction with historical, social and economic materials. Topics include organization, union recognition, unfair labor practices and collective bargaining.

LAW 7427. Corporate Finance: Acquisitions. 4 Hours.
This course will explore the legal implications of corporate financing and acquisition decisions. After a brief introduction to basic financial economic concepts, the course will cover a variety of topics, including (1) the legal rights, duties and relationships among holders of senior securities (debt, preferred, and convertible securities), common equity holders, corporate directors and managers; and (2) mergers, acquisitions and other change of control transactions. While the focal point of this course will be on the legal dimensions of corporate financial decisions — in contrast to a business school approach to teaching corporate finance — some effort will be made to promote a basic understanding of the economic and financial rationale underlying corporate law principles in this area. Nevertheless, no prior familiarity with finance will be assumed or required.

LAW 7428. State Local Government. 3 Hours.
This course offers an introduction to the workings of state and local governments, and to the roles of law and of lawyers in shaping and controlling their operation. Topics to be covered include: the sources and scope of state and of local lawmaking authority, intergovernmental relationships, modes of citizen participation in and control over the governing process, and state and municipal fiscal structure and operations. In exploring these topics, the course will focus both on the practical roles played by attorneys (employed inside or outside of government) in the governmental processes and on the place of decentralized governmental units within the vision of a democratic polity.

LAW 7429. Labor Law 2. 3 Hours.
An advanced labor law course focusing on the law of the collective bargaining agreement. The course compares collective bargaining rights to other workplace rights systems, such as individual statutory entitlement and public employee constitutional rights.

LAW 7434. Secured Transactions. 4 Hours.
This course has as its principal focus the way that most credit in America is extended. The transactions covered range from the purchase by consumers of automobiles or large household goods on credit to mega-loans by banks to large corporations. The primary law studied is Article 9 of the Uniform Commercial Code as well as certain sections of the federal Bankruptcy Code. The course also seeks to introduce students to commercial law generally and to further their facility with issues of statutory construction.

LAW 7443. Professional Responsibility. 3 Hours.
This course focuses on the legal, ethical and professional dilemmas encountered by lawyers. Emphasis is on justice as a product of the quality of life that society provides to people rather than merely the process that the legal system provides once a crime or breach of duty has occurred. The course also provides students with a working knowledge of the American Bar Association’s Model Rules of Professional Conduct and the Code of Professional Responsibility as well as an understanding of the underlying issues and a perspective within which to evaluate them. In addition, the course examines the distribution of legal services to poor and non-poor clients.

LAW 7444. Modern Real Estate Development. 3 Hours.
This course explores the basic elements of commercial real estate transactions, with a focus on the acquisition and financing of real estate development. We discuss the economic considerations (including basic tax benefits) and risk elements of real estate development, as well as some of the emerging trends in real estate development and their theoretical implications. We give limited consideration to residential real estate transactions. A complex real estate transaction serves as the basis for the course discussions. Course materials include typical transactional documents. During the term, one or more in-class drafting exercises are included to help focus the discussion of the issues.
LAW 7447. Quantitative Methods. 3 Hours.
Quantitative Methods is an interdisciplinary skills-building course intended to enhance students’ ability to critique, analyze, and generate empirical information. The course explores a variety of contexts in which legal and policy professionals may be called upon to evaluate and interpret data. Possible topics may include calculating the present value of cash flows in settlements (divorce, personal injury); preparing and analyzing financial statements (corporate); critiquing empirical methods and sources of bias in scientific literature (mass torts, medical malpractice); evaluating geographical information (environmental management, zoning); and formulating social science and polling research (public policy and politics). Taking an experiential approach, students are expected to apply concepts and methodologies introduced in class to straightforward problem sets, independent research assignments, and interactive discussions of current events.

LAW 7448. Employment Discrimination. 3 Hours.
The Employment Discrimination course focuses on Title VII of the 1964 Civil Rights Act. It surveys the Supreme Court’s decisions in this ever-changing area of law—including the recent decisions in Nassar and Vance, which reflect the efforts of the current Court to reduce the number of cases filed in this area.

LAW 7449. Alternative Dispute Resolution. 3 Hours.
This course is designed to introduce the theory and practice of various dispute resolution mechanisms that are alternatives to the traditional litigation model for resolving disputes. Insofar as negotiation is the foundation of most ADR processes, the course begins there. We will analyze negotiation theory and strategy before adding mediation and collaborative law to the mix. We will look at how to represent clients in negotiation, mediation and collaborative law, how to prepare for these processes and how to develop effective strategies. The final weeks of the course will focus on understanding the essential attributes of arbitration.

LAW 7454. Advanced Legal Research. 2 Hours.
The course is designed to prepare law students for research in practice, clerkships, and legal scholarship. Students will evaluate legal research sources and use them effectively, expand skills in primary and secondary U.S. legal sources, become aware of non-legal information resources that could be useful to legal practice, and get an overview of public international law and foreign legal research. Since learning legal research requires a hands-on approach, students are required to complete assignments and in-class exercises. This course will emphasize cost-effective research, including print and Internet sources. The topics covered in this survey course will vary from year to year and may include immigration law, tax law, business law, environmental law and cultural property law among others.

LAW 7463. Non-Profit Organizations. 3 Hours.
This course is about federal regulation of nonprofit organizations. Why does the government exempt certain organizations from tax? What are the rules that non-profit organizations must follow in order to retain their tax-exempt status? What activities by non-profit organizations are prohibited by federal law? These and other questions about non-profit organizations will be discussed. The course will focus on relevant Federal tax law, but there is no prerequisite for the course. Although the course is about the Internal Revenue Code, the concepts of income taxation (what is income? when is it income? etc.) are irrelevant because nonprofit organizations are exempt from tax.

LAW 7469. Disability Law. 3 Hours.
This course explores how the law treats individuals with disabilities. We will analyze what is meant by the term “disability” and consider constitutional review of state actions discriminating against individuals with disabilities. Particular attention will be given to the rights and obligations created by the Rehabilitation Act, the Americans with Disabilities Act and the Individuals with Disabilities Education Act. The rights of individuals with disabilities to be educated, work, receive healthcare, and enjoy public accommodations will be considered in depth. This course is designed for students wishing to represent individuals with disabilities as well as students who may represent employers and public accommodations.

LAW 7475. First Amendment. 3 Hours.
This course examines several rights protected by the First Amendment to the Constitution. The focus is on the principles and processes developed by the judiciary to protect various forms of speech, expression and association. The course does NOT deal with the free exercise of religion or the establishment clause. The course also focuses on integrating doctrine with the core values of the First Amendment as well as emphasizing the need for students to develop their own preferred approach to protecting free expression. The course does not, except tangentially, deal with other parts of the Bill of Rights.

LAW 7478. Collective Bargaining, 4 Hours.
This course consists of a collective bargaining simulation exercise in which students participate in the process of negotiating a collective bargaining agreement. Students are divided into teams representing either management or labor and formulate proposals and counterproposals, and attempt to reconcile significant differences between the labor and management positions. Negotiators are required to operate within the context of the applicable statutory framework including the National Labor Relations Act, Labor Management Reporting and Disclosure Act, Fair Labor Standards Act and the Civil Rights Act of 1964. Every effort is made to simulate an actual collective bargaining negotiation.

LAW 7479. Basic Income Taxation. 4 Hours.
This introductory tax course covers the fundamental concepts and operations in income taxation. Tax issues are raised in the context of typical lawyer-client situations: the employment contract (fringe benefits, employee business expenses), buying and selling a house and other property, personal injury expenses and recoveries, and running a small business. An important aspect in understanding the details covered will be comprehension of the economic policy objectives, and unintended results, of specific tax provisions such as capital gains taxation. The course is focused on the statute, cases and administrative law that define the income tax base. Tax rates are also examined and tax unit issues are covered for individual wage-earners, married couples, children living in the home, pensioners and small businesses organized as sole proprietorships.

LAW 7487. Critical Race Theory. 3 Hours.
This course traces the historical, political, and intellectual origins of Critical Race Theory (CRT) by examining the key writings that formed its foundational pillars. Through this endeavor, we will have an opportunity to grapple with some of CRT’s theoretical contributions as well as the associated methodologies for advancing these claims. Our exploration will also encompass a review of new developments in the field and an application of CRT to current social injustices. Enrollment is limited and evaluation will be based on class participation, a presentation, and a paper project.
LAW 7488. Sexuality, Gender, and the Law. 3 Hours.
This course uses case law and theory to address doctrinal problems and justice concerns associated with gender and sexuality. The syllabus is organized around notions such as privacy, identity and consent, all of which are conceptual pillars upon which arguments in the domain of sexuality and gender typically rely. Doctrinal topics include same-sex marriage, sodomy, sexual harassment, discrimination, among others, but the course is not a doctrinal survey; it is a critical inquiry into key concepts that cut across doctrinal areas. Students should expect to write a paper and share some of what they have learned with the class.

LAW 7491. International Human Rights and the Global Economy. 3 Hours.
Can recognizing “the right to housing” make the demands of homeless persons for adequate housing more effective? Does the right to maintain cultural or religious traditions conflict with the right to be free from gender discrimination? This course highlights the growing influence of the international economic, social, and cultural rights framework as well as the implications of globalization for all international human rights. We will begin by examining the history and theoretical origins of socioeconomic and cultural rights such as rights to food, housing, health, education, and cultural expression. We then engage the legal framework under major international and regional human rights treaties and leading interpretations of them by international, regional, and domestic courts and other actors. Finally, we grapple with the tensions among core human rights, cultural imperatives, and traditional human rights. There is no prerequisite for this course.

LAW 7494. Bioethics and the Law. 3 Hours.
This course will focus on the intersection of law and bioethics and will consider how different ethical theories may guide legal decisions. Topics will include physician-assisted suicide, testing for HIV, reproductive technology, and rationing of healthcare. Students will be expected to write a research paper and share some of what they have learned with the class.

LAW 7495. Advanced Criminal Procedure: Investigation. 3 Hours.
During this course, students will examine the law of criminal investigation. The primary focus of the course will be to present and discuss leading Supreme Court decisions in the field of constitutional criminal procedure. Students will study decisions which apply the Fourth, Fifth and Sixth Amendments and the Due Process Clause to the criminal justice process and the procedures through which criminal laws are enforced.

LAW 7496. Appellate Practice. 2 Hours.
This course covers various aspects of appellate practice, focusing on appellate jurisdiction, brief writing and oral advocacy. As a component of the course, students will write an appellate brief, working from a record from a lower court, and argue the case. The course includes observation of appellate arguments, conversations with appellate judges and with lawyers who focus on appellate practice, and review of recent cases that were briefed and argued in the Massachusetts appellate courts and the First Circuit.

LAW 7501. Patent Law. 3 Hours.
This course will provide an in-depth review of patent law and practice. The course will cover the administrative process for obtaining patents, including the requirements for patentability. The course will also cover enforcement of patent rights and the defense of patent infringement suits. The course will be presented in a simple, non-technical manner so that students of all disciplines can learn and understand the concepts.

LAW 7503. Commercial Law: Business Bankruptcy. 3 Hours.
This course deals with business reorganization under Chapter 11 of the Bankruptcy Code. The objective of Chapter 11 bankruptcy is to allow the debtor to modify and restructure its debt so that it can continue to operate its business. The course will cover matters that typically arise in a Chapter 11 case, such as the automatic stay, modification of debt, rejecting contracts, post-bankruptcy financing, creditors' claims, management of the debtor, and the plan of reorganization. The course will also address topical issues such as employee rights, retiree benefits, and mass tort claims, including asbestos and environmental claims.

LAW 7509. Professional Responsibility Seminar. 3 Hours.
This small section of Professional Responsibility is taught as a seminar-style course. The course incorporates basic analytical and legal reasoning techniques, as well as offers opportunities for students to improve their legal writing through analysis and critique. Writing is done in the context of Professional Responsibility doctrine with a focus on legal, ethical and professional dilemmas encountered by lawyers. This course fulfills the 3 credit Professional Responsibility course requirement while, at the same time, refines students' basic analytical and writing skills.

LAW 7511. Labor Arbitration Workshop. 3 Hours.
In this workshop, students will explore the important role of alternative dispute resolution in the workplace. Using court and arbitration decisions as well as supplementary materials, students will discuss the relationship between arbitration and the judicial system, a union's duty of fair representation, issues of arbitrability, evidence and procedure, as well as a variety of substantive contractual issues normally addressed in arbitration, such as seniority, fringe benefits, wages and hours, subcontracting and union security. In particular, the course will focus on "just cause" discharge and discipline cases. Although there are no prerequisites or co-requisites, Labor Law I is recommended. During the course of the quarter, students will draft an arbitration brief based on a transcript of a hearing and participate in an arbitration simulation using witnesses and documentary evidence.

LAW 7512. Problems in Public Health Law. 3 Hours.
This course will explore the rationales for using law to protect and preserve the public's health, the legal tools that may be used to achieve that end, and the conflicts and problems that may result from legal interventions. Topics discussed will include the use of law to reduce the spread of HIV and other infectious diseases, control of tobacco and other hazardous products, bioterrorism, and the threats TO CIVIL LIBERTIES AND MINORITY GROUPS engendered by all such legal efforts. This course is highly recommended for all students enrolled in the J.D./M.P.H. dual degree program, but is open to other students as well.

LAW 7514. Natural Resources Law. 3 Hours.
This course addresses legal requirements and institutions dealing with animal and plant species, biological resources, habitats, and ecosystems. Major themes include biological diversity, endangered and threatened species, public and private rights in migratory resources, public trust doctrine, the allocation of power among federal, state, and local governments, and the roles of administrative agencies in ecosystem management. The course provides opportunities to explore specific topics of interest such as environmental ethics, wetlands protection, fisheries law, Native American hunting rights and fishing rights, and management of national parks, forests, and grazing lands.
LAW 7515. Sports Law. 3 Hours.
This course explores the legal, economic and social aspects of national and international professional and amateur sports. The course will focus on judicial, administrative, legislative and private decisions that have created a cohesive body of principles for the resolution of disputes involving athletes, clubs, leagues, spectators, and fans. These decisions address issues of antitrust, labor, tort, agency, and constitutional law. We will pay particular attention to the governance of sports, player reservation systems and player contracts, collective bargaining and salary arbitration, franchise free agency, violence in sports, NCAA rules and regulations, gender and handicapped discrimination, and sports agents. Students will draft a research paper on a topic approved by the instructor.

LAW 7516. Legal Writing Workshop. 3 Hours.
This course is for students who wish to strengthen their writing and analytic skills. The first part of the course will focus on objective writing. Students will work on an office memorandum analyzing a statute and case law. The classes will focus on large scale organization, small scale organization, case analysis, and revising your own work. The second part of the course will focus on persuasive writing and research. Students will research and draft an appellate brief based on a constitutional issue, paying particular attention to persuasive writing techniques. The appellate brief will fulfill the upper level writing requirement. The entire course will focus on writing concisely, using citations accurately, and other skills essential to effective legal writing.

LAW 7518. Affordable Housing Law—Theory and Practice. 3 Hours.
This course will explore how and why Federal law supports the production, finance and operation of affordable housing, and the consequences, both intended and unintended, of historical shifts in Federal housing policy. Students will examine in detail the ways in which both housing regulation and the tax code affect the structure and documentation of complex transactions, and will analyze the "real world" impact of changing policies and legal requirements on the practice of affordable housing law.

LAW 7521. Branding Law and Practice. 3 Hours.
As preparation for advising clients on brands and brand-related activities, this course looks at a variety of laws (such as trademark, copyright, unfair competition, trade dress, design patent and advertising) and the business practices associated with branding products and services. The focus is on the practical application of legal principles with respect to selection, acquisition, promotion, use and protection of brand indicia (marks, logos, slogans, designs, labels and packaging) and related lawyering competencies, including conducting due diligence, applying relevant law, working collaboratively, giving useful advice and communicating effectively.

LAW 7523. International Business Regulation. 3 Hours.
This course examines international and domestic law regulating multinational enterprises. It is intended for students interested in the work of international lawyers representing corporations and other economic actors, serving in relevant government agencies and international organizations, and engaged in the public interest work of NGOs. The course will cover, among other things, the role of lawyers in the international business environment, legal aspects of multinational enterprises, the international sale of goods, foreign investment issues, select international aspects of mergers and acquisitions, and international joint venturing.

LAW 7525. Law and Economic Development. 3 Hours.
This course will examine the prevailing economic theories of and strategies for economic development since World War II and the legal and institutional frameworks devised to implement these strategies. Questions we will explore will include: What kinds of legal and institutional arrangements best facilitate economic growth? How does law structure and shape markets? What is “development” and how can it best be measured? Can legal instruments be used effectively to address underdevelopment in a structural way? While the focus will be on development in the so-called “developing world,” we will also explore some strategies for addressing development in a local community context. We will conclude the course by applying what we have learned to address several development case studies posing particular problems in particular regions and contexts.

LAW 7526. Juvenile Courts: Delinquency, Abuse, Neglect. 3 Hours.
This course covers the broad topic of children in custody for delinquency, abuse or neglect and for status offenses. Through an examination of fundamental case law, statutory law and theory of juvenile law, participants will be exposed to both substantive and procedural principles of the juvenile court system. The course examines how children come into court jurisdiction and the educational and mental health services they require while in foster care or in detention. The course looks at foster care, termination of parental rights and adoption as well as the juvenile death penalty issue. Court attendance is a requirement.

LAW 7527. Public Health Legal Clinic. 4 Hours.
This clinic supports the work of the Public Health Advocacy Institute, a Northeastern-based think tank. It provides students with an opportunity to gain experience in public interest law, health law, and the use of litigation to effect changes in public health policy. The clinic’s primary focus will be on tobacco control and on the emerging issue of obesity-related litigation and policy, but students may explore other public health-related topics as well. This clinic also provides a unique opportunity for students to develop their academic legal writing skills; the final project in this course is the equivalent of a law review article. In addition to weekly class readings and discussions, each student will work on a major research project throughout the quarter, meet regularly with the instructor to discuss the project, give an oral presentation to the class, and write a substantial paper discussing his/her research.

LAW 7528. Balancing Liberty and Security Seminar. 3 Hours.
This course will examine the challenges, obstacles and issues presented in the struggle to create a balance between securing our homeland and respecting the rights of all of those who call this land home. We will examine recent Supreme Court decisions (Handi, Rasul, and Padilla) as well as international perspectives on counterterrorism strategies. The course will include a discussion of the privacy and human rights issues that have arisen since September 11th and the ethical responsibility of lawyers adjudicating those issues. Students will take a take-home exam at the end of the quarter.

LAW 7529. International Tax and Business Planning. 3 Hours.
This course is about the United States’ taxation of international transactions. That includes the taxation of American corporations and individuals on their foreign income and the taxation of foreign individuals and corporations on their United States income. Basic Income Taxation is a prerequisite.

LAW 7530. Education Law. 3 Hours.
A survey of current issues in U.S. education law including high stakes testing, “No Child Left Behind,” the charter school movement, vouchers, church/state issues, home schooling, and school funding.
LAW 7532. International Criminal Law. 3 Hours.
An overview of substantive and procedural international criminal law and its enforcement mechanisms, this course will cover principles of state liability and individual culpability, international crimes, international criminal procedure, and punishment. It will focus on the sources and principles of international criminal law, how international human rights, humanitarian and criminal law are binding on U.S. and other domestic courts, and the history and operations of international human rights, humanitarian and criminal tribunals. It will also address state liability for failure to investigate, prosecute and punish gross human rights violations and other international crimes, conspiracy and corporate responsibility, and individual culpability and defenses for state actors and private individuals. It will consider international crimes such as War crimes, crimes against peace and humanity, and breaches of the Geneva Convention. It will consider principles of punishment, including the death penalty.

LAW 7535. Legal Interviewing Counseling. 3 Hours.
Students in this course will study the principles of interviewing and counseling, learning how to interview clients to identify their legal problems and to gather information on which solutions to those problems can be based. Students will also practice interviewing witnesses and students will be taught how to counsel clients—a process by which, having determined what the client’s legal problems are, the lawyer helps clients make decisions by identifying potential strategies and solutions and their likely positive and negative consequences. Students will practice specific interviewing and counseling techniques and have the opportunity to receive feedback from classmates and the instructor.

LAW 7536. Employment Law Safety Health. 3 Hours.
This course will focus on the legal issues relating to the primary and secondary prevention of injuries and illnesses at work. The course will include a review of the Occupational Safety and Health Act, as well as discussions of other relevant aspects of employment, labor, compensation and tort law.

LAW 7538. International Environmental Law. 3 Hours.
This course addresses the evolution of key concepts and principles of international environmental law. It discusses legal responses to transboundary and global environmental problems such as marine and freshwater pollution, habitat destruction, and climate change. It explores the connections between resource exploitation, ecological degradation, poverty, and violations of human rights. It discusses the regulation of international trade to achieve environmental goals. The course includes consideration of framework agreements, binding obligations, financing and compliance mechanisms, and articulation of international principles through domestic law. It gives attention to the expanding roles of local and non-state actors in pursuing solutions to international environmental controversies.

LAW 7539. Employment Law—Job Security and Rights. 3 Hours.
This course surveys legal and policy issues concerning job security, focusing primarily on law governing the termination of private sector employment. Students develop an understanding of the history and scope of the underlying employment-at-will doctrine and the primary ways in which the at-will doctrine has been modified through common law and statute.

LAW 7540. Employment Law—Compensation, Benefits, and Retirement. 3 Hours.
This course surveys the legal and policy issues concerning minimum wage and wage-payment laws, regulation of working time and overtime premiums, family medical leave, unemployment insurance, COBRA, Social Security and pensions and ERISA. It stresses close reading of statutes and administrative regulations. The problems of low-wage workers receive special emphasis. *This course replaces and may not be taken by students who have already taken LAW2465—Employment Law.

LAW 7541. Global AIDS Policy Seminar. 3 Hours.
The global HIV/AIDS pandemic, the preeminent public health and human rights challenge of our time, is structured by biological, economic, social, and cultural forces ranging from the arcane structures of the international intellectual property regime to the cultural norms that prefigure sexual intimacy. This seminar will explore selected policy options for reversing and responding to the tide of infection. Pharmaceutical research, development, and access, neo-liberal economic and trade policies, gender relations and prevention policies, global health initiatives and primary health systems, healthcare policy and health worker migration – these and many other topics will be the subject of classroom discussion and student research papers.

LAW 7542. Advanced Legal Skills in Social Context. 6 Hours.
This six credit course provides a select group of upper level students with advanced lawyering training in examining the role of law in our diverse society, by looking critically and analytically at societal assumptions, beliefs and values codified in all legal doctrine and to grapple with emerging law. Students who take ALSSC are also trained to act as lawyering fellows for law office teams of first year students in their required companion course, LSSC. In this capacity, ALSSC students also develop and manage the implementation of social justice projects that seek to use law as a tool for social change. May be repeated without limit.

LAW 7546. Law of Financial Institutions. 3 Hours.
This course will survey the complex regulatory regime governing the operations of commercial banking organizations in the United States. The primary focus will be on federal regulation of banks and bank holding companies. Nevertheless there will also, of necessity, be coverage of federal regulation of other types of depository institutions and holding companies — such as credit unions, savings associations, and savings and loan holding companies — as well as of state regulation of depository institutions and their holding companies. Current issues relating to bank mergers, diversification of banking organizations into other forms of financial and commercial activities (including securities and insurance), regulatory responses to specific problems (such as capital adequacy, deposit insurance, limitations on lending authority, anti-money laundering and anti-terrorism initiatives) will be considered.

LAW 7549. Comparative Law: Law, Markets and Democracy in East Asia. 3 Hours.
Today, we see a variety of market developments and rule of law programs around the world promulgated by such international institutions as the World Bank, the International Monetary Fund, and the Asian Development Bank. Markets are viewed as the panacea to the ills associated with economic development, and “rule of law” is synonymous with democracy, equality, and universal rights. This course examines the truth of the above assumptions by a study of legal systems in East Asian countries, selected for their varying stages of economic development. The course will examine three areas: cultural forces behind legal systems; forces of economic development and political, social and legal institutions established to promote this national goal; and finally, the intended and unintended consequences of these legal institutions.
LAW 7550. Refugee and Asylum Law. 3 Hours.
This course will explore the law of asylum and refugees. The primary focus will be on U.S. law as it has evolved since passage of the Refugee Act of 1980. This will include legislation and case law—both administrative and federal court cases. It will also look at relevant international law and standards utilized in other countries by way of comparison with U.S. Law. We will also examine the process of asylum adjudications to analyze issues of due process, credibility, cross cultural communication and integrity of the various legal procedures. We will explore new and emerging theories of asylum eligibility and policy developments which impact asylum seekers in the United States.

LAW 7554. International Investment Arbitration and Litigation Practice. 3 Hours.
This course will blend the study of Investor-State International Arbitration with mock litigation exercises. The subject of Investor-State disputes and their resolution lies at the cutting edge of international law. Topics that will be covered in this course are (1) the substantive law of investment arbitration; and (2) elements of procedure that characterize investor-state arbitration including tribunal composition, jurisdiction, evidence, and annulment. At the same time, students will put their knowledge into practice by participating in a series of litigation exercises based upon proceedings brought by a foreign investor against a State before the International Centre for the Settlement of Investment Disputes (ICSID). Active participation in oral advocacy exercises is required. The course grade will be a function of those assignments and class participation.

LAW 7555. Communications Law. 3 Hours.
This course surveys legal issues associated with the regulation of the mass media, but with particular emphasis upon the broadcast media. FCC regulatory and licensing issues will be covered extensively. First Amendment issues as related to television and radio are an important part of the course. To the degree that time allows, defamation and privacy issues will also be considered.

LAW 7556. Corporate Finance. 3 Hours.
This course provides an overview of corporate finance concepts and their relationship to corporate transactional practice. The course begins with coverage of basic corporate finance concepts, i.e., risk, valuation, present value, leverage, and diversification. The concepts are then discussed in the context of corporate transactions such as business restructurings, mergers and acquisitions, and initial public offerings. In addition to focusing on the conceptual underpinnings of corporate transactions, students will be required to understand how elements of a business deal get translated into drafting strategies. It is strongly recommended that students have taken or take in conjunction with the course one of the following: Corporations, Securities Regulation, or Business Bankruptcy. There is a basic level of math (elementary algebra) required to understand and apply corporate finance concepts.

LAW 7558. Cross-Border Litigation. 3 Hours.
This course presents advanced topics of civil procedure to reflect the realities of litigation in a globalized world. Using examples ranging from defective products in a global supply chain to corporate violations of human rights, it focuses on commercial and civil litigation in US courts in cases involving a cross-border issue. The course discusses jurisdiction over foreign parties (including multinational corporations), service of process abroad, obtaining evidence abroad, choice of law and the application of foreign law, recognition of foreign judgments in the US and recognition of US judgments abroad, cross-border litigation strategy, and provides an overview of international arbitration issues. This course takes a pragmatic approach and provides an opportunity to build oral and written litigation skills.

LAW 7559. International Trade. 3 Hours.
This course provides a comprehensive introduction to the legal framework for U.S. and international regulation of international trade. The course will include a brief introduction to the economics of trade and trade restriction measures. It will then focus on the World Trade Organization agreements regulating international trade in goods, services and intellectual property; it will provide an overview of the North American Free Trade Agreement; and it will examine U.S. trade laws particularly relief from "unfairly" traded imports, boycotts and trade sanctions.

LAW 7561. Private Litigation in the Public Interest. 3 Hours.
How can lawyers working in the "private" arena influence public policy? This course looks at tort-based litigation that impacts tobacco control, climate change, and other policy arenas. It considers the financial consequences of "mass torts", class actions and punitive damages on plaintiffs’ attorneys as well as on defendants, and examines doctrinal, ethical and practical issues raised by the effort to use civil remedies to achieve social change.

LAW 7565. Intellectual Property Transactions Practice. 3 Hours.
This course provides students with training for transactions, with focus on the purpose, terms and conditions of transactions related to creation, ownership, license, sale, use and exploitation of intellectual property assets. The course includes analyzing cases, problems and agreements related to transactions affecting private and public interests. Initial exercises focus on the purpose, effect and drafting of various types of transactions and clauses. The class then focuses on cases leading to transactions between business and/or NGOs or other public interest parties, for which students are expected to analyze parties' interests, propose transactional resolutions and draft or revise transaction documents. As a final exercise, students prepare on behalf of one party a version of a transaction document and draft and final versions of an advisory memorandum.

LAW 7566. International Intellectual Property. 3 Hours.
This course introduces relevant legal and trade principles, economic and cultural influences and sources of law. Classes will consider important principles of international law, IP treaties and institutions, including principles of territoriality, national treatment, choice of law and choice of forum, treatment of cultural property, the scope of TRIPs and the roles of WIPO and WTO. The balance is devoted to problems and current controversies that allow students to examine IP laws from a comparative perspective, to consider the impact of economic interests on development of IP laws and treaties, to analyze the influence of IP laws and treaties on foreign and multi-national activities, and to discuss practical approaches for establishing, protecting and using IP assets and engaging in global activities and business transactions.

LAW 7568. Legal Analysis. 1 Hour.
In preparation for graduation and the bar exam, Legal Analysis offers third year students the opportunity to review all first year doctrinal subjects plus upper level Evidence, as well as offering material not covered in the courses they have previously taken. Although this course is voluntary and not a substitute for a commercial bar review course, it will be a useful tool in the third year students' preparation for their bar exam.
LAW 7569. International and Foreign Legal Research. 2 Hours.
This course is designed to teach students how to research international and foreign legal materials. The course uses a combination of lectures, hands-on research exercises, and homework assignments. Students will have opportunities: to increase the quality of research by attaining substantive knowledge on international legal topics and the legal system in which their issue arises; to attain practical skills to brainstorm search terms, formulate issues, and evaluate legal research resources by iterative process; and to increase flexibility and confidence in researching international and foreign law topics. Topics include: U.S. and Non-U.S. treaties, international custom, jurisprudence, and documents of the United Nations, the European Union, and NGOs. The class also explores research in topical areas such as human rights, immigration and refugee laws, and foreign laws.

LAW 7572. Transactional Drafting Seminar. 3 Hours.
This seminar will help students improve their writing in the context of transactional legal documents. The seminar will help students: adopt tools to achieve clear and concise writing; understand the purpose of each element of a contract and adopt the language that most clearly accomplishes that purpose; draft the operative provisions of a contract to express the agreement of the parties; and create an architecture for a contract to make individual provisions work together in a cohesive document. The seminar will address concepts applicable to a wide range of transactional legal documents, with emphasis on drafting in the context of corporate transactions, including employment issues, shareholders' rights, and mergers and acquisitions.

LAW 7573. Civil Procedure. 2-5 Hours.
This course introduces students to the procedural rules that courts in the United States use to handle non-criminal disputes. The purpose of this course is to provide a working knowledge of the Federal Rules of Civil Procedure and typical state rules, along with an introduction to federalism, statutory analysis, advocacy and methods of dispute resolution. The course also examines procedure within its historical context. May be repeated for up to 7 total credits.

LAW 7574. Property. 2-6 Hours.
This course covers personal property, estates in land, landlord-tenant relationships, mortgages, real estate financing and the doctrine of future interests. The course concludes with the study of private restrictions on land use and a detailed examination of zoning law. May be repeated for up to 6 total credits.

LAW 7575. Torts. 2-4 Hours.
This course introduces students to theories of liability and the primary doctrines limiting liability, which are studied both doctrinally and in historical and social context. The course includes a brief consideration of civil remedies for intentional harms, but mainly focuses on the problem of accidental injury to persons and property. It also provides an introductory look at alternative systems for controlling risk and allocating the cost of accidents in advanced industrial societies. May be repeated for up to 6 total credits.

LAW 7576. Criminal Justice. 2-4 Hours.
In this course, students are introduced to the fundamental principles that guide the development, interpretation and analysis of the law of crimes. They are also exposed to the statutory texts—primarily the Model Penal Code, but also state statutes. In addition, students are introduced to the rules and principles used to apportion blame and responsibility in the criminal justice system. Finally, students examine the limits and potential of law as an instrument of social control. May be repeated for up to 6 total credits.

LAW 7577. Constitutional Law. 2-4 Hours.
This course studies the techniques of constitutional interpretation and some of the principal themes of constitutional law: federalism, separation of powers, public vs. private spheres, equality theory and rights analysis. The first part of the course is about the powers of government. The second part is an in-depth analysis of the 14th Amendment. May be repeated for up to 6 total credits.

LAW 7578. Contracts. 2-5 Hours.
This course examines the legal concepts governing consensual and promissory relationships, with emphasis on the historical development and institutional implementation of contract theory, its relationship and continuing adaptation to the needs and practice of commerce, and its serviceability in a variety of non-commercial contexts. Topics covered include contract formation, the doctrine of consideration, remedies for breach of contracts, modification of contract rights resulting from such factors as fraud, mistake and unforeseen circumstances, and the modern adaptation of contract law to consumer problems. This course also introduces students to the analysis of a complex statute: the Uniform Commercial Code. May be repeated for up to 7 total credits.

As the importance of intellectual property (IP) grows, managers and lawyers need to understand IP opportunities and risks and to collaborate effectively during new product development (NPD) in order to establish valid IP assets and effective IP strategies. This course for MBA and JD students will address the legal and business challenges of integrating NPD processes with IP asset development and IP risk management, with an emphasis on establishing and exploiting IP assets for competitive advantage and clearing or minimizing the risk of IP infringement. Students will collaborate on proposals for managing the development of a next generation product to assure timely launch and strategic IP positioning, including developing plans for identifying potential IP assets and defining the team, resources, critical stages and decision points.

LAW 7580. Community Economic Development. 3 Hours.
Community economic development has been the subject of intense work and innovative approaches to poverty alleviation in the last several decades. But CED efforts have thus far lagged behind in producing sustainable forms of income generation for poor people. This seminar will examine current efforts to develop sustainable forms of income generation in Boston and nationwide. The students will then undertake the process of developing a new model for sustainable income development. In doing so, we will ask how the law can support such a model. Students will write research reports describing and critiquing current income generation programs in Boston.

LAW 7581. Rights of Noncitizens. 3 Hours.
This seminar explores the rights of noncitizens in the United States. Areas of focus will include workplace rights, language rights, child custody rights, and state and local anti-immigrant initiatives. Students will be asked to choose and research a relevant topic, incorporating both domestic and international law into their analysis. Students will present their research to other members of the seminar for discussion and feedback from other students and the instructor before submitting the final paper at the end of the quarter. Final papers can be used to satisfy the law school’s “rigorous writing” requirement. Readings will include case law, statutes, policy reports, and academic articles from a variety of disciplines.
LAW 7582. Elder Law. 3 Hours.
In this course we will look at legal and policy questions related to aging individuals. Older Americans face an increasing number of legal questions involving entitlement to public benefits, protection of property, utilization of medical resources, healthcare decision-making, and interaction with legal and financial institutions. Topics that will be covered will include Medicaid benefits, Medicare benefits, Veterans Benefits for elderly veterans and their spouses, age discrimination, nursing home institutionalization, income maintenance (social security benefits, pensions etc.), elder abuse, consumer fraud targeted at older consumers, guardianships, conservatorships, competency and capacity, alternatives to guardianships and conservatorships, end of life issues, tax issues in elder law and estate planning for elders. Ethical issues that arise when representing the elderly will also be discussed.

LAW 7588. Reproductive and Sexual Rights and Health. 3 Hours.
This course will examine how sexual and reproductive health laws impede or increase access to sexual and reproductive healthcare and shape how we understand what constitutes sexual and reproductive health. Attention will be paid to understanding legal doctrine, public health research, and critically assessing issues arising from sexual and reproductive health law. The course will draw on various tools of analysis including critical race theory, critical legal theory, human rights, and a range of public health methods. Topics covered will include, amongst others, sexual and reproductive health law as it pertains to abortion, sexuality, pregnancy, marriage, healthcare in prisons, immigrants, HIV/AIDS, and sex education.

LAW 7589. International Health Law: Governance, Development, and Human Rights. 3 Hours.
This course will address three aspects of international health law: global health governance, health in the context of development, and health and human rights. Through the use of country and topical case studies the course will explore how laws structure and interact in the context of global health. The paper for this course can count for the writing requirement.

LAW 7590. Copyright Law. 3 Hours.
This course examines the law of copyright in the United States, with some reference to international aspects. We will discuss the scope of copyright protection, the formalities of securing copyright, the nature of the rights afforded by copyright law, the fair use doctrine, and copyright enforcement. The course will place copyright in historical perspective, and consider tensions created by emerging industries. The course is open to upper level students, without prerequisite.

LAW 7592. Spanish for Lawyers. 2 Hours.
This course offers the opportunity to enhance oral and written Spanish abilities. The course focuses on communication skills in different legal contexts. The course will stress listening comprehension, speaking skills and verb conjugation practice. The first half will focus on basic conversation: personal introductions, family, and country of origin. The second half will focus on procedural legal vocabulary and how to discuss legal problems with clients. The goals are for students to be able to have conversations with clients, fill out client intake forms in Spanish, give directions to law offices and court buildings in Spanish, and discuss legal and court fees. A focus will be placed on procedural legal vocabulary in Spanish. The instructor may wish to verify basic Spanish proficiency prior to admission.

LAW 7594. Litigation in the Workplace. 2 Hours.
Ligation arising out of the regulation of the workplace constitutes an ever expanding practice area. Litigating workplace claims also involves a unique set of skills and practical and tactical considerations. After studying the fundamental concepts necessary to litigate wage and hour class and collective actions and disability claims, students will apply these concepts using original matters from previously litigated cases. Working in teams, students will prepare memoranda of law in support and opposition to various motions and will argue these motions before state and federal court judges. Drafting and preparation sessions in class will be included to help develop students’ skills and prepare them for arguments.

LAW 7597. Civil Rights and Restorative Justice Clinic. 6 Hours.
The CRRJ (Civil Rights and Restorative Justice) Clinic engages students in legal research, litigation and legislative initiatives relating to anti-civil rights violence in the United States. CRRJ clinic students assist law enforcement agencies considering criminal investigation and pursue civil litigation against government entities. One of CRRJ’s projects, Reconstructing Cases of Racial Violence, involves researching cases where criminal prosecution may not be an option. Students reconstruct legal proceedings and conduct factual investigations. The project focuses on practical legal research skills and helps students integrate the law of torts, civil procedure, federal courts, criminal law, and constitutional law. Faculty will provide individual supervision of each student.

LAW 7599. Pretrial Civil Practice and Advocacy. 2 Hours.
This course provides the foundation to manage the pretrial phase of a civil action. Each class will consist of a lecture concerning an aspect of pretrial practice, followed by student conducted pretrial advocacy. Using model civil cases, the students will engage in most types of pretrial practice, including an initial client interview and basic legal analysis to evaluate and assert potential legal claims and defenses, witness selection and preparation, deposition and written discovery practice, dispositive motions, pretrial memoranda and settlement positions.

LAW 7600. Current Issues in Health Law and Policy. 3 Hours.
This seminar will examine recent debates in health law and policy through discussion of current events, proposed legislation, and scholarly articles in the legal, medical, and public policy literatures. Weekly topics will depend in part on student interest, but will likely include federal healthcare reform, malpractice liability reform, obesity, health disparities, regulation of pharmaceutical promotion, and other issues related to healthcare access, quality, and financing. Requirements include weekly readings, weekly attendance and participation, a brief presentation of one health law-related current event, a research paper of at least 20 pages on any approved health law-related topic, and an oral presentation of the research paper. Previous health-related coursework or work experience is recommended but not required.

LAW 7601. Pathway to Practice. 2 Hours.
Completion of this course is a requirement of the J.D. degree program. Students fulfilling this requirement receive instruction in key aspects of ethical legal practice. Topics discussed will include confidentiality, the attorney-client relationship, conflicts, and responsibilities of being an officer of the court. The challenges of exercising independent judgment and making principled decisions in difficult situations will be addressed. Satisfactory completion of a law school co-op placement pursuant to law school co-op rules is required in order to complete the work for this course. The coursework includes preparatory assignments, other assessments, and a final written report reflecting on the applied learning experience.
LAW 7602. Bioproperty. 3 Hours.
This seminar will examine how the law has enabled property in living organisms, including plants, animals, and people. Drawing upon case law, property theory, and multi-disciplinary commodification scholarship, participants will explore topics such as bioprospecting, frozen human embryos, patents in genetically engineered plants and animals, and markets in human organs.

LAW 7603. International Business Transactions. 3 Hours.
This course deals with transnational commercial law. It addresses the legal framework for international sales transactions, including the commercial terms of the sales agreement, shipping contracts, insurance, financing arrangements, and customs documentation. It also examines foreign direct investment transactions, international franchise and distribution agreements, and contracts for the transfer of technology. Bribery of foreign officials and liability under US and international rules are also included. Dispute resolution will be considered briefly with emphasis on choice of law and forum, arbitration, and enforcement of arbitral awards and foreign judgments.

LAW 7606. Drug Law and Policy. 3 Hours.
The field of Drug Law is vast, spanning the discovery, manufacture, distribution, and consumption of chemical agents designed to alter the human condition. This course focuses on three domains of the broader subject: the evolution and current state of the Federal Food, Drug, and Cosmetic Act; the architecture of the drug regulation system in the U.S., including the distinct space occupied by the Food and Drug Administration, the Department of Agriculture, and the Drug Enforcement Agency; and the role of regulation and tort litigation in harmonizing drug policy with science. Designed around legal and policy case studies, this course is intended for students expecting to become involved in clinical practice involving pharmaceuticals as well those generally interested in the interplay of law and public health.

LAW 7607. Consumer Law. 3 Hours.
This course examines consumer transactions in formation, substance, and remedies. While the course will focus most on consumer credit, we will also examine consumer leasing, advertising; fraud; warranties; and product standards and safety.

LAW 7608. American Legal Thought: Traditional and Critical. 3 Hours.
This course contrasts critical-theoretic approaches to law (e.g., legal realism, critical legal studies, identity-based jurisprudence, socio-legal studies, transformative jurisprudence) with mainstream legal thinking. In part the course is an intellectual history of American law, and in part it addresses contemporary jurisprudence and legal theory. Drawing on students’ personal experience, the course also examines American legal education and the professional socialization of law students. A “big” question underlying the course is whether legal work is a medium in which one can pursue projects oriented toward political and social change. There is no prerequisite for this course, and no prior background in legal theory, history, or jurisprudence is needed. All students are expected to read the assigned texts very closely and participate in discussing them in class.

LAW 7610. Community Business Law Clinic. 6 Hours.
The clinic requires students to devote twenty hours per week to providing legal services to low-income and underserved entrepreneurs under the supervision of clinical faculty and staff. The services provided will range from entity formation to financing and include attention to intellectual and real property issues and government regulation. Preference will be given to students with relevant academic learning, including Corporations and the Community Economic Development Seminar, or relevant practical experience.

LAW 7612. Wrongful Convictions and Post-Conviction Remedies. 3 Hours.
The emergence of DNA testing has not only assisted law enforcement in solving crimes, but it has also helped to expose a problem that many observers of the criminal justice system have long suspected: that a number of actually innocent prisoners have been convicted in the United States. Given that biological evidence suitable for post-conviction DNA testing is available in only a smattering of cases, the exonerations generated by DNA represent only the tip of the innocence iceberg, so to speak. This class will explore (1) the primary factors that contribute to the phenomenon of wrongful convictions, (2) the state and federal procedures through which post-conviction claims are litigated and (3) potential reforms to protect against the conviction of the innocent.

LAW 7613. Criminal Defense Advocacy Externship. 6 Hours.
Criminal defense demands a great deal from its practitioners. These demands are born from the humbling recognition of the gravity of the responsibility involved in representing another human being whose freedoms are at risk. To develop the skill and the confidence to meet these demands is the goal of the course. Achievement of the goal necessarily requires recognition and honing of those necessary skills. The course has two components: a simulation based seminar and an externship placement for twelve hours a week. The seminar provides an opportunity to learn and practice critical lawyering skills and the placement a chance to see those skills put into practice. Students will be evaluated on effort and performance in mastery of the components of criminal defense.

LAW 7614. Law Practice Management: Access to Justice. 3 Hours.
This course challenges conventional law practice management by exploring means of filling the market gap in the provision of legal services to middle class clients. Students will investigate and document ways to use improved marketing techniques, staffing patterns, technological innovations and a variety of other tools to provide legal services to underserved portions of the market in a sustainable and economically viable fashion. Students will conduct independent research to develop a law firm business plan; exploring a practice area of particular interest to them. This course is not solely geared toward the entrepreneurial attorney, but rather will assist anyone in the development of skills to bridge-the-gap between their theoretical education and its practical application to the practice of law.

LAW 7617. Economic Perspectives on Health Policy. 4 Hours.
Uses basic economic concepts to illuminate the many factors that shape health, healthcare, and the healthcare system in the United States. Examines the role of these concepts in explaining the challenges faced in achieving three core goals of the healthcare system: increasing access, limiting cost, and improving quality. Explores how policy makers, market participants, and others can remedy access, cost, and quality deficiencies. Illustrates how economic concepts can be applied to the study of health and health behaviors.

LAW 7619. Healthcare Fraud and Abuse Law. 3 Hours.
This course provides an overview of the law relating to healthcare fraud. It will provide an overview of the healthcare fraud and abuse laws, emphasizing the role of whistleblowers, qui tam actions, criminal investigative techniques, trial issues inherent in white collar criminal prosecutions, innovative resolutions of corporate fraud including compliance programs, and sentencing. Topics will include an overview of the healthcare payment system, the frauds visited on that system, and the interplay of criminal prosecutions with the FDA regulation. This course is highly recommended for students in the JD/MPH program, LLM students specializing in health policy and law, and students interested in criminal law, but is open to others as well. Health Law is recommended but not required.
LAW 7620. Human Behavior, Legal Doctrine, and Policy Design. 3 Hours.
This course will compare accounts of human behavior, including the Utilitarian/Law and Economics view of man as a rational calculator of his self-interest, with classical and contemporary alternatives to that description, including Behavioral Economics. We will evaluate the reasons for doubting or crediting these competing accounts, and will then consider their implications for determining appropriate legal doctrines and regulatory approaches. For example, we may consider whether the views of human behavior which shape consumer protection case law and the Supreme Court’s commercial speech doctrine are justified, and whether – and in what circumstances—regulations are appropriate which seek to help people by prescribing, proscribing, or “nudging” their behavior. Students are expected to participate in class and write a research paper which may satisfy the writing requirement.

LAW 7621. Theory for the Sake of Clients. 2 Hours.
This two-credit seminar will explore the nature of legal approaches to conflict resolution and institutional design from the perspective of how legal training equips lawyers to serve client needs. Students will be introduced to core aspects of legal analysis such as rules vs. standards; law-on-the-books versus law-in-action; text versus subtext; majority rule vs. minority rights; literal vs. purposive interpretation and more. Topics will be reviewed through discussion of how non-lawyers often view problems differently and thus how lawyers must work hard to explain their work to clients. Ward Farnsworth’s book, The Legal Analyst, will serve as a class resource. Evaluation will be based on short reaction papers and a final exam.

LAW 7622. Whistleblower Law. 2 Hours.
This course provides an introduction to the legal issues related to whistleblowing, a dynamic new area in employment, corporate compliance, and anti-fraud law. It focuses on tort-like remedies and monetary rewards available to whistleblowers under the Dodd-Frank, Sarbanes-Oxley, Foreign Corrupt Practices and False Claims Acts, along with protections under tax law, the First Amendment, and common law. There will be a final exam and a short paper (approximately 2 pages in length).

LAW 7624. Advanced Legal and Interdisciplinary Research. 2 Hours.
This course teaches students how to research specialized legal topics, highlighting both legal and nonlegal sources that reflect modern practice. The course will use a combination of lectures, interactive hands-on sessions, real life examples, and an in-depth final research and writing project. Students may explore state, federal and international primary laws and regulations, as well as relevant nonlegal sources and how they interact with the law. Both print and electronic sources will be researched. The course will highlight different specialized topics such as health law, environmental law, etc.

LAW 7627. The Open Classroom: Public Debates on Public Policy. 4 Hours.
Offers special topics built around a series of public debates on selected issues of public policy. May be repeated without limit. LAW 7627 and PPUA 7225 are cross-listed.

LAW 7628. Open Classroom Recitation. 0 Hours.
Provides a small-group discussion format to cover material in the corequisite lecture course. May be repeated without limit. LAW 7628 and PPUA 7226 are cross-listed.

LAW 7629. Inside Counsel. 2 Hours.
The legal departments of corporations represent a significant practice opportunity for lawyers interested in corporate and regulatory law. These corporate departments operate on a different model than law firms and regulatory agencies and offer careers that combine legal disciplines with business management skills. This course will examine the roles of corporate counsel inside U.S.-based corporations and not-for-profits, specifically: the value proposition of corporate counsel, common responsibilities, unique ethical issues, the implications of the Sarbanes-Oxley and Dodd-Frank acts, corporate governance, risk management and litigation. Students will be graded on their responses to mid-term and final essay questions and the demonstration of their comprehension of the subject matter in the classroom. Prior study of Corporate Law is preferred but not required.

LAW 7630. Global Health. 4 Hours.
Presents an overview of global health issues and focuses on less economically developed countries. Covers measures of disease burden; demography of disease and mortality; Millennium Development Goals (under the auspices of the United Nations); infectious diseases such as HIV/AIDS, tuberculosis, and malaria and their prevention; vaccine utilization and potential implications; chronic diseases; tobacco-associated disease; nutritional challenges; behavioral modification; mother and child health; health human resources; and ethical issues in global health. LAW 7630 and PHTH 5230 are cross-listed.

LAW 7631. Building Power for Contingent Workers: Community Lawyering Strategies. 2 Hours.
Subcontracting, involuntary part-time and temporary work, and global supply chains are pervasive in low-wage industries where wages and working conditions are in a rapid decline. Workers and their advocates have responded with creative strategies and innovative organizing campaigns to improve workplace conditions and hold the beneficiaries of their labor accountable. We will use case studies to analyze the potential and limitations of various social change strategies including collective organizing, direct action, rights-education, litigation, administrative complaints, and legislative advocacy. We will address questions at the intersection of employment, immigration, civil rights, and labor law to evaluate the short and long term promise of various legal theories and strategies and to develop recommendations for individual and organizational clients.

LAW 7632. Strategies for Public Interest Environmental Litigation. 2 Hours.
Environmental laws are passed and regulations are promulgated, but too often, enforcement is lax, illegal exceptions are granted, inconsequential penalties are levied, business - and pollution - continues as usual. Using real examples, we discuss how to evaluate, litigate and prevail in environmental enforcement cases brought in the public interest. The course covers philosophical and policy-related underpinnings of citizen suit enforcement, case development and analysis, attorney-client retainers and economic considerations, ethical considerations, strategic use of experts, citizen standing pointers and pitfalls, deposition and motions practice, agency relations and threat of preclusion, trial, settlement strategies and consent decree drafting, media, and post-trial/settlement monitoring and enforcement. Students will evaluate cases from actual agency and industry documents, draft strategy memos and pleadings, depose witnesses and conduct oral arguments.
LAW 7633. IP CO-LAB Clinic. 6 Hours.
The clinic requires students to devote at least twenty hours per week to providing IP-related legal services to students, ventures and other participants in the university’s entrepreneurship and innovation ecosystem under the supervision of clinical faculty and staff. The clinic includes opportunities to address issues related to IP rights, risks and transactions for individuals and ventures in the university community, to collaborate with faculty and others on IP learning modules, policies, presentations or workshops for this community, to develop practice skills, and to participate in organization and operation of a legal services office. Intellectual Property LAW 7369 is a prerequisite. Enrollment is limited to 6; preference given to students with other relevant courses or practical experience.

LAW 7634. Energy Law and Policy. 3 Hours.
Climate change and carbon emissions are the most important issues shaping energy law and policy in the United States today. This course will provide an introduction to U.S. energy law and policy in that context and will be organized around the regulated electricity sector which alone produces about 40% of all U.S. greenhouse gas emissions. We will explore the dynamics of natural monopoly markets, public utilities and their regulation, and the interplay of state and federal power in the energy space. We examine coal, natural gas, nuclear power, hydropower, renewables, storage, and efficiency for their impacts and potential as electrical energy sources in a carbon-constrained world. We conclude by investigating the legal potential to proactively foster and sustain a transition to a carbon-sustainable energy economy.

LAW 7635. Laboratory Seminar in Applied Design and Legal Empowerment. 2 Hours.
This limited enrollment seminar explores the use of design principles in the development of new models for delivering legal information and services. Problem-solving methodologies derived from the fields of product and systems design are being successfully applied in many disciplines, including the law. These methods will be critically examined and applied by students within the context of NuLawLab community projects. Students will join multidisciplinary teams working with communities to collaboratively design responsive solutions to unmet legal needs, using the technological advances currently transforming the legal profession and our larger society. The seminar emphasizes hands-on student engagement with community clients, field observations, and teamwork in partnership with a diversity of other disciplines. Students will be assessed based on contributions to project work, including class discussions.

LAW 7636. Housing Justice: Introduction to Housing Law and Effective Advocacy for Low-Income Clients. 2 Hours.
This course will provide an introduction to housing law and justice, by examining the issues facing advocates and low-income tenants/homeowners, and by participating in hands-on fieldwork and court observation. The course will cover the following topics: eviction defense in Massachusetts; homelessness; the intersection of domestic violence and housing; fair housing and residential segregation; foreclosure defense law in Massachusetts; community lawyering and organizing for housing justice; gentrification/mass displacement; and the Civil Gideon movement. Students will be required to do the following fieldwork/court observation at least once during the quarter: observe eviction day at the Boston Housing Court (Thursday mornings); assist at the Greater Boston Legal Services eviction defense pro se clinic (Monday mornings); and attend a community organizing meeting at City Life/Vida Urbana (Tuesday evenings).

LAW 7637. Assisted Reproductive Technology and the Law. 3 Hours.
The law around Assisted Reproductive Technology (ART) is often referred to as the “wild west” of law. Recent advances in medical science and increased societal acceptance of different family structures challenge many aspects of existing law and provide opportunities for new law and regulation. Legislatures, judges, and practitioners regularly chart new paths in this evolving legal terrain. In this course we will examine the shifting legal and ethical framework surrounding ART which can include issues that touch on many legal disciplines such as Family Law, Property, Contracts, Torts, Constitutional Law, International law, Health Law, Reproductive Rights, and more.

LAW 7638. Trademark Law. 3 Hours.
This course is about the intellectual property right known as a “trademark,” a word or symbol that distinguishes source of goods or services from each other. Trademark law is part of unfair competition law, which protects against a variety of “deceptive” or “inequitable” business practices. The regulation of trademarks is considered a way to maintain a fair and efficient marketplace for businesses and consumers. This course will cover common and statutory law of trademark as well as deepening your legal analysis of intellectual property rights. The course will offer insight into how trademarks live and develop in culture so you can draw both on the black letter law and its nuances as well as on your experience as a consumer in order to advise clients.

LAW 7639. Internet Law. 3 Hours.
This course examines how courts, legislatures, and regulators have confronted the legal issues presented by technology innovation and the commercialization of the Internet. The material in the course ranges from the foundational texts of historical “cyberlaw” of the 1990s to current leading-edge internet law and policy documents around duties of information security and privacy, protection of free speech, and recourse for harms caused(?) by technology. We will discuss the legal implications of social networks, user-generated content, location-based services, cloud computing, and the Internet of Things, and various other topics that are ripped from the headlines. No pre-existing technical knowledge is required.

LAW 7640. Information Security Law. 3 Hours.
This seminar will conduct a bleeding edge discussion of the state of the legal art in information security law – what is known in DC policy circles as “cybersecurity.” While this field of law started in the 2000’s by focusing on data breach notification, today the stakes are much higher. Consumer products that rely on computer code can now kill us, and one appropriately targeted zero day exploit could potentially devastate our economy. We will discuss why data breaches continue to run rampant, what duties of data care and code safety are owed to consumers, and how various government agencies are tackling the consumer protection and national security issues implicated by vulnerable computer code. You will never look at your gadgets the same way again.

LAW 7641. Amicus Curiae Project. 3 Hours.
Today more than ever, amici curiae ("friends of the court") appear in high-stakes litigation over everything from the right to bear arms to same-sex marriage. An amicus curiae is someone who, though not a party to a lawsuit, adds their voice because they have an interest in the outcome. Amicus briefs can influence judges by providing legal or policy analysis, or factual information, not supplied by the litigants. In this course, students research and draft amicus briefs for the Massachusetts Supreme Judicial Court, with guidance from experienced appellate counsel. Exceptional research and writing skills are required. Useful prerequisites are Legal Writing Workshop, Advanced Legal Research, or Appellate Practice. Students can apply by submitting a resumé and unofficial transcript to the instructor.
LAW 7642. Law Practice Technology and the Legal Profession. 3 Hours.
Expanding use of technology is transforming the nature of the legal profession and how lawyers practice law. Using both conceptual and practical approaches, students will learn about changes in the profession, and about practice technologies, including practice management, document management, e-discovery, information security, electronic communication and social networking, information literacy, and presentation technologies. Ethical considerations related to use of technology and data management will be covered. Examples of subject-specific practice software will be included. The focus will be on practice in a small firm or organization, while understanding “Biglaw” approaches. Students’ own practice and subject interests can partially shape course coverage. There will be a final project and class presentation in place of a final exam.

LAW 7643. Creative and Innovative Economies: IP, Commercial Development, and Sustainable Business Practice. 3 Hours.
This seminar based on IP policy and law reform focuses on the binary of access and ownership in the development of IP-rich communities focused on creative and innovative practices. Students read intensely for 4–5 weeks and write response papers and discuss the material, then pick projects to develop (a particular creative or innovative community to study), while continuing our reading and discussion. The deliverable is a portfolio that includes: (1) interviews with professionals in the field, transcriptions of interviews and executive summaries (simulating client intake and fact gathering); (2) a 10–15 page memo identifying and analyzing particular IP issues the community faces and needs resolved; (3) a presentation that resembles a problem-identifying and problem-solving model of client counseling, with open issues identified for further study.

LAW 7644. Advanced Legal Research—Online Version. 2 Hours.
This two credit course which will be taught online in a long distance format through Blackboard, will focus on advanced legal research methodologies. It will include coverage of secondary sources, statutes, cases and citators, administrative law, electronic databases, practice materials, and strategies for making sure that your research is thorough. The course is designed to prepare law students for research in practice, clerkships, and legal scholarship. Students will be taught how to evaluate legal research sources and use them effectively, expanding skills in primary and secondary U.S. legal sources.

LAW 7645. Remediing Discrimination After Disasters: Advocacy, Communications, Community Lawyer. 2 Hours.
When disaster strikes, it exposes increased vulnerabilities in areas of racial segregation and fence line communities exposed to environmental injustice. Leaders may exploit the situation to push deregulation, privatization, and displacement of vulnerable communities, all of which can thwart a just and equitable recovery. In this course, you will become acquainted with a toolkit of litigation, advocacy communications, and community lawyering skills to secure rights guaranteed under the Fair Housing Act, Environment Justice rules and related civil rights laws. You will explore oversight, accountability, and advocacy techniques and gain a better understanding of providing high impact civil legal aid in the aftermath of disasters. This course will focus on case studies drawn from Hurricanes Katrina and Ike, Superstorm Sandy, and from the BP oil explosion.

LAW 7646. Disability Justice in the Age of Mass Incarceration. 2 Hours.
People with disabilities represent the largest minority population in jails and prisons. Yet, advocates rarely view the crisis of mass incarceration through a disability justice lens or approach reincarceration advocacy with an intersectional framework. This course explores the nexus between race, disability and structural inequality, focusing on people with multiple marginalized identities. Discussion centers on common and overlapping experiences with education and income inequality; police brutality; wrongful arrests and convictions; mass incarceration; and rights violations in carceral settings. Students will be exposed to strategies for advocacy in education, justice, legal and prison settings that foreground long-standing federal disability rights laws. In addition, students will engage in nonlegal experiential learning opportunities within substantive public interest issue areas, including school discipline, deaf wrongful conviction and prisoner rights.

LAW 7647. Trial Practice. 2 Hours.
An introduction to the tactical and strategic problems commonly encountered in the trial of civil and criminal cases is the main objective of this course. Attention is given to the forensic aspects of trial practice, techniques of direct and cross-examination, and opening and closing summations. Prior course work in Evidence is a prerequisite.

LAW 7648. Access to Justice by Design. 2 Hours.
One of the biggest challenges facing the legal system is how many people are trying to navigate it without a lawyer; particularly for problems like divorce, child custody, personal debt, housing, and small claims. This class proposes that a user-centered design approach, mixed with an agile development approach, can increase the amount of procedural justice for self-represented litigants in the courts. Students will be exposed to how to practice agile user-centered design by creating new interventions for courts to help people without a lawyer to understand their legal options, create a strategy, and pursue a legal process. The class will involve fieldwork at the courts; identifying key fail points and frustrations of stakeholders by observing and conducting interviews, and brainstorming and testing new solutions.

LAW 7649. Law and Social Movements. 3 Hours.
This course will cover the theory, policy, and practice underlying key legalized social movements, focusing on the last three decades. The course will cover some or all of the following movements: environmental justice; LGBT rights; disability rights; death penalty abolition; racial justice; restorative justice; the innocence movement; and “rollback” movements that seek to narrow reproductive rights, voting rights, and LGBT rights.

LAW 7650. Dynamic Lawyering for Systemic Change. 3 Hours.
This innovative project incubator seeks to prepare students for future leadership by fusing theory into practice and practice into teaching. Students will be exposed to innovative client-centered lawyering by helping selected organizations that serve underserved communities to transform challenging problems into concrete, workable legal and advocacy projects suitable for engagement between the organizations and NUSL students. Students will plan and phase short and long-term project proposals, and develop multidisciplinary project strategies for participation with diverse institutional and community stakeholders. Students can also deepen their research, writing, strategic advising and team management skills, and be taught to give and receive constructive peer, expert and client critique. Limited enrollment open to all upper level students; prerequisite for Legal Skills in Social Context program lawyering fellow eligibility.
LAW 7651. Human Rights in the United States. 3 Hours.
This seminar explores the role of international human rights frameworks and strategies in social justice lawyering in the United States. On a range of issues, lawyers are bringing human rights home. They are using human rights mechanisms of the United Nations and Inter-American Human Rights system, drawing on international human rights and comparative foreign law in litigation before U.S. courts, and engaging in other human rights-based advocacy such as documentation, organizing, and human rights education. Advocates find that a human rights approach provides important strategic leverage and highlights the interdependence of economic, social, cultural, civil, and political rights. We will use skills exercises, assignments and real-world problems to develop practical skills to address policies on local, state and national levels, and to support social movements.

LAW 7652. Strategies for Bar Success. 3 Hours.
This course eases students into bar exam preparation by focusing on contextualized substantive review of the most heavily tested topics on the bar. It overlays skill instruction on reading comprehension, issue identification, rule mastery, critical thinking, legal analysis and recognition of distractor skills. Students gain a strong conceptual understanding and in-depth knowledge of highly tested doctrines across two MBE subjects and will be taught how to develop, use and apply a flexible but strong analytical framework to solve bar exam problems. Limited to third-year law students.

LAW 7653. Law and Strategy. 3 Hours.
This course will introduce students to the interplay of law and strategy, with attention to applying legal knowledge and resources to strategic management and strategy implementation. The course will use several examples/cases of business school oriented strategy scholarship and integrate understandings of contract law, administrative law, for profit and nonprofit corporation law, ethics, and the role of lawyers as in-house and outside counsel. We will emphasize the resource based view of the firm in examining and developing approaches to incorporating understanding of law in strategic management. We will work with the concepts of legal astuteness and transformation in the integration of law and strategy.

LAW 7654. Race, Justice, and Reform. 6 Hours.
This seminar will focus on: how the criminal justice system impacts community members; how laws, policies and practices disparately impact communities of color and perpetuate structural economic inequality; and how Massachusetts and other states struggle to reform our criminal justice systems. Class sessions will examine specific topics and discuss class readings on those topics. Each student will choose one topic to investigate and explore. Students will write papers identifying and analyzing the issues germane to their topic. In addition, they will investigate and develop narratives describing the community impact of particular criminal laws and policies. Finally, they will create podcasts and op-eds to educate the public about this particular topic and what reforms are needed to address the problems illuminated by their research and narratives.

LAW 7655. Advancing Economic and Social Equity through Municipal Policy and Law. 2 Hours.
Strong-market cities fuel the American Economy. They are experiencing employment and population growth, private sector investment and new, wealthier demographics attracted to urban living. But the benefits of urban prosperity are not shared equitably across races or incomes. Federal disinvestment and state/federal roadblocks have spurred municipal innovation to address income inequality and to defend or advance inclusion for communities like immigrants and LGBT individuals. This course will examine trends in equitable city policy through case studies on civil rights, wages, worker protections, safety net funding like affordable housing and more. It will also explore legal-policy intersections like home rule, pre-emption, the limits of federal coercion and constitutional considerations. Taught by a municipal elected official, policy discussions will be grounded within real-world civic and political contexts.

LAW 7656. Legal Research and Writing 2. 3 Hours.
Building on the basic skills developed in the required Legal Research and Writing course, this course offers the opportunity to solidify and expand on the skills learned in the foundation course and develop additional advanced research and writing techniques to more fully prepare for current real world work experiences. Requires permission of instructor.

LAW 7657. Immigrant Justice Clinic. 6 Hours.
Law students, under the supervision of clinical faculty and staff, will devote 20 hours per week to providing legal services to non-citizen clients. Students are expected to interview, research, plan, investigate, write, counsel, negotiate, and advocate for their clients. Students are expected to interview, research, plan, investigate, write, counsel, negotiate, and advocate for their clients. Students are expected to interview, research, plan, investigate, write, counsel, negotiate, and advocate for their clients. Students are expected to interview, research, plan, investigate, write, counsel, negotiate, and advocate for their clients.

LAW 7658. Legal Blogging: Health Law. 2 Hours.
In this course, students will have an opportunity to develop and expand their existing research and writing skills beyond traditional legal genres. The course emphasizes how to best utilize blogs and other short form mediums to discuss legal issues related to health policy and law, including issues such as health care reform, the opioid crisis, and occupational safety. Assignments include researching and drafting several blog and short form pieces for possible publication on a blog overseen by the Center for Health Policy and Law and possibly additional sites. Weekly class meetings will feature both substantive discussions as well as writing workshops with the instructors and classmates. Strong foundational writing skills are necessary. Prior health-related coursework or work experience is recommended.

LAW 7927. Applied Learning Experience for JD/MPH. 3 Hours.
Work completed for this individualized instruction course fulfills the capstone requirement for the Master of Public Health (MPH) portion of the Dual JD/MPH Program with Tufts University. The requirement is known as the Applied Learning Experience and it earns 3 Northeastern University Law school credits. Students fulfilling this required course spend a minimum of 160 hours in a public health agency completing a project related to public health and law. It is both an academic and practice experience where students use their legal and public health knowledge and skills to undertake a discrete project in a public health agency. A final paper and presentation are required.
LAW 7929. Moot Courts and Legal Competitions. 1-4 Hours.
This individualized instruction program allows students to participate in a variety of professional competitions: moot court, mock trial, mediation, client counseling and writing competitions. Under the supervision of a faculty member, participants in these competitions devote substantial time and effort to researching, writing, and preparing for oral arguments or advocacy. In recognition of the effort required to participate in these competitions, participants are awarded up to three (3) credits for the experience, provided they satisfactorily (i) complete the required written submission, (ii) participate in a number of rounds of practice argument, and (iii) attend and participate in the competition. May be repeated up to five times for up to 6 total credits.

LAW 7930. Law Review, Legal Writing, and Scholarly Publication. 1-3 Hours.
This individualized instruction program allows students to participate in a variety of professional writing, scholarship, and publication experiences: law review, legal journals, online publications, and legal symposia and debates. Under the supervision of a faculty member, participants devote substantial time and effort to researching, writing, editing, and producing theoretical and applied legal scholarship and publications. In recognition of the effort required to participate, participants are awarded up to three (3) credits for the experience, provided they satisfactorily (i) complete required written submissions and other writing assignments, (ii) fulfill their assigned editing, publication, scholarly, and other responsibilities, and (iii) attend and participate in required events. May be repeated up to five times for up to 6 total credits.

LAW 7931. LSSC Lawyering Fellow. 3 Hours.
Lawyering Fellows in the Legal Skills in Social Context (LSSC) program assist LSSC faculty in all aspects of the first-year LSSC course. Working closely with a supervising faculty member, Lawyering Fellows provide critique and feedback on first-year students’ written and oral work, create legal research plans, identify areas for field research, liaise with representatives from the partner organizations, and help to foster strong team dynamics and development. Lawyering Fellows may also provide instruction on research skills and citation. Lawyering Fellows receive three credits for their work in the LSSC program.

LAW 7944. Co-op Work Experience—Part Time. 0 Hours.
Provides eligible students with an opportunity for part-time work experience.

LAW 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LAW 7964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

LAW 7978. Independent Study. 1-5 Hours.
Any upper level student in good standing may engage in one or more independent study projects, totaling not more than three credits during an academic quarter and six credits during the two upper level years. A student wishing to conduct an independent study must secure the approval of a faculty member who agrees to supervise the project. Many students use independent studies to continue to examine a topic begun during co-op, or to extend the syllabus of a course. Students may also design projects which are not based in either course work or co-op, but in all cases a faculty sponsor must agree to the project. May be repeated for up to 6 total credits.
LWP 6103. Theory, Adversarial Legalism, and Interbranch Perspectives on Law and Policy. 3 Hours.
Incorporates online readings, texts, faculty/student discussions on theoretical and law and policy topics, essay assignments, monthly distinguished guest faculty, and accomplished practitioners of law and policy. Combines the online format with live intensive sessions in which the students attend lectures addressing theoretical study and adaptation of functionalist, utilitarian, Kantian, feminist critical studies and economic, libertarian, pragmatism, positivism, and conservative theoretical perspectives upon law and policy phenomena. Offers students an opportunity to engage in legal, policy, historical, and institutional analysis of the branches in U.S. government; state and local government; political and legislative agenda building; enactment and implementation of legislation, including principal-agency dynamics, applied law, and policy; legal realism; and policy theory.

LWP 6108. Law, Policy, Theory: Moral and Political Perspectives on Research and Leadership Application. 3 Hours.
Incorporates online readings, texts, faculty/student discussions on theoretical and law and policy topics, essay assignments, monthly distinguished guest faculty, and accomplished practitioners of law and policy. Offers students an opportunity to apply theory to the study of political and moral thought; to compare political vs. market-driven views of policy making; to study the stages and streams of problem definition, public policy development, and the education of the democratic citizen. In the course of their studies, students have an opportunity to test the applicability of various critical approaches such as functionalism, utilitarianism, Kantian thought, feminism, libertarianism, Marxism, and neokonservativism.

LWP 6110. Theory, Law, and Policy. 3 Hours.
Incorporates online readings; texts; faculty/student discussions on theory, law, and policy; essay assignments; and monthly encounters with distinguished guest faculty who are scholars and/or accomplished practitioners of law and policy. Offers students an opportunity to engage in the study of constitutional law, to experience a briefing in a private law practice, to study and prepare scholarly presentations on leading moral and political philosophers, and to study present-day legal phenomena affecting society. Uses lectures and survey readings to cover policy scholarship. Topics include the pitfalls of economism, framing, and conflict theory.

Offers students an opportunity to apply models of microeconomic and macroeconomic analysis, graphing assignments, and statistical and SPSS assignments to the fields of law, policy, and social science research.

LWP 6112. Negotiation Skills for Law and Policy. 2 Hours.
Incorporates online readings, texts, faculty/student discussions, and simulated negotiations in formal and informal negotiation settings on applicable law and policy topics. Lectures cover negotiation theory and application in various simulations that include labor/management relations, healthcare, legislation, education, macro- and microeconomic issues, environmental regulation, energy, criminal justice, civil justice, budgets, litigation, and mediation. Offers students an opportunity to engage in the study of various theories of negotiation, bargaining, and their impact on law and policy. Includes negotiation simulations, with faculty critiques and lectures addressing the simulations.

LWP 6113. Leadership, Media, Narrative, and Communications. 3 Hours.
Incorporates online readings; texts; faculty/student discussions on theory, leadership, media and communications, narrative, problem definition, and law and policy; essay assignments; and monthly encounters with distinguished guest faculty who are scholars and/or accomplished practitioners of leadership, media, communications, narrative, problem definition, and law and policy. Offers students an opportunity to engage in the study of leadership theories, leadership simulations, media theories and narratives, problem definition, and taped simulated media events to critique and improve their communication, narrative, live television, and leadership skills in advancing law and policy in their respective domains. Uses lectures and survey readings to cover leadership, media communications, narrative, problem definition, and law and policy scholarship.

LWP 6114. Integrating Knowledge Creation Competencies. 3 Hours.
Offers doctoral scholars an opportunity to complete their integration of core knowledge creation curricula, including theory, micro- and macroeconomics, law, policy, philosophy, problem definition, negotiations, paradigms, methods, statistics, exposition, writing, and publication. Also offers these students an opportunity to engage in advanced integration of core knowledge creation skills to create unique truths and effectively express them through publications, articles, essays, grant applications and awards, opinion pieces, and in public presentations to advance law and policy knowledge creation in their respective domains.

LWP 6116. Capstone Law and Policy Doctorate. 6 Hours.
Offers candidates for the Doctorate in Law and Policy an opportunity to review their program of study and edit their doctoral thesis projects for publication as research journal articles.

LWP 6118. Historical Foundations of American Law. 2 Hours.
Explores American law and legal institutions in a historical context, instead of examining specific legal doctrines. Topics include, but are not limited to, the role of slavery, foreign affairs, territorial expansion, and immigration in building the nation; the emergence of law as a distinct profession; and the rise of the U.S. Supreme Court. Examines a series of questions concerning the relationship between law and society and the importance of history in understanding modern legal developments.

LWP 6119. Current Law and Policy Debates: Our Nation's Capital and Beyond. 2 Hours.
Explores an important law and policy issue that captures the attention of our national policy makers, think tanks, and journalists. Topics may include, but are not limited to, technology and privacy, gun control, healthcare reform, civil rights and civil liberties, K–12 and higher education, foreign policy, and others. Course includes a residency in Washington, D.C.

LWP 6120. Law and Legal Reasoning 1. 2 Hours.
Introduces the American legal system and the modes of legal reasoning used by attorneys and judges. Offers students an opportunity to obtain the skills necessary to use legal resources and legal reasoning in academic and policy work. At the conclusion of the course, students are expected to understand basic legal concepts and terminology, the organization of the federal and state court systems, and how litigation moves through the courts; to understand the different types of legal reasoning used in cases involving both common law and enacted/statutory law; and to be able to read and understand key legal documents, especially judicial opinions and litigation documents, such as complaints and briefs.
LWP 6121. Law and Legal Reasoning 2. 2 Hours.
Offers an overview of a handful of key areas of law that are particularly important for policy students, such as federalism/preemption, doctrines of justiciability, and constitutional law. At the conclusion of the course, students are expected to understand how to brief a legal case, how to analyze a legal case and apply it to new fact patterns, and how to perform legal research by finding and applying the applicable case law or statute and drafting a legal memorandum.

LWP 6122. Law and Legal Reasoning 3. 2 Hours.
Introduces law and policymaking in the current administrative state, which often involves the intersection of constitutional law and federal and state statutory law. Examines the way Congress and administrative agencies adopt binding rules of law (statutes and regulations) and the way that interpreting institutions—courts and administrative agencies—analyze and apply these laws. Also examines the reasons for modern regulation, limits of regulation, and ways it can distort policy; the structure of the modern administrative state; and incentives that influence the behavior of regulators and the regulated. Also examines the legal rules (such as standards of deference) that structure the relationship between and among Congress, administrative agencies, and courts.

LWP 6123. Law and Legal Reasoning 4. 2 Hours.
Offers a theoretical overview of foundational law and policy concepts. Topics include legal formalism and textualism, legal realism and pragmatism, critical legal studies, the living constitution, originalism, and popular constitutionalism. Offers students an opportunity to apply these theories to historic and current cases.

LWP 6200. Statistics, Methods, and Microeconomics for Law and Policy Research and Leadership Application 2. 2 Hours.
Incorporates online readings, texts, online research, online lectures, faculty/student discussions, economic analysis and graphing assignments, as well as lectures addressing the microeconomic study of first responders, failed and regulated markets, producer costs and nonprofit firms, the decision to produce, the organization of markets, the economics of welfare, etc. Offers students an opportunity to apply statistics and other methods to the study of what and how surveys measure by means of sampling techniques, variability, probability, and the normal curve. Students analyze selected samples and populations, test the difference between the means, analyze variance, and apply other, nonparametric tests of significance.

LWP 6300. Intermediate Law and Policy Doctoral Studies 1. 6 Hours.
Offers students an opportunity to attend lectures and discuss potential doctoral thesis opportunities for further development. Expects students to read and write extensively in response to presentations by core faculty and distinguished guest faculty, as well as to participate in online course work. Includes mandatory daily discussions of the topics assigned; weekly written assignments, including one to three weekly essays; and research assignments in law and policy, economics, the use of applied statistical methods, the use of applied social theory, and the development and presentation of a legal and/or policy issue in the public domain as the subject of an analytical, methodologically sound, data-driven, and conclusive doctoral thesis.

Offers an overview of the structure of the political branches of government, the various types and forms of public policy, and the dimensions of conflict in the creation and modification of public policy. Topics include problem definition, pluralism (i.e., group theory) vs. elitism, policy heuristics, and street-level bureaucracy.

LWP 6402. Law and Policy Concepts 2: Strategizing for Public Policy. 2 Hours.
Offers an overview of policy making theory. Topics include agenda setting, historical institutionalism, and interbranch perspectives of law and policy.

LWP 6403. Law and Policy Concepts 3: Policy Case Studies. 2 Hours.
Reviews how modern policy scholarship is applied to public policy challenges. Topics may include, but are not limited to, healthcare, criminal justice, environmental policy, labor policy, economic development, housing, or social welfare.

LWP 6404. Evaluation Research. 2 Hours.
Introduces commonly used policy evaluation methods and tools. Offers students an opportunity to become familiar with the concepts, techniques, and practices of evaluation research; to learn how to read evaluation research critically; and to develop an appropriate evaluation plan for an ongoing program. Topics include outcome and impact evaluation, as well as cost-benefit analysis.

Offers a continuation of the course sequence in scholastic and practitioner curriculum in foundational law and policy concepts, case studies, and applications. Focuses on critical interpretation, with application to environmental and private business law and policy. Continues law and policy readings and explores broad questions such as the impact of environmental and private business law and policy on individuals; communities; and local, state, and national governments. Continues with specific environmental and private business law and policy case studies.

LWP 6410. Economics for Policy Analysis. 2 Hours.
Offers an overview of the use of various economic theories in policy analysis and the tools of public finance. Topics may include the theory of public choice; market failure; economic concepts of public and private goods; externalities; and theories of social welfare, political economy, behavioral economics, sources of revenue and expenditure, tax structures, and other contemporary efforts to incentivize private investment to support social goals. Offers students an opportunity to understand these theories and concepts and apply them to a range of public policy and legal issues.

LWP 6411. Economics for Policy Analysis 2. 2 Hours.
Continues the economic-for-policy-analysis course sequence. Focuses on understanding the essential ideas of micro- and macroeconomics, and the related disciplines of law and economics, and applying them to a wide range of domestic and international public policy and legal issues at the international, national, state, and local levels. Reviews economic scholarship and concepts, such as the Coase Theorem, public goods, Pareto optimality, equity, and efficiency as applied in formal and informal civil, criminal, and a wide range of legal and policy contexts.

LWP 6412. Economics for Policy Analysis 3. 2 Hours.
Offers a continuation of the “Economics for Policy Analysis” course sequence. Reviews application of law and economic theories, concepts, and analysis to legal, domestic, and international public policy. Focuses on leading scholarship in modern economics and its role in effective and efficient legal and policy formation.
LWP 6413. Law, Economics, and Beyond 2. 2 Hours.
Offers a continuation of the course sequence in economics for policy analysis. Builds upon the application of economics to the analysis of law and policy to center on the trade-off between equity and efficiency and the maximization of social welfare. Effective policy formation and program development can be identified and advanced with an understanding of the leading scholarship in modern economics; this course seeks to provide such understanding.

LWP 6420. Quantitative Methods. 2 Hours.
Introduces the manipulation and description of data, survey techniques, and secondary data analysis. Topics include the variety of techniques to calculate descriptive statistics and techniques to evaluate the relationship between variables, including crosstabs.

LWP 6421. Quantitative Methods 2. 2 Hours.
Offers, as a continuation from descriptive methods, a course covering the process of making statistical inferences and testing hypotheses. From a foundation of probability and probability distributions, topics include sampling distributions, estimation, and testing differences using t-tests, analysis of variance, and chi-square. Analytic assignments involve SPSS, emphasizing parametric and nonparametric tests of hypotheses about differences between and among groups.

LWP 6422. Quantitative Methods 3. 2 Hours.
Offers a continuation of inferential methods, covering techniques for analyzing the associations among variables. Includes correlation, partial correlation, and multiple and logistic regression. Analytic assignments involve SPSS, emphasizing regression approaches to prediction.

LWP 6423. Qualitative Methods. 2 Hours.
Introduces qualitative data collection techniques, including in-depth group interviews, archival research, and observation. Offers students an opportunity to apply these techniques through assignments and perform qualitative data analysis.

LWP 6424. Research Methods. 2 Hours.
Introduces research design; logic of inquiry; data collection; evaluation of evidence; and qualitative, quantitative, and mixed-methods approaches for law and policy research and analysis. Reviews research ethics and Institutional Review Board processes and policies.

LWP 6425. Methods and Theory as Applied to Doctoral Research. 2 Hours.
Offers the fifth part of an exploration of research design and quantitative, qualitative, and mixed-methods tools for law and policy social science research and policy analysis. Offers students an opportunity to become familiar with the issues involved in theory, research questions, and collection and analysis of data using qualitative techniques. Emphasizes those methods that are most appropriate for addressing policy questions. Discusses issues of research design, sampling strategies, constructing interview guides, and data coding and analysis as applied to doctoral projects. Includes a practical how-to component allowing students an opportunity to apply the content to their doctoral projects.

LWP 6430. Social Science Theories and Analytic Tools. 2 Hours.
Addresses the theories and analytic tools of socio-legal thought as part of the exploration of research design, using quantitative and qualitative tools for law and policy social science research and policy analysis. Examines the issues involved in a number of theoretical approaches to social science phenomena as well as the various analytic tools to evaluate law and policy phenomena. Along with readings and structured exercises, students research distinct schools of thought, such as libertarianism, communitarianism, Marxism, conflict theory, classical liberalism, modern conservatism, and economics, as well as scholars who have shaped these schools of thought; students also have an opportunity to make individual presentations of their research.

LWP 6431. Political and Moral Ethics and Dilemmas. 2 Hours.
Offers a political and moral examination of the responsibilities of public policy makers in government by asking two questions: (1) What should governments do, considering principles that guide good, just, legitimate public policy? (2) What should political actors do, considering the many and often competing obligations that guide political actors in contesting what is good, just, and legitimate public policy? Assignments focus on applications of theoretical concepts from scholarly readings in philosophy and political theory to practical issues of public policy. Students are expected to research distinct political and moral scholars, make presentations of their research, and complete a term paper addressing these ideas and scholars as applied to their doctoral project.

LWP 6435. Leadership, Negotiations, and Communication. 2 Hours.
Introduces the theory and practice of leadership within organizations. Case studies examine the national, state, and local challenges of healthcare reform and disaster response.

LWP 6450. Public Policy Theory and Practice 1. 2,4 Hours.
Offers a practical and theoretical overview to crafting effective strategies for advancing public policy changes at the federal, state, and local level using a range of legislation, litigation, and other policy tools. After developing the technical aspects of a public policy proposal, those working for policy change face an array of strategic and tactical decisions about how to intervene in the complicated system of actors and institutions that establishes and implements public policies. Examines a wide range of policy topics to understand and evaluate how different policy strategies evolve in the interplay between branches and levels of government.

LWP 6451. Public Policy Theory and Practice 2. 2,4 Hours.
Focuses on crafting effective strategies for advancing public policy changes at the federal, state, and local level using a range of legislation, litigation, and other policy tools. Guest experts lecture and lead class discussions. Students are expected to analyze policy change options and to evaluate which strategies are most likely to produce desired changes. Selected students are asked to moderate class debates. Offers students an opportunity to develop a theory-based and pragmatic framework for developing effective strategies for achieving desired policy change across a broad spectrum of issues and at all levels of government. Students are asked to also examine ideas and proposals raised in their doctoral theses.

LWP 6452. Public Policy Theory and Practice 3. 2,4 Hours.
Focuses on crafting effective strategies for advancing public policy changes at the federal, state, and local level using a range of legislation, litigation, and other policy tools. Potential topics include, but are not limited to, health policy, rights policy, criminal justice, education policy, immigration policy, and housing policy. Guest experts lecture and initiate class discussions. Students are expected to analyze policy change options and propose strategies to produce desired policy changes. Selected students are asked to lead and moderate class debates. Offers students an opportunity to develop a theory-based and pragmatic framework for developing effective strategies for achieving desired policy change across a broad spectrum of issues and at all levels of government.

LWP 6500. Doctoral Research Design 1. 2 Hours.
Offers students an opportunity to begin to develop their thesis project, to review and understand different approaches to policy research design, and to learn basic literature search/bibliographic review techniques. By the end of the course, students are expected to have written a literature review in their topic of interest and to produce a general project purpose statement that will guide the design of their thesis project.
LWP 6501. Doctoral Research Design 2. 2 Hours.
Offers students an opportunity to continue to develop their thesis project and to review and understand the range of choices in policy research design. Reviews various methods of data collection. Students explore how to connect their project purpose to appropriate data collection methods, emphasizing qualitative methods and survey design. At the end of this course, students are expected to have written a thesis project proposal to submit to their thesis committee for approval.

LWP 6502. Doctoral Research Design 3. 2 Hours.
Offers students an opportunity to continue to develop their thesis project and to review and understand the range of choices for the analysis and interpretation of data. Students are expected to finalize their data collection tools and also begin data collection during this course. At the end of this course, students are expected to have written the final description of the research design and method as well as the analytic protocol for their project.

LWP 6503. Doctoral Research Design 4. 2,6 Hours.
Offers students an opportunity to finalize and move toward the completion of their thesis project. Also offers students an opportunity to explore the conclusions that are possible from the results of their data collection and analysis and, as part of this, to finalize their analytic protocols. Students are expected to understand how to write a thesis. At the end of this course, students should have written an outline for their thesis and a final description of design and methods of their thesis project, as well as present their research projects and preliminary findings.

LWP 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

LWP 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LWP 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

LWP 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

LWP 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

LWP 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

LWP 6983. Topics. 1-4 Hours.
Covers special topics in law and policy. May be repeated without limit.

LWP 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

LWP 7961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

LWP 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.

LWP 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

LWP 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

LWP 7980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

LWP 7983. Topics. 1-4 Hours.
Covers special topics in law and policy. May be repeated without limit.

LWP 7990. Doctoral Thesis. 1-4 Hours.
Offers thesis supervision by faculty members teaching the program.

LWP 7994. Thesis Continuation—Part Time. 0 Hours.
Offers continued thesis supervision by members of the program. May be repeated up to three times.

LWP 7995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

LWP 7996. Thesis Continuation. 0 Hours.
Offers continuing thesis supervision by members of the department.

LWP 8964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience.

LWP 8966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

LWP 8982. Readings. 1-4 Hours.
Offers selected readings under the supervision of a faculty member.

LWP 8994. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

LWP 8996. Research. 0 Hours.
Offers students an opportunity to conduct research under faculty supervision.

LWP 9996. Dissertation Continuation. 0 Hours.
Offers continued dissertation supervision by members of the department.

LPSC 1101. Introduction to Law. 4 Hours.
Examines the role of law and society from a regulatory, constitutional, and judicial perspective, noting the role each of these has played in shaping the current legal framework in the United States. Introduces students to the relationship between law, societal organizations (both nongovernmental organizations and not-for-profit organizations), the private sector, and the separate branches of government (the judiciary, congressional, and executive branches). Provides students with the opportunity to learn to legally analyze judicial opinions, prepare legal memoranda, and present an oral argument before a “judge.”.

LPSC 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
LPSC 2301. Introduction to Law, Policy, and Society. 4 Hours.
Examines the relationship of society to its laws: how society creates changes in law or policy via societal pressure and social movements (such as the environmental, women’s rights, and corporate accountability movements); how law and policy affect individual rights and behavior; whether a society needs laws in order to function; the relationship between some branches of our government in effectuating social change; and some of the fundamental differences between societies governed by seemingly similar but pragmatically different laws, such as the right to a jury trial. Requires a GPA of 3.00 or better.

Explores the implications of globalization on international human rights law. Analyzes numerous sources of international law, such as the universal declaration of human rights and the international covenant on economic, social, and cultural rights. Examines free trade and its impact on civil, political, economic, social, and cultural rights. Also explores the international mechanisms to resolve disputes and the impact of globalization on the rights of particular groups (e.g., women, children, and indigenous peoples).

LPSC 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LPSC 3303. Topics in Law and Public Policy. 4 Hours.
Covers special topics in law, policy, and society to fulfill students’ interests. May be repeated without limit.

LPSC 3305. Law and the City. 4 Hours.
Considers questions such as the following: Can cities regulate private gun ownership, such as the Mayors Against Gun initiative, within the confines of the Second Amendment? When do green city initiatives, such as wetlands and water table preservation programs, regulate private property to an extent that regulation becomes constitutional “takings”? How can cities employ zoning regulation to further urban planning and economic growth? U.S. cities are the source of many legal controversies that are on the cutting edge of modern jurisprudence, covering a wide range of subject areas. Analyzes key legal opinions and social research to examine how law is developing at the urban level.

LPSC 3306. Law and Literature. 4 Hours.
Examines the role of literature in our understanding of the law and the legal system. Explores a variety of themes and delves into many of the policy questions currently facing society, such as the connection between literary writing and the legal system, the role of the lawyer, whether lawyers are heroes or villains, if we can really trust juries to find the truth, how to determine proper punishment for crimes, the role of government surveillance on society’s behavior, when the level of government control becomes too much, how society reacts to unjust laws, and what happens when law and justice are in conflict. Using literature, students have an opportunity to analyze current policy problems and assess potential solutions.

LPSC 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LPSC 4304. Advanced Debates in Law and Public Policy. 4 Hours.
Explores the evolving roles of the courts, the legislative process, and social movements through case studies of current controversies in law and policy. Topics may include sentencing disparities in drug crimes, the changing laws of Internet use, funding of stem cell research, and safety on university campuses. Each case study includes a class debate or interactive simulation. Specific topics vary each semester.

LPSC 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LPSC 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

LPSC 5201. Law and the City. 3 Hours.
Examines key legal structures, court decisions, and social research to consider the ability of cities to make and implement public policies that directly affect the everyday lives of millions of people. American cities and their residents are frequently faced with similar legal and political questions. Topics include federalism, land-use planning and development, business regulation, gun control, school choice, public health, and climate adaptation initiatives.

LPSC 6313. Economic Analysis for Law, Policy, and Planning. 3 Hours.
Designed to familiarize master’s degree students with the essential ideas and methods of microeconomics and their application to a wide range of domestic public policy issues at the national, state, and local level. Emphasizes the role of program and management incentives in influencing behavior and policy outcomes. Focuses on understanding the ideas of microeconomic theory and applying them to a range of alternative public policy issues. Offers students an opportunity to develop a clear understanding of essential economic ideas and how the economic perspective can be applied to a wide range of public policy issues. Restricted to master’s degree students only.

LPSC 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LPSC 7000. Qualifying Exam. 0 Hours.
Provides eligible students with an opportunity to take the master’s qualifying exam.

LPSC 7215. Advanced Quantitative Techniques. 3 Hours.
Covers multivariate statistical models and their applications to social science data. The ordinary least squares (OLS) regression model and the assumptions underlying it are covered in detail, as are techniques for analyzing data when OLS assumptions do not apply, such as simultaneous equation models, time series models, and maximum likelihood techniques for limited and discrete dependent variables. This is an advanced course in quantitative techniques for graduate students in the social sciences.

LPSC 7305. Research and Statistical Methods. 3 Hours.
Examines the methods and assumptions of research conducted in policy and legal studies. Explores how to identify researchable questions; how to formulate a set of hypotheses; and how to design, develop, and carry out research projects, including a study of quantitative and qualitative techniques for analyzing data. Focuses written assignments on critiques of published articles in reference journals addressing comparative strengths and weaknesses inherent in any research approach.

LPSC 7308. Law and Legal Reasoning. 3 Hours.
Designed to provide students with an introduction to American jurisprudence and the fundamentals of legal reasoning. Provides the basic skills necessary to use the law library to support LPS research and written work with legal resources.

LPSC 7309. Topics. 3 Hours.
Examines selected topics in law, policy, and society. May be repeated without limit.
LPSC 7310. Research Design and Analysis. 3 Hours.
Continues LPSC 7305. Includes readings of original research and on the philosophy of social science. Emphasizes the problem of indeterminacy of social behavior, the ambiguous role of the law, and the conflict between the goals and assumptions of the research and the practical, public use of it. Includes practical exercises in writing dissertation proposals and outlines.

LPSC 7311. Strategizing Public Policy. 3 Hours.
Provides a practical overview to crafting effective strategies for advancing public policy changes at the federal, state, and local level using a range of legislative, litigation, and other policy tools. Uses a series of case studies on a wide range of policy topics to understand and evaluate how different policy strategies evolve in the interplay between branches and levels of government. Takes an interbranch perspective on how policy is made and places particular emphasis on the role litigation and the courts play in policy making, an aspect of public policy formulation that is often downplayed or overlooked.

LPSC 7312. Cities, Sustainability, and Climate Change. 3 Hours.
Provides an overview of the various aspects of urban sustainability planning. Examines sustainability as an urban planning approach with both ecological and social justice goals. Covers sustainable planning and offers students an opportunity to understand it within the context of smart growth and the new urbanism. Focuses on the two areas in which cities can reduce energy consumption and greenhouse gas emissions—the built environment and transportation. From there, the course examines planning efforts to reduce demand on water and sewer systems and to create employment in renewable energy and other "clean-tech" occupations. The course ends by placing urban initiatives in the context of state and national policy.

LPSC 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LPSC 7976. Directed Study. 1-4 Hours.
Offers a supervised reading and research activity with faculty supervision approved by a committee of the Law, Policy, and Society faculty. May be repeated without limit.

LPSC 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

LPSC 7990. Thesis. 1-4 Hours.
Offers thesis supervision by members of the department. May be repeated without limit.

LPSC 7996. Thesis Continuation. 0 Hours.
Offers continued thesis supervision by individual members of the department.

LPSC 8400. Planning Module in Urban Law and Policy. 1 Hour.
 Relates a professional activity to urban and regional planning. May be repeated without limit.

LPSC 8960. Exam Preparation—Doctoral. 0 Hours.
Offers the student the opportunity to prepare for the PhD qualifying exam under faculty supervision.

LPSC 8966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

LPSC 8982. Readings. 1-4 Hours.
Offers selected readings under the supervision of a faculty member. May be repeated without limit.

LPSC 8984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

LPSC 8986. Research. 0 Hours.
Indicates successful completion of the doctoral comprehensive exam.

LPSC 9000. PhD Candidacy Achieved. 0 Hours.
Indicates successful completion of the doctoral comprehensive exam.

LPSC 9984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

LPSC 9986. Research. 0 Hours.
Indicates successful completion of the doctoral comprehensive exam.

LPSC 9990. Dissertation. 0 Hours.
Offers dissertation supervision by members of the department. May be repeated once.

LPSC 9996. Dissertation Continuation. 0 Hours.
Offers continued dissertation supervision by members of the department. May be repeated without limit.

Leadership Studies - CPS (LDR)

LDR 0500. Taking Action: Getting Elected. 2.4 Hours.
Designed to give students an understanding of the complexities and issues related to a political campaign. Offers students an opportunity to learn issues and strategies from prominent leaders and politicians, including the ins and outs of running for office and what it means to hold a political office.

LDR 0501. Leadership for a Change. 2 Hours.
Provides students an opportunity to practice exercising leadership in public life, serving communities, and being committed to the idea of community. We are charged with serving and representing the citizenry while simultaneously effecting change. In this challenging and empowering workshop, students have the opportunity to get back in touch with their visions and senses of purpose; to examine the differences between authority, power, and leadership and between technical and adaptive challenges; and to develop a personal and powerful understanding of the roadblocks that prevent people from realizing their commitments and visions.

LDR 1200. Assessing Your Leadership Capacity. 3 Hours.
Introduces the methodologies and processes that are essential aspects of leadership: conceptualizing motivation, identifying traits, creating a vision, understanding influence, overcoming obstacles, developing character, and establishing a professional brand. Offers students an opportunity to focus on self-awareness, reflection, individual effectiveness, and self-assessment to learn how to recognize and utilize the differences between themselves and others. Students receive ongoing feedback from their peers and a chance to develop their own philosophy of leadership. The successful student should be able to answer the question, "What does it take to be a 21st-century leader?".

LDR 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LDR 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
LDR 3200. Leading and Managing Change. 3 Hours.
Offers students an opportunity to develop the knowledge base necessary to lead and manage organizational change in all sectors with an emphasis on a 360-degree approach to understanding the many facets of change. Uses case studies that address various aspects of implementing change, such as: addressing the human psychology of change through innovative technology, social media, theoretical frameworks, understanding change agents, and operations. Encourages students to develop their views from both a management and nonmanagement perspective. The successful student should be able to gain knowledge and practical skills in how to connect change with strategy, anticipate resistance, assess readiness, and measure sustainability.

LDR 3250. Leading Teams Locally and Virtually. 3 Hours.
Covers the skills needed to manage teams in one office, in multisite locations, internationally or virtually. Topics include effective communication strategies, how to structure teams within an intergenerational environment, and how to leverage individual strengths to lead high-performance teams. Offers students an opportunity to identify barriers, study strategic methods for overcoming obstacles, leverage technology to build virtual spaces for people and ideas, and work to develop a strategy to optimize team effectiveness through a shared process and peer coaching by participating on a cohort team. The successful student should be able to understand their role as a catalyst, visionary, and leader in the formation and success of any team.

LDR 3400. Evidence-Based Leadership and Decision Making. 3 Hours.
Examines the components of evidence-based leadership that have been tested in various settings, shown to be effective, operational, and able to be used in solving real-world dilemmas. Emphasizes using decision-making models to analyze behaviors, align organizational goals, determine consequences, and make recommendations for actions leaders can make to solve problems. Studies the relationship(s) between scientific data, academic theory, technological advances, and changes in society toward the goal of understanding ethical problems. The successful student should be able to demonstrate increased information literacy, identify strategies for decision making, and know where to seek evidence needed in order to make high-quality decisions on a wide range of issues.

LDR 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LDR 4850. Strategic Decision Making (Capstone). 3 Hours.
Offers students an opportunity to examine and test leadership theory in practice. Students demonstrate their leadership knowledge gained during their undergraduate studies by completing an experiential action-oriented project. Under faculty guidance and approval, each student must present a body of work that addresses a critical leadership topic that will enhance their professional development as a 21st-century leader. Experiences can be undertaken within any industry sector or at the workplace with supervisor approval. Past projects have included research studies, case studies, new products, leadership development plans, publications, journals, magazines, media/films, training programs, etc. Requires students to deliver a presentation on their project and share a culmination of learned outcomes.

LDR 4896. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student's approved experiential activity and integrates it with study in the academic major.

LDR 4950. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

LDR 4955. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

LDR 4983. Topics. 1-4 Hours.
Covers special topics in leadership studies. May be repeated without limit.

LDR 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LDR 4991. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

LDR 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

LDR 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

LDR 4994. Internship. 1-4 Hours.
Provides students with an opportunity for internship work.

LDR 4995. Practicum. 1-4 Hours.
Integrates theory and practice through a structured consulting experience working with organizations or conducting an applications-oriented research study. Introduces the problem-solving consulting model. From problem identification through recommendations, offers student teams an opportunity to work with decision makers to solve organizational leadership issues or conduct practical research studies.

LDR 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

LDR 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

LDR 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

LDR 6100. Developing Your Leadership Capability. 3 Hours.
Seeks to provide the foundation for the master's degree program. Starts with the premise that everyone is capable of leadership by exposing students to a series of alternative perspectives of leadership, including some contemporary collaborative models. From careful consideration of these perspectives, as well as from applying them using action learning methods, students have an opportunity to build a personal model of leadership that they can put to immediate use in their workplace.

LDR 6110. Leading Teams. 3 Hours.
Offers students an opportunity to lead teams through all stages of team development, learn and overcome team challenges, and determine the principles of building high-performing teams while nurturing the cohesion and bonding of team members. The team is the unit of an organization where most leaders begin to develop influence skills. Leading teams involves managing different personalities, cultures, and varying skill levels, while simultaneously securing resources and managing expectations of stakeholders. In this course, students also have an opportunity to learn effective techniques for working with virtual teams, managing conflict in teams, and facilitating team problem solving.
LDR 6115. Leadership Communication. 3 Hours.
Offers students an opportunity to evaluate and utilize numerous communications options to develop an authentic, powerful, leadership voice using interpersonal, technology-mediated, and intercultural communications competencies and techniques; to develop a personal model for leadership communication; and to define an action plan for their growth in powerful leadership communications. In today's dynamic, global work environment, leaders need to be able to communicate effectively with people located in the same geographical location or located anywhere across the globe.

LDR 6120. Organizational Leadership. 3 Hours.
Offers students an opportunity to learn the best practices for onboarding, developing, and coaching leaders, as well as creating organizational systems that ensure the company has strong leadership talent for current and future success. The acquisition and development of a company's current and future leaders is one of the most vital activities for healthy organizational identity, strong organizational performance, and ensuring long-term growth. Searching for, anticipating, and securing a pipeline of leadership talent, often referred to as developing "bench strength," requires a proactive organizational environment that ensures the right processes are in place to support leadership development and succession planning.

LDR 6130. Dynamics of Change at the Community and Social Level. 3 Hours.
Offers students an opportunity to learn to assess the needs and interests of multiple stakeholders simultaneously; examine national and international trends, issues, and political shifts; and consider ways to bring the public interest and common good into organizational decision-making processes. Given the interplay among government, business, and society, leaders may be called upon to effect change at a community or social level. Understanding the dynamics of change at this level requires understanding the needs of the multiple stakeholders involved.

LDR 6135. Ethical Leadership. 3 Hours.
Considers leadership dilemmas that can arise when individual values conflict with those of the organization or when a situation requires decisions with conflict value sets. Offers students an opportunity to use case studies, their own experiences, and current events to examine actions leaders have taken and consequences faced when confronted with ethical dilemmas. Students work on a real-life ethical dilemma for understanding in-depth reasoning of the problem and to develop an action plan for solving and preventing similar problems at the organizational and societal levels. From these discussions, students have an opportunity to develop a personal model for ethical leadership.

LDR 6140. Strategic Leadership. 3 Hours.
Offers students an opportunity to build strategic thinking competencies through case analyses of relevant businesses, nonprofits, and state organizations, as well as through strategic analysis of their own career path. Students work in a consultative role with partner organizations to develop strategic action plans, to perform critical analyses of external and internal environments for a real organization, and to develop recommendations for the organization's strategic positioning and actions. From these discussions and personal development exercises, students have an opportunity to develop an action plan for personal growth as a strategic leader.

LDR 6145. Global Leadership. 3 Hours.
Explores changing demographics as they impact organizations of today and in the future and examines best-in-class organizations' motivations to more fully appreciate the backgrounds, cultures, experiences, viewpoints, styles, and contributions of all workforce members. Offers students an opportunity to reflect on leadership from key ethical, legal, policy, business, political, and societal frameworks. In a global economy, leaders of best-in-class organizations understand that creating an inclusive work environment is essential for continued competitive advantage. The world's exploding diversity coupled with technological advancements demand effective collaboration among employees from countries with different cultures, beliefs, and backgrounds.

LDR 6150. Transforming Organizations. 3 Hours.
Offers students an opportunity to learn the framework for organizational transformation and obtain the skills and competencies required to develop and implement a holistic model of change. The strategies incorporate revealing the problems that ask to be solved, designing what the future change will look like, assessing the current situation in relation to the desired change, and planning and managing the transition from the current situation to the desired future. Within this course, students serve as consultants for real-life organizations, helping managers in their endeavors for organizational transformation. From these discussions, students have an opportunity to develop a personal model for change leadership and define an action plan for personal growth as a change agent.

LDR 6320. Event Planning. 3 Hours.
Provides an overview of strategies for special-event planning, including the management, planning, budgeting, costing, and marketing of an event. Examines corporate sponsorship opportunities to finance special events.

LDR 6323. Event Management. 3 Hours.
Examines strategies and techniques required to run successful events. Offers students an opportunity to learn how to manage logistics; the who, what, where, when, and how of running the event; how to develop checklists and manage processes to keep things running smoothly; and how to have contingency plans. Covers the basic details involved in running events—size, budget, venue, hospitality, marketing, publicity management—and working with vendors, community organizations, spectators, and celebrities.

LDR 6360. Dynamics of Change at the Community and Social Level. 3 Hours.
Offers students an opportunity to learn to assess the needs and interests of multiple stakeholders simultaneously; examine national and international trends, issues, and political shifts; and consider ways to bring the public interest and common good into organizational decision-making processes. Given the interplay among government, business, and society, leaders may be called upon to effect change at a community or social level. Understanding the dynamics of change at this level requires understanding the needs of the multiple stakeholders involved.

LDR 6400. Sports Management. 3 Hours.
Provides an overview of management and administration pertaining to all levels of athletics. Focuses on basic theories of management and administration in athletic organizations. Addresses planning, scheduling, and financing aspects required to run a successful athletics program. Offers students an opportunity to learn to develop communication and management skills with an emphasis placed on decision making.
LDR 6405. Sport in Society. 3 Hours.
Examines the role sports plays in society. Emphasizes improving society through sports by creating and developing community service, drug awareness, and violence prevention programs. Discusses sports within sociological, economic, and political backgrounds. Topics include ethics, organizational code of conduct, and ethical behavior within competitive athletic settings.

LDR 6410. Leadership and Organization in Sport. 3 Hours.
Introduces a set of personal, interpersonal, and team-based skills and competencies required for leadership roles in sport organizations. These skills include self-awareness, managing stress, creative problem solving, communicating effectively, gaining power and influencing others, correcting performance and motivation problems, managing conflict, and delegation. Also explores the application of these skills in various contexts within the sports industry.

LDR 6425. Employment Issues in Athletics. 3 Hours.
Examines organizational practices in the management of human resources. Emphasizes staff planning, recruitment, selection, training, compensation, and contemporary problems of athletic personnel. Discusses immigration laws and work visas.

LDR 6427. Gender and Diversity in Sport. 3 Hours.
Examines gender and diversity in sport. Emphasizes creating equal opportunity for participants and administrative and leadership personnel. Explores affirmative action, human resources, and recruiting tactics and strategies.

LDR 6430. Sports Law. 3 Hours.
Addresses the legal aspects of sports, recreation, and leisure services, with a focus on tort and contractual liability. Covers legal concepts of negligence and principles of risk management, legal issues related to equipment use, facility management, and accommodation for special populations. Offers sports managers an opportunity to obtain the fundamental legal knowledge necessary to operate in the increasingly complex sports environment.

LDR 6435. Fiscal Practices in Sports. 3 Hours.
Examines the financial and regulatory issues confronting sports, fitness, and recreation industry managers. Covers accounting principles, financial statements, and related concepts that help determine the viability and strength of financial decision making.

LDR 6440. Sports Marketing and Promotions. 3 Hours.
Studies marketing and promotion strategies utilized in various aspects of the sports industry. Examines marketing sports as a product and marketing of nonsports products using sports as a promotional tool.

LDR 6441. Sports Media Relations. 3 Hours.
Studies the basic knowledge and understanding of media relations in sports. Emphasizes building and managing an effective media relations program on the intercollegiate and professional level. Examines news releases, hometown features, contest management, press conferences, statistics, and publications.

LDR 6442. Athletic Fund-Raising. 3 Hours.
Examines the fundamental tools and strategies necessary to raise funds within college athletics. Emphasizes annual fund-raising through solicitations via the mail, telephone, and interpersonal meetings and major gift and capital campaign solicitations and presentations. Discusses the role of the annual fund within the scope of an athletics department.

LDR 6443. Ticket Sales and Strategies. 3 Hours.
Provides an overview of ticket sales as a revenue source in athletics. Examines sales strategies for single-game, season ticket, and group sales; ticket office operations; and building a database for ticket sales.

LDR 6444. Licensing and Merchandising. 3 Hours.
Examines the licensing and merchandising aspects in sports. Emphasizes controlling logo rights through licensing companies. Examines purchasing, inventory, and sales of merchandise.

LDR 6445. Corporate Sponsorships. 3 Hours.
Offers students an opportunity to develop a complete understanding of how sports properties can create effective commercial partnerships with corporations through the creation and execution of sponsorship agreements and how to prepare and critically evaluate the strategic implications of sponsorship proposals.

LDR 6446. New Media and International Sport. 3 Hours.
Addresses the media, culture, and sport displays presented by mega-events such as the Olympic Games. Presents, discusses, questions, and debates the notion of the sports festival that these mega-events provide, filtering it through the conceptual lenses that media, technology, and culture provide. Also explores a range of sporting events following the narratives and imageries that accompany them, paying particular attention to marketing and communication strategies, including policies directed at media and athletes. To achieve this, the course uses a series of case studies and practical assignments designed to help participants identify, analyze, and evaluate new media tools, coordinated online and offline strategies, cross-cultural communications, and sporting ideologies.

LDR 6450. Athletic Contracts. 3 Hours.
Studies the formation, interpretation, negotiation, and tax implications of sports industry contracts. Emphasizes team-player agreements, agent contracts, sports marketing contracts, collective bargaining agreements, facility leases, and related agreements. Focuses on the ethical rules governing lawyers in their interactions in the sports industry. Emphasizes athletic contract development and negotiation. Examines contracts as they relate to sports regarding personnel, corporate sponsors, facility leases, and scholarships.

LDR 6455. NCAA Compliance. 3 Hours.
Provides a thorough study of the governing structure, rules, and legislative process within the NCAA. Examines compliance issues within a collegiate athletic department, including drug testing, self-reporting, and student-athlete eligibility.

LDR 6460. Risk Management in Athletics. 3 Hours.
Offers students an opportunity to develop the tools to conduct a thorough risk assessment for their organization and events by identifying potential risks, estimating their frequency and severity, determining how to control them, and developing safety policies and processes for staff and event participants. Emphasizes how to conduct a safety review and risk assessment and how to run an event that complies with health, safety, and security regulations.

LDR 6465. Title IX. 3 Hours.
Examines Title IX laws governing gender equity. Emphasizes managing an athletic department within the guidelines set forth by Title IX. Examines the original Title IX legislation, subsequent regulations issued by the Office of Civil Rights, and relevant court decisions.
LDR 6470. Bystander Strategies for the Prevention of Gender-Based Violence. 3 Hours.
Offers participants an opportunity to learn about the theoretical and practice models used to understand and respond to gender-based violence. Emphasizes bystander models of prevention. This interactive course is designed for students who are interested in research and practice directed at youth. Explores topics such as battery, gender roles, teen dating violence, sexual harassment, sexual assault/rape, and homophobia as facets of men's violence against women. Emphasizes train skill development for higher education, secondary education, public health, and social professionals. Offers participants an opportunity to learn how to effectively convene and facilitate public discourse about gender-based violence utilizing mentors in violence prevention curriculum with high school and college populations and to apply these concepts in service-learning opportunities.

LDR 6505. Developing Internal and External Leadership Capacity. 7 Hours.
Offers participants an opportunity to build a personal model of leadership that they can put to immediate use in their workplace. Begins with the premise that everyone is capable of leadership. Exposes course participants to a series of alternative perspectives of leadership, including some contemporary collaborative models. Considers these perspectives as well as applies them using action learning methods. Offers participants an opportunity to gain an understanding of best practices in talent development (commonly referred to as “bench strength”), succession planning and management, and leadership development. Seeks to provide the foundation for the capstone project and for the master's degree program.

LDR 6510. Leading the Organization. 7 Hours.
Examines principles of building highly effective teams by analyzing the variety of interrelated practices underlying group dynamics. Combines learning through classic case situations and contemporaneous experiences in a team-based simulation. Leadership is not a solo activity but only happens through others. Emergent leaders commonly begin with leading in the team sphere. Covers managing different personalities, cultures, conflicting political agendas, and varying skill levels while simultaneously securing resources and managing expectations of senior executives or other stakeholders internal or external to the organization. Examines ethical leadership, change theory, and models and conceptual frameworks that facilitate effective organizational integrity and change.

LDR 6515. Strategic Leadership. 6 Hours.
Uses case analyses of relevant businesses and institutions to offer students an opportunity to build strategic thinking skills. Based on these analyses, students develop recommendations for their own organizations’ success and actions they can take to influence strategic change. Effective leaders look within and beyond their organizations to determine the right direction for action. Leadership capability extends beyond operational excellence; it requires an appreciation of the external environment and its impact on the organization. A common gap in leadership competence of today's administrators and managers is the ability to consider the role of the organization within its wider technologic, competitive, and economic environment.

LDR 6572. Master's Project. 7 Hours.
Offers students a culminating opportunity to synthesize and integrate leadership knowledge gained in the master's degree program. Examines the project evaluation and assessment techniques commonly used by the project manager. Analyzes both quantitative and qualitative approaches of evaluation and stakeholder analysis and techniques for reporting performance results. Combines applying leadership theory through a high-impact, real-world project. Offers participants an opportunity to design and complete an action-based research project that includes a project proposal, project plan, final report, and presentation under the guidance of a faculty member.

LDR 6595. Licensing and Merchandising. 3 Hours.
See LDR 6444.

LDR 6600. Licensing and Merchandising. 3 Hours.
See LDR 6444.

LDR 6615. Academic Advising for Student-Athletes. 3 Hours.
Offers an overview of the foundations of academic advising and life-skill training as an essential component of student-athlete success and retention programs on higher education campuses. Topics include definitions and concepts for developmental advising; literature and research on the key concepts of academic advising; exploration of the various models and delivery systems for academic advising; skills for effective advising; advising diverse populations; and training, development, evaluation, assessment, and reward systems for advisers and advising programs.

LDR 6961. Internship. 1-4 Hours.
Offers students an opportunity, while under the supervision of a sports professional and utilizing relationships with local college, professional, and amateur organizations, to work on a term basis in specific sports-related assignments. Students share their experiences through a discussion board forum as well as deliver a final paper and develop a Web portfolio. The Web portfolio highlights the student’s skills, knowledge, development, quality of writing, and critical thinking by showcasing a comprehensive collection of work samples and artifacts from the student’s experiences in the sports leadership program. May be repeated without limit.

LDR 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LDR 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

LDR 6966. Practicum. 1-4 Hours.
Offers students an opportunity to integrate theory and practice in a real-world setting. Through this experience, students are given the opportunity to demonstrate their competence in the area of leadership knowledge and skill. With the advice of faculty, students define an appropriate project and environment in which to conduct their action research.

LDR 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.
LDR 6980. Capstone. 1-4 Hours.
Offers students an opportunity to complete their academic experience with an in-depth, sports leadership internship. Students share their experiences through a discussion board forum as well as deliver a final paper and develop a Web portfolio. The Web portfolio highlights the student's skills, knowledge, development, quality of writing, and critical thinking by showcasing a comprehensive collection of work samples and artifacts from the student's experiences in the sports leadership program. By selecting an assignment of academic and professional interest, students are offered an opportunity to deepen their knowledge of a particular area of sports leadership through the senior project option. Intended for students already employed in the sports field.

LDR 6983. Topics. 1-4 Hours.
Covers special topics in leadership studies. May be repeated without limit.

LDR 6995. Project. 1-6 Hours.
Focuses on an in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

LDR 7961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

LDR 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.

LDR 7976. Directed Study. 1-4 Hours.
Offers students an opportunity to carry out an individual reading and research project under the supervision of a faculty member. The directed study format allows for the in-depth analysis of a particular topic not covered in-depth or the study of a subject not typically covered in the curriculum. A directed study proposal must be approved by the faculty sponsor, division head, and senior associate dean for academic affairs.

LDR 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

LDR 7980. Capstone. 3 Hours.
Offers students an opportunity to increase their impact and effectiveness as a leader. Students develop an initiative for a real-life project that can be work-, community-, or university-based or, for a consulting case project, students develop a case study and case analysis. The case is a short description of a situation facing an organization and must be based on field research, depict real-life events, and describe a situation that requires a decision. The case analysis outlines the key issues in the case, identifies alternative scenarios for solutions, and provides the conceptual justification for the student's recommendation using relevant reference material from College of Professional Studies graduate courses. The capstone project is an action-based leadership project.

LDR 7983. Topics. 1-4 Hours.
Covers special topics in leadership studies. May be repeated without limit.

LDR 7990. Thesis. 1-4 Hours.
Offers thesis supervision by members of the department.

LDR 7994. Thesis Continuation—PT. 0 Hours.
Offers continuing thesis supervision by members of the department.

LDR 7995. Project. 1-4 Hours.
Focuses on an in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

LDR 7996. Thesis Continuation. 0 Hours.
Offers continuing thesis supervision by members of the department.

Legal Studies (LS)

LS 6101. Introduction to Legal Studies 1: Law and Legal Reasoning. 3 Hours.
This course will provide students with an introduction to the American legal system and legal reasoning. The course materials will cover rights and obligations created by contracts, fundamental principles of property law, accident law, the regulation of criminal conduct, and the laws associated with business formation and relationships. Students will also complete writing exercises to enable them to synthesize their understanding, and to find and use legal sources in support of their work.

LS 6102. Introduction to Legal Studies 2. 3 Hours.
This course builds on LS 6101 with its emphasis on common law by introducing students to statutes and regulations. The setting involves federal administrative agencies governing employment, consumer protection, environment, labor, cyberlaw, intellectual property, and international trade. Exercises and discussions require finding, summarizing, applying and arguing about the applicability of statutes and regulations in concrete situations. The capstone of the course allows students to create a project to illustrate the lessons learned in the course.

LS 6110. Law of Information and Records. 3 Hours.
This course will present a comprehensive survey of procedural and evidentiary rules in the context of recordkeeping, document production, due diligence, and investigations. It will include an exploration of rights to privacy, issues of confidentiality and conflicts of interest, contractual and legal liability, evidentiary consequences in administrative and court settings resulting from work-place disputes, and other related areas.

LS 6120. Law and Strategy. 3 Hours.
This course will introduce students to the implications and impact of law on strategy, with attention to applying legal knowledge and resources to strategic planning and strategy implementation. The course will use several examples of readily understood strategies to provide opportunities for students to identify the legal environment, consider the legal rights and requirements implicated by relevant law or regulation (e.g., intellectual property, contracts, administrative law) and their potential impact on management, incorporating law as a resource on the resource based view of the firm. The range of examples will include considering law and strategy implementation in multiple contexts. The focus will be on developing an appreciation of the legal environment and making effective use of legal resources and lawyers as advisors in strategic management aimed at attaining sustainable competitive advantage over rivals.

LS 6130. Negotiation and Advocacy. 3 Hours.
Students will learn core elements of negotiations that are the precursors to any final agreement or resolutions of informal disputes: negotiation planning from opposing sides and counseling, analysis of the bargaining range and opponent’s needs, principled concession patterns, problem-solving strategies to avoid deadlock, information bargaining and authority clarification, principles of drafting, settlement, and ethics.

LS 6140. Regulation and Compliance. 3 Hours.
Institutions increasingly face a host of regulatory compliance issues. This course (building on LS 6102) will cover the challenges facing organizations in building programs that ensure adherence with legal obligations. Statutes covering a broad range of areas will be explored, including health and safety, environment, financial services, consumer protection, and employment.
LS 6150. Law and Organizational Management. 3 Hours.
Students will learn the rules governing organizations, including corporations, partnerships, governmental organizations, and nonprofits. The focus will include relationships within the organizations and powers of members of organizations. In addition, the course will cover employment issues relevant to relationships in organizations. Topics will include rights of workers to be free of discrimination in the workplace, the importance of workplace rules, and policies governing the workplace.

LS 6160. Regulation and Global Business Strategies. 3 Hours.
This course provides an introduction to the international legal concepts, principles and institutions that define and shape international business relations. Globalization has increased the number of economic interactions across national borders. The globalization of production and consumption takes place in the background of an international monetary system and an international legal infrastructure facilitating and regulating transnational trade, international finance and global intellectual property and investment protection. The course specifically examines case studies of global governance based on codes of practice, certification and other regulatory initiatives.

LS 6170. Financial Transactions. 3 Hours.
In this course students will explore various aspects of corporate financial transactions, including vendor and supplier contracts, early stage financing, commercial loans, initial public offerings, mergers, and the sale of assets. Issues involving valuation of assets will be covered, and students will learn basic securities laws related to the transactions covered.

LS 6180. Health Law Survey. 3 Hours.
This course examines legal regulations governing the provision of healthcare services. Topics include access to health insurance and healthcare, healthcare financing, the organization and responsibility of healthcare institutions (especially hospitals), healthcare cost containment policies, public and private insurance programs, and the formulation of health policy. The course will also provide an introductory overview of the major statutes, regulations, and case law related to health law, including an introduction to the Patient Protection and Affordable Care Act, otherwise known as Obamacare.

LS 6181. Healthcare Regulation and Compliance. 3 Hours.
This course covers major regulatory issues related to the healthcare field, providing an in-depth regulatory overview of health programs. Statutory schemes covered will include HIPAA/HITECH, Stark/fraud and abuse. In addition, students will learn about compliance programs, including compliance operations, and the code of conduct for particular fields.

LS 6182. Patient Records, Privacy, and Security. 3 Hours.
This course explores the ethical and legal obligations respecting patient records, particularly electronic records. In addition to reviewing HIPAA's privacy and security rules, the course will cover professional ethics regarding confidentiality, common law and state protections for confidentiality, GINA, and the HiTech Act.

LS 6210. Special Topics in Employee Rights and Employer Obligations. 3 Hours.
Examines the legal relationship between employer and employee. Addresses issues and topics such as discrimination, affirmative action, the Americans with Disabilities Act, sexual harassment, health and safety, AIDS in the workplace, compliance issues, and legal issues related to downsizing and terminations. Today’s HR manager works in a highly complex environment with constantly changing laws and legislation that govern employee rights and employer obligations. Course content may vary from term to term.

LS 6211. Antidiscrimination Law. 3 Hours.
This course will provide an overview of antidiscrimination laws governing the workplace. The focus will be on discrimination based on race and sex, but some attention will also be given to discrimination based on other characteristics, including age, sexual orientation, and disability. In addition to general issues of discrimination, the course will focus on the specific topics of retaliation, harassment, and bullying in the workplace.

LS 6212. Wages and Benefits. 3 Hours.
This course will cover topics related to wage and hour laws (federal and state), ERISA (pensions), health insurance benefits, the Affordable Care Act, and disability insurance.

LS 6230. Intellectual Property Survey. 3 Hours.
In our modern day “information economy,” the law of intellectual property (IP) has taken on enormous importance to both creators and users of creative works. Such IP Law is the way we provide legal protection to encourage invention and creativity by guaranteeing an opportunity for financial return to the originator of novel work. This course introduces students to the classic principles of copyright, patent, trademark, and trade secret law and explores the ways in which those principles are shifting and adapting in response to new technology.

LS 6231. Identifying and Securing Intellectual Property Rights. 3 Hours.
This course will focus on intellectual property issues in employment, collaborative environments, and business transactions. It will cover common issues for founders and startups, employers, and contractors—including non-compete agreements, crowd-sourcing, and open innovation practices.

LS 6232. Intellectual Property and Media. 3 Hours.
This course will cover copyrights, trademarks, and unfair competition, with a focus on media, advertising, user-generated content, and other online activities.

LS 6300. Experiential Network. 0 Hours.
This course offers the opportunity to apply what students have learned in the MLS program to a relevant project in the practice setting. Working with an outside sponsor, backed up by law school faculty, a student selects and refines an applied research topic, analyzes that topic, presents useful recommendations to the project sponsor, and creates a plan to implement those recommendations. Alongside this fieldwork, students will participate in an online course that provides a platform to develop, refine and practice key business communication skills, project and client management techniques, and analytic approaches. Each student receives feedback from both the project sponsor and course faculty, reviews “lessons learned,” and employs that feedback to advance his or her career development goals and professional plans.

LST 4850. Capstone Project in Liberal Studies. 3 Hours.
Offers students an opportunity to complete an independent capstone research project, with faculty supervision and guidance, that addresses a research question in line with the student’s curriculum plan.

LST 4950. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

LST 4955. Project. 1-4 Hours.
Focuses on an in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

LST 4983. Topics. 1-4 Hours.
Covers special topics in liberal studies. May be repeated without limit.
LING 1000. Linguistics at Northeastern. 1 Hour.
Introduces first-year linguistics majors to the discipline, the department, and the University as a whole; offers students an opportunity to familiarize themselves with the skills needed for success as a university student.

LING 1150. Introduction to Language and Linguistics. 4 Hours.
Introduces students to their tacit linguistic knowledge of word structure (morphology), sentence structure (syntax), meaning (semantics), and speech sounds (phonetics and phonology). This structural knowledge is the basis for exploring the social dimensions of language: geographic dialects (e.g., Boston speech), Black English (Ebonics), men’s and women’s language, as well as biological questions of nature vs. nurture, language acquisition, and animal communication.

LING 1449. English Now and Then. 4 Hours.
Introduces the linguistic study of the English language from current and historical perspectives. Topics include the Latin and Greek etymology of English words; the linguistics of modern English dialects; English as a global language; and the origins of English as a Germanic language, closely related to German and Dutch.

LING 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LING 2350. Linguistic Analysis. 4 Hours.
Offers a workshop that focuses on the three core areas in the study of language: syntax, morphology, and phonology. Examines the regularities that lie inside each language user’s mind, with a slant toward “doing” linguistics: playing with data, analyzing it, and ultimately explaining it.

LING 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LING 3402. African-American English. 4 Hours.
Addresses topics in the study of African-American English or Ebonics. Investigates the hypotheses about the origins of African-American English as well as arguments about the relation of the dialect to English and other languages. Considers issues regarding the use of the dialect in schools.

LING 3412. Language and Culture. 4 Hours.
Explores the complex, often inexplicit relationship between language and culture, using a variety of methods drawn from the fields of anthropological linguistics and sociolinguistics. Questions may include: How do language and thought interact? How is language used to create and maintain social institutions and individual personae? How is language used differently by and across gender, ethnicity, and social class?

LING 3422. Phonetics and Phonology. 4 Hours.
Surveys phonetics and phonology from both descriptive and theoretical perspectives. Phonetic topics include types of consonant and vowel articulations found crosslinguistically, aerodynamics of speech production, and the phonetics of supersegments. Basic approaches to phonology include underlying and surface representations, phonological rules, derivational vs. constraint-based explanation, and the interplay between phonetics and phonology in syllables and prosody. Offers students an opportunity to acquire practical skills in broad and narrow phonetic transcription, as well as phonological analysis. Students who do not meet course prerequisites may seek permission of instructor.

LING 3424. Morphology. 4 Hours.
Introduces morphology, the study of the structure, distributional behavior, and use of words. Covers descriptive methods of analysis, hierarchical word structure, morphological processes and rules, productivity, morphological change, and the interaction of morphology with phonology and syntax. Introduces major contemporary theories, including split morphology and single-component architecture.

LING 3428. African Languages. 4 Hours.
Seeks to prepare students for serious theoretical and practical study of the West African language and literature known as Kwa, the largest language subgroup in the Niger-Congo family. Students explore the classification of African languages, the application of basic linguistics, and the history of these languages in Africa and the Western hemisphere, all leading to an introduction to spoken Yoruba and Igbo.

LING 3430. Applied Linguistics. 4 Hours.
Explores the solution of language-based real-world problems. Solutions to these problems depend on information not only from linguistics but also from a variety of other disciplines such as anthropology, sociology, education and area studies (including literature), and public administration. Studies the relationship of linguistics to applied linguistics; second language acquisition; second and foreign language teaching; language policy and planning; and the linguistic aspects of multiculturalism.

LING 3432. Romance Linguistics. 4 Hours.
Provides a general linguistic introduction to one of the most important language families. Discusses the structural characteristics of several Romance languages. Includes defining a language family, how and why languages change, and the relationship of standard and nonstandard linguistic varieties. Studies contemporary theoretical issues in Romance linguistics including object-pronoun placement, word order, creolization, and subject-pronoun use. Conducted in English. Requires a reading knowledge of one Romance language or permission of instructor.

LING 3434. Bilingualism. 4 Hours.
Focuses on the fact that half of the world’s population is bilingual, that is, uses two or more languages on a regular basis. Also explores the fact that bilingualism remains a poorly understood phenomenon surrounded by a number of myths: those that hold that bilinguals are found in bilingual countries and are equally fluent in both languages; that bilingual children suffer from cognitive impoverishment; and that bilingual education hinders the assimilation of minority groups. Reviews all aspects of bilingualism (in the world, in society, in the child, and in the adult). Discusses topics such as biculturalism and language change.
LING 3436. Structure of Spanish. 4 Hours.
Considers the Spanish language from a linguistic point of view, focusing on elements of Spanish phonology (sound system), morphology (word structure), and syntax (sentence structure). Topics include how Spanish compares with other Romance languages, as well as with non-Romance languages like English.

LING 3438. Structure of French. 4 Hours.
Considers the French language from a linguistic point of view, focusing on elements of French phonology (sound system), morphology (word structure), and syntax (sentence structure). Topics include how French compares with other Romance languages, as well as with non-Romance languages like English.

LING 3442. Sociolinguistics. 4 Hours.
Focuses on why people choose to say things in different ways in different situations. Examines language behavior in its social context and outlines the linguistic constructs that allow conversation to occur, the types of variation that can occur in registers and dialects, and the possible reasons for choosing different linguistic varieties. Also explores linguistic variation in relation to social context, gender, socioeconomic class, race, and ethnicity.

LING 3444. Linguistics in Education. 4 Hours.
Explores the role that language plays in education. Topics include the role of language acquisition in psychological development and the implications for formal education; literacy (what does it mean to be literate, how is literacy acquired, and the role that literacy plays in education); the role that language and discourse patterns play in the classroom, in student learning, and in testing; and multilingualism in the classroom.

LING 3448. Issues in Linguistics. 4 Hours.
Examines an issue in linguistics in which there are theoretical debates in one of a range of areas, including syntax, semantics, morphology, prescriptive/descriptive grammar, Ebonics, and others. May be repeated without limit.

LING 3450. Syntax. 4 Hours.
Introduces syntax, the theory of sentence structure. Explores how to do syntactic analysis using linguistic evidence and argumentation. Focuses primarily on English, with some discussion on the syntax of other languages. Other topics include syntactic universals and the relation between syntax and semantics. Students who do not meet course prerequisites may seek permission of instructor.

LING 3452. Semantics. 4 Hours.
Focuses on meaning and how it is expressed in language—through words, sentence structure, intonation, stress patterns, and speech acts. Considers how content, logic, and speakers’ and listeners’ assumptions affect what sentences can mean and how linguistic meaning is determined by one’s perceptual system or culture. Requires completion of the mathematical/analytical thinking level-1 requirement of the NU Core.

LING 3454. History of English. 4 Hours.
Surveys the linguistic and social history of the English language from its Indo-European beginnings to the present. Examines the changes that have occurred in the sound system, word and sentence structures, vocabulary, semantics, and spelling from a formal linguistic perspective. Considers issues in language change—the influence of foreign invasion and migration, differences in dialect, and the emergence of English as a “world” language.

LING 3456. Language and Gender. 4 Hours.
Investigates the relationship between language and gender. Topics include how men and women talk; the significant differences and similarities in how they talk, why men and women talk in these ways, and social biases in the structure of language itself.

LING 3458. Topics in Linguistics. 4 Hours.
Focuses on one of a range of topics from the perspective of current linguistics, such as American dialectics, contemporary syntactic theory, language and law, women’s and men’s language, words and word structures, or issues in linguistics and literature. May be repeated without limit.

LING 3460. Historical Linguistics. 4 Hours.
Introduces diachronic linguistics, the study of language change over time. Surveys common changes in the areas of sound systems, word and sentence structure, and semantic meaning. Introduces methodologies to access earlier stages of language, including the comparative method and internal reconstruction. Other topics include linguistic borrowing, analogical change, linguistic paleontology, and areal diffusion.

LING 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LING 4654. Seminar in Linguistics. 4 Hours.
Explores a topic in current linguistics research. Requires prior completion of either two 3000-level LING courses or one 3000-level LING course and permission of instructor. May be repeated without limit.

LING 4891. Research Seminar in Linguistics. 4 Hours.
Offers individualized research experience on a chosen topic under the direction of a faculty member. Also includes group meetings of students and the faculty member to study relevant research methods, to discuss relevant research literature, and to present research progress and results. Research content and requisites depend on the instructor, and prior arrangements should be made with the faculty member well in advance of registration. May be repeated up to eight times.

LING 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

LING 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

LING 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LING 4991. Directed Study Research. 4 Hours.
Offers individualized research experience on a chosen topic under the direction of a faculty member. Research content and requisites depend on the instructor, and prior arrangements should be made with the faculty member well in advance of registration.

LING 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

LING 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.
LING 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major. Fulfills the college’s experiential education requirement. May be repeated without limit.

Management (MGMT)

MGMT 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGMT 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGMT 3302. Negotiating in Business. 4 Hours.
Focuses on the nature of conflict, conflict resolution, and the structure and process of negotiations, negotiation ethics, as well as skills to deal with “difficult” negotiators. Negotiation is a lifelong skill that we use every day, not just a tactic to get a higher salary or a better deal. No matter what direction one’s professional life takes, negotiation is an essential part of one’s job and one’s life. To be effective, one must be a skillful negotiator. While some of us are naturally gifted negotiators, most of us are not; the concepts and techniques of skillful negotiations can be learned and practiced in the classroom. Offers students numerous opportunities to develop and practice negotiating skills.

MGMT 3330. Developing Leaders for Global Sustainability. 4 Hours.
Offers students an opportunity to learn how to effectively research and communicate about global environmental sustainability in both their companies and their communities. Emphasizes how to be an effective lay consumer of scientific knowledge. Students work with the latest science on such global issues as climate change and energy depletion. Analyzes how key stakeholders—businesses, governments, and communities—interact on current issues in global sustainability.

MGMT 3330. Managing Leadership Organizations: Critical Challenges and New Approaches. 4 Hours.
Designed for students interested in careers with significant healthcare managerial responsibilities. Presents the critical challenges and core issues facing managers in hospitals; insurance and managed-care organizations; pharmaceutical, biotechnology, medical device, and software companies; long-term care organizations; healthcare research and consulting organizations; and the government. Covers the newest clinical care and financial models, the pivotal role of healthcare information technology, and the impact of federal and state laws and legislative initiatives on the operations and strategies of industry players.

MGMT 3335. Managing a Diverse Workforce. 4 Hours.
Examines issues related to managing oneself and others in an increasingly diverse workforce. Organizations need to address diversity issues in some manner if they are to compete effectively in a global economy. Covers diversity-related issues with management implications including religion, social identity, socialization, employment decisions by applicants and organizations, team dynamics, leadership, sexual harassment, workplace romance, career development, work and family, accommodation of people with disabilities, and organizational strategies for promoting equal opportunity and a multicultural approach toward diversity. Offers students an opportunity to conduct self-assessments to monitor their own workforce needs as they relate to issues of diversity, careers, and work-life integration.

MGMT 3360. Law and the Legal Process. 4 Hours.
Introduces U.S. laws and legal system, with a focus on the legal rights of individuals and business organizations and the legal obligations they each owe to others. Considers the role of the legal system in making and enforcing laws and resolving disputes. Uses exercises, team projects, and presentations to offer students an opportunity to identify and gain understanding of the particular legal environment for different activities and situations. Explores the impact of the legal environment on the internet; employment; innovation; and relationships with sellers, customers, and competitors. Includes consideration of contract, intellectual property, negligence, incorporation, and criminal and agency laws.

MGMT 3370. Leading and Managing Change. 4 Hours.
Focuses on developing the skills needed for implementing change. Leading and managing change is not a straightforward process. Identifying what we need to change and recommending, planning, managing, enacting, and evaluating personal and organizational changes are challenges that we face every day. Analyzes the forces that drive individuals and organizations to identify and promote what to change, examines impediments to change, and enacts individual and organizational changes. Also seeks to develop an understanding of why, what, and how to implement change and to provide practical skills for managing and leading change.

MGMT 3420. Managing Human Capital. 4 Hours.
Offers an overview of the human resources management (HRM) function, including recruiting and hiring new employees, overseeing compensation and benefits, improving employee relations, and ensuring compliance with labor laws. Focuses on what a (non-HRM) manager needs to know about HRM and also seeks to provide a foundation for the HRM professional.

MGMT 3435. Social Networks and Organizations. 4 Hours.
Examines three different perspectives on “social networks”: interpersonal networks within organizations—their formation, their content and structure, and how those factors affect the performance of individuals and the organization; interorganizational networks (such as alliances or board interlocks)—factors that affect their formation and their impact on organizations and industries; and social network and social media—their use by organizations and how such use affects an organization’s mission, identity, and employees. Organizations increasingly comprise a shifting web of interactions among people that defy traditional hierarchies and structures. Understanding how these social networks form and operate can be critical not only to a manager’s day-to-day effectiveness but for long-term career success as well.

MGMT 3510. Managing Global Teams Virtually and Locally. 4 Hours.
Studies how understanding culture, cross-cultural differences and similarities, as well as the characteristics of the global work context, are necessary for becoming successful leaders in global organizations. The main objectives of this course are to sensitize professionals and managers to similarities and differences in cultural values, management practices, and behaviors; to facilitate their adaptation to the global, multicultural work context; and to develop awareness to one’s own culture and how it is perceived by others. Offers students an opportunity to learn how to successfully manage multicultural and virtual teams.

MGMT 3530. Project Management. 4 Hours.
Discusses why good project management skills are essential to a wide variety of business careers. Covers why many important business projects fail due to poor planning, poor time management, going over budget, and/or ineffective communication. Includes a balance of strategic, technical, and behavioral issues in project management.
MGMT 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGMT 4310. The Management Practices of Great Organizations. 4 Hours.
Focuses on a wide range of management practices, many of which are “radical” and represent organizations that “dare to be different.” The course uses many teaching approaches, including case studies, class exercises, and “competitions” that require students—and seek to increase their ability—to debate, present, think on their feet, and ask tough questions. Some organizations seem “to work”; they provide high-quality products and services, they treat their employees with respect, they behave ethically, they are strong financially, and the like. The key question of this course is “How do they do it; i.e., why do they work so well?” Students study and debate the criteria for a great organization in order to answer this question.

MGMT 4410. Human Resources and Workforce Analytics. 4 Hours.
Introduces evidenced-based workforce management, including identifying the strategic work that is truly necessary to execute firm strategy, investing in differentiated management systems that support that work, and designing and implementing targeted measurement systems (HR function and workforce scorecards) designed to hold line managers accountable for strategic talent. Emphasizes helping students move from a focus on levels associated with a particular workforce attribute to understanding the impact of the workforce on business-level outcomes (e.g., how does product manager quality affect new product cycle time?). In addition to those interested in HR, the course could be highly relevant for students specializing in corporate finance, marketing, and international business.

MGMT 4501. Skills for Managerial Success. 4 Hours.
Builds on co-op experiences to focus on skills critical to effective management in all fields. Using experiential exercises, self-assessment, feedback, and coaching, offers students an opportunity to develop in such areas as leading teams; being effective team members; giving feedback; and improving written and oral persuasion, motivational, and problem-solving skills.

MGMT 4603. Leadership Seminar. 4 Hours.
Explores the hallmarks of effective leadership in a wide variety of organizational settings, including not only the top echelon of leaders but also those lower in the hierarchy, who by developing an appropriate skill set can accrue personal power and influence those who outrank them. Designed to help students assess their own leadership style, thereby increasing the likelihood of career success.

MGMT 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

MGMT 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

MGMT 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGMT 4993. Independent Study. 1-4 Hours.
Allows students who have received approval to undertake independent study in lieu of any course required in the various concentrations. Students present proposals to an Independent Studies Committee for evaluation and approval. Every proposal requires a detailed outline of the objectives and plan of study and must be accompanied by a supporting statement from the supervising faculty member under whose direction the study takes place. A copy of the final report prepared by the student is presented to the appropriate Independent Studies Committee. Further information about the Independent Studies Program can be obtained from concentration coordinators. May be repeated without limit.

MGMT 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

MGMT 5978. Independent Study. 1-4 Hours.
Allows students who have received approval to undertake independent study in lieu of any course required in the various concentrations. Students present proposals to an Independent Studies Committee for evaluation and approval. Every proposal requires a detailed outline of the objectives and plan of study and must be accompanied by a supporting statement from the supervising faculty member under whose direction the study takes place. A copy of the final report prepared by the student is presented to the appropriate Independent Studies Committee. Further information about the Independent Studies Program can be obtained from concentration coordinators. May be repeated without limit.

MGMT 6207. Global Innovation Management. 1.5 Hour.
Examines the actions that managers must take to stimulate innovation and direct it in ways that allow the organization to accomplish its goals. Introduces such topics as what organization forms are most conducive to innovation, what factors hinder innovativeness and how can they be overcome, and what role managers play in bringing about innovation. Discusses elements of an organization’s infrastructure that contribute to innovativeness such as design, reward mechanisms, communication patterns, boundary spanning, control systems, leadership at all levels, and the organization’s culture.

MGMT 6209. Global New Product Development. 1.5 Hour.
Provides an overview of the best-practice model of the new product/service development process. Focuses on the stages of the development process and the critical role of the customer and market research in creating, designing, and developing a successful new product.

MGMT 6210. Law for Managers and Entrepreneurs. 3 Hours.
Covers the legal environment in which businesses operate and its impact on businesses and their transactions. Exposes students to a variety of legal concepts and topics, such as corporations and other legal entities; contract law, mergers and acquisitions, e-commerce, and other types of business transactions; intellectual property; compliance with securities, consumer products, and other regulations; debtor-creditor relations, employment, and agency law; torts and strict liability; and the international legal environment. Addresses the complementary application of legal, financial, business, and ethical analysis to business management and decision making. Offers students an opportunity to sharpen their analytical and critical thinking skills, to develop a manager’s understanding of laws and the legal system, and to use those skills and understanding to create opportunities for adding value and managing risk.
MGMT 6211. Business Law and Professional Ethics. 3 Hours.
Examines the critical aspects of business essential in understanding the business and legal environment. Examines contract law and areas of the law that relate directly to the accountancy profession. Develops knowledge of the Uniform Commercial Code as it relates to the law of sales, commercial paper, and secured transactions. Also explores the importance of ethics in the business and accounting environment, and considers potential ethical dilemmas.

MGMT 6212. Managerial Communication. 3 Hours.
Focuses on business communication strategies including written communication, business and professional speaking, and skills required to be successful in variety of business and professional contexts. Topics include audience and situation analysis, the writing process, informal and formal speaking, and presentations. In-class exercises, simulations, and individual and group work help participants develop and practice communication skills. Restricted to accounting students only.

MGMT 6213. Managing Ethics in the Workplace and Marketplace. 2 Hours.
Seeks to stimulate creative individual and group thinking and learning for working professionals while offering practical guidance for improved decision making in both common and novel ethical business situations. Recent and historical executive and managerial criminal conduct and ethical lapses have destroyed careers and shareholder value in addition to severely eroding employee and public trust. Uses a series of case studies, readings, and field study experiences to actively engage students in a timely, relevant, and challenging fashion.

MGMT 6214. Negotiations. 2, 3 Hours.
Designed to improve students' understanding of the negotiations process and their ability to plan and conduct negotiations effectively. Includes such class activities as readings, lectures, and discussions as well as case discussions and role-playing negotiation exercises.

MGMT 6215. Strategic Security Management. 3 Hours.
Analyzes the contemporary role of the security manager as it necessarily evolves from that of content expert to one of business strategist. To effectively develop the competencies and mind-set necessary to establish a strategic approach to security management, this class uses a range of readings, case studies, and research materials with the goal of critically examining the behavioral, structural, ethical, legal, political, social, cultural, and competitive conditions of today's complex, interdependent, and global business environment.

MGMT 6216. The Chief Executive Officer. 3 Hours.
Explores the CEO's job and role in a business organization. Offers presentations by and discussions with chief executive officers of major corporations in the Greater Boston area. Cases and readings also help address the job requirements, problems, and opportunities facing top management.

MGMT 6217. Business and Government Regulation. 3 Hours.
Explores the process by which regulations are formulated at the various levels of government and their impact on business: the regulation of prices, industry concentration and monopoly, safety, environment, energy, and consumer rights. Emphasizes particular industries: transportation, communication, energy, healthcare, and finance. The overriding objective is to enhance the ability of managers to respond to and deal with government regulation, which today significantly affects virtually every aspect of business.

MGMT 6220. Leadership in the Strategy Process. 3 Hours.
Focuses on the leadership role in strategic implementation—usually the most time-consuming and difficult part of the strategic process, requiring leadership from every level of management. Emphasizes how to motivate people to achieve objectives, develop the right culture, enhance core competencies, and create the right structure to support the strategy, ultimately insuring that all elements of the organization are operating to support the strategy implementation process.

MGMT 6222. Healthcare Industry. 3 Hours.
Examines the evolution of the U.S. healthcare delivery system from early forms of organized institutional care through the current dynamic and increasingly integrated and managed care systems. Introduces students to the interactions of regulatory, economic, political, and social aspects of the healthcare system. Compares current policies and proposals for health reform. Students are asked to analyze the impact and consequences of actions in one era on the structure and function of healthcare practice in later years and to project these trends into the future.

MGMT 6223. Strategic Decision Making for Healthcare Professionals. 3 Hours.
Examines how healthcare organizations manage their resources and competitive environment to meet the goals of their many stakeholders. Applies three essential elements of strategic decision making—environmental analysis, strategy formulation, and strategy implementation—to the healthcare industry.

MGMT 6224. Healthcare Strategy. 3 Hours.
Examines how healthcare organizations manage their resources and competitive environment to meet the goals of their many stakeholders. Encourages students, through a combination of cases, readings, and project work, to apply three essential elements of strategic decision making—environmental analysis, strategy formation, and strategy implementation—to the healthcare industry. Places special emphasis on comparing the healthcare industry to other leading industries; identifying specific management tools, activities, and methods from other industries; and applying them to healthcare. Also emphasizes the impact that creative and effective leadership may have in facilitating strategic and operational changes in healthcare delivery.

MGMT 6225. Sustainability and Leadership. 3 Hours.
Examines how organizational leaders influence decisions to advance an environmental agenda. Studies the scientific knowledge that organizational leaders must have to make effective sustainability decisions. Analyzes how a variety of organizations, including businesses, governments, government-sponsored enterprises, and nongovernment organizations, interact on environmental issues.

MGMT 6226. Sustainability and the Business Environment. 3 Hours.
Examines how the environment affects corporate strategy, public policy, and individual decision making. Examines the skills and knowledge needed to help organizations understand and act upon the principles of sustainability. Examines a variety of environmental problems, including global warming, use and disposal of toxic substances, and depletion of natural resources. Also studies how companies solve these problems by reducing their impact on the environment through solutions such as zero emissions, green design, and corporate environmental reporting.
MGMT 6227. Organizational Network: Analysis, Implications, and Practice. 3 Hours.
Examines organizational phenomena using a social network perspective. Focuses on understanding social networks in and of organizations and on understanding the impact of these social networks on outcomes for both individuals and organizations, including career success, innovation, and performance. Offers students an opportunity to develop a strong grasp of key network concepts, to learn how to use specialized software to analyze social network data, and to translate social network analysis to applied management practice. Designed both to engage existing research and case studies and to apply that knowledge with hands-on organizational network analyses.

MGMT 6230. Physician-Executive Field Experience. 3 Hours.
Introduces students to the real and complex problems of management and systems change. Student teams work under the supervision of a faculty coordinator, physician-executives, and other administrative personnel on a project designed to further the mission of the specific sponsoring healthcare organization.Teams are asked to define and analyze a complex problem in the sponsoring organization with the goal of recommending desired management actions. Successful projects incorporate a detailed understanding of key clinical, economic, social, political, competitive, technological, and organizational variables that impact the project’s domain. Includes instruction on project management techniques and communication skills relevant to healthcare industry executives while serving as an introductory practice-based educational model consistent with the goals of effective medical and business school learning.

MGMT 6233. Introduction to Business Analytics. 3 Hours.
Introduces the key concepts of data science and data analytics as applied to solving data-centered business problems. Emphasizes principles and methods covering the process from envisioning the problem to applying data science techniques to deploying the results to improve financial performance, strategic management, and operational efficiency. Topics include an introduction to data-analytic thinking; application of data science solutions to business problems; data mining, supervised and unsupervised machine learning; methods for the detection of co-occurrences and associations; and achieving and sustaining competitive advantage with data science. Presents the application of these disciplines in the areas of marketing, supply chain management, finance, sales, and innovation.

MGMT 6260. Advanced Topics in Management. 3 Hours.
Offers course topics that vary with instructor, with typical issues being current strategic and managerial problems of high-technology industries, the evolution of new industries, such as biotechnology and healthcare, government regulation as it affects business, the shaping of public policy and its impacts on industry, and a focus on current topics as shaped by the instructor’s research interests and writing. May be repeated without limit.

MGMT 6280. Innovation for Next-Generation Products and Systems. 3 Hours.
Focuses on next-generation products, systems, and services with an integrated framework that applies market innovation, user-centered design, architectural and platform innovation, and business model innovation. Offers students an opportunity to apply these concepts to new product/service/business process innovation opportunities in their own organization with executive sponsorship and faculty guidance.

MGMT 6281. Competitive Strategy for Dynamic Markets, Development, and Execution. 3 Hours.
Explores frameworks and business processes used by industry leaders to develop strategic plans. Uses a combination of case studies and student projects. Examines industrial products, financial services, medical technology and services, life sciences, information technology, and defense. Explores the gathering of market and competitive intelligence, new product/service strategy, assessing underlying human and technical competencies, and position in innovation within a dynamic industry ecosystem. Discusses execution of a corporate growth strategy across diverse business units and geographical interests.

MGMT 6282. Negotiation and Communication. 3 Hours.
Studies the basic foundations and processes of negotiations for different applications, including getting a promotion; working with executives, peers, and subordinates; interacting with customers; and working with suppliers. Being skilled in negotiation has become one of the most critical skills we need to be effective. Based on the concepts and skills of the best-selling Getting to Yes, this intensive course uses lectures, role-plays, and simulations in an effort to help students develop these essential skills.

MGMT 6283. Business Law, Corporate Governance, and Intellectual Property Strategies. 3 Hours.
Covers the fundamentals for business law and contracts, structures and processes for corporate governance, and approaches to risk mitigation. Explores the development, protection, and management of intellectual property across a variety of industry sectors and how such protections work or do not work in emerging markets. Exposes students to the intersection of law, business, and innovation.

MGMT 6290. CEO Symposium. 1 Hour.
Examines the challenges facing CEOs and the skills necessary to lead organizations using readings, discussions, and group exercises. Using an integrative case study based on a CEO who is an Executive MBA alum, study groups act as consultants and make recommendations to the CEO regarding the situation in the case. The CEO is present for the session and relates firsthand experiences and solutions.

MGMT 6293. Developing an Executive Understanding of Business Law and Intellectual Property. 3 Hours.
Offers students an opportunity to gain a greater understanding of the legal environment in which a business operates. Studies identifying and managing enterprise risk; establishing effective rules of governance, accountability, and transparency; insuring global compliance with internal and external requirements; using the legal system to further growth and innovation through the use of intellectual property protections; and managing with integrity, including managerial ethics and social responsibility.

MGMT 6295. Leadership for High Performance and Organizational Change. 2 Hours.
Focuses on the leadership behaviors that executives need to create and sustain high performance of their firms. Emphasizes change interventions that can be used to motivate employees to alter their patterns of behavior to meet the shifting needs of the competitive environment. Introduces skills and concepts related to organization diagnosis; organizational design, particularly across national borders; and human resource development that facilitate an executive’s ability to lead change and reinforce new behaviors.

MGMT 6296. Managerial Communication and Presentations. 2 Hours.
Focuses on business communication strategies. Provides students with the opportunity to learn how to use situational analysis and audience analysis to craft and deliver persuasive messages for a variety of business audiences.
MGMT 6960. Exam Preparation—Master’s. 0 Hours.
Offers the student the opportunity to prepare for the master’s qualifying exam under faculty supervision.

MGMT 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGMT 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

MGMT 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

Management - CPS (MGT)

MGMT 5000. High-Performance Management. 3.9 Hours.
Designed to assist managers in becoming more effective and provides real-world solutions to common business problems. Managers must balance demands of resource allocation, make difficult decisions, adjust priorities on a moment’s notice, all while keeping their eyes on short- and long-term goals of the organization. Topics include the foundations of high-performance management and leadership, individual and organizational barriers to high performance, optimizing interpersonal intelligence in the workplace, optimizing productivity and work/life balance, employee assimilation strategies, leading high-performance teams, strategic planning and goal-setting, leveraging performance management to achieve corporate goals, running effective meetings, successfully managing change, elective consulting skills, and high-impact presentation techniques and skills.

MGMT 0501. Supervisor Development. 3.6 Hours.
Offers new supervisors or existing managers an opportunity to obtain the essential skills and tools needed to be successful on the job. Topics include making the transition from worker to manager, communication, influencing without direct authority, hiring the right employee, managing performance, coaching and motivation strategies, managing conflict, building effective work teams, and time and task management. Supervisors today must have more than just exceptional technical knowledge in their industry. They need the interpersonal skills necessary to manage a diverse workforce, coach and mentor employees to perform to their potential, and learn the balance of delegating vs. doing.

MGMT 0503. Biotech Management Certificate. 8.4 Hours.
Covers general management skills for students in the biotech field. Offers students an opportunity to experience and utilize skills back at their workplace. Includes project management, leadership, teamwork, accounting and finance, presentation skills, technical writing, patents, and intellectual property and ethics.

MGMT 0504. Business Management Certificate. 3.6 Hours.
Offers students an opportunity to evaluate and strengthen their current business practices and to learn to adapt to the challenges of current business situations. Every manager should have a basic set of skills in their tool kit. Once those skills are mastered, it is essential for managers, whether functional or operational, to focus their skill development in business management. Uses minilectures, class discussion, experiential exercises, and feedback to cover the most compelling questions of business and create a clear pathway of action for applying learning toward real-world solutions to common business problems.

MGMT 0505. Biotech Management Certificate. 5.6 Hours.
Covers general management skills for students in the biotech field. Offers students an opportunity to explore management topics and provides time for participants to experience and utilize these new skills back at their workplace. Topics include presentation skills, accounting and finance, project management, team building, strategic planning, business writing, and leadership.

MGMT 0506. Supervisor Development. 1.8 Hour.
Offers new supervisors or existing managers an opportunity to acquire the essential management skills and tools needed to be successful on the job. Supervisors today must have the interpersonal skills to manage a diverse workforce, to improve and maximize employee performance, and much more. Designed to provide new supervisors or existing managers with the essential management skills and tools needed to be successful on the job.

MGMT 1100. Introduction to Business. 3 Hours.
Offers students an opportunity to develop a business vocabulary, refine business decision-making skills, and foster critical and analytical thinking. Examines key external factors that influence business development, namely political, economic, legal, social, and technological forces. Explores the internal organization of business, analyzing major issues associated with the key management functions of marketing, strategy, finance, accounting, information systems, and operations.

MGMT 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGMT 2100. Principles of Management. 3 Hours.
Examines historical changes in workforce composition and the many effects of globalization, technological change, and new workforce arrangements. Offers students an opportunity to apply critical thinking to topics related to the managerial tasks of planning, organizing, leading, and controlling. Emphasizes discussions on diversity in organizations, social responsibility, managerial ethics, and the impact of globalization.

MGMT 2210. Information within the Enterprise. 3 Hours.
Addresses the central role of information management (IM) and information technology (IT) systems in running and managing a business and in infusing it with competitive advantage. Business leaders must have ready access to timely, accurate, and relevant information if they are to manage and compete effectively in the global economy. Explores how a wide range of enterprises around the world employ IM to operate, to manage and control, and to plan and innovate. Focuses on real business issues, analysis and problem solving, and out-of-the-box thinking in creating value to the enterprise by effectively applying IM and IT. Rather than focusing on specific technical content or skills, this course is entirely case driven.

MGMT 2220. Supply Chain Management. 3 Hours.
Explores the basic concepts of managing a supply chain that produces goods and/or services. Offers students an opportunity to examine the fundamental functions and processes of a fully integrated supply chain, identify the key business and economic drivers of supply chain performance, and understand the strategic decisions that enable a supply chain to directly support business objectives. Topics include basic functions within a supply chain—planning, sourcing, forecasting and demand planning, manufacturing, inventory management, logistics, just-in-time (JIT), lean, Six Sigma, outsourcing, and sustainability.
MGT 2310. Organizational Behavior. 3 Hours.
Studies psychological, sociological, and organizational theories and principles underlying interpersonal communication in the organization. Through written analysis of case studies and role-playing, offers students an opportunity to analyze the impact of varying organizational decisions and dynamics on employee and management behavior. Discusses how embracing human differences and implementing diversity initiatives contribute to both organizational performance and the advancement of the society as a whole.

MGT 2330. Business Law. 3 Hours.
Examines and applies principles, practices, and current issues facing organizations as related to attracting, selecting, motivating, and keeping the most talented organizational members in today’s competitive environment. Focuses on human resource management strategy, organizational staffing, employee and labor relations, and organizational safety and security. Emphasizes current legal considerations and issues.

MGT 2820. Operations Management. 3 Hours.
Studies the flow of inputs of people, materials, information, and technology as they are transformed into useful goods and services. Topics include types of production processes, process flow analysis, capacity analysis, inventory, and quality management. Emphasizes problem formulation, managerial implications, and the impact on operations strategy.

MGT 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGT 3220. International Business. 3 Hours.
Focuses on the principles and practices of international business, comparing domestic and international activities and managerial responsibilities. Examines the major facets of the international management environment (legal, political, economic, and cultural). Explores international strategies by assessing the main factors determining success and failure of international companies. Offers students an opportunity to describe and compare domestic and international management operations and issues such as managing a multicultural workforce, designing and executing global marketing strategies, designing global products and services, and managing global R&D.

MGT 3444. Resource Planning and Scheduling. 3 Hours.
Focuses on techniques for material and capacity scheduling. Topics include detailed coverage of enterprise resource planning (ERP), capacity requirements planning (CRP), inventory management practices, and procurement and supplier planning. Analyzes techniques and practices of inventory management, the mechanics of the detailed material-planning process, operations planning to support the priority plan, planning procurement, and external sources of supply.

MGT 3451. Purchasing. 3 Hours.
Addresses the strategic and operational role of purchasing and its impact on the supply chain. Topics include organization of the function, procedures, supplied selection, negotiation, buyer-supplier relationships, quantity, quality, and cost/price considerations for the purchase of goods and services.

MGT 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGT 4210. Project Management. 3 Hours.
Focuses both on the analytical tools to manage projects as well as the people-management tools necessary for project success. Examines the entire process of implementing a project, from project definition to the evaluation of feasibility, scheduling, quality criteria, and financial and budgetary factors. Offers students an opportunity to apply contemporary management techniques based on Project Management Institute (PMI) current practices and to become familiar with current software options.

MGT 4220. Innovation and Change Management. 3 Hours.
Offers students an opportunity to discuss and apply principles, tools, and methods to successfully implement change and innovation within organizations. The use of multiple perspectives to assess organizational performance seeks to ensure that students are not trapped by a “one-best-way” approach to change management. Discusses strategies to design, implement, communicate, and sustain change; techniques for mapping and assessing when and where change is needed in an organization; organizational development techniques; as well as barriers and enablers to fostering an environment conducive to change and innovation.

MGT 4230. New Venture Creation. 3 Hours.
Examines the theory and practice of developing and managing innovations in startups and in already established firms. Offers students an opportunity to apply frameworks, strategies, business models, idea-generation techniques, and funding methods for introducing new products and services. Examines such topics as the creative process, the formulation of a business plan, and the execution of the plan itself.

MGT 4850. Business Strategy. 3,4 Hours.
Examines how companies in different industries choose goals and strategically position themselves in the business environment. Examines the total management process from planning to execution. Offers students an opportunity to critically reflect about issues, including long-term planning, corporate social responsibility, diversification, and building dynamic capabilities through the application of strategic frameworks. As a capstone course, it relies on and combines skills from several business disciplines—marketing, finance and accounting, organizational behavior, operations, and management information systems.

MGT 4896. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major.

MGT 4950. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

MGT 4955. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

MGT 4983. Topics. 1-4 Hours.
Covers special topics in management. May be repeated without limit.

MGT 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGT 4991. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

MGT 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

MGT 4993. Independent Study. 1-4 Hours.
Offers students an opportunity to undertake special research.
MGT 4994. Internship. 1-4 Hours.
Offers an opportunity for students to obtain supervised professional experience (related to course work) at an on-site location.

MGT 4995. Experiential Management Practicum. 3 Hours.
Offers students an opportunity to test-drive a potential career, acquire marketable skills, and practice typical obligations of the professional work environment. Students apply knowledge and skills gained through their management degree program to work on challenging short-term projects under faculty supervision. Students are matched with discipline-specific consulting projects provided by a wide range of sponsoring organizations in the private and nonprofit sectors. Examples of projects include developing a project plan, conducting market research, and developing and delivering managerial recommendations to sponsoring organizations. Requires an application process through the experiential network platform.

Management Information Systems (MISM)

MISM 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MISM 2301. Management Information Systems. 4 Hours.
Explores how a wide range of enterprises around the world use information and information technology to create better-managed, more innovative, and successful organizations. The twenty-first-century enterprise runs on information, and every part of the business has been transformed by the use of information technology. Today's business leaders, therefore, must have ready access to timely, accurate, and relevant information to manage effectively in the global economy.

MISM 2309. Management Information Systems. 4 Hours.
Does not count as credit for business majors. Counts as MISM 2301 for business minors only.

MISM 2510. Fundamentals of Information Analytics. 4 Hours.
Focuses on information analytics concepts and techniques needed by educated information analysts, designers, and consumers to lead organizations in the contemporary information age. Includes concepts, techniques, methods, and strategies for the entire information life cycle—collection, organization, exploration, analysis, manipulation, visualization, interpretation, and presentation of information for business. Each of these topics is introduced with real-world examples and data sets, grounded in relevant theory and principles, and is reinforced using various user-friendly software tools to gain the necessary analytical skills and knowledge.

MISM 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MISM 3305. Information Resource Management. 4 Hours.
Examines how information technology is used to support the functional areas of business (finance, accounting, marketing, manufacturing, and human resource management) to achieve business results (creating new products and services, redesigning business operations, and altering relations with customers and suppliers to achieve competitive advantage). Offers students an opportunity to understand the business issues involved in investing in new technologies.

MISM 3404. Introduction to Web Design, Practices, and Standards. 4 Hours.
Seeks to equip students with the foundational skills and knowledge necessary to design, evaluate, and build websites. Offers a hands-on and lab-based course in which students have an opportunity to develop websites for small businesses, including nonprofits and for-profit entities. Studies accessibility tools and standards. Students participate in the analysis of a specific Web practice/service/technology that is relevant for improving the performance and/or security of websites. Uses Web development software for the labs. Each student is expected to have his or her laptop for this course. Prior programming skill is not required. Students who do not meet course prerequisites may seek permission of instructor.

MISM 3406. Data Communications. 4 Hours.
Introduces data communications concepts and terminology, network design and architecture, distributed information systems, and security within a business systems environment. The modern enterprise relies on being able to get information to where it is needed quickly, accurately, and securely. From the instantaneous global reach of the Internet, to mobile wireless devices, to multimedia communication, innovations in data communication have directly changed the way business is done today. Explores key emerging technologies such as Web services and Web 2.0, service-oriented architecture, wireless and mobile communication, and multimedia networking.

MISM 3407. Information Visualization for Business. 4 Hours.
Introduces the use of design, interaction, and visualization techniques and strategies to support the effective presentation and manipulation of business information. Based on principles from art, design, psychology, and information science, offers students opportunities to learn how to successfully choose appropriate methods of representing various kinds of business data to support analysis, decision making, and communication to organizational stakeholders.

MISM 3408. Data Mining for Business. 4 Hours.
Covers key concepts, techniques, methods, and applications of data mining in the context of business. Offers students opportunities to learn how to distill key insights from a large amount of unknown data, which techniques to choose from, how to apply the techniques and methods to get the answer and insights from the data, and how to interpret the results from the analysis. Example predictive analysis techniques include market basket analysis and principle component analysis. Covers all techniques using business examples and user-friendly tools.

MISM 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
MISM 4501. Business Systems Integration. 4 Hours.
Examines significant improvements to business performance, which can be achieved through sharing information within the enterprise and with customers and suppliers. Realizing the full business benefits of shared information requires changing processes and organizational structures. This team- and project-based course offers students an opportunity to design and implement these strategies and to examine significant improvements to business performance.

MISM 4512. Special Topics in Information Technology Management. 4 Hours.
Examines various contemporary issues in information technology management. Topics may include wireless technologies for business; the emergence of global information systems; collaborative implementation; and others. May be repeated without limit.

MISM 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

MISM 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

MISM 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MISM 4993. Independent Study. 1-4 Hours.
Allows students who have received approval to undertake independent study in lieu of any course required in the various concentrations. Students present proposals to an Independent Studies Committee for evaluation and approval. Every proposal requires a detailed outline of the objectives and plan of study and must be accompanied by a supporting statement from the supervising faculty member under whose direction the study takes place. A copy of the final report prepared by the student is presented to the appropriate Independent Studies Committee. Further information about the Independent Studies Program can be obtained from concentration coordinators. May be repeated without limit.

MISM 6080. Network Security Concepts. 4 Hours.
Focuses on security concepts, issues, terms and definitions, as well as the strategic value of being secure. Key topics include planning for network security, security and network protocols, end-user and administrator training, and securing existing networks. Addresses management issues related to network security, including the ethical considerations that arise from decisions regarding access, reporting, monitoring, and use.

MISM 6081. Cryptographic Mechanisms. 4 Hours.
Introduces the main types of cryptographic mechanisms, the security services they provide, and how they are managed. Specific topics include private and public key algorithms and their functionality, one-way hashes and digital signatures, and certification authorities (CAs). Offers students an opportunity to learn how private key algorithms work with network protocols.

MISM 6082. Network Protection. 4 Hours.
Examines the technical methods used to ensure that information using wired and wireless media reaches only those for whom it was intended. Covers the technical tools to protect information from external compromise. Explores load balancing, wireless access, Web security issues, and network intrusion detection. Offers students an opportunity to develop a detailed understanding of authentication, firewall configuration, and rule sets and to learn how to address and prevent security issues related to intranets, extranets, enterprise networks, and the Internet.

MISM 6083. System Forensics—Incident Response Handling. 4 Hours.
Focuses on legal concepts and rules and legal risk-management techniques for information security managers. Offers students an opportunity to gain an understanding of incident handling and the role of incident response teams, including the formation and use of internal and external Computer Emergency Response Teams (CERTs). Other key topics include network monitoring, intelligence gathering, computer forensic analysis, and the collection and storage of electronic information, such as electronic signatures, that can lead to identification of the origin of incidents and security risks.

MISM 6200. Introduction to Business Analytics. 3 Hours.
Provides a comprehensive approach to understanding how business analytics enable companies to become more competitive. Offers students an opportunity to learn how to apply value chain analysis and other strategic perspectives to determine how business analytics can be integrated effectively into a firm’s operations. Interactive activities such as simulations and case studies allow students to explore how insights from data can improve business decisions. Examines real-world examples of how companies have used business analytics perspectives and tools to enhance different types of business processes, such as inventory prediction, customer service quality, and resolution of ethical dilemmas.

MISM 6202. Foundations of Data Analysis for Business. 3 Hours.
Covers basic principles and techniques of descriptive and predictive analytics. What are the essential data analysis concepts underlying business analytics? Topics include descriptive statistics, data visualization, probability and modeling uncertainty, sampling, estimation and confidence intervals, hypothesis testing, analysis of variance, simple and multiple regression analysis, time-series analysis, and forecasting. Emphasizes an understanding of how these tools can support decision making and analytics initiatives in a business context with real-world examples and case studies. Uses various software packages for analyzing data sets and creating visualizations.

MISM 6203. Business Analytics Methods. 3 Hours.
Introduces key analytics methods for using data through the perspectives of applied statistics and operations analysis. Covers application of these methods to business areas including marketing, supply chain management, and finance. Topics include business-analytic thinking; application of business analytics solutions to business problems; data mining, supervised and unsupervised machine learning; methods for detecting co-occurrences and associations; and achieving and sustaining competitive advantage by using business analytics methods.
MIS 6110. Internet Technologies and Applications. 4 Hours.
Explores and evaluates Internet solutions using the client/server model as the basis for Internet infrastructure and then moves on to discuss ERP, CRM, SFA, and information system outsourcing. Effective Internet solutions depend on an understanding of the technologies and applications that support e-business activity. The focal point of this course is an analysis of Internet initiatives: Who are the main players? How do Internet technologies address mission-critical objectives? How are certain initiatives actually implemented? While this is not a programming course, it introduces students to some computer languages to illustrate how technologies take advantage of the Internet's power to deliver business solutions.

MIS 6150. Internet Solutions. 3 Hours.
Offers students an opportunity to learn how to utilize the Internet to support an organization's operations by taking advantage of the Web's potential to reduce costs and improve effectiveness. Emphasizes the integration of Internet solutions with existing applications, systems, and processes, along with incorporating Internet capabilities into the planning and decision process. Examines Internet tools and services, particularly as they relate to business activities such as purchasing, online recruitment, inventory management, and Internet conferencing. For graduate students only.

MIS 6160. Web-Based Marketing. 3 Hours.
Offers students an opportunity to learn how to capitalize on the Internet's ability to support and enhance marketing activities, such as marketing research, segmentation, differentiation, advertising, and postsales support. Emphasizes the strategic marketing plan and the development of an effective Web-based marketing campaign. Analyzes how to evaluate Internet marketing initiatives such as Web-site deployment and banner advertising. Incorporates case studies and requires students to develop an Internet marketing plan. For graduate students only.

MIS 6165. Internet Law. 3 Hours.
Covers publishing and commerce laws relevant to the Internet, as well as strategies for dealing with areas of ambiguity. The Internet does not function within political borders and creates numerous complexities for those wishing to utilize the Web to support business activity. Complicating the legal issues further is the lack of a comprehensive and coherent national or international Internet policy. Offers students an opportunity to gain an understanding of criminal and civil liability as they relate to the Internet.

MIS 6170. Internet Systems and Tools. 3 Hours.
Introduces object-oriented technologies and Internet architecture, as well as the infrastructure needed to support Internet activities. Offers students an opportunity to learn how to assess organizational needs and evaluate existing capabilities. Examines online databases and their relationship to both Internet and intranet utilization. Additional topics include outsourcing, virtual hosting, and transaction security. For graduate students only.

MIS 6220. Internet and E-Commerce Legal Issues. 4 Hours.
Considers the impact of the Uniform Commercial Code and intellectual property laws on business decisions, how communication and privacy laws have been adapted and applied to e-commerce activity, and how contract law pertains to vendor arrangements and general e-business initiatives. While the Web may be a virtual space, the legal issues that affect Web activity are very real. As students become more actively involved in conducting or supporting business activities on the Internet, it is critical to build an understanding of these legal parameters. Offers students an opportunity to obtain an understanding of the legalities needed to drive e-business decisions and a knowledge of how to develop their own strategies for dealing with those areas of legal ambiguity.

MIS 6240. E-Business Strategy. 4 Hours.
Explores the managerial strategies that lead to success in the e-business environment. Examines how a company can develop strategic Internet plans that effectively leverage new capabilities to improve internal and external relationships with employees, suppliers, distributors, customers, partners, and regulators. Offers students an opportunity to learn to evaluate and improve business functions and studies methods for evaluating industry sectors and their participants by applying competitive market analyses, SWOT analysis, and Porter’s Five Forces model. Examines specific industries and companies within the consumer (e-tailing) sectors and the business-to-business (B2B) economy, including various business models and strategies for B2B exchanges and hubs. Other topics include the issue of standards, along with XML and UDDI, and an evaluation of intranets, extranets, and supply chain management.

MIS 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

MIS 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MIS 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

MIS 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

MIS 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

MIS 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

MIS 6983. Topics. 1-4 Hours.
Covers special topics in management information systems. May be repeated without limit.

MIS 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

Management Science (MGSC)

MGSC 1900. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGSC 2201. Operations Management. 2 Hours.
Considers the productive system of an enterprise whereby inputs of people, materials, information, and technology are transformed into useful goods and/or services. Topics include types of production processes, process flow analysis, capacity analysis, inventory and quality management, and so on. Provides an overview of the problems and issues encountered by an operations manager. Although a variety of models and techniques are discussed, the emphasis is on the problem formulation, managerial implication, and the impact on operations strategy.
MGSC 2301. Business Statistics. 4 Hours.
Offers students an opportunity to obtain the necessary skills to collect, summarize, analyze, and interpret business-related data. Covers descriptive statistics, sampling and sampling distributions, statistical inference, relationships between variables, formulating and testing hypotheses, and regression analysis in the context of business. Use of the SPSS statistical programming package is an integral part of the course.

MGSC 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGSC 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGSC 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGSC 4993. Independent Study. 1-4 Hours.
Allows students who have received approval to undertake independent study in lieu of any course required in the various concentrations. Students present proposals to an Independent Studies Committee for evaluation and approval. Every proposal requires a detailed outline of the objectives and plan of study and must be accompanied by a supporting statement from the supervising faculty member under whose direction the study takes place. A copy of the final report prepared by the student is presented to the appropriate Independent Studies Committee. Further information about the Independent Studies Program can be obtained from concentration coordinators. May be repeated without limit.

MGSC 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

MGSC 5978. Independent Study. 1-4 Hours.
Allows students who have received approval to undertake independent study in lieu of any course required in the various concentrations. Students present proposals to an Independent Studies Committee for evaluation and approval. Every proposal requires a detailed outline of the objectives and plan of study and must be accompanied by a supporting statement from the supervising faculty member under whose direction the study takes place. A copy of the final report prepared by the student is presented to the appropriate Independent Studies Committee. Further information about the Independent Studies Program can be obtained from concentration coordinators. May be repeated without limit.

MGSC 6200. Information Analysis. 3 Hours.
Provides students with basic information analysis skills and tools needed to manage effectively in today's information-intensive business climate. Exposes students to analytical problems from different areas of business and the quantitative concepts and techniques that can analyze them. Course objectives are to improve the information analysis skills of the students, to provide students with a working knowledge of important statistical tools, to help students become more critical evaluators of studies and reports involving statistical and quantitative methods, and to improve skills in communicating the results of analyses. Offers students the opportunity to learn how to evaluate, analyze, and interpret data, and present their findings and conclusions that will be most useful for managerial decision making through the use of business applications and analytical software.

MGSC 6201. Information Systems and Technology. 3 Hours.
Provides students with a fundamental understanding of the impact of technology on the organization and its financial systems. In particular, students are exposed to the new business models that technology enables and the control issues that these business models create. Discusses emerging technologies, digital business, supply chain, customer relationship management, and other technology subjects. Requires admission to MS/MBA program.

MGSC 6204. Managing Information Resources. 1.5 Hour.
Focuses on issues of the strategic uses of information technology for competitive advantage, support of business processes, information and control, digital business, integration of business with technology, organizational communication, and data management. Information has become a key resource in doing business. Managers must understand that high-quality information adds value to existing products and services, enhances the creation of new products, changes the efficiency and effectiveness of business processes, and affects relationships with customers, suppliers, and competitors.

MGSC 6205. Management of Information Resources. 2 Hours.
Examines information and its role as a key resource in business. Today's managers must understand that well-managed information can add value to facilitate the creation and revision of new products and services; promote the efficiency and effectiveness of business processes of the global extended enterprise; and transform the relationships with customers, suppliers, and competitors. Covers topics including the strategic uses of information and information technology; the role of information for transforming business processes; e-commerce; and the alignment of business processes, technology, and information.

MGSC 6206. Management of Service and Manufacturing Operations. 3 Hours.
Focuses on decision making by an operations manager. The operations manager's major job function is to provide quality products and services desired by customers, on time and at a competitive cost. Helps the operations manager to perform this function in both the manufacturing and service sectors of the economy. Explores operations management concepts, techniques, and models. These include the optimum allocation and efficient utilization of manpower, materials, equipment, and technology at strategic and tactical levels in the organization. Topics include process analysis, capacity planning, materials management, resource allocation, quality management, and scheduling.

MGSC 6207. Data Analysis for Decision Making. 2 Hours.
Covers basic statistical skills in using methods of data analysis. Seeks to improve analytical skills of the students, to develop knowledge and appreciation for models and other technical tools, and to prepare students to be effective communicators of their analyses and findings to management. Uses business applications and computer software to teach students how to evaluate, analyze, and interpret data and models and present their findings and conclusions to assist in rational decision making. Topics include statistical sampling, estimation, testing hypotheses, and basic regression models.
MGSC 6208. Operations Management. 2 Hours.
Examines decisions related to the design, running, and control of agile operations systems. Addresses the issues confronting operations managers whether in the service or the manufacturing sectors of the economy. Operations are of primary importance in the implementation of corporate strategy and fundamental to supply chain strategies for competitive advantage. Explores concepts, techniques, and models that support the operations manager’s job to provide customer-centric, innovative, high-quality products and services, on time and at a competitive cost. These include the effective and efficient allocation of resources, such as technology, information, manpower, materials, and equipment at different levels of the organization. Discusses the analysis of different types of processes, capacity and quality planning, project management, and materials management in a collaborative supply chain environment.

MGSC 6209. Business Statistics. 3 Hours.
Offers an introductory course in business statistics. Seeks to provide students with the opportunity to learn the most common statistical and analytical tools used in business decision making and to develop skills that enable them to recognize business problems and which statistical methods can be used most effectively given the problem.

MGSC 6210. Information Systems Global Enterprise. 3 Hours.
Focuses on how to employ technology effectively in organizations, with emphasis on the global organization. Explores management issues of how to use new technologies in an organization along with issues of supply chain management, customer relationship management, outsourcing of technology services, information technology development, and the integration of technology within an organization through the use of enterprise systems.

MGSC 6211. Research Methods. 3 Hours.
Offers an introductory course in business research methods. Designed to introduce students to basic concepts and problems encountered in social science and business research, including types of data and measurement, sampling, probability, and research design. Also offers students an opportunity to become acquainted with a variety of approaches and techniques to develop their own research projects.

MGSC 6212. Data Management. 3 Hours.
Provides a management-oriented introduction to data administration, database management systems (DBMS), and their impact on business. Data drives businesses and are necessary for businesses to function and for customers to buy products and services. Topics include the rationale for the DBMS approach, database design, data models, DBMS software tools, and the role of the database administrator. Gives students the opportunity to use a DBMS package, gain experience in database design, and use a query language.

MGSC 6214. Business Data Communications. 3 Hours.
Focuses on the key technical and managerial issues governing the effective deployment and use of data communication technologies within a business. Discusses telecommunication fundamentals including telecommunication hardware, network topologies and protocols, network security, and installation of networks for both local and global business communications. Emphasis is on developing the ability to evaluate and then select from a variety of connectivity options, conduct a network performance analysis, conduct a cost-benefit analysis, and manage a data communications network. Also discusses the role of a systems or network administrator.

MGSC 6216. Knowledge Management. 1.5 Hour.
Discusses how knowledge differs from data and information, the role knowledge plays in organizations, and the role information technology can play in managing that knowledge. Knowledge is a key strategic resource in today’s economy, and organizations must create and share it effectively to be successful. Some of the most creative applications of information technology are those that enable teamwork, communication, problem solving, and innovation.

MGSC 6218. Information Analysis and System Design. 3 Hours.
Discusses how the successful application of information technology requires a careful understanding of information requirements in the context of a business application/process. Provides the tools, experience, and examples needed to identify and analyze such opportunities. Topics include the analysis of information needs, identification of data requirements, systems design methodologies, assessment of information technology capabilities, implementation strategies, and organizational changes resulting from information system changes.

MGSC 6220. Information Strategy in a Digital Business Economy. 1.5 Hour.
Focuses on what companies need to do to take full advantage of new information technologies that the Internet and other emerging technologies provide. The information economy has produced profound effects on doing business, and it will continue to do so in the future. New business opportunities are being created, and traditional businesses are being transformed in the electronic business environment. Emphasis is on supply chain issues, telecommunications issues, the role of the electronic marketplace, and effective uses of the Web.

MGSC 6221. Introduction to Health Informatics and Health Information Systems. 3 Hours.
Introduces the history and current status of information systems in healthcare: information architectures, administrative and clinical applications, evidence-based medicine, information retrieval, decision support systems, security and confidentiality, bioinformatics, information system cycles, the electronic health record, key health information systems and standards, and medical devices.

MGSC 6222. Business Systems Integration Strategy. 3 Hours.
Covers the concepts, skills, and techniques needed to integrate information systems. The dramatic growth in business being conducted over the Internet, the rapid change of business models, and the wave of corporate mergers have boosted dramatically the need for integrated business information. These demands force organizations to introduce new approaches and techniques to integrating business systems within the company and between companies.

MGSC 6223. Manufacturing Policy. 3 Hours.
Focuses on how to gain competitive advantage through manufacturing rather than just improving operational performance. Effective manufacturing fits the needs of the business, and strives for consistency between its capabilities and policies and the competitive advantage sought. To do so requires translating the business strategy into an appropriate collection of bricks and mortar, equipment, people, and procedures. Being able to move from the level of specific decisions to developing general capabilities—and back again—is central to developing and implementing an effective manufacturing strategy.

MGSC 6224. Quality Management. 3 Hours.
Introduces quality management in various sectors of the economy. Provides students with an appreciation of the need for quality assurance in both the manufacturing and service environments. Emphasizes quality in the production and maintenance of software. Provides a general introduction to some of the technical/statistical tools used in quality assurance and control. Offers a forum to discuss and promote the concept of total quality and its implementation.
MGSC 6225. Mass Customization. 3 Hours.  
Overviews mass customization, which refers to designing, manufacturing, testing, and delivering products according to the customers’ individual requirements but at costs not significantly higher than mass production. It combines the productivity and cost advantages of mass production with the variety and quality of custom production. The paradigm shift toward mass customization is taking place in both manufacturing and service industries. Topics include manufacturing processes, typology of mass customization, information needs and customer focus, and implementation of a mass customization project. It is based on principles of industrial engineering, mechanical engineering, management science, and marketing.

MGSC 6226. Statistical Methods and Applications in Functional Areas of Business. 3 Hours.  
Surveys a variety of statistical models and applications of multiattribute data that arise in functional areas of business like marketing, organizational behavior, and finance. Emphasizes the applications of statistical models, such as multiple regression, clustering, discriminant analysis, logistic regression, and factor analysis. Introduces time series models that are relevant to the study of financial markets. Offers a blend of statistical theory and statistical practice on business-related data for informed decision making.

MGSC 6227. Project Management. 3 Hours.  
Explores managing in a project environment from definition, planning, and implementation through managing the project termination phase. Examines alternative organizational structures, development of a work breakdown structure, cost estimation, management of project teams, scheduling techniques, risk management, and tailoring of communication patterns and monitoring and control systems to specific projects. Introduces software specifically designed for scheduling and performing risk analysis in project environments.

MGSC 6228. Management of Service Operations. 3 Hours.  
Introduces students to the problems and issues faced by managers in managing service operations. Develops the basic analytical skills required for solving the problems encountered, and provides a managerial perspective. Examines the general management tasks of executives at more senior levels of management and seeks to tie those to the middle-management tasks of managing the frontline operations. A major theme is that service operations are of primary importance in the implementation of business and corporate strategy. Thus we need to consider aspects of corporate strategy in order to determine priorities.

MGSC 6260. Advanced Topics in Information Resources Management. 3 Hours.  
Offers an in-depth examination of selected issues and problems in information resource management that are of current interest to faculty and students. Specific topics alternate depending on faculty availability and interest as well as student enrollment criteria.

MGSC 6261. Advanced Topics in Operations Management. 3 Hours.  
Offers an in-depth examination of selected issues and problems in operations management that are of current interest to faculty and students. Specific topics alternate depending on faculty availability and interest as well as student enrollment criteria.

MGSC 6280. Analytical Models and Methods. 3 Hours.  
Presents analytical techniques and their applications that are useful for a variety of business problems ranging from basic market research to managerial forecasting. Emphasizes understanding analytical models and decision making rather than computational tasks for which computers are more suitable. Covers techniques and methods including statistical analysis of single- and multiattribute data, regression and forecasting models, and conjoint analysis.

MGSC 6281. Service Innovation and Management. 3 Hours.  
Examines innovation in services and the internal management of business processes. Uses a framework of service/process redesign. Emphasizes strategic initiatives and key organizational change elements critical for improving services to customers; increasing profitability; and building long-term customer loyalty across multiple industry sectors, including information technology, healthcare, financial services, and government. Introduces the various strategic aspects of process improvement in the delivery of services, including managing change and the resulting impact on the organization, supply-chain management in the service industry, process improvement, overcoming organizational resistance, customer involvement, empowerment, and the role of leadership in managing operations. Through guided project work, offers students an opportunity to apply these concepts to services and internal business processes at their own organizations.

MGSC 6290. Business Statistics. 2 Hours.  
Focuses on building students’ analytical skills by using such tools as charts and tables to describe information, estimate, explore relationships, build regression equation, and predict results. Students gain insight about business situations where information analysis tools can be useful. Enhances the ability to communicate analytical results with written reports.

MGSC 6291. Creating Value through Process Improvement. 2 Hours.  
Focuses on the process through which organizations transform inputs into outputs—both products and services—for customers. Examines, in particular, how some organizations have achieved breakthrough performance, reengineering their operations processes through application of lean, total quality management (TQM), just-in-time (JIT), and six sigma concepts. Students tour a local manufacturing company that practices lean six sigma and hear from senior management about its strategic impact. Offers students an opportunity to develop their ability to describe, analyze, and synthesize transformation processes; make and implement sound operations decisions; and develop effective operational design by achieving congruence among people, processes, and technology. Topics include quality management, continuous improvement, and service management.

MGSC 6292. Delivering Competitive Advantage through IT Strategy. 2 Hours.  
Examines how to provide leadership in information technology (IT) management. Offers students an opportunity to learn how information and information systems can be a strategic resource for managing organizations and supporting business functions and processes. Examines how IT facilitates the capture, analysis, and sharing of a company’s information that, in turn, can be used to better control the enterprise and to enable learning and innovation. Topics include enterprise resource planning (ERP) systems, business intelligence, and Internet challenges and opportunities.

MGSC 6960. Exam Preparation—Master’s. 0 Hours.  
Offers the student the opportunity to prepare for the master’s qualifying exam under faculty supervision.

MGSC 6962. Elective. 1-4 Hours.  
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MGSC 6964. Co-op Work Experience. 0 Hours.  
Provides eligible students with an opportunity for work experience. May be repeated without limit.

MGSC 7976. Directed Study. 1-4 Hours.  
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.
Managerial Economics (MECN)

MECN 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

MECN 5978. Independent Study. 1-4 Hours.
Allows students who have received approval to undertake independent study in lieu of any course required in the various concentrations. Students present proposals to an Independent Studies Committee for evaluation and approval. Every proposal requires a detailed outline of the objectives and plan of study and must be accompanied by a supporting statement from the supervising faculty member under whose direction the study takes place. A copy of the final report prepared by the student is presented to the appropriate Independent Studies Committee. Further information about the Independent Studies Program can be obtained from concentration coordinators. May be repeated without limit.

MECN 6200. Global Competition and Market Dominance. 3 Hours.
Trains managers to understand the competitive implications of global economic policies, the business effects of technological change, and the commercial imperatives of alternative political systems at a macro level. At a micro level, it creates a framework for industry analysis in a global setting that combines economic analysis, competitive analysis, and business decision-making skills.

MECN 6203. Global Managerial Economics. 3 Hours.
Develops understanding of the organization of the global economy and how this helps managers assess the winds of economic change and make better decisions for their shareholders. Addresses interactions among competitors, suppliers and customers, central banks and other financial intermediaries, and governments and how these interactions impact business decision making. Leads to a framework for industry analysis in a global setting that involves economic analysis, competitive analysis, and business decision-making skills.

MECN 6205. Sustainability and the Economics of Markets. 3 Hours.
Examines the idea that building a sustainable business enterprise often involves correcting market failures. Examines the responsibilities of the business enterprise to society at large. Also explores the causes of and remedies for market failures, such as immigration, education, healthcare, climate change, and finance, and what these mean for governments, businesses, and individuals.

MECN 6208. Economics for Managerial Decision Making. 2 Hours.
Focuses on the application of economic concepts to business decision making in an international setting. The goal is understanding those aspects of creating and sustaining shareholder value that managers control and those arising from external sources. Topics include analyses of competitive market forces, demand-supply interactions, production, costs and profits, market structures and industrial organization, and pricing strategies. Focuses also on the social, political, economic, and institutional forces that influence value and wealth. Topics include national income accounting, aggregate economic behavior, financial markets analysis, the determination of income, employment and inflation, growth and productivity, exchange rate determination, and absolute versus comparative advantage. Helps students-managers learn how to better evaluate economic trends and conditions enabling them to make more informed choices on behalf of their stakeholders.

MECN 6280. The Economics of Technical Ventures. 3 Hours.
Provides an understanding of economic principles and their use and application in decision making within high-tech firms. Discusses how dynamic, innovative industries and enterprises challenge conventional economic paradigms, and how managers can incorporate uncertainty into rational decision making.

MECN 6281. Understanding the Global Business Environment. 1.5 Hour.
Explores the hierarchical nature of economic activity, thus providing a perspective on a firm’s relative position and the origins of the forces that operate on it. Provides students with the opportunity to understand the organization of the global economy and the accounting system that underlies it, as well as understand the interactions among competitors, suppliers and customers, central banks and other financial intermediaries, and governments and how these interactions combine to create the parameter space for business decision making. By knowing how all the pieces fit and by knowing the pathways of influence among these pieces, managers can better read the winds of economic change and, as a consequence, can make better decisions for their shareholders.

MECN 6290. How Economics and Politics Affect U.S. Businesses. 3 Hours.
Focuses on the macroeconomic environment in the United States in the context of economic and political trends in the United States and around the world. Specific topics include demand and supply analysis, national output and national income, and economic growth and productivity. Studies the complex role of government as an important stakeholder in the business environment through fiscal policy, monetary policy, international trade policy and practice, and industrial economic policy and practice. Offers students an opportunity to understand how macroeconomic and political events affect businesses, industries, and individuals.

MECN 6960. Exam Preparation—Master’s. 0 Hours.
Offers the student the opportunity to prepare for the master’s qualifying exam under faculty supervision.

MECN 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MECN 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

MECN 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

Marine Studies (MARS)

MARS 3200. Marine Studies. 4 Hours.
Surveys the issues and methodologies involved in the interdisciplinary study of marine environments. Examines the physical, biological, social, and historical processes that interact in this complex system. Guest lectures provide an overview of the range of disciplines in the study of the world’s oceans.

MARS 3210. Marine Mammals. 4 Hours.
Designed to familiarize students with biology and conservation of marine mammals. The course content is primarily scientific, but the goal of the course is to consider how scientific knowledge is used as a tool of conservation. Topics include the evolution and taxonomy of whales, seals, and other marine mammals, adaptations to the ocean environment, feeding and social behavior, and population ecology. Issues include whaling and sealing, environmental contaminants, entanglements in fishing gear, tuna /dolphin interactions, and the decline of Stellar Sea lions.
MARS 3300. The Ocean World. 4 Hours.
Provides a comprehensive, interdisciplinary introduction to the oceans. Focuses on the sea’s complexity and the far-reaching consequences of our interactions with them. Draws on specialists in the sciences, social sciences, humanities, and arts, each with an interest in marine issues and a commitment to bridging the gaps among disciplines. The course themes are broad, but, when appropriate, focus on Boston Harbor, a first step into the ocean world for this area.

MARS 3305. Maritime History of New England. 4 Hours.
Surveys maritime transportation, trade, travel, exploration, and warfare from approximately 3500 B.C. to the end of the wooden boat era in the late nineteenth century. Prior to the widespread application of steam power on land and sea, ships were the fastest, safest, and most economical means of transporting large cargoes over long distances. Literary and art history sources are also introduced, along with several films on maritime archaeology.

MARS 3310. Water Resources Policy and Management. 4 Hours.
Explores the ways in which water has affected our bodies, our planet, our history, our culture, and the danger posed by increasing demand, waste, and pollution on our limited supply of usable fresh water. Considers water through scientific, historical, and cultural viewpoints. Surveys contemporary water problems in all their dimensions-political, economic, and technological.

MARS 3315. Wetlands: Ecology and Hydrology. 4 Hours.
Investigates the vital role of wetlands in the hydrology and ecology of global landscapes. Topics include function of inland and coastal marshes, and swamps and bogs in water and nutrient cycles, and in support of biodiversity from microbes to vertebrates. Examines biological links between wetlands and human activities, such as agriculture, coastal development, and fisheries. Also covers legal framework for the protection and restoration of endangered wetlands.

MARS 3325. Coastal Zone Management. 4 Hours.
Focuses on outstanding issues in coastal environment affairs. Discusses scientific, legal, economic, and technical aspects of coastal issues and integrates them into problem-solving exercises.

MARS 3425. Biology of Fishes. 4 Hours.
Covers the evolution, systematics, anatomy, physiology, and behavior of freshwater, marine, and anadromous fishes from temperate to tropical environments. Examines the diversity of fish interactions in aquatic communities; predator/prey relationships, host/symbiont interactions, and the various roles of fishes as herbivores. Studies interspecific predator-prey relationships among fish populations in aquatic communities and integrates principles of ecology. Provides access to the collection of the New England Aquarium resulting in an extraordinary opportunity to understand principles of ichthyology through the study of living fish. Hosted each year by a consortium member institution, this Massachusetts Bay Marine Studies Consortium is an intermediate-level survey course.

MARS 3430. Biology of Whales. 4 Hours.
Offers a comprehensive review of the biology, ecology, and management of cetaceans. A thorough grounding in cetacean mammalogy and population biology seeks to prepare students to understand conservation problems presented as case histories. Requires students to complete an independent research paper on a topic related to cetacean biology. Hands-on activities may include the dissection of a small cetacean and a shore-based whale watch in Cape Cod Bay. Hosted each year by a consortium member institution (at Northeastern University’s Boston campus), this is a Massachusetts Bay Marine Studies Consortium course.

MARS 4500. Advanced Seminar in Marine Studies. 4 Hours.
Focuses on outstanding issues in the marine environment. Using a seminar format, students from colleges and universities throughout the Boston area convene to address the complex interactions of disciplines including scientific, legal, economic, and technical aspects of issues that come into play in marine affairs. Seminars are led by experts actively involved in the issues.

MKTG 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKTG 2201. Introduction to Marketing. 4 Hours.
Provides an overview of the role of marketing in business and society. Considers the planning, implementation, and evaluation of marketing efforts in consumer and business-to-business companies, in service and goods companies, and in for-profit and nonprofit organizations. Also examines contemporary issues in marketing that can affect organizational success. A term project is used to enable students to apply their learning about the fundamentals of marketing.

MKTG 2202. Introduction to Marketing in a Global Context. 4 Hours.
Covers the role of marketing in business and society. Considers the planning, implementation, and evaluation of marketing efforts in consumer and business-to-business companies, in services and goods companies, and in for-profit and nonprofit organizations. Focuses on the cultural, social, and political challenges faced by global firms as they conduct market research and develop and vary marketing strategies to be successful in multiple markets internationally. Also examines contemporary issues in marketing that can affect organizational success. Requires students to apply their learning about the fundamentals of marketing in a term project.

MKTG 2209. Introduction to Marketing. 4 Hours.
Does not count as credit for business majors. Counts as MKTG 2201 for business minors only.

MKTG 2301. Marketing and Society. 4 Hours.
Examines the role of marketing and business in society’s central contemporary problems as well as the way marketing can take a positive and influential role in the efforts to address these problems. Reviews some of our society’s main problems and a critical view of marketing and business in today’s world. Also examines changing marketing practices and roles for businesses as firms and institutions become more socially responsible and ethically aware. Finally, introduces and analyzes the role of prosocial marketing, how marketing can influence people’s behavior for advancing a socially desirable change. Offers students an opportunity to better understand our society and enhance an ethical mind-set, while highlighting the ways marketers can contribute to societal well-being.

MKTG 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKTG 3301. Marketing Management. 4 Hours.
Covers the role of marketing in business and society. Considers the planning, implementation, and evaluation of marketing efforts in consumer and business-to-business companies, in services and goods companies, and in for-profit and nonprofit organizations. Also examines contemporary issues in marketing that can affect organizational success. Requires students to apply their learning about the fundamentals of marketing in a term project.
MKTG 3401. Marketing Research. 4 Hours.
Focuses on the marketing research process and the analysis of data using statistical software. Helps students develop an understanding of consumer attitudes and behavior processes as the basis of the design of marketing problems. Topics include problem definition, research design, sampling, attitude measurement, questionnaire design, data collection, and data analysis. Students are expected to work on group projects. The course requires no previous computer experience. Requires prior completion of 56 SH toward degree.

MKTG 3501. Marketing Analytics. 4 Hours.
Studies the importance of using an analytical approach to support marketing decision making in organizations and offers students an opportunity to learn how to implement such an approach in practice. Focuses on data science in marketing: identifying and acquiring the right data for addressing different marketing challenges, building skills necessary for conducting relevant quantitative analyses, and guiding how to use obtained insights to make better marketing decisions. Topics may include product innovation, market identification and segmentation, customer valuation, media attribution models, and assessment of digital and social media. Students are expected to apply statistical concepts and use relevant software packages for analyzing marketing datasets.

MKTG 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKTG 4220. Marketing in Asia. 4 Hours.
Studies the opportunities and challenges associated with the increasing globalization of Indian and Asian markets. During this Dialogue of Civilizations, students study key environmental forces shaping consumer needs and preferences, the impact of foreign political and economic factors on entering companies, the influence of international competition, market segmentation, and strategy decisions specific to Asian marketing. Analyzes the impact of cultural, social, political, and economic factors on marketing strategies. Offers students an opportunity to learn how to determine when to use different market entry and penetration strategies and how to examine the different skills and systems required to implement marketing strategies in India and broader Asia. May be repeated without limit.

MKTG 4310. Retailing. 4 Hours.
Explores the basic concepts of retailing strategy and positioning, evaluating the retail environment and customer behavior and trends. Retail functions are also examined, focusing on site selection and trading area; merchandise selection and display; layout and design; retail pricing; customer service and image management; retail technology; and operations management. Students do extensive fieldwork applying and exploring the concepts through homework assignments and projects. Industry experts provide exposure to current trends and procedures.

MKTG 4420. Sales Management. 4 Hours.
Focuses on the entire sales effort. Offers students the opportunity to apply a proven selling process and present compelling solutions to customers. Topics include how to translate product features into buyer benefits, how to handle customer objections, and how to close sales and deals. Covers team selling and relationship marketing. Intended for students interested in a sales career as well as future product managers who must rely on the sales force to introduce new products and promotions.

MKTG 4502. Marketing in the Service Sector. 4 Hours.
Provides a basic treatment of methods and techniques for marketing in the service sector, which includes sports, recreation, public service, banking, insurance, and hotels. Analyzes a number of descriptive studies covering the application of marketing principles in key service areas as well as the principles themselves.

MKTG 4504. Advertising and Brand Promotion. 4 Hours.
Focuses on managing and integrating marketing communications in relation to a company's overall marketing objectives. Includes advertising; creative and media strategy; the communication process; direct and interactive marketing; consumer and trade promotions; public relations; and the social, ethical, and economic considerations underlying marketing communications in the twenty-first century.

MKTG 4506. Consumer Behavior. 4 Hours.
Focuses on demographics, lifestyle, social and cultural trends, and their impact on consumer motivations and behavior. A thorough understanding of the consumer is at the heart of marketing. Topics include the consumer decision-making process, family, learning, personality, and group dynamics, and their impacts on the business world. Ultimately, we are all consumers and we are all part of society, so consumer behavior is critical to all of us.

MKTG 4508. Digital Marketing. 4 Hours.
Examines the impact of technology on the marketing of goods and services. Focuses on the Internet and the World Wide Web. Investigates recent trends in e-business and identifies marketing strategies that work in this new environment. Introduces students to frameworks that help explain current issues in electronic marketing. Although the focus is on Internet marketing strategy, phenomena such as television home shopping and database marketing are also explored. Readings, cases, discussions, lectures, guest speakers, student reports, and exercises on the World Wide Web are all utilized.

MKTG 4510. New Product Development. 4 Hours.
Provides an overview of the new-product-development process, with an emphasis on customer involvement in this process. Detailed insights are provided on such topics as new-product strategy, idea generation, idea selection and evaluation, concept development and testing, product development and testing, and market testing and product launch.

MKTG 4512. International Marketing. 4 Hours.
Introduces those aspects of marketing that are unique to international business within the framework of traditional functional areas of marketing. Focuses on the environment and the modifications of marketing concepts and practices necessitated by environmental differences. Topics include cultural dynamics in international markets, political and legal environmental constraints, educational and economic constraints, international marketing research, international marketing institutions, and marketing practices abroad.

MKTG 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

MKTG 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

MKTG 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
MKTG 4993. Independent Study. 1-4 Hours.
Allows students who have received approval to undertake independent study in lieu of any course required in the various concentrations. Students present proposals to an Independent Studies Committee for evaluation and approval. Every proposal requires a detailed outline of the objectives and plan of study and must be accompanied by a supporting statement from the supervising faculty member under whose direction the study takes place. A copy of the final report prepared by the student is presented to the appropriate Independent Studies Committee. Further information about the Independent Studies Program can be obtained from concentration coordinators. May be repeated without limit.

MKTG 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

MKTG 5978. Independent Study. 1-4 Hours.
Allows students who have received approval to undertake independent study in lieu of any course required in the various concentrations. Students present proposals to an Independent Studies Committee for evaluation and approval. Every proposal requires a detailed outline of the objectives and plan of study and must be accompanied by a supporting statement from the supervising faculty member under whose direction the study takes place. A copy of the final report prepared by the student is presented to the appropriate Independent Studies Committee. Further information about the Independent Studies Program can be obtained from concentration coordinators. May be repeated without limit.

MKTG 6200. Creating and Sustaining Customer Markets. 3 Hours.
Focuses on market design and planning. Emphasizes analysis of customer needs and company and competitor capabilities. This analysis forms the basis of a sound marketing strategy that provides value to customers in a way superior to competitors. Discusses how to deliver this strategy through the development of an integrated marketing program covering product offerings, pricing, promotion, and distribution. Includes professional accounting students.

MKTG 6206. International Marketing. 3 Hours.
Develops understanding of the opportunities and challenges facing the international marketing executive, the decision-making process in marketing goods abroad, and the environmental forces—economic, cultural, and political—affecting the marketing process in the international marketplace.

MKTG 6208. Marketing and Customer Value. 4 Hours.
Examines the role of marketing as an organizational function and a set of processes in creating, communicating, and delivering offerings that provide superior value to customers. Gives students an opportunity to develop skills in market analysis, including customer, competitor, and company analysis, as well as decision-making capabilities in both marketing strategy and implementation. Emphasizes methods for the identification, acquisition, and retention of customers in a way that provides mutual value to the customer and the organization in the context of a global business environment.

MKTG 6210. Marketing Research. 3 Hours.
Provides an overview of the major qualitative and quantitative marketing research methodologies available to marketing managers. Explores customer relationship management (CRM) and multivariate statistical techniques including conjoint analysis, customer satisfaction, and service quality measurement.

MKTG 6212. International Marketing. 3 Hours.
Develops understanding of the opportunities and challenges facing the international marketing executive, the decision-making process in marketing goods abroad, and the environmental forces—economic, cultural, and political—affecting the marketing process in the international marketplace.

MKTG 6214. New Product Development. 3 Hours.
Focuses on the challenges and decisions new-product managers face as they take ideas through the new-product-development process. Companies need to create, develop, and market new products and services continually to compete effectively in a rapidly changing environment. Provides an overview of the new-product-development process, with an emphasis on customer involvement in this process. Provides detailed insights on such topics as new-product strategy, idea generation, idea selection and evaluation, concept development and testing, product development and testing, and market testing.

MKTG 6216. Market Focused Strategy. 3 Hours.
Offers an advanced course in defining and managing an organization's product-market strategy. Intended for marketing specialists and nonspecialists interested in incorporating a market focus from a general management or consulting perspective. Emphasizes understanding the difference between goods and services, differences in the consumer evaluation process between goods and services, special marketing problems created by the differences between goods and services, and strategies that address the unique problems in service marketing.

MKTG 6218. Marketing in Service Sector. 3 Hours.
Provides students with knowledge of management needs and techniques associated with the service sector of the economy. Includes understanding the differences between goods and service marketing, and how these differences influence marketing strategy and the tactical design of marketing mix variables. Assists in understanding the difference between tangible goods and services, differences in the consumer evaluation process between goods and services, special marketing problems created by the differences between goods and services, and strategies that address the unique problems in service marketing.

MKTG 6222. Digital Marketing. 3 Hours.
Explores the latest trends in technology and new media, their effect on marketing goods and services, and how to deliver value to the customer using the latest technological innovations. Examines the latest trends in digital marketing, such as mobile marketing, and how the mobile platform can be used for branding purposes and to enhance customer relationships. Explores topics such as branding and advertising via mobile phones, online social networks and communities, technology adoption in global emerging markets, and how the Internet empowers customers and enables firms to engage in customer advocacy. Also examines how marketing research is conducted for technological innovations and ethical concerns that arise with technology usage, such as privacy and security issues, identity theft, and the role of trust in digital marketing.

MKTG 6223. Brand and Advertising Management. 3 Hours.
Offers students an opportunity to obtain an in-depth understanding of the brand-building process amid radical changes in today's marketing communications platforms. Explores student to concepts, frameworks, and theories critical to developing branding and advertising strategy in the twenty-first century, including brand positioning, target audiences definition, creative advertising, integrated marketing communications, the influence of social media, and assessing marketing and media effectiveness.
MKTG 6224. B2B and Strategic Sales. 3 Hours.
Covers business-to-business marketing and the key roles of managing relationships with large buyers, going to market, and the sales organization. Begins with an understanding of why and how firms, institutions, and organizations purchase products and services and the importance of the multifunctional buying center. Covers a proven selling process and presents compelling solutions to customers. Going-to-market topics include managing value-added resellers and distributors. Intended for all interested in marketing: future product managers who must rely on the sales force and distributors to introduce new products and promotions, future sales managers, and marketing executives who must manage the marketing-sales interface.

MKTG 6225. Sustainability and Innovation in Product Design. 3 Hours.
Examines various strategies organizations have used for sustainability in innovation. Introduces the concept of designing products for the "triple bottom line"—people, planet, and profit. Uses case study discussions and a product development group exercise to help demonstrate the opportunities and issues arising from sustainability initiatives in corporations.

MKTG 6226. Consumer Behavior. 3 Hours.
Focuses on the consumer as the key element of marketing strategy and application. Explores demographic, lifestyle, social, and cultural trends and their impact on consumer attitudes, motivations, and behavior. Other topics include group dynamics, family, learning, personality, and emotions and their impact on the business world. Offers an in-depth look at the consumer decision process as a model to guide the planning and evaluation of marketing strategies.

MKTG 6228. New Media and Digital Marketing Analytics. 3 Hours.
Examines how marketers are collecting and using big data and marketing analytics tools on new media and devices to create successful digital marketing strategies. Explores how marketers can benefit from consumer-generated content on social media devices, such as location-based marketing via mobile devices, to reach consumers 24/7. Introduces digital marketing analytics tools and techniques commonly used to conduct market research and analysis. Offers students an opportunity to better understand the impact of devices, such as "wearables," and recent phenomenon, such as the Internet of Things, on marketing strategies. Investigates privacy and ethical concerns that arise from the collection, analysis, and use of consumer data. Incorporates cases, discussions, readings, lectures, real-life examples, and student research projects and reports.

MKTG 6230. Driving Marketing Performance: Measure, Analyze, Profit. 3 Hours.
Introduces how to measure, analyze, and evaluate the profit impact of marketing actions (MAP) by bringing together marketing, strategy, and finance. Your organization is going to spend millions on a new marketing or strategic initiative, but how will you know if it is working? Marketing performance measurement and feedback systems enable managers to take smarter risks by assessing experimental projects and forecasting the profit potential of bigger, bolder initiatives. Offers students an opportunity to explore systems that summarize marketing productivity and suggest steps for performance improvement in marketing strategy and tactics.

MKTG 6232. Engaging Customers and Markets. 3 Hours.
Introduces information-centric methods that help to choose which customer markets are worth pursuing; that identify what benefits would be most attractive to offer these customers; and that develop, communicate, and deliver products and services that provide value to both customers and organizations. In the current customer-centric marketplace, every member within an organization is responsible for understanding and engaging customers, regardless of their specific functional role. Properly collecting and utilizing data from inside and outside the organization is necessary to support this process. Using real-world cases, scenarios, and data, offers students an opportunity to learn how customer relationships can be created and sustained.

MKTG 6260. Special Topics in Marketing. 3 Hours.
Offers an in-depth examination of selected issues and problems in marketing that are of current interest to faculty and students. Specific topics alternate depending on faculty availability and interest as well as student enrollment criteria. May be repeated without limit.

MKTG 6280. Gaining Customer Insight. 3 Hours.
Introduces the substantive and procedural aspects of marketing strategy and customer markets. Topics include how to identify target markets, how to leverage data and analyses to enhance the development of a marketing strategy, and how to develop knowledge of various techniques for uncovering customer needs/wants. Studies the importance of customer insights to business success. Offers students an opportunity to develop and implement a concept test.

MKTG 6281. Go-to-Market for New Products and Services. 3 Hours.
Studies the fundamentals for creating go-to-market strategies to support new products and services, including integrative communication systems, multichannel marketing, relationship selling, and pricing tactics for emerging and existing products. Using a series of cases, the course examines product launch, channel management, and marketing of services for different industry sectors. Also covers the role of social networking in marketing.

MKTG 6282. Digital Marketing. 3 Hours.
Explores how technology affects the marketing of goods and services. Emphasizes learning how to deliver value to the customer using technology. Explores marketing strategies in this age of technology and what firms need to do to be effective in the twenty-first century. Students analyze and evaluate issues facing firms that wish to compete amid continuous technological innovation, global competition, and rapidly changing dynamics. Examines factors that impede and accelerate the adoption and diffusion of innovations in the marketplace. Examines how the Internet has affected product, pricing, distribution, and communication strategies for goods and services. Also examines new trends such as mobile marketing. Encourages students to explore ethical concerns such as privacy and security issues and the role of trust in digital marketing.

MKTG 6283. Marketing and Selling Innovation. 3 Hours.
Reviews the product portfolio concept, examining the need for balanced portfolios and focusing on issues related to product proliferation and simplification. Discusses market-based pricing strategies, sales efforts, distribution, and communication in the context of enhancing the firm’s product position in the marketplace. Focuses on developing and executing sales. Explores business-to-business and business-to-customer strategies.
MKTG 6290. Creating and Sustaining Markets. 3 Hours.
Covers conceptual schemes and models for analyzing marketing problems and opportunities. Offers students an opportunity to develop skills used in addressing the important issues involved in the creation, promotion, distribution, and sale of goods and services. Introduces customer analysis, competitor analysis, and the broad environmental trends affecting the success of marketing programs. Uses real-case analyses to illustrate the importance of profitable positioning and strategic fit. Examines the relationship between marketing activities and the other functional areas of the firm.

MKTG 6291. E-Business/Electronic Marketing. 2 Hours.
Explores current issues in electronic marketing/e-business. Examines the Internet as a technology that has profoundly affected marketing in recent years. Topics include the rise and fall of dot-coms and continuing Internet activities beyond the bursting of the dot-com bubble. Also presents theoretical frameworks for the understanding of the adoption and diffusion of innovation.

MKTG 6292. Best Practices for New Product and Services Development. 2 Hours.
Offers an overview of the best-practice model of the new product/service development (NPD) process. Introduces success/failure factors, new product strategy, portfolio management and project selection, idea generation, and concept development and testing. Offers students an opportunity to learn the major challenges facing new product managers in planning and developing new products, particularly in the Fuzzy Front End of the NPD process; the role of the customer and of marketing research in the Fuzzy Front End; and critical best practices that can lead to successful new products/services.

MKTG 6293. Leveraging Traditional and Digital Platforms for New Marketing Strategy. 2 Hours.
Emphasizes the elements of the marketing mix in creating and sustaining value for the firm and its customers. Given the changes to technology and marketing strategy over the past decade, this course focuses especially on how to learn to analyze new and complex marketing situations and to develop marketing programs to address them. Offers students an opportunity to develop quantitative and qualitative analytical skills to measure return on marketing investment and to understand the importance of traditional and digital marketing mix elements and their alignment with overall business strategy.

MKTG 6960. Exam Preparation—Master’s. 0 Hours.
Offers the student the opportunity to prepare for the master's qualifying exam under faculty supervision.

MKTG 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKTG 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

MKTG 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

Marketing - CPS (MKT)

MKT 0301. Principles of Marketing. 2 Hours.
Consists of lectures, readings, and small group discussions on the role of marketing in contemporary society, in the business enterprise, and in the nonprofit organization. Considers the planning, operations, and evaluation of marketing and promotional efforts necessary for the effective marketing of consumer and industrial products and services in both profit and nonprofit organizations. Knowledge or prior experience in marketing recommended.

MKT 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKT 2100. Principles of Marketing. 3 Hours.
Introduces the fundamentals of marketing management, including marketing strategy, consumer decision making, market segmentation and targeting, product, promotion, distribution, and pricing strategies. Emphasizes the importance of ethical behavior in marketing in both profit and nonprofit organizations operating at a domestic or a global level.

MKT 2220. Consumer Behavior. 3 Hours.
Examines the major theoretical approaches to consumer behavior. Examines how the concepts of affect and cognition, behavior, and learning can be used to design and execute an effective marketing strategy in an environment that is more consumer empowered. Understanding the decision-making process, attitude, and behavior of buyers, as well as the impact of the environment, is essential to developing marketing plans in which sophisticated customer relationship management approaches are dependent upon knowing the customer needs and motives. Offers students an opportunity to gain a better understanding of their own buying behavior.

MKT 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKT 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKT 4896. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student's approved experiential activity and integrates it with study in the academic major.

MKT 4950. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

MKT 4955. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

MKT 4983. Topics. 1-4 Hours.
Covers special topics in marketing. May be repeated without limit.

MKT 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKT 4991. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

MKT 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.
MKT 4993. Independent Study. 1-4 Hours.
Offers students an opportunity to undertake special research.

MKT 4994. Internship. 1-4 Hours.
Offers an opportunity for students to obtain supervised professional experience (related to course work) at an on-site location.

MKT 4995. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

MKT 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

MKT 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

MKT 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

MKT 6010. Customer Relationship Management. 4 Hours.
Offers students an opportunity to learn to perform a CRM central needs analysis and outline a CRM plan that integrates all aspects of customer support and relationship management. Adding value by building strong customer relationships is key to the long-term success of almost any company. Understanding the role technology plays in supporting CRM activities is of primary concern. Other topics include vendor selection and barriers to effective implementation.

MKT 6020. Strategic Database Marketing. 4 Hours.
Offers students an opportunity to learn what capabilities various database options can provide and how to capitalize on those capabilities to address marketing challenges. Data warehousing and data mining activities are beginning to transform business activity, particularly as it relates to marketing. Knowledge of sophisticated customer relationship management initiatives, including basic list management and good database management, is essential. Topics include database design, scalability, search and retrieval strategies, and marketing-specific applications.

MKT 6030. E-Marketing Solutions. 4 Hours.
Offers students an opportunity to learn advertising techniques and marketing strategies such as ad server networks, viral and banner ads, and Web portals that allow them to use Web marketing to competitively position an organization or enterprise. Explores customer relationship management strategies that integrate the capabilities of relational databases with the customer-access and community-building capabilities of the Web. Successful e-marketing requires a new set of skills, tools, and strategies. Examines how the Web has changed aspects of the value chain and the distribution of goods and services, including disintermediation and reintermediation.

MKT 6040. Competitive Intelligence. 4 Hours.
Offers students an opportunity to learn to use competitive intelligence frameworks to help them insure that strategic and operational decisions are grounded in the realities of the market in which the organization operates and how to use technology to gather and analyze intelligence information from public and private databases, securities analysts, regulatory agencies, and customers. Marketers today compete in a volatile environment, with constant change and aggressive rivalry the norms. Anticipating major change and assessing the intentions of competitors is critical.

MKT 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

MKT 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MKT 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

MKT 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

MKT 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

MKT 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

MKT 6983. Topics. 1-4 Hours.
Covers special topics in marketing. May be repeated without limit.

MKT 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

MATL 5375. Corrosion of Materials. 4 Hours.
Studies the thermodynamics and rate of corrosion both in aqueous and nonaqueous environments. Topics include different forms of corrosion, mixed potential theory, corrosion testing, corrosion prevention, environmental effects, dependence on materials structure, and high-temperature metal-gas reactions. Emphasis is on metals, alloys, and engineering plastics.

MATL 5380. Particulate Materials Processing. 4 Hours.
Covers the processing of metallic and ceramic materials from particulate form. Includes particulate fabrication, characterization, handling, and consolidation for alloys, ceramics, and composites. Other topics include the principles of sintering in the absence and presence of liquid, advanced materials processing by rapid-solidification powder metallurgy, and the processing and structures of advanced ceramics.

MATL 6250. Soft Matter. 4 Hours.
Introduces the relatively young field of soft matter, which encompasses the physical description of various states of soft materials including liquids, colloids, polymers, foams, gels, granular materials, and a number of biological materials. Soft matter (also known as “soft condensed matter” or “complex fluids”) is less ordered than metals and oxides (hard condensed matter) and is more subject to thermal fluctuations and applied forces. Focuses on critical thinking, problem diagnosis, estimation, statistical analysis, and data-based decision making. Includes many in-class demonstrations from colloidal assembly to emulsion stability to cellular apoptosis. Highlights applications such as industrial processing, life sciences, and environmental remediation. Requires graduate study in related field or permission of instructor.

MATL 6285. Structure, Properties, and Processing of Polymeric Materials. 4 Hours.
Provides an introduction to the organic chemistry of polymers, the effects of chemical composition on structure, melting point, and degradation, and the thermodynamics of polymers. Other topics include the mechanical properties of polymers, analysis and testing, the effects of processing on structures and properties, and the processing of industrial polymers, with applications.
MATL 6290. Fundamentals of Nanostructured Materials. 4 Hours.
Covers fundamentals of 1D and 2D nanomaterials such as carbon nanotubes, graphene, nanowires, 2D atomic crystals (transition metal dichalcogenides), nanostructured graphites and their novel physical properties, and related nanotechnology. Draws from various textbooks and from seminal scientific journal articles that paved the new era of nanomaterials and nanotechnology in the past couple of decades. Includes lab demonstrations and assignments for some nanomaterials synthesis and characterization. An introduction to materials science and engineering, solid-state physics, chemistry of materials, or any related materials engineering background is strongly recommended.

MATL 6300. Computational Material Science. 4 Hours.
Covers the principles and practice of modern computer simulation techniques used to understand solids, liquids, and gases. Reviews the statistical foundation of thermodynamics followed by in-depth discussion of Monte Carlo and molecular dynamics techniques, as well as their links to mesoscale and continuum computational techniques. Discusses intermolecular potentials; extended ensembles; and mathematical algorithms used in molecular simulations, parallel algorithms, and visualization. Requires knowledge of materials science.

MATL 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATL 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

MATL 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

MATL 7345. Macroscopic Transport in Materials Processing. 4 Hours.
Discusses principles of mathematical and physical modeling of the processing of primary and electronic materials. Practical examples include continuous casting, rheocasting, metal-matrix composites, thermal spraying, magnetohydrodynamics, microgravity processing, growth of semiconductor crystals, and chemical vapor deposition. Explores transport equations as tools of mathematical models and similarity criteria as tools of physical models. Topics include Newtonian and non-Newtonian fluid mechanics, multiphase flow, dimensionless numbers, conductive and convective heat transfer, thermal radiation, diffusion and mass transfer with chemical reaction, order-of-magnitude analysis, and intelligent processing techniques. Requires knowledge of heat transfer.

MATL 7350. Mechanical Behavior and Strengthening Mechanisms. 4 Hours.
Covers dislocation theory and includes such topics as crystalline defects, elastic properties of dislocation, movement of dislocations, multiplication, intersection, annihilation, dislocations in crystalline materials, and dislocation arrays and crystal boundaries. Examines application of dislocation theory to microplasticity, dynamic recovery and recrystallization, strengthening mechanisms, and high-temperature deformation. Requires knowledge of materials science.

MATL 7355. Thermodynamics of Materials. 4 Hours.
Covers fundamentals of materials thermodynamics that encompass the first, second, and third laws, entropy, enthalpy, and free energy. Emphasis is on phase stability and equilibria, phase diagram computation with applications to phases in metals, alloys, and ionic compounds. Requires knowledge of thermodynamics course and materials science course.

MATL 7360. Kinetics of Phase Transformations. 4 Hours.
Focuses on the different types of phase transformations that occur in materials in relation to theory and practice. Topics include the diffusion equations, mechanisms of diffusion in crystalline solids, random walk theory, ionic conduction, high-diffusivity paths, diffusional and nondiffusional phase transformations, and microstructural evolution in material processing.

MATL 7365. Properties and Processing of Electronic Materials. 4 Hours.
Focuses on electronic principles and the processing techniques underlying the processing/structure/property relationships of materials. Covers metals and alloys, semiconductors, and insulators. Topics include electronic structures, band theory; thermal, electrical, and magnetic properties; and processing methods including film deposition.

MATL 7374. Special Topics in Materials Engineering. 4 Hours.
Offers topics of interest to the staff member conducting this class for advanced study. May be repeated without limit.

MATL 7390. Advanced Materials Processing. 4 Hours.
Introduces students to such new topics in materials processing as advanced joining, advanced coatings, nanocrystalline materials, biomaterials, materials in information technology, rapid prototyping, and nano/microfabrication.

MATL 7395. Fundamentals of Solidification. 4 Hours.
Discusses fundamental aspects of the solidification of metals and alloys in both conventional and advanced solidification processing. Topics covered include the nucleation and growth of solids, the morphological stability of the solid/liquid interface, capillarity effects, cellular and dendritic solidification, effects of diffusion and convection, eutectic solidification, and the solidification of undercooled melts.

MATL 7945. Master's Project. 4 Hours.
Offers theoretical or experimental work under individual faculty supervision.

MATL 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATL 7978. Independent Study. 1-4 Hours.
Offers theoretical or experimental work under the direction of the faculty in fulfillment of the requirements for the degree. Requires successful completion of the seminar program. May be repeated without limit.

MATL 7990. Thesis. 1-8 Hours.
Offers analytical and/or experimental work conducted under the direction of the faculty in fulfillment of the requirements for the degree. Requires first-year students to attend a graduate seminar program that introduces the students to the methods of choosing a research topic, conducting research, and preparing a thesis. Requires successful completion of the seminar program. May be repeated without limit.

MATL 7994. Thesis Continuation—Part Time. 0 Hours.
Continues thesis work conducted under the supervision of a departmental faculty member. May be repeated without limit.

MATL 7996. Thesis Continuation. 0 Hours.
Offers continuing master's thesis supervision under individual faculty supervision.
MATH 0100. Algebra Review. 4 Hours.
Designed for arts and sciences, criminal justice, and other majors who need to build their algebraic skills in order to succeed in the next math or math-related courses required by their major. Most students are directed to this course as a result of placement tests. Concepts include solving first- and second-degree equations, understanding slopes and graphs of lines, solving simultaneous equations in several variables, solving rational equations, and graphing inequalities. Requires the analysis and solution of word problems. (Does not count toward graduation credit.).

MATH 1000. Mathematics at Northeastern. 1 Hour.
Designed for freshman math majors to introduce them to one another, their major, their college, and the University. Students are introduced to our advising system, register for next semester’s courses, and learn more about co-op. Also helps students develop the academic and interpersonal skills necessary to succeed as a university student.

MATH 1110. College Algebra. 4 Hours.
Covers laws of exponents, roots, graphing of equations and inequalities, special curves (that is, conic sections), functions and operations on functions, complex numbers, matrices, and vectors. If time permits, also explores elementary discrete probability and least squares curve fitting.

MATH 1120. Precalculus. 4 Hours.
Focuses on linear, polynomial, exponential, logarithmic, and trigonometric functions. Emphasis is placed on understanding, manipulating, and graphing these basic functions, their inverses and compositions, and using them to model real-world situations (that is, exponential growth and decay, periodic phenomena). Equations involving these functions are solved using appropriate techniques. Special consideration is given to choosing reasonable functions to fit numerical data.

MATH 1130. College Math for Business and Economics. 4 Hours.
Introduces students to some of the important mathematical concepts and tools (such as modeling revenue, cost and profit with functions) used to solve problems in business and economics. Assumes familiarity with the basic properties of linear, polynomial, exponential, and logarithmic functions. Topics include the method of least squares, regression curves, solving equations involving functions, compound interest, amortization, and other consumer finance models. (Graphing calculator required, see instructor for make and model.).

MATH 1180. Statistical Thinking. 4 Hours.
Introduces statistical thinking to students without using any sophisticated mathematics. Uses extensive class discussion and homework problems to cover statistical reasoning and to evaluate critically the usage of statistics by others. Readings from a wide variety of sources are assigned. Topics include descriptive statistics, sampling theory, and fundamentals of statistical inference (confidence intervals and hypothesis testing).

MATH 1213. Interactive Mathematics. 4 Hours.
Develops problem-solving skills while simultaneously teaching mathematics concepts. Each unit centers on a particular applied problem, which serves to introduce the relevant mathematical topics. These may include but are not limited to polling theory, rate of change, the concepts behind derivatives, probability, binomial distributions, and statistics. The course is not taught in the traditional lecture format and is particularly suited to students who work well in collaborative groups and who enjoy writing about the concepts they are learning. Assessment is based on portfolios, written projects, solutions to “problems of the week,” and exams.

MATH 1215. Mathematical Thinking. 4 Hours.
Focuses on the development of mathematical thinking and its use in a variety of contexts to translate real-world problems into mathematical form and, through analysis, to obtain new information and reach conclusions about the original problems. Mathematical topics include symbolic logic, truth tables, valid arguments, counting principles, and topics in probability theory such as Bayes’ theorem, the binomial distribution, and expected value.

MATH 1216. Recitation for MATH 1215. 0 Hours.
Provides small-group discussion format to cover material in MATH 1215.

MATH 1220. Mathematics of Art. 4 Hours.
Presents mathematical connections and foundations for art. Topics vary and may include aspects of linear perspective and vanishing points, symmetry and patterns, tilings and polygons, Platonic solids and polyhedra, golden ratio, non-Euclidean geometry, hyperbolic geometry, fractals, and other topics. Includes connections and examples in different cultures.

MATH 1225. Game Theory. 4 Hours.
Uses the unifying theme of game theory to explore mathematical techniques for gaining an understanding of real-world problems. Includes matrix algebra, linear programming, probability, trees, von Neumann’s minimax theorem, and Nash’s theorem on equilibrium points. Considers zero-sum and non-zero-sum games, multi-person games, and the prisoner’s dilemma. Explores the applications of game theory, including conflict analysis, and various issues in psychology, sociology, political science, economics, and business. Requires mathematics SAT of at least 600 or permission of instructor.

MATH 1231. Calculus for Business and Economics. 4 Hours.
Provides an overview of differential calculus including derivatives of power, exponential, logarithmic, logistic functions, and functions built from these. Derivatives are used to model rates of change, to estimate change, to optimize functions, and in marginal analysis. The integral calculus is applied to accumulation functions and future value. Emphasis is on realistic business and economics problems, the development of mathematical models from raw business data, and the translation of mathematical results into verbal expression appropriate for the business setting. Also features a semester-long marketing project in which students gather raw data, model it, and use calculus to make business decisions; each student is responsible for a ten-minute presentation. (Graphing calculator required, see instructor for make and model.).

MATH 1241. Calculus 1. 4 Hours.
Serves as both the first half of a two-semester calculus sequence and as a self-contained one-semester course in differential and integral calculus. Introduces basic concepts and techniques of differentiation and integration and applies them to polynomial, exponential, log, and trigonometric functions. Emphasizes the derivative as rate of change and integral as accumulator. Applications include optimization, growth and decay, area, volume, and motion.

MATH 1242. Calculus 2. 4 Hours.
Continues MATH 1241. Introduces additional techniques of integration and numerical approximations of integrals and the use of integral tables; further applications of integrals. Also introduces differential equations and slope fields, and elementary solutions. Introduces functions of several variables, partial derivatives, and multiple integrals.
MATH 1251. Calculus and Differential Equations for Biology 1. 4 Hours.
Begins with the fundamentals of differential calculus and proceeds to the specific type of differential equation problems encountered in biological research. Presents methods for the solutions of these equations and how the exact solutions are obtained from actual laboratory data. Topics include differential calculus: basics, the derivative, the rules of differentiation, curve plotting, exponentials and logarithms, and trigonometric functions; using technology to understand derivatives; biological kinetics: zero- and first-order processes, processes tending toward equilibrium, bi- and tri-exponential processes, and biological half-life; differential equations: particular and general solutions to homogeneous and nonhomogeneous linear equations with constant coefficients, systems of two linear differential equations; compartmental problems: nonzero initial concentration, two-compartment series dilution, diffusion between compartments, population dynamics; and introduction to integration.

MATH 1252. Calculus and Differential Equations for Biology 2. 4 Hours.
Continues MATH 1251. Begins with the integral calculus and proceeds quickly to more advanced topics in differential equations. Introduces linear algebra and uses matrix methods to analyze functions of several variables and to solve larger systems of differential equations. Advanced topics in reaction kinetics are covered. The integral and differential calculus of functions of several variables is followed by the study of numerical methods in integration and solutions of differential equations. Provides a short introduction to probability. Covers Taylor polynomials and infinite series. Special topics include reaction kinetics: Michaelis-Menten processes, tracer experiments, and inflow and outflow through membranes.

MATH 1260. Math Fundamentals for Games. 4 Hours.
Discusses linear algebra and vector geometry in two-, three-, and four-dimensional space. Examines length, dot product, and trigonometry. Introduces linear and affine transformations. Discusses complex numbers in two-space, cross product in three-space, and quaternions in four-space. Provides explicit formulas for rotations in three-space. Examines functions of one argument and treats exponentials and logarithms. Describes parametric curves in space. Discusses binomials, discrete probability, Bézier curves, and random numbers. Concludes with the concept of the derivative, the rules for computing derivatives, and the notion of a differential equation.

MATH 1340. Intensive Calculus for Engineers. 6 Hours.
Contains the material from the first semester of MATH 1341, preceded by material emphasizing the strengthening of precalculus skills. Topics include properties of exponential, logarithmic, and trigonometric functions; differential calculus; and introductory integral calculus.

MATH 1341. Calculus 1 for Science and Engineering. 4 Hours.
Covers definition, calculation, and major uses of the derivative, as well as an introduction to integration. Topics include limits; the derivative as a limit; rules for differentiation; and formulas for the derivatives of algebraic, trigonometric, and exponential/logarithmic functions. Also discusses applications of derivatives to motion, density, optimization, linear approximations, and related rates. Topics on integration include the definition of the integral as a limit of sums, antider differentiation, the fundamental theorem of calculus, and integration by substitution.

MATH 1342. Calculus 2 for Science and Engineering. 4 Hours.
Covers further techniques and applications of integration, infinite series, and introduction to vectors. Topics include integration by parts; numerical integration; improper integrals; separable differential equations; and areas, volumes, and work as integrals. Also discusses convergence of sequences and series of numbers, power series representations and approximations, 3D coordinates, parameterizations, vectors and dot products, tangent and normal vectors, velocity, and acceleration in space. Requires prior completion of MATH 1341 or permission of head mathematics advisor.

MATH 1343. Calculus 2 for Engineering Technology. 4 Hours.
Builds upon the differential and integral calculus topics in MATH 1341 to develop additional tools such as partial derivatives and multiple integrals needed by students of engineering technology. This course is not equivalent to MATH 1342.

MATH 1352. Recitation for MATH 1342. 0 Hours.
Provides small-group discussion format to cover material in MATH 1342.

MATH 2210. Foundations of Mathematics. 4 Hours.
Investigates the modern revolutions in mathematics initiated by Cantor, Gödel, Turing, and Robinson in the fields of set theory, provability, computability, and analysis respectively, as well as provides background on the controversy over the philosophy and underlying logic of mathematics.

MATH 2230. Mathematical Encounters. 4 Hours.
Covers interesting and significant developments in pure and applied mathematics, from ancient times to the present. Fundamental mathematical ideas have a power and utility that are undeniable and a beauty and clarity that can be inspirational. Selected topics may include: prime and irrational numbers, different infinities and different geometries, map coloring, and famous unsolved and recently solved problems. Provides students with an opportunity for hands-on experience actually doing some of the mathematics discussed and to research topics in the library and on the Web.

MATH 2250. Programming Skills for Mathematics. 2 Hours.
Introduces basic programming skills for applied mathematics. Also serves as preparation for co-op assignments. Topics include Excel macros, MATLAB programming, and the R statistical package. Every mathematics major or student in a mathematics combined major is required to take this course or an equivalent course in another department.
MATH 2280. Statistics and Software. 4 Hours.
Provides an introduction to basic statistical techniques and the reasoning behind each statistical procedure. Covers appropriate statistical data analysis methods for applications in health and social sciences. Also examines a statistical package such as SPSS or SAS to implement the data analysis on computer. Topics include descriptive statistics, elementary probability theory, parameter estimation, confidence intervals, hypothesis testing, nonparametric inference, and analysis of variance and regression with a minimum of mathematical derivations.

MATH 2285. Introduction to Multisample Statistics. 4 Hours.
Provides an introduction to statistical techniques, including multisample statistics and regression. Offers an opportunity to learn to choose appropriate statistical data analysis methods for applications in various scientific fields and to learn to use a statistical package to implement the data analysis. Topics include descriptive statistics, elementary probability theory, parameter estimation, confidence intervals, hypothesis testing, analysis of variance, and regression. May also include optimal design. Not open to students who have completed MATH 2280.

MATH 2310. Discrete Mathematics. 4 Hours.
Provides the discrete portion of the mathematical background needed by students in electrical and computer engineering. Topics include Boolean algebra and set theory, logic, and logic gates; growth of functions, and algorithms and their complexity; proofs and mathematical induction; and graphs, trees, and their algorithms. As time permits, additional topics may include methods of enumeration and finite-state machines.

MATH 2321. Calculus 3 for Science and Engineering. 4 Hours.
Extends the techniques of calculus to functions of several variables; introduces vector fields and vector calculus in two and three dimensions. Topics include lines and planes, 3D graphing, partial derivatives, the gradient, tangent planes and local linearization, optimization, multiple integrals, line and surface integrals, the divergence theorem, and theorems of Green and Stokes with applications to science and engineering and several computer lab projects. Requires prior completion of MATH 1342 or MATH 1252.

MATH 2322. Recitation for MATH 2321. 0 Hours.
Provides small-group discussion format to cover material in MATH 2321.

MATH 2323. Calculus 3 for Business, Economics, and Mathematics. 4 Hours.
Covers multivariable calculus with applications from economics and business. Designed for combined majors in business and mathematics and in economics and mathematics, but open to all who have taken first-year calculus. Topics include Gaussian elimination, matrix algebra, determinants, linear independence, calculus of several variables, chain rule, implicit differentiation, optimization, Lagrange multipliers, and integration of functions of several variables with applications to probability.

MATH 2331. Linear Algebra. 4 Hours.
Uses the Gauss-Jordan elimination algorithm to analyze and find bases for subspaces such as the image and kernel of a linear transformation. Covers the geometry of linear transformations: orthogonality, the Gram-Schmidt process, rotation matrices, and least squares fit. Examines diagonalization and similarity, and the spectral theorem and the singular value decomposition. Is primarily for math and science majors; applications are drawn from many technical fields. Computation is aided by the use of software such as Maple or MATLAB, and graphing calculators.

MATH 2334. Introduction to Multivariable Calculus. 4 Hours.
Extends the techniques of calculus to functions of several variables; introduces vector fields and vector calculus in two and three dimensions. Topics include lines and planes, 3D graphing, partial derivatives, the gradient, tangent planes and local linearization, optimization, multiple integrals, line and surface integrals, the divergence theorem, and theorems of Green and Stokes with applications to science and engineering and several computer lab projects. Requires prior completion of MATH 1342.

MATH 2341. Differential Equations and Linear Algebra for Engineering. 4 Hours.
Studies ordinary differential equations, their applications, and techniques for solving them including numerical methods (through computer labs using MS Excel and MATLAB), Laplace transforms, and linear algebra. Topics include linear and nonlinear first- and second-order equations and applications include electrical and mechanical systems, forced oscillation, and resonance. Topics from linear algebra, such as matrices, row-reduction, vector spaces, and eigenvalues/eigenvectors, are developed and applied to systems of differential equations. Requires prior completion of MATH 1342.

MATH 2342. Recitation for MATH 2341. 0 Hours.
Provides small-group discussion format to cover material in MATH 2341.

MATH 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATH 3000. Co-op and Experiential Learning Reflection Seminar 1. 1 Hour.
Intended for math majors who have completed their first co-op assignment or other integrated experiential learning component of the NU Core. The goal is to examine the mathematical problems encountered in these experiences and relate them to courses already taken and to the student’s future program. Faculty members and other guests contribute to the discussion. Grades are determined by the student’s participation in the course and the completion of a final paper.

MATH 3081. Probability and Statistics. 4 Hours.
Focuses on probability theory. Topics include sample space; conditional probability and independence; discrete and continuous probability distributions for one and for several random variables; expectation; variance; special distributions including binomial, Poisson, and normal distributions; law of large numbers; and central limit theorem. Also introduces basic statistical theory including estimation of parameters, confidence intervals, and hypothesis testing.

MATH 3090. Exploration of Modern Mathematics. 4 Hours.
Intends to create student leadership and motivation in understanding and expressing personal, social, and cultural perspectives on modern mathematics. Intended for math majors, math combined majors, and students pursuing a math minor; all others should obtain permission of instructor.

MATH 3150. Real Analysis. 4 Hours.
Provides the theoretical underpinnings of calculus and the advanced study of functions. Emphasis is on precise definitions and rigorous proof. Topics include the real numbers and completeness, continuity and differentiability, the Riemann integral, the fundamental theorem of calculus, inverse function and implicit function theorems, and limits and convergence. Required of all mathematics majors.

MATH 3175. Group Theory. 4 Hours.
Provides the theoretical underpinnings of calculus and the advanced study of functions. Emphasis is on precise definitions and rigorous proof. Topics include the real numbers and completeness, continuity and differentiability, the Riemann integral, the fundamental theorem of calculus, inverse function and implicit function theorems, and limits and convergence. Required of all mathematics majors.

MATH 3250. Group Theory. 4 Hours.
Provides the theoretical underpinnings of calculus and the advanced study of functions. Emphasis is on precise definitions and rigorous proof. Topics include the real numbers and completeness, continuity and differentiability, the Riemann integral, the fundamental theorem of calculus, inverse function and implicit function theorems, and limits and convergence. Required of all mathematics majors.

MATH 3310. Elementary Differential Geometry. 4 Hours.
Studies differential geometry, focusing on curves and surfaces in 3D space. The material presented here can serve as preparation for a more advanced course in Riemannian geometry or differential topology.
MATH 3341. Dynamical Systems. 4 Hours.
Studies dynamical systems and their applications as they arise from differential equations. Solutions are obtained and analyzed as parameterized curves in the plane and used as a means of understanding the evolution of physical processes. Applications include conservative systems, predator-prey interactions, and cooperation and competition of species.

MATH 3527. Number Theory. 4 Hours.
Introduces number theory. Topics include linear diophantine equations, congruences, design of magic squares, Fermat’s little theorem, Euler’s formula, Euler’s phi function, computing powers and roots in modular arithmetic, the RSA encryption system, primitive roots and indices, and the law of quadratic reciprocity. As time permits, may cover diophantine approximation and Pell’s equation, elliptic curves, points on elliptic curves, and Fermat’s last theorem.

MATH 3530. Numerical Analysis. 4 Hours.
Considers various problems including roots of nonlinear equations; simultaneous linear equations: direct and iterative methods of solution; eigenvalue problems; interpolation; and curve fitting. Emphasizes understanding issues rather than proving theorems or coming up with numerical recipes.

MATH 3532. Numerical Solutions of Differential Equations. 4 Hours.
Covers numerical problems in interpolation, differentiation, integration, Fourier transforms, and the solving of differential equations. Emphasizes practical methods and techniques. The heart of the course is a study of modern methods for finding numerical solutions of ordinary differential equations, both initial value problems and boundary value problems. Homework and projects are based on MATLAB.

MATH 3533. Combinatorial Mathematics. 4 Hours.
Introduces techniques of mathematical proofs including mathematical induction. Explores various techniques for counting such as permutation and combinations, inclusion-exclusion principle, recurrence relations, generating functions, Polya enumeration, and the mathematical formulations necessary for these techniques including elementary group theory and equivalence relations.

MATH 3541. Chaotic Dynamical Systems. 4 Hours.
Presents an experimental study using simple mathematical models of chaotic behavior in dynamical systems. (Such systems are frequently found in science and industry.) Goals include the development of skills of experiment and inquiry, integration of visual and analytical modes of thought, and appreciation of issues of problem formulation and representation. Requires prior completion of two semesters of calculus.

MATH 3550. Geometry. 4 Hours.
Studies classical geometry and symmetry groups of geometric figures, with an emphasis on Euclidean geometry. Teaches how to formulate mathematical propositions precisely and how to construct and understand mathematical proofs. Provides a line between classical and modern geometry with the aim of preparing students for further study in group theory and differential geometry.

MATH 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATH 4000. Co-op and Experiential Learning Reflection Seminar 2. 1 Hour.
Intended for math majors who have completed their second co-op assignment or other integrated experiential learning component of the NU Core. The goal is to examine the mathematical problems encountered in these experiences and relate them to courses already taken and to the student’s future program. Faculty members and other guests contribute to the discussion. Grades are determined by the student’s participation in the course and the completion of a final paper.

MATH 4020. Research Capstone. 4 Hours.
Offers students the experience of engaging in mathematical research that builds upon the math courses that they have taken and, possibly, their co-op assignments. Requires students to complete a research project of their own choosing. Focus is on the project and on the students presenting their work. Also requires students to write a reflection paper. Intended for juniors or seniors with experience or interest in mathematics research. Students who do not meet course prerequisites may seek permission of instructor.

MATH 4025. Applied Mathematics Capstone. 4 Hours.
Emphasizes the use of a variety of methods—such as optimization, differential equations, probability, and statistics—to study problems that arise in epidemiology, finance, and other real-world settings. Course work includes assigned exercises, a long-term modeling project on a topic of the student’s choosing, and a reflection paper.

MATH 4525. Applied Analysis. 4 Hours.
Demonstrates the applications of mathematics to interesting physical and biological problems. Methods are chosen from ordinary and partial differential equations, calculus of variations, Laplace transform, perturbation theory, special functions, dimensional analysis, asymptotic analysis, and other techniques of applied mathematics.

MATH 4535. Mathematical Topics in Computer Vision. 4 Hours.
Studies topics in computer vision and the mathematical approaches to them. These include but are not limited to detection of object boundaries in images, nonlinear diffusion, optimization, and curve evolution. Students are required to be able to program algorithms that the course develops. Requires programming experience with MATLAB or an equivalent computer algebra system; familiarity with matrices and their properties is helpful.

MATH 4541. Advanced Calculus. 4 Hours.
Offers a deeper and more generalized look at the ideas and objects of study of calculus. Topics include the generalized calculus of n-space, the inverse and implicit function theorems, differential forms and general Stokes-type theorems, geometry of curves and surfaces, and special functions.

MATH 4545. Fourier Series and PDEs. 4 Hours.
Provides a first course in Fourier series, Sturm-Liouville boundary value problems, and their application to solving the fundamental partial differential equations of mathematical physics: the heat equation, the wave equation, and Laplace’s equation. Green’s functions are also introduced as a means of obtaining closed-form solutions.

MATH 4555. Complex Variables. 4 Hours.
Provides an introduction to the analysis of functions of a complex variable. Starting with the algebra and geometry of complex numbers, basic derivative and contour integral properties are developed for elementary algebraic and transcendental functions as well as for other analytic functions and functions with isolated singularities. Power and Laurent series representations are given. Classical integral theorems, residue theory, and conformal mapping properties are studied. Applications of harmonic functions are presented as time permits.
MATH 4565. Topology. 4 Hours.
Introduces the student to fundamental notions of topology. Introduces basic set theory, then covers the foundations of general topology (axioms for a topological space, continuous functions, homeomorphisms, metric spaces, the subspace, product and quotient topologies, connectedness, compactness, and the Hausdorff condition). Also introduces algebraic and geometric topology (homotopy, covering spaces, fundamental groups, graphs, surfaces, and manifolds) and applications. Other topics are covered if time permits.

MATH 4571. Advanced Linear Algebra. 4 Hours.
Provides a more detailed study of linear transformations and matrices: LU factorization, QR factorization, Spectral theorem and singular value decomposition, Jordan form, positive definite matrices, quadratic forms, partitioned matrices, and norms and numerical issues. Topics and emphasis change from year to year.

MATH 4575. Introduction to Cryptography. 4 Hours.
Introduces the mathematical foundations of cryptography, beginning with the study of divisibility of integers, the Euclidian Algorithm, and an analysis of the Extended Euclidian Algorithm. Includes a short study of groups, semigroups, residue class rings, fields, Fermat’s Little Theorem, Chinese Remainder Theorem, polynomials over fields, and the multiplicative group of residues modulo a prime number. Introduces fundamental notions used to describe encryption schemes together with examples, which include affine linear ciphers and cryptanalysis and continues with probability and perfect secrecy. Presents the Data Encryption Standard (DES) and culminates in the study of the Advanced Encryption Standard (AES), the standard encryption scheme in the United States since 2001.

MATH 4576. Rings and Fields. 4 Hours.
Introduces commutative rings, ideals, integral domains, fields, and the theory of extension fields. Topics include Gaussian integers, Galois groups, and the fundamental theorem of Galois theory. Applications include the impossibility of angle-trisection and the general insolvability of fifth- and higher-degree polynomials. Other topics are covered as time permits.

MATH 4581. Statistics and Stochastic Processes. 4 Hours.
Continues topics introduced in MATH 3081. The first part of the course covers classical procedures of statistics including the t-test, linear regression, and the chi-square test. The second part provides an introduction to stochastic processes with emphasis on Markov chains, random walks, and Brownian motion, with applications to modeling and finance.

MATH 4586. Algebraic Geometry. 4 Hours.
Concentrates on the basics of algebraic geometry, which is the study of geometric objects, such as curves and surfaces, defined by solutions of polynomial equations. Algebraic geometry has links to many other areas of mathematics—number theory, differential geometry, topology, mathematical physics—and has important applications in such fields as engineering, computer science, statistics, and computational biology. Emphasizes examples and indicates along the way interesting problems that can be studied using algebraic geometry.

MATH 4606. Mathematical and Computational Methods for Physics. 4 Hours.
Covers advanced mathematical methods topics that are commonly used in the physical sciences, such as complex calculus, Fourier transforms, special functions, and the principles of variational calculus. Applies these methods to computational simulation and modeling exercises. Introduces basic computational techniques and numerical analysis, such as Newton’s method, Monte Carlo integration, gradient descent, and least squares regression. Uses a simple programming language, such as MATLAB, for the exercises.

MATH 4681. Probability and Risks. 4 Hours.
Reviews main probability and statistics concepts from the point of view of decision risks in actuarial and biomedical contexts, including applications of normal approximation for evaluating statistical risks. Also examines new topics, such as distribution of extreme values and nonparametric statistics with examples. May be especially useful for students preparing for the first actuarial exam on probability and statistics.

MATH 4682. Theory of Interest and Basics of Life Insurance. 4 Hours.
Reviews basic financial instruments in the presence of interest rates, including the measurement of interest and problems in interest (equations of value, basic and more general annuities, yield rates, amortization schedules, bonds and other securities). Examines numerous practical applications. Also introduces problems of life insurance with examples. May be especially useful for students preparing for the second actuarial exam on theory of interest.

MATH 4683. Financial Derivatives. 4 Hours.
Presents the mathematical basis of actuarial models and their application to insurance and other financial risks. Includes but is not limited to financial derivatives such as options and futures. Techniques and applications may be useful for students preparing for actuarial Exam 3F (Society of Actuaries Exam MFE).

MATH 4687. Probability and Risk Theory. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

MATH 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

MATH 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

MATH 4972. Directed Study. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATH 4973. Independent Study. 1-4 Hours.
Offers independent study under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

MATH 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATH 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

MATH 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

MATH 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

MATH 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

MATH 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major. Restricted to mathematics majors who are using it to fulfill their experiential education requirement; for these students it may count as a mathematics elective, subject to approval by instructor and adviser. May be repeated without limit.
MATH 5050. Advanced Engineering Calculus with Applications. 4 Hours. Introduces methods of vector analysis. Expect students to master over thirty predefined types of problems. Topics include analytic geometry in three dimensions, geometric vectors and vector algebra, curves in three-space, linear approximations, the gradient, the chain rule, the Lagrange multiplier, iterated integrals, integrals in curvilinear coordinates, change of variables, vector fields, line integrals, conservative fields, surfaces and surface integrals, the flux and the circulation of a vector field, Green’s theorem, the divergence theorem, and Stokes’ theorem. Illustrates the material by real-world science and engineering applications using the above techniques. Requires familiarity with single-variable calculus.

MATH 5101. Analysis 1: Functions of One Variable. 4 Hours. Offers a rigorous, proof-based introduction to mathematical analysis and its applications. Topics include metric spaces, convergence, compactness, and connectedness; continuous and uniformly continuous functions; derivatives, the mean value theorem, and Taylor series; Riemann integration and the fundamental theorem of calculus; interchanging limit operations; sequences of functions and uniform convergence; Arzelà-Ascoli and Stone-Weierstrass theorems; inverse and implicit function theorems; successive approximations and existence/ uniqueness for ordinary differential equations; linear operators on finite-dimensional vector spaces and applications to systems of ordinary differential equations. Provides a series of computer projects that further develop the connections between theory and applications. Requires permission of instructor and head advisor for undergraduate students.

MATH 5102. Analysis 2: Functions of Several Variables. 4 Hours. Continues MATH 5101. Studies basics of analysis in several variables. Topics include derivative and partial derivatives; the contraction principle; the inverse function and implicit function theorems; derivatives of higher order; Taylor formula in several variables; differentiation of integrals depending on parameters; integration of functions of several variables; change of variables in integrals; differential forms and their integration over simplexes and chains; external multiplication of forms; differential of forms; Stokes’ formula; set functions; Lebesgue measure; measure spaces; measurable functions; integration; comparison with the Riemann integral; L2 as a Hilbert space; and Parseval theorem and Riesz-Fischer theorem. Requires permission of instructor and head advisor for undergraduate students.

MATH 5104. Basics and Probability and Statistics. 4 Hours. Introduces the ideas and the reasoning used in both finite and infinite probabilistic settings. Covers the concepts of sample space, event, and axioms. Studies discrete and continuous probability distributions for one or more random variables, conditional probability, Bayes’s law, independence, and expectation and variance. Explores the use of moments, and the binomial, Poisson, and normal distributions. Examines the law of large numbers, the central limit theorem, and the use of probability in statistical inference including estimation of parameters, confidence interval, and hypotheses testing. Requires a substantial project that connects the material in this course to the secondary school classroom. Requires permission of instructor and head advisor for undergraduate students.

MATH 5105. Basics of Statistics and Stochastic Processes. 3 Hours. Focuses on the classical procedures of statistics including the t-test, linear regression, and the chi-square test. Introduces stochastic processes, with an emphasis on Markov chains, random walks, and Brownian motion, with applications to modeling. Requires a substantial project that connects the material in this course to the secondary school classroom. Requires permission of instructor and head advisor for undergraduate students.

MATH 5106. Basics of Complex Analysis. 3 Hours. Introduces the analysis of functions of a complex variable. Starting with the algebra and geometry of complex numbers, basic derivative and contour integral properties are developed for elementary algebraic and transcendental functions, as well as for other analytic functions with isolated singularities. Gives Power and Laurent series representations. Studies classical integral theorems, residue theory, and conformal mapping properties. Presents applications of harmonic functions as time permits. Requires a substantial project that involves an application of ideas covered in the course. Requires permission of instructor and head advisor for undergraduate students.

MATH 5107. Basics of Number Theory. 3 Hours. Introduces number theory. Topics include linear diophantine equations, congruencies, design of magic squares, Fermat’s little theorem, Euler’s formulas, Euler’s phi function, computing powers and roots in modular arithmetic, the RSA encryption scheme, primitive roots and indices, and the law of quadratic reciprocity. As time permits, additional topics may include diophantine approximation and Pell’s equation, elliptic curves, points on elliptic curves modulo, and elliptic curves and Fermat’s last theorem. Requires a substantial project that connects the material in this course to the secondary school classroom. Requires permission of instructor and head advisor for undergraduate students.

MATH 5108. Methods for Teaching Math. 3 Hours. Explores mathematics teaching methods that are research based, experience based, and grounded in the contemporary theoretical frameworks influencing mathematics education. Emphasis is on issues related to teaching math in an urban school, problem solving, communication, connections, and integrating technology as well as issues of access and equity, assessment, and cross-content teaching strategies. Graduate students are required to demonstrate advanced levels of study and research. Requires permission of instructor and head advisor for undergraduate students.

MATH 5111. Algebra 1. 4 Hours. Covers vector spaces and linear maps. Topics include row and column operations and their application to normal form; eigenvalues and eigenvectors of an endomorphism; characteristic polynomial and Jordan canonical form; multilinear algebra that covers tensor products, symmetric and exterior powers of vector spaces, and their universality properties; quadratic forms, reduction to diagonal form, and Sylvester theorem; hyperbolic spaces and Witt theorem; the orthogonal group and isotropic subspaces; antisymmetric forms and their reduction to canonical form; the symplectic group; and Pfaffian and affine geometry, and classification of conic sections. Requires permission of instructor and head advisor for undergraduate students.

MATH 5112. Algebra 2. 4 Hours. Continues MATH 5111. Topics include groups, such as subgroups, normal subgroups, homomorphism of groups, abelian groups, solvable groups, free groups, finite p-groups, Sylow theorem, permutation groups, and the sign homomorphism; rings, such as homomorphism, ideals, quotient rings, integral domains, extensions of rings, unique factorization domain, Chinese remainder theorem, and Gauss’s lemma; and modules, such as homomorphism, submodules, quotient modules, exact sequence, and structure of finitely generated modules over principal ideal domains. Examples include abelian groups and Jordan canonical form. Also covers representations of finite groups, group rings and irreducible representations, Frobenius reciprocity, Maschke theorem and characters of finite groups, and dual groups. Requires permission of instructor and head advisor for undergraduate students.
MATH 5121. Topology 1. 4 Hours.
Provides an introduction to topology, starting with the basics of point set topology (topological space, continuous maps, homeomorphisms, compactness and connectedness, and identification spaces). Moves on to the basic notions of algebraic and combinatorial topology, such as homotopy equivalences, fundamental group, Seifert-VanKampen theorem, simplicial complexes, classification of surfaces, and covering space theory. Ends with a brief introduction to simplicial homology and knot theory. Requires permission of instructor and head advisor for undergraduate students.

MATH 5122. Geometry 1. 4 Hours.
Covers differentiable manifolds, such as tangent bundles, tensor bundles, vector fields, Frobenius integrability theorem, differential forms, Stokes' theorem, and de Rham cohomology, and curves and surfaces, such as elementary theory of curves and surfaces in R3, fundamental theorem of surfaces in R3, surfaces with constant Gauss or mean curvature, and Gauss-Bonnet theorem for surfaces. Requires permission of instructor and head advisor for undergraduate students.

MATH 5131. Introduction to Mathematical Methods and Modeling. 4 Hours.
Presents mathematical methods emphasizing applications. Uses ordinary and partial differential equations to model the evolution of real-world processes. Topics chosen illustrate the power and versatility of mathematical methods in a variety of applied fields and include population dynamics, drug assimilation, epidemics, spread of pollutants in environmental systems, competing and cooperating species, and heat conduction. Requires students to complete a math-modeling project. Requires undergraduate-level course work in ordinary and partial differential equations.

MATH 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. Requires permission of instructor or head advisor for undergraduate students. May be repeated without limit.

MATH 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. Requires permission of instructor or head advisor for undergraduate students. May be repeated without limit.

MATH 5984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. Requires permission of head advisor for undergraduate students. May be repeated without limit.

MATH 6000. Introduction to Cooperative Education. 0 Hours.
Seeks to prepare students for the transition from college student to full-time employee.

MATH 6960. Exam Preparation—Master's. 0 Hours.
Offers the student the opportunity to prepare for the master's qualifying exam under faculty supervision.

MATH 6961. Internship. 1-4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

MATH 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATH 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

MATH 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

MATH 7000. Qualifying Exam. 0 Hours.
Provides eligible students with an opportunity to take the master's qualifying exam.

MATH 7201. Ordinary Differential Equations. 4 Hours.
Introduces partial differential equations, their theoretical foundations, and their applications, which include optics, propagation of waves (light, sound, and water), electric field theory, and diffusion. Topics include first-order equations by the method of characteristics, linear, quasilinear, and nonlinear equations; applications to traffic flow and geometrical optics; principles for higher-order equations; power series and Cauchy-Kowalevski theorem; classification of second-order equations; linear equations and generalized solutions; wave equations in various space dimensions; domain of dependence and range of influence; conservation of energy, dispersion, and dissipation; Laplace's equation; mean values and the maximum principle; the fundamental solution, Green's functions, and Poisson kernels; applications to physics; properties of harmonic functions; the heat equation; eigenfunction expansions; the maximum principle; Fourier transform and the Gaussian kernel; regularity of solutions; scale invariance and the similarity method; Sobolev spaces; and elliptic regularity.

MATH 7202. Partial Differential Equations 1. 4 Hours.
Introduces partial differential equations, their theoretical foundations, and their applications, which include optics, propagation of waves (light, sound, and water), electric field theory, and diffusion. Topics include first-order equations by the method of characteristics, linear, quasilinear, and nonlinear equations; applications to traffic flow and geometrical optics; principles for higher-order equations; power series and Cauchy-Kowalevski theorem; classification of second-order equations; linear equations and generalized solutions; wave equations in various space dimensions; domain of dependence and range of influence; Huygens' principle; conservation of energy, dispersion, and dissipation; Laplace's equation; mean values and the maximum principle; the fundamental solution, Green's functions, and Poisson kernels; applications to physics; properties of harmonic functions; the heat equation; eigenfunction expansions; the maximum principle; Fourier transform and the Gaussian kernel; regularity of solutions; scale invariance and the similarity method; Sobolev spaces; and elliptic regularity.

MATH 7203. Numerical Analysis 1. 4 Hours.
Introduces methods and techniques used in contemporary number crunching. Covers floating-point computations involving scalars, vectors, and matrices; solvers for sparse and dense linear systems; matrix decompositions; integration of functions and solutions of ordinary differential equations (ODEs); and Fast Fourier transform. Focuses on finding solutions to practical, real-world problems. Knowledge of programming in Matlab is assumed. Knowledge of other programming languages would be good but not required.
MATH 7204. Complex Analysis. 4 Hours.
Introduces complex analysis in one complex variable. Topics include
holomorphic functions of one complex variable and their basic
properties; geometrical and hydrodynamical interpretations of
holomorphic functions; hyperbolic plane and its group of automorphisms;
Cauchy-Riemann equations; Cauchy integral formula; Taylor series
of holomorphic functions; Weierstrass and Runge theorems; Laurent
series and classification of singular points of holomorphic functions;
meromorphic functions; residues and their applications to the calculation
of integrals; analytic continuation and Riemann surfaces; maximum
principle and Schwarz lemma; the Riemann mapping theorem; elements
of the theory of elliptic functions; entire functions, their growth,
and distribution of zeros; asymptotic expansions; and Laplace method
and saddle point method for finding asymptotics of integrals.

MATH 7205. Numerical Analysis 2. 4 Hours.
Introduces complex analysis in one complex variable. Topics include principal component
analysis and applications; types of partial differential equations (PDEs)
and their numerical solution using finite-difference and finite-element
methods; stability of PDE algorithms; expansion of functions using
orthogonal functions and wavelets; parallel computing algorithms
(scans, reductions, parallel prefix, and map-reduce); types and concepts
in parallelism (Flynn’s taxonomy and data-parallel vs. task-parallel
computing); parallel computing frameworks (MPI, OpenMP, and Hadoop);
optimization of smooth functions (Newton and quasi-Newton methods);
constrained optimization; linear and quadratic programming; pattern
recognition and classification using machine learning algorithms;
cryptography; and compression of data. Requires programming
experience with Matlab; experience with other programming languages
(such as C or C++) helpful but not required.

MATH 7206. Inverse Problems: Radon Transform, X-Ray Transform, and
Applications. 4 Hours.
Introduces the radon transform, which is the integration of a two-
dimensional function along all possible lines in the plane, and its
generalization to higher-dimensional case, the x-ray transform. This
is the mathematical framework behind the medical imaging technique
known as computed tomography (CT scan) and seismic imaging in
geoseismology. The transforms are also introductory examples of
integral geometry, as well as the basic tools in microlocal analysis.
Covers the theory of radon transform (x-ray transform), including
the inversion formula, the stability, and the range characterization, and the
numerical applications on the inverse problems of imaging.

MATH 7209. Numerical Analysis Workshop. 0 Hours.
Introduces students to mathematical methods of data analysis,
including techniques for image analysis (filters, edge detection);
Fourier analysis (discrete Fourier transform, high/low-pass filters); and
numerical simulation of partial differential equations. Offers students
an opportunity to gain hands-on experience through use of software
packages and through teamwork on projects.

MATH 7213. Algebra 3: Galois Theory. 4 Hours.
Continues MATH 5112. Studies finite extensions of fields,
automorphisms, structure of finite fields, normal and separable
extensions, Galois group, fundamental theorem of Galois theory,
cyclotomic fields, solvability of equations by radicals, and applications
(for example, coding theory). Also includes Dedekind rings, integral
closure of a Dedekind ring in a field extension, and ramification theory.

MATH 7221. Topology 2. 4 Hours.
Introduces homology and cohomology theory. Studies singular homology, homological algebra (exact sequences,
axioms), Mayer-Vietoris sequence, CW-complexes and cellular homology,
calculation of homology of cellular spaces, and homology with coefficients.
Moves on to cohomology theory, universal coefficients
theorems, Bockstein homomorphism, Kunneth formula, cup and cap
products, Hopf invariant, Borsuk-Ulam theorem, and Brouwer
and Lefschetz-Hopf fixed-point theorems. Ends with a study of duality in
manifolds including orientation bundle, Poincaré duality, Lefschetz
duality, Alexander duality, Euler class, Lefschetz numbers, Gysin
sequence, intersection form, and signature.

MATH 7222. Geometry 2. 4 Hours.
Studies advanced mathematical methods, focusing on illustrating solutions
to practical, real-world problems. Topics include principal component
analysis and applications; types of partial differential equations (PDEs)
and their numerical solution using finite-difference and finite-element
methods; stability of PDE algorithms; expansion of functions using
orthogonal functions and wavelets; parallel computing algorithms
(scans, reductions, parallel prefix, and map-reduce); types and concepts
in parallelism (Flynn’s taxonomy and data-parallel vs. task-parallel
computing); parallel computing frameworks (MPI, OpenMP, and Hadoop);
optimization of smooth functions (Newton and quasi-Newton methods);
constrained optimization; linear and quadratic programming; pattern
recognition and classification using machine learning algorithms;
cryptography; and compression of data. Requires programming
experience with Matlab; experience with other programming languages
(such as C or C++) helpful but not required.

MATH 7233. Graph Theory. 4 Hours.
Introduces graph theory. Topics include adjacency and incidence matrices, paths and connectedness, and vertex degrees
and counting; trees and distance including properties of trees, distance
in graphs, spanning trees, minimum spanning trees, and shortest paths;
matchings and factors including matchings in bipartite graphs, Hall’s
matching condition, and min-max theorems; connectivity, such as vertex
connectivity, edge connectivity, k-connected graphs, and Menger’s
theorems; network flows including maximum network flow, and integral
flows; vertex colorings, such as upper bounds, Brooks’ theorem, graphs
with large chromatic number, and critical graphs; Eulerian circuits and
Hamiltonian cycles including Euler’s theorem, necessary conditions for
Hamiltonian cycles, and sufficient conditions; planar graphs including
embeddings and Euler’s formula, characterization of planar graphs
(Kuratowski’s theorem); and Ramsey theory including Ramsey’s theorem,
Ramsey numbers, and graph Ramsey theory.

MATH 7234. Optimization and Complexity. 4 Hours.
Offers theory and methods of maximizing and minimizing solutions to
various types of problems. Studies combinatorial problems including
mixed integer programming problems (MIP); pure integer programming
problems (IP); Boolean programming problems; and linear programming
problems (LP). Topics include convex subsets and polyhedral subsets
of n-space; relationship between an LP problem and its dual LP problem,
and the duality theorem; simplex algorithm, and Kuhn-Tucker conditions
for optimality for nonlinear functions; and network problems, such as
minimum cost and maximum flow-minimum cut. Also may cover
complexity of algorithms; problem classes P (problems with polynomial-
time algorithms) and NP (problems with nondeterministic polynomial-
time algorithms); Turing machines; and NP-completeness of traveling
salesman problem and other well-known problems.
MATH 7235. Discrete Geometry 1. 4 Hours.
Discusses basic concepts in discrete and combinatorial geometry. Topics may include convex sets and their basic properties; theorems of Helly, Radon, and Carathéodory; separation theorems for convex bodies; convex polytopes; face vectors; Euler’s theorem and Dehn-Sommerville equations; upper bound theorem; symmetry groups; regular polytopes and tessellations; reflection groups and Coxeter groups; regular tessellations on surfaces; abstract regular and chiral polytopes; and other topics at instructor’s discretion.

MATH 7241. Probability 1. 4 Hours.
Offers an introductory course in probability theory, with an emphasis on problem solving and modeling. Starts with basic concepts of probability spaces and random variables, and moves on to the classification of Markov chains with applications. Other topics include the law of large numbers and the central limit theorem, with applications to the theory of random walks and Brownian motion.

MATH 7245. Statistics for Health Sciences. 4 Hours.
Designed as an introductory course in probability and statistics for students in health sciences. Includes descriptive and inferential statistics and discussion of various data’s origin, say, “random sample” from some population. Requires an understanding of probability, including the concept of the probability of an event; axioms of probability; concepts of random variables and their expectation; probability distributions; theoretical results of probability, such as the central limit theorem and its use to approximate deviations of the sample mean. Shows, in the statistics segment, how to use data to estimate parameters of interest and test statistical hypotheses. Introduces regression, analysis of variance, and goodness-of-fit tests, which can be used to test whether a proposed model is consistent with data. Also describes some nonparametric hypothesis tests.

MATH 7260. History of Mathematics. 4 Hours.
Studies mathematics as a living, changing entity through different historical eras and across a wide range of cultures. Topics considered in-depth in their historical-social context include prime numbers, limits infinite series, the notion of algorithm, the concept of function, and engineering applications.

MATH 7301. Functional Analysis. 4 Hours.
Provides an introduction to essential results of functional analysis and some of its applications. The main abstract facts can be understood independently. Proof of some important basic theorems about Hilbert and Banach spaces (Hahn-Banach theorem, open mapping theorem) are omitted, in order to allow more time for applications of the abstract techniques, such as compact operators; Peter-Weyl theorem for compact groups; spectral theory; Gelfand’s theory of commutative C*-algebras; mean ergodic theorem; Fourier transforms and Sobolev embedding theorems; and distributions and elliptic operators.

MATH 7302. Partial Differential Equations 2. 4 Hours.
Continues MATH 7202. Comprises advanced topics in linear and nonlinear partial differential equations, with applications. Topics include pseudodifferential operators and regularity of solutions for elliptic equations; elements of microlocal analysis; propagation of singularities; elements of spectral theory of elliptic operators; properties of eigenvalues and eigenfunctions; variational principle for eigenvalues and its applications; the Schrödinger equation and its meaning in quantum mechanics; parabolic equations and their role in describing heat and diffusion processes; hyperbolic equations and propagation of waves; the Cauchy problem for hyperbolic equations and hyperbolic systems; elements of scattering theory; nonlinear elliptic equations in Riemannian geometry including the Yamabe problem, prescribed scalar curvature problem, and Einstein-Kähler metrics; the Navier-Stokes equations in hydrodynamics; simplest properties and open problem nonlinear hyperbolic equations and shock waves; the Korteweg-de Vries equation and its relation to inverse scattering problems; and solitons and algebra-geometric solutions.

MATH 7303. Complex Manifolds. 4 Hours.
Introduces complex manifolds. Discusses the elementary local theory in several variables including Cauchy’s integral formula, Hartog’s extension theorem, the Weierstrass preparation theorem, and Riemann’s extension theorem. The global theory includes the definition of complex manifolds, sheaf cohomology, line bundles and divisors, Kodaira’s vanishing theorem, Kodaira’s embedding theorem, and Chow’s theorem on complex subvarieties of projective space. Special examples of dimension one and two illustrate the general theory.

MATH 7311. Commutative Algebra. 4 Hours.
Introduces some of the main tools of commutative algebra, particularly those related to algebraic geometry. Topics include prime ideals, localization, and integral extensions; primary decomposition; Krull dimension; chain conditions, and Noetherian and Artinian modules; and additional topics from ring and module theory as time permits.

MATH 7312. Lie Theory. 4 Hours.
Examines Lie groups and Lie algebras, the exponential map, examples, basic structure theorems, representation theory, and applications. Additional topics vary with the instructor and may include infinite-dimensional Lie algebras, algebraic groups, finite groups of Lie type, geometry, and analysis of homogeneous spaces.

MATH 7313. Representation Theory. 4 Hours.
Studies the representation theory of basic algebraic structures such as groups, associative algebras, Lie algebras, and quivers. Topics include general results on the classification of irreducible or indecomposable representations, computation of characters, and structure of derived categories. Examples considered may include symmetric groups, algebraic groups over different fields or Lie groups, semisimple Lie algebras or more general Kac-Moody algebras and their universal enveloping algebras, quantum groups or more general Hopf algebras, Dynkin quivers, and others.

MATH 7314. Algebraic Geometry 1. 4 Hours.
Concentrates on the techniques of algebraic geometry arising from commutative and homological algebra, beginning with a discussion of the basic results for general algebraic varieties, and developing the necessary commutative algebra as needed. Considers affine and projective varieties, morphisms of algebraic varieties, regular and singular points, and normality. Discusses algebraic curves, with a closer look at the relations between the geometry, algebra, and function theories. Examines the Riemann-Roch theorem with its many applications to the study of the geometry of curves. Studies the singularities of curves.
MATH 7315. Algebraic Number Theory. 4 Hours.
Covers rings of integers, Dedekind domains, factorization of ideals, ramification, and the decomposition and inertia subgroups; units in rings of integers, Minkowski's geometry of numbers, and Dirichlet's unit theorem; and class groups, zeta functions, and density sets of primes.

MATH 7316. Lie Algebras. 4 Hours.

MATH 7317. Modern Representation Theory. 4 Hours.
Introduces students to modern techniques of representation theory, including those coming from geometry and mathematical physics. Covers applications of geometry to the representation theory of semisimple Lie algebras, algebraic groups and related algebraic objects, questions related to the representation theory of infinite dimensional Lie algebras, quantum groups, and p-adic groups, as well as category theory methods in representation theory.

MATH 7320. Modern Algebraic Geometry. 4 Hours.
Introduces students to modern techniques of algebraic geometry, including those coming from Lie theory, symplectic and differential geometry, complex analysis, and number theory. Covers subjects related to invariant theory, homological algebra questions of algebraic geometry, including derived categories and complex analytic, differential geometric, and arithmetic aspects of the geometry of algebraic varieties. Students not meeting course prerequisites or restrictions may seek permission of instructor.

MATH 7321. Topology 3. 4 Hours.
Continues MATH 7221. Introduces homotopy theory. Topics include higher homotopy groups, cofibrations, fibrations, homotopy sequences, homotopy groups of Lie groups and homogeneous spaces, Hurewicz theorem, Whitehead theorem, Eilenberg-MacLane spaces, obstruction theory, Postnikov towers, and spectral sequences.

MATH 7322. Geometry 3. 4 Hours.

MATH 7323. Differential Geometry 1. 4 Hours.
Studies geometry and topology of surfaces in R3, with emphasis on the global aspects. Topics include minimal surfaces, constant mean curvature surfaces, and the Gauss-Bonnet theorem.

MATH 7324. Differential Geometry 2. 4 Hours.
Continues MATH 7323. Covers principal bundles, vector bundles, connections on principal bundles and vector bundles, curvatures, holonomy, and the Chern-Weil theory of characteristic classes.

MATH 7331. Algebraic Combinatorics. 4 Hours.
Discusses relationships between algebra and combinatorics. Topics may include enumeration methods; combinatorial sequences of special interest; partially ordered sets and lattices, their incidence algebras, and Möbius functions; permutations statistics; Young tableaux and related combinatorial algorithms; matching theory with applications to assignment problems; graphs and their spectral properties; theory of partitions, and other topics at instructor's discretion.

MATH 7335. Discrete Geometry 2. 4 Hours.
Discusses fundamental concepts in discrete and combinatorial geometry. Topics may include basic convex geometry; convex bodies and polytopes; lattices and quadratic forms; Minkowski's theorem and the geometry of numbers; Blichfeldt's theorem; packing, covering, tiling of spaces; Voronoi diagrams; crystallographic groups and Bieberbach theorems; tilings and aperiodicity; packing and covering densities; Minkowski-Hlawka theorem; sphere packings and codes; polytopes and groups; and other topics at instructor's discretion.

MATH 7340. Statistics for Bioinformatics. 4 Hours.
Introduces the concepts of probability and statistics used in bioinformatics applications, particularly the analysis of microarray data. Uses statistical computation using the open-source R program. Topics include maximum likelihood; Monte Carlo simulations; false discovery rate adjustment; nonparametric methods, including bootstrap and permutation tests; correlation, regression, ANOVA, and generalized linear models; preprocessing of microarray data and gene filtering; visualization of multivariate data; and machine-learning techniques, such as clustering, principal components analysis, support vector machine, neural networks, and regression tree.

MATH 7341. Probability 2. 4 Hours.
Continues MATH 7241. Studies probability theory, with an emphasis on its use in modeling and queueing theory. Starts with basic properties of exponential random variables, and then applies this to the study of the Poisson process. Queueing theory forms the bulk of the course, with analysis of single-server queues, multiserver queues, and networks of queues. Also includes material on continuous-time Markov processes, renewal theory, and Brownian motion.

MATH 7342. Mathematical Statistics. 4 Hours.
Introduces mathematical statistics, emphasizing theory of point estimations. Topics include parametric estimations, minimum variance unbiased estimators, sufficiency and completeness, and Rao-Blackwell theorem; asymptotic (large sample) theory, maximum likelihood estimator (MLE), consistency of MLE, asymptotic theory of MLE, and Cramer-Rao bound; and hypothesis testing, Neyman-Pearson fundamental lemma, and likelihood ratio test.

MATH 7343. Applied Statistics. 4 Hours.
Designed as a basic introductory course in statistical methods for graduate students in mathematics as well as various applied sciences. Topics include descriptive statistics, inference for population means, analysis of variance, nonparametric methods, and linear regression. Studies how to use the computer package SPSS, doing statistical analysis and interpreting computer outputs.

MATH 7344. Regression, ANOVA, and Design. 4 Hours.
Discusses one-sample and two-sample tests; one-way ANOVA; factorial and nested designs; Cochran's theorem; linear and nonlinear regression analysis and corresponding experimental design; analysis of covariance; and simultaneous confidence intervals.

MATH 7345. Nonparametric Methods in Statistics. 4 Hours.
Provides methods for analyzing data that is not necessarily normal. Emphasizes comparing two treatments (the Wilcoxon test, Kolmogorov-Smirnov test), comparison of several treatments (the Kruskal-Wallis test), randomized complete blocks, tests of randomness and independence, asymptotic methods (the delta method, Pitman efficiency), and bootstrapping.

MATH 7346. Time Series. 4 Hours.
Includes analysis of time series in the time domain, the frequency domain and the ARMA models, and Kalman filters.
MATH 7347. Statistical Decision Theory. 4 Hours.
Covers statistics as a game, loss and utility, subjective probability, priors, Bayesian statistics, minimaxity, admissibility and complete classes, James-Stein estimators, and empirical Bayes.

MATH 7348. Categorical Data Analysis. 4 Hours.
Focuses on the analysis of data in tables, that is, with cross-classified data. Comprises loglinear models (a generalization of analysis of variance methods) and logistic regression. Includes homework problems involving real data and sometimes focusing on theoretical issues.

MATH 7349. Stochastic Calculus and Introduction to No-Arbitrage Finance. 4 Hours.
Introduces no-arbitrage discounted contingent claims and methods of their optimization in discrete and continuous time for a finite fixed or random horizon. Establishes the relation of no-arbitrage to the martingale calculus. Introduces stochastic differential equations and corresponding PDE describing functionals of their solutions. Presents examples of contingent claims (such as options) evaluation including the Black-Scholes formula.

MATH 7350. Pseudodifferential Equations. 4 Hours.
Covers Sobolev spaces and pseudodifferential operators on manifolds, applications to the theory of elliptic operators, elliptic regularity, Fredholm property, analytic index, and Hodge theory.

MATH 7351. Mathematical Methods of Classical Mechanics. 4 Hours.
Overviews the mathematical formulation of classical mechanics. Topics include Hamilton’s principle and Lagrange’s equations; solution of the two-body central force problem; rigid body rotation and Euler’s equations; the spinning top; Hamilton’s equations; the Poisson bracket; Liouville’s theorem; and canonical transformations.

MATH 7352. Mathematical Methods of Quantum Mechanics. 4 Hours.
Introduces the basics of quantum mechanics for mathematicians. Introduces the von Neumann’s axiomatics of quantum mechanics with measurements in the first part of the course. Discusses the notions of observables and states, as well as the connections between the quantum and the classical mechanics. The second (larger) part is dedicated to some concrete quantum mechanical problems, such as harmonic oscillator, one-dimensional problems of quantum mechanics, radial Schrödinger equation, and the hydrogen atom. The third part deals with more advanced topics, such as perturbation theory, scattering theory, and spin. Knowledge of functional analysis and classical mechanics recommended.

MATH 7353. Atiyah-Singer Index Theory. 4 Hours.
Introduces the Atiyah-Singer index theorem, one of the most impressive achievements of mathematics of the twentieth century. Connects analysis, geometry, and topology, and has numerous applications in mathematical physics, such as a calculation of the dimensions of moduli spaces of instantons. Topics include elliptic operators in sections of vector bundles, their index, and heat-kernel invariants; the Atiyah-Bott formula and local expression for the index; Chern-Weil construction of characteristic classes; and invariants of representations of orthogonal and unitary groups with applications to the heat kernel invariants of Laplacians. Also covers index formulas for classical elliptic operators and elliptic complexes (Gauss-Bonnet theorem, Hirzebruch signature theorem, the Riemann-Roch-Hirzebruch theorem, and Lefschetz-type theorems). Studies elements of K-theory and index theorem for general elliptic operators. Requires knowledge of pseudodifferential operators.

MATH 7354. Von Neumann Algebras and Applications. 4 Hours.
Introduces von Neumann algebras and their applications to analysis, geometry, and topology. Topics include algebras of operators in a Hilbert space; uniform, strong, and weak topology in the algebra of bounded linear operators in a Hilbert space; von Neumann algebras, traces, and von Neumann dimensions; ideals in von Neumann algebras; factors and their classification; von Neumann algebras and traces associated with actions of discrete groups on manifolds; trace class operators and Hilbert-Schmidt operators; tensor products of von Neumann algebras and traces; analytic expression of traces; elliptic operators; pseudodifferential operators and their Schwartz kernels; uniform Sobolev spaces; index theory in von Neumann algebras and Atiyah L2 index theorem on covering manifolds; von Neumann Betti numbers and Euler characteristics; heat kernel invariants and spectra-near-zero invariants, their interpretation as near-cohomology and homotopy invariance; Witten deformation and semiclassical asymptotics on covering manifolds with applications to L2 Morse inequalities; and L2 Riemann-Roch theorem for elliptic operators.

MATH 7355. Topics in Differential Equations. 4 Hours.
Offers various advanced topics in differential equations and dynamical systems. Intended to meet the needs and interests of students. Topics may include chaotic dynamical systems, delay equations, and dynamical systems on manifolds. May be repeated without limit.

MATH 7356. Complex Analysis in Several Variables. 4 Hours.
Introduces complex analysis in several complex variables. Topics include integral formulas, domains of holomorphy, pseudoconvexity and plurisubharmonicity, L2 estimates, and Stein manifolds and almost complex manifolds.

MATH 7357. Topics in Complex Analysis. 4 Hours.
Introduces complex analysis in one complex variable. Topics include holomorphic functions of one complex variable and their basic properties; geometrical and hydrodynamical interpretations of holomorphic functions; hyperbolic plane and its group of automorphisms; Cauchy-Riemann equations and Cauchy integral formula; Taylor series of holomorphic functions; Weierstrass and Runge theorems; Laurent series and classification of singular points of holomorphic functions; meromorphic functions; residues and their applications to the calculation of integrals; analytic continuation and Riemann surfaces; the maximum principle and Schwarz lemma; the Riemann mapping theorem; elements of the theory of elliptic functions; entire functions, their growth, and distribution of zeros; asymptotic expansions; and Laplace method and saddle point method for finding asymptotics of integrals. May be repeated up to five times.

MATH 7358. Potential Theory. 4 Hours.
Covers Laplace and Poisson equations in electrostatics, calculation of simplest potentials with applications, properties of classical potentials, capacity, equilibrium distribution of charges and its properties, and singularities of bounded harmonic functions. Also discusses the Dirichlet problem for the Laplace equation: classical methods of solving and Wiener solvability criterion, as well as applications of capacity in spectral theory of Schrödinger operators.

MATH 7361. Schemes. 4 Hours.
Studies some of the main tools and key objects of algebraic geometry; in particular, the Hilbert scheme that parametrizes subschemes of a projective variety. Topics include coherence of the higher direct images of coherent sheaves under a projective map, theorem on formal functions, Zariski’s main theorem and Zariski’s connectedness theorem, and the construction of the Hilbert and Picard schemes. May be repeated without limit.
MATH 7362. Topics in Algebra. 4 Hours.
Focuses on various advanced topics in algebra, the specific subject matter depending on the interests of the instructor and of the students. Topics may include homological algebra, commutative algebra, representation theory, or combinatorial aspects of commutative algebra. May be repeated without limit.

MATH 7363. Topics in Algebraic Geometry. 4 Hours.
Focuses on various advanced topics in algebraic geometry, the specific subject matter depending on the interests of the instructor and of the students. Topics may include cohomology theory of algebraic schemes, study of singularities, geometric invariant theory, and flag varieties and Schubert varieties. May be repeated without limit.

MATH 7364. Topics in Representation Theory. 4 Hours.
Offers topics in the representation theory of the classical groups, topics vary according to the interest of the instructor and students. Topics may include root systems, highest weight modules, Verma modules, Weyl character formula, Schur commutator lemma, Schur functors and symmetric functions, and Littlewood-Richardson rule. May be repeated up to five times.

MATH 7371. Morse Theory. 4 Hours.
Covers basic Morse theory for nondegenerate smooth functions, and applications to geodesics, Lie groups and symmetric spaces, Bott periodicity, Morse inequalities, and Witten deformation.

MATH 7372. Characteristic Classes. 4 Hours.
Introduces fiber bundles and characteristic classes. Topics include construction of universal bundles, homotopy classification of principal bundles, bundles over spheres, cohomology of classifying spaces, Stiefel-Whitney classes, Gysin and Wang sequences, Thom isomorphism, Euler class, obstructions, Chern classes, Pontrjagin classes, vector fields on spheres, cobordism theory, Hirzebruch index formula, and exotic spheres.

MATH 7373. Topology of Complex Hypersurface. 4 Hours.
Introduces the topology of complex hypersurfaces and their singularities. Begins with the geometric content of the complex implicit function theorem, and moves quickly to the study of the Milnor fibration of a hypersurface singularity. Uses Brieskorn varieties and plane curves as fundamental examples of isolated singularities. The study of nonisolated singularities, such as the Whitney umbrella and discriminantal varieties, requires stratification theory. Covers the basics of stratified Morse theory and uses it as a tool throughout the course. The course supposes a certain familiarity with the basic objects of topology, algebra, and geometry, but reviews necessary notions as the need arises.

MATH 7374. Riemannian Geometry and General Relativity. 4 Hours.
Introduces Riemannian and pseudo-Riemannian geometry with applications to general relativity. Topics include Riemannian and pseudo-Riemannian metrics, connections, geodesics, curvature tensor, Ricci curvature and scalar curvature, Einstein's law of gravitation, the gravitational red shift, the Schwarzschild solution and black holes, and Einstein equations in the presence of matter and electromagnetic field.

MATH 7375. Topics in Topology. 4 Hours.
Offers various advanced topics in algebraic and geometric topology, the subject matter depending on the instructor and the students. Topics may include Morse theory, fiber bundles and characteristic classes, topology of complex hypersurfaces, knot theory and low-dimensional topology, K-theory, and rational homotopy theory. May be repeated without limit.

MATH 7376. Topics in Differential Geometry. 4 Hours.
Offers various advanced topics in differential geometry, the subject matter depending on the instructor and the students. Topics may include symplectic geometry, general relativity, gauge theory, and Kähler geometry. May be repeated without limit.

MATH 7381. Topics in Combinatorics. 4 Hours.
Offers various advanced topics in combinatorics, the subject matter depending on the instructor and the students. May be repeated without limit.

MATH 7382. Topics in Probability. 4 Hours.
Offers various advanced topics in probability and related areas. The specific subject matter depends on the interest of the instructor and students. May be repeated up to five times.

MATH 7391. Topics in Statistics. 4 Hours.
Focuses on various advanced topics in statistics, the specific subject matter depending on the interest of the instructor and students. Topics may include multivariate statistics and clustering; biostatistics; Stein's paradox and admissibility; foundation; nonparametric density and regression estimation; and probabilistic and inferential aspects of reliability theory. May be repeated without limit.

MATH 7392. Topics in Geometry. 4 Hours.
Focuses on various advanced topics in geometry. The specific subject matter depends on the interest of the instructor and students. Topics may include symplectic geometry and Kähler geometry. May be repeated up to five times.

MATH 7721. Readings in Topology. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7722. Readings in Algebraic Topology. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7723. Readings in Geometric Topology. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7725. Readings in Singularities. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7730. Readings in Combinatorics. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7731. Readings in Combinatorics and Algebra. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7732. Readings in Combinatorial Geometry. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7733. Readings in Graph Theory. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7734. Readings in Algebra. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.
MATH 7735. Readings in Algebraic Geometry. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7736. Readings in Discrete Geometry. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7737. Readings in Commutative Algebra. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7741. Readings in Probability and Statistics. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7751. Readings: Analysis. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7752. Readings in Real Analysis. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7753. Readings in Geometric Analysis. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7754. Readings in Ordinary Differential Equations. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7755. Readings in Partial Differential Equations. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 7771. Readings in Geometry. 4 Hours.
Offers topics in geometry that are beyond the ordinary undergraduate topics. Topics include the regular polytopes in dimensions greater than three, straight-edge and compass constructions in hyperbolic geometry, Penrose tilings, the geometry and algebra of the wallpaper, and three-dimensional Euclidean groups. May be repeated without limit.

MATH 7772. Readings in Coding Theory. 4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated up to five times.

MATH 7762. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MATH 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

MATH 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

MATH 7990. Thesis. 1-4 Hours.
Offers theoretical and experimental work conducted under the supervision of a departmental faculty. May be repeated without limit.

MATH 7996. Thesis Continuation. 0 Hours.
Continues research for the master’s degree.

MATH 8440. Mathematical Tapas Seminar. 4 Hours.
Intended for graduate students in mathematics who have completed their master’s degree and are just starting the PhD program but have not yet selected an area of specialization or a thesis adviser. Acquaints students with the areas of research that are represented by our faculty and what it means to be a mathematical scholar. Faculty members give expository lectures on their own work or areas in which they could supervise a doctoral candidate. Gives students the opportunity to read one or two mathematical research papers during the course of the seminar; students may be asked to give an oral presentation near the end of the course. May be repeated up to three times.

MATH 8450. Research Seminar in Mathematics. 4 Hours.
Introduces graduate students to current research in geometry, topology, mathematical physics, and in other areas of mathematics. Requires permission of instructor for undergraduate mathematics students. May be repeated without limit.

MATH 8460. Graduate Seminar in Geometry and Representation Theory. 4 Hours.
Introduces students to topics of fundamental importance for geometry and representation theory by reading foundational papers in these subjects, making presentations, and participating in discussions. Requires permission of instructor.

MATH 8662. Master's Research. 2 Hours.
Offers research methods and their application to a specific problem under the direction of a graduate faculty member.

MATH 8664. Master's Research. 4 Hours.
Offers research methods and their application to a specific problem under the direction of a graduate faculty member.

MATH 8948. Research Methods in Mathematics. 4 Hours.
Seeks to prepare students to do independent research beyond the topic of the dissertation. Offers students an opportunity to learn current trends in the area related to their dissertation. Discusses both technical methods and the ideas of how to find doable but interesting research problems. May be repeated once.

MATH 8960. Exam Preparation—Doctoral. 0 Hours.
Offers the student the opportunity to prepare for the PhD qualifying exam under faculty supervision.

MATH 8964. Master's Research. 4 Hours.
Offers research methods and their application to a specific problem under the direction of a graduate faculty member.

MATH 8982. Readings. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

MATH 8984. Research. 1-4 Hours.
Offers a reading course to be arranged between an individual student and instructor on a topic of their mutual choice. May be repeated without limit.

MATH 8986. Research. 0 Hours.
Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

MATH 9000. PhD Candidacy Achieved. 0 Hours.
Indicates successful completion of the doctoral comprehensive exam.
MATH 9948. Modern Mathematical Research. 4 Hours.
Offers students an opportunity to study the most recent developments in the area of their research, not necessarily directly related to the topic of their dissertation. Seeks to expand students’ horizons and to prepare them to understand talks at mathematical conferences in their area of research. May be repeated once.

MATH 9984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

MATH 9986. Research. 0 Hours.
Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

MATH 9990. Dissertation. 0 Hours.
Offers dissertation supervision by members of the department. May be repeated without limit.

MATH 9996. Dissertation Continuation. 0 Hours.
Offers dissertation supervision by members of the department. May be repeated without limit.

Mathematics - CPS (MTH)

MTH 0102. College Mathematics 1. 2.4 Hours.
Offers the first course in a two-quarter sequence of algebra. Includes a review of polynomials, rational expressions, and rational exponents. Topics include solving equations and inequalities, complex numbers, and linear and quadratic functions. Discusses applications to these topics.

MTH 0103. College Mathematics 2. 4.8 Hours.
Offers the second course in a two-quarter sequence of college algebra. Topics include the function concept; linear, quadratic, polynomial, rational, exponential, and logarithmic functions; and systems of equations. Discusses applications to these topics.

MTH 0105. Introduction to Calculus. 1.8 Hour.
Includes a review of precalculus and conic sections. Topics include limits, continuity, and introduction to differentiation. A graphing calculator is required.

MTH 0106. Calculus 1. 3.6 Hours.
Offers a continuation of the study of calculus started in MTH 0105. Topics include differentiation of algebraic, trigonometric, exponential, and logarithmic functions; applications of the derivative; antiderivatives; the definite and indefinite integral; the Fundamental Theorem of Calculus; and integration by substitution. Additional topics include differentiation and integration of hyperbolic and inverse trigonometric functions. A graphing calculator is required.

MTH 0108. Foundations of Mathematics. 4 Hours.
Designed for college students who have no previous experience in algebra and for those who need a review of basic algebraic concepts. Offers students an opportunity to work with mathematical symbols and operations to develop an understanding of how mathematics can model and solve problems and to obtain the skills necessary to successfully complete MTH 1001. Topics include variables, exponents, the real number system, fractions, basic operations, order of operations, simplifying algebraic expressions, solving linear equations, solving equations containing fractions, solving equations containing decimals, ratios, proportions, and graphing linear equations. Credit for this course cannot be applied to School of Engineering Technology degree programs or to College of Professional Studies degree programs.

MTH 0115. Prealgebra. 1.5 Hour.
Covers the simplifying of algebraic expressions; solving and graphing linear equations and inequalities; radicals, exponents, factoring polynomials, rational expressions, systems of equations, and quadratic equations.

MTH 0120. Prealgebra. 3.6 Hours.
Covers the simplifying of algebraic expressions; solving and graphing linear equations and inequalities; radicals, exponents, factoring polynomials, rational expressions, systems of equations, and quadratic equations.

MTH 0901. Algebra, Numbers, and Geometry. 6.8 Hours.
Develops the principles of beginning and intermediate algebra. Offers students an opportunity to develop a clear understanding of the mathematical concepts involved and to translate personal mathematical accomplishment into effective teaching strategies. Explores elements of arithmetic as a basis for understanding algebra. Uses exciting “tricks” and “puzzles” that can also be used to enliven the classroom experience for students. The tools and techniques of arithmetic then motivate an understanding of the general principles of algebra. Explores visual connections via graphing. Topics include principles of arithmetic (algebraic rules, order of operations, exponents, logarithms), number theory (primes, Euclidean algorithm), elements of combinatorics (counting techniques, divided differences), number systems and bases, polynomial algebra, linear functions, manipulating quadratics, graphing and connections to area, rational functions, complex numbers, and more.

MTH 0902. Geometry. 6.8 Hours.
Examines the study and teaching of beginning and intermediate geometry. Offers teachers an opportunity to develop a clear understanding of the mathematical concepts involved and to translate personal mathematical accomplishment into effective teaching strategies. Topics include pi and why it is the same for all circles, the value of pi for a square, what motivated Euclid to develop his controversial parallel postulate, why a straight line is the shortest path between two points, and trigonometry. Other topics include volume, Pythagoras’ theorem, distance and equidistance, parallelism, circles, triangles, polygons, the role of similarity, and conics, all within the framework of innovation, understanding, and an enjoyment of mathematics.

MTH 0903. Functions and Trigonometry. 6.8 Hours.
Serves as a precursor to a course in calculus and as a stand-alone course in methods of advanced algebraic thinking. Introduces the study of functions—their definition, application, methods of manipulating them, generalized notions (so-called multivalued functions and relations), and their algebra. The act of graphing functions provides ties to geometry. This course utilizes innovative geometric insights to provide a sound and comprehensive perspective to the topic. The study of logarithms, the number “e,” complex numbers, trigonometry, growth and decay, and the conic sections find a natural place in this very general setting. Offers students an opportunity to develop a clear understanding of mathematical concepts and a deep global perspective of algebraic thinking as a whole.
MTH 0904. Mathematics for Social Justice. 6.8 Hours.
Explores principles of social justice in education as a lens to rethinking school mathematics curriculum and pedagogy. Offers students an opportunity to expand their knowledge and awareness of issues of social justice in the context of mathematics education; to develop a pedagogical model for teaching for social change; to critically examine the content of school mathematics curriculum and instructional practices from the perspective of social justice; and to contemplate the role of the teacher as an agent of change and “transformative intellectual.” Emphasizes the relationship between theory and practice in an attempt to understand some of the complexities and challenges in addressing issues of social justice in mathematics teaching and learning.

MTH 0905. Classroom Technologies for the Middle and High School. 6.8 Hours.
Seeks to improve teachers’ skills in bringing together curriculum and technology to support student learning. Technology is an integral part of the modern mathematics classroom, including the almost universal use of the graphing calculator. Two computer programs, Excel and the Geometer’s Sketchpad, have also been extensively used. These technologies are meant to illuminate and enhance concepts and techniques in the math curriculum. The NCTM emphasizes multiple representations of problems and methods, and these programs and calculators are designed for that exact purpose. Because there is little curriculum designed for the classroom use of technology, teachers must acquire and apply their own skills in adapting the technology into their teaching. Participants have the opportunity to practice presenting lessons with particular emphasis on the graphing calculator.

MTH 0909. Probability and Statistics. 6.8 Hours.
Introduces probability and statistics. Combines hands-on activities with conceptual exploration. Uses a non-calculus-based introduction to methods of thinking about problems in probability and statistics. Utilizes technology for simulations, evaluation of distribution functions, and experiential learning. In probability, examines continuous situations using either geometrical methods or use of formulas and technology. In statistics, topics covered include sampling methods and various ways of displaying and interpreting data.

MTH 0910. Precalculus for the Secondary Teacher. 6.8 Hours.
Explores the behavior and the applications of polynomial, exponential, logarithmic, and trigonometric functions. Examines the wide array of mathematics curves that serve as the foundational examples on which the calculus is then preformed. Considers other curves, such as the circle, ellipse, and hyperbola, as well as disparate topics, such as vectors, sequences, and series. Offers students an opportunity to use technology extensively, mostly the graphing calculator, to facilitate the explorations and to complete the skills necessary for a rigorous calculus course. Uses real-world examples to illuminate each of the elements of the course.

MTH 0915. Introduction to Quantitative Reasoning for Middle School and High School Mathematics. 6.8 Hours.
Offers participants an opportunity to understand quantitative reasoning (QR) and to integrate a QR approach and concepts into existing or newly developed middle school and high school curriculum. Focuses on learning and doing mathematical reasoning in a variety of contexts, such as personal finance and demographics. Topics include number sense, real-life probability and statistics, critical thinking and problem solving, interpreting graphs and tables, and modeling. Activities include mathematical problem solving, skill development, using a spreadsheet, reflecting on pedagogical practices, and examining connections to the Common Core Standards. Offers participants an opportunity to design and share problems, lesson plans, and projects to suit the interests and needs of their students and curriculum, working toward preparing students for future success in college, career, and life experiences.

MTH 0920. Mathematical Thinking in the Middle School. 6.8 Hours.
Aimed at middle school teachers. Focuses on developing key mathematical thinking in the formative pre-high school years. Explores, at the base level, content in numbers, number sense, and beginning algebra, with connections to geometry, with the goal of transforming procedural practice into clear and effective conceptual understanding. Offers participants an opportunity to reinforce their own personal understanding of mathematics as well as the tools to translate personal mathematical accomplishment into effective teaching strategy. Examines devices to enliven the classroom experience for students. Uses the tools and techniques of arithmetic to motivate and help develop clear understanding of the principles of algebra. Explores visual connections.

MTH 0937. Differentiating Instruction in the K–8 Mathematics Classroom. 6.8 Hours.
Presents best practices in differentiating instruction, with a focus on K–8 mathematics. Focuses on how best to reach an understanding about the importance of differentiated instruction, when to differentiate, and what tools are available to assist students achieve greater potential. Teaching and learning the K–8 mathematics curriculum in an inclusive classroom setting with English-language learner (ELL) students, special education students, gifted learners, and regular education students is less of a daunting task when a myriad of learning styles and ways of knowing how to accommodate these styles are seen as pieces of an intricate puzzle. As the range of student learners continues to widen, the challenges educators face to meet their needs simultaneously increases.

MTH 0949. Conceptual Calculus. 6.8 Hours.
Covers the techniques and practices of calculus. Offers students an opportunity to develop a deep understanding of the general principles, mechanisms, and issues that make the subject work. Introduces and develops the concepts covered in the standard AB calculus curriculum —limits, continuity, differential calculus, beginning integral calculus, and the fundamental theorem of calculus. Discusses the historical and philosophical context of the mathematics.

MTH 0963. Geometry and Measurement for Elementary Teachers. 6.8 Hours.
Focuses on the foundations of informal measurement and geometry in one-, two-, and three-dimensional space. Explores how children develop an understanding of length, area, volume, angles, and geometric relationships, as well as visualization, spatial reasoning, and geometric modeling. Offers students an opportunity to develop the vocabulary of geometry and explore both definitions and attributes of geometric objects. Covers transformational geometry, similarity, congruence, geometric constructions, and how to calculate the perimeter of polygons, areas of two-dimensional shapes, and volumes of three-dimensional shapes.

MTH 1100. College Algebra. 3 Hours.
Covers laws of exponents, factoring, inequalities, polynomials, roots, linear and quadratic equations, complex numbers, rational functions, systems of equations, exponential and logarithmic functions, and inverse functions. Requires students to communicate mathematical ideas using symbolic and written forms and to apply algebraic concepts to real-life applications. Seeks to provide students with a solid foundation of concepts and skills necessary to advance to statistics or precalculus. Requires prior knowledge of the manipulation and simplification of basic algebraic expressions.
MTH 1200. Precalculus. 3 Hours.
Combines algebraic, geometric, and trigonometric concepts and techniques to model real-world situations (that is, exponential growth and decay, periodic phenomena). Successful completion of this course should strengthen the student’s conceptual understanding of mathematics and critical reasoning. Focuses on linear, polynomial, exponential, logarithmic, trigonometric functions and conic sections. Emphasizes understanding, manipulating, and graphing these basic functions, their inverses and compositions, and using them to solve applications drawn from the physical and natural sciences.

MTH 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MTH 2100. Calculus 1. 3 Hours.
Focuses primarily on differential calculus. Using mathematical models, offers students an opportunity to make predictions and inferences in a variety of applications that relate to the fields of engineering, economics, biology, etc. For example, students can use differential calculus to determine what is the most cost-effective speed to drive a car, using the least amount of fuel. These types of problems, called optimization problems, require an understanding of the derivative as a rate of change. The course focuses on how to apply rules and properties of derivatives to model and solve application problems in science, engineering, and technology. As a prelude to MTH 2105, at the end of the semester, the concept of the integral is introduced as a limit of sums and antiderivatives.

MTH 2105. Calculus 2. 3 Hours.
Continues MTH 2100. Uses mathematical models to make predictions and inferences in a variety of applications that relate to the fields of engineering, economics, biology, etc. Focuses primarily on integral calculus and infinite sequences and series. Topics include definite and indefinite integration, the fundamental theorem of calculus, and the use of integration methods in the calculation of areas and volumes and other applications. Introduces improper integrals as well as the study of infinite sequences and series, power series, Taylor series, and techniques for determining convergence or divergence of sequences series. This course offers an in-depth overview of the above concepts and applies them to solve problems in science, engineering, and technology.

MTH 2110. Calculus 3. 3 Hours.
Extends concepts and problem-solving techniques of single-variable calculus to multivariate calculus. Employs techniques to evaluate higher-order differentiation and integration, including vector fields and vector calculus in 2D and 3D. Topics include lines and planes; 3D graphing; partial derivatives; the gradient, tangent planes, and local linearization; optimization; multiple integrals; line and surface integrals; the divergence theorem; and theorems of Green and Stokes with applications to science, engineering, and technology.

MTH 2400. Technology and Applications of Discrete Mathematics. 3 Hours.
Offers students experience with and exposure to ideas and techniques from discrete mathematics, which is at the foundation of the technological disciplines. Focuses on applications and practical use of discrete mathematics as it is applied to the computing sciences and engineering disciplines. Topics covered include sets; logic; Boolean algebra; machine representations of numbers (decimal, binary, octal, hexadecimal) and arithmetic; counting methods; graphs; and trees. Specific applications include algorithms and complexity, circuits and circuit diagrams, searching and sorting, networks, probability, and finite-state machines. Requires students to select and apply appropriate techniques from discrete math to address common problems found in modern technological systems, especially software and computing hardware design.

MTH 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MTH 3200. Differential Equations. 3 Hours.
Studies equations involving a single independent variable, also referred to as ordinary differential equations. Mathematics models are created and used by engineers and scientists to express the laws of nature and other physical phenomena. The use of differential equations is pivotal in constructing such models. Reviews techniques to formulate, solve, and interpret ordinary differentials and their application in science, engineering, and technology. Topics include numerical methods, Laplace transforms, linear algebra, matrix algebra, systems of algebraic equations, eigenvalues, and eigenvectors.

MTH 3300. Applied Probability and Statistics. 3 Hours.
Covers randomness, finite probability space, probability measure, events; conditional probability, independence, Bayes’ theorem; discrete random variables; binomial and Poisson distributions; concepts of mean and variance; continuous random variables; exponential and normal distribution, probability density functions, calculation of mean and variance; central limit theorem and implications for normal distribution; purpose and the nature of sampling; nature of estimates, point estimates, interval estimates; maximum likelihood, least-squares approach; confidence intervals; estimates for one or two samples; development of models and associated hypotheses; nature of hypothesis formulation, null and alternate hypotheses, testing hypotheses; test statistics: t-test, chi-squared test; correlation and regression; Markov processes, discrete time systems, and continuous time systems; queuing theory, including system simulation and modeling, queuing methods.

MTH 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MTH 4896. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major.

MTH 4950. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

MTH 4955. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

MTH 4983. Topics. 1-4 Hours.
Covers special topics in mathematics. May be repeated without limit.

MTH 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
MTH 4991. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

MTH 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

MTH 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

MTH 4994. Internship. 1-4 Hours.
Provides students with an opportunity for internship work.

MTH 4995. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

MTH 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

MTH 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

MTH 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

MTH 6016. Calculus-Based Probability and Statistics. 4 Hours.
Focuses on probability theory. Topics include conditional probability and independence; discrete and continuous probability distributions for one and for several random variables; expectation variance; special distributions, including binomial, Poisson, and normal distributions; the law of large numbers and central limit theorem. Introduces basic statistical theory, including estimation of parameters, confidence intervals, and hypothesis testing. Requires prior completion of one semester of multivariable calculus.

MTH 6108. Precalculus. 4 Hours.
Serves as a precursor to a rigorous course in calculus giving a swift review of the necessary techniques and practices of algebra and trigonometry. Topics covered include a review of polynomial and rational functions (their algebraic manipulation and their graphing), exponential functions and population models, logarithmic functions, derivation of Euler's number "e," trigonometry, conic sections, complex numbers theory, limits and continuity, and the study of systems of equations (beginning linear algebra and linear programming). Successful students of this course are prepared to take MTH 6208.

MTH 6201. Algebra, Numbers, and Geometry. 4 Hours.
Develops the principles of algebra. Offers students an opportunity to develop a clear understanding of the mathematical concepts involved and to translate personal mathematical accomplishment into effective teaching strategies. Explores arithmetic as a basis for understanding algebra. Uses exciting "tricks" and "puzzles" that can be used in the classroom. The tools and techniques of arithmetic then motivate an understanding of the general principles of algebra. Explores visual connections via graphing. Covers principles of arithmetic (algebraic rules, order of operations, exponents, logarithms), number theory (primes, Euclidean algorithm), elements of combinatorics (counting techniques, divided differences), number systems and bases, polynomial algebra, linear functions, manipulating quadratics, graphing and connections to area, rational functions, and complex numbers. Emphasizes algebra and numbers, though integral elements of geometry appear throughout discussions.

MTH 6202. Geometry. 4 Hours.
Examines the study and teaching of beginning and intermediate geometry. Offers teachers an opportunity to develop for themselves a clear understanding of the mathematical concepts involved, and to translate personal mathematical accomplishment into effective teaching strategies. Topics covered include area and volume, Pythagoras' theorem and its consequences, distance and equidistance, parallelism, circles, triangles, polygons, the role of similarity, trigonometry, and conics, all within the framework of innovation, understanding, and an enjoyment of mathematics.

MTH 6203. Functions and Trigonometry. 4 Hours.
Serves as a precursor to a course in calculus and as a stand-alone course in methods of advanced algebraic thinking. Introduces the study of functions—their definition, application, methods of manipulating them, generalized notions (so-called multivalued functions and relations), and their algebra. The act of graphing functions provides ties to geometry. Utilizes innovative geometric insights to provide a sound and comprehensive perspective to the topic. The study of logarithms, the number "e," complex numbers, trigonometry, growth and decay, and the conic sections find a natural place in this very general setting. Offers students an opportunity to develop a clear understanding of mathematical concepts and a deep global perspective of algebraic thinking as a whole.

MTH 6207. Problem Solving. 4 Hours.
Offers K–3 teachers an opportunity to expand and refine problem-solving skills while improving content knowledge of generalized arithmetic, algebra, and the role it plays in doing math in the primary classroom. Utilizes hands-on experiences to provide participants opportunities to solve problems in more than one way, to reason and think, to communicate in a variety of ways, and to represent concepts with symbols. Making connections and supporting the Mathematics Curriculum Framework strands of number sense and operations, patterns, relations, and algebra, data analysis, statistics, and probability are embedded in each task.

MTH 6208. Calculus. 4 Hours.
Covers the techniques and practices of calculus and offers students an opportunity to develop a deep understanding of the principles, mechanisms, and issues that make the subject work, allowing one to begin to apply theory to a wide range of contexts. Personal accomplishment and a sense of perspective enable one to be an effective educator. Explores the computation of the area of curved figures (as discussed since antiquity) and the problem of grinding parabolic lenses with flat grinding planes (as arose with the invention of the telescope in the early 1600s). The impact of Newton's and Leibniz' discovery that these two problems are intimately connected and that the solution of one, in fact, solves the other provides the historical and mathematical context of the course.

MTH 6209. Probability and Statistics. 4 Hours.
Develops the practices and principles of probability theory, descriptive statistics, and beginning inferential statistics, vast, historically rich, and philosophically perturbing subjects. Identifies the key concepts and principles behind these works and demystifies the approaches that seem counter to intuition. Uses give-and-take conversation, guided by both conceptual and practical exploration, to build up knowledge. As such, classes are interactive. Topics covered include naïve probability theory, models of probability theory, philosophical consequences, sampling, descriptive techniques (plot diagrams and numeric descriptives—mean, median, mode, variance, deviation), correlation and regression, distributions, inferential methods, reliability, techniques, and practices.
MTH 6218. History of Mathematics. 4 Hours.

Begins with arithmetic, protoalgebra, and geometry of the people of the fertile crescent (the Mesopotamians), the people of the valley of the Nile River (the Egyptians), and the early civilization on Crete (the Minoans), who were the forerunners of the Mycenaean Greeks and the classical ancient Greeks. Studies the people of the middle and lower Yellow River (the Chinese) and the people of the area near the Indus River valley (the Indians). The roots of the above cultures seem to have begun about 4,000 years ago. Building upon the discoveries and creations of these five ancient cultures, the inheritors of Alexander the Great’s conquests, the Hellenistic Greeks and the Islamic societies, made great strides in advancing mathematics. Renaissance Italy built upon this mathematical edifice.

MTH 6219. Introduction to Analysis. 4 Hours.

Provides the theoretical underpinnings of calculus and the advanced study of functions needed for teaching AB or BC advanced placement calculus. Emphasizes precise definitions and rigorous proofs. Offers students an opportunity to understand a rigorous proof of the Fundamental Theorem of Calculus and to learn how to write careful, logical, and understandable mathematical proofs. Topics include the construction of real numbers from rational numbers, completeness, continuity, uniform continuity, and differentiability of functions in the inverse function theorem and the Riemann integral.

MTH 6220. Linear Algebra. 4 Hours.

Surveys linear algebra, including the study of systems of linear equations, linear mappings, and their applications. Topics include matrices and solving systems of equations by the Gauss-Jordan elimination algorithm, geometric, and algebraic properties of vectors; properties of vector spaces (e.g., basis, dimension); the matrix of representing a linear transformation; and inverses, determinants, and the definitions and basic properties of groups, rings, and fields.

MTH 6222. Number Theory. 4 Hours.

Introduces elementary number theory. Includes linear Diophantine equations, congruencies, modular arithmetic, design of magic squares, Fermat’s little theorem, Euler’s phi function, the RSA encryption system, and the law of quadratic reciprocity. Discusses additional topics, such as Diophantine approximation, Pell’s equation, elliptic curves, and Fermat’s last theorem, if time permits.

MTH 6228. Calculus 2. 4 Hours.

Follows the standard BC calculus curriculum. Reviews differentiation and integration and the Fundamental Theorem of Calculus, followed by a study of further integration techniques, differential equations, numerical methods and error analysis, sequences and series, Taylor series, polar coordinates, and parametric equations. Familiarity with algebra and trigonometry is assumed.

MTH 6232. Multivariable Calculus. 4 Hours.

Surveys multivariable calculus, which serves as the gateway to advanced mathematics courses and is a basic prerequisite for applied mathematics programs. Offers students an opportunity to learn to visualize mathematical shapes and ideas in two and three dimensions and to understand the derivative of a function of two and three variables and the integral to multivariable functions.

MTH 6237. Differentiating Instruction in the K–8 Mathematics Classroom. 4 Hours.

Presents best practices in differentiating instruction, with a focus on K–8 mathematics. Focuses on how best to reach an understanding about the importance of differentiated instruction, when to differentiate, and what tools are available to assist students achieve greater potential. Teaching and learning the K–8 mathematics curriculum in an inclusive classroom setting with English-language learner (ELL) students, special education students, gifted learners, and regular education students is less of a daunting task when a myriad of learning styles and ways of knowing how to accommodate these styles are seen as pieces of an intricate puzzle. As the range of student learners continues to widen, the challenges educators face to meet their needs simultaneously increases.

MTH 6254. Conceptual Calculus. 4 Hours.

Covers the techniques and practices of calculus. Offers students an opportunity to develop a deep understanding of the general principles, mechanisms, and issues that make the subject work. Introduces and develops the concepts covered in the standard AB calculus curriculum—limits, continuity, differential calculus, beginning integral calculus, and the fundamental theorem of calculus. Discusses the historical and philosophical context of the mathematics.

MTH 6302. Geometry 2: Geometry since 1800. 4 Hours.

Introduces more recent Euclidean geometry, such as Feuerbach’s nine-point circle, the Euler line, and Morley’s theorem. Looks at geometry on the surface of the spherical earth and the passage to elliptic geometry and some features of hyperbolic geometries. Uses the Geometer’s Sketchpad to study transformations of friezes and to visualize the geometry in the above paragraph, including pictures of the geometry of the hyperbolic plane. Introduces the six regular polytopes in four-dimensional space. Abbott’s Flatland and Dewdney’s The Plane and Curved Surface are among the readings and are suitable for secondary classrooms.

MTH 6505. Classroom Technologies for the Middle and High School. 4 Hours.

Seeks to improve teachers’ skills in bringing together curriculum and technology to support student learning. Technology is an integral part of the modern mathematics classroom, including the almost universal use of the graphing calculator. Two computer programs, Excel and the Geometer’s Sketchpad, have also been extensively used. These technologies are meant to illuminate and enhance concepts and techniques in the math curriculum. The NCTM emphasizes multiple representations of problems and methods, and these programs and calculators are designed for that exact purpose. Because there is little curriculum designed for the classroom use of technology, teachers must acquire and apply their own skills in adapting the technology into their teaching. Participants have the opportunity to practice presenting lessons with particular emphasis on the graphing calculator.

MTH 6506. Interactive Mathematics Program Year 1. 4 Hours.

Offers teachers an opportunity to learn how to use the problem-solving units in geometry, algebra, and numbers. These units could in turn be used to develop middle grade students’ understanding of mathematical concepts. Models and discusses alternative pedagogy for helping students make sense of mathematics.

MTH 6510. Mathematics Content Development. 4 Hours.

Offers students an opportunity to explore mathematical tasks in order to experience the conceptual and pedagogical power of mathematical skills and concepts. Examines the topics and concepts developed under the strands of mathematics in a standard K–6 program. Explores numeration, operations, algebra, geometry, measurement, and data and probability, as well as strategies to adjust mathematical tasks for students of varying abilities through a differentiated approach to instruction.
MTH 6515. Introduction to Quantitative Reasoning for Middle School and High School Mathematics. 4 Hours.
Offers participants an opportunity to understand quantitative reasoning (QR) and to integrate a QR approach and concepts into existing or newly developed middle school and high school curriculum. Focuses on learning and doing mathematical reasoning in a variety of contexts, such as personal finance and demographics. Topics include number sense, real-life probability and statistics, critical thinking and problem solving, interpreting graphs and tables, and modeling. Activities include mathematical problem solving, skill development, using a spreadsheet, reflecting on pedagogical practices, and examining connections to the Common Core Standards. Offers participants an opportunity to design and share problems, lesson plans, and projects to suit the interests and needs of their students and curriculum, working toward preparing students for future success in college, career, and life experiences.

MTH 6520. Mathematical Thinking in the Middle School. 4 Hours.
Aimed at middle school teachers. Focuses on developing key mathematical thinking in the formative pre-high school years. Examines at the base level, content in numbers, number sense, and beginning algebra, with connections to geometry, with the goal of transforming procedural practice into clear and effective conceptual understanding. Offers participants an opportunity to reinforce their own personal understanding of mathematics as well as the tools to translate personal mathematical accomplishment into effective teaching strategy. Examines devices to enliven the classroom experience for students. Uses the tools and techniques of arithmetic to motivate and help develop clear understanding of the principles of algebra. Explores visual connections.

MTH 6527. Mathematics for Middle School Science Teachers. 4 Hours.
Explores mathematical concepts using examples from science. Offers participants an opportunity to enhance the mathematical skills needed to teach middle school science more effectively. Topics include ratios and proportions, algebraic equations (linear and quadratic), systems of linear equations, functions (linear and quadratic), graphical representation, fundamentals of statistical analysis, plane geometry, trigonometry, and vector analysis.

MTH 6531. Developing Mathematical Ideas: Building a System of 10s. 4 Hours.
Designed to help experienced K–6 teachers explore the structure of our base-10 number system and examine how children develop an understanding of it. Uses sets of classroom episodes (cases) to illustrate student thinking. In addition, the curriculum offers opportunities to view and discuss videos of mathematics classrooms; explore mathematics in instructor-led lessons; share student work; plan, conduct, and analyze student interviews; analyze innovative elementary mathematics curricula; and read and reflect on related research.

MTH 6532. Developing Mathematical Ideas: Making Meaning of Operations. 4 Hours.
Designed to help experienced K–8 teachers examine the actions and situations modeled by the four basic mathematical operations. Issues covered include young children’s counting strategies and an examination of children’s developing ideas of the four basic operations in the context of rational numbers. Uses case studies to illustrate student thinking as described by their teachers. Offers participants an opportunity to view and discuss videos of mathematics classrooms; explore mathematics in lessons led by the instructor; share and discuss student work; plan, conduct, and analyze mathematics interviews of students; analyze innovative lessons; and read and reflect on related research.

MTH 6533. Assessing Student Understanding in Today’s Mathematics Classroom. 4 Hours.
Seeks to provide students with an in-depth focus on authentic assessment in the elementary mathematics classroom and how to use the results of assessment to chart more effective pathways for instruction. Topics include the different types of assessment strategies, the distinction between evaluation and assessment, the nature of authentic assessment, and the design and use of rubrics and checklists. Seeks to review research that shows how assessment can enrich and focus learning, to examine national and state assessment items, to develop model assessments to be shared on a database, and to experience ways to evaluate student work to probe student understanding.

MTH 6534. Reasoning About Algebraic Operations. 4 Hours.
Focuses on how children’s study of operations leads into articulation of generalizations in the number system and justification of such generalizations. Offers students an opportunity to explore related mathematical ideas for themselves, thus preparing them to support similar thinking in their own classrooms. Designed to enhance students’ understanding about how this mathematical work in the elementary grades is related to the algebra that is more conventionally studied in later grades. This course is part of the Developing Mathematical Ideas (DMI) series, a professional development curriculum designed to help teachers think through the major ideas of K–7 mathematics and examine how children develop those ideas.

MTH 6535. Patterns, Functions, and Change. 4 Hours.
Seeks to help K–8 teachers examine the connections between repeating patterns and mathematical functions and how two quantities change in relationship to one another. Offers teachers an opportunity to explore the conceptual issues people face as they work to represent relationships between two quantities using tables, graphs, arithmetic rules, and symbolic notation. Studies a variety of functions (linear, quadratic, and exponential), the graphs for these functions, and how these two quantities change in relation to one another. Offers opportunities for discussion by using case studies, visuals, exploring mathematics in instructor-led lessons, sharing of work, analyzing lessons taken from innovative elementary mathematics curricula, and for reading and reflecting on overviews of related research.

MTH 6536. Assessing Student Work in Mathematics and Its Impact on Instruction. 4 Hours.
Focuses on how to use assessment results to inform instruction in mathematics. Offers participants an opportunity to examine student work critically in order to evaluate what students have learned regarding key concepts in mathematics. Explores how to edit and perfect teacher-developed assessments to probe for deeper understanding and design learning opportunities for students that deepen their mastery of content and standards.

MTH 6560. Creating the Ideal Learning Environment for Elementary Mathematics. 4 Hours.
Seeks to assist students to become confident and effective inquiry-based mathematics teachers. Explores the learning environment that is most conducive for teaching and learning elementary mathematics in today’s classrooms and how children develop foundational mathematical understanding at a very early age. Provides an introductory, hands-on, exploratory experience in number sense, arithmetical operations, geometry, measurement, and algebra. The work is approached from the perspective of the student learner. Offers students an opportunity to delve into the mathematical concepts behind the experiences to gain an understanding of how these early skills are scaffolded at the upper-grade levels. Emphasizes making sense of student thinking, investigating alternative solution strategies, refining lesson planning, sharing instructional strategies, and creating a community of learners.
MTH 6561. Number and Place Value. 4 Hours.
Offers students an opportunity to develop a comprehensive understanding of number systems and how their structure is related to computation and problem solving. Begins with a look at a historical perspective of numbers and number systems and continues with the study of place value and the base-10 structure of the number system. Emphasizes understanding the concept of place value, since it forms the foundation for understanding other major mathematical concepts such as decimal fractions, scientific notation, standard algorithms, mental math, estimation, and rounding. Explores decimals, fractions, percentages, and mixed numbers and the connections among them. Uses the number line as a tool for depicting positive and negative numbers and fractions.

MTH 6562. Arithmetic Operations. 4 Hours.
Offers an in-depth look at the four arithmetic operations—addition, subtraction, multiplication, and division of whole numbers—and then revisits the operations in the context of rational numbers. Emphasizes the connections among the operations. Uses the number line for simple arithmetic operations. Offers students an opportunity to explore the standard and nonstandard algorithms for the four operations and why they work. Explores the properties of arithmetic and develops estimation skills and the skills known collectively as number sense and mental math.

MTH 6563. Geometry and Measurement. 4 Hours.
Focuses on the foundations of informal measurement and geometry in one-, two-, and three-dimensional space. Explores how children develop an understanding of length, area, volume, angles, and geometric relationships, as well as visualization, spatial reasoning, and geometric modeling. Offers students an opportunity to develop the vocabulary of geometry and explore both definitions and attributes of geometric objects. Covers transformational geometry, similarity, congruence, and geometric constructions. Covers how to calculate the perimeter of polygons, areas of two-dimensional shapes, and volumes of three-dimensional shapes.

MTH 6564. Standard and Metric Measurements. 4 Hours.
Focuses on the operation and function of measurement in everyday life. Investigates the fundamentals of measurement. Covers both the American system of measurement and the metric system. Introduces an assortment of tools to measure length, distances, capacity, volume, weight, mass, time, and temperature. Asks students to convert from one unit of measurement to another within the same measurement system and to use measurement to design and construct objects and draw scaled drawings with attention to accuracy and precision of measurements.

MTH 6565. Functions and Algebra. 4 Hours.
Demonstrates how to scaffold prealgebra and algebra skills in the elementary grades. Algebra, once considered too advanced for the elementary classroom, is now recognized as a gatekeeper subject. Offers students an opportunity to attain depth and understanding of mathematical expressions, formulas, equations, and functions (linear, exponential, polynomial). Explores the relationship among ratio, proportion, constant rates, and linear functions, as well as how graphs, equations, tables, and words can be used to describe relationships. Covers the power of variables and how they are used to describe patterns. The use of the graphing calculator plays an important role in these explorations.

MTH 6566. Data Analysis and Probability. 4 Hours.
Offers students an opportunity to develop a deeper understanding of data analysis, descriptive statistics, and probability. Students formulate questions, design investigations, gather data, and then organize and analyze that data. The descriptive statistic topics covered include measures of central tendency (mean, median, mode), dispersion (range, standard deviation), distributions, and regression. Includes basic principles and calculation methods of probability.

MTH 6575. Assessment in the Elementary Mathematics Classroom. 4 Hours.
Explores a range of assessments that can be implemented in the elementary classroom. Offers students an opportunity to create a comprehensive picture of student achievement through data collection as well as to delineate clearly student learning needs. Examines formal assessments (standardized tests) and informal assessments (student observation) in mathematics and provides an opportunity to weigh the benefits and limitations of each. Covers questioning strategies and a protocol for looking at student work.

MTH 6576. Creating a Student-Centered Mathematics Classroom: Meeting the Needs of All Students. 4 Hours.
Explores specific instructional strategies that support differentiation in the mathematics classroom. Examines the teacher's current role in the classroom, discusses ways to facilitate student learning through inquiry-based activities, and promotes student independence. Explores ensuring equitable access to all members of a diverse learning population, as well as how to identify students in need of services in mathematics, how to explore particular mathematical learning disabilities such as dyscalculia, and how to support ELL students.

MTH 6577. Integrating Technology into the Mathematics Classroom. 4 Hours.
Offers students an opportunity to obtain knowledge about, and strengthen their ability to select, computer software and Web sites that can be integrated into the mathematics classroom. Reviews research supporting the use of software and Web sites in mathematics classrooms at all levels. Students select, review, analyze, and evaluate various software and Web sites and then design technology-based lesson plans.

MTH 6610. Precalculus for the Secondary Teacher. 4 Hours.
Explores the behavior and the applications of polynomial, exponential, logarithmic, and trigonometric functions. Examines the wide array of mathematics curves that serve as the foundational examples on which the calculus is then performed. Considers other curves, such as the circle, ellipse, and hyperbola, as well as disparate topics, such as vectors, sequences, and series. Offers students an opportunity to use technology extensively, mostly the graphing calculator, to facilitate the explorations and to complete the skills necessary for a rigorous calculus course. Uses real-world examples to illuminate each of the elements of the course.

MTH 6691. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

MTH 6692. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MTH 6694. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

MTH 6696. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

MTH 6697. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.
MTH 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

MTH 6983. Topics. 1-4 Hours.
Covers special topics in mathematics. May be repeated without limit.

MTH 6995. Project. 1-4 Hours.
Focuses on an in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

MTH 7961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

MTH 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.

MTH 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

MTH 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

MTH 7980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

MTH 7983. Topics. 1-4 Hours.
Covers special topics in mathematics. May be repeated without limit.

MTH 7990. Thesis. 1-4 Hours.
Offers thesis supervision by members of the department.

MTH 7994. Thesis Continuation—PT. 0 Hours.
Offers continuing thesis supervision by members of the department.

MTH 7995. Project. 1-4 Hours.
Focuses on an in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

MTH 7996. Thesis Continuation. 0 Hours.
Offers continuing thesis supervision by members of the department.

MEIE 2000. Introduction to Engineering Co-op Education. 1 Hour.
Provides students preparation for the first co-op experience. Focuses on skills that provide a basis for successful co-op engagement including expectations and requirements, an introduction to professional credentials, résumé construction, self-assessment and goal setting, interviewing, professional and co-op ethics, issues of diversity in the workplace community, academic planning and decision making, and an introduction to career portfolios.

MEIE 3000. Professional Issues in Engineering. 1 Hour.
Provides students with an opportunity to reflect on both academic and co-op experiences in the context of planning for the senior year and beyond. Issues include professional and ethical issues, resolving ethical conflicts, awareness of engineers as professionals in a diverse world, strengthening decision-making skills, career portfolios, and lifelong learning needs, goals, and strategies. Students reflect upon issues of diversity from their experience in the University and in their cooperative education placements. Explores the role of different work and learning styles and diverse personal characteristics on the workplace and the classroom. Professional issues include impact of the cultural context, both in the United States and around the world, on the client, government relations, and the workplace.

MEIE 3435. Introduction to Engineering Entrepreneurship. 4 Hours.
Designed for engineering and science students who have little or no experience in business topics and have a strong interest in technological innovation. Focuses on high-technology venture creation and leadership. Topics include the high-tech entrepreneurial leader, approaches to high-technology ventures, and the engineering design process and entrepreneurial engineering. Emphasizes identifying a market for a new technology-based idea, transforming a technology-based idea or venture into a product, understanding and protecting intellectual property, developing a business plan, and acquiring resources and setting up a company. May be repeated without limit.

MEIE 4701. Capstone Design 1. 1 Hour.
Offers the first in a two-course sequence that culminates the student’s education and experience with the design process. Students form teams and are assigned their design project and faculty adviser. Projects can be industrially, departmentally, or externally sponsored. Students are expected to communicate with their faculty adviser, course coordinator, and sponsor using the Internet, teleconferencing, and other electronic methods. Topics include project management, ethics, cost analysis, Internet and library research methods, and engineering codes and standards. Students prepare written reports and make oral presentations. Students are expected to complete a thorough state-of-the-art report on their problem and a problem statement with specifications and requirements.

MEIE 4702. Capstone Design 2. 5 Hours.
Continues MEIE 4701. Students are expected to apply engineering principles acquired throughout their undergraduate academic and co-op experiences to the design of a system, component, or process. Each project includes the development and use of design methodology, formulation of design problem statements and specifications, consideration of alternative solutions, feasibility considerations, and detailed system descriptions. Projects include realistic constraints such as economic factors, safety, reliability, maintenance, aesthetics, ethics, and political and social impact. Students make oral presentations on their results in a series of design reviews. Students document their solutions using a written report that includes an executive summary. A working prototype or simulation, as appropriate, of their solution is required to complete the course.

MEIE 6800. Technical Writing. 0 Hours.
Seeks to provide graduate students with guidelines, tools, and strategies for improving their technical writing. Uses short in-class assignments to reinforce class concepts. Homework assignments related to the students’ research offer students an opportunity to practice their skills and receive feedback on their writing. It is hoped that the work students produce is of direct benefit to themselves and their advisors by allowing students to write up their own research to date and have it critiqued in an organized way.
ME 2355. Mechanics of Materials. 4 Hours.
Discusses concepts of stress and strain; transformation of stress and strain at a point; stress-strain relations material properties; second moments of cross-sectional areas; stresses and deformations in simple structural members due to axial torsional, and flexural loading for statically determinate and indeterminate cases; design of beams under combined loading; and stability of structures and buckling of columns with various supports. Laboratory experiments and written reports are required.

ME 2356. Lab for ME 2355. 1 Hour.
Accompanies ME 2355. Covers topics from the course through various activities.

ME 2380. Thermodynamics. 4 Hours.
Defines and calculates thermodynamic properties such as energy, entropy, temperature, and pressure. Work and heat interactions are defined. The first and second laws of thermodynamics and concepts of thermodynamic equilibrium are introduced. Conservation of energy and mass and the entropy balance relation are discussed for open and closed systems. Irreversibility, energy, and the energy balance relation are introduced and applied in analyzing thermodynamic systems. Fundamentals of thermodynamics are used to model power generation and refrigeration systems. Covers thermodynamics of nonreacting gas mixtures with applications to air-water vapor mixtures for air-conditioning systems.

ME 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ME 3455. Dynamics and Vibrations. 4 Hours.
Covers kinematics of rigid bodies in general plane motion and mass moments of inertia. Examines dynamics of rigid bodies using force-mass-acceleration, work and energy, and impulse and momentum. Explores continued development of problem-solving ability in dynamics, free and forced vibration of undamped and damped on-degree-of-freedom systems. Topics includes viscous and non-viscous damping, support motion, rotational unbalance, vibration isolation, vibration measuring instruments, general periodic excitation, and general excitation using numerical methods. Laboratory experiments and written reports are required.

ME 3456. Lab for ME 3455. 1 Hour.
Accompanies ME 3455. Covers topics from the course through various activities.

ME 3475. Fluid Mechanics. 4 Hours.
Studies fundamental principles in fluid mechanics. Topics include hydrostatics (pressure distribution, forces on submerged surfaces and buoyancy); Newton’s law of viscosity; dimensional analysis; integral forms of basic laws (conservation of mass, momentum, and energy); pipe flow analysis; differential formulation of basic laws including Navier-Stokes equations; and the concept of boundary layer and drag coefficient. Includes a team-based independent project.
ME 3480. International Applications of Fluid Mechanics. 4 Hours.
Studies fundamental principles in fluid mechanics in an international setting. Students have an opportunity to travel to a foreign locale to develop theoretical understanding while experiencing the issues that affect applications of fluids engineering in a culture and environment different from their own. Topics include hydrostatics (pressure distribution, forces on submerged surfaces, and buoyancy); Newton’s law of viscosity; dimensional analysis; integral forms of basic laws (conservation of mass, momentum, and energy); pipe flow analysis; differential formulation of basic laws including Navier-Stokes equations; and the concept of boundary layer and drag coefficient. Includes a team-based independent project that focuses on applications that allow students to delve into issues that affect engineering and technology development in their host country.

ME 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ME 4505. Measurement and Analysis with Thermal Science Application. 4 Hours.
Introduces basic measurements and data analysis techniques. Offers students an opportunity to become familiar with various types of measurement systems and to set up and perform experiments according to a given procedure. Covers basic measurement methods of rotational frequency; temperature, pressure, and power; and analog-to-digital conversion techniques and data acquisition. Data analysis topics include statistical analysis of data, probability and inherent uncertainty, basic measurement techniques, primary and secondary standards, system response characteristics, and computerized data acquisition methods. Includes experiments in thermodynamics, fluid mechanics, and heat transfer. Topics include cycle performance, flow discharge coefficient and heat transfer coefficient measurements, and psychrometric applications in the air-conditioning field.

ME 4506. Lab for ME 4505. 1 Hour.
Accompanies ME 4505. Covers topics from the course through various activities.

ME 4508. Mechanical Engineering Computation and Design. 4 Hours.
Highlights the role of finite element analysis in product development. Introduces the theory of finite elements in elastic/plastic, static, and transient problems. Emphasis is on solid modeling in design using available commercial finite element software. Also covers other numerical techniques such as finite difference schemes in the solution of systems of partial differential equations, and numerical solution to systems of linear and nonlinear equations.

ME 4550. Mechanical Engineering Design. 4 Hours.
Explores development of the mechanical design process and its open-ended nature. Reviews fundamentals of stress and theories of failure including fatigue considerations in the analysis of various machine components. Treatment is given to shafts, springs, screws, connections, lubrications, bearings, gears, and tolerances. Includes team-based design projects that involve modeling and the design process.

ME 4555. System Analysis and Control. 4 Hours.
Presents the theoretical backgrounds for the analysis and design of simple feedback control systems, differential equations, and Laplace transforms. Treats system modeling, linear approximations, transfer functions, and block diagrams; and transient and frequency response and stability-frequency domain and root locus methods. Other topics may include linear systems with time lag and relay servomechanisms with small nonlinearities.

ME 4565. Introduction to Computational Fluid Dynamics. 4 Hours.
Introduces numerical methods applied to solve fluid flow problems. Includes basic mathematics and physics related to computational fluid dynamics (CFD), together with practical assignments that use commercial CFD packages. Emphasizes finite difference and finite volume methods. Other topics include mathematical properties of partial differential equations, accuracy and stability analysis of numerical solution, CFD verification and validation, application to variety of fluid dynamics problems, grid generation, and turbulence modeling.

ME 4570. Thermal Systems Analysis and Design. 4 Hours.
Introduces theories of thermal energy transport, including conduction, convection, and thermal radiation, and the design of thermal systems. Solution methods are developed for steady-state and transient conduction problems including thermal circuit analogies, internal energy sources and extended surfaces. Convective heat transfer mechanisms are introduced and correlations to evaluate the heat transfer coefficient are discussed. Methodologies for calculating the thermal radiation heat transfer between surfaces are introduced. These theories are integrated with thermodynamics and fluid mechanics in the design of thermal systems, including heat exchangers. Includes an open-ended design project and students are expected to use computational methods throughout the course.

ME 4640. Mechanical Behavior and Processing of Materials. 4 Hours.
Continues studies of the physical basis for the mechanical behavior of solid materials including elasticity, plasticity, viscoelasticity, fracture, fatigue, and creep properties. Also covers materials processing and includes casting, forming, joining, and machining.

ME 4660. Introduction to Microelectromechanical Systems. 4 Hours.
Introduces the design and manufacture of microelectromechanical systems (MEMS), including principles of MEMS sensing and actuation, microfabrication, and packaging. Covers electrical, thermal, and mechanical behavior of microsystems, the design of electromechanical and thermal sensors and actuators, MEMS microfabrication, and MEMS packaging techniques. Studies a variety of microscale sensors and actuators (e.g., electrical switches, pressure sensors, inertial sensors, and optical MEMS). Devotes the last third of the course largely to design projects, involving design of MEMS devices to specifications in a realistic fabrication process. Students who do not meet course restrictions may seek permission of instructor. EECE 4660 and ME 4660 are cross-listed.

ME 4670. Internal Combustion Engine. 4 Hours.
Presents the concepts and theories of operation of internal combustion engines based upon the fundamental engineering sciences of thermodynamics, gas dynamics, heat transfer, and mechanics. Discusses the design and operating characteristics of conventional spark-ignition, compression-ignition, Wankel, and stratified charge. Explores the relationship between vehicle load and engine load through differential and transmission gear-ratio selections. Includes laboratory experiments.

ME 4680. Energy Systems. 4 Hours.
Focuses on the design and operating characteristics of thermal energy systems such as steam power plants, gas turbines, fuel cells or heating, ventilation and air-conditioning systems. Reviews selected topics in thermofluids as needed, and introduces new topics such as reacting mixtures and combustion, chemical energy and chemical equilibrium, one-dimensional internal compressible flow through nozzles and diffusers, and normal shock waves. These topics are then applied to the energy systems under study.

ME 4699. Special Topics in Mechanical Engineering. 4 Hours.
Focuses on an advanced mechanical engineering project agreed upon between the student and instructor. May be repeated without limit.
ME 4710. Mechanical Engineering Research 1. 4 Hours.
Focuses on scientific research in mechanical engineering agreed upon between the student and instructor. May be repeated without limit.

ME 4711. Mechanical Engineering Research 2. 4 Hours.
Focuses on in-depth scientific research in mechanical engineering agreed upon between the student and instructor. May be repeated without limit.

ME 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

ME 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

ME 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ME 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

ME 4992. Directed Study. 1-4 Hours.
Offers theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

ME 4993. Independent Study. 1-4 Hours.
Offers theoretical or experimental work under individual faculty supervision. May be repeated without limit.

ME 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

ME 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using the course to fulfill their experiential education requirement. May be repeated without limit.

ME 5240. Computer Aided Design and Manufacturing. 4 Hours.
Covers basic aspects of computer graphics and CAD/CAM. Topics include hardware and software concepts, generic structure of CAD/CAM software and its modules, and CAD/CAM database structure. Also covers the parametric representations of curves, surfaces, solids, and features that are widely used in existing commercial CAD/CAM systems. Discusses geometrical transformations, CAD/CAM data exchange formats, prototyping techniques, and PDM. Presents applications such as mass properties calculations, assemblies, mechanical tolerancing, simulation, finite element mesh generation, process planning and CAPP, CNC part programming, and Web-based CAD/CAM.

ME 5245. Mechatronic Systems. 4 Hours.
Covers integration of electronic/electrical engineering, computer technology, and control engineering with mechanical engineering to provide a self-contained, modern treatment of mixed systems along with their computer simulation and applications. Topics include mixed-systems integration; sensors, actuation systems; brief overview of dynamic systems modeling, response characterization, and closed-loop controllers; interfacing; data presentation systems and processes; microprocessors; real-time monitoring and control; and applications of mechatronic systems. The course also offers numerous MATLAB/Simulink examples of select mechatronic systems and devices along with open-ended design projects and assignments.

ME 5250. Robot Mechanics and Control. 4 Hours.
Covers kinematics and dynamics of robot manipulators, including the development of kinematics equations of manipulators, the inverse kinematics problem, and motion trajectories. Employs Lagrangian mechanics to cover dynamics of manipulators for the purpose of control. Covers control and programming of robots, steady state errors, calculations of servoparameters, robot vision systems and algorithms, as well as imaging techniques and the concept of mobile robots.

ME 5374. Special Topics in Mechanical Engineering. 4 Hours.
Offers topics of current interest in mechanical engineering.

ME 5600. Materials Processing and Process Selection. 4 Hours.
Covers the fundamentals and usage of processes and techniques for bulk, thick film, thin film, and patterned structures. Covers techniques for improvement of mechanical or functional properties, for reliability, or for operation in harsh environments. Includes case studies for which processes are selected based on efficacy, material input, and cost. Systems studied include biocompatible implants and materials for the telecommunication, semiconductor, energy, and aerospace industries.

ME 5645. Environmental Issues in Manufacturing and Product Use. 4 Hours.
Explores environmental and economic aspects of different materials used in products throughout the product life cycle. Introduces concepts of industrial ecology, life cycle analysis, and sustainable development. Students work in teams to analyze case studies of specific products fabricated using metals, ceramics, polymers, or paper. These case studies compare cost, energy, and resources used and emissions generated through the mining, refining, manufacture, use, and disposal stages of the product life cycle. Debates issues in legislation (extended product responsibility, recycling mandates, and ecolabeling) and in disposal strategies (landfill, incineration, reuse, and recycling). Discusses difficulties associated with environmental impact assessments and the development of decision analysis tools to weigh the tradeoffs in technical, economic, and environmental performance, and analyzes specific case studies.

ME 5650. Advanced Mechanics of Materials. 4 Hours.
Covers stress, strain, and deformation analysis of simple structures including beams, plates, and shells. Topics include classical theory of circular and rectangular plates; combined effects of bending and in-plane forces; buckling of plates; effects of shear deformation and of large deflections; membrane theory of shells; analysis of cylindrical shells; introduction to energy methods with applications to beams, frames, and rings; Ritz method; and the concept of stability as applied to one and two degree-of-freedom systems buckling of bars, frames, and rings. Permission of instructor required for undergraduate students.

ME 5655. Dynamics and Mechanical Vibration. 4 Hours.
Covers dynamic response of discrete and continuous media. Topics include wave and energy, impulse and momentum, Lagrangian dynamics, free and forced response to periodic and transient excitations, vibration absorber, free and forced response of multiple degree-of-freedom systems with and without damping, method of modal analysis, vibrations of continuous media such as extensional, torsional, and bending vibrations of bars, and approximate methods of analysis. Permission of instructor required for undergraduate students.
ME 5657. Finite Element Method. 4 Hours.
Focuses on numerical techniques for solving engineering problems. Topics include introduction to the finite element method; methods of approximations and variational methods; Rayleigh-Ritz method and Galerkin formulation; interpolation functions; truss, beam, plate, shell, and solid elements; stiffness matrix and assembly of element equations; application of finite element method in fluid and heat transfer problems; linear, nonlinear, and transient problems; numerical integration and methods of solving systems of equations for static and dynamic problems; and use of a finite element general-purpose commercial package. Permission of instructor required for undergraduate students.

ME 5659. Control Systems Engineering. 4 Hours.
Covers concepts in design and control of dynamical systems. Topics include review of continuous-time system modeling and dynamic response; principles of feedback, classical and modern control analyses, and design techniques such as root locus, frequency response (e.g., Bode plots and Nyquist Criteria), and state-space feedback; dynamic analysis, design, and control of electromechanical systems; block diagram algebra or signal-flow graphs, effects of poles and zeros on system response characteristics; principles of controllability, observability, observer designs, and pole placement techniques; introduction to adaptive and learning control and digital implementation of control algorithms.

ME 5665. Musculoskeletal Biomechanics. 4 Hours.
Using a three-part format, emphasizes the quantitative analysis of human musculoskeletal system statics and dynamics, including, in part I, gait analysis and estimation of the complex loads on human joint systems. Investigates how the form of connective tissue and bone is derived from function in part II, including a quantitative analysis of the material properties of bone, ligament, tendon, and cartilage. Working in groups in part III, students select and investigate a relevant, current topic in musculoskeletal biomechanics and present their findings to the class. Requires prior completion of an undergraduate course in biomechanics (Northeastern's BIOE 2350 or equivalent). Permission of instructor required for undergraduate students.

ME 5667. Solid Mechanics of Cells and Tissues. 4 Hours.
Focuses on the multiscale mechanical behavior of biological tissues. The mechanical integrity of a single cell depends on the mechanical properties and geometrical arrangements of the fiber network in the extracellular matrix. Introduces the statistical concept of persistent length and entanglement of long-chain polymer molecules, linear elasticity and viscoelasticity, membrane undulations, stability of vesicles. Discusses the intersurface forces that cause cells to adhere and to form microscopic, mesoscopic, and macroscopic two-dimensional membranes and three-dimensional structures. Introduces experimental techniques and measurements involving atomic force microscopy, surface force apparatus, optical tweezers, micropipette aspiration. Examples are given for specific physiological and path-physiological phenomena related to mechanical and adhesion behavior of cells and membranes. Requires prior completion of an undergraduate course in biomechanics (Northeastern's BIOE 2350 or equivalent). Permission of instructor required for undergraduate students.

ME 5685. Solar Thermal Engineering. 4 Hours.
Develops a model for the hourly direct and diffuse radiation under a cover of scattered clouds and the transmission and absorption of this radiation by passive and active systems. Considers the design of air heating systems and the storage of the collected energy by a pebble bed, and considers elements of heater exchanger design. Makes a study of the economics of a domestic water and/or space heating system using f-chart analysis. Requires prior completion of ME 4570 or equivalent.

ME 5690. Gas Turbine Combustion. 4 Hours.
Offers students an opportunity to obtain an understanding of the basic physical, chemical, and aerodynamic processes associated with combustion in gas turbine engines and their relevance to combustor design and performance in applications ranging from aeronautical to power generation. Topics include the history and evolution of gas turbine engines, thermodynamic cycles, conventional and alternative aviation fuels, combustion fundamentals, fuel injection and atomization, advanced wall cooling techniques, mechanisms of combustion noise and approaches to noise control, and design and performance for ultra-low emissions.

ME 5695. Aerodynamics. 4 Hours.
Focuses on topics of practical importance in applications of fluid mechanics to external flows over bodies. Covers compressible flow analysis in order to use the concepts of sound speed and Mach number and to design subsonic and supersonic nozzles, diffusers, and airfoils. Introduces normal and oblique shock waves and the Prandtl-Meyer expansion applied to supersonic flows over bodies and surfaces. Discusses Rayleigh and Fanno flows. Studies and applies the Bernoulli equation and potential flow theory to external flows analyses and the theory of lift generation on airfoils.

ME 5976. Directed Study. 1-4 Hours.
Offers theoretical or experimental work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

ME 5978. Independent Study. 1-4 Hours.
Offers theoretical or experimental work under individual faculty supervision. May be repeated without limit.

ME 5994. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

ME 6200. Mathematical Methods for Mechanical Engineers 1. 4 Hours.
Focuses on ordinary differential equations (ODEs) with mechanical engineering applications, linear algebra, and vector analysis. Topics include Laplace transform, power series, Fourier series, numerical methods for ODEs, matrices, finite dimensional linear vector spaces, eigenvalue problems, applications to systems of ODEs, vector field theory, curvilinear coordinates, and integral theorems.

ME 6201. Mathematical Methods for Mechanical Engineers 2. 4 Hours.
Focuses on partial differential equations with applications to mechanical engineering. Includes function spaces; Sturm-Liouville theory; eigenfunction expansions; special functions; potential theory; solution of elliptic, parabolic, and hyperbolic PDEs using separation of variables; eigenfunction expansions, transform methods, and numerical methods.

ME 6260. Introduction to Microelectromechanical Systems (MEMS). 4 Hours.
Provides an introduction to microelectromechanical systems including principles of sensing and actuation, microfabrication technology for MEMS, noise concepts, and packaging techniques. Covers a wide range of disciplines, from electronics to mechanics, material properties, microfabrication technology, electromagnetics, and optics. Studies several classes of devices including inertial measurement devices, pressure sensors, rf components, and optical MEMS. Devotes the last third of the semester largely to design projects, involving design of MEMS devices to specifications in a realistic fabrication process.

ME 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
ME 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

ME 6965. Co-op Work Experience Abroad. 0 Hours.
Offers eligible students an opportunity for work experience abroad. May be repeated without limit.

ME 7200. Boundary-Integral Methods in Engineering. 4 Hours.
Introduces boundary-integral equation methods for solving problems in solid mechanics, fluid mechanics, and electromagnetism. Begins with fundamentals such as the exact correspondence between partial-differential equation models and boundary-integral equations and the use of Green's functions and Green's theorem to convert between them. Illustrates boundary-integral theory and computation through applications including materials, nanotechnology, and biological systems. Offers students hands-on experience with state-of-the-art software and high-performance computing strategies, such as coupling boundary-integrals to traditional finite-element methods.

ME 7205. Advanced Mathematical Methods for Mechanical Engineers. 4 Hours.
Covers applications to applied mechanics and thermal science problems in advanced engineering applications. Topics may include complex variables, analytic functions, Laurent and Taylor series, singularities, branch points, and contour integration. Additional topics may include generalized functions and integral transforms; variational calculus and applications; and approximate methods of engineering analysis, including asymptotic expansions, perturbation methods, and weighted residual methods.

ME 7210. Elasticity and Plasticity. 4 Hours.
Covers stress and strain analysis in continuous media. Analyzes Cartesian tensors using indicial notation; stress and strain concepts; point stress and strain; relation to tensor concepts; equations of equilibrium and compatibility; constitutive laws for elastic, general, axisymmetric, plane stress, and plane strain formulations and solutions; the relation of elasticity to structural mechanics theories; physical basis of plastic/inelastic deformation of solids; and constitutive descriptions of plasticity including yielding, hardening rules, Prandtl-Reuss constitutive laws, and viscoplasticity.

ME 7220. Mechanics of Contact and Lubrication. 4 Hours.
Covers issues related to friction, wear, and lubrication of contacting surfaces. Topics include brief review of elasticity, fluid mechanics and probability theory, characterization of engineering surfaces, standard surface topography descriptors, Gaussian and fractal characterization of surface topography, surface profilors, contact mechanics, Hertzian contact, contact of rough surfaces, real area of contact, empirical contact formulas, rolling contact, friction of solids, wear mechanisms, theory of lubrication, compressible and incompressible Reynolds equation, effects of slip flow, classification of bearing types, elastohydrodynamic lubrication, foil bearings, and boundary lubrication.

ME 7232. Theory of Plates and Shells. 4 Hours.
Covers the mechanics of plates using classical theory (cylindrical bending, rectangular plates, and circular plates) and plate theory with shear deformation. Includes combined effects of bending and in-plane forces, buckling of plates, moderately large deflections, membrane theory of shells, analysis of thin cylindrical shells of revolution, and general theory of thin elastic shells.

ME 7238. Advanced Finite Element Method. 4 Hours.
Focuses on advanced techniques for solving engineering problems with the finite element method. Topics include review of finite element method; solution of linear and nonlinear algebraic problems; solution of dynamics problems; solution of contact problems using penalty and Lagrange multiplier methods; solution of nonlinear beams, plates, and shells; finite element formulations of solid continua including Lagrangian and updated Lagrangian formulations, material nonlinearities, and use of a commercially available finite element package.

ME 7240. Composite Materials. 4 Hours.
Discusses the stress, strain and deformation, and failure analysis of composite structures. Topics include introduction to composite materials, constitutive relations and mechanical properties of particulate reinforced composites, anisotropic lamina and cellular composites, micromechanical models, laminated composites and effect of stacking sequence, application to structural response of beams and plates, and damage in composite materials.

ME 7245. Fracture Mechanics and Failure Analysis. 4 Hours.

ME 7247. Advanced Control Engineering. 4 Hours.
Reviews topics from modern control engineering and characteristics of nonlinear systems. Covers fundamentals of Lyapunov theory and stability analysis as well as nonlinear feedback control systems using the Lyapunov method. Includes an introduction to advanced topics: variable structure system control, adaptive control-system analysis and design, robust adaptive control, and optimal and digital control. Requires prior completion of ME 5659 or a graduate-level course in modern control.

ME 7253. Advanced Vibrations. 4 Hours.
Covers advanced concepts in mechanical vibration analysis. Topics include introduction to variational approach and energy methods applied to motions of deformable body in three dimensions; vibrations of distributed-parameters systems including strings, bars, shafts, beams, membranes, and plates. Covers approximate methods, Rayleigh's Quotient, Rayleigh-Ritz method, method of functions expansion, Galerkin's and assumed mode methods, design and analysis of a variety of vibration-control systems, and recent advances in vibration of micro- and nanoscale systems. Permission of instructor required for undergraduate students.

ME 7255. Continuum Mechanics. 4 Hours.
Covers the stresses, strains, and displacements in general continuous media. Topics include vector and tensor calculus; definitions of stress, strain, and deformation; kinematics of a continuous medium; material derivatives; rate of deformation tensor, finite strain, and deformation; Eulerian and Lagrangian formulations; geometric measures of strain; relative deformation gradient, rotation, and stretch tensors; compatibility conditions; general principles; conservation of mass; momentum principles; energy balance; and principle of virtual displacements.
ME 7262. Nanomanufacturing 1. 4 Hours.
Provides an interdisciplinary nanomanufacturing course for a student population with diverse scientific and engineering backgrounds. Taught in segments focused in five areas: (1) directed self-assembly, (2) advanced micro- and nanofabrication techniques, (3) nanoscale polymer and composite processing, (4) environmentally benign nanomanufacturing and worker safety, and (5) related policy and ethical issues. Includes fundamental concepts in addition to more advanced topics in nanomanufacturing in each lecture segment.

ME 7270. General Thermodynamics. 4 Hours.
Examines fundamentals of equilibrium thermodynamics. Topics include work, energy, heat, temperature, available energy, entropy, first and second law of thermodynamics, simple systems, closed and open systems, availability loss and irreversibility, heat engines, multicomponent systems, mixtures of gases, chemical reactions, and chemical equilibrium.

ME 7275. Essentials of Fluid Dynamics. 4 Hours.
Offers a fundamental course in fluid dynamics designed to prepare the student for more advanced courses in the thermofluids curriculum while providing a strong background in fluid mechanics. Topics include Cartesian tensors; differential and integral formulation of the equations of conservation of mass, momentum, and energy; molecular and continuum transport phenomena; the Navier-Stokes equations; vorticity; inviscid incompressible flow, the velocity potential, and Bernoulli’s equation; viscous incompressible flow; the stream function; some exact solutions; energy equation including heat conduction and viscous dissipation, low Reynolds number flow, exact and approximate approaches to laminar boundary layers in high Reynolds number flows, stability of laminar flows and the transition to turbulence, and treatment of incompressible turbulent mean flow; and internal and external flows.

ME 7280. Statistical Thermodynamics. 4 Hours.
Provides insight into the laws of classical thermodynamics and the behavior of substances. Topics include introduction to probability; ensemble theory, elementary kinetic theory of an ideal gas including the distribution of molecular velocities, and the mean free path treatment of transport properties; classical statistics of independent particles, equipartition of energy, the partition function, and laws of thermodynamics; some results from quantum mechanics, quantum statistics of independent particles; applications to gases; and systems of interacting particles.

ME 7285. Heat Conduction and Thermal Radiation. 4 Hours.
Emphasizes analytical techniques in conduction and radiative transfer. Topics include formulation of steady- and unsteady-state one-dimensional and multidimensional heat conduction problems, solution techniques for linear problems including the method of separation of variables, Laplace transforms and integral transforms, approximate analytical methods, phase change problems, and nonlinear problems. Offers an introduction to thermal radiation heat transfer including the electromagnetic background of radiation, nature of thermal radiation, radiation intensity, black body intensity, and radiation through nonparticipating media. Discusses the fundamentals of radiation in absorbing, emitting, and scattering media including the equation of radiative transfer with methods of solution, pure radiative transfer in participating media, and interaction of radiation with conduction and/or convection. Requires undergraduate heat transfer course.

ME 7290. Convective Heat Transfer. 4 Hours.
Focuses on the fundamental equations of convective heat transfer including heat transfer in incompressible external laminar boundary layers, integral boundary layer equations, laminar forced convection in internal flows, and turbulent forced convection in internal and external flows. Develops analogies between heat and momentum transfer including the Reynolds, Taylor, and Martinelli analogies. Covers natural convection, heat transfer in high-speed flow, and transient forced convection.

ME 7295. Multiscale Flow and Transport Phenomena. 4 Hours.
Covers the fundamentals of flow and transport phenomena in multiscale systems. Begins with an overview of momentum, energy, and mass transport phenomena, emphasizing microscale phenomena such as the slip flow regime. Introduces other driving forces and transport processes relevant to microscale flows, such as surface tension (capillarity) and electrokinetics. These basic concepts provide the preamble for the presentation of the more complex multiphase and porous flow transport behavior. This course material is supplemented with class projects and presentations by the students. Requires knowledge of thermodynamics, fluid mechanics, and heat transfer.

ME 7300. Combustion and Air Pollution. 4 Hours.
Deals with the formation of pollutants during combustion processes and their subsequent transformations in the atmosphere. Emphasis is on the effects of design and operating parameters of combustion devices on the nature and composition of exhaust gases, improvements, postcombustion treatment of effluent gases, atmospheric chemistry, and atmospheric transport of pollutants, smog formation, acid rain, ozone formation, and destruction.

ME 7305. Fundamentals of Combustion. 4 Hours.
Provides an advanced course that is a comprehensive treatment of the problems involved in the combustion of liquid, gaseous, and solid fuels in both laminar and turbulent flow. Discusses the fundamentals of chemical kinetics. Examines the equations for the transport of mass, momentum, and energy with chemically reacting gases. Topics include diffusion and premixed flames, combustion of droplets and sprays, and gasification and combustion of coal.

ME 7310. Computational Fluid Dynamics with Heat Transfer. 4 Hours.
Offers an advanced course in numerical methods applied to fluid flows with heat transfer. Topics include finite difference and finite volume methods for solving partial differential equations, with particular emphasis on the equations of fluid dynamics and heat transfer. Other topics include mathematical properties of partial differential equations, accuracy and stability analysis of numerical solutions, applications to a variety of fluid dynamics and heat transfer problems, grid generation, and an introduction to turbulence modeling. Requires knowledge of computer programming.

ME 7315. Heat Transfer Processes in Microelectronic Devices. 4 Hours.
Focuses on discussion and development of state-of-the-art methods used to predict the heat transfer rates from microelectronic devices and packages and to simulate transport phenomena in manufacturing processes associated with microelectronic devices. Topics may include use of latent heat reservoirs, boiling jet impingement cooling, control volume approaches to extended surfaces, calculation of thermal contact conductances, and natural convection in enclosures.

ME 7325. Two Phase Flow. 4 Hours.
Covers the basic concepts of heat and mass transfer associated with phase change and multiphase flows. Topics include boiling heat transfer (nucleate boiling, film boiling, and bubble dynamics); evaporation and condensation; liquid-gas two-phase flow and gas-solid and liquid-solid two-phase flows. Requires knowledge of heat transfer.
ME 7330. Turbulent Flow. 4 Hours.
Offers an advanced course dealing with flow and transport, with emphasis on engineering methods. Includes generation and dissipation of turbulence, fluctuations, and time-averaging; Reynolds stresses and turbulent fluxes; closure models for free and bounded shear flows; models employed for practical flows including k-epsilon and algebraic-stress models; an introduction to large eddy and direct simulation; and an introduction to numerical modeling of turbulent flows.

ME 7335. Aerosol Mechanics. 4 Hours.
Studies the behavior of ultrafine particles from both microscopic and macroscopic viewpoints. Discusses the microscopic origins of aerosol transport phenomena including Brownian diffusion, drag, thermophoresis, condensation, and evaporation. Explores deposition processes for monodisperse aerosols, the distribution function for polydisperse aerosols, the general dynamic equation and methods of solution, homogeneous nucleation, and coagulation. Applications are introduced where appropriate.

ME 7340. Turbomachinery Design. 4 Hours.
Presents preliminary design methods and analytical tools applicable to turbomachinery. Discusses design criteria and performance characteristics at design and off-design operating conditions for several important types of turbomachinery. Studies axial flow compressors and turbines (gas and steam) including topics such as compressor surge, turbine blade cooling, and steam wetness effects. Also studies centrifugal compressors, radial inflow turbine, pumps, fans, and water turbines. Discusses turbomachinery mechanical design limitations. Examines the use of empirical data on blade cascade performance in blade selection. Presents numerical methods of analyzing two- and three-dimensional flows in turbomachinery (conformal transformation and streamline curvature). Two in-depth design projects are assigned. Requires knowledge of fluid mechanics and thermodynamics.

ME 7350. Graduate Seminar in Robotics. 1 Hour.
Introduces the field of robotics with an emphasis on medical applications. Consists of lectures from experts in the field of robotics, discussions of the latest papers in robotics literature, and student presentations of minirobots projects.

ME 7355. Graduate Seminar in Nanoscale Manufacturing. 1 Hour.
Introduces the new field of nanomanufacturing. Covers applications in energy, life sciences, electronics, and materials. Consists of lectures from experts in the field of nanomanufacturing on the latest developments in nanotechnology and nanotechnology-based products and presentations in nanomanufacturing topics chosen and presented by students.

ME 7374. Special Topics in Mechanical Engineering. 4 Hours.
Offers topics of interest to the staff member conducting this class for advanced study. May be repeated without limit.

ME 7440. Mechanical Engineering Leadership Challenge Project 1. 4 Hours.
Offers students an opportunity to develop and present a plan for the demonstration of a marketable technology product or prototype with a mechanical engineering focus. Constitutes the first half of a thesis-scale project in technology commercialization. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student’s technological and engineering depth and fostering the student’s leadership development.

ME 7442. Mechanical Engineering Leadership Challenge Project 2. 4 Hours.
Continues ME 7440, a thesis-scale project in technology commercialization. Offers students an opportunity to demonstrate their development of a marketable technology product or prototype with a mechanical engineering focus and to produce a written documentary report on the project to the satisfaction of an advising committee. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student’s technological and engineering depth and fostering the student’s leadership development.

ME 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ME 7978. Independent Study. 1-4 Hours.
Offers theoretical or experimental work under individual faculty supervision. An independent study must be petitioned and approved by the academic advisor. The petition must clearly state the reason for taking the course; a brief description of goals; as well as the expected outcomes, deliverables, and grading scheme. Master’s degree students in thesis or project options are not eligible to take independent study.

ME 7990. Thesis. 1-8 Hours.
Offers analytical and/or experimental work conducted under the direction of the faculty in fulfillment of the requirements for the degree. Requires first-year students to attend a graduate seminar program that introduces the students to the methods of choosing a research topic, conducting research, and preparing a thesis. Requires successful completion of the seminar program. May be repeated without limit.

ME 7994. Thesis Continuation—Part Time. 0 Hours.
Continues thesis work conducted under the supervision of a departmental faculty member. May be repeated without limit.

ME 7996. Thesis Continuation. 0 Hours.
Continues thesis work conducted under the supervision of a departmental faculty member.

ME 8960. Candidacy Preparation—Doctoral. 0 Hours.
Offers students an opportunity to prepare for the PhD qualifying exam under faculty supervision. Intended for students who have completed all required PhD course work and have not yet achieved PhD candidacy; students who have not completed all required PhD course work are not allowed to register for this course. May be repeated once.

ME 8964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

ME 8986. Research. 0 Hours.
Offers students an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

ME 9000. PhD Candidacy Achieved. 0 Hours.
Indicates successful completion of program requirements for PhD candidacy.

ME 9986. Research. 0 Hours.
Offers students an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

ME 9990. Dissertation. 0 Hours.
Offers dissertation supervision under individual faculty supervision. May be taken twice for course credit. May be repeated once.
ME 9996. Dissertation Continuation. 0 Hours.
Offers continuing dissertation supervision under individual faculty supervision. May be repeated without limit.

**Mechanical Engineering - CPS (MEG)**

MEG 0100. Direct Digital Controls and Energy Management System. 3 Hours.
Examines state-of-the-art HVAC computerized controls. Emphasizes available system configurations, applications, feasibility determination, and avoiding common system problems. Topics include automatic controls, energy management systems, and data communications.

MEG 0110. The ADA and the Massachusetts Architectural Access Board Requirements. 0.7 Hours.
Examines scoping and technical requirements, alteration formulas, additions, site access, vertical access, toilet rooms, dormitories, signage, recreation areas, and assembly areas. Discusses common errors and omissions and offers participation in an access survey. Covers Section 504 of the Rehabilitation Act and the federal Fair Housing Act design and construction requirements. Offers the successful student an opportunity to feel comfortable using the ADA Standards for Accessible Design and the Rules and Regulations of the AAB (521 CMR).

MEG 0168. Fundamentals of Engineering (FE) License Examination. 2.5 Hours.
Offers students an opportunity to prepare for the Fundamentals of Engineering (FE) License Examination. Reviews engineering fundamentals in addition to the important concepts common to all engineering specialties. Reviews sample problems in class. The course concludes several weeks prior to the date of the examination.

MEG 0170. Professional Engineering Review: Mechanical. 3.2 Hours.
Offers students an opportunity to prepare for the Principles and Practice (PE) License Examination in Mechanical Engineering. Reviews mechanical engineering fundamentals such as fluid dynamics, hydraulics, mathematics, mechanics, etc., in addition to the important advanced topics common to all mechanical engineers. Reviews sample multiple-choice problems in class. The course concludes prior to the state exam.

MEG 0182. Mechanical Cost Estimating and Bidding. 2.5 Hours.
Introduces mechanical cost estimating from receipt of plans and specifications to taking off quantities and estimating materials and labor. Specific topics include subcontractor pricing, interpretation of contract documents, profit determination, overhead factors, adjustments, claims, optimizations, and bidding strategy. This course is specifically geared for HVAC trades plus sub trades.

MEG 0206. Testing, Adjusting, and Balancing HVAC Systems/Air and Water. 2.5 Hours.
Covers how to estimate jobs; instruments used; fan systems involved; air distribution devices; and how to test, adjust, and balance the various types of HVAC systems. Includes an on-site field practicum.

MEG 0301. HVAC Temperature Controls and Systems Design. 3 Hours.
Studies the control industry. Discusses fundamentals of electric, pneumatic, and electronic controls. Covers current practices relating to the application and design of residential and commercial systems (electric, gas, and oil), cooling controls, heat pump, commercial, and solar controls.

MEG 0303. Introduction to HVAC Systems Design 1. 2.2 Hours.
Presents the fundamentals of the design and installation of heating, ventilation, and air-conditioning (HVAC) systems for personnel currently or potentially involved in the HVAC field. Topics include basic calculation of heating and cooling loads, warm-air duct heating systems design, commercial air-conditioning systems design, air handling and duct systems design, and techniques for estimating labor and material for HVAC jobs. Includes relevant aspects of the Massachusetts State Building Code, Article 31. Provides background for more advanced courses in HVAC systems.

MEG 0304. HVAC Systems Design 2. 2.5 Hours.
Emphasizes application and design of HVAC systems on psychrometric charts, correlating the calculations and selection of equipment with psychrometrics. Focuses on air distribution and duct design, selection of HVAC equipment, fans and fan laws, design of refrigerant piping systems, and pump application. Includes case studies that illustrate some of the field problems with HVAC systems.

MEG 0307. Intelligent Building Systems. 2.5 Hours.
Introduces and examines the “intelligent building.” Topics surveyed include the integrated building automation system; integrated energy management; fire management; security management; HVAC, lighting, and other design trends in intelligent buildings; electrical wire management; use of digital telephone techniques for building automation communications; and office furniture. Case studies review intelligent buildings and the intelligent healthcare facility. A field trip is planned.

MEG 0308. Introduction to HVAC Systems. 0.7 Hours.
Covers fundamentals of the design and installation of heating, ventilation, and air-conditioning (HVAC) systems for personnel currently or potentially involved in the HVAC field. Topics include basic calculation of heating and cooling loads, warm-air-duct heating systems design, commercial air-conditioning systems design, air handling and duct systems design, and techniques for estimating labor and material for HVAC jobs. Includes relevant aspects of the Massachusetts State Building Code, Article 31.

MEG 0323. Overview and Principles to Building Commissioning. 0.7 Hours.
Offers students an opportunity to work with a ten-step process to examine proper building commissioning procedures. Building commissioning is the process of inspecting and testing new construction or renovation projects after all work is complete but prior to final approval and payment from the owner. Building commissioning is the last critical step in a project that ensures the owners’ expected level of quality and work they contracted for has been achieved.

MEG 0350. Fundamentals of Steam and Hydronic Systems Design and Application. 2.2 Hours.
Covers hydronic heating and low-pressure steam heating. Designed for maintenance personnel, HVAC contractors and installers, and anyone who wants to learn more about hot water and steam systems. Describes the proper operation, location, and selection of various components found in all hydronic systems (proper sizing and selection of centrifugal pumps, various methods of air control and expansion tank sizing, and the various pumping methods such as primary/secondary and parallel and series pumping). Describes how low-pressure systems were designed to operate. Details the components found in one-pipe and two-pipe steam systems. By understanding how these systems were designed to operate, it becomes much easier to either troubleshoot a specific problem or improve the overall operating efficiency of these systems.
MET 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Covers design topics relative to the creation, modification, analysis, and optimization of engineering components and assemblies with extensive use of selected computer-aided design software (CAD). Concentrates on the use of contemporary parametric and/or explicit CAD modeling, management of associative relationships between geometries, and digital prototyping. Studies the role of CAD in product development and product life-cycle management. Involves extensive hands-on practice using commands and featured capabilities of the selected CAD software and completion of individual or team design projects. Projects focus primarily on mechanical systems design. Emphasizes accurate dimensioning, symbol interpretation, and accurate tolerancing of digital designs. Also includes introductory topics of graphical analysis of mechanical stress of elements and assemblies.

MET 2020. Computer Solid Modeling and Virtual Simulation. 3 Hours.
Covers design topics relative to the creation, modification, analysis, and optimization of engineering components and assemblies with extensive use of selected computer-aided design software (CAD). Concentrates on 3D solid modeling, structural and thermal graphical analysis, and virtual simulation of digital elements and assemblies. Applies featured capabilities of selected modern CAD software to a host of different mechanical engineering applications, and investigates optimization of designs through virtual experimentation and testing of design parameters including durability, cost, static and dynamic response, assembly motion, and graphical analysis of mechanical stresses. Requires completion and presentation of advanced and comprehensive individual or team-based CAD projects.

MET 2040. Engineering Manufacturing Process. 3 Hours.
Introduces technologic and economic aspects of manufacturing that require application of physical and chemical processes to alter properties, geometry, and appearance of a given starting material and transform it into parts, devices, or products. Discusses typical engineering materials used in manufacturing and shaping; metal forming and sheet metal working; machining operations; and joining, molding, and assembling processes such as welding, brazing, and fastening. Introduces fundamental principles of rapid prototyping and advanced manufacturing including numerical control 2, lithography, and product inspection and quality. This is an introductory course. Involves demonstrations of manufacturing processes in the lab and development of small manufacturing projects with opportunities for students to learn the characteristics and use of typical manufacturing machinery such as welders, lathes, milling machines, and CNC equipment.

MET 2100. Mechanics 1: Statics. 3 Hours.
Introduces the fundamental concepts and principles needed to analyze the mechanical equilibrium of engineering systems. Topics include Newton’s fundamental laws, systems of units, vector operations, forces, mechanical equilibrium of particles and rigid bodies, moments of forces, moments of couples, free-body diagrams, 2D and 3D equilibrium of bodies, centers of gravity, centroids, concentrated and distributed loads, analysis of mechanical structures, dry friction, moments of areas and inertia, and an introduction to the concepts and definitions of mechanical work and potential energy.

MET 2200. Mechanics 2: Dynamics. 3 Hours.
Expands and uses the underlying principles and concepts of Newtonian mechanics to study, analyze, and solve problems relative to mechanical systems in motion. Explores approaches to analyze motion both neglecting and considering the cause of motion and their relationship to the design of engineering systems. Discusses subjects pertaining to the study of kinematics and dynamics of particles and rigid bodies in detail. Topics include linear, curvilinear, and rotational motion of particles and rigid bodies, as well as conservation principles and concepts and inherent definitions for the analysis and design of dynamic systems such as velocity, acceleration, linear and angular momentum, impulse, forces, work, kinetic and potential energy, total mechanical energy, and power.

MET 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MET 3100. Engineering Stress Analysis. 3 Hours.
Covers theoretical principles and methods for analyzing and quantifying mechanical stresses in members and systems subjected to loads. Studies the effects of axial, transversal, and torsional loads, such as elongation, deflection, twisting, buckling, and rupture. Allowable loads and mechanical properties of engineering materials are concatenated to the concept and the prediction of mechanical failure. Covers normal, shear, bearing, and torsional stresses and strains, as well as methods to design mechanical elements by examining their condition of load and the ability of materials to withstand stresses. Concentrates on stresses within the elastic region of mechanical behavior, and includes factors of safety, thermal stresses, geometric concentration of stresses, combined stresses, and theories of failure.

MET 3101. Lab for MET 3100. 2 Hours.
Accompanies MET 3100. Relates the concepts, theoretical principles, and problem-solving techniques to real-life conditions via experimental activity performed in a lab. A variety of elements, components, and systems are subjected to tensile, compressive, torsional, and bending loads in order to quantify the strength of the materials involved and identify and characterize the associated types of failure experimentally. Seeks to reinforce comprehension of theoretical concepts imparted in the lectures about stress, strain, and parameters associated with mechanical failure.

MET 3200. Fluid Mechanics. 3 Hours.
Studies underlying concepts, principles, and definitions relative to the behavior of fluids at rest and in motion. Covers physical properties of fluids, distribution of force and static pressure on walls containing fluids, and buoyancy and stability in submerged or floating bodies in static fluids. Studies principles, definitions, and characterization of fluid flow, the effect of moving flows in submerged bodies, and foundations of aerodynamics. Discusses approaches to solving engineering problems involving fluids in motion and applicability of principles of fluid flow in analysis, design, and/or selection of common engineering devices and systems.

MET 3201. Lab for MET 3200. 2 Hours.
Accompanies MET 3200. Relates concepts, theoretical principles, and problem-solving techniques in real-life conditions via experimental activity performed in the lab. Investigates physical properties of fluids; absolute and manometric pressures; flow velocity; flow rate; flow velocity profiles; pump performance; energy losses in pipe lines and fittings; and the use of widespread instruments such as nozzles, orifice plates, and venture tubes to measure fluid flow parameters.
MET 3300. Engineering Materials Science. 3 Hours.
Studies the foundation of physical and chemical characteristics, properties, behavior, and selection. Discusses the influence of fabrication and treatment methods on the characteristics of typical materials used in engineering applications including metals, ceramics, polymers, and composites. Topics include crystalline and noncrystalline structures, lattices, point defects, and dislocations. Also covers mechanical, thermophysical, and electrochemical characteristics of materials such as hardness, mass diffusion, and electroplating, as well as ferrous and nonferrous metal alloys, the structure and properties of ceramics, fundamentals of polymer science and technology, and synthetic and laminar composites.

MET 3301. Lab for MET 3300. 2 Hours.
Accompanies MET 3300. Experimental activities include sample preparation, microstructure analysis, cooling arches, binary phase diagrams, and experimental determination of thermophysical properties. Experimental themes include optical microscopy, heat treatment of engineering materials, hardening and hardness testing of materials, equilibrium phase diagrams, recrystallization and grain growth, and X-ray analysis. Uses modern techniques for materials characterization and relates them to engineering design of hardware.

MET 3400. Engineering Thermodynamics. 3 Hours.
Studies energy interactions among systems and their effect on the physical properties of the systems. Covers the zeroth, first, second, and third laws of thermodynamics in detail and their association with the concepts; definitions; and use of heat, work, mechanical energy, internal energy, enthalpy, and entropy in the analysis, design, and operation of engineering systems and devices commonly used to convert energy and deliver or consume power. Covers the evaluation and interpretation of thermodynamic properties of pure substances and ideal gases via thermodynamic tables, equations of state, or contemporary software. Examines thermodynamic principles behind the functioning and performance of familiar engineering devices such as gas and steam turbines, internal combustion engines, heat exchangers, pumps, compressors, refrigerators, and heat pumps.

MET 3401. Lab for MET 3400. 2 Hours.
Accompanies MET 3400. Experimental activity includes observation, investigation, and quantification of thermodynamic properties of pure substances, boundary work, isothermal compression of gases, energy balances in steam-flow devices such as heat exchangers and throttling devices, thermal efficiencies of heat engines, and coefficients of performance of heat pumps or refrigeration units.

MET 3500. Theory of Engineering Measurements and Data Analysis. 3 Hours.
Covers fundamental theory of engineering measurements as an integral part of the design, control, and operation of advanced engineering systems. This is a multidisciplinary course that uses concepts and principles from various subjects of the curriculum, such as calculus, differential equations, solid mechanics, stress analysis, electricity, thermodynamics, and heat transfer. Studies characteristics of measurement systems and the theory of underlying phenomena behind the operation of instruments designed to sense and furnish magnitudes of physical quantities. Also covers in detail statistical concepts and techniques to collect and analyze experimental data. Topics include theory of error and uncertainty, statistical confidence and hypothesis testing, standards of measure, dynamic response of measuring systems, transfer functions, signal conditioning, digitizing, and fundamentals of computerized data acquisition.

MET 3501. Lab for MET 3500. 2 Hours.
Accompanies MET 3500. Covers proper design and planning of engineering experimentation; correct characterization and use of instruments to measure typical engineering variables; and application of statistical concepts to collect, analyze, and validate experimental data. Emphasizes the need for reliable measurements in design and control of engineering systems.

MET 3600. Heat Transfer Engineering. 3 Hours.
Studies the concepts, principles, and mathematical and numerical procedures of analysis in the modes of heat transfer—conduction, convection, and radiation. The study of conduction includes 1D and 2D steady-state heat transfer in solids and transient analysis of lumped parameter systems. The study of convection covers heat transfer in internal and external fluid flows and the application of concepts and techniques for analysis and design of heat exchangers such as the LMTD and the NTU methods. Topics of radiation include irradiation, radiosity, spectral distribution, and radiation exchange between black and gray surfaces. Emphasizes use of mathematical and numerical techniques for problem solving in order to apply heat transfer theory to practical analysis and design of advanced engineering systems.

MET 3601. Lab for MET 3600. 2 Hours.
Accompanies MET 3600. Experimental activities involve observation and investigation of the conduction, convection, and radiation mechanisms and experimental quantification of rates of heat transfer. Concentrates particularly on experimental quantification of performance and effectiveness of heat exchangers and the influence of the geometric characteristics of components and thermophysical properties of materials used to manufacture them.

MET 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MET 4100. Mechanical Engineering Systems Design. 3 Hours.
Covers the fundamental principles of mechanical design including details of the engineering design process, design factors, creativity, optimization, safety, and value engineering. Discusses properties and selection of common engineering materials used in design and manufacturing of mechanical components and machines. Focuses on analysis and design of typical machine elements that operate under mechanical loads and stresses, including shafts, gears, bearings, and chain drives, clutches, brakes, fasteners, springs, torsion bars, power screws, linear actuators, and joints. Integrates computer usage for efficient and rapid design, formula evaluation, mathematical simulation, design selection and optimization, and virtual prototyping. Discusses additional elements of engineering design such as cost analysis, robustness, quality improvement, and environmental concerns.

MET 4200. Thermal Engineering Systems. 4 Hours.
Covers the fundamentals and techniques for design of thermofluids systems and components, including details of the engineering design process, design factors, creativity, optimization, safety, and value engineering. Applies concepts and principles of analysis learned in thermodynamics, heat transfer, fluid mechanics, and basic electricity to design thermal hardware such as heat and mass exchangers, turbines, expanders, compressors, pumps, boilers, and engines that are typically used in industries such as power generation; electric and gas utilities; refrigeration; air-conditioning; heating; and in the food, chemical, and process industries. Integrates computer usage for efficient and rapid design, formula evaluation, mathematical simulation, design selection and optimization, and virtual prototyping. Additional topics include cost analysis, robustness, quality improvement, and environmental considerations of thermal engineering design.
MET 4300. Alternative and Renewable Energy Technology. 3 Hours.
Explores the principles and current technological status of conventional and nonconventional alternative, but not necessarily renewable, energy conversion systems and strictly renewable energy conversion systems for power generation. Discusses the world’s energy usage and the current and projected fractions satisfied by alternative and renewable systems in comparison to fossil fuel power-generation systems. Studies in-depth the concept of exergy, the quantification of exergy destruction, and the thermodynamic maximum power that can be extracted from a natural resource with emphasis on renewable resources. Covers fundamental analysis and design of alternative conventional systems, such as hydroelectric and nuclear power plants, as well as renewable energy conversion systems, including wind turbines, solar thermodynamic plants, solar photovoltaic units, and geothermal power plants.

MET 4310. Power Plant Engineering and Technology. 3 Hours.
Studies conventional engineering systems for power generation within the frame of the world’s ever-increasing demand for electricity, current and projected consumption of natural energy resources, and environmental impact. Concentrates on principles of operation and thermodynamic analyses of thermomechanical systems for power generation, including steam power plants, gas turbine and combined-cycle power plants, and diesel and gas-engine power generation. Also covers cogeneration, emission control, and heat recovery. Introduces basic analysis of combustion processes and carbon sequestration technologies to reduce pollution and secure long-term sustainable use of fossil fuels. Offers students an opportunity to gain the technical knowledge and skills to better manage the energy, design energy-efficient systems, and reduce environmental impact.

MET 4320. Lean and Green Manufacturing and Rapid Prototyping Technology. 3 Hours.
Covers definition and principles of lean, Six Sigma fundamentals and their application to manufacturing engineering products. Studies contemporary models of product design and development, including integrated product and process design and concurrent engineering, as well as techniques for reduction of lead and cycle time and waste elimination. Covers stages, tools, and techniques of lean implementation in the manufacturing process, including enterprise value stream mapping and analysis, five-S, SMED, Kanban, process wastes, cellular manufacturing, pull systems, performance metric, LESA T, and capacity and queuing. Studies rapid prototyping and manufacturing techniques. Requires students to complete and document hands-on simulations of lean manufacturing via small projects involving actual manufacturing of mechanical elements and assemblies using techniques and laboratory equipment for rapid prototyping.

MET 4330. Nanotechnology and Nanomaterials Manufacturing. 3 Hours.
Introduces the definitions and primary characteristics of nanoscale science and technology maintaining an engineering approach and focusing on study of the properties, classification, and commercially viable techniques to manufacture nanomaterials. Includes the study of one-, two-, and three-dimensional nanoscale materials, including thin films, graphene, surface coatings, nanowires, nanotubes, nanoparticles, and nanocrystals. Discusses general and specific areas of applicability of nanomaterials in engineering devices and processes, such as in the food, energy, graphene-based, space, cosmetics, OLEDs, OLETs, medicine, environment, and construction industries. Examines existing common and widespread manufacturing methods for carbon nanotubes, thin films, and nanoparticles.

MET 4340. Biomaterial and Biomechanical Manufacturing Technology. 3 Hours.
Offers an overview of types and properties of metals, polymers, and ceramics used to interact with biological systems and in medical devices. Studies biocompatibility and selection techniques and factors of biomaterials within expected scales of applicability. Covers various interaction phenomena, surface properties, materials behavior, and tissue response to biomaterials. The remaining portion of this course builds upon students’ knowledge and practice of the principles of mechanics (statics and dynamics) and structural analysis and applies those principles to study musculoskeletal mechanics, kinesiology, ergonomics, implant medicine, sports, and injury and medical rehabilitation, which set the basis for design and manufacturing of mechanical implants and prosthetics.

MET 4350. Biotransport Processes Technology. 3 Hours.
Introduces biotransport engineering. Building on students’ knowledge and practice in fluid mechanics, heat transfer, and biology, explores applications in key technologies dealing with protein adsorption to biomaterials, blood flow in arteries, receptor-ligand binding on a cell surface, oxygen delivery to tissues, and hemodialysis. Reviews energy transport principles and introduces basic concepts of mass transport and their relationship to medical technologies, including kidney dialysis engineering, bioassays, and oxygen therapy technology.

MET 4360. Biomedical Sensing and Instrumentation. 3 Hours.
Covers the theory and design characteristics of instrumentation used in measuring typical/major physiological parameters and variables such as bioelectric potential, cardiovascular, respiratory, thermal, and physical movement measurements. Builds upon the knowledge and practice on foundations of measurements and analysis acquired earlier by students and concentrates on the study of characteristics of biologic signals, typical transducers to measure them, and instrumentation for patient monitoring. Discusses noninvasive diagnostic medical instrumentation, including underlying principles of thermography, ultrasound, and polygraphy, as well as the basic principles of biotelemetry, X-ray instrumentation, and instrumentation for clinical tests and analysis with an emphasis in blood cells tests.

MET 4410. Modern HVAC Technology and Design. 3 Hours.
Explores the basic engineering concepts, principles, and procedures needed to design and select and/or integrate the elements and components of heating, ventilating, and air-conditioning systems. Topics include calculation of heating and cooling loads, ventilation needs as per standards, and recommended practices by ASHRAE. Covers principles of psychrometry and thermodynamic processes with moist air in order to condition it for human comfort and/or industrial processes. Studies the basic thermodynamic processes, working substances, and thermodynamic processes and cycles behind equipment commonly used to heat, cool, and ventilate environments, including the standard vapor-compression cycle and the absorption cycle. Includes basic principles of automatic control and techniques for energy conservation in HVAC systems. Discusses simplified procedures for planning and designing HVAC systems.
MET 4420. Industrial Automation and Control. 3 Hours.
Analyzes feedback control systems under both transient and steady-state conditions. Examines utilization of signal flow graphs and Laplace transforms in the formulation of block diagrams and transfer functions for use in control system modeling. Reviews the basic components and performance characteristics and types of feedback control systems—including PC, PIC, PID, and PD controllers—and tuning parameters. Discusses cascade control; ratio, override, and selective control strategies; and control system stability. Introduces basic concepts on programmable logic controllers (PLC) and its associated I/O elements, as well as relay ladder logic (RLL). Presents an overview of common protocols for industrial control systems and process automation.

MET 4430. Modern Vehicle Engine Technologies and Design. 3 Hours.
Imparts the science and technology of electric vehicles (EV) and hybrid electric vehicles (HEV). Covers the mechanics, power, and propulsion of vehicles for terrestrial transportation. Discusses fundamentals and design of batteries, fuel cells, and DC machines; three-phase AC machines; induction machines; regenerative braking; permanent magnet machines; and switched reluctance machines. Studies electric drive components, the EV transmission configuration, and EV motor sizing. Requires students to complete a design project relative to EV and/or HEV design.

MET 4440. Hydrogen and Fuel Cell Technology. 3 Hours.
Studies the underlying thermodynamics and electrochemical principles of energy conversion through fuel cells, including oxidation, free energy, and standard potential of the cell. Examines hydrogen production means and costs; the thermodynamics of the water-splitting reaction; the electrolysis process; and the characteristics, advantages, and challenges of the main current electrolysis technologies. Covers fuel cell systems, elements, performance characteristics, polarization, and voltage output. Studies regenerative fuel cells and dissociation and discusses classification of fuel cells and its applicability in engineering devices. Emphasizes the study of hydrogen fuel cells with respect to technological innovations and applications in transportation vehicles, biomedicine, and industrial and domestic power generation. Discusses present trends, forecasts, and impact of this technology in areas of energy generation, conservation, and the environment.

MET 4450. ISO Industrial Standards and Certifications. 3 Hours.
Starts with an in-depth discussion about benefits, need for, and importance of standards in the engineering discipline. Provides an overview of the ISO 9000 family of standards with special focus on the ISO 9001 standard: the set of requirements established by the International Organization for Standardization to secure reliability, safety, and quality of engineering services and manufactured products and the base for audit and certification of the organization. Includes detailed study of the ISO 50001 standard: the requirements that address energy management and continuous improvement in energy use and consumption within the organization. Uses case studies to illustrate principles. Development of a simulated audit to confirm ISO 9001 compliance of a local company is part of this course.

MET 4950. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

MET 4955. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

MET 4983. Topics. 1-4 Hours.
Covers special topics in mechanical engineering technology. May be repeated without limit.

MET 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MET 4991. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

MET 4992. Directed Study. 1-4 Hours.
Offers independent work under the guidance of a member of the department on a chosen topic.

MET 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

MET 4994. Internship. 1-4 Hours.
Provides students with an opportunity for education and training.

MET 4995. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

MET 4996. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major.

CINE 1200. Exploring the Humanities through Film. 4 Hours.
Investigates the ways in which the methods of the humanities can expand one’s awareness of the sources, statements, and meanings of popular films. Presents films for evaluation in the light of reading, various approaches presented by faculty members from a number of humanistic disciplines, and student’s own experiences.

CINE 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CINE 2150. Narrative Filmmaking. 4 Hours.
Introduces narrative filmmaking without synch sound. Offers students an opportunity to create several short projects without dialogue. The successful student leaves the course with a portfolio of work, a basic knowledge of video cameras, and one editing software program (either Avid or Final Cut Pro). Focuses on storytelling through visuals.

CINE 2161. Video Software Tools. 1 Hour.
Offers a technology workshop introducing intermediate skills and software used in capturing, manipulating, and editing video and audio.

CINE 2336. American Film and Culture. 4 Hours.
Surveys the rise of American film from the late nineteenth century to the present. Examines key films, directors, major themes, and film forms and techniques. Includes lectures, screenings, and discussions. Students who do not meet course prerequisites may seek permission of instructor.

CINE 2350. History of Film. 4 Hours.
Surveys major international developments in film from the late nineteenth century to the present. Examines national movements, technological and aesthetic innovations, important figures, and significant films. Includes films, lectures, and discussions.

CINE 2394. Modern Film and Global Culture. 4 Hours.
Studies a selection of major modern films from around the world from a thematic, cultural, and historical perspective. Special attention is given to political, social, ethical, and psychological issues, as well as to the way common human themes emerge in quite diverse cultures. Also covers the basic procedures of film interpretation.
CINE 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CINE 3370. Contemporary Directions in Cinema. 4 Hours.
Provides a comparative study of major international film movements from 1960 to the present. Studies selected films by representative contemporary directors. Includes lectures, screenings, and discussions.

CINE 3389. Screenwriting. 4 Hours.
Approaches the unique narrative form of the dramatic short film, with the goal of having students produce a short film screenplay (under twenty minutes in length) which could eventually be shot. Takes students through the storytelling process, from conception to visualization, dramatization, characterization, and dialogue, ending in a project which should reflect the student’s own personal voice and unique vision. Offers students an opportunity to work on many writing exercises involving free association, visualizations, and character explorations, and to evaluate and critique each other’s work in a workshop setting. May be repeated up to two times.

CINE 3392. Gender and Film. 4 Hours.
Examines the representation of gender in film. Uses concepts and research from film and media studies to investigate the influences and consequences of gender representations in film. CINE 3392 and WMNS 3392 are cross-listed.

CINE 3446. Topics in Documentary Production. 4 Hours.
Offers a hands-on documentary production course. Provides an historical retrospective of the documentary. Explores a variety of filmmaking styles. After instruction in cameras and digital editing, students have an opportunity to produce their own documentaries from concept to finished product. May be repeated up to two times.

CINE 3500. Film Theory. 4 Hours.
Explores the movement from modernist concern with the art object to postmodern concerns with subjectivity and spectatorship, race, and gender. Requires a paper using formalist analysis and later revision using cultural analysis, psychoanalysis, philosophy of perception, race studies. Also offers students an opportunity to learn research methods in cinema studies and perform a metacritical review of their own work and to present their findings from film journals, databases, Web sites, blogs. Presents the relation of perception to reality; levels of representational realness; reception theory; digitalization in its relation to movement and meaning. Seeks to enable students to recognize structures and problems for analysis in a film and to apply appropriate theoretical models to analyze these structures.

CINE 3851. Film Festivals: Exhibition and Distribution. 4 Hours.
Examines the role of the film festival in the film industry. Analyzes the actual workings of an array of film festivals from the boutique, short, and independent showcases to the large international festivals. (a) MSCR 1230 or permission of instructor and (b) sophomore standing or above.

CINE 3900. Film and Psychoanalysis. 4 Hours.
Explores one of the most influential approaches to the study of film. Readings introduce students to key concepts in the psychoanalytic approach to film analysis. Students who do not meet course prerequisites may seek permission of instructor.

CINE 3920. Topics in Film Studies. 4 Hours.
Focuses on a specific issue and topic in film studies. Course content varies from semester to semester. Students who do not meet course prerequisites may seek permission of instructor. May be repeated up to three times.

CINE 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CINE 4500. Modernism/Modernity and Film. 4 Hours.
Offers an interdisciplinary course that traces the modernist impulse in literature, film, art, and architecture from the early twentieth century to the multifaceted development of postmodernism at the end of the century. Emphasizes the relationship of art to society, and studies the way in which modernism’s revolutionary strategies required constant innovation and renewal in the face of such challenges as fascism, the Cold War, and postcolonial struggles for national identity. Students complete individual projects (creative or research paper) and also contribute to the Web site Boston modernism (http://www.atsweb.neu.edu/bostonmodernism). Counts as a capstone course for the cinema studies combined major.

CINE 4550. Cinema Studies Seminar. 4 Hours.
Encourages students to reflect on their undergraduate experience as well as to make the transition to the next stage of their career. Students are asked to complete an individual creative project (the experiential component) that reflects a significant engagement with the world beyond the academic setting. They are also asked to complete a research paper that draws together aspects of their combined major and the world of work and/or graduate study. Classes consist of screenings and lectures, guest lectures and field trips, and student presentations. This junior/senior seminar is a capstone course in the cinema studies combined major.

CINE 4560. Directing the Short Fiction Film. 4 Hours.
Offers a directing workshop in which students have an opportunity to create short films with dialogue and to prepare a larger and more ambitious project. Students have an opportunity to become familiar with a broad range of production techniques as well as screenwriting and storytelling, both in the field and through class discussions, and to work both individually and in groups.

CINE 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

CINE 5239. Media and History. 4 Hours.
Introduces students to the variety of chemical and electronic media, and the appropriate uses of these media for teaching, preservation, outreach, and primary research documents. Each student engages in research related to the selection and evaluation of existing media, and on the deconstruction, analysis, evaluation, and assembly of documentary presentations. Students then form research and production teams for the creation of media production, which takes place during the semester. Topics include media preservation, production budgeting, marketing, and intellectual property.

CINE 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Media and Screen Studies (MSCR)

MSCR 1000. Media and Screen Studies at Northeastern. 1 Hour.
Intended for freshmen media and screen studies majors and combined majors. Introduces students to the liberal arts in general. Offers students an opportunity to become familiar with media and screen studies as a major discipline; to develop the academic skills necessary to succeed (analytical ability and critical thinking); to become grounded in the culture and values of the university community (including advising); and to develop interpersonal skills—in short, to become familiar with all the skills needed to become a successful university student.
MSCR 1100. Film 101. 4 Hours.
Focuses on the ways in which cinematic language and representations have developed since the late-nineteenth century, how representations of human difference vary in distinct cultural contexts, and how particular filmmakers and historical/national movements have challenged certain representations and ideologies. This range of representations and discourses includes blackface performance and other racist tropes, ethnographic studies of indigenous people as “exotic” curiosities, films noir that demonize independent women, postwar Italian neorealism’s revolutionary focus on the plight of the poor, films by and about marginalized ethnicities in the U.S. and the global south, banned films that highlight the condition of women in post-revolution Iran, and contemporary Hollywood’s treatment of homosexuality and masculinity.

MSCR 1150. TV 101. 4 Hours.
Provides an overview of television studies for nonmajors. Covers different ways to think about how to watch TV and the effect of changing technology and industry practices on television.

MSCR 1200. Media, Culture, and Society. 4 Hours.
Surveys the various media of communication. Includes radio, television, film, newspapers, magazines, and electronic communication. Explores the impact media have on culture and society and addresses some of the key issues and debates that circulate about the media and media influence. Also discusses and develops an understanding of the process of media preproduction and production including storyboarding, budgeting, and the medium requirements.

MSCR 1230. Introduction to Film Production. 4 Hours.
Offers an introduction to production that blends theory and practice of film/video production through an examination of exemplary works, aesthetic strategies, production techniques, and the dynamic relationship between media makers, subjects, viewers, and technology. Offers students an opportunity to gain fundamental moving-image fluency using widely accessible media production tools including camcorders, mobile phones, and digital single-lens-reflex cameras.

MSCR 1310. Introduction to Digital Media Culture. 4 Hours.
Outlines the history and theory of digital media from aesthetic, cultural, and political perspectives. Analyzes digital media as layered objects emerging at the intersection of technological innovation, social experimentation, and power relations.

MSCR 1320. Media and Social Change. 4 Hours.
Explores media’s role in movements for social, economic, and cultural change. Specifically examines how people use media technologies to organize themselves and communicate their message to wider audiences in order to achieve social change. As a way to develop and improve ethical reasoning, students are asked to think about the accountability of media institutions and actions of groups and individuals who use media technologies and tactics in the name of social change.

MSCR 1420. Media History. 4 Hours.
Examines the historical relationships between media, culture, and society with a focus on the role of media technologies as tools of communication. Emphasizes the broad social and cultural conditions that shape media and the ways in which people experience culture and understand meaning. Introduces the concept of mediation to analyze how different forms of communication have emerged in different historical moments. Critically examines past interactions between media and culture, and also examines the emergence of historically specific conceptions of audience, identity, content, industry, information, perception, and so forth.

MSCR 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MSCR 2220. Understanding Media and Film. 4 Hours.
Introduces how media works—stylistically, socially, and culturally. Topics include genre, narrative, cinematography, ideology, and representation. Offers students an opportunity to learn how to analyze media by acquiring skills associated with research and writing.

MSCR 2300. Television: Text and Context. 4 Hours.
Introduces students to critical television studies. Topics include visual language (use of image, music, graphics, editing, and sound); narrative structure; and genre. Specific critical approaches include semiotics, narrative and genre analysis, feminist analysis, and ideological analysis of representation.

MSCR 2302. Advertising and Promotional Culture. 4 Hours.
Investigates our promotional culture through a close study of advertising’s history and contemporary industry. By analyzing advertising’s production of meaning from storyboard to the complete campaign, the course develops an understanding of the interlinkages among advertising, publicity, promotion, and publications.

MSCR 2305. Digital Media Culture. 4 Hours.
Investigates the emerging media technologies such as the Internet, the World Wide Web, and video and computer games. Studies media and technological convergence. Offers students an opportunity to obtain the critical skills both to comprehend these new forms of communication and intervene in their use and production.

MSCR 2325. Global Media. 4 Hours.
Covers global dynamics of media and media systems. Specifically seeks to introduce students to the nuances of globalization and cultural performance through media structures. Introduces a wide variety of topics that fall in the intersection between globalization and media and the ways in which they operate socially and culturally. The course focuses broadly on understanding—in both theoretical and practical ways—how and why global media function as they do and how they contribute to knowledge formation and social justice within various cultural contexts.

MSCR 2400. Hip-Hop in and as Media. 4 Hours.
Explores hip-hop’s capacity to communicate particular images, ideals, and values that represent various social factions at different historical moments. Hip-hop has evolved significantly since its inception over 40 years ago in the South Bronx. Most often understood as a musical genre, hip-hop’s cultural complexity encompasses musical expression, art forms including dance and graffiti/graphic design, new terminology, innovative entrepreneurialism, and myriad other elements that continue to influence popular culture more widely. Analyzes issues of authenticity and genre; modes of representation in rap lyricism; representation via hip-hop literature, press, films, and videos; technologies, media production, and contexts of reception; issues of differences and dissonance across generations; the communication of spatiality through hip-hop; and hip-hop as a transnational/global conduit of meaning and affiliation.

MSCR 2500. Digital Media Research. 4 Hours.
Examines the growing centrality of what has been variously labeled as the “social web,” “Web 2.0,” “participatory culture,” and “convergence culture.” Does so by situating blogs, social network sites, Wikis, image boards, and other types of participatory media in broader social, economic, and political contexts. Examines how the development of social media is infused with gendered, racial, cultural, and subcultural values. Offers students an opportunity to examine key dimensions of cultural life that make up our (online) selves—including friendship, privacy, labor, celebrity, power, gender, race, and activism—by conducting original research.
MSCR 2505. Digital Feminisms. 4 Hours.
Explores the unique ways that feminist activism and theory are impacted by the increasing digital nature of our world. From hashtags to Tumblr, feminists are using digital tools and platforms to aid in the pursuit of social justice. Offers students an opportunity to develop a timeline that traces feminists' engagement with the Internet, new media, and technological innovations from the late seventies to the present. Examines the strengths and challenges that the digital world creates for feminist engagement. MSCR 2505 and WMNS 2505 are cross-listed.

MSCR 2895. Film Analysis. 4 Hours.
Introduces the languages, aesthetics, and cultures of film. Topics include film genre, film history, and film theory; basic elements (e.g., shot construction and sound editing); narrative cinema, nonnarrative or experimental work, and documentaries; and the marketing and distribution of film.

MSCR 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MSCR 3210. Special Topics in Media and Screen Studies. 4 Hours.
Addresses issues in communication and media as well as developments in the production of television and video. Course content may vary from year to year. Students who do not meet course prerequisites may seek permission of instructor. May be repeated up to four times.

MSCR 3300. Media Activism. 4 Hours.
Explores media activism and tactical media as practices emerging at the intersection of political activism, the heritage of the twentieth-century avant-gardes, and technological innovation. By examining social movements media, avant-garde techniques, and critical media theories, offers students an opportunity to acquire the theoretical foundations necessary for a critical understanding of contemporary media activism and tactical media. Couples such historical examination with the review of a variety of contemporary tactical media interventions. Students who do not meet course prerequisites may seek permission of instructor.

MSCR 3385. Video: Story and Sequence. 4 Hours.
Explores narrative structure and the construction of cinematic sequences in a variety of film/video genres. Examines the codes and conventions film/video artists express in narrative, documentary, and experimental forms and how they are expressed through directing, cinematography, editing, and sound design. Offers students an opportunity to apply cinematic language to their work in video, design, animation, or interrelated media forms.

MSCR 3402. Television and Society. 4 Hours.
Offers a critical approach to television and society by approaching television as an institution, industry, and cultural form. Course readings use television to analyze cultural and social issues as well as addressing the political and social consequences of television in a historical and contemporary context. Therefore, rather than analyzing television programs as texts, television is used to address a range of topics that may include identity, globalization, citizenship, neoliberalism, interactivity, nationalism, and technology. Students who do not meet course prerequisites may seek permission of instructor.

MSCR 3422. Media Audiences. 4 Hours.
Explores how mass media audiences interpret and actively use media messages and products as listeners, readers, and consumers. Examines the different stages of ethnographic research, audience meanings and interpretations, pleasure and fanship, the role of media in everyday life, and the use of ethnographic research methods in communication studies. Students who do not meet course prerequisites may seek permission of instructor.

MSCR 3423. 20th-Century Media. 4 Hours.
Surveys the emergence of U.S. media from a social and cultural perspective. Analyzes the development of media in the United States in the twentieth century in terms of debates about nationality, class, race, and gender, as well as industry practices. Readings address a range of media technology including radio, television, and the early development of the Internet. Students who do not meet course prerequisites may seek permission of instructor.

MSCR 3426. Popular Music as Media Form. 4 Hours.
Analyzes the social forces, technological advances, and cultural influences that have contributed to the development of U.S. popular music, from early Tin Pan Alley to the present. Popular music is treated as a facet of commercial mass culture, as a profoundly influential communicative medium, and as an indicator and amplifier of broader social changes. Students who do not meet course prerequisites may seek permission of instructor.

MSCR 3428. Television Studies. 4 Hours.
Introduces students to critical television studies. Topics include visual language (use of image, music, graphics, editing, and sound); narrative structure; and genre. Specific critical approaches include semiotics, narrative and genre analysis, feminist analysis, and ideological analysis of representation.

MSCR 3435. Media Industries. 4 Hours.
Offers an overview of media industries studies. Uses a critically informed approach to media industries that offers students an opportunity to learn to identify and analyze the variety of companies that collaborate to produce, distribute, and market media texts. Explores different approaches to studying the life cycle of media, considering such factors as ownership, regulation, marketing, branding, and the impact of new technologies. Students who do not meet course prerequisites may seek permission of instructor.

MSCR 3437. Media and Identity. 4 Hours.
Examines representations of identity (race, gender, sexuality, and class) in the media, investigates their influences, and considers their repercussions. The class especially focuses on understanding identity as a construction, rather than as inherently "natural." Broadly, we discuss the relationship between identity and media representations; more specifically, we look at cultural texts, sites, and practices where the existing racial categories mix, merge, and/or rub up against each other in ways that problematize the naturalness of essentialized identities. Students who do not meet course prerequisites may seek permission of instructor.

MSCR 3438. Celebrity Culture. 4 Hours.
Explores the relationships between media, and celebrity, stardom and fame. Focuses on the structures and industries that produce celebrities and ideas of fame and stardom. In asking why celebrity culture has become so important to twenty-first century culture, media, and capitalism, this course also examines how audiences respond to celebrities.

MSCR 3500. Documentary Storytelling. 4 Hours.
Explores documentary storytelling. Offers each student an opportunity to complete a short documentary. Project assignments mimic professional milestones and practices. Guest filmmakers visit to provide additional insight into how their respective area of professional specialization contributes to storytelling and to give feedback and support to student work-in-progress. Analyzes a wide range of creative storytelling techniques and styles through screenings of documentaries.

MSCR 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
MSCR 4206. Age, Media, and Representation. 4 Hours.
Offers students an opportunity to engage with emerging social and critical theory by encompassing elements of the developing area of critical age studies as well as subcultural theory. Readings include those by Dick Hebdige, Henry Giroux, Margaret Morganroth Gullette. Students who do not meet course prerequisites may seek permission of instructor.

MSCR 4208. TV History. 4 Hours.
Examines the history of television in the United States. Possible topics include style, genre, aesthetics, and television specificity; the audience; and industrial and technological conditions of production. Students who do not meet course prerequisites may seek permission of instructor.

MSCR 4602. Media and Democracy. 4 Hours.
Introduces the role of the media in democratic societies. Explores a number of important questions, including what is democracy? What types of information do citizens of a democracy need in order to participate in the governance of their lives? In our increasingly digital world, where do political discussions happen? Are the media responsible for keeping the public informed? Who constitutes the “public”? Are we citizens? Consumers? Producers? Who decides? In order to address these questions, students have the opportunity to become conversant in a variety of modern and contemporary theoretical and critical perspectives on the relationship between the media, democracy, and what has come to be known as the public sphere. Students who do not meet course prerequisites may seek permission of instructor.

MSCR 4610. The Networked Self. 4 Hours.
Analyzes online participatory culture. With their emphasis on constant sharing and updating, social network sites, blogging platforms, and photo- and video-sharing services are reshaping contemporary culture by providing virtually infinite opportunities for self-expression and conversation. Explores what kind of subjectivity is set in motion by media that demand that users display their network of social relationships and provide constant updates, or conversely, to obliterate their individual selves. Offers students an opportunity to test critical and theoretical problems by analyzing a variety of Web-based phenomena. Students who do not meet course prerequisites may seek permission of instructor.

MSCR 4622. Special Topics in Media and Screen Studies. 4 Hours.
Addresses issues in communication and media as well as developments in the production of television and video. Course content may vary from year to year. Students who do not meet course prerequisites may seek permission of instructor. May be repeated up to two times.

MSCR 4623. Theories of Media and Culture. 4 Hours.
Overviews key conceptual approaches that have developed for the study of the media. Investigates theories that address the role of media in culture and focuses on how cultural studies can inform our reading of both media and culture.

MSCR 4685. Interactive Documentary. 4 Hours.
Introduces the historical context, evolving aesthetics, and contemporary production practice of interactive documentary, an emerging genre that brings together interrelated media forms. Topics include documentary storytelling, content architecture, and interface design. Builds on a variety of production methods: photography, audio production/editing, video production/editing, animation, graphic design, interaction design, information visualization, writing, archival research, etc. Seeks to weave individual contributions into a cohesive experience suitable for online publication at the conclusion of the course.

MSCR 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

MSCR 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MSCR 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

MSCR 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

MSCR 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

MSCR 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

MSCR 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using the course to fulfill their experiential education requirement. May be repeated without limit.

Meeting Management - CPS (MTM)

MTM 0100. Introduction to Meeting Management. 1.8 Hour.
Offers students an opportunity to learn the basic skills and concepts needed to plan successful meetings. Students work through the logistics of building a meeting plan to gain an overall understanding of contract negotiation, menu planning, budgeting, site selection, and on-site management. Discusses available resources and how best to use them, the importance of networking, and working effectively with clients and vendors. Provides a broad overview of the meetings industry and serves as a foundation for the remaining courses in the certificate program. (This class must be taken first as it is a prerequisite for all other courses.)

MTM 0101. Program Design. 1.8 Hour.
Includes information on the specific processes and methods involved in designing, planning, implementing, and evaluating conferences, workshops, and education events. Meeting managers are looked to more and more as experts and advisers on a variety of issues in the meetings industry. Clients require managers to have knowledge of budgets, A/V, siting, negotiations, logistics, etc. All of these pieces are held together by the actual design of the program or event being planned. Without a solid program design, conferences often appear fragmented and fail to accomplish their intended purposes. Focuses in-depth on the design process and includes analyzing audiences, developing goals and objectives, assessing and selecting appropriate delivery methods, selecting presenters and presentation media, implementing events, and evaluating outcomes. (Required.)
MTM 0102. On-Site Conference Management. 1.8 Hour.
Offers students an opportunity to learn all of the varying pieces needed to manage a successful program. As the meeting date approaches, planning is critical to ensure a successful conference. Decisions must be made about meal planning, program staffing, attendee travel, A/V and/or production management, VIP management, hosting of spouse/guest special programming, recreational activities, attendee communication, local customs or laws (especially if you're on foreign turf), fire safety, and security issues. Planning for and managing the unexpected—such as weather, strikes, and medical emergencies—are also essential.

MTM 0103. Budgeting and Financial Management. 1.8 Hour.
Focuses on basic budgeting skills and financial management concepts that provide basic financial analysis skills that meeting planners can incorporate into their daily work. A well-prepared budget is essential to accurately plan specific components of meetings and events and to track income and expenses. It is one of the most important control mechanisms available to a meeting planner. Specific content areas include but are not limited to factors that influence budget, the budgeting process, understanding financial statements, estimations, variance analysis, cost containment, financial controls, taxes and gratuities, and understanding negotiable items. Calculators are necessary for each class. (Required.)

MTM 0104. Site Selection. 1.8 Hour.
Provides a strategic approach to site selection by breaking the selection process down into critical elements. Fundamentally, the perfect site supports meeting objectives, enhances learner outcomes, provides value, and honors budgetary guidelines. Offers students an opportunity to learn how to find the perfect site for every event by integrating site selection into the meeting-planning process. Includes an actual site inspection, offering insight into the hospitality industry, and class presentations to broaden students' resources. Uses handouts and discussions, covering adult learning theory, legal liabilities, contractual obligations, and current industry issues. Offers students an opportunity to obtain the skills and knowledge necessary to be efficient and effective meeting managers.

MTM 0105. Audiovisual Technology. 1.8 Hour.
Takes a nontechnical, upbeat approach to understanding equipment, from microphones to video conferencing to the latest in computer displays. If the picture doesn't appear on the screen or the microphone fails to work, there is real trouble. Audio-visual support is often the most critical and least understood element of a meeting or conference's success. Discusses room sets, facilities, contractors, and presenters. (Required.)

MTM 0106. Contract Management. 1.8 Hour.
Covers what meeting and event planners need to know to negotiate and execute a contract with hotels, convention centers, and other suppliers, starting with the factors that drive negotiations with suppliers, negotiation tips and techniques, and keys to understanding each party's formula for success. The final outcome of a successful negotiation is a contract. Uses a contract checklist to demonstrate how to analyze a hotel contract, covering such important terms as attrition, cancellation, indemnification, and force majeure. Offers students an opportunity to understand and negotiate the key terms and conditions of a contract through a step-by-step process. (Required.)

MTM 0108. Exhibition and Trade Show Management. 1.8 Hour.
Designed to be useful whether seeking to become a trade show/exhibition manager or a meeting planner doing events with a trade show component. Covers the selection of locations where the exhibitions take place; different factors taken into account when considering locations; exhibition facilities; overnight accommodations for visitors; and negotiating contracts with the city, the facility management, labor unions, and companies that provide the services required by the exhibitors.

LNG 0906. Teaching Modern Languages Through the Creative Arts. 6.8 Hours.
Explores the use of the arts to teach modern languages. The arts are student centered and promote the internalization of grammatical concepts and create a natural environment for vocabulary acquisition. Topics include visual art, poetry, drama, storytelling, music, and dance and movement. References the Massachusetts Foreign Languages Curriculum Framework along with concepts of differentiated instruction, multiple intelligences, and authentic assessment. Examples are presented in French and Spanish but can be applied to any language. The specific grammatical concepts and vocabulary covered are participant driven.

LNG 0907. Developing Creative Arts Materials for the Foreign Language Class. 6.8 Hours.
Reviews previous material and expands and adds some new concepts. Requires students to bring the experiences from LNG 6506 or LNG 0906 and be prepared to discuss their successes and/or failures in the implementation of the creative arts in their classrooms. Time is provided to create lessons and materials.

LNG 0915. The Five Cs: Teaching in a Standards-Based Modern-Languages Classroom. 6.8 Hours.
Seeks to strengthen foreign language instruction for all types of learners by examining the five standards: communication, cultures, comparisons, connections, and communities. The Massachusetts Foreign Languages Curriculum Framework is referenced throughout the course, but teachers outside Massachusetts are encouraged to provide their own state's standards. Offers participants an opportunity to create a wide variety of standards-based activities, lessons, and assessments for immediate classroom use. To meet the standard's strands, topics include Howard Gardner's multiple intelligences, differentiated instruction, classroom management strategies, and the creative arts. Participants are required to bring their own copy of their state's Foreign Languages Framework as well as curricula and related materials.

LNG 0916. Using Technology to Teach Modern Languages. 6.8 Hours.
Designed to expose modern-language teachers to twenty-first century technologies as a method of modern language instruction. Seeks to help students navigate the fast-changing world of new technologies and achieve a comfort level using the gadget, software program, or tool that can enhance their instruction. This project-based-learning (PBL) hands-on course provides participants with ways to evaluate, create, integrate, and adapt several Web tools to their portfolio of teaching strategies. Offers participants an opportunity to explore the use of technologies such as podcasts, videocasts, social networks, weblogs, wikis, and other collaborative tools.

LNG 0960. Using Technology to Enhance Materials Development for the Modern Languages Classroom. 6.8 Hours.
Offers a course appropriate for the more advanced technology user. Covers many different aspects of how to create and develop instructional materials using Microsoft Office tools such as PowerPoint, Excel, and Word. Offers participants an opportunity to gain a better understanding of how technology and media can be integrated into language classes as an aid to improving student performance and to explore the design of materials using technology as a tool to better support teaching and the learning. Emphasizes students with different learning styles.
LNG 5915. Teaching Language and Literature through the Arts and Media. 4 Hours.
Designed for the classroom teacher, this course introduces participants to current theories, methodologies, and creative approaches related to language acquisition. Offers participants an opportunity to develop lesson plans applicable to their curriculum using creative strategies, including the arts, media, and inquiry-based activities that are designed to engage all learners. Discusses strategies for collaboration and offers opportunity for reflection on the practical application in the classroom and correlation with national standards and state frameworks. Lessons are shared in presentations and journal entries.

LNG 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

LNG 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

LNG 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

LNG 6506. Teaching Modern Languages Through the Creative Arts. 4 Hours.
Explores the use of the arts to teach modern languages. The arts are student centered and promote the internalization of grammatical concepts and create a natural environment for vocabulary acquisition. Topics include visual art, poetry, drama, storytelling, music, and dance and movement. References the Massachusetts Foreign Languages Curriculum Framework along with concepts of differentiated instruction, multiple intelligences, and authentic assessment. Examples are presented in French and Spanish but can be applied to any language. The specific grammatical concepts and vocabulary covered are participant driven.

LNG 6507. Developing Creative Arts Materials for the Foreign Language Class. 4 Hours.
Reviews previous material and expands and adds some new concepts. Requires students to bring the experiences from LNG 6506 or LNG 0906 and be prepared to discuss their successes and/or failures in the implementation of the creative arts in their classrooms. Time is provided to create lessons and materials.

LNG 6511. Institute in Modern Languages. 4 Hours.
Offers students an opportunity to identify and analyze content, curriculum, and instruction in the light of current research; to identify problems and design and implement solutions to such problems; to evaluate and field-test various curriculum approaches; and to apply new knowledge and skills to classroom practice.

LNG 6516. Using Technology to Teach Modern Languages. 4 Hours.
Designed to expose modern-language teachers to twenty-first century technologies as a method of modern language instruction. Seeks to help students navigate the fast-changing world of new technologies and achieve a comfort level using the gadget, software program, or tool that can enhance their instruction. This project-based-learning (PBL) hands-on course provides participants with ways to evaluate, create, integrate, and adapt several Web tools to their portfolio of teaching strategies. Offers participants an opportunity to explore the use of technologies such as podcasts, videocasts, social networks, weblogs, wikis, and other collaborative tools.

LNG 6615. The Five Cs: Teaching in a Standards-Based Modern-Languages Classroom. 4 Hours.
Seeks to strengthen foreign language instruction for all types of learners by examining the five standards: communication, cultures, comparisons, connections, and communities. The Massachusetts Foreign Languages Curriculum Framework is referenced throughout the course, but teachers outside Massachusetts are encouraged to provide their own state's standards. Offers participants an opportunity to create a wide variety of standards-based activities, lessons, and assessments for immediate classroom use. To meet the standard's strands, topics include Howard Gardner's multiple intelligences, differentiated instruction, classroom management strategies, and the creative arts. Participants are required to bring their own copy of their state's Foreign Languages Framework as well as curricula and related materials.

LNG 6660. Using Technology to Enhance Materials Development for the Modern Languages Classroom. 4 Hours.
Offers a course appropriate for the more advanced technology user. Covers many different aspects of how to create and develop instructional materials using Microsoft Office tools such as PowerPoint, Excel, and Word. Offers participants an opportunity to gain a better understanding of how technology and media can be integrated into language classes as an aid to improving student performance and to explore the design of materials using technology as a tool to better support teaching and the learning. Emphasizes students with different learning styles.

LNG 6915. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

LNG 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

LNG 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

LNG 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

LNG 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

LNG 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

LNG 6983. Topics. 1-4 Hours.
Covers special topics in modern languages. May be repeated without limit.

LNG 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

Music (MUSC)

MUSC 1000. Music at Northeastern. 1 Hour.
Intended for freshmen in the College of Arts, Media and Design. Introduces freshmen to the liberal arts in general. Offers students an opportunity to become familiar with their major; to develop the academic skills necessary to succeed (analytical ability and critical thinking); grounding in the culture and values of the university community; and to develop interpersonal skills—in short, to become familiar with all skills needed to become a successful university student.
MUSC 1001. Music in Everyday Life. 4 Hours.
Dedicated to exploring, expanding, and exploding traditional meanings of what music is; of what it means to be a composer, performer, and audience member, and of what it means to listen. The overarching goal is to provide students with the tools and opportunities necessary for determining for themselves what place music holds in everyday life.

MUSC 1101. Introduction to Music. 4 Hours.
Offers an introduction to selected works of our Western musical heritage, from earliest to contemporary styles. Consists primarily of a survey and listening format, with emphasis on styles, basic theory, forms, and the historical, social, and artistic periods that these works represent.

MUSC 1103. Music as a Social Expression. 4 Hours.
Examines the processes of music making and the perceptions of music’s functions in human culture. Considers what is music, why we have it, what kinds of music are made, and what kinds of music are made to be meaningful. Identifies various styles and genres of music and examines them within an ever-shifting context of aesthetics, social history, and cultural heritage.

MUSC 1104. Survey of African-American Music. 4 Hours.
Explores the various musical traditions of African Americans, with a specific focus on the United States. Examines the impact of African, European, and Native American traditions on African-American music as well as the role of music as an expression of African-American aesthetics, traditions, and life. Considers historical and contemporary forms of African-American music, with selected video presentations. Not open to students who have taken AFAM 1104.

MUSC 1105. Music of the USA. 4 Hours.
Examines American music from the time of Puritan psalm singing to the present. Covers a wide variety of music including concert music, traditional folk music, jazz, and contemporary styles.

MUSC 1106. Women in Music. 4 Hours.
Examines the multifaceted role of women in music from the Renaissance to the present. Discusses the fact that for centuries women have been active and influential patrons, composers, teachers, conductors, and performers in Europe and the United States. Examines their contributions to classical and popular music and to jazz, with emphasis on such widely varying figures as Elizabeth Jacquet de la Guerre, Fanny Mendelssohn Hensel, Clara Schumann, Amy Beach, Germaine Tailleferre, Billie Holiday, Carla Bley, Ruth Crawford Seeger, Pauline Oliveros, Sarah Caldwell, Antonia Brico, and Nadia Boulanger.

MUSC 1108. Music and Poetry. 4 Hours.
Examines the art of setting words to music. Confronts the aesthetic problems encountered in a synthesis of two different art forms. Examines that synthesis in selected songs, choral works, tone poems, and operas of diverse periods and styles (classical, folk, and popular).

MUSC 1109. Introduction to Art, Drama, and Music. 4 Hours.
Offers an interdisciplinary approach to music and other arts including painting, film, and theatre. Examines works of art from various periods in the context of the cultures that produced them. Supplements regular classes with visits to art museums or attendance at concerts and theatrical performances.

MUSC 1110. Music in Popular Culture. 4 Hours.
Explores the nature of music composed for the mass market. Discusses techniques of recording and merchandising music. Selected songs are analyzed for their musical content. Traces the evolution of various styles including ragtime, jazz, blues, rock, and music for the media.

MUSC 1111. Rock Music. 4 Hours.
Examines the development of rock-and-roll and its relationship to blues, rhythm and blues, country, folk, and other styles of music. Considers themes such as the role of rock as youth music, the reflections of social realities in rock songs, the relationship of rock to the recording industry and the mass media, and the changing styles of rock. Emphasizes listening skills.

MUSC 1112. Jazz. 4 Hours.
Examines the evolution of the creative improvisational musical styles commonly called jazz, from its African-American roots to its status as one of America’s classical musics and an internationally valued art form. Explores the contributions of African and European musical traditions and African-American spirituals, work songs, and blues. Examines major composers and their stylistic development and change through selected audio and audio-visual presentations. Also considers the sociocultural dynamics that have affected musical evolution and acceptance.

MUSC 1113. Film Music. 4 Hours.
Emphasizes the various ways that music is used in film, including music depicted on-screen and musical scores. Music is a crucial element of meaning in film, yet its presence is easy to ignore. Offers students an opportunity to learn basic approaches to the analysis of music and sound in film, to develop the ability to think critically about film, and to become knowledgeable about key historical developments in film music and sound. No musical background is necessary.

MUSC 1114. Mozart. 4 Hours.
Traces Mozart’s musical development from child prodigy to mature artist through personal letters and biographies. Analyzes many of his major compositions including symphonies, concertos, operas, and chamber works.

MUSC 1115. Debussy and the Music of Paris. 4 Hours.
Recognizes that Claude Debussy, impressionist in sound, composed music that marked a turning point toward modern trends. Covers much of his music for piano, orchestra, and voice, including Suite Pour le Piano, Suite Bergamasque, Images (for piano and orchestra), Nocturnes, La Mer, and Pelleas et Melisande. Discusses the music of Satie, Ravel, and Fauré as it relates to that of Debussy.

MUSC 1116. Beethoven. 4 Hours.
Analyses the complex personality and art of Beethoven, his relation to the turbulent times in which he lived, and his role in classical and romantic music.

MUSC 1117. George Gershwin. 4 Hours.
Studies the life and works of George Gershwin (1898-1937) including popular song, musical comedy, opera, and orchestral compositions. Explores the relationship of George Gershwin to his times, both musically and historically. Takes as a critical starting point Gershwin's famous statement, “My people are American; my time is today.”.

MUSC 1118. Music Therapy 1. 4 Hours.
Examines the application of music as a therapeutic vehicle to release suppressed emotions, to encourage self-expression in psychiatric patients, and to treat a wide variety of disorders. Examines music therapy, in a modern approach to health services, as a supplement to other treatments.
MUSC 1119. Fundamentals of Western Music Theory. 4 Hours.
Introduces students with little or no musical experience to all the major and minor key signatures and the following scales: major, natural minor, harmonic minor, and melodic minor. Topics include how to read music in treble clef, bass clef, and various C-clefs; how to identify and construct intervals, triads, and seventh chords; how melody and harmony work together to create a piece of music; roman numeral analyses; and various small forms. Short excerpts are analyzed, and students are required to write musical compositions.

MUSC 1121. Medieval and Renaissance Music. 4 Hours.
Offers an introduction to European music from the sixth through the sixteenth centuries. Covers a wide variety of music, ranging from the serene elegance of sacred Gregorian chant and the plaintive love songs of the medieval troubadours to the lively dances and humanistic vocal music of the Renaissance. Examines representative works by composers such as Machaut, Landini, Josquin, Palestrina, and Dowland.

MUSC 1122. Music of the Baroque Era. 4 Hours.
Focuses on music of the seventeenth and early eighteenth centuries in Italy, Germany, France, and England. Discusses the emergence of important new genres (such as opera, sonata, and concerto) and examines representative works of major composers (such as Bach, Handel, Corelli, Vivaldi, Rameau, and Purcell).

MUSC 1123. Music of the Classical Era. 4 Hours.
Focuses on crucial developments in musical styles and forms of the late eighteenth century and on emerging genres, such as the symphony, the concerto, and the string quartet. Emphasizes the vocal and instrumental works of Haydn and Mozart and the early works of Beethoven.

MUSC 1124. Music of the Romantic Era. 4 Hours.
Focuses on romantic realism and idealism as expressed in the music of the nineteenth century. Emphasizes historical, nationalistic, and literary influences. Includes composers such as Beethoven, Schumann, Schubert, Berlioz, Liszt, Verdi, Wagner, Brahms, Tchaikovsky, and Mahler.

MUSC 1125. 20th-Century Music. 4 Hours.
Focuses on developments in music from 1900 to 2000. Examines a broad range of musical styles including expressionism, neoclassicism, and other major trends in music of the twentieth century.

MUSC 1127. Introduction to World Music. 4 Hours.
Introduces musical traditions from around the world using ethnomusicological approaches to examine the role of music in culture. Focuses on various world music from the perspectives of the people who create the music and compares these perspectives with our own.

MUSC 1128. Music of Africa. 4 Hours.
Uses ethnomusicological frameworks and concepts to examine some of the many music cultures on the continent of Africa. Selected cultures are studied through their musical, social, historical, and political heritage. Musical focus includes various vocal and instrumental performance characteristics as well as dance. Covers traditional and contemporary African music. Not open to students who have taken AFRS 1128.

MUSC 1129. Music of the Middle East. 4 Hours.
Presents an introduction to the music of selected Near Eastern and Arab cultures (such as Persian in the East and Ethiopic and Berber in Africa). Includes the cantillation styles and practices of various chants of the Hebrew, Christian, and Islamic traditions.

MUSC 1131. Music of Latin America and the Caribbean. 4 Hours.
Introduces students to the diverse music of Latin America and the Caribbean. Students read and write about the cross-fertilization of indigenous, European, and African influences in the music that have created unique hybrid musical genres. Cultural theories used in class frame the conceptual, behavioral, and musical aspects of performance in a number of contrasting music cultures. Students discuss and write about features of the music cultures under study and investigate how music constructs meaning for listeners. Offers students an opportunity to gain an understanding of the important connection of music to its accompanying dance—which shapes the music’s tempo, rhythmic structure, and form—and to develop critical listening skills.

MUSC 1132. Music of the Jewish People. 4 Hours.
Investigates the role that music has played in Jewish life from ancient to modern times. Topics include music in the time of the Bible, rabbinic attitudes toward music, music and mysticism, the development of the modal for prayer and scriptural cantillation, church and synagogue music compared, music of the holidays and the life cycle, folk and popular music in the Diaspora, the development of art music in the modern era, and music in modern Israel. Prior knowledge of music is not required.

MUSC 1133. Voice Class. 4 Hours.
Gives students the opportunity to learn the basic vocal production required for fine singing. Chooses repertoire, both classical and contemporary, for each student to learn and perform in lessons and before the entire class. Topics include diction, the physiology of singing, resonance, registers, and interpretation. Also studies the basics of music reading and sight-singing. Discusses some interpretation, and plays recordings of the greatest vocal artists for class analysis.

MUSC 1134. Guitar Class. 4 Hours.
Provides an introduction to the fundamentals of classical guitar playing for those with or without prior knowledge of the guitar. Covers music reading and theory. Requires students to perform alone and in ensemble with other members of the class. Augments the syllabus by live performances from outside professional and student classical guitarists. Bases final grades on several written examinations and student performance.

MUSC 1135. Coltrane. 4 Hours.
Studies the life of John Coltrane, recognized as one of the greatest musicians of all time. Presents, in a chronological sequence, his growing up in a Black North Carolina community during the era of U.S. apartheid to becoming a world-class artist whose music touched the hearts and souls of listeners all around the globe. His advanced and innovative conceptions (melodic, rhythmic, and harmonic) and stylistic contributions in and to the realm of African-American creative improvisation changed the way to play the music forever. Emphasizes his immense impact on jazz and other improvisational music and expressive art forms, as well as his spiritual legacy, which focused on using music as a force for the improvement of humanity. His musical and spiritual legacy continue as major influences in current times. Not open to students who have taken AFAM 1135.
MUSC 1136. What’s Playing at Symphony?. 4 Hours.
Offers students an opportunity to attend several performances of the Boston Symphony Orchestra (BSO) at Symphony Hall. Discusses each piece of music from a variety of perspectives, including the history of a given composer and his or her relationship to music history and the history of a given composition and its relevance to the symphonic repertoire. Analyzes program pieces in order to provide a deeper appreciation for their musical construction; however, no musical background is required to participate in this course—it is designed for nonmusic majors and music majors alike. Requires students to purchase BSO College Cards (for a nominal fee) for the current BSO concert season.

MUSC 1139. Popular Music, Sexuality, and the New Global Order. 4 Hours.
Introduces critical debates on the role of sexuality, focusing on a number of popular music or artists from around the globe—the transgendered pop of Saida Sultan/Danna International; dance and the body politics in post-Suharto Indonesia; and the intersection of sex, nation, and religion in Turkey—to explore the continuously changing categories of gender and sexuality in the processes of globalization. Sexuality is central to popular music because of the way in which it is enacted and embodied by performers and also interpreted by the audience. Although conventions and customs of local cultures and/or societies continue to inform popular music, globalization has opened up spaces in which it is possible to rearticulate gender and sexual identities.

MUSC 1140. Global Pop Music. 4 Hours.
Introduces and studies popular music from around the world within the framework of popular culture and the impact of globalization. Seeks to answer three major questions using readings, musical listenings, and discussions of materials for the course: What do we mean by music as popular culture? What do we mean by global perspective? What is the mutual impact between global forces and local musics? Explores important issues surrounding popular music in regard to specific genres, styles, and practices using readings gleaned from the fields of anthropology, sociology, and ethnomusicology. Requires students both to respond to and to build on the work of various scholars in their writing assignments, final project, and final exam.

MUSC 1141. Wired for Sound. 4 Hours.
Explores the use of electronics in music of various styles and genres from a historical perspective, beginning in the early twentieth century and moving to the present. Examines the methods and means of electronic sound production. Throughout history, technological innovations have influenced music. Starting in the early twentieth century, electricity and, later, electronics, became a key motivating force in music, both in composing and performing and even in listening. Covers the social and cultural conditions under which electric sound was able to evolve.

MUSC 1142. Pop, Jazz, and Rock Singing. 4 Hours.
Focuses on singing techniques used in pop, rock, and jazz. Techniques taught, discussed, and applied in class include breathing, tone and vowel production, singing with power without strain, developing range, improvising, and creating one’s own style. Offers students an opportunity to apply these techniques in class, learning through vocal demonstrations in class and through the study of recordings. Singers/songwriters are encouraged to enroll. All levels of singers are welcome; students who enroll should already have the ability to sing generally in tune.

MUSC 1143. Music in Culture. 4 Hours.
Studies ethnomusicology—a field of study that places music centrally within cultures and societies. The field’s history, definitions, and scope provide a basis for understanding frameworks used to study music cultures and how musical concepts, behavior, and performance interrelate. Focuses on a number of ethnomusicological studies to illustrate the variety of research approaches used to emphasize particular aspects of music making and musical meaning and to uncover the role and function of music, ranging from ritual to play. Offers students an opportunity to learn about fieldwork methods for collecting data so essential to research. Other topics include comparing music cultures, the challenges of being an outsider in studying music cultures, the impact of new technologies, and processes of musical change.

MUSC 1201. Music Theory 1. 4 Hours.
Introduces melodic and harmonic practices in tonal music with additional work in chord and melody construction. Develops ear training and sight-singing skills.

MUSC 1202. Music Theory 2. 4 Hours.
Continues MUSC 1201. Focuses on harmonic practices in tonal music. Examines the role and function of harmony through analysis of musical examples and composition of four-voice chorales. Introduces study of advanced harmony. Further develops ear training and sight-singing skills.

MUSC 1205. Piano Class 1. 4 Hours.
Provides introductory-level study of piano designed for students with or without previous experience. Combines skills in reading music with improvisation and functional piano. Introduces some basic theory to help clarify the structure of class repertoire. Allows students to progress at their own pace. Determines grades by the amount of repertoire mastered during the semester.

MUSC 1241. Musicianship 1. 1 Hour.
Develops ear training, sight-singing skills, rhythmic skills, and keyboard skills.

MUSC 1242. Musicianship 2. 1 Hour.
Continues MUSC 1241. Develops ear training, sight-singing skills, rhythmic skills, and keyboard skills.

MUSC 1250. Instrumentation and Orchestration. 4 Hours.
Introduces the individual abilities of the instruments of the orchestra as well as the fundamental techniques of orchestration.

MUSC 1901. Music Lessons 1. 1 Hour.
Offers private instruction in voice or in an instrument. Arranges weekly lessons on a half-hour basis. Contact the music department for arrangements. Requires lab fee. May be repeated without limit.

MUSC 1902. Music Lessons 2. 1 Hour.
Offers private instruction in voice or in an instrument. Arranges weekly lessons on a half-hour basis. Contact the music department for arrangements. Requires lab fee. May be repeated without limit.

MUSC 1903. Composition Lessons. 1 Hour.
Offers private instruction in music composition. Contact the music department for arrangements. Requires lab fee. May be repeated without limit.

MUSC 1904. Chorus. 1 Hour.
Allows students to participate as performers in one or more ensembles under the direction of a faculty conductor. Prereq: Audition or permission of instructor. May be repeated without limit.

MUSC 1905. Concert Band. 1 Hour.
Allows students to participate as performers in one or more ensembles under the direction of a faculty conductor. May be repeated without limit.
MUSC 1906. Orchestra. 1 Hour.
Allows students to participate as performers in one or more ensembles under the direction of a faculty conductor. Prereq: Audition or permission of instructor. May be repeated without limit.

MUSC 1907. Wind Ensemble. 1 Hour.
Allows students to participate as performers in one or more ensembles under the direction of a faculty conductor. Prereq: Audition or permission of instructor. May be repeated without limit.

MUSC 1911. Jazz Ensemble. 1 Hour.
Designed to serve both music majors and nonmajors, this is a performance/theory/history offering of the varied styles and techniques of performance in the jazz tradition of African-American music. Students are drawn from all segments of the University. Repertory is taken from the standard jazz literature as well as investigations of new works. Improvisational and interpretational technique are the core content of the course. Both the NU Jazz Ensemble and the NU Jazz Combo are represented together in this course. Prereq: Audition or permission of instructor. May be repeated without limit.

MUSC 1912. Rock Ensemble. 1 Hour.
Allows students to participate as performers in one or more ensembles under the direction of a faculty conductor. May be repeated without limit.

MUSC 1913. Blues/Rock Ensemble. 1 Hour.
Allows students to participate as performers in one or more ensembles under the direction of a faculty conductor. Prereq: Audition or permission of instructor. May be repeated without limit.

MUSC 1914. Create Your Own Music. 1 Hour.
Allows students to participate as performers in one or more ensembles under the direction of a faculty conductor. May be repeated without limit.

MUSC 1915. Chamber Ensemble. 1 Hour.
Allows students to participate as performers in one or more ensembles under the direction of a faculty conductor. Prereq: Audition or permission of instructor. May be repeated without limit.

MUSC 1916. Contemporary Music Ensemble. 1 Hour.
Offers students an opportunity to participate as performers in an ensemble under the direction of a faculty conductor. Under faculty supervision, students have an opportunity to identify repertory, including original compositions by members of the ensemble. Prereq: Audition or permission of instructor. May be repeated without limit.

MUSC 1917. Jazz Choir and Combo. 1 Hour.
Designed to give students who sing jazz and blues the opportunity to rehearse and perform in a small vocal group. Offers students an opportunity to work on singing in harmony and be featured in solos. The group is also accompanied by a student jazz combo. Members of the combo may register for the course for credit. Requires audition. May be repeated without limit.

MUSC 1918. World Music Ensemble. 1 Hour.
Explores music-making traditions from selected world cultures through performance on percussion, voice, and other instruments. No previous music-making experience required. May be repeated up to eight times.

MUSC 1919. Fusion Ensemble. 1 Hour.
Offers students an opportunity to participate as performers in one or more ensembles under the direction of a faculty conductor. Focuses on instrumental rock, blues, funk, and jazz repertoire. Prereq: Audition or permission of instructor. May be repeated up to eight times.

MUSC 1920. Pep Band. 1 Hour.
Offers students an opportunity to participate as performers in one or more ensembles under the direction of a faculty supervisor. The pep band performs at sporting events and other university functions. May be repeated up to eight times.

MUSC 1921. World Fusion Ensemble. 1 Hour.
Offers students an opportunity to participate as performers in one or more ensembles under the direction of a faculty conductor. Designed for more advanced students seeking to explore a variety of world music. Prereq: Audition or permission of instructor. May be repeated up to eight times.

MUSC 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUSC 2101. Black Popular Music. 4 Hours.
Surveys, investigates, and analyzes black popular music from the end of the 19th century to the present. Through critical listening habits and analytical thinking skills, offers students an opportunity to explore black popular culture as a means of expression, communication, and collective identity, attending to issues of representation, identity, values, and aesthetics through a wide range of interdisciplinary sources and methodologies. Emphasizes intersections of creativity, technology, and performance, along with the impact of music industry, audience reception, and cultural politics. Requires students to complete daily exercises and weekly discussion forums in which they must apply critical thinking to synthesize material, complete comparative analyses, relate individual lessons to key course themes, and connect the curriculum to their own experiences and musical listening practices.

MUSC 2107. Introduction to Opera. 4 Hours.
Offers an historical, social, political, economic, and artistic overview of the evolution of opera from its beginnings to the present day. Examines basic musical concepts (harmony, melody, and orchestration), structures of opera (aria, ensemble, and recitative), vocal categories and schools, and the relationship between literature, history, and librettos. Offers close study of selected operas in various styles (bel canto, verismo, and so on) by Mozart, Rossini, Verdi, Puccini, Tchaikovsky, Wagner, and others.

MUSC 2111. Algebra and Geometry of Music. 4 Hours.
Engages mathematical thinking in music with regard to its symbolic (how we represent music using numbers and signs); sonic (how mathematical thinking might create insights into musical sound); and grammatical (the logic by which music proceeds from one time to the next) expressions. Music and mathematics both contain objects that exhibit similar properties, such as circularity, similarity, objecthood, spatial dimensionality, dynamics, and processuality. Draws upon various branches of mathematics, including number theory, set theory, algebra, geometry, and statistics. Such representations highlight fundamental musical principles invoked in the process of improvisation, performance, and composition. As such, musical listening is a key component of the course. Ability to read musical notation or musical experience preferred.

MUSC 2130. Music of Asia. 4 Hours.
Introduces the musical heritage of a variety of music cultures in Southeast, Far East, and Central Asia, highlighting the importance of music as a human activity and a creative expressive form. Exposure to aesthetic preferences different from the West expands students’ notions of what sounds pleasing, pleasurable, or proper. Offers students an opportunity to learn cultural theories that frame the conceptual, behavioral, and musical aspects of performance in a number of contrasting music cultures. Students discuss and write about features of the music cultures under study, investigate how music constructs meaning for listeners, and develop critical listening skills. Learning about local and global forces that shape music engages students to argue for the positive or negative effects each have on processes of musical change.
MUSC 2110. Conducting. 4 Hours.
Focuses on repertory as well as performance. Examines the great improvisational artists in American music, such as Charlie Parker, Miles Davis, and John Coltrane. Approaches analysis from a theoretical as well as a practical perspective. Explores the use of rhythm, chords, scales, and modes in the creative improvisation process.

MUSC 2120. Songwriting 1. 4 Hours.
Offers an opportunity to learn to construct songs with forward motion and memorable "hooks." Topics include time-proven song forms, melody writing, harmonic tools, lyric writing, collaboration, and production techniques. Emphasizes the craft of writing songs for use in film and television.

MUSC 2121. Songwriting 2. 4 Hours.
Builds on the skills covered in MUSC 2120. Seeks to advance the student's songwriting toolbox via a combination of analysis/transcription, writing, production, critiquing, and analysis. In order to maximize the amount of professional opportunities afforded to the songwriters, this course is highly collaborative in order to model the writing processes most commonly used in the industry.

MUSC 2137. Viennese School 1. 4 Hours.
Focuses on music from the mid-eighteenth century to the mid-nineteenth century. Covers specific genres as well as specific works by major central European composers.

MUSC 2138. Viennese School 2. 4 Hours.

MUSC 2150. Making a Musical: Analysis, Craft, and Creation. 4 Hours.
Explores how great musicals are constructed and what tools are needed, focusing on how effective lyrics are built, how songs function in musicals, and how book writers, lyricists, and composers create new works and adapt existing works from other media to the musical theater stage. Offers students an opportunity to transform analytical techniques and discoveries into creative strategies, building short musicals in collaborative teams. Students need not be musicians to participate in this class. Aspiring actors, composers, lyricists, authors of all styles, technical theater artists and designers, and all those with a curiosity about the history of musicals and how musicals are made are strongly encouraged to enroll.

MUSC 2208. Jazz Improvisation. 4 Hours.
Focuses on music from the mid-eighteenth century to the mid-nineteenth century. Covers some of the best-known figures in classical music: Bach, Mozart, Beethoven, Wagner, and Stravinsky. Considers why and how the great tradition of tonal music defines classical music even today. Uses scores to help understand the different ways music can be written and the different aesthetic definitions of beauty, pleasure, and meaning in sound.

MUSC 2210. Songwriting 1. 4 Hours.
Continues MUSC 1202. Examines representative examples of structural principles governing the melodic, harmonic, rhythmic, and formal components of music. Focuses on music from the sixteenth to the mid-nineteenth centuries. Further develops ear training and sight-singing skills.

MUSC 2205. Piano Class 2. 4 Hours.
Continues MUSC 1205. Emphasizes increasing students' flexibility at the keyboard through the study of scales, transposition, and modulation.

MUSC 2206. Principles of Music Literature. 4 Hours.
Examines the evolution and application of each major structural element of music through an historical perspective. Also links larger categories of music such as classical, popular, and non-Western by examining their common elements. Restricted to music majors and combined majors only.

MUSC 2301. Historical Traditions: America. 4 Hours.
Provides an overview of music in the United States in cultural and stylistic contexts. Introduces historical methods of music. Studies a broad range of styles including folk, popular, and classical music.

MUSC 2302. Historical Traditions: Classical. 4 Hours.
Provides an overview of the history of the music industry. Following intensive study of the electronic and print tools available to those interested in researching the music industry, the course initiates historical work in the nineteenth century, when many aspects of the modern music industry took root and blossomed. The remainder of the course is organized around topics drawn from the twentieth and twenty-first centuries, including record companies and marketing, television and the music industry, and the Internet and the music industry. Each unit is accompanied by the most recent and cutting-edge research in the field.
MUSC 2317. Punk Rock. 4 Hours.
Explores punk rock as a music genre and a lifestyle, an attitude and a philosophy, a political orientation and a commodified fashion. Everyone’s perspective on punk is different, but it also has rules and boundaries. Although it emerged in the 1970s as a reaction against very specific social, cultural, and musical moments in the United States and the United Kingdom, punk has become larger than itself in the intervening decades, spawning sub-subcultures and subgenres that would be unrecognizable to its originators. Addresses punk’s long narrative: protopunk genres including garage rock and glam rock; punk’s origins in New York City and London; its transformation into postpunk, hardcore, anarcho-punk, and straightedge; and its legacy outside the United States/United Kingdom nexus and in genres such as riot grrrl, grunge, and pop-punk.

MUSC 2319. Korean Pop Music and the Music Business. 4 Hours.
Covers the history of Korean pop music (K-pop) from 1970 to the present, focusing on its rapid growth over the last ten years. Discusses the history of Korean pop music, major K-pop artists, and the K-pop music business. Discussions are coupled with site visits to provide context. Excursions may include visits to recording studios to observe producers and pop artists at work and to K-pop concerts to study stage settings, the flow of concerts, and musical arrangements; TV stations; and classes given by K-pop artists. Taught in Korea.

MUSC 2320. 40,000 Years of Music Technology. 4 Hours.
Surveys the relationship between music and technology from the Paleolithic Age to the present. Examines the origins and impact of diverse musical instruments, with attention to connections between musical and technological developments; the reasons instruments are accepted, modified, or abandoned; and debates about the effects of new technologies on music. Considers such forces as standardization, institutionalization, and commodification—as well as experimentation, hacker, and DIY cultures—and asks whether music technologies are just tools or rather carry with them ethical values and ramifications. By studying the sociocultural history of such instruments as the violin, piano, electronic guitar, and synthesizer, offers students an opportunity to gain an understanding of the interplay between technological change and the enduring human need for music.

MUSC 2330. Musical Communities of Boston. 4 Hours.
Combines ethnomusicology and experiential learning by exploring the diverse communities of Boston and their music. Since 17th-century encounters between the Wampanoag Nation and English Puritans, Boston has been characterized by intercultural contact and exchange. Discusses the history and legacies of such encounters, as well as present-day issues of diversity and belonging in Boston. Focuses on how communities reinforce their own cultural bonds through music and discusses alliances formed through shared experiences of diasporic, exilic, refugee, immigrant, and minority status. Through interdisciplinary, ethnographic analysis and practice, offers students an opportunity to explore how these inherently intersectional social dynamics—which engage issues of race, gender, class, ethnicity, etc.—play out through collective and individual musical practices.

MUSC 2340. Divas, DJs, and Double Standards. 4 Hours.
Examines the significance of gender to the experience of and access to participation in music making, listening, the music industries, and cultural recognition. Surveys how gender differences have been constructed, enacted, and contested in historical and contemporary musical cultures and develops critical lenses for analyzing musical representations of gender difference and their social impact. Considers how gender intersects with racial and sexual identities in music and its institutional structures. Uses case studies drawn from a variety of contexts, such as classical (Bizet’s “Carmen”), popular (Beyoncé), film (“Star Wars”), and avant-garde (Yoko Ono).

MUSC 2343. Musicianship 3. 1 Hour.
Continues MUSC 1242. Develops ear training, sight-singing skills, rhythmic skills, and keyboard skills.

MUSC 2344. Musicianship 4. 1 Hour.
Continues MUSC 2343. Develops ear training, sight-singing skills, rhythmic skills, and keyboard skills.

MUSC 2350. Acoustics and Psychoacoustics of Music. 4 Hours.
Introduces students from a variety of disciplines to the fundamentals of sonic production, transmission, and reception. Topics include impedance, refraction and diffraction, wave mechanics, frequency spectrum, and resonance. Applies core concepts to the understanding of the acoustics of musical instruments and loudspeakers. Explores basic auditory psychophysics. Offers students an opportunity to investigate real-life applications in the domains of music, sonic art, sound design, instrumental design, and recording.

MUSC 2420. Music Composition Seminar 1. 4 Hours.
Exposes students to the basic methods of music composition. Analyzes examples from music literature to gain an understanding of the methods employed; students complete several compositions of their own.

MUSC 2540. Special Topics in Music. 4 Hours.
Focuses on various topics related to music. May be repeated without limit.

MUSC 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUSC 3337. Writing about Music. 4 Hours.
Provides an overview of various types of musical journalism including criticism, reviews, feature articles, program notes, promotional material, and so on. Offers students significant opportunity to develop their own skills in writing, editing, research, and interview techniques as they apply to writing about music and the music industry.

MUSC 3410. Recital 1. 1 Hour.
Offers preparation for and performance of a minirecital (twenty to thirty minutes of music) under the guidance of the student’s primary instrumental or vocal instructor. Minirecitals are usually shared by more than one student. Students take MUSC 3410 in place of MUSC 4992.

MUSC 3470. War and Music. 4 Hours.
Offers an interdisciplinary and comparative exploration of the diverse ways in which composers, artists, novelists, poets, and dramatists have depicted the excitement, glory, agony, and sacrifice of war both at the dawn of modern gunpowder-based warfare in the seventeenth and eighteenth centuries, and as the full impacts of “industrialized killing” became visible in the twentieth. Drawing on artistic and literary artifacts and the massive cultural outpourings that the slaughter and destruction of the two World Wars of the twentieth century elicited, students will investigate how artists’ interactions with the experience and meaning(s) of war have developed and changed in the modern world and how those changes have affected our own understanding of its impact and significance.

MUSC 3540. Special Topics in Music Analysis. 4 Hours.
Focuses on advanced topics in theory and analysis. Topics vary with each offering. May be repeated without limit.

MUSC 3541. Music Analysis Seminar. 4 Hours.
Explores students to advanced methods of musical analysis. Focuses on techniques for analyzing large musical forms from the baroque period to the present day.
MUSC 3550. Historical Traditions: Special Topics. 4 Hours.  
Provides an advanced seminar examining topics and issues surrounding 
musical cultures and histories. Topics vary with each offering. May be 
repeated without limit.

MUSC 3560. Historical Traditions: Music since 1900. 4 Hours.  
Offers an intensive overview of music from 1900 to the present day. 
Covers the works of the best-known figures of the twentieth and twenty-
first centuries and draws on a variety of repertoires including American 
and European “classical” music, jazz, and the music of non-Western 
cultures. Includes analysis of scores as well as thorough investigations 
into the social milieus from which the music emerged.

MUSC 3640. Special Topics in Music. 4 Hours.  
Focuses on various topics related to music. May be repeated up to two 
times for up to 12 total credits.

MUSC 3990. Elective. 1-4 Hours.  
Offers elective credit for courses taken at other academic institutions. 
May be repeated without limit.

MUSC 4621. Seminar in Performance Practice. 4 Hours.  
Provides students with the opportunity to reflect on their research as 
it applies to their performances. Students present written reports to be 
discussed at the seminar. Students are also expected to research and 
write the program notes for their performances. Fulfills the college’s 
experiential education requirement for literature and performance majors.

MUSC 4622. Recital 2. 1 Hour.  
Offers preparation for and performance of a senior recital (forty to 
sixty minutes of music) under the guidance of the student’s primary 
instrumental or vocal instructor.

MUSC 4631. Music History and Analysis Capstone. 4 Hours.  
Offers students an opportunity to complete a culminating written project 
for the music history and analysis major. Projects might include writing 
program notes, reviews of concerts, and/or completing a research project 
that explores a particular area of music history and analysis.

MUSC 4641. Seminar in Ethnomusicology: Issues in Fieldwork and 
Methodology. 4 Hours.  
Offers a practice-oriented course, the goal of which is to apply theories 
and paradigms covered in MUSC 3350. Requires a final paper/research 
proposal and presentation. The research project necessitates fieldwork, 
reading relevant literature (including research methodology, research 
techniques, and proposal writing), and reflecting about questions 
in which students are interested and methods of addressing them 
through ethnography. Focuses on critical aspects of proposal and 
project development, including data analysis, audiovisual techniques, 
methodology, and ethics of ethnomusicology.

MUSC 4970. Junior/Senior Honors Project 1. 4 Hours.  
Focuses on in-depth project in which a student conducts research or 
produces a product related to the student’s major field. Combined with 
Junior/Senior Project 2 or college-defined equivalent for 8-credit honors 
project. May be repeated without limit.

MUSC 4971. Junior/Senior Honors Project 2. 4 Hours.  
Focuses on second semester of in-depth project in which a student 
conducts research or produces a product related to the student’s major 
field. May be repeated without limit.

MUSC 4990. Elective. 1-4 Hours.  
Offers elective credit for courses taken at other academic institutions. 
May be repeated without limit.

MUSC 4991. Research. 4 Hours.  
Offers an opportunity to conduct research under faculty supervision.

Music - CPS (MUS)

MUSC 4992. Directed Study. 1-4 Hours.  
Focuses on independent work in a selected area of music under the 
direction of a member of the department. Enrollment is limited to 
qualified students by special arrangement with the supervising faculty 
member and with the approval of the department chair. May be repeated 
without limit.

MUSC 4993. Independent Study. 1-4 Hours.  
Offers independent work under the direction of members of the 
department on a chosen topic. Course content depends on instructor. 
May be repeated without limit.

MUSC 4994. Internship. 4 Hours.  
Offers students an opportunity for internship work. May be repeated 
without limit.

MUSC 4996. Experiential Education Directed Study. 4 Hours.  
Draws upon the student’s approved experiential activity and integrates 
it with study in the academic major. Restricted to those students who 
are using it to fulfill their experiential education requirement. May be 
repeated without limit.

MUSC 5540. Special Topics in Music. 3,4 Hours.  
Focuses on various topics related to music. May be repeated up to two 
times.
MUS 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

MUS 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

MUS 4994. Internship. 1-4 Hours.
Provides students with an opportunity for internship work.

MUS 4995. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

MUS 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

MUS 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

MUS 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

MUS 6100. The Entertainment Industry. 3 Hours.
Introduces the music/entertainment industry. Presents an overview of the music industry and associated management principles required to succeed in today’s changing, competitive, and dynamic music/entertainment business environment.

MUS 6110. Music Copyright and Publishing. 3 Hours.
Explores the unique character of music-related copyright issues. Investigates common-law copyright; statutory copyright; ownership, duration, and transfer of copyright; fair use; works for hire; infringements and remedies; public domain works; and international copyright. Examines related legal aspects of the exploitation of intellectual property.

MUS 6120. The Record Industry. 3 Hours.
Examines the domestic and international record industry. Topics include industry structure, business and legal affairs, the recording contract, royalties, manufacturing, distribution, promotion, publicity, advertising, licensing, and piracy. Offers students the opportunity to explore major record labels and independent labels. Addresses the past, present, and future of the record industry.

MUS 6130. Artist Management. 3 Hours.
Offers students an opportunity to gain an in-depth understanding of the field of musical artist management. Explores the artist-manager relationship, the management contract, artist evaluation, image formulation, and the artist’s development team. Highlights the processes required for achieving a record contract, merchandising, endorsements, sponsorships, touring, and financial management.

MUS 6140. Live Music Performance. 3 Hours.
Explores the principles and practices of concert promotion and venue management. Focuses on concert promotion, venue advertising, talent buying, contractual requirements, insurance, government regulation, ASCAP/BMI licenses, personnel management, and concert production and administration.

MUS 6150. Music Entrepreneurship. 3 Hours.
Offers students an opportunity to gain the knowledge, skills, and abilities necessary to plan, finance, develop, and operate a new music venture. Topics include attributes of music entrepreneurs and entrepreneurial careers, evaluating opportunities, writing business plans, financing, and long-term management and planning.

MUS 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

MUS 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUS 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

MUS 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

MUS 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

MUS 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

MUS 6983. Topics. 1-4 Hours.
Covers special topics in music. May be repeated without limit.

MUS 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

Music Industry (MUSI)

MUSI 1203. Music Theory for Music Industry 1. 4 Hours.
Provides basic instruction in reading and writing music. Introduces melodic and harmonic practices, concentrating in popular music styles. Develops ear training and sight-singing skills. Permission of instructor required for students who do not meet prerequisite; music majors and performance certificate students only.

MUSI 1204. Analyzing Popular Genres. 4 Hours.
Continues MUSI 1203. Examines the role and function of various musical elements by analyzing examples from popular music. Examines structure, lyrics, and instrumentation in popular music. Offers students an opportunity to further develop ear training and sight-singing skills.

MUSI 1230. Introduction to Music Industry. 4 Hours.
Examines business-related areas of the music industry. Topics include music publishing, copyright, the function of performing rights organizations (ASCAP and BMI), talent agents, artist management, concert promotion, and royalties and contracts.

MUSI 1231. Music Industry 2. 4 Hours.
Continues MUSI 1230. Topics include the music products industry, theatrical production, arts administration, the recording industry, music in broadcasting, music in advertising, and royalties and contracts.

MUSI 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
MUSI 2101. Demo Production for Songwriters. 4 Hours.
Offers students an opportunity to learn the necessary techniques to utilize current Musical Instrument Digital Interface (MIDI) and audio technology in the production of professional-quality song demos, including intermediate to advanced skills and concepts of MIDI, synthesis, multitrack recording, mixing, and sound processing. Covers musical approaches to the effective assembly and arranging of sound materials using professional digital audio workstations (DAWs). Focuses on techniques to import and export both MIDI and audio data to greater facilitate collaboration within the virtual classroom as well as using external collaborators (across a variety of DAWs and platforms). Songwriting skills are also critiqued.

MUSI 2231. Music Licensing for Media. 4 Hours.
Examines a variety of music usages in film, advertisements, TV shows, and other media types or venues that require music licensing. Offers students an opportunity to examine licenses and agreements in an effort to enable them to customize boilerplate forms to reflect accurately the needed licenses with any and all customized terms. Stresses teamwork, defining roles within a team, and assertiveness in an effort to enable students to function at their highest level for the demanding team-based final project. The final project stresses resourcefulness, meeting deadlines, creative excellence, along with open and sustained communication between the production side and the creative side.

MUSI 2232. Music Recording 1. 4 Hours.
Introduces the history and practice of recording music. Covers recording apparatus; microphones; monophonic, stereophonic, and digital theory and techniques; field recording; studio terminology; basic sound theory; and development of rudimentary editing skills. Also examines the role of the producer vs. that of the technician, preparation for recording sessions, and basic legal regulations regarding copyrights and compensation.

MUSI 2233. Music in the Online and Mobile Environment. 4 Hours.
Offers an overview of the music and radio industries as related to the world of Internet radio. Analog radio has historically been resilient in the face of previous technological advances (FM, TV, satellite radio, HD radio) but now faces pressures from online, mobile, and social media platforms. Introduces conceptual frameworks of innovation theory, scans the current music/radio ecosystem, studies real-world examples, and examines processes to facilitate the reimagining of industry practices. Offers students an opportunity to learn basic concepts and vocabulary for Internet-based music services, to learn and to apply theories of innovation to identify optimum opportunities, to draft a plan for an Internet radio/music service, and to create an audio demo of the idea.

MUSI 2234. Festivals. 4 Hours.
Examines the multiple ways in which festivals affect musical life. Analyzes festivals both as music communities concentrated into limited temporal and geographic frames as well as social and cultural institutions situated within particular historical and cultural contexts. Studies what a festival does; what we can learn from the history of music festivals; how festivals have impacted social, cultural, economic, and aesthetic hierarchies; and what festival organizers consider when making artistic, financial, and administrative decisions. By the end of the semester, successful students should have a comprehensive understanding of both the business and the cultural contexts of music festivals, which they should be able to demonstrate through individual written, multimodal creative, and group assignments.

MUSI 2330. Performing Arts Administration. 4 Hours.
Introduces music management including the structure of nonprofit organizations (such as arts service organizations, arts centers, symphony orchestras, chamber orchestras, ensembles, opera companies, and university arts programs) and the structure of for-profit enterprises. Examines financial management, funding, and audience development.

MUSI 2331. Music Recording 2. 4 Hours.
Offers students the opportunity to learn additional skills in the recording process, such as material marketing and distribution, contracts and negotiations, and establishing distribution channels. Includes hands-on studio production of record-quality material.

MUSI 2332. Music Publishing and Royalties. 4 Hours.
Focuses on music publishing, which plays a pivotal role in the music industry. Not only does this field generate billions of dollars worldwide in revenue, but it has become an essential part of the recording, live performance, and merchandising sectors of the music industry. Examines the concepts and current issues of music publishing as it pertains to recording, film, television, print, and other media. Topics include licensing, royalty collection, and the art of negotiating music copyrights.

MUSI 2341. Music Supervision 1. 4 Hours.
Covers the field of music supervision, which has become an in-demand field due to the increased use of songs in TV shows, films, live events, advertisements, websites, and other forums. Discusses the whole process, from choosing the perfect song/lyric to strategies for securing licensing with artists and publishers. Offers students a hands-on opportunity to make music selections fit a variety of media and also to structure licensing/contract deals for composers, publishers, and record companies. Final project involves networking with Green Line Records and external rights holders to license and place music into a series of scenes and advertisements.

MUSI 2540. Special Topics in Music Industry. 1-4 Hours.
Focuses on various topics related to the music industry. May be repeated without limit.

MUSI 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUSI 3332. Artist Management. 4 Hours.
Provides an in-depth investigation of the field of musical artist management. Explores the artist-manager relationship, the management contract, artist evaluation, image formulation, the artist’s development team, achieving a recording contract, merchandising, endorsements, sponsorships, touring, and financial management.

MUSI 3333. The Record Industry. 4 Hours.
Examines the domestic and international record industry. Topics include industry structure, business and legal affairs, the recording contract, royalties, manufacturing, distribution, promotion, publicity, advertising, licensing, and piracy. Offers students the opportunity to explore major record labels and independent labels. Addresses the past, present, and future.

MUSI 3334. Music Products Industry. 4 Hours.
Provides a thorough examination of business organization, marketing, distribution, and sales techniques in the diverse field of the music products industry. Investigates market sectors such as musical instruments; professional, semiprofessional, and home audio equipment; the recording industry; and print music.
MUSI 3335. Copyright Law for Musicians. 4 Hours.
Explores the unique character of music-related copyright issues. Investigates common law copyright; statutory copyright; ownership, duration, and transfer of copyright; fair use; works for hire; infringements and remedies; public domain works; and international copyright. Also examines related legal aspects of the music industry.

MUSI 3338. Music Industry Marketing and Promotion. 4 Hours.
Provides a thorough examination of the principles and applications of marketing and promotion within the music industry. Students explore how music companies successfully conduct product, pricing, distribution, and communication management. Approaches music marketing issues using readings, specific music marketing case studies, lectures, guest speakers, and projects.

MUSI 3340. Concert Promotion and Venue Management. 4 Hours.
Provides an in-depth exploration of the principles and practices of concert promotion and venue management. Focuses on areas such as concert promotion, venue advertising, talent buying, contractual requirements, insurance, government regulation, American Society of Composers, Authors, and Publishers (ASCAP)/BMI licenses, personnel management, and concert production and administration.

MUSI 3341. Music Recording 3—Mixing and Mastering. 4 Hours.
Covers specific topics relating to the final stages in music recording—mixing and mastering. Discusses criteria for making decisions about levels, equalization, dynamics, time-based effects, and spatial positioning. In-depth listening and analysis are designed to augment hands-on practice using both students’ current recordings and professional recordings from the past forty years.

MUSI 3342. Music Supervision 2. 4 Hours.
 Builds on the basic skills covered in MUSI 2341. Digs deeper into supporting visual media through the use of songs, sound design, and underscore. Offers students hands-on opportunities to make music selections fit a variety of media by developing skills in music editing, critical listening, “pitching” to a producer, negotiating with rights owners, working with “taped” music, staying within budgets, and working with a production team as well as working individually. Includes exclusive interviews and guest lecturers in their respective fields. The final project entails collaboration between a variety of on-campus and off-campus resources, serving as both a preparation to the field of work and as a career networking opportunity.

MUSI 3401. Hip Hop in the Music Industry. 4 Hours.
Seeks to prepare and challenge music industry students to analyze Hip-Hop culture through a variety of lenses (musical, social, political, economical, cultural, and religious/spiritual) in order to uncover the impact (positive, negative, and/or neutral) on society. Focuses on the role of the music/entertainment industry within the influence, exposure, and dissemination of Hip-Hop culture. Also addresses a number of topics including Hip-Hop production; sampling and intellectual property; packaging and marketing Hip-Hop; and musicality, authenticity, and integrity. Analyzes Hip-Hop culture’s contributions to ongoing dialogues on gender, sexuality, sensuality, race, ethnicity, class, justice, and equality.

MUSI 3540. Special Topics in Music Industry. 4 Hours.
Focuses on various topics related to the music industry. May be repeated up to two times.

MUSI 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUSI 4350. Music Entrepreneurship. 4 Hours.
Designed to provide students with the knowledge, skills, and abilities necessary to plan, finance, develop, and operate a new music venture. Topics include attributes of music entrepreneurs and entrepreneurial careers, evaluating opportunities, writing business plans, financing the venture, and long-term management and planning.

MUSI 4601. Seminar in Music Industry. 4 Hours.
Presents a capstone course for music industry students. Offers advanced students the opportunity to explore contemporary events and issues in the music industry. Allows students to reflect upon, distill, and apply knowledge accumulated in prior courses and previous experiential learning. This reflection and application occurs through substantial writing assignments and classroom discussion. Fulfills the college's experiential education requirement for music industry majors.

MUSI 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUSI 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

MUSI 4992. Directed Study. 1-4 Hours.
Focuses on independent work in a selected area of music under the direction of a member of the department. Enrollment is limited to qualified students by special arrangement with the supervising faculty member and with the approval of the department chair. May be repeated without limit.

MUSI 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

MUSI 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

MUSI 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using the course to fulfill their experiential education requirement. May be repeated without limit.

MUSI 5540. Special Topics in Music Industry. 3,4 Hours.
Focuses on various topics related to the music industry. May be repeated up to two times.

MUSI 6000. Management of Music Organizations. 3 Hours.
Examines approaches used to manage and oversee various music organizations, including managing change, decision making, negotiation and presentation skills, and assessing management style. Successful music industry leaders must be well grounded in traditional management knowledge and practices, yet at the same time appreciate the unique aspects of the creative industries.

MUSI 6100. Music Industry Research Methodology. 3 Hours.
Offers students an opportunity to develop and enhance their research skills. Success as a music industry manager often hinges on the ability to find solutions effectively and efficiently. Many business mistakes can be directly traced to inaccurate information, inappropriate data, or invalid interpretation. All of these are due to inappropriate research. In an increasingly diversified music industry, managers must be functional in both qualitative and quantitative research methods and data analysis and must develop sensitivity to the target market or subjects of interest. This course is designed to help students understand how good research enables managers to make informed decisions. Requires students to complete written research reports.
MUSI 6200. Financial Management in the Music Industry. 3 Hours. 
Examines financial reporting and decision making in the music industry. 
Offers students an opportunity to become proficient in analyzing financial 
statements to predict the future performance and growth of a firm.

MUSI 6300. Intellectual Property for Music Management. 3 Hours. 
Focuses on the regulatory frameworks and converging media law. Topics 
include contracts, licensing, standards, and best practices in intellectual 
property both at a national and international level.

MUSI 6400. Marketing Strategies in the Music Industry. 3 Hours. 
Examines the role of strategic planning in developing effective marketing 
programs that enhance the overall performance of a music organization. 
Specific topics include consumer behavior, market segmentation, 
targeting, customer equity, brand equity, brand positioning, marketing 
research, product policy, pricing strategy, distribution channels, 
marketing communications, global branding, new product development, 
and social marketing.

MUSI 6500. Leadership of Music Organizations. 2-4 Hours. 
Examines the role and function of leaders within the music industry. 
Seeks to extract lessons and insights that can be applied to students’ 
own approaches to leadership. The readings cover leaders from the 
music and entertainment industries and other fields as they lead in a 
variety of contexts. It is an eclectic group who face diverse challenges. 
Discusses the key elements of leadership, and a framework for thinking 
about leadership provides the focus for discussions. Offers students 
an opportunity to develop a coherent and consistent perspective on 
leadership within the creative industries.

MUSI 6540. Special Topics in Music Industry Leadership. 1-4 Hours. 
Focuses on various topics related to the music industry. May be repeated 
up to 11 times for up to 12 total credits.

MUSI 6600. Music Industry Negotiation. 2 Hours. 
Immerses students in a variety of negotiations that cover typical music 
industry agreements within the pop and classical world. Being a leader 
in the music industry requires one to possess solid negotiating skills for 
building sustainable businesses or networks of long-term relationships. 
Covers “interest-based negotiation,” by which the parties “expand the pie” 
and unearth options for mutual gain for both parties. Offers students an 
opportunity to role-play multiparty/multi-issue negotiations, heightening 
the realism of industry scenarios, which often have several stakeholders. 
Addresses ethics, assertiveness, hardball tactics, presentation, and 
gender to offer students an opportunity to improve their effectiveness as 
negotiators.

MUSI 6700. Advanced Licensing Techniques for Music Management. 2-4 Hours. 
Identifies and explores advanced licensing strategies, techniques, 
and transactions for various intellectual properties, including music 
publishing, sound recordings, trademarks/service marks, and likeness/
publicity rights. Examines complex or hybrid licenses that cover more 
than one aspect of IP in the same license and approaches, strategies, 
and tactics (both successful and unsuccessful) that have been applied 
to licensing. Offers students an opportunity to develop a dynamic and 
effective licensing methodology and practice.

MUSI 6800. Music and Mobile Technologies. 3 Hours. 
Examines the mobile music landscape and the major underlying 
technical, legal, economic, and creative principles in play. The music 
mobile space is a hotbed of innovation, new content, and novel 
monetization approaches. The technology, telecommunications, and 
creative sectors are undergoing rapid changes at the point of their 
intersection, and this is particularly true for the music industry. Examines 
this arena from the points of view of artists, businesses, and consumers.

MUSI 6964. Co-op Work Experience. 0 Hours. 
Offers eligible students an opportunity for work experience.

MUSI 7976. Directed Study. 1-4 Hours. 
Offers independent work under the direction of members of the 
department on chosen topics. May be repeated without limit.

MUSI 7980. Capstone. 4 Hours. 
Offers students an opportunity to integrate their course work, knowledge, 
and experiences into a capstone project. Offers students an opportunity 
to work in partnership with local, state, or national leaders to produce an 
operational music company. This is a faculty-guided project for students 
completing course work in music industry leadership studies.

MUSI 7990. Thesis. 1-8 Hours. 
Offers analytical and/or experimental work conducted under the direction 
of the faculty in fulfillment of the requirements for the degree. Students 
are expected to present original research on a topic that has received 
approval from the music industry graduate academic committee. May be 
repeated without limit.

MUSI 7996. Thesis Continuation. 0 Hours. 
Continues thesis work conducted under the supervision of a 
departmental faculty member.

MPNC 1102. Music Instruction. 2 Hours. 
Offers private classical and jazz instruction at all levels by qualified, 
experienced faculty. Includes instruction in voice; most instruments, 
including classical guitar; composition; conducting; jazz arranging; music 
theory; music sight-reading; orchestration; and music technology. May be 
repeated up to 10 times.

MPNC 1103. Music Instruction. 3 Hours. 
Offers private classical and jazz instruction at all levels by qualified, 
experienced faculty. Includes instruction in voice; most instruments, 
including classical guitar; composition; conducting; jazz arranging; music 
theory; music sight-reading; orchestration; and music technology. May be 
repeated up to 10 times.

MPNC 1104. Music Instruction. 4 Hours. 
Offers private classical and jazz instruction at all levels by qualified, 
experienced faculty. Includes instruction in voice; most instruments, 
including classical guitar; composition; conducting; jazz arranging; music 
theory; music sight-reading; orchestration; and music technology. May be 
repeated up to 10 times.

MPNC 1201. Contemporary Music Production and Technology 1. 1 Hour. 
Covers the essential topics a musician should consider when exploring 
the use of computers and technology related to the music experience. 
Examines musical styles and forms, the history of electronic music, 
musical elements, and the fundamentals of music technology. Topics 
include multitrack recording; sequencing; music notation; home studios; 
computer and MIDI applications; sampling; microphones; physics of 
sound; sound reinforcement; virtual instruments; podcasting; and music 
for film, TV, multimedia, and video games. Offers hands-on experience 
in the music lab and an opportunity to be the artist, composer, producer, 
and recording engineer with a final product produced as an online 
electronic portfolio. No previous music technology experience necessary.

MPNC 1202. Music Instruction. 2 Hours. 
Offers private classical and jazz instruction at all levels by qualified, 
experienced faculty. Includes instruction in voice; most instruments, 
including classical guitar; composition; conducting; jazz arranging; music 
theory; music sight-reading; orchestration; and music technology. May be 
repeated up to 10 times.

MPNC 1203. Music Instruction. 3 Hours. 
Offers private classical and jazz instruction at all levels by qualified, 
experienced faculty. Includes instruction in voice; most instruments, 
including classical guitar; composition; conducting; jazz arranging; music 
theory; music sight-reading; orchestration; and music technology. May be 
repeated up to 10 times.
MPNC 1301. Build Your Voice: Art/Skillful Singing. 1 Hour.
Introduces singers of all levels to the fundamental mechanisms of the singing voice, which influence posture and stability, pitch and vibrato, timbre and diction, stage movement and expression. Offers students an opportunity to develop each aspect of vocal performance to increase overall confidence. Students apply their knowledge by preparing songs of their choice (art songs, musical theatre, opera, jazz, Irish ballads, or contemporary) that may be performed in class and coached by the instructor in a supportive environment.

MPNC 1310. Body Mechanics and Awareness for Singers. 2 Hours.
Explores key concepts related to singers’ needs in vocal production via two mind-body modalities: yoga and the Alexander Technique. Includes presentations on the anatomy of the larynx and the breathing mechanisms; exploration of muscle coordination and strengthening of postural muscles; a yoga singer series developed by Catt; and Alexander Technique principles on coordination and integration. Explores the mind-body modalities both in their unique ways and also in an integrated approach in order to provide building blocks and vocabulary on how the body works and to help participants identify and clear habitual tensions.

MPNC 1401. Jazz Ear Training 1. 1 Hour.
Functions as an aural counterpart to MPNC 1411. Emphasizes simple interval recognition, basic jazz rhythmic rudiments, aural identification of beginning jazz harmony, simple transcription, and vocal and instrumental imitation. Offers students an opportunity to obtain basic aural recognition skills using jazz musical vocabulary. Includes singing (no previous experience is necessary) and playing of instruments.

MPNC 1411. Jazz Theory 1. 1.5 Hour.
Introduces the harmonic and analytic vocabulary used by jazz musicians for compositional and improvisational development. Emphasizes understanding common technical terms and also learning to quickly apply theoretical constructs to playing and/or singing in a performance setting. Uses recordings of well-known jazz pieces to demonstrate theory concepts. Topics include chord construction, key signatures, diatonic modes and chord scales, basic extended jazz harmony, guide tones, and voice leading, as found in standard jazz chord progressions.

MPNC 1421. Finale Chart Writing. 1 Hour.
Focuses on basic instruction in Finale notation software. Designed for the student who desires to learn computer notation software and to make clear-looking printed music for rehearsals and performance. Offers students an opportunity to learn how to make professional charts based on the concept of developing empathy for the reader. In-class projects include lead sheets (melodies and chords); two-line scores (enhanced lead sheets); rhythm section writing (drums, bass, guitar, and keyboards); writing for vocals; changing keys; writing for horns; concert and transposed scores; part preparation; and through-composed (completely notated) scores. Also covers using Finale to make audio files as a tool for individual vocal or instrumental practice and composition.

MPNC 1451. Jazz History 1. 1 Hour.
Offers the first half of a comprehensive overview of the evolution of American jazz from its roots in African folk song and ritual through the present day. Covers related topics such as crossover, third stream, fusion, and jazz-influenced classical music. Emphasizes listening and class discussion, with possible live in-class performances.

MPNC 1501. Introduction to Music-in-Education. 2 Hours.
Offers an overview of the diverse and evolving roles of music and musicians in the field of music-in-education (MIE). Introduces the artist-teacher-scholar framework and relevant readings on the teaching of arts, the artistry of teaching, and the scholarship of teaching as a way to explore the differentiation and synthesis of these three perspectives in preparation for a role as a music educator. Researches the role of music as a catalyst for learning in other subject areas and social-emotional development. Offers students an opportunity to create and maintain their MIE digital portfolios.

MPNC 1612. Group Piano Class. 1 Hour.
Introduces keyboard to beginners. Offers students an opportunity to learn note-reading and rhythm skills and to develop technique to play repertoire at their own skill level. No prior keyboard experience is required. For students who have had experience playing piano or have participated in a previous session, the course seeks, through personalized instruction, to help boost technique and progress to a more advanced level of repertoire. Designed to accommodate varying beginning skill levels and to be customized for returning and continuing students.

MPNC 1621. The Art of Musical Sight-Reading. 2-4 Hours.
Designed especially for singers or instrumentalists who know basic notation but open to all who wish to better understand the languages of music and how to read them. Offers students an opportunity to develop skills at reading musical notation in ways that reach for higher structures of musical meaning. Explores music of different historical periods and of different composers in an effort to develop capabilities in understanding how musical languages work and how they may be read. Practice at home is expected of those who wish to improve their reading fluidity. There is group reading and opportunities for individual reading work in class for those who wish it.

MPNC 1622. The Art of Practice and Performance. 1 Hour.
Offers students an opportunity to become optimal teachers to themselves and to identify practice skills that promote deep learning. Introduces physiological and cognitive techniques that help manage performance anxiety. Presents methods that help free students to express their feelings, stories, and themselves with their audience. This is an interactive workshop; students should bring their instruments.

MPNC 1623. Developing Perfect Pitch 1. 1 Hour.
Based upon the unique ear-training system discovered and designed by Alla Elana Cohen. This system was created to help professional and amateur musicians improve and refine their ear with the ultimate goal of acquiring perfect pitch. The practice of the exercises in this course, along with dedication and patience, seeks to help realize the ear’s highest level of virtuosity. Class meetings consist of specific auditory exercises designed to help improve the student’s ability to perceive and recognize individual pitches, not only on the piano but on any instrument.

MPNC 1631. The Accidental Music Teacher: From Musical Artist to Creative Educator. 1.5 Hour.
Designed for musicians seeking a practical foundation as artists/educators. As a musical artist, pursuing studies or focusing on your career, you may at some point find yourself standing in front of a classroom or teaching in a music studio—you are the “accidental music teacher.” Examines resources, methods, strategies, and approaches applied in music education. Explores current teaching methodologies. Examines a variety of topics and issues, including assessment procedures, institutional guidelines and educational standards, and maintaining creative integrity as music educators. Course work includes a statement defining a personal philosophical and methodological approach to music education. Students design an individualized music curriculum by incorporating current methodologies and resources.
MPNC 1642. Sight-Singing for Singers. 1 Hour.
Offers singers who understand staff notation, can easily sing basic rhythms, and can easily find pitches on the keyboard an opportunity to develop their sight-singing skills. Offers regular drills in recognizing and singing all intervals. Seeks to establish fluency with all key signatures and sight-singing accuracy in all major and minor keys.

MPNC 1712. Baroque Ensemble. 1 Hour.
Specializes in composers such as Monteverdi, Schütz, Bach, and others. Offers an opportunity for musical families to sing, play, and perform together. May be repeated up to 10 times.

MPNC 1713. NEC Voices: A New Choral Experience. 1.5 Hour.
Seeks to uniquely serve the needs of both advanced and beginning singers, with opportunities for each to take their skills to the next level. Focuses on excellence in singing, on vocal artistry, and on music's unique ability to reflect the human experience. May be repeated up to 10 times.

MPNC 1714. Renaissance Ensemble. 1 Hour.
Offers students an opportunity to perform music of the Renaissance—the largest and perhaps the greatest period of vocal and instrumental chamber music. Since each part has its own melody in the polyphonic web, the repertoire is very satisfying for performers. This performance class includes a wide range of madrigals, instrumental music, and dance music. Includes work with some of the Renaissance improvisation manuals, such as treatises by Ortiz and Ganassi. Open to all advanced and professional vocalists and instrumentalists. May be repeated up to 10 times.

MPNC 1716. Contemporary Improvisation Ensemble: Walking between Worlds. 1.5 Hour.
Explores music and improvisation from many genres, eras, and cultures. Offers students an opportunity to create their versions as they learn from the sources. Pieces are chosen based on the interests of students and may include original compositions by participants as well as works stemming from folk genres, pop music, jazz, and classical music. Culminates in a performance showcasing the work that students have done. All instruments and voices are welcome. May be repeated up to 10 times.

MPNC 1721. Guitar Ensemble 1. 1 Hour.
Offers an opportunity to study, prepare, and perform music for guitar trio or quartet and to play literature from all stylistic periods. Emphasizes developing good ensemble skills—dialogue, critical listening, nonverbal communication, and timing. When possible, other instruments may play a guest role. Takes a progressive approach toward the development of sight-reading skills, though the primary goal is on prepared music and assignments. Designed for early intermediate players who can read some music but are not fluent at sight-reading. May be repeated up to 10 times.

MPNC 1731. Jazz Ensemble. 1.5 Hour.
Offers jazz ensembles at all levels. Designed for instrumentalists and vocalists who wish to work with a complete rhythm section. Emphasizes the exploration of various jazz styles and improvisation techniques. Encourages performances of student compositions. May be repeated up to 10 times.

MPNC 1741. Chamber Music Ensemble. 1 Hour.
Offers chamber music ensembles at intermediate and advanced levels encompassing the following areas: strings, woodwinds, piano, voice, brass, guitar, and mixed ensembles. Coached by the department chair and faculty. Explores the great repertoire in detail, combining the discipline of the highest standard of playing with an understanding of the music. Offers students an opportunity to learn how to play their best, getting past the limitations of purely technical considerations. May be repeated up to 10 times.

MPNC 1742. Chamber Music Duo. 1 Hour.
Offers chamber music duos at intermediate and advanced levels encompassing the following areas: strings, woodwinds, piano, voice, brass, guitar, and mixed ensembles. Coached by the department chair and faculty. Explores the great repertoire in detail, combining the discipline of the highest standard of playing with an understanding of the music. Offers students an opportunity to learn how to play their best, getting past the limitations of purely technical considerations. May be repeated up to 10 times.

MPNC 1751. Vocal Chamber Music. 1.5 Hour.
Introduces three centuries of literature for solo vocal ensemble (music for two or more solo voices and piano or instruments). Tailored to the interests and abilities of the participants. Includes ensemble singing, ear training, diction, and stage presence. Concludes with a concert. Literature is drawn from the works of Brahms, Haydn, Schubert, Mendelssohn, Schumann, Fauré, Donizetti, Rossini, Dvořák, Britten, Purcell, Foster, and others. May be repeated up to 10 times.

MPNC 1771. Improvisation and Composition Ensemble. 1.5 Hour.
Offers a laboratory for experiments and games in which students explore new ways of creating music and interacting with other musicians. Offers students an opportunity to develop skills to understand current ideas about composition and improvisation and to be able to apply some of them in a group setup. Seeks to give ensemble members the ability to make connections between music and other artistic expressions. Includes experiments with visual art, poetry, and dance as main sources for new pieces. The ensemble is designed for students who have musical experience as well as those who have never played before. All instruments and voices are welcome. May be repeated once.

MPNC 1781. Medieval Folk Roots Ensemble. 1.5 Hour.
Explores a body of songs that have slipped in and out of oral and written traditions over the centuries—medieval cantigas; Gregorian chant; trouvère songs and villancicos; folk songs; and works of Machado, Villa-Lobos, Dvorak, Canteloube, and recent composers. Offers students an opportunity to play with melodies and modes as they look at how songs travel through time and across cultures and create their own songs and arrangements to add to the tradition. May be repeated once.

MPNC 1801. Introduction to Composition 1. 1 Hour.
Encourages beginning composition students to realize their musical conceptions. Introduces basic concepts such as pitch and scale organization, meter, rhythm, interval, chord, tone color, motive, phrase, melody, and texture. Covers rudiments of counterpoint, harmony, instrumentation, and standard forms. Emphasizes the balance between repetition and contrast. Specific exercises are given, but students are also encouraged to write freely and to develop a style of their own.

MPNC 1802. Contemporary Improvisation: Skill Building. 2-4 Hours.
Seeks to ground students with a strong foundation in ear training, theory, rhythm, keyboard, performance, and improvisation skills. Also seeks to develop and hone these skills through vocal and instrumental work, both on students' main instruments and at the keyboard, as well as through notated exercises. All work is practically applied, offering students an opportunity to instantly connect new skills with their own musical goals. May be repeated up to four times.
Examines works by a diverse group of performers, composers, and improvisers across cultures and genres throughout history. Offers students an opportunity to analyze their different approaches and influences and to create their own works based on those techniques. Possible artists/genres may include Igor Stravinsky, Claude Debussy, Charles Ives, Billie Holiday, Roscoe Holcomb, Esma Redzepova, Ornette Coleman, Appalachian and Eastern European folk music, and many others. This course is part of a four-course sequence ("Music of the World").

MPNC 1901. Art and Soul of Cinema: An Appreciation of Film Music. 1.5 Hour.
Explores the various functions of music in film. Describes the various roles of those involved in producing a film and how they each relate to the composer and the musical score. Examines the evolution of film music from 1895 to the present. Discusses functions of film scoring and the operational aspects of the film music industry along with interviews of music editors, orchestrators, film music agents, studio musicians, music copyists, music contractors, and others within the business. Studies composers using video and audio excerpts, representative scores, biography, and a listing of the composer’s recognizable compositional style. Designed for moviegoers, composers, and film music enthusiasts.

MPNC 1911. Latin American Classical Traditions 1. 1 Hour.
Covers chamber music, concertos, operas, ballets, art songs, choral, and instrumental music by Latin American composers. The history of Latin American art music stretches back more than 500 years and is extremely rich and varied. Studies how the rhythms, melodies, and harmonies were transformed in this continent to shape new music by composers such as Heitor Villa-Lobos, Ginastera, Lecuona, Guastavino, Sojo, and many others. Includes the countries of Argentina, Brazil, Mexico, Venezuela, Chile, Peru, Puerto Rico, and Cuba and examines the origin and development of each nation’s musical identity.

MPNC 2401. Jazz Ear Training 2. 1 Hour.
Continues concepts introduced in MPNC 1401 and functions as an aural counterpart to MPNC 2411. Emphasizes simple interval recognition, basic jazz rhythmical rudiments, aural identification of beginning jazz harmony, simple transcription, and vocal and instrumental imitation. Offers students an opportunity to obtain basic aural recognition skills using jazz musical vocabulary. Includes singing (no previous experience is necessary) and playing of instruments.

MPNC 2411. Jazz Theory 2. 1.5 Hour.
Continues exploring the topics introduced in MPNC 1411 with further discussion of harmonic and analytic vocabulary used by jazz musicians for compositional and improvisational development. Emphasizes understanding common technical terms and also learning to quickly apply theoretical constructs to playing and/or singing in a performance setting. Uses recordings of well-known jazz pieces to demonstrate theory concepts. Topics include chord construction, key signatures, diatonic modes and chord scales, basic extended jazz harmony, guide tones, and voice leading, as found in standard jazz chord progressions.

MPNC 2431. Jazz Composition and Analysis. 1.5 Hour.
Focuses on various techniques and methods of composing—such as motivic development, rhythmic manipulation, and reharmonization—as well as on the structure of form and phrase. Exercises and assignments stem from an in-depth analysis of important jazz compositions and recordings.

MPNC 2451. Jazz History 2. 1 Hour.
Offers the second half of a comprehensive overview of the evolution of American jazz from its roots in African folk song and ritual through the present day. Covers related topics such as crossover, third stream, fusion, and jazz-influenced classical music. Emphasizes listening and class discussion, with possible live in-class performances.

MPNC 2511. Music-in-Education Seminar. 2 Hours.
Explores readings and presentations focused on the various ways that music functions as a medium and/or model for learning in other subject areas and how it affects social-emotional development. Offers students an opportunity to use this seminar to propose new guided internships, to present and reflect on their work in current guided internship courses, or to work on their requirements for the final music-in-education concentration cumulative portfolio and exit interview.

MPNC 2512. Models for Teaching and Learning for Music-in-Education. 2 Hours.
Challenges students to investigate important contrasting models of learning and to explore their application to teaching and learning in (and through) music. Serves as a preparation for guided internships, curriculum development, assessment, and further study of the developmental psychology of music. Portfolio assignments focus on readings, observations, sample curricula that support each student’s evolving rationale, and application of general models of teaching and learning to music.

Explores historical and current practices in music learning assessment methods, from preschool to K–12 to postsecondary contexts, including published studies conducted at New England Conservatory. Examines implications of current research and practices designed to measure the extent to which music training affects general learning and human development. Topics include recent developments in assessing music and neurological development, research on music’s role in early literacy, and long-term studies on the relationship between music and social development. Challenges students to apply their knowledge of recent findings in research literature to teaching and learning in music.

MPNC 2526. Music, Brain Development, and Learning. 2 Hours.
Examines implications of current research indicating that music training affects general learning and human development. Topics include recent developments in brain imaging, research on music’s role in early literacy, and long-term studies on the relationship between music and social development. Challenges students to apply their knowledge of recent findings in research literature to teaching and learning in music.

MPNC 2547. Cross-Cultural Alternatives for Music-in-Education. 2 Hours.
Explores approaches to music making and music learning that derive from ancient resonances of oral traditions and contemporary research in music and cognition.

MPNC 2548. Teaching and Learning with Music Technology. 2 Hours.
Covers the fundamental tools of current music technology and the common practices and strategies typically employed by teachers using these tools. Introduces the music technologies most commonly found in educational settings and explores them in a hands-on music technology lab setting. Examines electronic musical instruments, notation software, sequencing software, recording software, and technology-assisted learning software. Working through the nine National Association for Music Education (MENC) standards for music education, offers students an opportunity to actively apply a wide range of technology-based teaching strategies and to develop and demonstrate a multilesson curricular sequence that they believe is most relevant to their future teaching contexts and students.
MPNC 2556. Improvisation in Music Education. 2 Hours.
Explores venues for employing traditional and contemporary improvisation techniques and methods for all instruments in the general music classroom ensemble or in private lessons. Emphasizes multiple cultural perspectives on percussion and vocal teaching and learning and attention to social-emotional aspects of drum circle facilitation. Also explores interdisciplinary aspects of improvisation with attention to language arts, mathematics, history, and science. Introduces techniques for teaching improvisation, with an emphasis on “playing by ear,” ornamentation, and learning through call-and-response exercises. Explores the cultural, historical, and educational methods of teaching improvisation in schools through readings, research, observation, and discussion.

MPNC 2561. String Pedagogy. 2 Hours.
Explores approaches and methods in the education of string players. Includes the historical development of techniques, important pedagogical writings, and guest lecturers who are experts in this topic.

MPNC 2571. Performing Artists in Schools. 2 Hours.
Discusses aspects of assessing the educational impact of musical performance through readings and by design and implementation of assessments in school settings. Models for education-based performance outreach build on the past work of music-in-education students, young audiences, and the From The Top radio show. Offers students an opportunity to learn to present high-quality programs that meet specific educational goals and objectives.

MPNC 2601. Music Production for Media. 1 Hour.
Continues the concepts studied and applied in MPNC 1201. Focuses in-depth on the music composition and multimedia applications of MIDI systems and digital audio workstations such as Pro Tools and Digital Performer as well as multitrack recording systems and techniques, sound design, and software-based synthesis/music production programs such as Reason. Covers fundamentals of theory and technical process for music in film, multimedia, corporate video, and TV commercials, in addition to multimedia Web authoring and video editing. Offers students an opportunity to gain further hands-on experience in the music lab and to be the artist, composer, producer, and recording engineer with a final product produced as an online electronic portfolio.

MPNC 2612. Piano Pedagogy. 2 Hours.
Examines methods, concept series, teaching materials, and literature from elementary through upper-intermediate levels. Views comparative educational philosophies and psychologies as related to piano teaching. Features guest lecturers in special areas of concentration. Introduces Dalcroze Eurhythmics and group piano teaching. Includes lectures, discussion, performance, and reading and research assignments.

MPNC 2623. Developing Perfect Pitch 2. 1 Hour.
Offers a continuation of the concepts studied in MPNC 1623. Offers students who practice with dedication and patience the exercises contained in this course an opportunity to realize the ear’s highest level of virtuosity. Class meetings consist of specific auditory exercises designed to help improve the student’s ability to perceive and recognize individual pitches, not only on the piano but also with any instrument.

MPNC 2624. Advanced Perfect Pitch. 1 Hour.
Offers a continuation of the concepts studied in MPNC 1623 and MPNC 2623. Offers students who practice with dedication and patience the exercises contained in this course an opportunity to realize the ear’s highest level of virtuosity. The course material consists of Alla Cohen’s book Perfect Pitch for You. Class meetings consist of specific auditory exercises designed to help improve the student’s ability to perceive and recognize individual pitches, not only on the piano but on any instrument.

MPNC 2644. Bach/Handel Arias for Singers. 1.5 Hour.
Explores the works of Johann Sebastian Bach through performance and study. Uses coaching; rehearsals; presentations by the instructor, guests, and students; listening; reading; and writing assignments in a master class format to offer students an opportunity to gain confidence in performance practice. Studies issues of Baroque style, ornamentation, language, and performance practice, with an emphasis on developing ensemble skills. Includes a performance at the end of the course. Requires familiarity with singing German.

MPNC 2801. Introduction to Composition 2. 1 Hour.
Reviews topics from MPNC 1801. Explores chromatic and nontriadic harmony, contrapuntal techniques such as double and triple invertibility, larger forms, and various twentieth-century developments. Offers intermediate composition students an opportunity to realize their musical conceptions. Specific exercises are given, but students are also encouraged to write freely and to develop a style of their own. Compositions are performed in class when possible.

MPNC 2911. Latin American Classical Traditions 2. 1 Hour.
Analyzes the repertoire that constitutes the Latin American art music canon. The history of Latin American art music stretches back more than 500 years and is extremely rich and varied. Covers chamber music, concertos, operas, ballets, art songs, choral, and instrumental music by Latin American composers including Heitor Villa-Lobos, Alberto Ginastera, Ernesto Lecuona, and Vicente Emilio Sojo, among many others.

MPNC 3401. Jazz Ear Training 3. 1 Hour.
Offers a continuation and expansion of MPNC 2401. Offers students an opportunity to learn how to sing jazz voice leading lines, identify extended jazz harmony, imitate complex rhythmic figures, transcribe complex melodies and solos, and imitate singers and instrumentalists. Includes singing and playing of instruments. Portable recorders are required.

MPNC 3411. Jazz Theory 3. 1.5 Hour.
Offers a continuation and expansion of the analytic principles and jazz vocabulary introduced in MPNC 2411. Topics include “modern” harmonic movement, modal hierarchies, chord substitutions, alternate modes, compound chords, chromaticism, and improvisational pacing of theoretical concepts. Uses recordings of well-known jazz pieces to demonstrate theory concepts. Encourages students to spend much time analyzing compositions and improvisations by jazz masters and composing.

MPNC 3431. Jazz Arranging. 1.5 Hour.
Studies how to compose and arrange parts for a small jazz ensemble. Topics covered include jazz notation for both rhythmic and melodic instruments; ranges and basic timbres of woodwind and brass instruments; technical limitations of instruments; and writing introductions, interludes, background figures, and endings. Offers in-class demonstrations by professional musicians. Portable cassette recorders are required.

MPNC 3611. Piano Interpretation/Performance Seminar. 1 Hour.
Designed for intermediate- to advanced-level performers. Offers participants an opportunity to deepen their musical understanding and to provide an artistic context to their repertoire. Covers technical, stylistic, and conceptual issues, as well as practice techniques, performance preparation, and learning to “own the stage.” Conducted in the format of a master class. Some coaching sessions may be conducted by distinguished guest artists. Culminates in a public concert by all active participants. May be repeated up to 10 times.
MPNC 3631. 18th-Century Tonal Counterpoint. 2-4 Hours.
Studies the basic elements of canon and fugue and the tonal harmony that gives direction and articulation to these types of polyphony. Draws representative examples from J. S. Bach's Musical Offering, Goldberg Variations, and The Well-Tempered Clavier, Book 1.

MPNC 3633. Modal Counterpoint. 2-4 Hours.
Studies sixteenth-century species counterpoint in two voices and introduces eighteenth-century counterpoint, canon, and fugue in three voices. Emphasizes representative musical examples by Palestrina and Bach.

MPNC 3641. Dramatic Coaching of Songs and Arias. 1 Hour.
Offers singers an opportunity to enhance their vocal performing power with dramatic coaching. Seeks to prepare singers for performances in recitals, opera, and auditions. Uses techniques of subtexting, inner monologue, semistaging, and musical and dramatic analysis to demonstrate the ability to create unique interpretations with energy, concentration, and dramatic impact.

MPNC 3642. Opera Ensemble Skills. 1 Hour.
Offers singers intensive training in the component skills required for successful performance as an ensemble singer-actor in opera and musical theatre, including role and musical preparation, musical and dramatic analyses, prosenium stage and acting techniques, dialogue, and recitative reading. All instruction takes place through hands-on preparation and performance of ensemble scenes from opera and musical theatre. This course's ensemble acting focus complements the individual focus of MPNC 3641. MPNC 3641 and MPNC 3642 may be taken separately or together.

MPNC 3643. Vocal Repertoire: Coaching and Performance. 1.5 Hour.
Offers singers and pianists an opportunity to perform selected pieces from the vocal repertoire each week in a supportive and noncompetitive class setting. The instructor coaches the performers on aspects of the literature that pertain to both vocalists and pianists, including diction, musical style, interpretation, presentation, relationship of the piano accompaniment to the vocal setting, and historical context of the repertoire. Concludes with a concert.

MPNC 3644. Musical Theatre Workshop. 1.5 Hour.
Focuses on the preparation and performance of works from musical theatre, from Gilbert and Sullivan through Stephen Sondheim right up to the modern Broadway stage. Repertoire includes solos, duets, trios, and ensemble pieces. Explores essential concepts of voice production, stage presentation, movement, and character development through in-class coaching and rehearsal. Culminates in a public performance. Since much of the repertoire after 1960 involves some degree of “belt” technique, for students performing this literature this course includes careful technical training in achieving authentic belt quality while ensuring vocal health. Students should be able to read music and to learn their parts outside class time. Decisions relating to repertoire selections and the final performance are at the instructor’s discretion.

MPNC 3801. Composition Seminar 1. 1.5 Hour.
Offers project-based work with the goal of creating intensive collaborations between composers and conservatory performers. Projects are focused on composing for specific instrumental combinations, differing from semester to semester. Offers students an opportunity to study orchestration and scores of repertory pieces to help them develop their craft for writing for the selected performer combination. The class is predominantly run like a group composition lesson where students present ongoing work for the chosen ensemble to each other. At various times throughout the semester, meetings are held with performers who critique works in progress. Culminates in a final performance and recording of finished work.

MUST 1220. Introduction to Music Technology. 4 Hours.
Provides students with instruction in the use of a computer for composing original music. Topics include MIDI sequencing, digital audio processing, and sound synthesis. Students use music hardware and software to complete a variety of projects.

MUST 1301. Introduction to Composition. 4 Hours.
Designed as the first step in the education of a student composer. The art and craft of composing music is grounded in knowledge of fundamental concepts and hands-on experience. Offers students an opportunity to acquire competence in the notation and layout of a score; develop basic compositional skills (control of melody, harmony, rhythm); and obtain a wide and deep knowledge of the musical repertory.

MUST 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUST 2320. Sound Design. 4 Hours.
Instructs students in the art of producing and designing musical accompaniments for a variety of media including film, TV commercials, industrial video, animation, games, theatre, and radio drama. Focuses on abstract thinking regarding sound theory and practice and includes hands-on skills. Restricted to music majors and combined majors; all other students require permission of instructor.

Music Technology (MUST)

MPNC 3802. Composition Seminar 2. 1.5 Hour.
Continues MPNC 3801.

MPNC 4401. Jazz Ear Training 4. 1 Hour.
Offers a continuation of concepts introduced in MPNC 3401. Includes further study of how to sing jazz voice leading lines, identify extended jazz harmony, imitate complex rhythmic figures, transcribe complex melodies and solos, and imitate singers and instrumentalists. Includes singing and playing of instruments. Portable recorders are required.

MPNC 4411. Jazz Theory 4. 1.5 Hour.
Offers a continuation of concepts introduced in MPNC 3411. Includes further discussion and analysis of "modern" harmonic movement, modal hierarchies, chord substitutions, alternate modes, compound chords, chromaticism, and improvisational pacing of theoretical concepts. Uses recordings of well-known jazz pieces to demonstrate theory concepts. Encourages students to spend much time analyzing compositions and improvisations by jazz masters and composing.

MPNC 4581. Music-in-Education Guided Internship. 2 Hours.
Offers students an opportunity to complete a guided internship. Students are supervised by the music-in-education department chair and music-in-education coordinator. Important to the success of the internship, and its possible application to state licensure, is the range and quality of documentation of the internship activities as specified in the internship plan. Internships may focus on many topics, such as studio instruction, preschool education, vocal and general music instruction, student improvisation and composition in schools, music integration in schools, music for special needs students, orchestral and wind ensemble conducting, music literacy instruction, conducting improvisation ensembles, opera performance and creating opera residencies, arranging and composing for school ensembles, arts learning organization, and administration internships.

MPNC 4591. Music-in-Education Portfolio. 0 Hours.
Offers students an opportunity to complete their portfolio with supervision by the music-in-education coordinator. Students are required to register for this course when they have designed, and intend to complete, a guided internship.
MUST 2431. Computer Music Fundamentals. 4 Hours.
Focuses on the creation and implementation of standard time-domain audio synthesis routines and effects, as well as standard frequency-domain processing routines. MaxMSP is the principal programming environment used in the course. Begins with programming protocols, as well as data structures and storage, and list processing in the MaxMSP environment before moving on to standard synthesis and audio processing routines. Examines how the techniques learned in the course can be applied using a variety of synthesis and spectral processing software applications that are standard in the field.

MUST 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUST 3421. Digital Audio Processing. 4 Hours.
Comprises the theory and application of digital audio processing techniques. Includes multitrack digital recording, sampling and sample processing, and encoding audio for various delivery formats.

MUST 3422. Music Composition Seminar 2. 4 Hours.
Exposes students to methods of musical composition. Requires students to compose several short pieces and one piece in a large form on their own. Analyzes examples from the literature to facilitate understanding the methods employed.

MUST 3540. Special Topics in Music Technology. 1-4 Hours.
Focuses on topics related to current trends in the area of music technology. Topics vary with each offering. May be repeated without limit.

MUST 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUST 4520. Interactive Music Programming. 4 Hours.
Focuses on three high-end skills: advanced software-based synthesis and production, abstract reasoning and computer programming, and performing live with electronic instruments in an interactive human-computer environment. Utilizes the MAX programming language, enhanced with MSP, a set of extensions to the MAX graphical programming environment that provides for real-time synthesis and signal processing with a PowerPC Mac OS computer.

MUST 4610. Composition for Electronic Instruments. 4 Hours.
Instructs students in the composition of original music for electronic and computer-based instrumentation. Students create music to accompany video, animation, and film, and study suitable methods for creating original music for the Internet. Also surveys examples of music written for similar contexts.

MUST 4611. Music Technology Capstone/Senior Recital. 4 Hours.
Instructs students in the preparation and presentation of their senior recital. Fulfills the college’s experiential education requirement for music technology concentrators.

MUST 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

MUST 4992. Directed Study. 1-4 Hours.
Focuses on independent work in a selected area of music under the direction of a member of the department. Enrollment is limited to qualified students by special arrangement with the supervising faculty member and with the approval of the department chair. May be repeated without limit.

MUST 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

MUST 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

MUST 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using the course to fulfill their experiential education requirement. May be repeated without limit.

MUST 5540. Special Topics in Music Technology. 3,4 Hours.
Focuses on various topics related to music technology. May be repeated up to two times.

Nanomedicine (NNMD)

NNMD 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

NNMD 5270. Introduction to Nanomedicine Science and Technology. 3 Hours.
Provides an overview of the distinctive features of nanotechnology and their application to biomedical problems. Includes active participation of students in the classroom through in-depth discussion sessions, presentations, and a group project. Taught by Northeastern faculty and guest speakers.

NNMD 5272. Nanomedicine General Seminar. 1 Hour.
Offers an opportunity to prepare and present a research seminar focused on applications of nanosystems in biology and medicine. May be repeated without limit.

NNMD 5274. Nanomedicine Advanced Seminar. 1 Hour.
Continues NNMD 5272 with advanced scientific findings and innovations in the field of nanomedicine by leading researchers and clinicians. May be repeated up to two times.

NNMD 5370. Nanomedicine Research Techniques. 4 Hours.
Provides an in-depth look at laboratory methods and tools for studying nanomaterials used in biology and medicine. Includes hands-on sessions with experts in research techniques, including nanoparticle synthesis, TEM, SEM, AFM, MRI, optical microscopy, etc.

NNMD 5470. Nano- and Biomedical Commercialization: From Concept to Market. 3 Hours.
Offers a comprehensive overview of key elements involved in commercialization of biomedical technologies. Discusses fundamental concepts around various business models, protection of intellectual property (IP), capital and financing, and mathematical modeling of business valuation and transactions. Also covers regulatory process for technical and clinical validation of biomedical solutions, as well as mechanisms for raising capital to support product development. Requires each student to complete an individual project and a team project, which are selected from ongoing research activities at Northeastern University and other leading research centers and are designed to apply concepts learned throughout the course.

NNMD 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
NAVY 1001. Naval Science Laboratory. 0 Hours.
Focuses on either drill instruction or practical work to complement classroom instruction. Must be taken in each class semester by all NROTC nursing students.

NAVY 1101. Introduction to Naval Science. 2 Hours.
Provides a general introduction to the naval profession and the concepts of sea power. Emphasizes the mission, organization, and warfare components of the United States Navy and Marine Corps. Includes an overview of officer and enlisted ranks and rates, training and education, and career patterns. Also covers naval courtesy and customs, military justice, leadership, and nomenclature. Exposes the student to the professional competencies required to become a naval officer.

NAVY 2102. Naval Ships Systems. 3 Hours.
Offers an overview of the engineering plants that propel and power U.S. Navy warships. Covers the basic engineering principles relating to thermodynamics, steam propulsion (conventional and nuclear), gas turbine propulsion, internal combustion engines, electricity generation and distribution, and various support systems. Also discusses ship design, stability, damage control, and some engineering-related ethical issues. At the conclusion of the course, the successful student should have a basic understanding of the engineering systems that naval personnel operate in the fleet.

NAVY 2201. Naval Weapon Systems. 3 Hours.
Covers laser fundamentals, applications, side-looking radar, and radar holography. Includes selected readings on naval weapons and fire control systems.

NAVY 2202. Sea Power and Maritime Affairs. 3 Hours.
Offers a historical study of the U.S. Navy from the American Revolution to the modern era. Traces the U.S. Navy's rise from a coastal defense force into the world's premier naval power. Major themes include wars, events, people, technology, strategy, tactics, and diplomacy that shaped naval history and America's role in the world.

NAVY 2840. History of War. 4 Hours.
Traces five centuries of war to uncover depths of depravity and cruelty and heights of sacrifice and suffering. Why do we make war? Nothing else so engages the human genius for creative destruction.

NAVY 3702. Leadership and Ethics. 3 Hours.
Provides a foundation of leadership principles and management tools and skills to prepare and motivate students to assume the responsibilities of a commissioned officer in the United States Navy confidently. Reinforces leadership principles through leadership case studies with emphasis on core values, responsibility, accountability, loyalty, and professional ethics. Provides a basic background in the responsibilities of a junior division officer and watch officer, with emphasis on training, counseling, career development, military law, and special programs. This is the capstone course of Naval Science.

NAVY 4101. Naval Operations and Seamanship. 3 Hours.
Offers a capstone course for senior midshipmen in advanced navigation, communications, naval operations, and naval warfare. Offers students an opportunity to learn through simulation in a computer classroom.

NAVY 4501. Leadership and Management. 2 Hours.
Studies at an advanced level organizational behavior and management in the context of the naval organization. Topics include the management functions of planning, organizing, and controlling; individual and group behavior in organization; and motivation and leadership. Explores major behavioral theories in detail. Investigates practical applications by the use of experiential exercises, case studies, and lab discussions. Develops other topics including decision making, communication, responsibility, authority, and accountability.

Network Science (NETS)

NETS 7341. Network Economics. 4 Hours.
Covers seminal works in the economics of information and networks, including Akerlof, Arrow, Spence, Stiglitz, and von Hayek. Proceeds through concepts of information, its value, and measurement; search and choice under uncertainty; signaling, screening, and how rational actors use information for private advantage; strategy-generated network effects; two-sided (or multisided) network effects, organizational information processing, learning, and social networks; and other micro- and macroeconomic effects such as matching markets. Although primarily a theory course, it may be of interest to any student applying information economics and network economics in academic, commercial, or government policy contexts. Exppects students to produce a major paper suitable for publication or inclusion in a thesis. Requires prior completion of graduate coursework in microeconomics and mathematics at the level of introductory calculus and statistics.

NETS 7345. The Practice of Interdisciplinary Scholarship. 4 Hours.
Seeks to improve students' written, oral, and visual communication skills, with a special focus on the unique challenges of communicating across disciplinary boundaries. Focuses on all stages of the academic writing process, including preparing a manuscript, selecting an appropriate publication outlet, and navigating the peer-review process. Students practice other forms of scientific communication, including conference talks, posters, and presentations for lay audiences. Assignments are designed to cultivate the skills, wisdom, and expertise necessary to communicate independent, high-quality scholarship to a number of different audiences. Through a combination of regular writing, speaking, peer-review, and instructor feedback, offers students an opportunity to learn to be outstanding interdisciplinary scientific communicators. Designed for second-year doctoral students.

NETS 7983. Topics. 4 Hours.
Covers various topics in network science. May be repeated up to two times for up to 12 total credits.

NETS 8941. Network Science Literature Review Seminar. 2 Hours.
Critically evaluates recent articles in the academic literature surrounding topics and applied research in network science. May be repeated up to three times.

NETS 8984. Research. 1-4 Hours.
Offers advanced students an opportunity to work with an individual instructor on a topic related to current research. Instructor and student negotiate a written agreement as to what topic(s) are covered and what written or laboratory work forms the basis for the grade. Viewed as a lead-in to dissertation research. May be repeated without limit.

NETS 9000. PhD Candidacy Achieved. 0 Hours.
Indicates successful completion of the doctoral comprehensive exam.

NETS 9990. Dissertation. 0 Hours.
Offers experimental and theoretical work for PhD candidates. Requires written dissertation and final oral exam. May be repeated once.
NETS 9996. Dissertation Continuation. 0 Hours.
Offers experimental and theoretical work for PhD candidates. Requires written dissertation and final oral exam. May be repeated without limit.

Nonprofit Management - CPS (NPM)

NPM 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

NPM 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

NPM 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

NPM 6110. Legal and Governance Issues in Nonprofit Organizations. 3 Hours.
Examines the U.S. federal and state laws under which nonprofit organizations operate and considers their effect on the establishment and operation of nonprofit organizations. Offers students an opportunity to learn about incorporation and tax-exempt status, general liability, regulatory compliance/reporting, and contracts. Emphasizes the roles, responsibilities, processes, and powers of boards of directors.

NPM 6120. Financial Management for Nonprofit Organizations. 3 Hours.
Introduces students to the major financial management concepts and techniques required for effective management of nonprofit organizations. Managing one’s budget well is an essential skill for the nonprofit manager because the organization’s core mission cannot be served if the financial health of the organization is in jeopardy. Offers students an opportunity to learn about nonprofit accounting, budget management, revenue forecasting, financial statements and reports, tax issues, grant compliance, internal expenditure control, audits, cash flow management, long-term financial planning, endowment management, and capital financing.

NPM 6125. Promoting Nonprofit Organizations. 3 Hours.
Explores the uses of traditional and nontraditional ways to promote nonprofits to an array of actual and potential audiences for a variety of purposes. All nonprofit organizations at some point must be visible to the public in order to fulfill their missions; nonprofit managers must know how to promote their organizations to current and potential supporters, the broader public, and the mass media. Topics include program and organizational branding, targeting respective audiences, and preparing materials for greatest effect.

NPM 6130. Fund-Raising and Development for Nonprofit Organizations. 3 Hours.
Examines sources of funding and strategies for development planning, including donor profiles, proposals and case statements, foundation and corporate philanthropy, government grant and contract programs, special events, marketing and public relations functions, direct mail and membership campaigns, planned giving, major gifts, and capital campaigns. Fund-raising and development are essential skills for managers because nonprofit organizations depend upon individual, government, and foundation resources to fulfill their mission.

NPM 6140. Grant and Report Writing. 3 Hours.
Introduces grants and grant proposal writing. Knowledge of the grant writing cycle allows nonprofit professionals to use their time productively. Topics include effective research, creating a plan for the program, elements of a good proposal, components of the proposal package, and strategies for getting a proposal read by a foundation or corporation. Offers students an opportunity to research an RFP or identify a foundation, write a grant proposal, and ready it for submission to a funding source.

NPM 6150. Human Resources Management in Nonprofit Organizations. 3 Hours.
Examines methods of developing, supervising, motivating, and recognizing volunteers and staff; communicating effectively within an organization; staff-volunteer relations; and stress, conflict, and crisis management. Managers in nonprofit organizations face the challenge of working with both paid and unpaid stakeholders in the organization’s future. Explores HRM topics such as legal employment issues, recruiting and hiring practices, diversity in the workplace, compensation and benefits, performance appraisal, and discipline.

NPM 6160. Public Management Context and Challenges. 3 Hours.
Examines the public management environment, current challenges and opportunities facing public managers, ethical standards and issues, and the legal environment. Offers students an opportunity to assess their own knowledge and skills and develop a personal development plan.

NPM 6162. Approaches to Service Delivery. 3 Hours.
Considers multiple approaches to public service delivery, focusing on performance measurement; benchmarking, best practices; innovative program identification, adoption, and implementation; use of technology; contracting out and contract management; and public-private partnerships. Assesses broader societal factors that affect which modes of delivery may be preferred to others.

NPM 6164. Budgeting and Financial Management. 3 Hours.
Offers an overview of state and local public budgeting and financial management. Topics include the budget process; approaches to public budgeting; the basics of financial management, including cash management, fund accounting, and expenditure control; internal controls; understanding financial auditing and reading financial audits; capital financing; and alternative funding sources.

NPM 6165. Personnel Management. 3 Hours.
Highlights the fundamental importance of personnel to public-sector performance and examines a range of public personnel management functions: the concept of human capital, the recruitment and selection of qualified staff, performance appraisal, the development of personnel, labor relations, and employment law issues in the public sector.

NPM 6166. Productivity and Program Evaluation. 3 Hours.
Focuses on practical issues pertaining to and methodologies for evaluating public program productivity and effectiveness. Emphasizes assessing alternative methods for evaluation and standards for performance auditing, political and organizational factors that affect program effectiveness, presentation of results, and advocacy for change.

NPM 6168. Leadership in Public Management. 3 Hours.
Focuses on the challenges facing public-sector leaders, the importance of identifying and understanding the organization’s internal and external environments, strategic planning, executive-legislative relations, media relations, different styles of leadership and decision making, and the importance of implementing and maintaining high standards of integrity.
NPM 6400. Management in Cultural Arts Administration. 4 Hours.
Offers students an opportunity to build strategic thinking skills through case analyses of relevant cultural arts organizations and institutions and, based on these analyses, to develop recommendations for success and actions to influence strategic change. Effective managers look within and beyond their organizations to determine the right direction for action. Management capability extends beyond operational excellence; it requires an appreciation of the external environment and its impact on the organization. A common gap in management competence of today’s administrators is the ability to consider the role of the organization within its wider environment. The comparative portion may take place as an intensive or integrated overseas component with counterparts who are academics or professionals in renowned cultural arts venues abroad.

NPM 6405. Cultural Policy. 4 Hours.
Provides an overview of cultural policy and introduces students to the individual components of the cultural arts sector. Offers students an opportunity to gain an understanding of how the sector is managed through key organizations and of its economic contribution to society. The comparative portion may take place as an intensive or integrated overseas component with counterparts who are academics or professionals in renowned cultural arts venues abroad.

NPM 6410. Principles and Practices in Cultural Arts Administration. 3 Hours.
Provides a survey of the history and practice of cultural arts administration. Focuses on the responsibilities of arts administrators in nonprofit organizations, the different challenges faced by arts institutions, and the role of commercial arts institutions. Emphasizes nonprofit governance and the roles and responsibilities of boards of directors.

NPM 6420. Audience Development and Strategic Marketing for Cultural Arts. 3 Hours.
Investigates the elements of marketing strategy and audience development and considers their application to cultural arts administration. Offers students an opportunity to develop a critical awareness of the external environment in which their organization operates and how the elements of the marketing mix can be used to improve demand, as well as to develop the student’s understanding of this management technique.

NPM 6430. Cultural Arts and Social Policy. 3 Hours.
Analyzes the role of cultural arts in society and investigates key aspects of cultural policy in the United States and elsewhere. Offers students an opportunity to investigate how cultural policy is created at federal, state, and local levels. Topics include arts education, multiculturalism, freedom of expression, and copyright issues.

NPM 6440. Urban Development and Cultural Arts Administration. 3 Hours.
Examines the role of artists and arts organizations in the process of local arts policy development. Focuses on the arts as the impetus for social and economic development, integrating the arts into public programs, partnerships with civic institutions, public art programs, and the role of cultural arts in the building of community identity.

NPM 6450. Marketing in the Cultural Sector. 3 Hours.
Investigates the elements of marketing management and considers their application to administration and leadership in the cultural arts sectors. Offers students an opportunity to develop an understanding of the use of marketing planning as a management technique, specifically, to develop an awareness of the external environment in which their respective organizations operate and to learn how the elements of the marketing mix can be used to improve demand.

NPM 6460. Project and Resource Management. 3 Hours.
Offers students an opportunity to identify, develop, and apply personal and team project management knowledge and skills and apply them to their own work experience. Students design, develop, and document a work-related project plan, indicating its resource requirements and how the plan can be implemented.

NPM 6470. Human Resources Management in For- and Nonprofits. 3 Hours.
Examines methods of developing, supervising, motivating, and recognizing volunteers and staff; communicating effectively within an organization; staff-volunteer relations; and stress, conflict, and crisis management. Managers in cultural arts organizations face the challenge of working with both paid and unpaid stakeholders in the organization’s future. Explores HRM topics such as legal employment issues, recruiting and hiring practices, diversity in the workplace, compensation and benefits, performance appraisal, and discipline.

NPM 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

NPM 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NPM 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

NPM 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

NPM 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

NPM 6980. Capstone. 3 Hours.
Integrates theory, practice, case studies, and experiential learning with operational and organizational concepts including, but not limited to, nonprofit law, financial management, human resource management, fund-raising and development, promotions, and grant writing. Aims to synthesize learning in a practical manner. Offers students an opportunity to prepare for working in or volunteering at a nonprofit organization. Presents an interrelationship of student learning and real-world practice through a series of pedagogical paradigms.

NPM 6983. Topics. 1-4 Hours.
Covers special topics in nonprofit management. May be repeated without limit.

NPM 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

NPM 7961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

NPM 7976. Directed Study. 1-4 Hours.
Offers students an opportunity to carry out an individual reading and research project under the supervision of a faculty member. The directed-study format allows for the in-depth analysis of a particular topic not covered in-depth or the study of a subject not typically covered in the curriculum. A directed study proposal must be approved by the faculty sponsor, division head, and dean of academic affairs.

NPM 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.
NPM 7980. Capstone. 1-4 Hours.
Provides students with an opportunity to select an issue of professional interest for assessment, to develop the appropriate project scope and methodology, to follow through on the assessment according to the project plan, to write up the analysis, and to present results for discussion. Encourages students to work in teams.

NPM 7983. Topics. 1-4 Hours.
Covers special topics in nonprofit management. May be repeated without limit.

NPM 7990. Thesis. 1-4 Hours.
Offers thesis supervision by members of the department.

NPM 7994. Thesis Continuation—PT. 0 Hours.
Offers continuing thesis supervision by members of the department.

NPM 7995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

NPM 7996. Thesis Continuation. 0 Hours.
Offers continuing thesis supervision by members of the department.

Nursing (NRSG)

NRSG 1000. College: An Introduction. 1 Hour.
Provides an introduction to the University, college, and health professions to enhance students' understanding of self and the decisions they make academically and socially as members of the University's diverse, multicultural community. Group activities and individual assignments along with active participation in a learning community help students adjust to life on an urban campus, develop a better understanding of the learning process, acquire essential academic skills, and make connections with the faculty and students in the college.

NRSG 1205. Wellness. 4 Hours.
Explores the concept of wellness and examines behaviors and lifestyle choices that lead to a high level of physical, emotional, and spiritual well-being. Topics include health risk, behavioral change, lifestyle analysis, the life cycle, and stress management through self-analysis.

NRSG 1206. Wellness Abroad. 4 Hours.
Explores wellness as both a concept and a self-care experience. Introduces theories and models of holism, wellness, stress, health promotion, health belief, and change as frameworks by which the student may learn to reflect upon personal behaviors and lifestyle choices that influence health and well-being. Topics include lifestyle analysis, health risk, behavioral change, and stress/stress-reduction comparisons across cultures. May be repeated without limit.

NRSG 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NRSG 2000. Professional Development for Co-op. 1 Hour.
Introduces the Bouvé Cooperative Education Program. Offers students an opportunity to develop job-search and career-management skills. Students perform assessments of their workplace skills, interests, and values and discuss how they impact personal career decisions. Offers students an opportunity to prepare a professional-style résumé, learn proper interviewing techniques, and gain an understanding of the opportunities available to them for co-op. Introduces career paths, choices, and career decision making. Familiarizes students with workplace issues relative to their field of study and presents the MyNEU COOL database in the job-search and referral process. Presents and discusses co-op policies, procedures, and expectations of the Bouvé Cooperative Education Program and co-op employers.

NRSG 2206. Global Perspectives in the Science and Practice of Mindfulness. 4 Hours.
Offers students an opportunity to explore theoretical, practical, and clinical applications of mindfulness in a variety of situations. Presents the theoretical underpinnings through text as well as through dialogue with peers, practitioners, and clinicians in the field. Practice includes a daily exploration of embodied learning experiences. Clinical site visits seek to deepen the student's comprehension of the practice applications of mindfulness in health, illness, and healing. Reflection and reflexivity frame inquiry into the inner and outer worlds of the student's lived experience as a global citizen. Major topics include stress reduction, focused attention, cultural intelligence, and intercultural communication. Taught abroad. May be repeated without limit.

NRSG 2210. Influences on Health and Illness: A Nursing Perspective. 3 Hours.
Offers a context within which students have an opportunity to begin to understand, develop, and nurture a professional nursing identity. Through situated learning within a model of whole-person care, the student may utilize clinical imagination and reasoning to explore culturally mediated behaviors and meanings that are ascribed to health and illness experiences across the life span. Empirical, personal, ethical, and aesthetic ways of knowing create a framework for personal reflection and reflexivity. Integrated learning strategies guide the beginner's study of communication and relationships with patients, families, and providers. Guiding course principles include foundations of the nursing profession, nursing self-care and well-being, compassionate care, social justice, and quality and safety.

NRSG 2220. Nursing Interventions, Assessment, and Community Care. 4 Hours.
Introduces the concepts of wellness and caring and application of the nursing process as the framework for providing holistic and quality nursing care to clients. Explores with students the professional role of the nurse and ethical, cultural, spiritual, social, psychological, developmental, gender, community-based, and physical considerations in meeting client health needs and promotion of health. Develops health-assessment and nursing skills through nursing theory, rationales, critical thinking, and evidence-based knowledge.

NRSG 2221. Lab for NRSG 2220. 1 Hour.
Introduces and facilitates the student foundation and mastery of beginning assessment techniques and nursing skills for application to nursing practice and delivery of safe care of clients. Offers students an opportunity to engage in learning through demonstration and supervised practice of skills. Additional opportunities for students to enhance quality care practice, communication techniques, and critical thinking and reasoning skills are delivered in a center for simulation client care experiences. The Electronic Medical Record systems enables students to gain knowledge and practice in documentation of client health care, effective communication, and interprofessional collaboration for improved client outcomes.
NRSG 2300. Pathophysiology. 3 Hours.
Reviews human physiology related to oxygenation, nutrition, elimination, protective mechanisms, neurological functions, endocrine functions, and skin integrity. Explores how the human body uses its adaptive powers to maintain equilibrium and how alterations affect normal processes. Examines disease processes and implications for nursing practice.

NRSG 2306. Nursing with Women and Families. 3 Hours.
Focuses on primary, secondary, and tertiary prevention as it relates to individuals with mental health issues. Incorporates principles of communication, with particular focus on individuals with altered patterns of communication. Helps students provide nursing care to individuals, families, and groups with a variety of mental health and mental illness-related issues. Provides students information about the spectrum of mental illnesses and about factors that predispose people to developing mental health problems. Critical thinking skills are employed to explore the legal and ethical issues of providing nursing care for mentally ill persons. Use of psychotropic drugs is integrated throughout the course as it applies to specific psychiatric illnesses. In patient and community settings are utilized as learning arenas to assist students to meet the course objectives.

NRSG 3320. Nursing Care of Adults 1. 4 Hours.
Focuses on the care of adults experiencing common health problems. Builds on the conceptual foundation learned in sciences, nursing practice, physical assessment, pharmacology, nutrition, and growth and development. Emphasizes the acute care of adults and application of the nursing process. Explores expanding concepts of health and illness, including management of patients transitioning from acute care to the home or rehabilitation settings.

NRSG 3321. Clinical for NRSG 3320. 2 Hours.
Emphasizes clinical skills that focus on the application of knowledge learned in NRSG 3320.

NRSG 3323. Intermediate Interventions and Assessment. 1 Hour.
Focuses on principles and concepts that support nursing assessment and the performance of advanced nursing skills in the adult patient. Discusses health assessment, nursing interventions, and communication techniques that support clinical decision making within the nursing process framework. Emphasizes critical analysis of the appropriateness and accurate performance of nursing interventions to ensure the provision of safe quality care. Covers the delivery of culturally competent care and the professional development of the nurse as an interprofessional team member.

NRSG 3340. Nursing and the Promotion of Mental Health. 3 Hours.
Focuses on applying the theories, principles, and concepts learned in NRSG 3400 in providing psychiatric mental health (PMH) nursing care.

NRSG 3420. Nursing Care of Adults 2. 4 Hours.
Focuses on the care of adults and their families experiencing complex physiological insults across the lifespan. Builds on the conceptual foundation established in NRSG 3320. Offers students an opportunity to improve their organizational skills through the expanding complexity of patient acuity levels and workloads in an advanced health care setting. Emphasis is on complex decision and critical thinking through collaboration and the use of evidence-based practices in high acuity and critical care settings. Seeks to help the student to conceptualize care of the ill patient from admission to discharge and beyond, as a means of holistic practice that demonstrates knowledge of prevention, promotion, maintenance, and restoration of the clients with complex health problems.
NRSG 3421. Clinical for NRSG 3420. 2 Hours.
Focuses on applying the theories, principles, and concepts covered in NRSG 3420 in providing nursing care to adults in increasingly complex situations. Builds upon clinical skills established in NRSG 3321.

NRSG 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NRSG 4502. Nursing Care of the Child. 4 Hours.
Builds on developmental and family theory. Focuses on the principles of nursing care of children experiencing acute and/or complex, chronic health problems and their families. The complex health issues are analyzed within the context of the individual, family, and community. Offers students an opportunity to explore evidenced-based practices within the framework of the nursing process. The therapeutic role is addressed in partnership with the family and resources available within a collaborative and interdisciplinary environment.

NRSG 4503. Clinical for NRSG 4502. 2 Hours.
Focuses on applying the theories, principles, and concepts learned in NRSG 4502 in providing nursing care for acutely and/or chronically ill children and their families in a pediatric clinical setting.

NRSG 4602. Nursing with Vulnerable Populations Abroad. 3 Hours.
Focuses on therapeutic interventions for the community in this study-abroad course. Analyzes care of populations, individuals, and families from a nursing process, epidemiological, and prevention framework. Emphasizes the role of the public health nurse in multiple arenas of practice in the United States and countries abroad. Examines factors that contribute to vulnerability in different population groups in selected countries and costs associated with levels of prevention. Designed to enable students to understand the value and use of assessment from the point of view of human biology; maturation and aging; physiologic function; physical, psychological, and social environment; and lifestyle. Examines community-based strategies for underserved populations that live in a variety of communities, both urban and suburban, in the United States and countries abroad.

NRSG 4603. Clinical for NRSG 4602. 2 Hours.
Accompanies NRSG 4602. Covers topics from the course through various activities in this faculty-led study abroad.

NRSG 4604. Public Health Community Nursing. 3 Hours.
Introduces population-focused nursing and applies the nursing process to the community as client. Examines evidence-based health-promotion strategies in a variety of community settings. Addresses core functions and essential services of public health, and introduces epidemiological and economic concepts and models. Emphasizes the involvement of the community/public health nurse in ethical issues and health policy, focusing on vulnerable populations in giving cultural and linguistic-competent care. Examines community-based strategies and interprofessional collaboration to care for underserved populations in both urban and suburban communities. Emphasizes the community/public health nurse as a population-focused care provider, case manager, deliverer of quality nursing care, care coordinator, critical thinker, liaison between agencies, and nursing researcher.

NRSG 4605. Clinical for NRSG 4604. 2 Hours.
Seeks to facilitate the student’s socialization to population-focused nursing and to plan care for the community as client. Emphasizes the application of knowledge when addressing core functions and essential services of public health, epidemiology, and economic concepts and models. Students engage in cultural and linguistic-appropriate health assessment, health promotion, and illness-prevention strategies in a variety of community settings. This may include acting as a community/public health nurse for ethical issues, health policy, coordination of care, interprofessional collaboration, liaison between agencies, and facilitation of healthcare research. Examines and evaluates types of community-based strategies used to serve underserved and vulnerable populations to ensure quality care for those living in both urban and suburban communities.

NRSG 4610. Managing and Leading in Healthcare. 4 Hours.
Introduces various theoretical frameworks that support principles of leadership and management in nursing in all types of organizational settings. Emphasizes developing, enhancing, and demonstrating leadership skills, competencies, and aptitudes. Exposes students to practical situations in the management of current and practical patient care in diverse healthcare settings. Integrates organizational structure; methods of nursing care delivery; comparison of management and nursing processes; decision making; change; communication skills; interprofessional collaboration; team building; ethical considerations; interpersonal skills of effective nursing leadership and management; and organizational issues related to the quality of client, family, and personal outcomes.

NRSG 4611. Managing and Leading in Healthcare—An International Perspective. 4 Hours.
Focuses on the knowledge and skills related to the delivery of health services within a nursing management context. Presents theories, concepts, and models—such as managed care, organization and management, authority, delegation, resource allocation, budgeting, leadership and empowerment, change, motivation, environmental safety, quality improvement, collective bargaining, and conflict resolution—to give students an understanding of the knowledge base for the management role of the baccalaureate nurse. Provides the opportunity to apply principles and practice skills in planning and delegating nursing care using different organizational models and approaches. Discusses the developing creative role for managing and leading in nursing. Includes case-based educational learning experiences and projects. Exposes students to practical situations in various healthcare settings in the United States and the country of study. Provides a context for comparing and contrasting healthcare issues in the U.S. and the country of study. May be repeated without limit.

NRSG 4620. Innovations in Nursing Practice. 4 Hours.
Offers the student an opportunity to demonstrate professional competency and integrate the critical thinking knowledge required in nursing practice. The student has an opportunity to identify, develop, and complete a project that is mutually acceptable to faculty and an agency. The project must demonstrate the role of the professional nurse in relation to professional responsibility in a selected health context, which can be any type of healthcare setting, and must focus on leadership responsibilities to improve the quality of care and/or improve the work environment.

NRSG 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.
NRSG 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

NRSG 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NRSG 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

NRSG 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

NRSG 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

NRSG 4995. Comprehensive Nursing Practicum. 5 Hours.
Seeks to prepare students to synthesize nursing knowledge, skills, and experience and facilitate their transition to professional nursing practice and case management of clients with health problems. Seeks to assist students demonstrate leadership and collaborative skills in working with other members of the health-care team through a weekly precepted relationship with an RN. Includes clinical learning experiences within hospital and community settings. Classwork includes a review of professional domains in all previous clinical courses in the nursing curriculum to help prepare students for licensure.

NRSG 5000. Advanced Perspectives in Wellness. 4 Hours.
Offers students an opportunity to explore wellness through both theoretical and experiential pathways. Introduces theories and models of holism, wellness, stress, health promotion, health belief, and change as operational frameworks by which the student has an opportunity to reflect upon personal history, health and risk-taking behaviors, and lifestyle choices that influence health and well-being. Studies the art and science of self-care through both the emic and etic perspectives. Course topics include holistic lifestyle and health analysis, behavioral change, decision making, and stress/stress reduction. Embodied learning methodologies inform course delivery.

NRSG 5100. Professional Development and Scientific Basis. 3 Hours.
Serves as a transitional course for the purposes of socialization and transformation of the student to the roles and scope of practice of baccalaureate generalist nurse. Employs principles of adult learning and critical thinking to assist the student in establishing the foundational skills required for scholarly communication, investigation, and study. Examines the historical and contemporary nursing theories related to the physiological, sociological, and cultural perspectives of professional practice, focusing on the four central concepts of professional nursing: person, health, environment, and nursing. Introduces the use of evidence-based practice to drive professional practice. Offers students an opportunity to develop a portfolio based on his or her personal and unique vision of professional nursing practice.

NRSG 5101. Computer and Nursing Informatics. 3 Hours.
Focuses on information and knowledge development concepts, data processing, and use of micro-, mini-, and mainframe computers in nursing practice. Introduces technologies used in nursing practice, such as hospital and nursing information system applications and decision support systems. Discusses the impact of computers and informatics on the future direction of nursing practice. Includes demonstration of computer-aided instruction, physiological monitoring devices, and applications of various software packages related to nursing practice, and the opportunity to practice computer skills.

NRSG 5102. Public Health Nursing. 4 Hours.
Focuses on the knowledge, skills and attitudes necessary for advanced nursing practice in a variety of community-based settings. Introduces biostatistics, epidemiology, and demography as the foundation sciences of public health. Examines definitions of health and illness, considering local, regional, national, and international communities. Explores nursing roles that affect the public health in the home, at work, and especially in the community. Expands the focus of intervention from the individual to the family and the community. Provides opportunities in the field for experiential learning in the community.

NRSG 5103. Cultural Diversity in Nursing Practice. 3 Hours.
Provides an opportunity to explore the implications of cultural diversity in advanced nursing practice. Examines and critiques selected theoretical perspectives including medical anthropology and sociology and ethnological analysis. Considers the epidemiology of folk illnesses and ethnic differences in morbidity and mortality. Students examine their own cultural health/illness perceptions as a basis for comparing the perceptions of selected groups and those of the Western allopathic medical model.

NRSG 5117. Advanced Pharmacology. 2 Hours.
Focuses on principles of pharmacology and the major drug classifications in relation to the treatment of health problems across the life span. Examines the effects of selected medications on pathophysiology and psychopathology. Emphasizes dose response, side effects/drug interactions, route of administration, and place in clinical therapy.

NRSG 5118. Healthcare System and Professional Role Development. 3 Hours.
Examines the role of the advanced practice nurse within the context of today's healthcare system. Focuses discussion on dimensions of the advanced practice nursing role, including intra/interdisciplinary collaboration, consultation, leadership, diversity, and accountability for quality care. Examines the healthcare system with special focus on social, political, economic, ethical, regulatory, research, and legal trends. Students are expected to evaluate the interaction between healthcare system issues and advanced practice role dimensions.

NRSG 5120. Statistics for Health Science. 3 Hours.
Focuses on applying formal reasoning to understand the underlying principles of statistics; how to select and conduct statistical tests; and how to interpret and use the results of data analysis in relation to research questions and research hypotheses.
NRSG 5121. Epidemiology and Population Health. 3 Hours.
Examines the theoretical basis for identification and analysis of the distribution and determinants of health problems at community, national, and international population levels. Considers health disparities that exist among specific populations and the role of government in setting policies for health promotion and disease prevention. Covers three topical areas: basic principles and population measures of epidemiology; epidemiologic study methods; and application of epidemiologic tools in interdisciplinary settings. Complements planned topics with current examples of population health issues. The goal is to understand the principles and practice of monitoring population health. Skills acquired assist advanced practice nurses, other clinicians, or administrators in critically evaluating new epidemiologic literature and in using the basic tools of epidemiology to assess population health and develop strategies for monitoring health improvement.

NRSG 5126. Pathophysiology for Advanced Practice. 3 Hours.
Covers content that provides current understanding of major disease processes across the life span. Builds on the knowledge of anatomy, physiology, biochemistry, microbiology, and immunology. Focuses on physiologic dysfunction; physiologic adaptation in maintaining the internal environment; and feedback mechanisms at the cellular, organ, and systems level. Seeks to provide students with a way of thinking about disease for each body system. Provides a comprehensive study of underlying concepts common to major pathophysiologic processes of the body, including specific diseases affecting the cardiovascular, endocrine, gastrointestinal, hematological, immunological, nervous, pulmonary, and renal systems.

NRSG 5127. Scientific Inquiry and Epidemiological Concepts. 3 Hours.
Emphasizes methods of scientific inquiry and epidemiological concepts relative to individual and population health. Addresses multiculturalism concepts relative to health and illness. Stresses theoretical frameworks, methods of inquiry, and appropriate use of selected statistical analyses. Offers students an opportunity to analyze data to improve healthcare delivery for individuals and populations. Examines threats to internal and external validity. Emphasizes critical appraisal of literature as evidence as a basis for translation into practice. Explores strategies and tools for retrieval, compilation, critical appraisal, and application of empirical and practice-based information. Restricted to USAGPAN students only.

NRSG 5170. Statistics in Nursing. 2 Hours.
Part of the USAGPAN program. This course provides students the opportunity to understand biostatistics and their application in scientific research. Students conduct a systematic inquiry relative to an identified anesthesia problem, conduct a research study, and apply the appropriate statistical measurement to analyze the data. In addition, the statistical foundation obtained from this course will enable students to critically analyze scientific literature. Restricted to USAGPAN students only.

NRSG 5172. Clinical Anatomy and Physiology 1 for Nurse Anesthesia. 6 Hours.
Part of the USAGPAN program. This course provides students the opportunity to study the anatomy and physiology of the cell, muscle, nervous, and cardiovascular systems with particular reference to their applicability to anesthesia and acute care management. Students engage in critical thinking regarding the effects of anesthetics on physiological processes and its relation to their client’s state of health/wellness as it interacts with culturally diverse populations in the 21st century. Restricted to USAGPAN students only.

NRSG 5174. Clinical Anatomy and Physiology 2 for Nurse Anesthesia. 5 Hours.
Part of the USAGPAN program. This course provides students the opportunity to build upon their knowledge of the anatomy and physiology of the endocrine, respiratory, and renal systems with particular reference to anesthesia, respiratory, and acute care management. Students engage in critical thinking regarding the effects of anesthetics on the normal physiological processes of the respiratory, endocrine, and renal systems. Restricted to USAGPAN students only.

NRSG 5176. Theoretical and Research Applications in Nurse Anesthesia. 3 Hours.
Part of the USAGPAN program. This course investigates the philosophical and theoretical bases underlying concepts and operations inherent in nursing. Theories from behavioral, natural, applied, and nursing sciences are examined. Theoretical frameworks and concepts are explored as a foundation for research relative to practice of nursing anesthesia. This course focuses on the research process from problem formulation to analysis and interpretation. Emphasizes is on research designs, methods, and appropriate use of selected statistical analyses. Critique of research is also explored. Students have the opportunity to input and analyze data using SPSS. Restricted to USAGPAN students only.

NRSG 5178. Information Systems in Advanced Nursing Practice. 2 Hours.
Part of the USAGPAN program. This course focuses on the methods and tools of information handling relative to selected aspects of anesthesia nursing, healthcare, education, and research. The process of organizing, collecting, processing, and analyzing of data is explored as a basis for clinical decision-making. Automation of communication, manuscript/proposal preparation, databases, and budgeting are emphasized. The integration of Word, SPSS, Excel, Access, and PowerPoint are explored. Computer-based resources including word processing, presentation software, bibliographic software, search engines and databases are used to assist in acquisition, maintenance, and presentation of information in a scholarly format. Research findings in the use of informatics are addressed. Restricted to USAGPAN students only.

NRSG 5180. Evaluation and Application of Research in Advanced Nursing Practice. 4 Hours.
Part of the USAGPAN program. This course provides students the opportunity to integrate theory, research and practice. Students conduct a systematic inquiry relative to an identified anesthesia problem. Specifically, the students design and implement a research protocol. This process provides experience in research design, implementation, and evaluation. Students submit a manuscript of the research to a refereed journal and present either a podium or a poster presentation at national meeting. Restricted to USAGPAN students only.

NRSG 5182. Physical Examination and Differential Diagnosis. 4 Hours.
Part of the USAGPAN program. This course provides students the opportunity to refine and specialize their assessment skills with an emphasis on assessing for the presence and quantifying the severity of problems with significant implications for anesthesia care. Particular attention is paid to the importance of consulting appropriately for preoperative optimization and the development of plans for anesthesia care that minimize anesthesia related risk. Restricted to USAGPAN students only.
NRSG 5184. Biochemistry for Nurse Anesthesia. 4 Hours.
Part of the USAGPAN program. A graduate level course which provides the student an opportunity to correlate biochemical principles as they apply to the physiology, pathophysiology, and pharmacology of anesthesia nursing. Major topics covered include: (1) structure and function of DNA, RNA and proteins; (2) basic medical genetics; (3) protein structure and function; (4) common metabolic pathways of carbohydrates, lipids, and amino acids; and (5) special topics including clinical chemistry. Lectures are supplemented by case studies and clinical correlate presentations related to anesthesia. Restricted to USAGPAN students only.

NRSG 5976. Directed Study. 1-4 Hours.
Allows student to develop an individualized plan to attain specific knowledge and skills related to professional goals. May consist of library study and reading, individual instruction, research, practicum, or other appropriate activity as approved by instructor and academic adviser. May be repeated without limit.

NRSG 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

NRSG 5984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

NRSG 6115. Health Assessment. 3 Hours.
Focuses on human physiology and the development of advanced health assessment knowledge and skills related to performing regional and comprehensive examinations of the client across the life span. Includes variables among cultural groups. Students synthesize knowledge from nursing, physical, social, and health sciences as they analyze data collected in the assessment process. Focuses on interviewing skills and systematic performance, analysis and documentation of health assessment process. Differentiation of normal and abnormal findings is emphasized utilizing critical thinking. Introduces the student to diagnostic reasoning within the scope of practice of the nurse in the advanced practice role. Nursing degree students only.

NRSG 6116. Advanced Health Assessment of the Neonate and Infant. 3 Hours.
Focuses on human physiology and the development of advanced health assessment skills to build a knowledge base with which to perform a thorough assessment and examination of the neonate and infant. Offers students an opportunity to learn to evaluate family history through chart review and direct interviewing to gain knowledge of the neonate and to anticipate certain findings based on information gained through a thorough assessment and physical examination. Emphasizes identifying normal from abnormal findings through critical thinking, introducing the student to diagnostic reasoning, which is the basis of the advance practice nurse role.

NRSG 6122. Theory and Practice of Nursing Research. 4 Hours.
Addresses the development of nursing science. Emphasizes the relationship between theory building and research for the discipline and advanced nursing practice. Requires students to complete an in-depth analysis of the research process and apply this analysis in the evaluation of published research reports related to healthcare. Topics include evidence-based practice, knowledge development and the scientific method, ethics, literature reviews, qualitative and quantitative approaches to research, research designs, sampling, data collection methods, reliability and validity of data-gathering procedures, computer utilization and data processing, statistical applications, analysis of findings, and utilization of research results. Aims course activities at assisting students to develop skills as an active participant of a clinically based research project and as a leader in the utilization of research to improve nursing practice. Requires knowledge of statistics.

NRSG 6124. Research Applications. 1 Hour.
Provides the opportunity for graduate nursing students to work individually or in groups of two with an experienced researcher in an area related to their clinical specialization or other professional interest. The student’s individual contribution depends on the stage of the research project and is determined jointly by the student, faculty liaison, and researcher. Evaluation includes the student’s individual effort, participation in the collaborative research process, and appraisal of the learning experience as a research assistant. By participating in an established, scientifically significant project, the student has an opportunity to experience actively the real-life aspects of conducting research. Additionally, the student is socialized to the role of the nurse researcher.

NRSG 6200. Theories of Health Behavior. 3 Hours.
Focuses on health illness, sickness, and disability from nursing, sociological, cultural, ecological, and medical perspectives. Examines concepts, theories, and models that explain health-related behaviors. Explores the empirical foundations of interventions designed to promote health and prevent disease for the individuals living in the community, with emphasis on access for populations at risk across the life span.

NRSG 6201. Theories of Family Health. 3 Hours.
Examines theoretical bases for understanding and promoting family-focused practice. Family theory frameworks and models developed by nursing and related disciplines are discussed and critically analyzed for application to advanced practice. Topics include family system response and family impact on health and illness across the life span and contemporary social issues, cultural factors, and health policy affecting family health.

NRSG 6202. Advanced Nursing Research. 3 Hours.
Specifically designed for students who choose to complete a master’s thesis, this course may be taken as an elective offering for nonthesis students. It is the second course in the graduate research sequence. Requires the student to complete an in-depth analysis of the research process and apply it to the development of a research proposal. Topics include methods and procedures for implementing a research plan, sampling techniques, methods for data collection, reliability and validity of norm-referenced and criterion-referenced measures, computer utilization and data processing, statistical applications, analysis of findings, and dissemination and utilization of nursing research. Offers students the opportunity to gain experience in computerized data analysis and the use of SPSS software package. Aimed at assisting students to finalize their research proposal.
NRSG 6210. Holistic Healing and Integrative Health. 3 Hours.
Examines integrative healthcare, which includes a variety of healing modalities and therapies. Designed to define health and to investigate modalities that complement Western medicine. Topics include (1) herbal medicine, (2) diet, nutrition, and lifestyle changes, (3) mind/body or behavioral interventions, (4) alternative systems of medical practice, (5) manual healing methods, (6) bioelectromagnetics, and (7) pharmacologic and biologic treatments. Defines and presents these approaches and therapies from a historical, philosophical, practical, and research perspective. Investigates a variety of healing approaches. Students become familiar with current leaders and philosophies in the area of integrative healthcare.

NRSG 6211. Energy-Based Healing Modalities. 3 Hours.
Identifies and discusses the principles and practices of energy-based healing therapies. In addition to a variety of energy techniques, specific investigation is given to acupuncture, cranial sacral work, massage, polarity therapy, reiki, and therapeutic touch. Students experience, review, and research one specific modality of energy healing. Students develop knowledge and skills in energy-based modalities and understand and develop strategies to integrate them within their lives.

NRSG 6212. Programs in Integrative Healthcare. 3 Hours.
Provides students with an opportunity to work with integrative healthcare practitioners. Each student may become certified or licensed through one of the licensing agencies or certification processes within integrative healthcare and practice as a clinician within the area.

NRSG 6213. International Health. 3 Hours.
Explores various dimensions of international health, with emphasis on the impact on globalization on world health. Examines the financial base for healthcare in representative nations to identify common themes and specific problem areas. Major assaults on health caused by natural disasters and war are assessed in relation to the response of the world community to public health issues. Examines implications and opportunities for specific health professions.

NRSG 6220. Nursing Management: Acute Episodic Illness. 3 Hours.
Addresses the assessment, preventive, and health maintenance theories of healthcare utilized by the acute-care advanced practice nurse. Includes common problems causing episodic and acute illnesses and the advanced nursing management skills needed to address them and implement management skills. Uses current theories and research from nursing and the physical and behavioral sciences as a basis for clinical decision making, with an emphasis on critical thinking and diagnostic reasoning. The nursing process and life cycle are integral frameworks used to structure the delivery of course content. Restricted to students in selected nursing programs or with permission of instructor.

NRSG 6221. Nursing Management: Critical and Chronic Illness. 3 Hours.
Emphasizes the acquisition of theoretical knowledge essential to understanding the common life-threatening and chronic, long-term pathophysiological problems, differential diagnosis, and related advanced nursing care of critically and chronically ill individuals and families. Addresses common problems causing critical, life-threatening illnesses, the chronic sequelae from these problems, and the advanced nursing management skills needed to address them. Uses current theories and research from nursing and the physical and behavioral sciences as a basis for clinical decision making, with an emphasis on critical thinking and diagnostic reasoning. The nursing process and life cycle are integral frameworks used to structure the delivery of course content. Restricted to students in selected nursing programs or with permission of instructor.

NRSG 6222. Pharmacology of Adults and Older Adults. 2 Hours.
Covers age-related changes in pharmacokinetics and pharmacodynamics and the prescription, administration, and monitoring of medications for older adults. Includes a detailed discussion of the most common drugs and classes of drugs prescribed for the elderly, as well as the signs and symptoms of drug toxicity particular to older adults. Investigates the impact of race/ethnicity on prescribing practices. Also discusses medication history guidelines for older adults, age-related considerations in prescribing for the elderly, and methods to support drug compliance and prevent inappropriate drug use and adverse drug reactions. Examines over-the-counter drug use among older adults. Emphasis is on the problem of polypharmacy for the older adult and the prevention, recognition, and treatment of drug interactions among older adults.

NRSG 6226. Strategies for Education, Staff Development, and Consultation. 3 Hours.
Focuses on major concepts of teaching and learning for the adult learner, principles and practices of staff development, and roles of consultation and collaboration. Examines the concepts of leadership, collaboration, and consultation as they relate to the advanced practice role of the clinical nurse specialist. Analyzes the influences of organizational systems, finances, and culture as components of the advanced practice role. Students are expected to learn and apply an evidence-based approach to managing complex healthcare issues that includes policies, procedures and protocols, and best-practice models. Assignments focus on helping students gain expertise in presenting, consulting, teaching, and writing. Offers students an opportunity to integrate advanced assessment techniques and parameters of critical thinking to solve problems related to the care of patients in acute-care settings.

NRSG 6230. Nursing Management: Critically Ill Neonatal 1. 3 Hours.
Focuses on the acquisition of knowledge about complex physiological concepts essential to the care of the critically ill neonate. Begins with the actual and potential alterations in fetal/neonatal well-being, adaptation to extrauterine life, and factors that interfere with adaptation to extrauterine life. Also emphasizes the acquisition of theoretical knowledge essential to understanding the neonate’s response to life-threatening problems. Discusses neonatal pathophysiologic disorders in terms of the nursing process and management of the neonate and their families. Uses current theories and research from nursing, biomedical, physical, and behavioral sciences as a basis for clinical decision making. The nursing process and developmental theory are frameworks utilized to structure the delivery of course content.

NRSG 6231. Nursing Management: Critically Ill Neonatal 2. 3 Hours.
Continues NRSG 6230. Covers the acquisition of theoretical knowledge essential to understanding the neonate’s response to life-threatening problems. Discusses neonatal pathophysiologic disorders in terms of the nursing process and management of the neonate and their families. Uses current theories and research from nursing, biomedical, physical, and behavioral sciences as a basis for clinical decision making. The nursing process and developmental theory are frameworks utilized to structure the delivery of course content.

NRSG 6232. Neonatal Pharmacology. 2 Hours.
Focuses on building upon basic knowledge in pharmacology and providing content essential for nurses in the expanded role. Examines the principles of pharmacology and major drug classifications as they relate to the causes and treatment of health and illness problems affecting critically ill neonates.
NRSG 6240. Nursing Management: Immunosuppressed Patient. 3 Hours. 
Exploring the relationship between the immune response and 
pathophysiologic dysfunctions in the critically ill. Utilizing an established 
knowledge base of physiologic processes and clinical concepts, 
focusing on current research and theories of immunologic competence, 
immunomodulated therapies, and the clinical sequelae of the critically ill 
immunosuppressed patients.

NRSG 6241. Acute-Care Concepts in Nursing Practice. 3 Hours. 
Focusing on the analysis and application of core physiological, behavioral, 
environmental, and psychosocial concepts essential for advanced 
nursing care of acute and critically ill individuals. Topics include the 
utility and clinical implications of monitoring technology available in the 
acute-care setting, the acute-care environment and its impact on patient 
and family systems, and the concepts of stress, grief, and coping. Also 
addresses the advanced nursing management of the multiple trauma 
patient and the related physiologic and clinical concepts. Opportunity is 
provided for exploration and development of concepts unique to each 
student’s area of concentration within the acute-care specialization. 
Restricted to students in selected nursing programs or with permission of 
instructor.

NRSG 6242. Pharmacotherapeutics of the Critically Ill. 2 Hours. 
Focusing on the pharmacokinetics and pharmacodynamics in the care 
of individuals with critical, life-threatening illnesses. The prescription, 
administration, and monitoring of medications for the critically ill serves 
as the organizing framework for the course. Includes the most common 
drugs and classes of drugs prescribed for the critically ill, the signs and 
symptoms of drug toxicity, and interventions utilized to resolve adverse 
drug reactions. Also addresses the impact of polypharmacy. Routes of 
medication delivery in the critical-care setting are examined, analyzed, 
and evaluated.

NRSG 6244. Ethical Issues in Aging, Multicultural Society. 3 Hours. 
Identifies cultural competency as a critical tool for improving the 
healthcare of older adults. Discusses the demographics of cultural 
diversity among older adults. Covers personal cultural competency 
skills, the tension between Western medicine and individual patient 
belief systems, and the challenge of responding to the linguistic and 
cultural needs in the acute-care setting. Considers the applicability of the 
traditional Western medico-ethical principles of autonomy, beneficence, 
nonmalefeasance, and justice to ethical problems encountered by 
healthcare providers caring for older adults of diverse racial, ethnic, and 
religious backgrounds. Emphasizes recognition of true ethical dilemmas, 
identification of central issues, gathering of necessary and appropriate 
information, and rational decision making. Considers contemporary 
ethical questions.

NRSG 6249. Health Promotion of Adult/Older Adult. 3 Hours. 
Focusing on the assessment, preventative, and health maintenance 
and promotion theories utilized by advanced practice nurses. Includes 
the impact of political, psychological, sociological, and physiological 
factors on the healthcare continua of the adolescent/adult/older adult. 
Explores self-modeling of health behaviors and institution of primary and 
secondary preventative strategies in the home, community, workplace, 
and primary care facility. Discusses and utilizes theoretical and strategic 
approaches to behavior change necessary for health promotion.

NRSG 6253. Primary Care of Adult/Older Adult Health Problems. 4 Hours. 
Building upon NRSG 6252, seeks to further develop the intellectual and 
attitudinal competencies necessary for successful performance as a 
primary healthcare provider. Focuses on assessment, diagnosis, and 
management of adolescents/adults/older adults with minor acute and 
stabilized chronic illness in the community and long-term care 
facility. Emphasizes the nurse practitioner role functions of collaborative 
interdisciplinary management, consultation, and referral skills.

NRSG 6254. Primary Care of Adult/Older Adult Complex Patients. 4 Hours. 
Focusing on the assessment and intervention of adults/older adults with 
complex multisystem health problems/diseases in primary care and 
long-term care settings. Utilizes knowledge from pathophysiology, 
pharmacology, and psychosocial sciences to increase knowledge and 
skill of the advanced practice nurse in the care of adults/older adults 
with complex problems. Teaches students about the role and expertise of 
advanced practice nurses and other professionals in diverse settings.

NRSG 6255. Family Nurse Practitioner Practicum 1. 3 Hours. 
Offers a clinical learning experience that correlates with the content 
presented in NRSG 6266. Focuses on assessment and intervention 
with the families across the life span within a holistic framework. 
Emphasizes identification of families at risk for premature morbidity 
and mortality. Focuses on advanced health-assessment techniques and 
interpretation of abnormal findings on physical examination. Also 
focuses on developing a client/family health-promoting plan of care 
within the advanced practice role of the nurse practitioner. Specific 
clinical activities focus on the care of pregnant women.

NRSG 6256. Family Nurse Practitioner Practicum 2. 3 Hours. 
Seeks to provide clinical learning experiences in the delivery and 
coordination of comprehensive pediatric care, including, but not limited to, 
well-child care, episodic care, chronic care, and urgent care. Focuses on 
performing a comprehensive health assessment of the child and 
family within the urban community utilizing an evidence-based and 
culturally competent approach. Emphasizes health promotion, health 
maintenance, and protection, as well as identification of children and 
families at risk. Requires students to practice in the clinical setting a 
minimum of twenty hours per week.

NRSG 6257. Family Nurse Practitioner Practicum 3. 3 Hours. 
Seeks to provide clinical learning experiences in the coordination and 
delivery of care to infants, children, adolescents, and young adults, and 
their families, within the context of their culture and urban community. 
Continued clinical practice experiences across settings and continuum of 
care offer an opportunity to develop knowledge, attitudinal competencies, 
and skills in the delivery of care to children, with a focus on acute and 
chronic health issues. Offers students an opportunity to learn to assess, 
diagnose, and manage chronic conditions and acute illnesses commonly 
encountered in childhood, adolescence, and young adulthood and to 
broaden the foundation of practice behaviors in health assessment, health 
promotion, and disease prevention. Emphasizes urban health. Requires 
students to practice in the clinical setting a minimum of twenty hours per week.

NRSG 6262. Pediatric Pharmacology. 2 Hours. 
Focusing on the principles of pharmacology and the major drug 
classifications in relation to the treatment of health problems 
during childhood and adolescence. Examines the effects of selected 
medications on pathophysiology and psychopathology. Discusses the 
implication of practice.

NRSG 6264. Care of Well Child/Adolescent Health Promotion. 4 Hours. 
Focusing on the health assessment on newborns, well children, 
adolescents, and their families within a community. Discusses issues 
most pertinent to the various ages of the well child within a community-
based primary care framework of anticipatory guidance and health 
promotion. Emphasizes the utilization of a comprehensive approach to 
preventative healthcare by examining the impact of psychological, 
sociological, developmental, behavioral, cultural, and physiological 
factors on the child’s health status within the family and community. 
Includes routine healthcare maintenance, screening, developmental 
issues, genetic implications, family dynamics, confidentiality, self-care, 
and common health concerns encountered in primary care settings.
NRSG 6265. Care of Child/Adolescent Health Problems. 4 Hours.
Builds upon the knowledge and skills gained in NRSG 6264. Seeks to further develop within the student the intellectual and attitudinal competencies necessary to successfully perform as a primary healthcare provider. Focuses on acute and chronic health problems seen in infants through young adults. Encompasses assessment, diagnosis, and management of children with acute and stabilized chronic illness, genetic and reproductive health issues, nutritional concerns, dermatology, sports and activity-related injuries, and perinatal care. Considers family, cultural, and community context. Emphasizes the nurse practitioner role, including the development of consultation and referral skills.

NRSG 6266. Family Theory and Primary Care in the Childbearing Years. 4 Hours.
Building on the knowledge of the health-assessment process and primary care concepts, the FNP student has an opportunity to learn to provide family focused primary care bridging the content learned in the adult and pediatric courses. Emphasizes integration of the assessment and management of the changing structure of the family unit throughout the childbearing years into the role of the family nurse practitioner. Applies this knowledge in a clinical learning experience where prenatal and postnatal care is provided to families.

NRSG 6267. Care of the Critically Ill Child. 4 Hours.
Using a combined didactic and clinical approach, examines the specific issues in the care of children with critical conditions. Designed to provide students with the knowledge and skills necessary to meet the unique needs of fragile children, including urban children who are at risk for poor health outcomes. Offers students clinical experience caring for these children.

NRSG 6275. Urban Families at Risk: A Primary Care Approach. 4 Hours.
Integrates academic and clinical learning into a unique collaborative experience, which affords students the opportunity to explore emerging trends and patterns of healthcare practices in the urban setting. Urban healthcare poses multiple challenges to nurses, including the need to master new skills and competencies and to understand the complex needs of these communities. Primary care providers need to be aware of the social and environmental context of children and their families. Examines the broad issues in the primary healthcare of identified, underrepresented urban groups: lesbians, women and children with HIV, homeless and abused women and children. Mentors students in both the classroom and clinical settings to explore current issues inherent in caring for underserved populations in urban settings through utilization of innovative strategies.

NRSG 6281. Dimensions of Clinical Practice. 3 Hours.
Focuses on psychodiagnostic history taking, mental status evaluation, psychodynamic treatment formulations, and designs of psychiatric treatment contracts for various aged clients. Studies the major forms of psychopathology, clinical theory, and the use of the DSM IV-R to make decisions for clients across the life span. Emphasizes supportive and insight-oriented approaches in dynamic therapy, and addresses prevention and treatment approaches for populations at risk. Identifies outcome indicators and describes goal-setting strategies.

NRSG 6282. Clinical Psychopharmacology. 3 Hours.
Provides comprehensive overview of major classes of psychotropic medications and the related psychiatric disorders associated with medication prescription. Emphasizes clinical nursing decision making related to choice of medication, differential diagnosis and drug interactions, safe monitoring with attention to side effects, and integration of medication management into a treatment regimen for various patient populations.

NRSG 6283. Psychobiological Bases of Mental Disorders. 3 Hours.
Focuses on major psychiatric disorders across the life span as identified in the DSM IV manual. Studies the central and autonomic nervous systems, stress-response syndrome, neurotransmitter activity, and neuroendocrine immune interactions. Reviews the biological base of mental disorders, and addresses the use of biological interventions in symptom reduction. Also reviews the psychiatric complications of physical illness and common physical disorders to rule out psychiatric conditions. Emphasizes the integration of biological with psychosocial approaches to treatment of mental disorders.

NRSG 6284. Psychopathology of Childhood. 3 Hours.
Emphasizes psychopathological disorders throughout the developmental phases of infancy, early childhood, latency, and adolescence. Focuses on diagnostic process and treatment planning for intervention. Uses psychodynamic theorists and discusses interactional, behavioral, and neurological models related to assessment, treatment, and prevention. Considers psychotherapeutic and psychopharmacological work with children, families, and communities.

NRSG 6285. Mental Health of Adolescents. 3 Hours.
Focuses on assessment and therapeutic management of adolescent mental health problems. Includes adolescent suicide, self-destructive behavior, incest, drug and alcohol abuse, acting-out behavior, violence, and psychosis. Explores psychodynamic concepts, psychiatric referral process, and issues related to treatment and placement in the community.

NRSG 6286. Contemporary Psychotherapies—Theory and Practice. 3 Hours.
Introduces the theory and practice of various forms of psychotherapy. Discusses theory and techniques associated with each therapy with regard to theoretical underpinnings, therapeutic action, techniques, relationship between therapist and patient, and application to different diagnostic populations. Uses lecture and seminar format to present material and case data to illustrate different psychotherapeutic perspectives.

NRSG 6287. Child and Adolescent Psychopharmacology. 2 Hours.
Provides a comprehensive overview of major classes of psychotropic medications for pediatric populations. Relates psychiatric disorders associated with medication prescription, differential diagnosis and drug interactions, safe monitoring with attention to side effects, and integration of medication management into a treatment regimen for various patient populations. Uses clinical cases to illustrate complex issues related to prescribing psychiatric medications for children.

NRSG 6288. Geriatric and Aging Adult Psychopharmacology. 2 Hours.
Offers a comprehensive overview of psychiatric disorders and the biopsychosocial issues associated with medication prescription, differential diagnosis, drug interactions, and safe monitoring with attention to side effects for geriatric and aging adult populations. Also offers a comprehensive overview of major classes of psychotropic medications and integration of medication management into a treatment regimen for geriatric and aging adult clients. Uses clinical cases to illustrate complex issues related to prescribing psychiatric medications for the geriatric population.

NRSG 6300. Healthcare Finance and Marketing. 3 Hours.
Covers healthcare economics and the financial and marketing functions and responsibilities of healthcare leaders. Emphasizes the decision-making process involved in assuring financial management and management of the exchange process between an organization and its “publics” by which both parties satisfy their needs and wants (marketing). Focuses on the integration of clinical and business aspects of healthcare into decision making for the advanced practice nurse leader.
NRSG 6301. Human Resources and Operations. 3 Hours.
Studies the essential practice of human resource management within healthcare organizations with a focus on leading and managing a professional nursing workforce. Quality healthcare is dependent on the availability and retention of adequate numbers of sufficiently educated and competent nurses and nonprofessional healthcare personnel. Examines the strategic management of a professional nursing and nonnursing healthcare workforce from many perspectives, including theoretical concepts relevant to human resource management in complex systems; legal and regulatory considerations; trends in nursing workforce supply/demand and composition; professional practice and participatory governance models; workplace diversity; collective bargaining; healthy work environment; and relational skill development, including conflict management. Discusses implications for nurse leaders within varying levels in the organization/system.

NRSG 6302. Health Policy and Law. 3 Hours.
Examines health policy and health laws by advanced practice nurses from the perspective of issues pertinent to public health, populations, communities, their healthcare, and its coordination. Reviews and criticizes court decisions, legislation, federal, and state regulatory activities relevant to healthcare and health policy initiatives. Discusses the concept of continuous quality improvement through the development of standards of care and evaluation outcomes. Explores healthcare as a vital part of a national care agenda. Concepts are presented for application through the manager-as-developer model, which includes influence, vision, two-way communication, autonomy, team building, and development.

NRSG 6303. Nursing and Business. 2 Hours.
Provides an opportunity for graduate students to explore the issues that arise at the interface of business and healthcare. Focuses on the role of the manager in the organizations and rapidly changing environments of healthcare. In an interdisciplinary seminar, students examine different and sometimes contrasting organizational frameworks, cultures, and values from the perspectives of business and nursing. Emphasizes the primary skills and competencies that are critical for the manager to identify and deal with complex management problems in healthcare. A healthcare business plan is created.

NRSG 6305. Case Management. 3 Hours.
Considers case management as a strategy used in healthcare organizations to manage clinical and financial risk related to patient care at the individual and population levels. Examines the roles, responsibilities, multidisciplinary interactions, and accountability of case managers in a variety of healthcare settings. Emphasizes program evaluation and research. Compares the purpose, concepts, and types of case management models in the contemporary healthcare environment from utilization review/discharge planning through venue-specific clinical models to health and disease management programs. Discusses the effects of program design on effective outcomes of care and efficient resource use in the context of realistic expectations and best clinical practice.

NRSG 6306. Health Informatics. 3 Hours.
Seeks to prepare students to use information systems and technology to support and improve patient care and healthcare systems. Examines the meta-structures (data, information, knowledge, and wisdom), concepts and tools of nursing, and healthcare informatics. Focuses on information literacy, including a critical examination of both electronic patient health information and provider decision support resources. Covers ethical and legal issues, including privacy and security, related to electronic systems. Database concepts, including data mining, warehousing, electronic data collection, and aggregation for research and patient care, are important components of this course. Examines the role of the nurse as a change agent during health information technology implementation. Students who do not meet course prerequisites may seek permission of instructor.

NRSG 6307. Operational Informatics in Healthcare Organizations. 3 Hours.
Expands on NRSG 6306. Covers theoretical, empirical, and practical knowledge and skills for effective strategic and operational informatics nursing leadership. Specific topics address systemwide change management and leadership particular to information technology; the interpretation and application of key metrics for evaluating health information systems (HIS); and the selection, assessment, design, building, testing, implementation, evaluation, and promotion of evolving HIS within healthcare organizations (HCOs). Finally, examines the strategic role of executive nursing leadership within HCOs and emerging informatics needs in analytics and reporting to evaluate health outcomes. Students who do not meet course prerequisites may seek permission of instructor.

NRSG 6308. Healthcare Management. 3 Hours.
Offers students an opportunity to prepare for their future roles as managers within a healthcare delivery system. Examines the founding principles and dynamics of healthcare management and the healthcare system. Explores the basic concepts and skills in administration. Analyzes management issues that distinguish health services organizations from other types of organizations and strategies for dealing with these issues. Restricted to USAGPAN students only.

NRSG 6310. Nurse/Healthcare Entrepreneur. 3 Hours.
Provides graduate students with the theoretical foundation to do business planning. This process is examined from a nurse/healthcare entrepreneur perspective. Identifies strategies for achieving business goals in nursing/healthcare. Emphasis is on actualizing a winning business plan in nursing/healthcare through step-by-step approach with a strong focus on marketing, planning, and financial analysis.

NRSG 6320. Role/Practice Issues in Nurse Anesthesia. 3 Hours.
Focuses on the development and current trends in nurse anesthesia practice, education, and research. Includes the historical, legal, legislative, and professional role issues associated with advanced practice anesthesia nursing. Emphasizes professional responsibilities, ethical issues, diversity, cultural competency, quality assurance, continuing education, and professional involvement.

NRSG 6321. Conceptual Basis of Nurse Anesthesia Practice 1. 3 Hours.
Covers fundamental knowledge and skills for entry into advanced practice anesthesia nursing. Includes assessment, essential techniques, monitoring and equipment, pharmacologic interventions, and safe practice across the life span.

NRSG 6322. Conceptual Basis of Nurse Anesthesia Practice 2. 3 Hours.
Continues NRSG 6321 with in-depth knowledge and skills of highly specialized problems and conditions requiring anesthesia or surgical interventions. Includes assessment, techniques, planning, and pharmacologic intervention for patients with disorders of the cardiovascular and pulmonary systems across the life span.
NRSG 6324. Chemistry and Physics in Anesthesia. 3 Hours.
Reviews organic functional group chemistry and introduces the principles of medicinal chemistry, provides a foundation for the in-depth study of drugs, including intravenous agents and anesthetic adjuncts. Focuses discussions on physics and technology in anesthesia practice, gas laws, biotransformation of anesthetics, pharmacology of anesthetics and adjuncts, and recent development in general anesthetic agents.

NRSG 6325. Pharmacotherapeutics in Anesthesia and Critical Care Nursing. 2 Hours.
Concentrates on the mechanisms of action common to many pharmacotherapeutic agents. Helps to increase students’ understanding of general principles of drug actions, interactions, and side effects, especially related to the administration of anesthesia. Includes content of dose-effect relationship, pharmacokinetics, drug allergy, pharmacogenetics, and teratogenic side effects. Consists of lectures, discussions, assignments, and examinations. Requires a presentation of a short paper on a selected topic.

NRSG 6333. Conceptual Basis of Nurse Anesthesia Practice 3. 3 Hours.
Covers in-depth knowledge and skills of highly specialized problems and conditions requiring anesthesia or surgical interventions. Includes assessment, techniques; planning; and pharmacologic intervention for patients with disorders of the nervous, endocrine, renal, and hepatic systems across the life span.

NRSG 6336. Advanced Concepts in Nurse Anesthesia Practice. 3 Hours.
Covers in-depth knowledge and skills of highly specialized problems and conditions requiring anesthesia or surgical interventions. Includes assessment, techniques, planning, and pharmacologic intervention for regional anesthesia, pain management, care of obstetrical patients, transplantation surgery, and patients with catastrophic condition.

NRSG 6340. Curriculum Development in Nursing. 3 Hours.
Focuses on curriculum development in nursing education. Includes history of nursing education, learning theories, criteria for programs in higher education, curriculum designs, and testing and evaluation methods. Examines values, trends, and issues in contemporary nursing education.

NRSG 6341. Teaching Nursing: The Art and Science. 3 Hours.
Explores various learning theories and their application to practice disciplines. Emphasis is on efforts to enhance critical thinking and problem solving, with assessment of technological aids for learning. Examines teaching modalities as they are related to increasing levels of complexity of information, and offers an introduction to the assessment of teaching effectiveness.

NRSG 6342. Educational Evaluation in Nursing. 2 Hours.
Introduces professional accreditation practices including the assessment of program outcomes. Testing and clinical evaluation of student learning are integral to the course. Provides the opportunity to develop evaluation tools including examinations.

NRSG 6344. Healthcare Quality Improvement. 3 Hours.
Focuses on critical issues related to healthcare quality improvement (QI) and nursing leadership to promote safe, timely, effective, efficient, equitable, and patient-centered care and services. Examines the science of improvement from many perspectives including current national reports, trends, and initiatives; standards, culture of safety, patient and staff safety; QI models, measurement, methods, and monitoring of care outcomes; use of healthcare informatics in the QI process; QI projects; and leadership and change related to development and implementation of quality improvement. Students are expected to work with a team to apply knowledge in a quality-improvement project based on a current healthcare problem.

NRSG 6369. Pharmacology for Nurse Anesthesia 1. 5 Hours.
Offers the first course in a two-part series. Focuses on pharmacodynamics, pharmacokinetics, uptake, distribution, biotransformation, and excretion of anesthetic agents and those agents used in adjunct during the course of anesthesia. Restricted to USAGPAN students only.

NRSG 6371. Pharmacology for Nurse Anesthesia 2. 4 Hours.
Offers the second course in a two-part series. Focuses on drugs used in anesthesia with particular reference to dosage, mechanism of action, characteristic drug effects, factors modifying drug effects, toxicity, and indications and contraindications for use. Restricted to USAGPAN students only.

NRSG 6372. Professional Aspects of Nurse Anesthesia Practice. 3 Hours.
Part of the USAGPAN program. This course focuses on nurse anesthesia practice in a variety of practice settings. A study of the history of anesthesia and nurse anesthesia practice and the relationship of that practice in the development and growth of the American Association of Nurse Anesthetists. The legal aspects of practice will be explored. The various functional roles of the nurse anesthetist related to administration, education, research and consultation with an orientation to administration and the teaching /learning process, and research will be explored. This course will enable the student to acquire knowledge, understanding, and appreciation for the historical aspects of anesthesia, to be aware of the legal ramifications concerning the administration of anesthesia, and understand the current issues affecting the nurse anesthetist’s role in administration, education, and research. Restricted to USAGPAN students only.

NRSG 6374. Fundamentals of Nurse Anesthesia 1. 6 Hours.
Offers the first course in a three-part series. Offers students an opportunity to learn the basic principles governing the practice of anesthesia, including physical principles, anesthesia gas delivery systems, biochemistry, preparation for administration of anesthesia, and intraoperative management of anesthesia. Restricted to USAGPAN students only.

NRSG 6375. Fundamentals of Nurse Anesthesia Practice 1. 9 Hours.
Seeks to integrate nursing science with biophysical sciences to prepare nurses for the highest level of advanced nursing practice in the specialty of anesthesia. Offers students an opportunity to learn the basic principles governing the practice of anesthesia, including physical principles, anesthesia gas delivery systems, preparation for administration of anesthesia, intraoperative management of anesthesia, regional anesthesia, biomedical monitoring, and GETA simulation. Introduces the formulation of anesthetic care plans, anesthetic techniques, prevention of patient complications, procedures and equipment requirements, monitoring, record keeping, and care of equipment. Restricted to USAGPAN students only.

NRSG 6376. Fundamentals of Nurse Anesthesia Practice 2. 6 Hours.
Offers the second course in a three-part series. Offers students an opportunity to learn the more advanced principles governing the practice of anesthesia, including the principles of regional anesthesia, biomedical monitoring, and anesthesia for special patient populations. Restricted to USAGPAN students only.

NRSG 6377. Fundamentals of Nurse Anesthesia Practice 3. 6 Hours.
Offers the final course in a three-part series. Offers students an opportunity to learn the more advanced principles governing the practice of anesthesia, including physical principles, anesthesia gas delivery systems, biochemistry, preparation for administration of anesthesia, intraoperative management of anesthesia, and intraoperative management of anesthesia. Restricted to USAGPAN students only.

NRSG 6378. Fundamentals of Nurse Anesthesia Practice 1. 9 Hours.
Seeks to integrate nursing science with biophysical sciences to prepare nurses for the highest level of advanced nursing practice in the specialty of anesthesia. Offers students an opportunity to learn the basic principles governing the practice of anesthesia, including physical principles, anesthesia gas delivery systems, preparation for administration of anesthesia, intraoperative management of anesthesia, regional anesthesia, biomedical monitoring, and GETA simulation. Introduces the formulation of anesthetic care plans, anesthetic techniques, prevention of patient complications, procedures and equipment requirements, monitoring, record keeping, and care of equipment. Restricted to USAGPAN students only.
NRSG 6379. Fundamentals of Nurse Anesthesia Practice 2. 9 Hours. 
Continues NRSG 6375. Covers a broad range of anesthesia nursing interventions. Concentrates on the theoretical basis and rationale for specific anesthetic management actions, offering students an opportunity to learn advanced principles governing anesthesia practice. Modules cover several categories of patients and types of surgical cases, including cardiovascular, pulmonary, endocrine, central nervous system, neuromuscular disorders, pediatrics, obstetrics, trauma/ austere environments, and subspecialties. Introduces students to the development of individualized anesthetic care plans, anesthetic techniques, monitoring, perioperative pain management, prevention of patient complications, surgical and anesthesia procedures and equipment requirements, and record keeping. Lectures focus on advanced health/physical assessment, physiology, pathophysiology, and the scientific underpinnings of evidence-based anesthesia practice. Restricted to USAGPAN students only.

NRSG 6390. Family Care of the Adult/Older Adult Patient. 4 Hours. 
Focuses on the health assessment, diagnosis, and management of minor acute and stabilized chronic conditions in the adult and older adult populations in the community and long-term-care facilities. Explores theories of health promotion and health maintenance. Discusses the impact of political, psychological, sociological, and physiological factors as they impact the care of the adult and older adult. Emphasizes the role of the advanced-practice nurse practitioner as a member of collaborative teams, consultant, and model of health behaviors.

NRSG 6391. Practicum for NRSG 6390. 4 Hours. 
Offers a clinical practicum focusing on the adult and older adult with risk for premature morbidity and mortality and family centered health promotion. Emphasizes the care of the adult with complex multisystem health problems and conditions. Explores care of individuals in acute- and long-term-care settings.

NRSG 6392. Family Theory. 2 Hours. 
Focuses on the assessment and management of the changing family structure across the life span of the family. Emphasizes the identification of families at risk for premature morbidity and mortality. Presents guiding principles and strategies for assessing the family, various theories of family structure and process, and techniques for engaging and connecting with families. Explores the family as an emotional unit, the individual patient as a member in his or her family of origin, and strategies for applying this knowledge in a clinical setting.

NRSG 6393. Family Care of the Pediatric and Adolescent Patient. 4 Hours. 
Focuses on the health assessment of individuals from the newborn stage into young adulthood. Emphasizes the utilization of an evidence-based approach to acute and chronic health conditions. Considers family, cultural, and urban community context and anticipatory guidance and health promotion within a culturally competent framework.

NRSG 6394. Practicum for NRSG 6393. 4 Hours. 
Offers a clinical practicum focusing on providing students with clinical learning experiences in the performance of comprehensive health assessments of children and families within the urban community. Using an evidence-based and culturally competent approach, emphasizes health promotion, health maintenance, and protection, as well as identification of children and families at risk. Offers students an opportunity to learn to assess, diagnose, and manage chronic conditions and acute illnesses commonly encountered in childhood, adolescence, and young adulthood. Builds on a foundation of practice behaviors in health assessment, health promotion, and disease prevention with a particular focus on urban health.

NRSG 6395. Healthcare of Women in Family Practice. 2 Hours. 
Discusses health assessment, promotion, and care of women through the life span. Emphasizes the perinatal time period.

NRSG 6396. Practicum for NRSG 6395. 4 Hours. 
Focuses on the assessment, diagnosis, and management of acute and chronic health conditions of women and families. Emphasizes the care of women during the perinatal and postpartum periods. Explores family health as the family structure changes across its life span. Emphasizes the role of the advanced-practice nurse practitioner as a member of collaborative teams, as a consultant, and as a model of health behaviors.

NRSG 6420. Adult-Gerontology Acute-Care Nursing Practicum 1. 2 Hours. 
Focuses on the assessment, preventative, and health-maintenance aspects of acute and episodic healthcare to adults (including older adults). The clinical practice emphasizes the multiple factors affecting the adult patient across the life span. The application of theory to the care of these patients through participation, observation, and research is facilitated by assignment to a clinical preceptor. Weekly seminars focus on an array of issues surrounding the role of the advanced practice nurse. Requires students to practice in the clinical setting a minimum of eight hours per week.

NRSG 6421. Adult-Gerontology Acute-Care Nursing Practicum 2. 4 Hours. 
Continues NRSG 6420. Offers students individualized experiences in the role of practitioner, educator, and manager. Facilitated by assignment to a clinical preceptor, students focus on the provision of care to adults (including older adults) experiencing complex, critical, and chronic health problems. Demonstrates how to assess, diagnose, and manage illnesses in the acute-care, chronic, or rehabilitation setting. Uses concurrent weekly seminars to focus on the roles of the advanced practice nurse. Requires students to practice in the clinical setting a minimum of twenty hours per week.

NRSG 6422. Adult-Gerontology Acute-Care Nursing Practicum 3. 4 Hours. 
Continues NRSG 6421. Offers students an opportunity to synthesize their previous learning experiences; to plan, deliver, and evaluate advanced nursing care to patients with complex healthcare problems; and to acquire the skills necessary to manage clients in an acute-care setting. Uses concurrent weekly seminars to analyze the impact of the advanced practice role on long-term patient care, interdisciplinary relationships, and healthcare policy. Requires students to practice in the clinical setting a minimum of twenty hours per week.

NRSG 6423. Geriatric Acute-Care Clinical Practicum. 2 Hours. 
Designed to provide the student with in-depth, individualized experiences in the role of practitioner, educator, leader, and manager. Facilitated by assignment to a nurse practitioner with a practice providing care to older adults, the student focuses on managing illness across multiple healthcare settings. Concurrent weekly seminars focus on the role of the geriatric acute-care nurse practitioner. Requires successful completion of clinical practicum sequence in specialization.

NRSG 6424. Specialty Acute-Care Clinical Practicum. 2 Hours. 
Designed to provide the student with in-depth, individualized experiences in the role of practitioner, educator, leader, and manager in a specialty area identified by the students and consistent with professional development goals. Facilitated by assignment to a nurse practitioner with a practice providing care to acute or critically ill adults, the student focuses on managing illness across the healthcare continuum. Concurrent weekly seminars focus on the role of the acute-care nurse practitioner in a specialty area. Requires successful completion of clinical practicum sequence in specialization.
NRSG 6426. Adult Health Clinical Nurse Specialist Practicum 1. 4 Hours.
Introduces students to the role of the clinical specialist in the first of a two-course sequence. Seeks to integrate principles of leadership, collaboration, consultation, and management into the role development for advanced practice. Three spheres of influence—patient/family, nursing, and organization/system—serve as the organizing framework for the clinical experience. Students are assigned a clinical nurse specialist preceptor who oversees the experiential portion of the course. Requires students to complete a minimum of twenty hours per week of precepted clinical experience, attend a weekly seminar, and conduct a needs assessment, inclusive of the development of population profiles and the conduct of clinical inquiries. Seeks to enable the successful student to define a clinical nursing problem in the healthcare setting and to develop an appropriate intervention.

NRSG 6427. Adult Health Clinical Nurse Specialist Practicum 2. 4 Hours.
Provides further opportunity for students to develop as clinical specialists in this follow-up to NRSG 6426. Explores principles of leadership, collaboration, consultation, and management as students have the opportunity to integrate these responsibilities into their advanced practice. Three spheres of influence—patient/family, nursing, and organization/system—continue to serve as the organizing framework for the clinical experience. Integrates principles of nursing research and evidence-based practice throughout the course. Students are assigned a clinical nurse specialist preceptor who oversees the experiential portion of the course. Requires students to complete a minimum of twenty hours per week of precepted clinical experience and attend a weekly seminar. Offers students an opportunity to implement and evaluate the intervention they developed in NRSG 6426 in response to the needs assessment and problem discovery.

NRSG 6430. Neonatal Clinical Practicum 1. 4 Hours.
Focuses on the skills necessary for management of the high-risk neonate and family. Students have the opportunity to provide direct care under the supervision of NNP preceptors in the hospital neonatal intensive care unit (NICU), responsible for daily management of a specified caseload of neonates and their families, including therapeutic and diagnostic procedures. Supervised delivery room management of the high-risk neonate is expected, where available. Seeks to familiarize the student with respiratory distress syndrome, transient tachypnea, pneumonia, pulmonary hypertension, congenital heart disease, and patent ductus arteriosus, with appropriate management strategies. Requires students to practice in the clinical setting a minimum of twenty hours per week.

NRSG 6431. Neonatal Clinical Practicum 2. 2 Hours.
Continues NRSG 6430. Offers the second in a series of three courses focusing on the acquisition of clinical skills necessary for patient management of the high-risk neonate and family. Students have the opportunity to provide direct care under the supervision of NNP or neonatologist preceptors in the hospital neonatal intensive care unit (NICU), responsible for daily management of a specified caseload of neonates and their families, including therapeutic and diagnostic procedures. Supervised delivery room management of the high-risk neonate is expected, where available. Seeks to familiarize the student with disease processes commonly encountered in the term and preterm infant populations and appropriate management strategies. Requires students to practice in the clinical setting a minimum of twenty hours per week.

NRSG 6432. Neonatal Clinical Practicum 3. 2 Hours.
Continues NRSG 6431. Offers the final course in the series focusing on the acquisition of clinical skills and expertise necessary for patient management of the high-risk neonate and family. Provides the student with intensified experience in the hospital neonatal intensive care unit (NICU) providing direct care under the supervision of NNP or neonatologist preceptors. The student is responsible for daily management of a specified caseload of neonates and their families. Proficient delivery room management of the high-risk neonate is an expectation. The student should exhibit the ability to function as an independent novice practitioner with preceptor support.

NRSG 6444. Healthcare Systems and Quality Patient Care. 3 Hours.
Offers a theory course emphasizing the use of systems thinking and systems theory as a guide for analyzing and improving healthcare systems. Emphasizes the complex challenges of leading change to achieve quality healthcare for aggregate populations within systems of care. Examines the role of nurses as leaders of the discipline and managers of healthcare services within team-based healthcare structures. Course topics include systems and organizational theory, health systems analysis, transformative leadership concepts, change management theory, outcomes assessment, and teamwork and team-based care delivery concepts and practices.

NRSG 6449. Health Promotion of Adult/Older Adult Practicum. 1 Hour.
Applies knowledge acquired in NRSG 6249. Focuses on the assessment and health promotion of adults/older adults in the primary care settings. Utilizes selected clinical experiences to increase and apply health and risk-assessment skills with adult populations in the community. Also offers students an opportunity to acquire a beginning knowledge of the role of the adult/older adult nurse practitioner in primary care settings.

NRSG 6450. Adult/Older Adult Practicum 1. 4 Hours.
Provides a clinical learning experience that correlates with the content presented in NRSG 6250. Focuses on assessment of the adult life span within a holistic framework. Emphasizes identification of individuals at risk for premature morbidity and mortality, as well as focusing on advanced health assessment techniques and interpretation of abnormal findings on physical examination and developing a client/family health-promoting plan of care within the advanced practice role of the nurse practitioner. Requires students to practice in the clinical setting a minimum of sixteen hours per week.

NRSG 6451. Adult/Older Adult Practicum 2. 4 Hours.
Continues NRSG 6450. Focuses on providing the student with clinical learning experiences in the coordination and delivery of primary healthcare nursing services to adults and their families, with emphasis on underserved populations. Studies how to assess, diagnose, and manage acute and chronic conditions and illnesses commonly encountered in adult populations. Students build on a foundation of practice behaviors in health assessment, health promotion, and disease prevention. Requires students to practice in the clinical setting a minimum of sixteen hours per week.
NRSG 6460. Care of Well Child/Adolescent Health Promotion Practicum. 4 Hours.
Provides the student with clinical learning experiences in the delivery and coordination of primary-care services to well infants, children, adolescents, and young adults and their families. Focuses on performing a comprehensive health assessment of the child and family utilizing a holistic approach. Emphasis is on health promotion, health maintenance, and identification of individuals or families at risk. The utilization of two clinical sites provides the opportunity for the student to evaluate interdisciplinary role responsibilities and clinical practice standards. Weekly seminar discussion fosters critical analysis of clinical experiences and the integration of theory, research, and primary practice. Requires students to practice in the clinical setting a minimum of twenty hours per week.

NRSG 6461. Child/Adolescent Health Problems Practicum. 4 Hours.
Continues NRSG 6460. Focuses on providing the student with clinical learning experiences in the coordination and delivery of primary-care nursing services to infants, children, adolescents, and young adults and their families within the context of their culture and community. Studies how to assess, diagnose, and manage stable chronic conditions and acute episodic illnesses commonly encountered in childhood, adolescence, and young adulthood. Students build on a foundation of practice behaviors in health assessment, health promotion, and disease prevention. Requires students to practice in the clinical setting a minimum of twenty hours per week.

NRSG 6463. Care of the Critically Ill Child Practicum. 4 Hours.
Designed to accompany NRSG 6267, this course focuses on providing the student with clinical learning experiences in the coordination and delivery of critical care to infants, children, adolescents, and young adults and their families within the context of their culture and urban community. The goal of continued clinical practice experiences across settings and continuum of acuity care is to facilitate the development of knowledge and attitudinal competencies and skills in the delivery of care to children with a focus on critical health issues. Requires students to practice in the clinical setting a minimum of twenty hours per week.

NRSG 6480. Psychiatric Practicum across the Life Span 1. 5 Hours.
Provides clinical experience with individuals and families throughout the lifespan in a psychiatric mental health setting in the advanced practice nursing role. Includes a didactic seminar that focuses on assessment of psychopathology and mental health, psychodiagnostic history taking, mental status evaluation, differential diagnosis, and treatment for various aged diverse clients. Requires students to develop a caseload and to practice in the clinical setting a minimum of twenty hours per week with an agency preceptor. Integration of theory and practice is emphasized, utilizing the data from the students' clinical placement as they apply to the specific diagnoses presented in clinical work. Also requires students to draft a needs assessment proposal to be completed in NRSG 6481.

NRSG 6481. Psychiatric Practicum across the Life Span 2. 5 Hours.
Continues NRSG 6480. Provides clinical experiences with individuals and families throughout the life span in a mental health setting. Requires students to continue to treat a caseload of clients and to practice a minimum of twenty hours per week with an agency preceptor. The focus is on planning and providing care, utilizing various treatment modalities, applying theoretical frameworks, prevention of psychiatric problems and promotion of mental health, group process, termination issues, and evaluation of clients’ progress. Clinical cases provide the basis for discussion in didactic seminar. Requires students to complete the activity proposed in NRSG 6480 to meet an identified need in their community or clinical setting.

NRSG 6502. Healthcare Informatics Practicum. 2 Hours.
Synthesizes knowledge and experience that advanced nurse clinicians/administrators need to acquire to use information systems effectively and efficiently in nursing and healthcare for innovative decision making and strategic planning in managerial positions in nursing.

NRSG 6510. Nursing Leadership Role Practicum 1. 3 Hours.
Offers students an opportunity to engage in a mentored nurse leadership role within a complex healthcare system. Using the AONE Nursing Leadership Competencies (2006; 2011) as a guiding framework, emphasizes developing all aspects of the leadership role and practice at the micro- and mesosystem levels with an aggregate population focus (long-term community care, school health, acute care, etc.) in a team-based care environment. Focuses on integrating systems thinking and evidence-based leadership practices when collaborating with the preceptor in current organizational and patient care issues. Students reflect on leadership experiences and emerging issues in leading and managing healthcare delivery in diverse, technical, and dynamic environments. Expect students to practice in a clinical setting for eight hours per week.

NRSG 6520. Nursing Leadership Role Practicum 2. 3 Hours.
Continues NRSG 6510. Continuing to work directly with a nursing leader preceptor in a complex health care system, offers students an opportunity for a concentrated experience implementing the multifaceted role of the nurse leader by expanding their focus to include responsibility for the strategic and daily operation of nursing services. Emphasizes strengthening the student’s abilities strategically to manage interpersonal relationships effectively and to convene, participate in, and lead healthcare teams. Focuses on relational skill building, such as negotiation, conflict resolution, coaching, and evaluating. Concurrent seminars focus on an array of issues surrounding the role of the nurse leader as well as team-building skills. Expects students to practice in a clinical setting for eight hours per week.

NRSG 6530. Nurse Anesthesia Practicum 1. 2 Hours.
Offers clinical learning opportunities designed to enable the student to develop an anesthesia plan and, with supervision, participate in the implementation of that plan.

NRSG 6534. Nurse Anesthesia Practicum 2. 4 Hours.
Seeks to provide students with the opportunity to apply theoretical concepts in clinical settings. With supervision, students are expected to determine the appropriate sequencing and timing of emergence and postanesthesia management of the patient. Requires students to practice in the clinical setting approximately thirty-six hours per week.

NRSG 6535. Nurse Anesthesia Practicum 3. 4 Hours.
Seeks to provide an in-depth clinical learning experience of advanced nurse anesthesia in specialty areas. Emphasizes increasingly independent integration of scientific principles to clinical practice and evaluation of patient outcomes and professional role development. Requires students to practice in the clinical setting approximately thirty-six hours per week.

NRSG 6540. Advanced Clinical Experiences in Nurse Anesthesia 1. 1 Hour.
Offers initial integration and synthesis course of advanced knowledge and skills for interdisciplinary anesthesia nursing care for complex problems and conditions across the life span. Selected topics and clinical case studies include collaborative decision making, effective communication, and root cause/adverse event analysis. With moderate guidance, students are expected to assume greater responsibility in planning and evaluation of anesthesia care. Requires students to practice in the clinical setting approximately thirty-six hours per week.
NRSG 6541. Advanced Clinical Experiences in Nurse Anesthesia 2. 1 Hour.
Offers second integration and synthesis course of advanced knowledge and skills for interdisciplinary anesthesia nursing care for complex problems and conditions across the life span. Selected topics and clinical case studies include collaborative decision making, effective communication, and root cause/adverse event analysis. With moderate guidance, students are expected to assume greater responsibility in planning and evaluation of anesthesia care. Requires students to practice in the clinical setting approximately thirty-six hours per week.

NRSG 6542. Advanced Clinical Experiences in Nurse Anesthesia 3. 1 Hour.
Offers third and final integration and synthesis course of advanced knowledge and skills for interdisciplinary anesthesia nursing care for complex problems and conditions across the life span. Selected topics and clinical case studies include collaborative decision making, effective communication, and root cause/adverse event analysis. With minimal guidance, students are expected to assume greater responsibility in planning and evaluation of anesthesia care. Requires students to practice in the clinical setting approximately thirty-six hours per week.

NRSG 6550. Teaching Practicum. 2 Hours.
Provides an individualized experience in practice teaching in a clinical or educational setting. Emphasizes teaching strategies, methods of learning reinforcement, and evaluation of teaching effectiveness. Examines faculty roles and responsibilities. Requires implementation and evaluation of a teaching project or course, with assistance from a faculty preceptor.

NRSG 6551. Elective Advanced Clinical Experience. 1-4 Hours.
Provides an individualized field experience in an appropriate agency or community setting. Focuses on a selected client population to allow observation and practice of specific therapeutic skills, with supervision by the course instructor. May be repeated without limit.

NRSG 6570. Nurse Anesthesia Role Practicum 1. 12 Hours.
Part of the USAGPAN program. An advanced graduate-level course which provides the student an opportunity to continue supervised clinical experience in the administration and management of anesthesia agents and techniques for all types of surgery and all patient age groups. This course provides the student an opportunity to explore current issues relevant to the practice of nurse anesthesia, and to address such issues from a legal, functional, historical, ethical, political, professional, and nursing theory framework. The course will review, discuss, and integrate clinical cases with physiology, pathophysiology, and pharmacological principles. Restricted to USAGPAN students only.

NRSG 6572. Nurse Anesthesia Clinical Practicum 1. 10 Hours.
Part of the USAGPAN program. An introductory graduate-level clinical course which provides the student an opportunity to obtain supervised clinical experience in the administration and management of anesthesia in patients undergoing surgical procedures. The course will review, discuss, and integrate clinical cases with physiology, pathophysiology, and pharmacological principles. Restricted to USAGPAN students only.

NRSG 6574. Nurse Anesthesia Role Practicum 2. 12 Hours.
Part of the USAGPAN program. An advanced course, the second of a two-course sequence, which provides the student an opportunity to study the components of the nurse anesthetist role using a multi-theoretical framework. The course will continue to review, discuss, and integrate clinical cases with physiology, pathophysiology, and pharmacological principles. Restricted to USAGPAN students only.

NRSG 6576. Nurse Anesthesia Clinical Practicum 2. 10 Hours.
Part of the USAGPAN program. An intermediate graduate-level course which provides the student an opportunity to obtain supervised clinical experience in the administration and management of anesthesia in patients undergoing surgical procedures. The course will review, discuss, and integrate clinical cases with physiology, pathophysiology, and pharmacological principles. Restricted to USAGPAN students only.

NRSG 6580. Nurse Anesthesia Clinical Practicum—Advanced. 0 Hours.
Offers students an opportunity to obtain further supervised clinical experience and to enhance clinical skills. Requires students to practice in the clinical setting a minimum of twenty hours per week. Restricted to USAGPAN students only.

NRSG 6800. Introduction to Industry Research Guidelines. 3 Hours.
Introduces the process by which drugs, devices, biologics, and medical procedures are tested for safety and effectiveness. Emphasizes the evolution of the Food and Drug Administration (FDA); the role of the U.S. Department of Agriculture (USDA); the Animal Welfare Act (AWA); and the regulations pertaining to the conduct, review, and reporting of clinical research intended for FDA submission. Examines international standards as they relate to increasing levels of complexity of research. Introduces students to industry decision making in conducting clinical research trials.

NRSG 6805. Integrative Application of Evidence-Based Research: Working with Industry Partners. 3 Hours.
Introduces evidence-based practice guidelines and how to partner with industry in the research planning, implementation, and communication of findings. Emphasizes understanding the role of the healthcare professional and industry partners in facilitating, coordinating, and conducting research and interdisciplinary investigations in the field of evidence-based practice and quality improvement.

NRSG 6810. Managing Regulated Clinical Research Trials: The Role of Clinical Research Organizations. 3 Hours.
Introduces clinical trial management practices (preclinical through phase IV); clinical, medical, and safety monitoring; data management principles; biostatistical analysis; and medical writing services for preparation of an FDA New Drug Application (NDA) or Investigational Device Exemptions (IDE). Focuses on understanding the role of the healthcare professional in managing a regulated, global clinical research study.

NRSG 6812. Management of Health Problems in the School Setting. 3 Hours.
Seeks to provide school nurses with enhanced pediatric and adolescent health assessment skills and knowledge necessary to manage common diseases and illnesses in the school setting. Offers students an opportunity to synthesize knowledge from nursing, physical, social, and health sciences. Focuses on both the physical and mental health assessment process as it pertains to the school nurse. Discusses identification and management of common diagnoses and illnesses that a school nurse might encounter.
NRSG 6844. Advancing Health Outcomes through Interprofessional Collaborative Practice. 2 Hours.
Seeks to provide an interdisciplinary background in the concepts and theories of interprofessional collaboration in healthcare settings and in the science and methods of teamwork and team-based care as aspects of interprofessional collaborative practice. The core competencies for interprofessional collaborative practice—values/ethics, roles/responsibilities, communication, and teams/teamwork—serve as an organizing framework for this course. Addresses the history, evidence, and outcomes of collaborative practice; the interdependence between interprofessional education and collaborative practice; professional role contributions and accountability in collaborative practice; research-based and innovative team structures; and team-based care practices and outcomes in healthcare environments, including patient-centered teams, and effective communication and collaborative skills and processes. Emphasizes the role of the advanced practice nurse in developing and leading collaborative practices and teams.

NRSG 6850. Introduction to Health and Aging. 3 Hours.
Seeks to offer students core knowledge of health and aging. Uses current literature and research to integrate the sociological, psychological, and physical aspects of aging in multicultural, political, and economic ecological contexts.

NRSG 6864. Professional Preparation Seminar. 0 Hours.
Seeks to prepare the newly graduated BSN student to take necessary steps for entry into the professional nursing role and workforce prior to beginning master’s specialization. Focuses on strategies for the transition from student nurse to professional nurse.

NRSG 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NRSG 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

NRSG 7100. Leadership in Advanced Practice Nursing. 3 Hours.
Seeks to provide a solid foundation for providing leadership. Analyzes the principles of transformational leadership and organizational behavior pertinent to healthcare systems. Seeks to prepare nursing leaders at the practice doctorate level to use critical thinking skills and evidence-based decision making to effect systems and organizational change. Discusses leadership skills and characteristics of leadership styles within the broader framework of interprofessional collaboration and innovations in healthcare delivery. Presents information from a variety of disciplines and perspectives (legal, fiscal, ethical, cultural, and political) for purposes of improving quality of care for patients, populations, and communities in health care settings across the continuum of care. Restricted to students enrolled in the Doctorate of Nursing Practice Program only.

NRSG 7104. Foundations in Nursing Research. 3 Hours.
Addresses the development of nursing science with specific emphasis on the importance of developing theory-based research. Includes a broad review of the various types of research studies (e.g., descriptive, causal, and relational); the steps of the research process; and the related analytic strategies and/or issues associated with each type of research study. Also reviews the guidelines for conducting critical literature reviews (i.e., systematic or meta-analyses) and how the results are used to determine the type of research study to employ. Discusses the scientific principles and integrity related to the conduct of responsible research and the means for assuring ethical integrity of research on human subjects.

NRSG 7105. Translating Research Evidence into Practice. 3 Hours.
Offers opportunities for students to examine strategies and tools for retrieval, compilation, critical appraisal, and application of empirical, reflective, and practice-based information to improve quality of care and health outcomes for populations of interest. Uses systematic reviews, case studies emphasizing use of quality improvement methods, clinical guidelines, collaborative interprofessional practice networks, and information technology. Includes program evaluation strategies and interpretation of biostatistical concepts relevant to population-based advanced practice. Offers students an opportunity to explore techniques that support their professional presence and voice as a leader. This course meets the requirements of the following DNP Essentials of Doctoral Education for Advanced Practice Nursing: (1): Scientific Underpinnings for Practice; (2): Clinical Scholarship and Analytical Methods for Evidence-Based (AACN, 2006).

NRSG 7110. Evidence-Based Practice Research Application. 2 Hours.
Offers graduate nursing students an opportunity to work singly or in groups of two with an experienced researcher in an area related to their clinical specialization or other professional interest. The student’s individual contribution depends on the stage of the research project and is determined jointly by the student, faculty liaison, and researcher. Evaluation includes the student’s individual effort, participation in the collaborative research process, and appraisal of the learning experience as a research assistant. By participating in an established, scientifically significant project, offers students an opportunity to actively experience the “real-life” aspects of conducting research and to be socialized to the role of the researcher.

NRSG 7400. Nurse Anesthesia Clinical Practicum 1. 5 Hours.
Constitutes an introductory doctoral-level clinical anesthesia course that offers the novice student registered nurse anesthetist (SRNA) an opportunity to gain supervised clinical experience in the preparation, administration, and management of anesthesia in patients undergoing surgical procedures or requiring pain management. Offers students an opportunity to begin to incorporate didactic (Phase 1) knowledge into providing anesthesia care of all forms to patients across the life span and to apply American Society of Anesthesiologists (ASA) physical status classification. The students receive extensive mentoring and direction with the goal of becoming safe, novice SRNAs able to accept increased independence and responsibility. Restricted to USAGPAN students only.

NRSG 7403. Nurse Anesthesia Clinical Practicum 2. 5 Hours.
Constitutes an introductory doctoral-level clinical anesthesia course that offers the advanced-beginner student registered nurse anesthetist (SRNA) an opportunity to gain supervised clinical experience in the preparation, administration, and management of anesthesia in patients undergoing surgical procedures. Offers students an opportunity to continue to incorporate didactic (Phase 1) knowledge into providing anesthesia care of all forms to patients across the life span and to apply American Society of Anesthesiologists (ASA) physical status classification. The SRNA continues to receive extensive mentoring and direction and is expected to demonstrate performance consistent with the advanced beginner and not at the level of a novice nursing anesthesia student. Restricted to USAGPAN students only.
NRSG 7406. Nurse Anesthesia Clinical Practicum 3. 5 Hours. 
Constitutes an advanced doctoral-level clinical anesthesia course that offers the senior student registered nurse anesthetist (SRNA) an opportunity to gain clinical experience with reduced levels of supervision in the preparation, administration, and management of anesthesia in patients undergoing surgical procedures. Seeks expanding the science of anesthesia (i.e., didactic knowledge) and evidence-based practice as found in the anesthesia literature into providing anesthesia care of all forms to patients across the life span and to apply American Society of Anesthesiologists (ASA) physical status classification. The SRNA continues to receive mentoring and direction as necessary, is expected to demonstrate performance consistent with the competent anesthesia provider and not at the level of an advanced-beginner nursing anesthesia student. Restricted to USAGPAN students only.

NRSG 7409. Nurse Anesthesia Clinical Practicum 4. 5 Hours. 
Constitutes an advanced doctoral-level clinical anesthesia course that offers the senior student registered nurse anesthetist (SRNA) an opportunity to gain clinical experience with minimal supervision in the preparation, administration, and management of anesthesia in patients undergoing surgical procedures. Seeks students to incorporate the science of anesthesia (i.e., didactic knowledge) and evidence-based practice as found in the anesthesia literature into providing anesthesia care of all forms to patients of all ages and health status. The SRNA continues to receive mentoring and direction as necessary, is expected to demonstrate performance consistent with the competent-to-proficient anesthesia provider, and have the ability to function independently as a CRNA in a military and/or Department of Defense (DOD) facility or deployed environment. Restricted to USAGPAN students only.

NRSG 7412. Nurse Anesthesia Role Development 1. 6 Hours. 
Constitutes an introductory doctoral-level course that offers the novice student registered nurse anesthetist (SRNA) an opportunity to continue supervised clinical experience while developing the skills necessary to function as a professional clinician and member of a military/Department of Defense (DOD) healthcare system. Focuses on developing anesthesia providers capable of functioning as the sole anesthesia provider in potentially austere environments. The role of a DOD-certified registered nurse anesthetist requires a high level of leadership, communication and interpersonal skills, collaboration with the surgical team, and unwavering independence. Seeks to help refine the professional role of the SRNA and facilitate a broad vision of the military surgical mission with a focus on high-quality care, patient outcomes, and improvement of safety through system processes. Restricted to USAGPAN students only.

NRSG 7415. Nurse Anesthesia Role Development 2. 6 Hours. 
Constitutes an introductory doctoral-level course that offers the novice student registered nurse anesthetist (SRNA) an opportunity to continue supervised clinical experience while developing the skills necessary to function as a professional clinician and member of a military/Department of Defense (DOD) healthcare system. Focuses on developing anesthesia providers capable of functioning as the sole anesthesia provider in potentially austere environments. The role of a DOD-certified registered nurse anesthetist requires a high level of leadership, communication and interpersonal skills, collaboration with the surgical team, and unwavering independence. Seeks to help refine the professional role of the SRNA and facilitate a broad vision of the military surgical mission with a focus on high-quality care, patient outcomes, and improvement of safety through system processes. Restricted to USAGPAN students only.

NRSG 7418. Nurse Anesthesia Role Development 3. 6 Hours. 
Constitutes a doctoral-level course that offers the senior student registered nurse anesthetist (SRNA) an opportunity to continue clinical experience while developing the skills necessary to function as a professional clinician and member of a military/Department of Defense (DOD) healthcare system. Focuses on developing anesthesia providers capable of functioning as the sole anesthesia provider in potentially austere environments. The role of a DOD-certified registered nurse anesthetist requires a high level of leadership, communication and interpersonal skills, collaboration with the surgical team, and unwavering independence. Seeks to help refine the professional role of the SRNA and facilitate a broad vision of the military surgical mission with a focus on high-quality care, patient outcomes, and improvement of safety through system processes. Restricted to USAGPAN students only.

NRSG 7421. Nurse Anesthesia Role Development 4. 6 Hours. 
Constitutes an advanced doctoral-level course that offers the senior student registered nurse anesthetist (SRNA) an opportunity to continue clinical experience while refining the skills necessary to function as a professional clinician and member of a military/Department of Defense (DOD) healthcare system. Focuses on developing anesthesia providers capable of functioning as the sole anesthesia provider in potentially austere environments. Requires a high level of leadership, communication and interpersonal skills, collaboration with the surgical team, and unwavering independence. Seeks to help refine the professional role of the SRNA. Challenges SRNAs to set the example as professional doctoral-level anesthesia students and assist (to the extent possible) in mentoring the junior SRNAs in their professional/clinical roles. Restricted to USAGPAN students only.

NRSG 7700. The Science of Nursing. 3 Hours. 
Introduces basic concepts in philosophy of science and the development of knowledge. Explores the historical development and themes for knowledge building in nursing and healthcare. Offers students an opportunity to analyze different ways of knowing and world views as they relate to the development of programs of research in nursing. Content from this course is applied to each student’s area of research interest. The examination of the scientific literature, identification of gaps in knowledge, and the development of research questions are completed to begin the process of developing a research plan.

NRSG 7705. Theoretical and Conceptual Foundations in Nursing Science. 3 Hours. 
Examines the nature of nursing science by critically analyzing the current relevance of nursing theories and conceptual models to the advancement of nursing’s scientific development. Emphasizes various approaches to concept/theory development, analysis, and synthesis. Expect students to develop skills in concept/theory analysis and synthesis and to apply these skills to a formal analysis of concept relevant to their phenomena of interest. Students who do not meet course prerequisites may seek permission of instructor.

NRSG 7709. Qualitative Research Methods. 3 Hours. 
Examines published qualitative research in nursing and related disciplines. Emphasizes major strategies of qualitative inquiry, including ethnography, grounded theory, phenomenology, narrative inquiry, and case study. Offers students an opportunity to begin to develop mastery in critiquing qualitative research, ethical issues, data analysis techniques, and proposal development.
NRSG 7712. Quantitative Research Methods. 3 Hours.
Introduces different types of quantitative research methods as they relate to investigation of phenomena in nursing and healthcare. Begins with a focus on defining research problems, theory testing, and causal inference, then explores a range of research designs and methodologic techniques that are available for empirical research. Quantitative techniques include sampling, data collection, analysis, and interpretation.

NRSG 7715. Measurement in Clinical Research. 3 Hours.
Examines the concepts of measurement, sources of measurement error, control, and instrumentation as they relate to variables in clinical research. Students have an opportunity to explore the procedural aspects of measurement, criterion-referenced and norm-referenced measures, as well as the reliability and validity of measurement techniques. Discusses methods and statistical procedures used in instrument design and testing, such as instrument blueprints, factor analysis, and item response theory. Emphasizes the measurement of variables to evaluate the effectiveness of clinical interventions.

NRSG 7750. Healthcare of Urban Populations. 3 Hours.
Provides students with an opportunity to explore the body of urban health research to identify key themes, conceptual foundations, and contemporary research findings. Examines integration of cultural and community contextual factors that affect the health status of urban populations. These include racial, ethnic, and economic health disparities; influences of the urban physical environment and the urban social environment; and the availability of and access to health and social services. Studies the influence of concepts such as vulnerability, underserved, culture, ethnicity, poverty, discrimination, disparities in healthcare, urbanization, diversity, social determinants of health, environmental justice, and migration on health status.

NRSG 7755. Intervention Research: Development, Implementation, and Evaluation. 3 Hours.
Examines theory-based intervention research for individuals, groups, populations, and systems. Offers an overview of the types of theory-based interventions across the health spectrum. Reviews the development and testing of theory-based interventions. Emphasizes understanding the strengths and challenges of integrating technology across the development, testing, and implementation of a theory-based intervention. Also emphasizes the selection of existing interventions, the process of adaption, and the valid and reliable execution of the selected intervention. Compares and contrasts intervention research developed for efficacy, effectiveness, and implementation. Restricted to students enrolled in a PhD program or with permission of instructor.

NRSG 7770. Research Colloquium. 1 Hour.
Offers doctoral students an opportunity to explore in-depth key concepts in nursing and healthcare research. Led by a faculty expert, offers students an opportunity to engage in meaningful dialogue and analysis to examine the concept from multiple perspectives. May be repeated up to four times.

NRSG 7780. Advanced Statistics. 3 Hours.
Reviews basic statistical concepts and their applications as a foundation for data analysis. Provides students with an opportunity to build upon their previous knowledge of statistics and explore the topics of multiple analysis of variance, logistic regression, repeated measures, latent variables, and structural equation modeling. Examines data analysis strategies of multiple regression, canonical analysis, and discriminant analysis as applied to clinical nursing research.

NRSG 7782. Multiple Regression Analysis in Health Sciences. 3 Hours.
Presents regression analysis at an advanced level. Focuses on regression for continuous variables: specification, estimation, testing, and diagnostics. Explores logistic regression for binomial and multinomial variables, log-linear regression for continuous variables, and proportional hazards regression for duration variables.

NRSG 7915. Capstone 1. 3 Hours.
Reflects the culmination of practice inquiry, knowledge, and competencies attained during the Doctorate of Nursing Practice program. Requires students to have identified a practice area that provides a guide for the development and completion of a capstone project. In this seminar, students are guided through the process of evidence-based project development, including formulation of goals and objectives, refinement of project design and implementation strategies, development of tools and or forms for data collection, identification of resources (personnel and fiscal), and evaluation. Through group discussion, offers students an opportunity to participate in a process of peer consultation and critique in support of project refinement.

NRSG 7917. Capstone 2. 6 Hours.
Reflects the culmination of practice inquiry, knowledge, and competencies attained during the Doctorate of Nursing Practice program. In this seminar, students are guided through the process of completing an evidence-based project and disseminating the results of the project.

NRSG 7920. The Steps to Practice Inquiry: Analyze, Evaluate, Synthesize, and Apply the Evidence. 3 Hours.
Designed as a complement to NRSG 7105 or equivalent. Offers students an opportunity to obtain skills and competencies needed for a practice doctorate—ability to generate new knowledge from practice, evaluate current practice approaches, analyze current knowledge, and adapt/translate knowledge into usable clinical strategies that improve practice and lead to better outcomes.

NRSG 7921. DNP Scholarly Project 1: Design and Ethical Consideration of Practice Application. 3 Hours.
Reflects the culmination of practice inquiry, knowledge, and competencies attained during the Doctorate of Nursing Practice program. In this seminar, students are mentored through the process of evidence-based project development, including formulation of goals and objectives; refinement of project design and implementation strategies; and development of tools and or forms for data collection, identification of resources (personnel and fiscal), ethical review, and evaluation. Offers students an opportunity to participate in a process of peer consultation and critique in support of project refinement. Requires a minimum total of 250 scholarly practice hours.

NRSG 7922. DNP Scholarly Project 2: Applying Practice Knowledge—Implementation/Outcomes. 3 Hours.
Reflects the culmination of practice inquiry, knowledge, and competencies attained during the Doctorate of Nursing Practice program. In this seminar, students are guided through the process of completing an evidence-based project. Emphasizes the acquisition of reflective practice skills and competencies needed to assess and implement evaluation of evidence and outcomes. Requires a minimum total of 250 scholarly practice hours.

NRSG 7923. DNP Scholarly Project 3: Dissemination of Practice Inquiry. 3 Hours.
Reflects the culmination of practice inquiry, knowledge, and competencies attained during the Doctorate of Nursing Practice program. In this seminar, students are guided through the process of summarizing and disseminating the results of the project. Requires a minimum total of 250 scholarly practice hours.
NRSG 7924. Applied Epidemiology for Advanced Nursing. 3 Hours.
Examines the scientific foundations integral to the competencies outlined in the Essentials of Doctoral Education for Advanced Nursing Practice (2006). Course content and accompanying practice opportunities, grounded in clinical prevention and population health, seek to enable students to analyze epidemiological, biostatistical, occupational, and environmental data in the development, implementation, and evaluation of clinical prevention and population health. Emphasizes current concepts of public health, health promotion, evidence-based recommendations, determinants of health, environmental/occupational health, and cultural diversity and sensitivity needed to guide advanced nursing practice. In addition, emerging knowledge regarding infectious diseases, emergency/disaster preparedness, and intervention frame the exercises and practice opportunities focused on clinical prevention and population health.

NRSG 7925. Health Policy and Advocacy. 3 Hours.
Examines the scientific foundations integral to meeting the competencies outlined in The Essentials of Doctoral Education for Advanced Nursing Practice (2006). Seeks to provide students with the knowledge and opportunity to develop skills and competencies essential to assuming leadership roles in the development of health policy. Contrasts the major contextual factors and policy triggers that influence health policymaking at the various levels. Exercises are aimed at developing skill in the design, implementation, and advocacy for healthcare policy to address issues of social justice and equity in healthcare. Additionally, the course integrates practice experiences with two additional skill sets—the ability to analyze the policy process and the ability to engage in politically competent action.

NRSG 7976. Directed Study. 1-4 Hours.
Allows PhD students to develop an individual plan to attain specific knowledge related to research goals or specific research technique/approach. May consist of library study and reading, preparation of scholarly presentation or publication, mentored research experience, or other appropriate activity as approved by professor and academic advisor. May be repeated without limit.

NRSG 7990. Thesis. 1-4 Hours.
Allows students to implement a research proposal with the guidance of a thesis adviser. Requires data collection and analysis, writing the thesis, and presentation of the findings. May be repeated without limit.

NRSG 8960. Exam Preparation—Doctoral. 0 Hours.
Offers the student the opportunity, under faculty supervision, to prepare for the PhD qualifying exam.

NRSG 9000. Comprehensive Exam. 0 Hours.
Indicates successful completion of the doctoral comprehensive exam.

NRSG 9845. Dissertation Seminar 1. 3 Hours.
Guides students through the beginning of the research process as they prepare their dissertation proposals, including writing the literature review and outlining the research design for their projects. Students have an opportunity to work with their dissertation advisors both individually and in small groups.

NRSG 9846. Dissertation Seminar 2. 3 Hours.
Provides students with an opportunity to finalize their dissertation proposals and make the necessary arrangements to begin their investigations by completing the design and methods and obtaining Investigative Review Board approval. Students have an opportunity to work with their dissertation advisors both individually and in small groups.

NRSG 9984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

NRSG 9986. Research. 0 Hours.
Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

NRSG 9990. Dissertation. 1 Hour.
Offers research/experimental work for PhD thesis on a full-time basis. Restricted to Doctoral candidacy students only. May be repeated up to two times.

NRSG 9996. Dissertation Continuation. 0 Hours.
Offers continuation of PhD dissertation research. May be repeated up to 15 times.
NUR 0630. Registered Nurse First Assister: Theoretical Concepts. 2.5 Hours.
Offers registered nurses an opportunity to obtain a comprehensive background in theoretical concepts and the professional framework necessary for the registered nurse first assistant (RNFA) role. Follows AORN's core curriculum for the RNFA, which includes scope of practice; infection control; surgical anatomy; surgical hazards; and lectures by board-certified surgeons, CRNFA faculty, and experienced perioperative nurses. Facility includes board-certified surgeons, CRNFA, and experienced perioperative nurses.

NUR 0631. Registered Nurse First Assistant Program: Lab. 1.5 Hour.
Complements lectures and offers students an opportunity to build ability and confidence in suturing techniques and knot tying. Individualized teaching as well as return demonstrations ensure proper technique. Students are given adequate time to practice under the supervision of RNFA's and surgeons. Students receive instruction and experience in practices related to minimally invasive surgery at a surgical training lab.

NUR 0632. Registered Nurse First Assistant Program: Practicum. 20 Hours.
Offers RNFA students an opportunity to complete their required clinical hours at their own facility under the mentorship of a board-certified surgeon. This arrangement is made by the student before the program begins. The practicum is divided into intraoperative experience and patient rounds, follow-up visits, and physical assessment. Students keep a surgical case log, which is submitted for evaluation on a regular basis. Monthly homework assignments and case studies are completed and submitted during this portion of the program. An evaluation assessing the student's progress and performance in the clinical setting is completed by the precepting surgeon at the end of the clinical requirement.

NTR 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

NTR 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

NTR 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

NTR 6100. Advanced Nutrition and Metabolism. 4 Hours.
Examines the metabolism, physiological actions, and interrelationships of carbohydrates, protein, fats, vitamins, minerals, and water. Discusses the regulation of the biochemical pathways and the nutritional principles of macronutrient and micronutrient metabolism; absorption, excretion, transport, and cellular metabolism; nutritional and toxicological standards for humans and animal models; and bioavailability of minerals.

NTR 6101. Nutrition Program Planning. 4 Hours.
Focuses on individual and community nutritional assessment. Emphasizes development, implementation, and evaluation of nutrition intervention programs. Offers students an opportunity to practice setting realistic goals that produce outcomes that improve health and support wellness. Explores changing nutritional behavior and the barriers to such change. This course is intended for graduate students in nutrition or other health sciences and/or human services graduate students interested in developing, implementing, and evaluating community-based nutrition programs.

NTR 6102. General Nutrition. 3 Hours.
Introduces nutrition science, foods, and major nutrients. Focuses on current scientific knowledge of nutrition and critical review of the literature and experimental data on which principles of human nutrition are based. Designed to be beneficial for anyone in the health sciences who has not previously studied nutrition in-depth. Offers students an opportunity to optimize their own nutrition regimen.

NTR 6110. Medical Nutrition Therapy. 4 Hours.
Explores the application of nutrition principles to the treatment and prevention of diseases. This treatment can range from changes in diet to providing specialized therapies such as intravenous or tube feeding. Discusses lifestyle strategies and therapeutic nutrient intervention to correct nutritional insufficiencies; promote optimal health; and prevent, manage, or correct medical problems.

NTR 6112. Research Methods in Nutrition. 4 Hours.
Examines the varying techniques and methods used in nutritional research. Offers students an opportunity to learn how to critically analyze and interpret research literature.

NTR 6115. Health Promotion/Disease Prevention. 4 Hours.
Examines health promotion—the science and art of helping people change their lifestyle to move toward a state of optimal health. Lifestyle changes can prevent chronic diseases, such as heart disease, cancer, and diabetes, which are the leading causes of death and disability in the United States. Reviews and critically assesses current efforts to influence lifestyle change, at both the individual and population levels. Offers students an opportunity to plan, organize, and conduct lifestyle change programs.

NTR 6118. Clinical Health Behavior Change. 4 Hours.
Explores health behavior theories to facilitate the adoption of healthful behaviors to various groups. Includes motivational interviewing; practice of nonverbal, active listening; goal assessment; and group counseling. Explores the evaluation of nutrition education interventions.

NTR 6119. Pediatric Nutrition. 4 Hours.
Explores the nutritional requirements of the healthy child from infancy through adolescence. Covers the assessment, treatment, and management of a variety of pediatric diseases and conditions, including prematurity, growth failure, food allergies and intolerances, developmental disabilities, diabetes, and obesity. Explores the global issues affecting children today, including malnutrition, obesity, and environmental health.

NTR 6120. Healthy Aging: Nutrition Strategies for Optimal Longevity. 4 Hours.
Offers a general survey of the impact of aging on the nutritional status of older adults. Covers the relationship between nutrition, body composition, and activity level and their impact on rehabilitation of older adults. Encourages students to look for the clinical signs and symptoms in aging clients that may require nutritional interventions. Offers students an opportunity to acquire strategies for the treatment and prevention of diseases and conditions that are associated with aging and become familiar with various cultures known for their longevity.

NTR 6126. Nutrition across the Life Span. 4 Hours.
Explores the physiological, sociological, and developmental factors that affect nutrient requirements and recommendations at the various stages of the life cycle. Covers topics in nutrition for pregnancy and lactation, introducing first foods and mealtimes with infants, energy and nutrient needs of growing children, and nutrition or lack of nutrition during adolescence. Topics continue along the life span to include nutrient needs of adults with or without chronic diseases and nutrient-drug interactions for older adults. Case studies assist in bringing together all information in a format that simulates clinical scenarios.
NTR 6130. Healthcare and Nutrition Communication. 4 Hours.
Examines cutting-edge research and current theories in health and nutrition communication. Studies empirically proven health campaigns, offering students an opportunity to understand the key qualities of messages that can best influence health-related decision making. Analyzes the mechanisms for transmitting key knowledge to a target audience, including the potential utility of social networking tools in developing nutrition as an applied science. Offers students an opportunity to test their own messages using print and electronic media. Seeks to help nutrition scientists create communities of "healthy practice" among populations that would benefit the most from improved nutrition.

NTR 6148. Exercise Physiology. 3 Hours.
Covers the advanced study of concepts, principles, and research in the field of exercise physiology. Discusses advanced concepts in the muscular/neuromuscular, cardiovascular, ventilatory, endocrine, and metabolic responses to exercise and exercise training. Specific study of the physiological control mechanisms regulating these systems are also addressed during periods of rest, acute exercise, and following chronic exercise training.

NTR 6150. Sports Psychology. 3 Hours.
Covers topics such as eating disorders among athletes, female athlete triad, and weight management. Discusses performance enhancement, motivation, and stress management of athletes. Offers students an opportunity to develop skills to counsel athletes, as well as sports teams, and to develop an understanding of behavioral change theory as it relates to sports psychology.

NTR 6155. Nutrition Entrepreneurship. 3 Hours.
Includes advanced analysis of the problems and considerations involved in establishing, organizing, and operating a nutrition-based business or clinical nutrition practice. Focuses on tools, techniques, and resources necessary for establishing a business, including developing a business plan, marketing and advertising, and reimbursement and legal and regulatory matters.

NTR 6165. Food and Society. 4 Hours.
Covers healthy food trends and food products that affect how we live. Includes advanced analysis of food in our society and environment. Examples are the organic movement, product and meal trends in supermarkets and restaurants, food and the economy, food politics, food labeling, and culinary nutrition trends. Focuses on how one can implement the findings into one’s practice and/or area of expertise.

NTR 6200. Nutrition Education. 4 Hours.
Presents methods for creating and evaluating nutrition content for educational presentations. Offers students an opportunity to develop educational materials with an eye toward audience and context-appropriate language. Encourages students to reflect on the purpose of particular educational materials and then fashion nutrition messages that have the best chance of eliciting meaningful behavioral changes. Requires students to produce highly effective educational materials from start to finish and, in the process, practice the commonly used methods for writing, editing, and designing appropriate educational tools.

NTR 6201. Commercialization of Nutrition and Nutritional Information. 3 Hours.
Examines the commercialization of food from the perspectives of the marketers and consumers. In the United States, the consumption of food and nutritional information is mediated by advertisements and infomercials. In contemporary society, the market shapes what we eat and what we think that we should eat. This course offers students an opportunity to evaluate the role that commercial enterprises play in influencing notions of healthy nutrition and nutrition education. Features images and copy found in print advertisements, television, popular online sources, and movies and product placements.

NTR 6202. The Financing of Nutrition and Wellness. 3 Hours.
Assesses the impact that public and private funding has on health communication and nutrition campaigns. In the United States, health campaigns are determined, in part, by the funding that they receive. Unfortunately, private and public funding of healthcare has traditionally embraced a pathological model, one in which payment was driven by curing the sick rather than maintaining the healthy. With a greater focus on controlling healthcare costs, policymakers, employers, and insurance companies have sought to promote health through nutritional information and wellness programs. The challenge is to find ways of financing these efforts. Offers students an opportunity to develop policy recommendations for supporting better nutrition practices among a diverse population.

Offers graduate students in applied nutrition an opportunity to obtain experience in the formal presentation of research results. Emphasizes the components of quality research. Offers students an opportunity to conduct, analyze, and present an evaluative or applied research project in a clear, concise, and logical manner.

NTR 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

NTR 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

NTR 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

NTR 6966. Practicum. 1-4 Hours.
Offers students an opportunity to build competencies related to their specific objectives by applying concepts learned in foundation courses to the particular job function in which they expect to apply their knowledge.

NTR 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

NTR 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

NTR 6983. Topics. 1-4 Hours.
Covers special topics in nutrition. May be repeated without limit.

NTR 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.
NTR 7130. Overweight and Obesity 1. 4 Hours.
Addresses the epidemiology of obesity, as well as the etiology and possible causes. Discusses the medical management and complications of obesity in-depth. Students review and critically assess current treatment strategies, such as pharmacotherapy, bariatric surgery, and behavioral approaches. Considers new research and paradigms for the causes and treatment of obesity.

NTR 7132. Overweight and Obesity 2. 4 Hours.
Examines a variety of topics in the current literature, some controversial, related to the etiology, management, treatment, and psychosocial ramifications of obesity. Offers students an opportunity to conduct an extensive review of the existing literature on various topics connected with obesity. The goal is to critically analyze and draw conclusions on how particular topics affect certain key areas in obesity, including clinical management, health promotion and disease prevention, and policy, as well as individual perceptions.

NTR 7135. Eating Disorders in Children and Adults. 4 Hours.
Examines eating disorders in children and adults, including the definition and clinical presentation of eating disorders. Considers the medical complications of eating disorders, as well as the relationship between eating disorders and obesity. Examines family issues, especially for children and adolescents, in the etiology and treatment of eating disorders. Analyzes existing approaches to treatment, as well as new and experimental treatments.

NTR 7140. Wellness and Nutrition. 4 Hours.
Debates the notion that ideas of wellness are culturally contingent and socially constructed. As part of that investigation, the course surveys the nexus among nutrition habits and public health, primary education and lifelong healthy habits, and emerging trends toward corporate wellness and nutrition coaching. Offers students an opportunity to study and apply the latest research and theories relating to health maintenance and preventative nutrition. Requires students to carefully reflect upon the various definitions of wellness. Explores the construction of nutrition expertise and its involvement in large public and private programs designed to motivate individuals to engage in healthy lifestyles.

NTR 7147. Sports and Fitness Nutrition. 3 Hours.
Focuses on understanding the specific role of energy and nutrients in fitness and athletic performance. Additional topics include the role of fluid and electrolytes, ergogenic aids, and special diets in physical activity. Explores tools for assessing body composition (body fat, muscle mass), unique dietary concerns across the life span and in special population groups (heart disease, diabetes, obesity), and the effect of diet on endurance.

NTR 7880. Nutrition in Practice. 1-4 Hours.
Presents a guided experience that offers students an opportunity to link theory and practice. Students gain experience in the field of nutrition, either in-person or online, and develop or work on an established project or program that is relevant to the student’s specialization. Seeks to help students construct a “portfolio” piece that can be included in job application packages.

NTR 7961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

NTR 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.

NTR 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

NTR 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

NTR 7980. Capstone. 1-4 Hours.
Offers graduate students in nutrition an opportunity to obtain experience in formal presentation of research results, with emphasis on the components of quality research. Students present a research seminar on a research topic (relating to their required project) in a clear, concise, and logical manner. Students write an abstract, with references, that summarizes the research seminar.

NTR 7983. Topics. 1-4 Hours.
Covers special topics in nutrition. May be repeated without limit.

NTR 7990. Thesis. 1-4 Hours.
Offers thesis supervision by members of the department.

NTR 7994. Thesis Continuation—PT. 0 Hours.
Offers continuing thesis supervision by members of the department.

NTR 7995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

NTR 7996. Thesis Continuation. 0 Hours.
Offers continuing thesis supervision by members of the department.

OR 5374. Special Topics in Operations Research. 4 Hours.
Offers topics of current interest in operations research. May be repeated up to four times.

OR 6205. Deterministic Operations Research. 4 Hours.
Introduces the theory, computation, and application of deterministic models to represent industrial operations. Includes linear programming formulation and solution using spreadsheet and algebraic languages software; simplex, big-M, two-phase, revised simplex, and dual simplex algorithms for solving linear programs; introduction to the theory of simplex, fundamental insight, duality, and sensitivity analysis; transportation, assignment, and transshipment problems; shortest path, minimum spanning tree, maximum flow, minimum cost network flow problems and project networks; and discrete-state and continuous-state dynamic programming models and applications. Requires knowledge of linear algebra.

OR 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

OR 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

OR 6965. Co-op Work Experience Abroad. 0 Hours.
Offers eligible students an opportunity for work experience abroad. May be repeated without limit.
OR 7230. Probabilistic Operation Research. 4 Hours.
Introduces the theory and use of stochastic models to represent industrial operations. Topics include discrete-state Markov chains and applications, state transitions and properties, first passage probabilities, steady-state analysis; absorbing chains and absorption probabilities; introduction to continuous-time Markov chains, transition rates and steady-state analysis; basic elements of queuing systems, birth-and-death process, and special cases; steady-state analysis of simple queuing models including M/M/s, M/M/s/K, M/M/s/N/N and their special cases; and queuing models involving nonexponential distributions.

OR 7235. Inventory Theory. 4 Hours.
Considers the nature and characteristics of inventory systems. Examines techniques of constructing and analyzing mathematical models of inventory systems with a view toward determining operating policies for such systems.

OR 7240. Integer and Nonlinear Optimization. 4 Hours.
Covers important families of mathematical programming problems and optimization methods. Discusses the cutting plane and the branch and bound algorithm for binary and mixed integer programming problems. Introduces nonlinear programming including unconstrained optimization, the Kuhn-Tucker conditions, gradient methods, and separable, quadratic, and geometric programming.

OR 7245. Network Analysis and Advanced Optimization. 4 Hours.
Considers concepts of advanced linear programming and network flows. Includes theory of the simplex method, the revised simplex algorithm using LU factorization, and simplex for bounded variables and primal-dual methods; methods for solving large-scale models such as Danzig-Wolfe decomposition, Bender’s partitioning, Lagrangian relaxation, and subgradient optimization; computational complexity and Karmarkar’s algorithm; minimum cost network flows, network simplex, and generalized and multicommodity network flow problems; and special types of network problems including the traveling salesman, routing, network location, and reliability problems.

OR 7250. Multi-Criteria Decision Making. 4 Hours.
Offers theory, computation, and application of multicriteria decision making. Topics include conventional and criterion cone parametric programming; approaches for generating efficient solutions, such as weighted sums, e-constraint, reduced feasible regions, and Fourier-Motzkin elimination; vector maximum algorithms and ADBASE software; multiattribute utility theory; goal programming; analytic hierarchy process and Expert Choice software; filtering techniques; multiple objective fractional programming; and interactive and Tchebycheff procedures.

OR 7260. Constraint Programming. 4 Hours.
Covers the basic foundations of logic-based modeling and constraint programming, which includes logic of propositions, discrete variables and 0-1 inequalities, global constraints (all different, cardinality, cumulative, stretch, disjunctive, element, sum), consistency, constraint propagation, domain reduction, and search strategies (branching, backtracking). Constraint programming uses techniques from artificial intelligence, computer science, and operations research to solve combinatorial problems such as planning, scheduling, vehicle routing, the traveling salesman problem (TSP), staff rostering, and course timetabling. Also covers integrated constraint programming and mathematical programming methods such as Benders decomposition, column generation, relaxation, and local search methods.

OR 7310. Logistics, Warehousing, and Scheduling. 4 Hours.
Explores the determination of needs and requirements for logistics within large-scale manufacturing and business environments. Examines warehousing and scheduling in the context of a business logistics system. Introduces managerial, mathematical, and software tools and techniques for modeling and optimizing various aspects of the business supply chain. Considers approaches to examining warehousing operations and the associated algorithms.

OR 7374. Special Topics in Operations Research. 4 Hours.
Offers topics of interest to the staff member conducting this class for advanced study. May be repeated without limit.

OR 7440. Operations Research Engineering Leadership Challenge Project 1. 4 Hours.
Offers students an opportunity to develop and present a plan for the demonstration of a marketable technology product or prototype with an operations-research focus. Constitutes the first half of a thesis-scale project in technology commercialization. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student’s technological and engineering depth and fostering the student’s leadership development.

OR 7442. Operations Research Engineering Leadership Challenge Project 2. 4 Hours.
Continues OR 7440, a thesis-scale project in technology commercialization. Offers students an opportunity to demonstrate their development of a marketable technology product or prototype with an operations-research focus and produce a written documentary report on the project to the satisfaction of an advising committee. Requires work/training with a sponsoring organization or employer to improve a process or develop a project that is of significant value to the organization and demonstrates a quantifiable market impact while enhancing the student’s technological and engineering depth and fostering the student’s leadership development.

OR 7945. Master’s Project. 4 Hours.
Offers theoretical or experimental work under individual faculty supervision.

OR 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

OR 7978. Independent Study. 1-4 Hours.
Offers theoretical or experimental work under individual faculty supervision. May be repeated without limit.

OR 7990. Thesis. 1-8 Hours.
Offers analytical and/or experimental work conducted under the direction of the faculty in fulfillment of the requirements for the degree. Requires first-year students to attend a graduate seminar program that introduces the students to the methods of choosing a research topic, conducting research, and preparing a thesis. Requires successful completion of the seminar program. May be repeated without limit.

OR 7994. Thesis Continuation—Part Time. 0 Hours.
Continues thesis work conducted under the supervision of a departmental faculty member. May be repeated without limit.

OR 7996. Thesis Continuation. 0 Hours.
Continues thesis work conducted under the supervision of a departmental faculty member.
Organizational Behavior (ORGB)

ORGB 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ORGB 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ORGB 3201. Organizational Behavior. 4 Hours.
Provides an overview of the actions and behaviors of people in organizations. Uses case studies, videos, experiential exercises, lectures, and discussions to explore the effects of individual, interpersonal, group, organizational, and cross-cultural factors on human behavior. Topics include groups and teams, motivation, leadership, organizational change, organizational culture, structure, conflict resolution, and communication. Both the underlying theories and principles of these topics, as well as their practical applications and implications for organizations, are covered.

ORGB 3202. Organizational Behavior in a Global Context. 4 Hours.
Covers the actions and behaviors of people in organizations. Uses case studies, videos, experiential exercises, lectures, and discussions to explore the effects of individual, interpersonal, group, organizational, and cross-cultural factors on human behavior. Topics include groups and teams, motivation, leadership, organizational change, organizational culture, structure, conflict resolution, and communication. Emphasizes the social and cultural issues faced by firms that operate globally. Studies both the underlying theories and principles of these topics, as well as their practical applications and implications for organizations.

ORGB 3209. Organizational Behavior. 4 Hours.
Does not count as credit for business majors. Counts as ORGB 3201 for business minors only.

ORGB 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

ORGB 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Organizational Change - CPS (OCM)

OCM 6100. Foundations of Organizational Change. 3 Hours.
Provides a comprehensive introduction to the theory and practice of organizational change. Offers students an opportunity to gain a deep understanding of its history, basic principles, current practices, and technologies. Examines the critical role of the change agent. Surveys the many recognized theories of organization, from the organization as a machine to the organization as a complex adaptive system. Analyzes real-world cases using established organizational change theories and diverse perspectives. Offers students an opportunity to reshape how they think about organizational change and to explore their own effectiveness in assuming the role required for designing, facilitating, and sustaining a change initiative.

OCM 6110. Organizational Assessment and Diagnosis. 3 Hours.
Provides a comprehensive introduction to the theory and practice of organizational change. Offers students an opportunity to gain a deep understanding of its history, basic principles, current practices, and technologies. Examines the critical role of the change agent. Surveys the many recognized theories of organization, from the organization as a machine to the organization as a complex adaptive system. Analyzes real-world cases using established organizational change theories and diverse perspectives. Offers students an opportunity to reshape how they think about organizational change and to explore their own effectiveness in assuming the role required for designing, facilitating, and sustaining a change initiative.

OCM 6120. Leading Change. 3 Hours.
Offers students an opportunity to gain a deep understanding of the relationship between “change leadership strategy” (the tactics employed by those leading change) and “resistance” (the response of those accountable for implementing change). Explores the applicability of change strategies based on the content and context of organizational change. Analyzes resistance—its many sources and dimensions, how it emerges, and how it can be managed. The ability to lead and manage change effectively is a mandatory skill for those working in today’s organizations.

OCM 6130. Enhancing Individual and Group Effectiveness. 3 Hours.
Focuses on the design and facilitation of interventions aimed at improving individual and group performance in support of change efforts. Topics include interpersonal relations, characteristics of effective work groups and teams, team building, process consultation, and individual and group decision making. Offers students an opportunity to investigate the issues inherent in successfully leading a variety of group settings to collective ends by designing, facilitating, and evaluating group interventions in wide-ranging cultural contexts.

OCM 6140. Collective Leadership and Sustainable Change. 3 Hours.
Explores emerging organizational and social change technologies that tap the collective wisdom of a system and transform resistance into a constructive resource for profound change. Leaders are increasingly presented with disruptive challenges and changes that require them to let go of old patterns of thinking and behavior and to sense new future possibilities. Today, over 70 percent of change efforts fail because they end up addressing symptoms instead of the deep systemic issues that need to be addressed but remain hidden in our individual and collective blind spots.

OCM 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

OCM 7995. Project. 3,4 Hours.
Offers students in the final quarter an opportunity to assess, design, and lead a real-world organizational or social change intervention. Instructors employ a structural and supervised process designed to enhance the student’s design, intervention, and evaluation skills. Students have an opportunity to apply the theories, perspectives, values, and behaviors learned during the program. Consulting skills are practiced—contracting, diagnosis, intervention, feedback, and follow-up. Requires a comprehensive report and presentation presented to and assessed by the organization change program faculty.
Paralegal Studies - CPS (PRL)

PRL 0147. Paralegal Internship (CEU). 0 Hours.
Offers students an opportunity to enter into work situations that allow them to test classroom theories, refine their career objectives, and develop positive work habits. Students must fulfill the contact hours on-site and complete all paperwork, which includes keeping a daily journal, writing a final paper on the internship experience, and compiling a portfolio of completed paralegal work assignments.

Payroll Administration - CPS (PAY)

PAY 0500. Payroll Administration Evening Program. 5.4 Hours.
Offers payroll administrators and managers an opportunity to obtain a higher level of proficiency in their careers and to help prepare for the Certified Payroll Professional (CPP) or Fundamental Payroll Certification (FPC) exam, valued and recognized designations among payroll professionals.

PAY 0501. Payroll Administration Program. 4.8 Hours.
Offers payroll administrators and managers an opportunity to obtain a higher level of proficiency in their careers and to help prepare for the Certified Payroll Professional (CPP) or Fundamental Payroll Certification (FPC) exam, valued and recognized designations among payroll professionals. Topics covered include employee status, new hire reporting, Fair Labor Standard Act laws, overtime pay and compensable time issues, white-collar worker exemptions, compensation, withholding and depositing taxes, unemployment insurance, benefits and deductions from pay, accounting principles, payroll for U.S. employees abroad and foreign aliens working in the United States, reporting requirements, record-retention laws, payroll systems and technology, managing a payroll department, and IRS problem resolution. Instructors are industry practitioners with real-world experience within the payroll administration area.

Pharmaceutical Science (PHSC)

PHSC 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHSC 2000. Professional Development Co-op. 1 Hour.
Introduces the Bouvé Cooperative Education Program. Offers students an opportunity to develop job-search and career-management skills. Students perform assessments of their workplace skills, interests, and values and discuss how they impact personal career decisions. Offers students an opportunity to prepare a professional-style résumé, learn proper interviewing techniques, and gain an understanding of the opportunities available to them for co-op. Introduces career paths, choices, and career decision making. Familiarizes students with workplace issues relative to their field of study and presents the MyNEU COOL database in the job-search and referral process. Presents and discusses co-op policies, procedures, and expectations of the Bouvé Cooperative Education Program and co-op employers.

PHSC 2301. Human Physiology 1. 3 Hours.
Provides students with an understanding of the principles of physiology. Discusses physiological information mostly related to cardiovascular, respiratory, digestive, urinary, and endocrine systems. Focuses on the physiological mechanisms of the major organ systems. Physiological information is related to the specific areas of pharmacology.

PHSC 2302. Human Anatomy Lab. 1 Hour.
Accompanies PHSC 2301. Focuses on the anatomy of the major organ systems. Interactive CD-ROMs allow each student to study in-depth the structure of each organ system.

PHSC 2303. Human Physiology 2. 3 Hours.
Continues PHSC 2301. Provides students with an understanding of the principles of physiology. Discusses physiological information mostly related to cell physiology, muscle physiology, and physiology of the nervous system. Focuses on the physiological mechanisms of the major organ systems. Physiological information is related to the specific areas of pharmacology.

PHSC 2304. Human Physiology Lab. 1 Hour.
Accompanies PHSC 2303. Covers topics from the course through various experiments.

PHSC 2320. Biochemistry. 4 Hours.
Introduces the structures, functions, and metabolism of amino acids, proteins, carbohydrates, lipids, and nucleic acids. Discusses the mechanisms of enzyme reactions, enzyme kinetics, vitamins, biological oxidation-reduction reactions, and bioenergetics, as well as various inborn errors of metabolism.

PHSC 2330. Immunology. 3 Hours.
Provides students with an understanding of the principles, mechanisms, organs, cells, and molecules of the innate and adaptive immunity. Monoclonal antibodies, organ transplant immunity, hypersensitivity, tolerance, tumor immunity, autoimmunity, and immunodeficiencies are discussed in light of potential therapeutic interventions. Weekly journal club-style presentation of related assigned topic is required.

PHSC 2360. Medical Microbiology. 3 Hours.
Reviews the structure and physiology of bacteria, fungi, parasites, and viruses, and then surveys the members of each of these groups of organisms that commonly colonize and/or cause significant disease in humans. The survey focuses on human organ systems such as skin and mucous membranes, gastrointestinal, respiratory, and urinary tracts, central nervous system, blood and lymphatics, and others. When possible, demonstration cultures of microorganisms are made available to students, and computer study guides or Kodachrome slide sets are available for review.

PHSC 2650. Introduction to Health Science Research. 4 Hours.
Surveys research methods and topics relevant to health science research with the goal of engaging undergraduate students to commit to research training throughout at least one semester and possibly continuing throughout their undergraduate program. Exposes students to lectures addressing the benefits of a research experience and readings of original literature. Health science faculty from across the university present their lines of research focusing on projects that would be available to students. Seeks to familiarize students with use of the scientific method in addressing unsolved problems and to prepare them to select the most appropriate research laboratory to engage in research.

PHSC 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHSC 3411. Pharmaceutics 1. 4 Hours.
Develops an understanding of pharmaceutical dosage forms, with emphasis on solids, liquids, semisolids, parenterals, inhalation, and novel drug delivery systems. Combines the discussion of pharmaceutical products developed in industry and those compounded in local pharmacies. Focuses on application of mathematical principles and problem-solving skills in pharmaceutical compounding.
and antiinflammatory agents.

PHSC 3411. Pharmaceutics. 4 Hours.
Continues PHSC 3410. Examines the physical and chemical properties of the drug as it relates to pharmaceutical product development. Covers concepts of thermodynamics, colloidal properties, ionic equilibria and buffers, solubility, complexation and protein binding, reaction kinetics, mass transport, interfacial phenomena and dispersion, and rheology.

PHSC 3419. Pharmaceutics Laboratory. 1 Hour.
Formulates pharmaceutical dosage forms such as powders, capsules, solutions, suspensions, emulsions, ointments, gels, creams, lotions, and suppositories, and tests the quality of the products in the lab using approved methods of analysis. Also provides an understanding of the physical and chemical properties of drugs as they relate to formulation development through experimental observation of dissolution, stability, and effects of pH and co-solvent on solubility of drugs.

PHSC 3430. Pharmacokinetics and Biopharmaceutics. 3 Hours.
Focuses on the basic principles and methods of biopharmaceutics and pharmacokinetics. Covers the kinetics of drug absorption, distribution, metabolism, and excretion; linear and nonlinear pharmacokinetics; general concept of one- and two-compartment models with instantaneous (i.e. bolus), zero order (i.v. infusion), or first order (oral administration or i.m. injection) input; evaluation of bioavailability and investigation of the factors affecting drug availability; influence of the route of administration, dosage form, and regimen on bioavailability of drugs; bioequivalence study; multiple dosing kinetics; general approaches to dosage adjustment in renal disease; noncompartmental analysis; and pharmacokinetic-pharmacodynamic modeling.

PHSC 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHSC 4340. Pharmacology for the Health Professions. 4 Hours.
Provides the fundamentals of pharmacology to students entering the health professions. Topics include the general principles of drug action, drug distribution, and drug elimination, with attention to the development of reasoning skills necessary to identify, avoid, and solve practical drug-related problems. Drugs are presented according to therapeutic or functional classification.

PHSC 4501. Pharmacology/Medicinal Chemistry 1. 5 Hours.
Introduces the principles and basic concepts of pharmacology and the general mechanisms of drug action including drug receptor interactions. Discusses the major drug classes affecting the peripheral autonomic and central nervous systems including anxiolytics, sedative-hypnotics, anesthetics, anticonvulsants, neuroleptics, antidepressants, and antianxiety agents. Considers therapeutic uses, mechanisms of drug action, and undesirable actions including side effects and adverse reactions.

PHSC 4502. Pharmacology/Medicinal Chemistry 2. 5 Hours.
Continues PHSC 4501. Covers the mechanisms of action, structure-activity relationships, therapeutic uses, and adverse effects of drugs including cardiovascular agents, hormones, anticancer drugs, antibiotics, and antiinflammatory agents.

PHSC 4600. Pharmacy Capstone. 4 Hours.
Acts as a final integrator of the major, general education, and experiential aspects of the student’s education. Expect students to demonstrate motivation and initiative and to work cooperatively with their faculty mentor, community partners, and fellow students (where applicable) in order to complete a comprehensive, high-quality scholarly work (e.g., a research project, educational project, administrative project, business plan, case report, or community-service learning project or professional manuscript) appropriate for dissemination to the university and professional community. The timeline for completion is set by the faculty mentor and agreed to by the individual or all members of the student group. May be repeated once.

PHSC 4850. Capstone for BS in Pharmaceutical Sciences. 4 Hours.
Designed to facilitate integration of major, general education, and experiential aspects of the individual student’s program of study with a focused scientific research experience under the mentorship of a faculty member. Offers students an opportunity to develop a research question, perform data collection and analysis, and satisfactorily complete a quality research report (detailing background; methods; results; discussion, including relevance to their pharmaceutical science career development; and references), followed by participation in a seminar on their work presented to the Northeastern community. In addition, students are strongly encouraged to present their findings at local, regional, national, and international professional meetings. Requires approval of director of pharmaceutical sciences BS program.

PHSC 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

PHSC 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

PHSC 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHSC 4991. Research. 4 Hours.
Extends current knowledge or offers novel insights through faculty-directed and supervised individual undergraduate research or creative projects. The project must be designed in concert with and obtain formal prior approval from relevant faculty and program director. May be repeated without limit.

PHSC 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHSC 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHSC 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

PHSC 4995. Practicum. 1-4 Hours.
Offers eligible students an opportunity for practical experience. May be repeated without limit.
Introduces new students in the Pharmaceutical Science Graduate Program to important concepts in medicinal and combinatorial chemistry as they relate to drug discovery, and a brief overview of pharmacology, drug metabolism, pharmacokinetics, and toxicology. Also introduces the major drug receptor families and their signaling pathways.

**PHSC 5200. Advanced Immunology and Immunological Therapies. 2 Hours.**

Offers an interactive course about molecular principles of immunity and ways to manipulate it. Provides instructive overview of molecular and cellular bases of the immunological diseases. Highlights the problems of modern clinical immunology and immunotherapies. Summarizes the molecular and cellular mechanisms by which the immune system protects the host from disease. Studies clinical cases of examples of the failure of immunity to some infections and, on the other hand, how inappropriate immune responses can themselves cause disease, such as with allergy and autoimmunity. Describes the pharmacological and physiological regulation of immune response and explains biotechnological approaches to develop new effective vaccines and immunotherapies.

**PHSC 5300. Pharmaceutical Biochemistry. 2 Hours.**

Offers students an opportunity to obtain an understanding of the principles of physiological chemistry. Focuses in-depth on the major topics of physiological chemistry, including general chemistry and biomolecules, peptide synthesis and protein structure, carbohydrates and nucleic acids, thermodynamics and kinetics of molecular interactions, and colloids and micelles. Relates biochemical information to the specific areas of pharmacology, pharmaceutics, and drug discovery/development.

**PHSC 5305. Professional Development for Pharmaceutical Sciences. 1 Hour.**

Introduces and examines the goals, expectations, policies, and procedures of the Masters' in Pharmaceutical Sciences internship program and professionalism in the field. Discusses the role and involvement of internship employers. Offers students an opportunity to develop job search and career management skills; assess their workplace skills, interests, and values; discuss how those qualities impact career decisions; prepare a professional résumé; and learn proper interviewing techniques. Issues of ethics and professionalism are designed to inform students of issues they will face in the pharmaceutical field. Content of this course is geared to students' participation in the internship program and overall professional development in pharmaceutical sciences.

**PHSC 5310. Cellular Physiology. 2 Hours.**

Focuses in-depth on the major cellular physiological mechanisms, including physiology of the cell membrane, ion channels and transport phenomena, energy production, signal transduction, synapses, and physiological processes in the cytosol. Relates physiological information on the specific areas of pharmacology, pharmaceutics, and drug discovery/development. Offers students an opportunity to obtain an understanding of the principles of cellular physiology.

**PHSC 5360. Anti-Infectives. 4 Hours.**

Reviews the structure and physiology of bacteria, fungi, and viruses and surveys significant organisms of medical importance. Introduces specific antibiotic, antifungal, and antiviral agents and classes of agents once a foundation of knowledge of the microorganisms that cause disease is established. Discusses concepts of pharmacology, pharmacokinetics, antimicrobial resistance, pharmacodynamics of antimicrobial agents, and spectra of activity.

**PHSC 5400. Principles of Drug Design. 3 Hours.**

Studies important aspects of drug discovery and development with a focus on drug design. Covers basic organic medicinal chemistry concepts and seeks to build students' skills in lead compound discovery, structure-activity relationship studies, and lead optimization strategies. Topics include the fundamentals of pharmacology, pharmacokinetics, and pharmacodynamics of therapeutic agents relevant to the drug-structure optimization. These skills often help develop a strong foundation in the concepts that govern the multidisciplinary process of drug discovery. Uses lectures and peer-reviewed seminar presentations to help students to incrementally increase their knowledge required to identify new, marketable therapeutic agents. Requires organic or medicinal chemistry at the undergraduate level.

**PHSC 5420. Repurposing Drugs for Cancer Immunotherapies. 2 Hours.**

Offers a multidisciplinary course targeted to students interested in recent advances in biomedical research, clinical practice, and personalized medicine as related to cancer immunotherapies. Describes current promises and disappointments with cancer immunotherapies and recent FDA drug approvals for personalized cancer therapies. Explains the role of immunological and physiological negative regulators of antitumor and tumor biology as needed. Explains underlying principles of immunology, biochemistry, genetics, and preclinical and clinical studies when introducing new concepts. Assigned detailed study of specific areas and discussion of assigned papers are designed to complement classroom material.

**PHSC 5500. Repurposing Drugs for Cancer Immunotherapies. 2 Hours.**

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

**PHSC 5545. Pharmaceutical Toxicology. 3 Hours.**

Covers fundamental concepts of toxicology and technical methods in toxicology along with comprehensive analysis of both in-vitro and in-vivo toxicity in drug discovery and development. Through lectures given by experts in various fields in toxicology on several topics required for specialized work in research, industrial, and clinical settings, offers students an opportunity to become familiar with methods and analyses including in-vitro and in-vivo toxicity assessments and toxicokinetic-toxicodynamic models and analyses. Includes mechanistic basis of toxicity, methods of toxicological analysis, and case studies pertinent to topics. Requires undergraduate physiology or biochemistry.

**PHSC 5576. Directed Study. 1-4 Hours.**

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

**PHSC 5578. Independent Study. 1-4 Hours.**

Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

**PHSC 5984. Research. 1-4 Hours.**

Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

**PHSC 6210. Drug Design, Evaluation, and Development. 2 Hours.**

Teaches students the concepts of using immunological, genomic, and proteomic techniques to find novel drug targets. Also introduces the concepts of drug targeting and dosage forms, in vivo/in vitro drug screening, and the importance of pharmacogenetics to explain variability in drug reactions.

**PHSC 6212. Research Skills and Ethics. 1 Hour.**

Teaches students the basics of laboratory safety, safekeeping laboratory data, and the process of writing a grant proposal. Also, case studies explore the concepts of data distortion or fabrication, conflicts of interest, confidentiality, ethical aspects of peer review, and the attribution of credit in science.
PHSC 6214. Experimental Design and Biostatistics. 2 Hours.
Discusses fundamental principles of experimental design and statistical analysis, with emphasis on clinical research. Topics include descriptive statistics, hypothesis testing, analysis of variance, correlation, regression, chi-square test, and nonparametric methods.

PHSC 6216. Human Physiology and Pathophysiology. 2 Hours.
Introduces major topics in human physiology, emphasizing knowledge essential to health-related laboratory research. Topics include neurophysiology, immunology, cardiovascular, respiratory, renal, and gastrointestinal physiology and endocrinology.

PHSC 6218. Biomedical Chemical Analysis. 2 Hours.
Presents the basic elements of immunopathology, reviewing the uses of radiopharmaceuticals and other contrast agents for imaging development research involving imaging; and the development and radiological studies; clinical and preclinical human drug discovery and kinetics, but concentrates on applications. Covers a survey of clinical and radioactivity and radiation measurement, as well as tracer (PET) and magnetic resonance imaging (MRI), used in metabolic and medical imaging modalities, principally positron emission tomography (PET) and magnetic resonance imaging (MRI), used in metabolic and functional studies. Reviews the basic science of magnetic resonance and radioactivity and radiation measurement, as well as tracer kinetics, but concentrates on applications. Covers a survey of clinical radiological studies; clinical and preclinical human drug discovery and development research involving imaging; and the development and uses of radiopharmaceuticals and other contrast agents for imaging modalities, including X-rays and ultrasound as well as PET and MRI.

PHSC 6218. Biomedical Chemical Analysis. 2 Hours.
Provides an interdisciplinary introduction to substance abuse, including the medicinal chemistry and neurobiology of drugs that act through the opioid, dopamine, acetylcholine, and cannabinoid systems. Compares and contrasts neurochemical mechanisms that are common to many addictive agents and those that are specific to individual drug classes. Highlights the involvement of the brain dopamine system and differences and contrasts similarities between the pharmacology of abused and therapeutic drugs, together with the development of medications for treating drug dependence. Includes lectures by experts on particular topics of their own recent research. Introduces students to key aspects of biological and chemical research as they pertain to drug abuse and its treatment.

PHSC 6222. The Chemistry and Biology of Drugs of Abuse. 2 Hours.
Designed to prepare students to understand the advantages, shortcomings, and pitfalls of the use of live, behaving animals in drug discovery. Covers an in-depth analysis of ethical issues in animal research, as well as aspects of animal behavioral models, behavior and brain biochemistry, and methods of behavioral analysis. Specific topics include psychopharmacology, fear and anxiety; pain and stress; depression and reward; general arousal and tolerance; drug abuse and habitual behaviors. The ways in which animal behaviors can be described in a quantitative manner and the effects of medications and abused drugs quantified and related to human diseases and drug responses are an important component of the course.

PHSC 6224. Behavioral Pharmacology and Drug Discovery. 2 Hours.
Designed to prepare students to understand modern noninvasive medical imaging modalities, principally positron emission tomography (PET) and magnetic resonance imaging (MRI), used in metabolic and functional studies. Reviews the basic science of magnetic resonance and radioactivity and radiation measurement, as well as tracer kinetics, but concentrates on applications. Covers a survey of clinical radiological studies; clinical and preclinical human drug discovery and development research involving imaging; and the development and uses of radiopharmaceuticals and other contrast agents for imaging modalities, including X-rays and ultrasound as well as PET and MRI.

PHSC 6226. Imaging in Medicine and Drug Discovery. 2 Hours.
Designed to prepare students to understand modern noninvasive medical imaging modalities, principally positron emission tomography (PET) and magnetic resonance imaging (MRI), used in metabolic and functional studies. Reviews the basic science of magnetic resonance and radioactivity and radiation measurement, as well as tracer kinetics, but concentrates on applications. Covers a survey of clinical radiological studies; clinical and preclinical human drug discovery and development research involving imaging; and the development and uses of radiopharmaceuticals and other contrast agents for imaging modalities, including X-rays and ultrasound as well as PET and MRI.

PHSC 6280. Immunobiotechnology. 2 Hours.
Provides an interdisciplinary introduction to biophysical methods used in modern drug discovery, including hit generation and lead optimization. Emphasizes key experimental methods, including nuclear magnetic resonance (NMR) spectroscopy and X-ray crystallography, as well as computer modeling as applied to ligand- and structure-based drug design. Includes lectures by experts on related topics from their recent drug-discovery research. Presented under the auspices of the Center for Drug Discovery. Requires permission of instructor for students of junior or senior standing.

PHSC 6300. Pharmaceutical Science Seminar. 1 Hour.
Teaches students to evaluate critically the scientific literature in a journal club format. Several sections may be offered each semester to accommodate different specializations or interest groups. May be repeated without limit.

PHSC 6314. Special Topics of Pharmaceutical Science. 2 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHSC 6401. Pharmaceutical Science Internship. 1 Hour.
Offers an experiential component of the graduate curriculum that fosters professional development through internship in drug discovery, development, and/or regulatory affairs in a pharmaceutical or biotechnology company. Requires students to work in a company for a minimum of twenty hours per week. Offers students an opportunity to engage in pharmaceutical science research or to work in an environment outside the University but under the supervision of a faculty instructor. May be taken in any semester. May be repeated up to two times.

PHSC 6760. Doctoral Pharmaceutical Science Research 1. 2 Hours.
Offers PhD research in preparation for thesis proposal.

PHSC 6761. Doctoral Pharmaceutical Science Research 2. 2 Hours.
Offers PhD research in preparation for thesis proposal.

PHSC 6810. Pharmaceutical Science Colloquium. 1 Hour.
Requires students to present one formal seminar on their research. This presentation is open to all those interested.

PHSC 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

PHSC 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

PHSC 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

PHSC 6996. Thesis Continuation. 0 Hours.
Offers continued registration while student completes master's thesis or other research project to meet the research requirement in pharmaceutical science.
PHSC 7010. Pharmaceutical Sciences Laboratory. 4 Hours.
Offers a hands-on laboratory course that introduces students to the investigative approaches and laboratory methods used in contemporary pharmaceutical sciences research. Laboratory exercises have a practical relationship to essential techniques in modern drug discovery, drug targeting and delivery, and determining mechanisms of drug action. These exercises cover basic laboratory skills, the rationale for and application of standard laboratory methods, training in the use of equipment and techniques central to pharmaceutical sciences research, how to maintain a laboratory notebook, statistical analysis and interpretation of data, and how to present research results in technical laboratory reports.

PHSC 7020. Scientific Writing: Thesis Proposal. 2 Hours.
Prepares the principles of writing a proposal based on the NIH R01 grant proposal template used by the department. Participants develop their own proposal in collaboration with their faculty advisor or the immediate project supervisor designated by their faculty advisor (the project principle investigator). Offers students an opportunity to meet with their own project principle investigators to develop content and map out the project aims and experimental design and to produce a revised draft of their thesis proposal. Each student must have initiated MS or PhD thesis research and have some preliminary data; PhD students must have passed their qualifying exam; MS students must petition the graduate committee in writing for permission to enroll.

PHSC 7030. Working with Radioactive Drugs. 1 Hour.
Offers students an opportunity to learn through a combination of lectures, readings, and hands-on laboratory work how to conduct experiments with radioactive drugs and other radio-labeled compounds in a manner that is safe, that is compliant with federal and state regulations, and that generates scientific data of high quality.

PHSC 7990. Thesis. 1-4 Hours.
Offers preparation of PhD thesis proposal and proposal defense before thesis committee. Requires qualifying examination. May be repeated without limit.

PHSC 8940. Doctoral Training and Research. 1 Hour.
Intended to show full-time status for pharmaceutical science PhD students in the semester in which they are taking the comprehensive exam. In addition to successfully completing the comprehensive exam, students are expected to perform research in preparation for the doctoral proposal; the grade for this course documents successful performance. Restricted to pharmaceutical science PhD students wishing to establish doctoral candidacy.

PHSC 8986. Doctoral Full-Time Research. 0 Hours.
Expects student to conduct full-time research in an adviser’s laboratory. May be repeated without limit.

PHSC 9000. Comprehensive Exam. 0 Hours.
Indicates successful completion of the doctoral comprehensive exam.

PHSC 9680. Doctoral Proposal. 2 Hours.
Offers preparation of PhD dissertation proposal and proposal defense before dissertation committee. Requires passing of comprehensive exam. May be repeated without limit.

PHSC 9990. Dissertation. 3 Hours.
Offers research/experimental work for PhD thesis. Students may register three times. May be repeated up to two times.

PHSC 9996. Dissertation Continuation. 0 Hours.
Offers continuation of PhD dissertation research. May be repeated without limit.

PMST 6250. Advanced Physical Pharmacy. 2 Hours.
Covers the physical and chemical principles in drug formulation design, with emphasis on such topics as solutions of nonelectrolytes and electrolytes, ionic equilibria, drug complexation, reaction kinetics, mass transport, and interfacial phenomena.

PMST 6252. Pharmacokinetics and Drug Metabolism. 3 Hours.
Focuses on concepts of one- and two-compartment linear and nonlinear pharmacokinetics and compartmental modeling with plasma and/or urinary data. Discusses principles and methods of metabolic biotransformation and disposition of xenobiotics in biological system.

PMST 6254. Advanced Drug Delivery System. 3 Hours.
Examines in-depth the role of sustained, controlled, and site-specific delivery systems for drugs and genetic materials using polymeric systems, colloidal drug delivery systems, and vectors for gene therapy.

PMST 6256. Advanced Pharmacokinetics. 2 Hours.
Covers derivation of general equations for linear and nonlinear mammillary models by using Laplace transform, input-disposition functions, and general partial fraction theorem. Explores development of compartmental, physiological, and stochastic models.

PMST 6258. Advanced Pharmacokinetics and Toxicology. 3 Hours.
Focuses on expanding prior basic pharmacokinetics to more advanced topics required for specialized work in research, clinical, and industrial settings. Using presentation and class participation, offers students an opportunity to become familiar with various analyses and modeling techniques, including compartmental/physiologic models, pharmacokinetic-pharmacodynamic analysis and modeling, and toxicokinetics/toxicodynamics. Requires prior completion of PMST 6252 or equivalent graduate pharmacokinetics course with calculus.

PMST 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PMCL 6260. Pharmacology 1. 2 Hours.
Surveys the chemical and pharmacological basis of the major classes of drugs and their use in the treatment of disease. Characteristics of drugs studied include indications, adverse reactions, contraindications, structure-activity relationships, metabolism, mechanism of action, and clinically significant interactions.

PMCL 6261. Pharmacology 2. 2 Hours.
Continues PMCL 6260, although in a format that is not contingent that PMCL 6260 precedes this course.

PMCL 6262. Receptor Pharmacology. 2 Hours.
Reviews receptors for drug substances and for endogenous ligands in a format that combines lecture presentations and discussion. Focuses on the evaluation of current literature. Covers techniques available to study receptors, various models for receptor-ligand interactions, stereochemical aspects of receptor interactions, receptor-mediated coupling mechanisms, and evaluation of several specific receptor systems.

PMCL 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
PMC 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

PMC 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

PMC 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

PMC 6145. Combinatorial Chemistry in Drug Discovery. 4 Hours.
Introduces the rapidly evolving science of combinatorial chemistry and high throughput synthesis as applied to the area of drug discovery. Investigates automation and analysis in organic synthesis, along with the informatics of data handling, the design of diverse screening libraries, and the role of structure-aided drug design.

PMC 6210. Pharmacy Benefit Management: Operations and Practices. 4 Hours.
Introduces the history, growth, current operating practices, and future challenges of organizations commonly referred to as pharmacy benefit managers (PBMs). Focuses on PBMs (Ex. Express Scripts, CVS Caremark, Medco Health Solutions) but also examines methods to control medication-related costs by other organizations, such as Medicare and Medicaid. Highlights traditional approaches to managing drug costs (pharmacy and therapeutics committees, drug utilization review, and preferred drug lists or formularies) and discusses their pros and cons. Explores PBMs' relationships with pharmaceutical companies and other key stakeholders. Offers students an opportunity to learn about the pharmacy benefits management industry and how insurance companies, health maintenance organizations (HMOs), Medicare, and Medicaid deal with rising costs of prescriptions. Analyzes how to reduce costs without compromising quality of care or delaying treatment.

Examines the process of planning, collecting, analyzing, and reporting data from drug development studies. Focuses on the goals of each phase (1–4) of the clinical drug development process and how to achieve these objectives within the confines of the FDA regulations and ICH guidelines. Covers requirements in other countries, including the UK Data Protection Act, issues related to the differences between the development of drugs for oncologic or AIDS indications compared to traditional drugs, cultural influences, current standards of therapy, the need for validated tools, and failure analyses.

PMC 6220. Drug Marketing and Distribution. 4 Hours.
Introduces methods employed by manufacturers before, during, and immediately after the launch of a new medication. Presents specific areas such as publication of new medical literature, interactions with key opinion leaders, and lobbying efforts to gain a favorable opinion of the new product. Addresses the role of medication distribution systems throughout multiple healthcare settings and their potential effects on these efforts. Offers students an opportunity to learn about the relationships that pharmaceutical companies have with multiple organizations, including the healthcare system as a whole, medical journals, managed care groups, and organizations that directly distribute their products. Focuses on the effect that these relationships have on the prescribing of medications. Discusses the current status of advertising and promotion of medications.

PMC 6230. Healthcare Information and Data Systems. 4 Hours.
Explores the administrative and research applications of information technology in today's healthcare delivery system. Surveys the major "players" in healthcare from an information systems perspective, focusing on concepts, processes, and challenges. Discusses emerging trends and issues in the field of healthcare informatics, including the complex social and legal implications. Explores the legal and ethical standards required to ensure statutory compliance, patient confidentiality, and information security. Requires general understanding of information systems—including processes, concepts, terminology, and basic hands-on computer experience—as well as a fundamental understanding of the key components of the healthcare delivery system.

PMC 6250. Pharmacogenetics in Drug Metabolism. 4 Hours.
Offers a historical perspective on the emergence of pharmacogenetics as a new field, as well as the rationale, aims, and significance of pharmacogenetics. Explores the pharmacology of human variation in drug response and the drug dose-response relationships in pharmacogenetics. Discusses quantitation of phenotypic resemblance in relatives of different degrees, twin studies in pharmacogenetics, and a mathematical treatment of heterogeneity in human drug response. Covers a survey of experimental models developed for pharmacogenetic research and an introduction and orientation to PharmGKB, the pharmacogenetics knowledge base on the Internet.

PMC 6252. Clinical and Molecular Pharmacogenetics. 4 Hours.
Focuses on genetic factors in drug therapy, including classification of pharmacogenetic phenomena. Topics include the integration of new technologies with drug development, including electrophoresis-based fluorescent dideoxy-terminator sequencing, mass spectrometry for protein-based approaches in functional genomics, and a clinical molecular scanner to study human proteome complexity. Discusses polygenic effects in pharmacogenetics and a summary of common themes and applications.

PMC 6253. Bioethical Issues of Pharmacogenetics. 4 Hours.
Explores the major bioethical issues facing companies involved in pharmacogenetics research, including human tissue collection, analysis, probable commodification, informed consent issues, privacy, and the status of the human embryo. Discusses examples of corporate strategies used to address these issues in the United States and abroad (including ethics committees and ethics consultants). Examines legal and ethical issues in using human tissue and stem cells for commercial research and reviews intellectual property issues associated with using research results derived from donated tissue. Studies practical recommendations to the researcher and biotechnology company on how best to balance commercial interests with the rights of a donor of tissue or stem cells. Is there a bioethicist in the company? (And should there be?).

PMC 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

PMC 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PMC 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

PMC 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

PMC 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

PMC 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.
Listening, (2) asking questions, (3) providing empathy, (4) understanding
and evaluating patient medication use needs. Specifically, students have
skills to support a client-centered approach in assessing, adapting, and
sterile techniques. Labs related to the learning of communication
strategies and provide an opportunity to apply knowledge learned in the
classroom related to the appropriate and effective use of communication
strategies and sterile techniques. Labs related to the learning of communication
skills support a client-centered approach in assessing, adapting, and
evaluating patient medication use needs. Specifically, students have
an opportunity to learn and practice six core communication skills: (1)
listening, (2) asking questions, (3) providing empathy, (4) understanding
and managing confusion, (5) understanding and managing conflict, and
(6) understanding and analyzing nonverbal behavior.

PHMD 1900. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.
May be repeated without limit.
PHMD 3450. Research Methodology and Biostatistics. 3 Hours.
Offers an interactive course covering aspects of research designs used in experimental and observational studies, hypothesis testing, and an introduction to basic biostatistics. Offers students an opportunity to critically examine selected articles from the clinical literature and to analyze the framing of the research question and the methods used to insure the validity and generalizability of the study's findings. Clinical trials, observational studies, and problem sets illustrate principles of research design, conduct, and data analysis.

PHMD 3600. Leadership and Advocacy in Health Professions. 2 Hours.
Designed to help facilitate successful careers of young healthcare professionals and expand students' knowledge of their leadership potential. Consists primarily of topic discussions that include a variety of issues related to professional development, focusing on leadership, organizational and relational skills, and advocacy. Covers global issues in leadership and advocacy. Encourages students to recognize the need for leadership in health professions and the ability of practitioners to influence change regardless of whether they have a title or position of authority. Seeks to be valuable to students with interests in administrative positions in various settings, including in high-level clinical positions, and to students who plan to pursue postgraduate training.

PHMD 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHMD 4350. Exploring Academic Careers. 2 Hours.
Seeks to prepare pharmacy students to become more confident and effective as educators. Also seeks to increase the student’s awareness of academic careers and the roles and responsibilities that faculty play in the class, department, and school of pharmacy. The knowledge, skills, and attitudes discussed and explored in this course are applicable across the profession of pharmacy regardless of practice setting. Restricted to students with fifth-year standing.

PHMD 4580. Drug Interactions. 2 Hours.
Designed as an elective course to enhance students’ knowledge and skills regarding drug interactions. Course lectures review commonly encountered drug interactions, with emphasis on the mechanism and clinical significance of interactions. Class discussions and assignments emphasize a scientific approach to identifying and evaluating potential interactions and recommending appropriate, patient-specific management of a given interaction.

PHMD 4581. Cancer Chemotherapy. 2 Hours.
Emphasizes the role of chemotherapy in the management of malignant disease. Reviews specific antineoplastic agents, specific malignancies, and related topics. Focuses throughout the course on supportive care for the cancer patient.

PHMD 4585. Research Methods in Health Systems. 4 Hours.
Exposes students to the research methods that health system pharmacists use most often when conducting research and builds on the content of PHMD 2350, PHMD 3450, and PHMD 4560. Incorporates a seminar discussion format led by healthcare system-based pharmacists actively involved in clinical research and helps prepare students for careers or postgraduate training programs (e.g., residencies) in health systems. Faculty use published studies, live patient databases, and descriptions of their current research projects to illustrate the topics in each session.

PHMD 4611. Comprehensive Disease Management 1. 6 Hours.
Covers foundational concepts of pharmacy practice, including patient evaluation; identification of drug-related problems; pathophysiology; and clinical management of diseases of the respiratory, cardiovascular, and endocrine systems. Specifically covers asthma and COPD, hypertension, hyperlipidemia, diabetes, fluids/electrolytes, and renal disorders. Reviews, system-by-system, the mechanisms of these diseases and their evidence-based prevention and treatment strategies. Offers students an opportunity to apply scientific knowledge and principles of medicinal chemistry, pharmacology, pharmacetics, and pharmacokinetics to the design of rational, evidence-based therapeutic strategies to provide care to patients in inpatient, ambulatory, and community settings. Emphasizes pathophysiology, self-care, patient education, assessment, medication administration, management, monitoring, and preventative health and population-based health outcomes.

PHMD 4612. Comprehensive Disease Management 1 Seminar. 1 Hour.
Designed to provide students with opportunities to apply concepts from PHMD 4611 to patient cases, special projects, and other medication-related issues focusing on foundational aspects of pharmacy practice, identification of drug-related problems, and diseases of the respiratory, endocrine, cardiovascular, and renal systems. Accompanies PHMD 4611 and seeks to facilitate accomplishment of course objectives using an active learning format. While completing seminar work, students are expected to review, discuss, integrate, and apply information presented in comprehensive disease management lectures and readings as well as previous and concurrent course work.

PHMD 4621. Comprehensive Disease Management 2. 6 Hours.
Covers the pathophysiology and clinical management of diseases of the renal, cardiovascular, neurological, and gastrointestinal systems. Reinforces foundational concepts of pharmacy practice and diseases covered in PHMD 4611, while completing a system-by-system review of the mechanisms of renal, cardiovascular, neurological, and gastrointestinal disorders and their evidence-based prevention and treatment strategies. Offers students an opportunity to design rational therapeutic strategies to provide care to patients with these disease states in inpatient, ambulatory, and community settings. Emphasizes pathophysiology, self-care, patient education, assessment, medication administration, management, monitoring, and preventative health and population-based health outcomes.

PHMD 4622. Comprehensive Disease Management 2 Seminar. 1 Hour.
Designed to provide students with opportunities to apply concepts from PHMD 4621 to patient cases, special projects, and other medication-related issues focusing on foundational aspects of pharmacy practice; identification of drug-related problems; and diseases of the renal, cardiovascular, neurological, and gastrointestinal systems. Accompanies PHMD 4621 and seeks to facilitate accomplishment of course objectives using an active-learning format. While completing seminar work, students are expected to review, discuss, integrate, and apply information presented in comprehensive disease management lectures and readings as well as previous and concurrent course work. Activities in seminar are reinforced by laboratory skill-building exercises in PHMD 4623.
PHMD 4623. Comprehensive Disease Management 2 Skills Lab. 0.5 Hours.
Offers a self-paced, blended learning experience designed to provide the student with functional knowledge and skills in the area of physical assessment, patient education, and counseling in the ambulatory clinic and community pharmacy settings. Uses discussions, videos, podcasts, simulations, and hands-on learning activities in the lab. Offers students an opportunity to apply information gained in previous and concurrent courses to clinical situations. While completing laboratory work, students are expected to review, discuss, integrate, and apply information presented in the closely aligned PHMD 4621 and PHMD 4622 as well as previous and concurrent course work.

PHMD 4631. Comprehensive Disease Management 3. 6 Hours.
Covers the pathophysiology and clinical management of infectious diseases, solid organ transplant, dermatology, and otic/opthalmic disorders. Reinforces foundational concepts of pharmacy practice and diseases covered in PHMD 4611 and PHMD 4612, while completing a system-by-system review of the mechanisms of infectious diseases and their evidence-based prevention and treatment strategies. Offers students an opportunity to design rational therapeutic strategies to provide care to patients with these disease states in inpatient, ambulatory, and community settings. Emphasizes pathophysiology, self-care, patient education, assessment, medication administration, management, monitoring, and preventative health and population-based health outcomes.

PHMD 4632. Comprehensive Disease Management 3 Seminar. 1 Hour.
Designed to provide students with opportunities to apply concepts from PHMD 4631 to patient cases, special projects, and other medication-related issues focusing on foundational aspects of pharmacy practice, identification of drug-related problems, and management of the infectious diseases and dermatologic and oral/otic disorders. Accompanies PHMD 4631 and seeks to facilitate accomplishment of course objectives using an active-learning format. While completing seminar work, students are expected to review, discuss, integrate, and apply information presented in comprehensive disease management lectures and readings as well as previous and concurrent course work. Activities in seminar are reinforced by laboratory skill-building exercises in PHMD 4633.

PHMD 4633. Comprehensive Disease Management 3 Skills Lab. 0.5 Hours.
Teaches and assesses various skills, including interpretation, processing, and verification of medication orders; detection and resolution of drug-related problems; use of current pharmacy software programs; medication reconciliation; presentation of hospitalized patients; and management of sterile compounding systems in the hospital pharmacy setting. Uses discussions, videos, podcasts, simulations, and hands-on learning activities in the lab. While completing laboratory work, students are expected to review, discuss, integrate, and apply information presented in the closely aligned PHMD 4641 and PHMD 4642 as well as previous and concurrent course work.

PHMD 4641. Comprehensive Disease Management 4. 6 Hours.
Covers the pathophysiology and clinical management of men's and women's health issues and neurological, psychiatric, and oncologic disorders. Reinforces foundational concepts of pharmacy practice and diseases covered in PHMD 4611, PHMD 4612, and PHMD 4613, while completing a system-by-system review of the mechanisms of infectious diseases and their evidence-based prevention and treatment strategies. Offers students an opportunity to design rational therapeutic strategies to provide care to patients with these disease states in inpatient, ambulatory, and community settings. Emphasizes pathophysiology, self-care, patient education, assessment, medication administration, management, monitoring, and preventative health and population-based health outcomes.

PHMD 4642. Comprehensive Disease Management 4 Seminar. 1 Hour.
Designed to provide students with opportunities to apply concepts from PHMD 4641 to patient cases, special projects, and other medication-related issues focusing on foundational aspects of pharmacy practice, identification of drug-related problems, and management of women's and men's disease, psychological disorders, and cancers. Accompanies PHMD 4641 and seeks to facilitate accomplishment of course objectives using an active-learning format. While completing seminar work, students are expected to review, discuss, integrate, and apply information presented in comprehensive disease management lectures and readings as well as previous and concurrent course work. Activities in seminar are reinforced by laboratory skill-building exercises in PHMD 4643.

PHMD 4643. Comprehensive Disease Management 4 Skills Lab. 0.5 Hours.
Teaches and assesses various skills, including interpretation, processing, and verification of medication orders; detection and resolution of drug-related problems; use of current pharmacy software programs; medication reconciliation; presentation of hospitalized patients; and management of sterile compounding systems in the hospital pharmacy setting. Uses discussions, videos, podcasts, simulations, and hands-on learning activities in the lab. While completing laboratory work, students are expected to review, discuss, integrate, and apply information presented in the closely aligned PHMD 4641 and PHMD 4642 as well as previous and concurrent course work.

PHMD 4700. Principles in General Medicine. 2 Hours.
Offers students an opportunity to apply concepts learned in comprehensive-disease-management modules to patient cases, special projects, and other medication-related problems in an active-learning environment. Creates an environment similar to that of acute care advanced pharmacy practice experiences (APPPEs) to enable students to gain familiarity and confidence in disease-state management, oral communication skills, and professional behavior and interactions. Focuses on oral presentations and communication skills, which is similar to how students are evaluated on clinically based rotations; students are also evaluated by quizzes and exams to measure mastery of content-specific objectives.

PHMD 4880. Special Topics. 2 Hours.
Explores topics germane to the use of medication as established by the course coordinator in various section offerings. May be repeated up to two times.

PHMD 4890. Contemporary Issues in Geriatric Pharmacy. 2 Hours.
Focuses on physiological and practical aspects of medication use in the elderly, the pharmacist's role in geriatric care, and the management of disease states and syndromes that predominantly occur in the elderly. Pharmacists must assess and assure safe and effective use of medication in the geriatric population to prevent adverse events that increase morbidity and mortality and reduce quality of life. Utilizes problem-based learning by promoting critical thinking, effective use of resources in research, and application of concepts to real-world situations.

PHMD 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

PHMD 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.
PHMD 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHMD 4991. Research. 4 Hours.
Extends current knowledge or offers novel insights through faculty-directed and supervised individual undergraduate research or creative projects. The project must be designed in concert with and obtain formal prior approval from relevant faculty and program director. May be repeated without limit.

PHMD 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHMD 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHMD 5223. Evidence-Based Medicine. 2 Hours.
Studies the principles of evidence-based medicine and how to apply them to patient-centered care. Offers students an opportunity to develop skills in critical appraisal of the scientific literature and practical application of the evidence to clinical decision making. Consists of didactic instruction, in-class group projects, and a group-based written assignment. Applies principles of research methodology, biostatistics, and professional writing.

PHMD 5250. Pharmacy Care Management. 3 Hours.
Focuses on the managerial and administrative skills required by a contemporary pharmacist practicing in either a community or hospital setting. Covers classical management principles of planning, decision making, organizing, hiring, and controlling. Case study methods are used as an interactive teaching tool. Also covers pertinent current events.

PHMD 5270. Economic Evaluation of Pharmaceuticals and Pharmacy Practice. 2 Hours.
Introduces the principles of economic theory of healthcare markets and economic evaluation of health products and services. Economic theory topics include fundamentals of supply and demand, market structure, market failure, and the role of government. Economic evaluation topics include measuring costs and benefits of a specific treatment, types of formal decision analysis, ethical considerations, and implementation in the real world. Restricted to students with fifth-year PharmD standing.

PHMD 5330. Jurisprudence. 3 Hours.
Covers all federal and state laws and regulations that affect the practice of pharmacy. Discusses sources of law including the U.S. Constitution, statutes, administrative regulations, and case law. Introduces federal and state administrative agencies that regulate pharmacy, including the Drug Enforcement Administration (DEA), Food and Drug Administration (FDA), Consumer Products Safety Commission (CPSC), Massachusetts Board of Registration in Pharmacy, and Massachusetts Department of Public Health. Requires students to research a pharmacy case decided by a court and give an oral presentation. Centers on the individuals who operate a pharmacy: pharmacists, pharmacy technicians, and pharmacy interns; their workplaces: pharmacy, pharmacy department, hospital, restricted pharmacy, managed care, nuclear pharmacy, and wholesale businesses; and duties performed by pharmacy personnel: dispensing medication and counseling patients.

PHMD 5438. Advanced Pharmacy Practice Experience Preparatory Seminar 1. 0.5 Hours.
Seeks to provide relevant information to enable fifth-year students to make informed decisions concerning the selection and completion of the advance pharmacy practice experiences (APPEs). Using the professional portfolio as a catalyst for exploration, students are required to examine and discuss the variety of APPEs offered. The review of APPE types includes utilizing effective strategies to identify appropriate APPE selections. Students are guided by faculty on how to make APPE selections based on student-identified professional career goals.

PHMD 5439. Advanced Pharmacy Practice Experience Preparatory Seminar 2. 0.5 Hours.
Designed to provide students with opportunities to apply concepts from PHMD 6438 and to continue to provide relevant information to enable fifth-year students to make informed decisions concerning the selection and completion of the advance pharmacy practice experiences (APPEs). Seeks to provide new knowledge and strengthen existing knowledge to ensure a smooth transition from the didactic courses to APPEs.

PHMD 5570. Technology in Healthcare and Pharmacy Practice. 3 Hours.
Examines trends and drivers of innovation in healthcare and how emerging technologies are assessed and adopted. Introduces students to frameworks for evaluating emerging technologies and their existing and potential impacts. Uses examples from electronic health records, outpatient e-prescribing, inpatient computerized physician order entry systems, regional health information organizations, personal health records, quality of care, pharmacogenomics, patient-centered and other emerging technologies relevant to pharmacy practice and research to illustrate concepts.

PHMD 5600. Pharmacy Capstone. 4 Hours.
Acts as a final integrator of the major, general education, and experiential aspects of the student’s education. Expects students to demonstrate motivation and initiative and to work cooperatively with their faculty mentor, community partners, and fellow students (where applicable) in order to complete a comprehensive, high-quality scholarly work (e.g., a research project, educational project, administrative project, business plan, case report, or community-service learning project or professional manuscript) appropriate for dissemination to the university and professional community. The timeline for completion is set by the faculty mentor and agreed to by the individual or all members of the student group. May be repeated once.

PHMD 5675. Ambulatory Care Pharmacy Practice in Urban Health. 2 Hours.
Examines trends and drivers of innovation in healthcare and how emerging technologies are assessed and adopted. Introduces students to frameworks for evaluating emerging technologies and their existing and potential impacts. Uses examples from electronic health records, outpatient e-prescribing, inpatient computerized physician order entry systems, regional health information organizations, personal health records, quality of care, pharmacogenomics, patient-centered and other emerging technologies relevant to pharmacy practice and research to illustrate concepts.

PHMD 5670. Pharmacy Practice Experience. 3 Hours.
Extends current knowledge or offers novel insights through faculty-directed and supervised individual undergraduate research or creative projects. The project must be designed in concert with and obtain formal prior approval from relevant faculty and program director. May be repeated without limit.

PHMD 5880. Special Topics. 2,3 Hours.
Explores topics germane to medication and medication use, as established by the course instructor.

PHMD 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated for up to 4 total credits.
PHMD 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHMD 5984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

PHMD 6220. Advocacy and Pharmacy Health Policy. 3 Hours.
Designed to introduce students to the political influences shaping the U.S. healthcare system in general and pharmacy practice specifically. In addition to a theoretical grounding through seminars, case analyses, and project development, students also have an opportunity to gain practical advocacy and policy analytical skills necessary to effect change in the current system. Addresses key questions such as: What is the role of government in health policy? What are the key elements of the public policy process at the local, state, and national level? What role do pharmacists and pharmacy associations play in the policy process? How can individuals and groups influence the policy process? The goal of this course is to prepare students to ultimately take a leadership role in the pharmacy profession.

PHMD 6440. Internal Medicine Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in the hospital setting. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients.

PHMD 6441. Acute Care Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients.

PHMD 6442. Ambulatory Care Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in an ambulatory clinic environment. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients.

PHMD 6443. Community Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a community setting. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients.

PHMD 6444. Internal Medicine Elective Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in the hospital setting. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6445. Ambulatory Care Elective Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in an ambulatory clinic environment. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6446. Psychiatry Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients under psychiatric care. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6447. Community Elective Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a community setting. In collaboration with other members of the healthcare team, and under the supervision of a clinical preceptor, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6448. Long Term Care Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a nursing home or rehabilitation center. Under the supervision of a clinical preceptor and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.
PHMD 6449. Geriatrics Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a geriatric practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6450. Pediatrics Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a pediatric practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6451. Neonatology Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a neonatal practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6452. Critical Care Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a critical-care practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6453. Surgery Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a surgical practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6454. Cardiology Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a cardiology practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6455. Pharmacokinetics Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients on a pharmacokinetic consult service. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6456. Drug Information Advanced Pharmacy Practice Experience. 6 Hours.
Applies drug information skills to site-specific drug information requests under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the site team. Using appropriate sources, the student analyzes drug information findings, such as dosing, monitoring, indications, efficacy, and adverse drug reactions. May be repeated without limit.

PHMD 6457. Oncology Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in an oncology practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6458. Drug Utilization Advanced Pharmacy Practice Experience. 6 Hours.
Identifies topics and design of methodology for drug-use evaluation as well as completion of data collection, data evaluation, and presentation of results under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team. May be repeated without limit.

PHMD 6459. Home Health Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a home healthcare practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.
PHMD 6460. Nutritional Support Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients on a nutritional support consult service. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6461. Infectious Disease Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients on an infectious disease consult service. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6462. Pharmacy Industry Advanced Pharmacy Practice Experience. 6 Hours.
Focuses on the application of regulatory affairs and healthcare principles in the pharmaceutical industry. Under the supervision of a preceptor, and, when appropriate, in conjunction with other members of the site team, participates in appropriate activities, such as drug research and development, marketing, medical affairs, regulatory affairs, and information service. May be repeated without limit.

PHMD 6463. Pharmacy Administration Advanced Pharmacy Practice Experience. 6 Hours.
Applies healthcare and management principles, with emphasis on pharmacy administration, under the supervision of a preceptor, and, when appropriate, in conjunction with other members of the site team. May be repeated without limit.

PHMD 6464. Regulatory Advanced Pharmacy Practice Experience. 6 Hours.
Participates in appropriate activities including but not limited to principles of and compliance with pharmacy law and review of regulations governing the FDA’s mandatory reporting of adverse drug reactions under the supervision of a preceptor, and, when appropriate, in conjunction with other members of the site team. In addition, students may have the opportunity to be given a step-by-step introduction to public record laws, Board Regulations at 247 CMR, and pharmacy statutes at Massachusetts General Laws, Chapter 112, 24(A)–42(A). May be repeated without limit.

PHMD 6465. Managed Care Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a managed-care practice setting. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6466. Transplantation Advanced Pharmacy Practice Experience. 6 Hours.
Applies principles of pathophysiology, therapeutics, and communication to the pharmacy-care management of individual patients in a transplantation unit. Under the supervision of a clinical preceptor, and, when appropriate, in conjunction with other members of the healthcare team, offers identification of appropriate drug therapy and monitoring requirements for common pathophysiologic processes, and, when indicated, modification of population-based treatment strategies based on the unique characteristics of individual patients. May be repeated without limit.

PHMD 6467. Directed Practice Advanced Pharmacy Practice Experience. 6 Hours.
Offers nontraditional experience with an approved preceptor at an appropriate site. Based on availability. May be repeated without limit.

PHMD 6468. International Advanced Pharmacy Practice Experience. 6 Hours.
Provides an international experience with an approved preceptor at an appropriate site. Based on availability. May be repeated without limit.

PHMD 6469. Management Advanced Pharmacy Practice Experience. 6 Hours.
Offers students an opportunity to apply healthcare and management principles, with an emphasis on pharmacy management, under the supervision of a preceptor and, when appropriate, in conjunction with other members of the site management team. May be repeated up to two times.

PHMD 6470. Education Advanced Pharmacy Practice Experience. 6 Hours.
Offers students an opportunity to teach in the pharmacy curriculum under the supervision of a faculty member. Students have an opportunity to examine how teachers use experience-based and problem-based approaches to engage the range of student learners (third- through fifth-year pharmacy students) to attain their learning goals. May be repeated up to two times.

PHMD 6471. Research 1 Advanced Pharmacy Practice Experience. 6 Hours.
Offers students interested in gaining basic or clinical research experience an opportunity to work under the direction of an experienced researcher at an appropriate site. Students can elect either a basic science (lab-based) preceptor or a clinical (patient-based) preceptor. Students can expect to be an active participant in a variety of different research activities and experiences that are deemed appropriate by the preceptor. The research efforts of the student may result in a peer-reviewed research abstract and/or presentation. May be repeated up to two times.

PHMD 6472. Research 2 Advanced Pharmacy Practice Experience. 6 Hours.
Offers students an opportunity to further develop research skills and experience gained in PHMD 6471. Intended for those students interested in pursuing a postgraduate research training program (e.g., fellowship or graduate school). The research efforts of the student in the course may result in authorship opportunities on a peer-reviewed research abstract and/or manuscript. May be repeated up to two times.
PHIL 1000. Philosophy at Northeastern. 1 Hour.
Intended for freshmen in the College of Social Sciences and Humanities. Introduces freshmen to the liberal arts in general; familiarizes them with their major; helps them develop the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community; and helps them develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

PHIL 1101. Introduction to Philosophy. 4 Hours.
Introduces students to philosophy by acquainting them with the theories and arguments of classical and contemporary philosophers and by teaching skills of constructing and analyzing arguments. Emphasizes philosophical inquiry. Topics include the basis of morality, free will vs. determinism, the existence of God, the problem of suffering, and the nature of knowledge.

PHIL 1102. Introduction to Contemporary Moral Issues. 4 Hours.
Focuses on current controversial issues and moral debates. Specific topics vary but include subjects like abortion, euthanasia, global poverty, economic justice, affirmative action, gender relations, animal rights, the environment, the death penalty, war, cloning, and same-sex marriage. Offers an opportunity to learn to apply both the methods of philosophical analysis and various ethical and political theories to these controversies.

PHIL 1103. Understanding the Bible. 4 Hours.
Introduces students to the Old and New Testaments, so that they may enter into a dialogue with the Bible, understanding not only what it says, but why it is said that way. To do this, discussion focuses on the Bible's social, political and cultural backgrounds.

PHIL 1104. Goddesses, Witches, Saints, and Sinners: Women in Western Religions. 4 Hours.
Begins with an analysis of the theory that original Western religion was goddess centered. Examines image, text, and ritual in the ancient world to analyze this theory and to explore what some scholars call the patriarchalization of these primal religions. Looks at the way that goddesses of the ancient world became saints or sinners under the newly constituted patriarchy. Includes a consideration of scripture such as the Hebrew Bible, Greek Testament, and Qu’ran as well as noncanonical texts. Not open to students who have completed PHIL 1103 except by permission of instructor.

PHIL 1105. Science and Pseudoscience. 4 Hours.
Examines the distinction between science and pseudoscience, how scientific theories change over time, the limits of scientific explanation, and whether or not scientific practice is rational and objective. What makes a theory scientific? Does culture influence scientific reasoning? What separates Einstein’s theory of relativity and astrological horoscopes? Covers a variety of topics in the history of science such as the Copernican revolution and the practice of psychoanalysis. Also covers contemporary issues regarding the scientific status of IQ tests, intelligent design theory, and others.

PHIL 1110. Introduction to Religion. 4 Hours.
Examines the methods, disciplines, and theories employed in the academic study of religion. Focuses on major theories of religion employed in the discipline of religious studies, including historical, psychological, anthropological, and sociological approaches. Introduces students to the primary methods of research in the academic study of religion.

PHIL 1111. Introduction to World Religions. 4 Hours.
Offers a historical and thematic overview of the most widely recognized religions in the world today: Christianity, Judaism, Islam, Hinduism, and Buddhism. Focuses on the formative periods and historical developments of the great religions, ritual practices, and the differing ways in which they answer the fundamental religious questions. Considers ways in which religious practitioners have attempted to understand the nature of the world, human society, and a person’s place within them.

PHIL 1114. Reason, Risk, and Evidence. 4 Hours.
Introduces the tools of inductive logic and probability while exploring their various philosophical and practical applications. What is the probability of a terrorist attack today given that there were none last week? What is the best bet to make at a roulette table? Is it rational to buy health insurance? What counts as good evidence for the existence of God? Examines evidence-based reasoning, the foundations of probability, the philosophical problem of induction, and how to make rational decisions when faced with risk and uncertainty.

PHIL 1115. Introduction to Logic. 4 Hours.
Covers the fundamentals of (formal) deductive and inductive logic. Begins with a thorough treatment of Boolean (i.e., truth-functional or propositional) logic, which provides the foundation for both mathematical and statistical reasoning. Discusses various applications of Boolean logic, including the reconstruction and evaluation of (natural language) deductive arguments. Covers inductive-logical reasoning, such as the fundamentals of the probability calculus and its applications to inductive (ampliative) inference. Offers students an opportunity to understand both deductive (e.g., mathematical) and inductive (e.g., statistical) reasoning.

PHIL 1120. Understanding the Bible. 4 Hours.
Introduces students to the Old and New Testaments, so that they may enter into a dialogue with the Bible, understanding not only what it says, but why it is said that way. To do this, discussion focuses on the Bible’s social, political and cultural backgrounds.
PHIL 1130. Ethics: East and West. 4 Hours.
Focuses on how traditions imagine the moral life in cross-cultural contexts. Topics may include ideals of human flourishing, notions of virtue and vice, and conceptions of self and community. Offers students an opportunity to learn methods of philosophical analysis and argumentation in cross-cultural contexts.

PHIL 1145. Technology and Human Values. 4 Hours.
Studies philosophy of technology, as well as ethics and modern technology. Considers the relationship between technology and humanity, the social dimensions of technology, and ethical issues raised by emerging technologies. Discusses emerging technologies such as biotechnology, information technology, nanotechnology, and virtual reality.

PHIL 1150. Sex, Power, and Oppression: An Introduction. 4 Hours.
Examines various philosophical issues that relate to gender and other forms of social identity, such as race, sexual orientation, and disability. Our genders (being male or female) shape not only who we are but also how we experience the world and possibilities that are open to us. Examines the ways in which these categories are socially constructed and looks at how they impact who we are, our autonomy/freedom, and our ability to be authentic. Examines philosophical articles and related pieces of popular media (newspaper articles, television clips, movies, etc.). PHIL 1150 and WMNS 1150 are cross-listed.

PHIL 1155. Introduction to Human Rights. 4 Hours.
Introduces human rights taught from an interdisciplinary perspective. Begins by looking at some philosophical questions around human rights. Explores what human rights are, where they come from, and what their historical and social roots are. Then looks at current human rights mechanisms in a global context, such as the functioning of the United Nations, the effectiveness of various human rights declarations, and mechanisms of transitional justice, such as the International Criminal Court. Concludes by discussing human rights issues such as genocide, women's rights, refugees, and torture in today's world.

PHIL 1156. Human Rights through Film: Witnessing Human Suffering. 4 Hours.
Examines through film the political, philosophical, and legal dimensions of human rights and current human rights debates. Focuses on how human suffering is portrayed across a variety of cultures. Since the beginning of political philosophy, there have been two main ways of viewing power. The first holds that "might makes right" and that one's power is enough to justify one's actions. The second upholds the idea that all are of equal importance and that we have a moral duty to protect the weak. This view is most powerfully expressed by the language of human rights—that each human being has certain inalienable rights that ought not to be violated under any circumstances.

PHIL 1157. Global Charities: Solution or Problem?. 4 Hours.
Explores the ethical issues that arise in the context of aid, philanthropy, charity, microfinance, and volunteering. Considers those issues from both domestic and global perspectives. Given great global and domestic need, the moral imperative to help others is pressing and falls on the state, civil society, enterprises, and individuals. In recent years, philanthropy—the "love of humanity"—has received widespread attention. Warren Buffet, Bill and Melinda Gates, George Soros, Ted Turner, and Oprah Winfrey have given incredible sums of money to help people both globally and domestically. In addition, members of the middle class often give generously both of their time, in the form of service, and financially.

PHIL 1160. Introduction to Economic Justice. 4 Hours.
Attempts to answer the questions: What is economic justice? What are the criteria by which we tell whether a society is (or is not) an economically just society? Looks at views on these issues developed by advocates of capitalism, socialism, and the welfare state.

PHIL 1162. Ethics and Philosophy through Sport. 4 Hours.
Introduces issues in ethics, epistemology, and metaphysics through sports. Each topic consists of a case study from the domain of sports in which an ethical or philosophical issue arises, paired with a classical or contemporary reading on the issue. Thus, this course uses examples from sport that exemplify core philosophical topics that arise as well in domains beyond sport. Studies justice and fairness, ability and disability, conceptual clarity/definition, individual vs. collective welfare, social goods, punishment, animal welfare, and the rationality of group identification. Uses data analysis, prediction models, and rational expectations in sports to illustrate several central issues in epistemology, including the problem of induction, counterfactual reasoning, decision theory, and game theory.

PHIL 1165. Moral and Social Problems in Healthcare. 4 Hours.
Introduces ethical theories and moral principles, and then uses these theories and principles to analyze the moral problems that arise in the medical context. Topics include euthanasia, medical paternalism, informed consent, patient confidentiality, the right to die, the ethics of medical research, abortion, the right to healthcare, distribution of scarce medical resources, and the ethical implications of health maintenance organizations.

PHIL 1170. Business Ethics. 4 Hours.
Examines ethical principles and considerations involved in making moral business decisions. Studies basic ethical viewpoints as a foundation; analyzes specific characteristics of business life through case studies and examples. Topics include corporate responsibility, employee rights, conflict of interest and roles, advertising and information disclosure, environmental issues, and self- and governmental regulations.

PHIL 1180. Environmental Ethics. 4 Hours.
Focuses on a current ecological crisis and addresses the values that underlie our concern over this crisis, whether the values at issue are anthropocentric or biocentric. Explores the ethical implications these ecological concerns have for our individual lifestyles, and for our role as members of communities.

PHIL 1181. Environmental Ethics Abroad. 4 Hours.
Examines the human relationship with the natural environment, with an emphasis on the ethical dimensions of our current ecological challenges. Focuses on the values that underlie our concern over environmental issues and what we ought to do in response to those issues, including the implications for our individual lifestyles and for our roles as members of communities. Offered abroad. May be repeated without limit.

PHIL 1185. The Ethics of Food. 4 Hours.
Introduces the ethics of food. Elucidates a wide range of ethical issues associated with food production, processing, distribution, and consumption. Offers students an opportunity to develop skills in ethics and values analysis that can be applied to evaluate food-related practices and policies. Includes topics such as the ethics of different food systems, genetically modified crops, meat eating, hunting, food security, food justice, sustainability, synthetic meat, food advertising, food safety, and foodie culture.

PHIL 1215. Symbolic Logic. 4 Hours.
Focuses on the syntax and semantics of propositional logic and first-order quantification theory. Considers relations between these systems and natural language. Covers analysis of the notion of derivation within a system, the notion of logical consequence, and practice in analyzing logical structure in natural language sentences.
PHIL 1220. The Meaning of Death. 4 Hours.
Offers an inquiry into different philosophical and religious perspectives on death and life after death, including an examination of some powerful contemporary accounts of personal confrontation with death along with investigations into attitudes toward death in other traditions (for example, Hinduism and Buddhism).

PHIL 1230. Sound, Music, and Religion. 4 Hours.
Explores the relationship between religion, sound, and musical expression using the lenses of gender studies, cultural studies, and performance theory. Emphasizes the interpretive and symbolic understandings of sonic expressions of religiousity, including chanting, mantra use, choir and congregational singing, and speaking in tongues. Seeks to familiarize students with some of the key sonic expressions within the Christian, Islamic, Hindu, and Buddhist traditions; to explore the methods of studying musical and sonic theology; and to analyze these traditions’ own debates about the use of sound and music in religious practice.

PHIL 1231. Image and Icon in South Asia. 4 Hours.
Explores the relationship between South Asian religions and artistic expression. Examines the variety and identifying features of many Hindu, Jain, and Buddhist temples and images. Particular attention is paid to the interpretive and symbolic understandings of these expressions. Explores the idea of the embodiment of a deity within an image and challenges such an idea in the readings. This course’s objectives are: to familiarize the students with the iconography of Hinduism, Jainism, and Buddhism in South Asia; to explore the methods of studying iconography and visual theology; and to analyze these traditions’ own debates about the use of icons and images.

PHIL 1250. Jesus in the Gospels, American Culture, and the Movies. 4 Hours.
Explores different portraits of Jesus drawn by the New Testament and extrabiblical gospel writers. Examines the varieties of understandings of Jesus in American culture with a focus on the twentieth century. Using the materials from the biblical and cultural analysis, the course then turns to films about Jesus to assess the different cultural situations and understandings of Jesus in films such as From the Manger to the Cross, Intolerance, The King of Kings, The Greatest Story Ever Told, The Gospel According to Matthew, Jesus Christ Superstar, Godspell, Jesus of Nazareth, The Life of Brian, The Last Temptation of Christ, Jesus of Montreal, and The Passion of the Christ.

PHIL 1260. Apocalypticism in Film. 4 Hours.
 Begins with an investigation of biblical texts that give rise to apocalypticism, definitions of apocalypticism, and an introductory exploration of the various ways in which apocalypticism has manifested itself in western culture. Examines the diverse and changing presentation of apocalypticism in film and includes titles such as The Day the Earth Stood Still, Independence Day, The Seventh Seal, Smoke Signals, Blade Runner, and The Matrix.

PHIL 1270. Judaism, Christianity, and Islam: Abrahamic Religions. 4 Hours.
Introduces the three major religious traditions: Judaism, Christianity, and Islam, sometimes called "Abrahamic traditions," as they all claim a special relationship with the biblical figure Abraham. Explores the foundation narratives, doctrines, rituals, and ethics of these three traditions, independently and in relation to each other. Focuses on how these traditions adapted to specific cultural and historical contexts. Offers students firsthand experience of the complex issues involved in the academic study of religion in comparative context.

PHIL 1271. Sex in Judaism, Christianity, and Islam. 4 Hours.
Explores approaches to gender, social organization of sexuality and gender, sexual ethics, and marriage in Judaism, Christianity, and Islam. Explores various sources within each tradition that serve as normative foundations, contemporary cultural and sociological dynamics that challenge those foundations, and psychological/ existential considerations for understanding the general nature of human sexuality. Addresses how these traditions understand gender and gender roles, seek to shape and control interactions between men and women, regulate sexual relations outside of and within marriage, view sexuality education, regard homosexuality, and examine historical and contemporary approaches to marriage, divorce, and parenting. PHIL 1271 and WMNS 1271 are cross-listed.

PHIL 1272. Ethics in the World’s Religions. 4 Hours.
Examines the ethical systems emerging from various religions. Includes Eastern religions with an emphasis on the Abrahamic religions (Judaism, Christianity, and Islam) and the different stances taken within the branches of each religion. Explores, for example, different perspectives among various types of Christianity, Islam, and Judaism. Examines the religious ethics of various indigenous peoples, Native Americans, Australian Aborigines, Maori, and some of the African peoples.

PHIL 1273. Jainism. 4 Hours.
Explores Jainism, one of the world’s oldest religious traditions. The Jain community—a small but influential one mostly concentrated in western India—presents us with a complex and fascinating philosophy, a lively temple and ritual culture, and a full year of fasts and festivals. Jainism offers both the most thorough examination of the value of nonviolence and an unprecedented prominence of women within the tradition both in the texts and in practice. Finally, Jainism is a religion of people, and the course examines both their religious lives and the ways their religion affects their socioeconomics. An in-depth look at Jainism demonstrates its importance in the development of Asian religions.

PHIL 1275. Hinduism, Buddhism, and Beyond: Eastern Religions. 4 Hours.
Examines Hinduism, Jainism, Theravada Buddhism, Mahayana Buddhism, Confucianism, Taoism, and Shinto within South Asia (India) and east Asia (China and Japan). Combines readings in primary source materials (the religious texts of these traditions) with secondary examinations of the historical and doctrinal developments within each tradition and region. This course intends to give students a context in which to examine the ways in which religions develop in interlocking sociocultural and political contexts and to provide a grounding in the lived experiences of these religious traditions.

PHIL 1276. Indian Religions. 4 Hours.
Traces the development of religious thought in India. South Asian religion is marked by the ongoing dialogues between the South Asian traditions we call Hinduism, Sikhism, and Jainism (as well as Buddhism and Islam, which are covered in separate courses). The interaction between these traditions shows the ways each defined itself independently and in response to challenges presented by the others.

PHIL 1280. Encountering Islam: Traditions, Debates, and Crosscultural Diversity. 4 Hours.
Explores Islam through its foundations narrative, rituals, doctrines, and ethical teachings. Presents Islam in terms of its diversity by focusing on a series of key debates in Islamic thought and practice from its early history to the present day in cross-cultural perspectives.
PHIL 1281. Islam, Gender, and Fashion. 4 Hours.
Explores why the Islamic veil today is so “pregnant with meanings” and how this impacts the lives of not only Muslim women who cover but also of those who do not. Specifically examines the various things wearing a veil “can do,” that is, its political, social, economic, and moral power. Considers how colonialism, nationalism, and Islamic movements have affected the Islamic veil; how veiling affects educational and employment opportunities for Muslim women; how the veil is used as a symbol of cultural identity; and when the Islamic veil is also a fashion statement. PHIL 1281 and WMNS 1281 are cross-listed.

PHIL 1285. Jewish Religion and Culture. 4 Hours.
Explores the basic features of Judaism in the ancient, rabbinic, and modern periods. Employs an historical critical approach to the formative texts and their interpreters. Analyzes Jewish practices within specific historical contexts and discusses the ways in which practices relate to the texts and history of Judaism. Examines the rich varieties of Jewish cultural expressions. JWSS 1285 and PHIL 1285 are cross-listed.

PHIL 1286. American Judaism. 4 Hours.
Explores Jewish theology, ethics, thought, and praxis in the United States beginning with the arrival of the first Jewish settlers in colonial times and culminating with an inquiry into the contemporary scene. Explores topics such as the challenges Judaism faced as it confronted a culture in which religion was both personal and voluntary; responded to the horrors of Hitler’s Germany; engaged the issues raised with the re-establishment of the nation of Israel; faced the developments of new forms of Judaism; and reacted to issues of Jewish identity, diversity, and gender as they were raised in the late twentieth century.

PHIL 1287. Modern Judaism. 4 Hours.
Studies the ways in which Judaism has changed in modern times. How did this ancient religion respond to the Enlightenment? How did the freedom of religion granted to Jews in America affect their religious expression? What does the birth of the State of Israel in 1948 mean in religious terms? The course addresses all of these questions as well as examining the rise of denominations, Zionism, Jewish feminism, and changing notions of Jewish peoplehood. Emphasizes the ways in which developments within Judaism reflected and responded to changes in the larger world and overlapped with developments in other Western religions.

PHIL 1290. Chinese Philosophy and Religion. 4 Hours.
Surveys the origins and development of the indigenous religious traditions of China, from the oracle bone divinations of the Shang Dynasty to the philosophical and religious traditions of Confucianism, Mohism, Yangism, Daoism, and Legalism. Identifies and elucidates those elements of ancient Chinese thought that have had the most lasting influence on the Chinese ethos and worldview. Studies the foundational texts of ancient China and also examines the relevant practices that helped to define the various traditions of thought. Focuses on how religious and philosophical ideas influenced the larger culture of Chinese life in regard to the arts, medicine, the social order, and government.

PHIL 1295. Religious Perspectives on Health and Healing. 4 Hours.
Explores aspects of the historical, religious, and cultural context for contemporary alternatives in healthcare, beginning with an examination of several examples of traditional healing practices and their accompanying religious and philosophical views about human life. Explores this “holistic” tradition in two frames of reference: the ascendancy of scientific rationalism over religion; and the takeover, by male-dominated professions, of healing functions that society has traditionally assigned to women (that is, the rise of obstetrics and the suppression of midwifery). Emphasizes major women healers of the nineteenth century. Includes some contemporary efforts at integration of scientific and traditional values in the modern healthcare system.

PHIL 1410. From Vodou and the Rastas to Afro-Islam: African Religions in the Americas. 4 Hours.
Explores the religions of Africa as they express themselves in the Americas in various Christian forms; in new religions such as Vodou, Santeria, and the Rastafari; and unique forms of Islam, Judaism, and Christianity. Begins by exploring indigenous African religions, then traces the forced transplantation of those religions and the way in which new religions emerge from the combination, or syncretism, of African symbols and belief and the forms of Christianity that existed in the New World when Africans arrived. To examine these religious traditions, the course draws on the methodology of comparative religion to explore the theory, practice, and symbol systems of the religions of Africa and the African Diaspora in the New World.

PHIL 1666. The Problem of Evil in Film. 4 Hours.
Seeks to ask the question, what is evil? Uses a variety of film genres to examine the definitions of evil in relation to concepts such as power, sin, hate, greed, envy, murder, neglect, fear, terror, tragedy, and “the Other.” Studies the problem of evil from the perspectives of religious studies and philosophy. Examines the various explanations for evil from a variety of Western religious traditions and explores the presentation of ethical dilemmas and moral theory to assess the content of a variety of films. Studies film titles such as The Dark Knight, The Exorcist, Silence of the Lambs, Frankenstein, Life Is Beautiful, Rear Window, Dr. Strangelove, Phone Booth, Crash, Star Wars, and The Wizard of Oz.

PHIL 1667. Science Fiction and Film: Moral Dilemmas and Ethical Analysis. 4 Hours.
Explores how science fiction films function as mythical cautionary tales about moral dilemmas of the twentieth and twenty-first centuries and as projections about how these dilemmas may be resolved or continue in the future. Provides a framework for an ethical analysis and examines how themes such as manifest destiny, nationalism, utopia, good vs. evil, war, and concepts of “the Other” are presented in classic and contemporary film. Also shows how science fiction film sometimes reinterprets pre-existing stories from world cultures and world religious traditions, updating earlier moral dilemmas to the contemporary situation.

PHIL 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHIL 2001. Ethics and Evolutionary Games. 4 Hours.
Surveys the basic ideas and principles from evolutionary game theory and how they can be applied to philosophical questions about ethical and social norms. Investigates how cooperation evolves and is maintained; where our sense of fairness comes from and how it affects the way we interact with others; why individuals are altruistic; and whether there is a rational basis for our most basic social norms. Basic ethical norms can involve cooperation, altruism, mutual aid, fairness, coordination, and communication. Evolution and game theory, the formal study of social interaction, have recently been applied to these areas in order to better understand how these norms can arise naturally. Prior completion of PHIL 1115, PHIL 1215, or the NU Core requirement for mathematical/analytical thinking level 1 recommended.
PHIL 2100. The Religious Worlds of Boston: Faith and Devotion in Urban Life. 4 Hours.
Examines the nature of religion and religious life in Boston, emphasizing the lived experience of the sacred in an urban setting. Offers students an opportunity to develop research methods based in ethnography, the analysis of texts, and the interpretation of material culture. Readings include works in the method and theory of religious studies, the practice of ethnography, and case studies of lived religion, especially those that focus on urban religion. Expects students to engage in fieldwork in Boston, examining the implicit religious dimensions of everyday life and particular religious communities. Assignments include field reports, analysis of the religious landscape of Boston, and a research paper on a designated religious community. Requires prior completion of one introductory-level course in the social sciences or humanities.

PHIL 2300. Mysticism. 4 Hours.
Looks primarily at mysticism in the major world religions, with an emphasis on Western mystics. Investigates the role of mysticism in some of the tribal religions of Africa and North America and compares the perceptions of the various forms. Looks at the ways in which the mystics are part of the larger traditions, such as cabala within Judaism, mysticism within Christianity, and Sufism within Islam. Describes the extent to which the cultural settings of the religions play a role in the form of mysticism that arises in the dominant religion. Requires prior completion of 4 SH of philosophy and religion or permission of instructor.

PHIL 2301. Philosophical Problems of Law and Justice. 4 Hours.
Focuses on general questions about the law: What is the nature and proper scope of the law? How should the law be enforced and are there alternatives to punishment? How can laws be properly interpreted? Examples of legal controversies are related to the theories studied.

PHIL 2302. Philosophical Problems of War and Peace. 4 Hours.
Concentrates on ethical and philosophical issues about war and peace. Focuses on the nature and justification of war, moral questions about tactics in war, ideas for avoiding war, concepts of and strategies for attaining peace, and the morality of relations between nations.

PHIL 2303. Social and Political Philosophy. 4 Hours.
Focuses on basic questions about the nature of the state and the relationship of individuals to the state. What basis is there for individuals to obey the laws of the state? What conditions must a government meet to be legitimate? What justification can be given for democratic forms of government? Also examines what sorts of controls the state should exert over citizens, and what benefits citizens have a right to expect from the state. Includes readings from both classical and contemporary sources. Not open to freshmen students.

PHIL 2311. The Kabbalah: Jewish Mysticism from the Zohar to Madonna. 4 Hours.
Surveys early mystical tendencies in the Hebrew Bible, in rabbinic literature, and in early medieval Jewish texts as background for grappling with the ideas of the Zohar, a fundamental text of the Jewish mystical tradition, or kabbalah. Begins with a brief overview of mysticism in general and Jewish mysticism in particular. Explores later kabalistic developments, including Hasidism and kabbalah in popular culture today. Topics include God in kabbalah; mystical experiences; the relationship of kabbalah to Jewish tradition; the power of language, gender, the body; and meditation and other mystical practices.

PHIL 2313. Exploring the Jewish Diaspora—From Mountain Jews to Crypto-Jews. 4 Hours.
Explores vibrant Jewish life in foreign lands, including Argentina, Brazil, Canada, and South Africa, as well as unusual Jewish communities in places such as Uganda and northeastern India. Covers topics such as how Jewish religion and identity are reshaped by other cultures, the emergence of secret Jews who fled the Iberian peninsula more than five centuries ago, and a brief history of Jewish life in the modern diaspora. Includes presentations and discussion of diaspora art, literature, film, and music. JWSS 2313 and PHIL 2313 are cross-listed.

PHIL 2314. Biblical Prophets and Their Interpreters. 4 Hours.
Analyzes several key prophets of the Hebrew Bible, such as Amos, Jeremiah, and Isaiah. Explores the cultural and historical contexts in which their prophecies originally arose. Examines the various ways in which prophecy has been interpreted within both Judaism and Christianity.

PHIL 2315. Adam and Eve and Their Interpreters. 4 Hours.
Focuses on the story of Eden, which has been interpreted and reinterpreted by Jewish, Christian, and Muslim thinkers throughout history. Primarily, Adam and Eve have served to legitimize and enforce gender and other social hierarchies, but occasionally, and particularly in light of modern feminism, are employed to justify egalitarianism. The course uses this story, and its long history of interpretation, as a case study for examining the social and political applications of religious principles derived from sacred texts in Western societies, as well as the influence of those societies on the diverse ways in which the text has historically been interpreted.

PHIL 2316. Interpreting the Bible. 4 Hours.
Offers students the opportunity to understand the Bible as it is continually interpreted by believing communities in their own social and religious contexts. By appreciating the process of scriptural interpretation and the various sources of authority for it, allows us to see contemporary theological conflicts in a broader perspective.

PHIL 2322. Responses to the Holocaust. 4 Hours.
Explores the variety of responses to the mass death brought on by the Holocaust. Examines the responses of theology, and literature, as well as relevant ethical issues. Requires prior completion of one philosophy course.

PHIL 2325. Ancient Philosophy and Political Thought. 4 Hours.
Examines the philosophers of classical Greece, primarily Socrates, Plato, and Aristotle. These philosophers examined the nature of the material world, of the city, and of the person. The course takes up both the moral and political writings as well as the metaphysical writings. Devotes considerable attention to major works such as Plato’s Republic. Some time is given to early Greek philosophers, to the Sophists, and to later developments. Requires written analysis of philosophical texts. PHIL 2325 and POLS 2325 are cross-listed.

PHIL 2327. Medieval Western Philosophy. 4 Hours.
Examines the writings of two major medieval Christian philosophers (Augustine and Aquinas), two major medieval Muslim philosophers (al-Ghazali and ibn Rushd [Averroës]), and two major medieval Jewish philosophers (Saadia Gaon and Maimonides). Focuses on the following themes: the conception of sin, God’s existence, the problem of God’s foreknowledge and our free will, God’s nature, God’s justice, the creation of the universe, the priority of reason versus faith, the literal versus metaphorical nature of religious language, and the soul’s immortality. Requires prior completion of one philosophy course.
PHIL 2330. Modern Philosophy. 4 Hours.
Focuses on the hundred years between 1650 and 1750, sometimes called "the century of genius." It was a period in which philosophers reacted to the new scientific discoveries of Copernicus, Kepler, and Galileo. Out of this reaction came new ways of thinking about the nature of knowledge and the nature of reality. Focuses on such major figures as the rationalists Descartes, Leibniz, and Spinoza, and the empiricists Locke, Berkeley, and Hume. Requires prior completion of two philosophy courses.

PHIL 2340. Philosophy of Human Nature. 4 Hours.
Focuses on various attributes of human beings, such as intelligence, sexuality, and language, in the context of biological, psychological, linguistic, and philosophical views of human nature. Requires prior completion of two philosophy courses.

PHIL 2394. Chinese Buddhism. 4 Hours.
Offers a historical survey of the major forms of Buddhism that developed in China, from the beginning of the Common Era to the "Golden Age" of Chinese Buddhism during the Tang and Song dynasties to its eventual decline. Beyond examining the particular texts, figures, and practices (particularly forms of meditation and prayer) from each historical period, the class addresses the following questions: How did the Chinese absorb and re-create Indian Buddhism to reflect the cultural foundations of Chinese traditional society? How were ideological lines drawn between Daoism, Confucianism, and Buddhism?

PHIL 2395. Japanese Buddhism. 4 Hours.
Surveys the major forms of Japanese Buddhism, from the earliest transmission of Buddhism to the maturation of Buddhist thought and practice during the Kamakura and Muromachi periods. Focuses not only on the major schools and figures of each period but also the ways in which Buddhism influenced and shaped Japanese culture. Examines, in particular, the formative influence of Buddhism on Japanese aesthetic sensibilities, samurai culture, and ritual. Focuses thematically on the religious practices that defined each school and how those practices were incorporated into a holistic religious vision.

PHIL 2398. Religion and Culture in Indian Cinema. 4 Hours.
Explores the intersecting discourses of gender, nationalism, and religion in India through the lens of Hindi cinema and the framework of the expanding scholarship on Indian cinema. Film is a particularly powerful medium for analyzing the representations of a culture. India boasts the largest film industry and film viewing audiences in the world. The course centers around Hindi popular cinema (Bollywood) but includes films from art cinema (New Cinema) and diaspora films for contrast with the mainstream cinema. Students are expected to watch films weekly and read corresponding work in cinema studies, gender studies, and religious studies. All films are subtitled in English.

PHIL 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHIL 2991. Research Practicum. 2-4 Hours.
Involves students in collaborative research under the supervision of a faculty member. Offers students an opportunity to learn basic research methods in the discipline. Requires permission of instructor. May be repeated once for up to 4 total credits.

PHIL 3343. Existentialism. 4 Hours.
Examines existentialist philosophy in its greatest representatives, such as Kierkegaard, Nietzsche, Heidegger, Camus, and Sartre. Focuses on central themes including self-alienation, inauthenticity, authenticity, and existential experiences. Requires prior completion of two philosophy courses.

PHIL 3345. Philosophy of Religion. 4 Hours.
Explores classic issues in philosophy of religion, including arguments for and against the existence of God, the relationship between religion and ethics, and the nature of religious experience. Also examines problems in recent philosophy of religion, such as how religious language works, whether it makes sense to say that religious beliefs are true or false, and the nature of religious ritual and what this may mean for philosophical analysis of religion. Also considers non-Western religious traditions and philosophies. Requires prior completion of two philosophy courses.

PHIL 3350. 20th-Century Continental Philosophy. 4 Hours.
Examines some of the main ideas and thinkers in twentieth-century continental philosophy as represented by such philosophers as Husserl, Heidegger, Sartre, Ricoeur, Gadamer, Habermas, and Derrida. Requires prior completion of two courses in philosophy.

PHIL 3355. 20th-Century Analytic Philosophy. 4 Hours.
Explores some of the main ideas and thinkers in twentieth-century analytic philosophy as represented by such philosophers as Moore, Russell, Wittgenstein, the logical positivists, Quine, Popper, and Rawls. Requires prior completion of two philosophy courses.

PHIL 3385. History of Jewish Rationalism. 4 Hours.
Studies the Jewish rational tradition from Philo (first century C.E.) to Spinoza (seventeenth century C.E.). Emphasis is on tracking the development of the rationalist commitment within the tradition and its interaction with religious doctrine and faith. Among the thinkers studied are Philo, Saadia Gaon, Judah Halevi, Maimonides, Gerondides, and Spinoza. Requires prior completion of two philosophy courses.

PHIL 3387. Religion, Nation, and Identity in Modern Jewish Thought. 4 Hours.
Examines the thought of major Jewish thinkers of the modern era. May include such figures as Spinoza, Mendelssohn, Buber, Rosenzweig, Kaplan, Heschel, and Rubenstein. Requires prior completion of two philosophy courses.

PHIL 3410. Religion and Spirituality in the African Diaspora. 4 Hours.
Examines religious thought and rituals and its Diaspora in a comparative context. Topics include traditional religions, Islam, Christianity, and Judaism in Africa and the diaspora. Emphasizes the transformation of religions practiced in Africa when African captives were forced into the three slave trades affecting the continent of Africa: trans-Saharan, Indian Ocean, and transatlantic.

PHIL 3435. Moral Philosophy. 4 Hours.
Explores two basic questions: What sorts of things are good or bad? What actions are right or wrong? Covers major philosophical theories about the nature of morality—whether it is relative or absolute, whether it accords or conflicts with self-interest. Such classic theories as utilitarianism and Kant are examined as well as contemporary developments and debates. Requires prior completion of two philosophy courses.

PHIL 3436. History of Modern Moral Philosophy. 4 Hours.
Studies the development of modern moral philosophy from its origins, the skepticism of Montaigne and the natural law theories of Hobbes and Pufendorf, to the emergence of the two major theories: consequentialism in the writing of Bentham and deontology in the writings of Kant. Includes readings from Hobbes, Clarke, Butler, Hutcheson, Hume, Smith, Price, and others.

PHIL 3445. Philosophy of Religion. 4 Hours.
Explores classic issues in philosophy of religion, including arguments for and against the existence of God, the relationship between religion and ethics, and the nature of religious experience. Also examines problems in recent philosophy of religion, such as how religious language works, whether it makes sense to say that religious beliefs are true or false, and the nature of religious ritual and what this may mean for philosophical analysis of religion. Also considers non-Western religious traditions and philosophies. Requires prior completion of two philosophy courses.

PHIL 3460. Philosophy and Literature. 4 Hours.
Provides the student the opportunity to learn to recognize, appreciate, and criticize philosophical themes in literature. Includes readings from acknowledged classics by philosophical authors. Requires prior completion of two philosophy courses.
to be Hindu. All texts are read in English. Prior knowledge about Hinduism
Ramayana has provided a ground for debates about what it means to be
comic books and a television series to Hindu nationalist politics, the
variants, subverted interpretations, and pop culture representations.

PHIL 4395. Ramayana. 4 Hours.
Examines the Ramayana, the story of Ram, Lakshmana, Sita, and
Hanuman—from Ram's exile and Sita's abduction to the victorious battle
to recapture her—one of the world's great epics and a central religious
story for Hindus. Explores the classical Sanskrit Ramayana, regional
variants, subverted interpretations, and pop culture representations.
From Sanskrit text recitation to ritual dance-drama performances, from
comic books and a television series to Hindu nationalist politics, the
Ramayana has provided a ground for debates about what it means to be
a good king, what it means to be a good person, and also what it means
to be Hindu. All texts are read in English. Prior knowledge about Hinduism
would be very useful.
PHIL 4545. Religion and Politics in South Asia. 4 Hours.
Analyzes how to think critically both about the ways religion is presented to us and the connections we make between political movements and religious groups. Explores questions such as: What could it mean for politics to be religious and for religions to be political? Are “religious conflicts” essentially religious? What is the relationship between socioeconomic movements and religion? Do religions take the blame for political movements? Focuses on two South Asian communal conflicts that are couched in terms of religious identity: the Hindu-Muslim conflicts and Hindu-Sikh conflicts. Uses primary and secondary sources to study these conflicts to analyze the workings of religious rhetoric and political rhetoric about religions.

PHIL 4546. Advanced Biblical Studies: Hebrew Bible. 4 Hours.
Studies a book or genre of texts of the Hebrew Bible in English translation. Designed for the student who has successfully completed course work in biblical studies at the college level, it addresses questions of authorship, form, original meaning, setting, and purpose.

PHIL 4547. Seminar: Apocalypticism. 4 Hours.
Designed to explore Jewish and Christian apocalypticism from the time it bursts onto the scene c. 165 BCE through its contemporary popular expressions. Begins with an in-depth look at the biblical materials contained in Daniel and Revelation, explores apocryphal and pseudepigraphal texts, and examines millenarian and messianic expectations in their historical perspectives. Requires prior completion of three philosophy courses or permission of instructor.

PHIL 4605. Advanced Seminar: Spinoza. 4 Hours.
Examines the political, religious, and philosophical writings of Spinoza. Emphasizes understanding Spinoza’s work in its historical context as well as examining his thought for insights applicable to our own time. Requires prior completion of three philosophy courses.

PHIL 4606. Seminar: Theories and Methods in Religious Studies. 4 Hours.
Focuses on the history of the study of religion as it developed during the nineteenth and twentieth centuries. Examines readings from a wide range of foundational thinkers and contemporary scholarship to illustrate the roots of religious studies and the state of the field today. Designed to simultaneously acknowledge the interdisciplinary nature of religious studies by asking students to read in several methodological schools while allowing each student to pursue a particular school in more depth. Includes theorists from anthropology, comparative method, cultural studies, hermeneutics, history of religions, mythology, phenomenology, philosophy of religion, ritual and performance studies, sociology, psychology, and visual theology. Offers an opportunity for students to see the ways religious studies methodologies speak to each other and how they might be used to examine particular religious phenomena. Requires prior completion of 16 SH of philosophy and religion.

PHIL 4901. Topics in Philosophy Seminar. 4 Hours.
Focuses on one specific problem or issue in philosophy. Topics vary, and students may register for the course more than once. Requires prior completion of three philosophy courses. May be repeated without limit.

PHIL 4902. Great Philosophers Seminar. 4 Hours.
Focuses on the writings of a major philosopher. Subjects include Plato, Aquinas, Locke, Hegel, and Heidegger. Specific philosophers vary, and students may register for the course more than once. Requires prior completion of three philosophy courses. May be repeated without limit.

PHIL 4903. Seminar in Religion. 4 Hours.
Examines topics including theodicy, cosmogony, contemporary issues in religion, and comparative ethics. Topics vary, and students may register for the course more than once. Requires prior completion of three philosophy courses. May be repeated without limit.

PHIL 4904. Major Figures in Religious Studies. 4 Hours.
Focuses on the work of one figure important in the field of religion. Subjects include Augustine, Calvin, Luther, Weber, and Eliade. Topics vary, and students may register for the course more than once. Requires prior completion of three philosophy courses.

PHIL 4906. Topics in Religious Studies. 4 Hours.
Focuses on a topic of special importance in the study of religion. Topics vary and students may take the course more than once. Requires prior completion of three philosophy courses. May be repeated without limit.

PHIL 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

PHIL 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

PHIL 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHIL 4991. Research. 4 Hours.
Offers an opportunity to do research under faculty supervision.

PHIL 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHIL 4994. Internship. 4 Hours.
Offers an opportunity for an internship. May be repeated without limit.

PHIL 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement. May be repeated without limit.

PHIL 5001. Global Justice. 4 Hours.
Explores the theoretical, political, and philosophical foundations of the obligations that underlie global justice. Theoretical approaches include human rights, human capabilities, cosmopolitanism, particularism, and universalism. Examines nationalism and the particular set of obligations that it generates. Following the theoretical component, the course considers social issues that arise in a global context: (1) the duties to the distant poor, (2) global philanthropy and problems of donee accountability, (3) global health and essential medicines and issues in environmental justice, and (4) issues in international law.

PHIL 5003. Ethics, Justice, and Global Climate Change. 4 Hours.
Explores normative dimensions of policy and action regarding global climate change. Addresses whether climate change mitigation or adaptation should be prioritized, the just distribution of climate change mitigation and adaptation responsibilities in climate change policy, the responsibility of individuals to reduce their greenhouse gas emissions, whether some forms of mitigation are preferable to others on ethical or justice grounds, and under what conditions is geoengineering justifiable. Considers theories of justice, the moral standing of future generations, the value of nonhuman species, and the basis and nature of human rights.
PHIL 5011. Comparative Religious Ethics. 4 Hours.
Offers a comparative approach to Eastern and Western ethical traditions.
Examines primary texts from a variety of religious cultures as well as
thematic works in comparative religious ethics and moral philosophy
that engage in and critique the project of cross-cultural dialogue.
Investigates ideas of human flourishing, notions of virtue and vice, and
conceptions of selfhood and community. Discusses issues of pluralism;
orientalism (a mode of thinking, constructed and disseminated by
the West, that projects a vision of the East as irrational, mystical, and
primitive, which suits the ideological and political purposes of the West);
and methods of comparative philosophy as a way of understanding the
context of the academic study of non-Western traditions.

PHIL 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.
May be repeated without limit.

PHIL 7240. Ethics and Public Policy. 4 Hours.
Focuses on the role of ethical values and principles in public policy
debates. Examines works by both classical and contemporary
philosophers, considers key ethical theories, and assesses arguments
about the scope and limits of legitimate governmental authority. Offers
students an opportunity to strengthen their skills in applying relevant
ethical principles to specific policy issues.

PHIL 7270. Ethics and Health Policy. 3 Hours.
Examines some of the values implicit in healthcare policy from both
theoretical and applied perspectives. Considers the role medical ethics
can and should play in forming health policy and studies the tension
between the moral interests of populations and those of individuals.
Possible issues for study include the ethics of managed care and
consumer-driven healthcare, the pricing and marketing of medicines, and
the role of medicines in global justice.

PHIL 7976. Directed Study. 1-4 Hours.
Offers an individualized course of study or project. May be repeated
without limit.

PHIL 1100. Social and Political Philosophy. 3 Hours.
Examines theories of social change, social institutions, and major
contemporary political theories. Asks general questions, such as what
constitutes a good state, what actions are right or wrong, and explores
differing answers to those questions. Contrasts Immanuel Kant’s view
that actions are intrinsically moral to John Stuart Mill’s theory that the
end result determines the rightness or wrongness of an act. Includes
material from social theorists such as Paley, Nietzsche, B. F. Skinner, and
Ayer.

PHIL 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.
May be repeated without limit.

PHIL 2100. Business Ethics. 3 Hours.
Focuses on basic ethical viewpoints as a foundation and examines
specific characteristics of business life through cases and examples.
The fact that there is not one universal set of behaviors one considers
ethical and no guidelines to follow to determine ethical behavior poses
unique challenges to managers today. Yet, managers are daily faced
with situations where individual values may conflict with those of teams
or organizations. Explores topics such as corporate responsibility and
conflict of interest, employee rights, and advertising and information
disclosure.

PHIL 2120. Ethical Issues in Communication. 3 Hours.
Examines ethical issues in communication. Discusses how ethical
choices affect communication to internal and external audiences,
management transparency, strategic ambiguity, and employee privacy.

PHIL 2130. Ethical Issues in Healthcare. 3 Hours.
Considers biomedical, clinical, social, and legal issues related to ethical
issues and integrates such considerations into ethical decision making.
Emphasizes the concepts of do no harm, quality of life, and conflict
resolution. Other topics include patients’ rights and the protection of their
confidentiality, privacy, and personal prerogatives. Explores case studies
and readings to assess the presence of ethical considerations.

PHIL 2140. Ethical Issues in Science and Engineering. 3 Hours.
Examines ethical principles and considerations involved in making
moral decisions. Analyzes specific examples in medicine, science and
engineering through case studies and readings.

PHIL 2310. Symbolic Logic. 3 Hours.
Introduces propositional and first-order quantification logic. Offers
students an opportunity to evaluate the status of logical formulas and
arguments, to create examples and counterexamples, and to construct
both informal and formal proofs.

PHIL 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.
May be repeated without limit.

PHIL 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.
May be repeated without limit.

PHIL 4896. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student’s approved experiential activity and integrates it
with study in the academic major.

PHIL 4950. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

PHIL 4955. Project. 1-4 Hours.
Focusses on in-depth project in which a student conducts research or
produces a product related to the student’s major field. May be repeated
without limit.

PHIL 4983. Topics. 1-4 Hours.
Examines a variety of subjects and themes, such as ancient philosophy,
philosophy of science and technology, and ethical issues in race and
gender. Because topics change from quarter to quarter, students may
take this course more than once, provided they focus on a different topic
each time. May be repeated without limit.

PHIL 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.
May be repeated without limit.

PHIL 4991. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty
supervision.

PHIL 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the
department on a chosen topic.

PHIL 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the
department on a chosen topic.

PHIL 4994. Internship. 1-4 Hours.
Provides students with an opportunity for internship work.

PHIL 4995. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

Philosophy - CPS (PHL)
Effects of everyday stress. and explore safe practices for becoming more resilient to the harmful activities designed to help students set high-level wellness goals in their lives. Examines the connection between stress and disease. Offers students an opportunity to develop a theoretical understanding of the holistic nature of stress and to begin to identify specific stressors one can ultimately participate in all recreational sports activities. Traditional school programs in health and physical education are being challenged to design and structure curricular offerings and assessment models in developing a fresh, rejuvenated approach to health and wellness instructional programs. Program practices and curricular offerings in health, wellness, and physical education must be updated regularly to meet the contemporary needs of all students in the community. National and state standards and strands are examined, cross-referenced, and put into perspective prior to developing a curriculum by grade level.

PHE 0904. Updating Your Health, Wellness, and Physical Education Program. 6.8 Hours.
Examines and utilizes the influences of conceptual practices, technology, and assessment models in developing a fresh, rejuvenated approach to health and wellness instructional programs. Program practices and curricular offerings in health, wellness, and physical education must be updated regularly to meet the contemporary needs of all students in the community. National and state standards and strands are examined, cross-referenced, and put into perspective prior to developing a curriculum by grade level.

PHE 0905. Implementing Technology into Your Physical Education Program. 6.8 Hours.
Offers students an opportunity to explore knowledge and skills relative to many different hardware and software solutions that pertain to "new" physical education program initiatives. Developing the ability to understand and apply technology within health and wellness curricula requires an upgrade of perspectives and skills in this area. Consequently, this course takes a hands-on approach so teachers have an opportunity to implement immediately the use of technology in their day-to-day teaching.

PHE 0906. Strategies for Building Movement into the Elementary Physical Education Program. 6.8 Hours.
Explores hands-on activities to facilitate movement education, rhythm and dance, sports concepts, and cooperative activities useful in curriculum implementation. Utilizing the "Skill, Theme, and Movement Concepts Approach," offers participants an opportunity to teach their students the language of movement and not just the movement itself.

PHE 0907. Teaching Well—Teaching Well. 6.8 Hours.
Offers ways to initiate a progressive, programmatic shift toward the "wellness model approach" of contemporary health and wellness activities. Traditional school programs in health and physical education are being challenged to design and structure curricular offerings and instruction to better meet the health and wellness needs of students. Examines the future directions of "quality" health and physical education programs and examines wellness programming. Involves students with activities such as tai chi, wellness in athletics, and nutrition and wellness. Argues for the need to adapt physical education to the needs of children with disabilities and emphasizes the importance of creating a resource manual of games and activities specifically designed to meet the needs of their students.

PHE 0908. Adapted Games, Activities, and Strategies for Inclusive Physical Education Programs. 6.8 Hours.
Designed to provide teachers with practical adaptive physical education strategies and techniques that can be generalized into their school program. The course is activity based and offers teachers an opportunity to create a resource manual of games and activities specifically designed to meet the needs of their students.

PHE 0909. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

PHE 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.
PHE 6502. Moving Toward Wellness. 4 Hours.
Offers ways to initiate a progressive, programmatic shift toward the “wellness model approach” of contemporary health and wellness activities. Traditional school programs in health and physical education are being challenged to design and structure curricular offerings and instruction to better meet the health and wellness needs of students. Explores the future directions of “quality” health and physical education programs and examines wellness programming. Involves students with activities such as tai chi, wellness in athletics, and nutrition and wellness. Focuses on contemporary health and wellness initiatives currently being implemented.

PHE 6503. Living Well—Teaching Well. 4 Hours.
Offers students an opportunity to develop a theoretical understanding of the holistic nature of stress and to begin to identify specific stressors in their lives. Examines the connection between stress and disease. Activities are designed to help students to set high-level wellness goals and explore safe practices for becoming more resilient to the harmful effects of everyday stress.

PHE 6504. Updating Your Health, Wellness, and Physical Education Program. 4 Hours.
Examines and utilizes the influences of conceptual practices, technology, and assessment models in developing a fresh, rejuvenated approach to health and wellness instructional programs. Program practices and curricular offerings in health, wellness, and physical education must be updated regularly to meet the contemporary needs of all students in the community. National and state standards and strands are examined, cross-referenced, and put into perspective prior to developing a curriculum by grade level.

PHE 6505. Implementing Technology into Your Physical Education Program. 4 Hours.
Offers students an opportunity to explore knowledge and skills relative to many different hardware and software solutions that pertain to “new” physical education program initiatives. Developing the ability to understand and apply technology within health and wellness curricula requires an upgrade of perspectives and skills in this area. Consequently, this course takes a hands-on approach so teachers have an opportunity to implement immediately the use of technology in their day-to-day teaching.

PHE 6506. Strategies for Building Movement into the Elementary Physical Education Program. 4 Hours.
Explores hands-on activities to facilitate movement education, rhythm and dance, sports concepts, and cooperative activities useful in curriculum implementation. Utilizing “The Skill, Theme, and Movement Concepts Approach,” offers participants an opportunity to teach their students the language of movement and not just the movement itself.

PHE 6507. Moving Toward Wellness: Applications and Practices. 4 Hours.
Explores professional development at the secondary level that gets to the heart of the instructional process through “hands-on activities” and “personal skill development” in a variety of curricular experiences. Designed to initiate a progressive, programmatic shift toward the “wellness model approach” of contemporary health and wellness activities for teachers and students in grades 6–12.

PHE 6508. Adapted Games, Activities, and Strategies for Inclusive Physical Education Programs. 4 Hours.
Designed to provide teachers with practical adaptive physical education strategies and techniques that can be generalized into their school program. The course is activity based and offers teachers an opportunity to create a resource manual of games and activities specifically designed to meet the needs of their students.

PHE 6510. Contemporary Topics in Wellness: Nutrition, Obesity, and the BMI Connection. 4 Hours.
Covers the best practices to segue from health information to application regarding these current topics as well as other related issues. Examines strategies for analyzing the effectiveness of current programs along with the most successful tools for achieving optimal outcomes. Designed to provide new and innovative instructional strategies and interactive activities to use with adolescents and adults.

PHE 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

PHE 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHE 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

PHE 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

PHE 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

PHE 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

PHE 6983. Topics. 1-4 Hours.
Covers special topics in physical education. May be repeated without limit.

PHE 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

Physical Therapy (PT)

PT 1000. College: An Introduction. 1 Hour.
Provides an introduction to the University, college, and health professions to enhance students’ understanding of self and the decisions they make academically and socially as members of the University’s diverse, multicultural community. Group activities and individual assignments along with active participation in a learning community help students adjust to life on an urban campus, develop a better understanding of the learning process, acquire essential academic skills, and make connections with the faculty and students in the college.

PT 1880. Introduction to Sports Medicine. 4 Hours.
Offers an introductory course intended for students interested in sports, coaching, medicine, and exercise. Exposes students to the field of sports medicine. Emphasizes orthopedic anatomy, exercise principles, and a basic introduction to prevention of injury and illness related to athletes. Includes a cadaveric lab and lectures.

PT 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
PT 2000. Professional Development Co-op. 1 Hour.
Introduces the Bouvé Cooperative Education Program. Offers students an opportunity to develop job-search and career-management skills. Students perform assessments of their workplace skills, interests, and values and discuss how they impact personal career decisions. Offers students an opportunity to prepare a professional-style résumé, learn proper interviewing techniques, and gain an understanding of the opportunities available to them for co-op. Introduces career paths, choices, and career decision making. Familiarizes students with workplace issues relative to their field of study and presents the MyNEU COOL database in the job-search and referral process. Presents and discusses co-op policies, procedures, and expectations of the Bouvé Cooperative Education Program and co-op employers.

PT 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PT 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PT 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PT 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PT 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PT 4995. Practicum. 1-4 Hours.
Offers eligible students an opportunity for practical experience. May be repeated without limit.

PT 4996. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement.

PT 5101. Foundations of Physical Therapy. 3 Hours.
Introduces basic patient-care procedures and professional behaviors used in physical therapy practice. Prepares students for co-op education experiences and discusses implications for career planning.

PT 5102. Lab for PT 5101. 1 Hour.
Accompanies PT 5101. Covers topics from the course through various experiments.

PT 5103. Human Skills Development. 2 Hours.
Examines typical skill development and maturation from intrauterine life through old age (senescence). Considers the interaction of system development on acquisition of and changes in skill development. Students apply developmental concepts to case studies and hypothetical clinical situations. Emphasizes childhood and early adult development as a foundation to the changes that occur later in adulthood and senescence.

PT 5104. Therapeutic Modalities. 1 Hour.
Provides application of physical agents to treat a variety of impairments found during a physical therapy examination. Covers the theory, rationale, and application of thermal, electrical, light, and mechanical agents.

PT 5105. Lab for PT 5104. 1 Hour.
Accompanies PT 5104. Covers topics from the course through various experiments.

PT 5111. Professional Development for Bouvé Graduate Co-op. 1 Hour.
Introduces graduate students to the Bouvé Cooperative Education Program and offers an opportunity to develop job-search and career-management skills. Students perform assessments of their workplace skills, interests, and values and discuss how they impact personal career decisions. Offers students an opportunity to prepare a professional-style résumé, learn proper interviewing techniques, and gain an understanding of the opportunities available to them for co-op. Introduces career paths, choices, and career decision making. Seeks to familiarize students with workplace issues relative to their field of study and to teach them to use myNEU COOL database in the job-search and referral process. Presents and discusses co-op policies, procedures, and expectations of the Bouvé Cooperative Education Program and co-op employers.

PT 5131. Gross Anatomy. 4 Hours.
Covers the structure and function of the human body with particular emphasis on the skeletal, muscular, nervous, and cardiovascular systems and clinical application to these systems. Considers basic abnormalities of structure and function. Involves lectures, cadaver prosection, osteology, and surface anatomy labs.

PT 5132. Lab for PT 5131. 1 Hour.
Accompanies PT 5131. Covers topics from the course through various activities.

PT 5133. Kinesiology. 3 Hours.
Studies normal movement through the analysis of muscle and joint function. Introduces fundamental examples of pathokinesiology, aberrant motions, and postures. Emphasizes analysis of the major joints and regions of the body as related to the field of physical therapy, including aspects of gait analysis. Encourages critical thinking and integrates material learned in prior course work, including, but not limited to, anatomy and physiology.

PT 5134. Lab for PT 5133. 1 Hour.
Offers students an opportunity to measure skills of goniometry and manual muscle testing to assess joint mobility and muscle performance. Also covers assessment of posture and gait. Integrated with PT 5133 and builds upon the foundation of gross anatomy.

PT 5138. Neuroscience. 4 Hours.
Covers the structure and physiological function of the human nervous system with emphasis on the clinical aspects of motor and somatosensory systems. Studies the anatomy of the brain, brain stem, and spinal cord in specimens and on slides and integrated with the basic physiology of motor and sensory systems. The application of neuroscience to clinical neurological cases is a foundation of this course.

PT 5139. Lab for PT 5138. 1 Hour.
Accompanies PT 5138. Covers topics from the course through various experiments.

PT 5140. Pathology. 4 Hours.
Covers general medicine, lab medicine, and pathology as related to conditions commonly treated by healthcare professionals. Provides the foundation for PT 6240.

PT 5141. Recitation for PT 5140. 0 Hours.
Provides small-group discussion format to cover material in PT 5140.

PT 5145. Introduction to the Healthcare System. 2 Hours.
Offers students an opportunity to obtain the foundation to understand and appreciate the framework of the U.S. healthcare system. Compares other selected global healthcare systems. Examines historical events, policy changes, and current issues that impact the delivery of healthcare services.
PT 5150. Motor Control, Development, and Learning. 4 Hours.
Covers three broad areas—motor control, motor development, and motor learning. Examines neural, behavioral, and physical mechanisms that contribute to the control of movement in humans. Focuses on motor control in healthy persons, with some discussion of alterations associated with musculoskeletal and neural impairment. Addresses motor development and maturation from intrauterine life through old age (senescence). Considers the interaction of body-system development and growth on acquisition of and changes in typical skill development. Examines factors that influence the learning of new motor skills (motor learning) as a result of practice.

PT 5151. Lab for PT 5150. 1 Hour.
Offers students an opportunity to apply knowledge gained in PT 5150 to activities designed to illustrate various principles and concepts related to motor control, motor development, and motor learning. Uses a series of guiding questions/activities in each laboratory and analyzes associated literature to offer students an opportunity to apply class concepts to healthy individuals and to those with clinical problems related to motor control, motor development, or motor learning.

PT 5160. Psychosocial Aspects of Healthcare. 3 Hours.
Examines interpersonal relationships among patients, families, health professionals, and society, with reference to the impact of and reaction to illness and disability. Identifies personal and societal beliefs, values, and attitudes that affect the role of people with illness or disabilities in our culture and the healthcare system; how patients’ beliefs, values, and experiences affect their expectations and interactions with healthcare professionals; and how beliefs, values, and experiences shape professional development and affect relationships with patients.

PT 5161. Psychosocial Aspects of Healthcare Seminar. 1 Hour.
Offers students an opportunity to engage in hands-on service roles and address the needs/interests of community partners. Students also have an opportunity to reflect on their learning through service during on-campus and online activities/assignments.

PT 5165. Sports Medicine: Managing the Injured Athlete. 4 Hours.
Offers students an opportunity to obtain in-depth knowledge in sports medicine. Covers taping and bracing procedures and techniques to assess concussions with various current protocols. Exposes students to current common pathologies within the athletic population. Discusses return-to-play criteria for an athlete once an injury has occurred and has subsequently been treated and rehabilitated.

PT 5170. Motor Control. 3 Hours.
Focuses on the theories and models of neuromuscular control and learning of human movement. Examines the relationship between theory and practice and how motor function may be altered by a variety of factors.

PT 5171. Lab for PT 5170. 1 Hour.
Accompanies PT 5170. Covers topics from the course through various experiments.

PT 5172. Recitation for PT 5170. 0 Hours.
Provides small-group discussion format to cover material in PT 5170.

PT 5209. Neurological Rehabilitation 1. 4 Hours.
Covers the foundations of the physical therapy examination, evaluation, and intervention with patients with neurological deficits. Presents examination skills, theoretical bases, and clinical applications of integrated intervention approaches for the patient with a neurological diagnosis. Includes the etiology, pathology, and physical therapy management of common neurological disorders affecting the pediatric population.

PT 5210. Lab for PT 5209. 1 Hour.
Accompanies PT 5209. Covers topics from the course through various experiments.

PT 5226. Physical Therapy Professional Seminar 2. 2 Hours.
Continues PT 5135 and builds on concepts introduced in the earlier course. Affords students the opportunity to reflect on issues in experiential education and prepare for future experiential learning.

PT 5227. Physical Therapy Project 1. 3 Hours.
Provides students with the opportunity to conduct an independent project under the mentorship of physical therapy faculty in areas such as research, education, clinical practice, administration, or service learning.

PT 5229. Physical Therapy Project 2. 2 Hours.
Provides students with a continued opportunity to work with individual faculty on scholarship activities to create a scholarly work in partial fulfillment of the requirement for a Doctor of Physical Therapy degree. Allows students to continue the research or education project that was initiated in PT 5227. Guides students as necessary to enable them to complete their capstone project.

PT 5230. Pediatric and Geriatric Aspects of Life Span Management. 3 Hours.
Incorporates analysis and comparison of methods of physical therapy (PT) management of selected populations across the life span, which includes pediatrics and geriatrics. Focuses on utilizing evidenced-based rationale for clinical decision making within the context of PT examination, evaluation, PT diagnosis, prognosis, and plan of care. Discusses how patient/client management seeks to reflect core professional values, as well as topics of prevention and wellness in these patient populations.

PT 5351. Physical Therapy Business Management. 2 Hours.
Introduces students to the strategy and business-planning principles, tools, and resources related to developing a new business, service, or product relevant to the physical therapy profession. The goal is for students to develop a business, implementation, and a marketing plan. Covers issues related to business, finance, law, regulations, licensure, real estate, and marketing.

PT 5410. Functional Human Neuroanatomy. 4 Hours.
Examines the detailed structure of the human nervous system, linking structure to function at both the clinical and neurobiological level. Offers students an opportunity to obtain a solid functional anatomical foundation for neuroscience. Reviews basic neuroanatomy and then provides a detailed look into the structure of the nuclei within the central nervous system and their connectivity. Examines the role of these structures in motor and sensory function as well as in complex cognitive functions at a physiological and clinical level.

PT 5411. Lab for PT 5410. 1 Hour.
Examines the detailed structure of the human nervous system in specimens of the human brain and spinal cord as well as in images of stained sections of these tissues and magnetic resonance images (MRI). The structure of individual nuclei and the main sensory and motor tracts of the nervous system are examined and discussed by students working in small groups. Although focusing on anatomical details, the lab introduces the student to clinical diagnosis of neurological cases.
PT 5500. Pharmacology for Physical Therapy. 4 Hours.
Offers a clinically oriented course covering knowledge of clinical pharmacology in the physical therapy profession. Discusses prescription and over-the-counter drugs and common herbal supplements. Drug classification, pharmacokinetics, pharmacodynamics, mechanism of action, drug interactions, and common side effects are brought into the clinical perspective of patient management. Explores recognition of expected drug effects, side effects, idiosyncratic reactions, and signs of abuse or nonadherence. Emphasizes the therapist’s proper incorporation of pharmacotherapeutic knowledge into patient assessment, differential diagnosis, and design of treatment regimens.

PT 5503. Cardiovascular and Pulmonary Management. 4 Hours.
Discusses physical therapy examination evaluation, interventions, and outcome assessment of common cardiac and pulmonary dysfunctions. Discusses etiology and pathology of common cardiac and pulmonary disorders. Uses case-based learning to promote synthesis of the material.

PT 5504. Lab for PT 5503. 1 Hour.
Accompanies PT 5503. Covers topics from the course through various experiments.

PT 5505. Musculoskeletal Management 1. 4 Hours.
Discusses physical therapy examination evaluation, interventions, and outcome assessment of common musculoskeletal dysfunctions. Uses case-based learning to promote synthesis of the material.

PT 5506. Lab for PT 5505. 1 Hour.
Accompanies PT 5505. Covers topics from the course through various experiments.

PT 5515. Integumentary Systems and Advanced Modalities. 2 Hours.
Applies anatomy, physiology, epidemiology, and pathology to explore the issues of medical, surgical, pharmacological, and psychological and physical therapy management of individuals throughout the life span with integumentary system impairments. Provides students with the opportunity to develop examination skills to derive diagnoses, prognoses, evaluations, and effective physical therapy interventions based on relevant evidence. Builds on information from PT 5104 to include electrophysiological testing and interpretation. Uses case studies to integrate the information learned in class.

PT 5516. Lab for PT 5515. 1 Hour.
Accompanies PT 5515. Covers topics from the course through various experiments.

PT 5520. Clinical Integration 1: Evidence and Practice. 2 Hours.
Prepares physical therapy students to safely manage patients in all inpatient settings, such as the acute and critical care settings and the acute rehabilitation and skilled nursing home settings. Focuses on integrative analysis of multiple disease processes (spanning all practice patterns of musculoskeletal, neuromuscular, cardiovascular, pulmonary, and integumentary) and their respective medical and surgical management that is relevant to physical therapy management encountered in these settings. Helps to enhance the student’s understanding of the scientific basis of physical therapy through a review of current scientific research, thereby helping the student to develop a foundation for evidence-based practice in these inpatient settings.

PT 5521. Case Studies for PT 5520. 1 Hour.
Discusses case studies relevant to the topics of PT 5520.

PT 5540. Clinical Integration 1: Evidence and Practice. 2 Hours.
Designed to prepare physical therapy students to integrate previous courses taught in the curriculum to safely manage patients in the acute-care setting, including the intensive-care unit, the critical-care unit, and step-down settings. Uses a combination of lecture, instruction in the simulation center, and standardized patient interactions. Follows the “Guide to Physical Therapy Practice for Evaluation and Intervention” in these settings. Offers students an opportunity to learn to perform an examination; to evaluate examination data to formulate a plan of care; to provide interventions; to determine a discharge plan for individuals in the acute-care environment; and to demonstrate core professional values in classroom, recitation, and standardized patient interactions.

PT 5500. Pharmacology for Physical Therapy. 4 Hours.
Offers a clinically oriented course covering knowledge of clinical pharmacology in the physical therapy profession. Discusses prescription and over-the-counter drugs and common herbal supplements. Drug classification, pharmacokinetics, pharmacodynamics, mechanism of action, drug interactions, and common side effects are brought into the clinical perspective of patient management. Explores recognition of expected drug effects, side effects, idiosyncratic reactions, and signs of abuse or nonadherence. Emphasizes the therapist’s proper incorporation of pharmacotherapeutic knowledge into patient assessment, differential diagnosis, and design of treatment regimens.

PT 5503. Cardiovascular and Pulmonary Management. 4 Hours.
Discusses physical therapy examination evaluation, interventions, and outcome assessment of common cardiac and pulmonary dysfunctions. Discusses etiology and pathology of common cardiac and pulmonary disorders. Uses case-based learning to promote synthesis of the material.

PT 5504. Lab for PT 5503. 1 Hour.
Accompanies PT 5503. Covers topics from the course through various experiments.

PT 5505. Musculoskeletal Management 1. 4 Hours.
Discusses physical therapy examination evaluation, interventions, and outcome assessment of common musculoskeletal dysfunctions. Uses case-based learning to promote synthesis of the material.

PT 5506. Lab for PT 5505. 1 Hour.
Accompanies PT 5505. Covers topics from the course through various experiments.

PT 5515. Integumentary Systems and Advanced Modalities. 2 Hours.
Applies anatomy, physiology, epidemiology, and pathology to explore the issues of medical, surgical, pharmacological, and psychological and physical therapy management of individuals throughout the life span with integumentary system impairments. Provides students with the opportunity to develop examination skills to derive diagnoses, prognoses, evaluations, and effective physical therapy interventions based on relevant evidence. Builds on information from PT 5104 to include electrophysiological testing and interpretation. Uses case studies to integrate the information learned in class.

PT 5516. Lab for PT 5515. 1 Hour.
Accompanies PT 5515. Covers topics from the course through various experiments.

PT 5520. Clinical Integration 1: Evidence and Practice. 2 Hours.
Prepares physical therapy students to safely manage patients in all inpatient settings, such as the acute and critical care settings and the acute rehabilitation and skilled nursing home settings. Focuses on integrative analysis of multiple disease processes (spanning all practice patterns of musculoskeletal, neuromuscular, cardiovascular, pulmonary, and integumentary) and their respective medical and surgical management that is relevant to physical therapy management encountered in these settings. Helps to enhance the student’s understanding of the scientific basis of physical therapy through a review of current scientific research, thereby helping the student to develop a foundation for evidence-based practice in these inpatient settings.

PT 5521. Case Studies for PT 5520. 1 Hour.
Discusses case studies relevant to the topics of PT 5520.
PT 5730. Global Perspectives in Disability and Health. 4 Hours.
Addresses the issues of disability relative to culture, public policy, rights, and advocacy. People with disabilities are less likely to receive necessary healthcare and rehabilitation services and as a consequence experience poorer health outcomes and mortality. Explores the effects of cultural beliefs, social attitudes, and stigma toward people with disabilities. Evaluates the impact of poverty, sociopolitical conditions, health economics, and resource allocation issues. Analyzes charitable contributions, by human rights and other organizations, to the needs of people with disabilities in underserved areas to identify both desirable and undesirable impacts. This interprofessional course offers students an opportunity to gain a broad understanding of complex and dynamic issues concerning people with disabilities in underserved and globally diverse settings.

PT 5740. Disabilities Practicum. 4 Hours.
Offers students an opportunity to work with a public agency, volunteer group, school system, parent collaborative, charitable organization, or other group that provides services for adults and/or children with disabilities. Designed to provide experiential learning while working with individuals or groups who have unmet needs in achieving their mission or objectives. The student, practicum coordinator, and a site supervisor develop a contract detailing the expected outcome(s) to be achieved. Examples include developing a new policy, performing a needs assessment, performing a literature search, writing a position paper addressing an important question, developing a training manual, or developing an advocacy plan. Requires working a minimum of sixty hours.

PT 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PT 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PT 6000. Leadership, Administration, and Management. 2 Hours.
Offers students an opportunity to develop the ability to analyze and evaluate changes in the healthcare system, health policy, and the impact on the delivery of services with a focus on physical therapy. Appraises key business and management concepts, including personnel, insurance, finance, marketing, productivity, and financial and legal regulations within the context of ethical practice. Emphasizes and examines leadership concepts in the areas of advocacy, legislation, and the promotion of the profession.

PT 6215. Assistive Technology. 3 Hours.
Studies theory and current practice in the use of prosthetics, orthotics, and assisted-living devices.

PT 6216. Lab for PT 6215. 1 Hour.
 Accompanies PT 6215. Covers topics from the course through various experiments.

PT 6219. Physical Therapy Administration. 4 Hours.
Explores concepts in administration and management applied to physical therapy. Involves seminar and discussion groups.

PT 6221. Neurological Rehabilitation 2. 4 Hours.
Focuses on the physical therapy management of adults with neurological dysfunctions. Concentrates on management of functional activity limitations, participation restrictions, and impairments resulting from neurological disease and/or trauma. Offers students an opportunity to learn about the etiology, pathology, clinical signs, and medical management of adults with neurological disorders; to learn to perform an examination, evaluate the examination data to formulate a plan of care, and provide interventions; and to use evidence-based decision making.

PT 6222. Lab for PT 6221. 1 Hour.
 Accompanies PT 6221. Covers topics from the course through various experiments.

PT 6223. Musculoskeletal Management 2. 4 Hours.
Provides an in-depth analysis of musculoskeletal management. Compares intervention protocols as an integral component of this course. Allows, in the lab component, for practical application of spinal joint mobilization, modalities, ergonomic assessment, functional training, and therapeutic exercise. Uses case-based learning to promote synthesis of the material.

PT 6224. Lab for PT 6223. 1 Hour.
 Accompanies PT 6223. Covers topics from the course through various experiments.

PT 6231. Advanced Physical Therapy Topics in Pediatrics. 2 Hours.
Provides students with an opportunity to obtain in-depth knowledge in pediatrics and physical therapy. Course topics vary each semester offered. Topics are determined by significant events and changes in the field. This course may be taken more than once, as long as topics are different. May be repeated without limit.

PT 6232. Advanced Physical Therapy Topics in Spine. 2 Hours.
Provides students with an opportunity to obtain in-depth knowledge in spine and physical therapy. Course topics vary each semester offered. Topics are determined by significant events and changes in the field. This course may be taken more than once, as long as topics are different. May be repeated without limit.

PT 6233. Advanced Physical Therapy Topics in Orthopedics. 2 Hours.
Provides students with an opportunity to obtain in-depth knowledge in orthopedics and physical therapy. Course topics vary each semester offered. Topics are determined by significant events and changes in the field. This course may be taken more than once, as long as topics are different. May be repeated without limit.

PT 6234. Advanced Physical Therapy Topics in Alternative Medicine. 2 Hours.
Provides students with an opportunity to obtain in-depth knowledge in alternative medicine and physical therapy. Course topics vary each semester offered. Topics are determined by significant events and changes in the field. This course may be taken more than once, as long as topics are different. May be repeated without limit.

PT 6235. Advanced Physical Therapy Topics in Geriatrics. 2 Hours.
Provides students with an opportunity to obtain in-depth knowledge in geriatrics and physical therapy. Course topics vary each semester offered. Topics are determined by significant events and changes in the field. This course may be taken more than once, as long as topics are different. May be repeated without limit.

PT 6236. Advanced Physical Therapy Topics in Cardiovascular/Pulmonary. 2 Hours.
Provides students with an opportunity to obtain in-depth knowledge in cardiovascular/pulmonary physical therapy. Course topics vary each semester offered. Topics are determined by significant events and changes in the field. This course may be taken more than once, as long as topics are different. May be repeated without limit.
PT 6237. Advanced Special Topics in Physical Therapy. 2 Hours.
Provides students with an opportunity to obtain in-depth knowledge in a
specific physical therapy topic area. Course topics vary each semester
offered. Topics are determined by significant events and changes in the
field. This course may be taken more than once, as long as topics are
different. May be repeated without limit.

PT 6239. Intercultural Healthcare Delivery Systems—Physical Therapy. 4
Hours.
Engages students with the culture, civilization, and people of the
countries studied and visited. Seeks to provide students with an in-
depth and on-site experience, exposing them to the history, anthropology,
philosophy, culture, and arts with a special focus on the healthcare
system in the country of study. Encourages students to connect with
their peers in each country/society and gain a “global experience”
designed to enhance their academic studies on campus in Boston. The
experience culminates in an independent service project conducted
by the students before, during, and after their time in-country. May be
repeated without limit.

PT 6240. Differential Diagnosis in Physical Therapy. 3 Hours.
Teaches physical therapy students how to conduct comprehensive
physical therapy evaluations on a variety of patient populations
across the life span, in order to determine the need for further medical
consultation and/or to develop an accurate physical therapy diagnosis.
Emphasizes developing efficiency through skillful sequencing of
examination techniques along with providing rationale during the
diagnostic process.

PT 6241. Screening for Medical Conditions in Physical Therapy Practice.
4 Hours.
Designed to prepare physical therapy students to recognize the signs
and symptoms of medical conditions and adverse drug reactions as they
relate to patient examination and to triage appropriately. Emphasizes
screening for medical conditions with the goal of recognizing red, yellow,
and green flags as they relate to patient care. Stresses medical referral
to other health care practitioners in an efficient and effective manner.

PT 6243. Health Education, Promotion, and Wellness. 3 Hours.
Covers health promotion, wellness, disease, impairment, functional
limitations, disability, and health risks. Offers students an opportunity to
explore their consultative role to business, schools, government agencies,
and other organizations.

PT 6244. Recitation for PT 6243. 0 Hours.
Provides small-group discussion format to cover material in PT 6243.

PT 6250. Clinical Integration 2: Evidence and Practice. 2 Hours.
Offers students an opportunity to practice demonstrating core
professional values in classroom, recitation, and standardized patient
interactions and to learn how to skillfully manage complex patients
across the life span and across practice patterns in a variety of clinical
settings. Integrates evidence-based content from previous courses in the
curriculum. Introduces special topics in physical therapy, including
bariatric care, home care, and hospice.

PT 6251. Diagnostic Imaging. 3 Hours.
Designed to integrate diagnostic imaging principles and techniques
relevant to physical therapy practice. Reviews commonly used diagnostic
imaging techniques and discusses clinical case studies in a case-based
online course.

PT 6441. Clinical Education 1. 6 Hours.
Provides students with opportunities to practice examination, evaluation,
and intervention skills previously learned in the classroom and on co-op.
Students work under the supervision and guidance of a licensed physical
therapist.

PT 6442. Clinical Education 2. 6 Hours.
Continues PT 6441. Provides students with additional opportunities to
practice examination, evaluation, and intervention skills learned in the
classroom and during the previous course. Students are expected to
function at a higher level requiring less supervision and guidance from
a licensed physical therapist than was needed during their first clinical
education experience.

PT 6448. Clinical Education 3. 9 Hours.
Designed to provide students with the opportunity to meet entry-
level requirements to practice as physical therapists. Supervised and
guided by a licensed physical therapist, students practice examination,
evaluation, intervention, documentation, and administrative skills and
are expected to function at the level of a new graduate by the completion
of this experience. Includes a written assignment. Helps students,
through reflection of what they have learned, identify who they are as
professionals, establish early career goals, and provide insight for the
need to be a lifelong learner.

PT 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.
May be repeated without limit.

PT 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience.

PT 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.
May be repeated without limit.

PT 6978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the
department on a chosen topic. Course content depends on instructor.
May be repeated without limit.

PTH 0800. Management of the Foot and Ankle Complex. 1.7 Hour.
Reviews the examination and treatment of selected foot and ankle
pathologies impacting patients across the adult life span. Through
lecture presentations, hands-on laboratory sessions, and discussions of
clinical presentations and case studies, offers participants an opportunity
to gain an understanding of normal and abnormal gait as it relates to
orthopedic dysfunction and various foot and ankle pathologies, as well as
evidence-based treatment interventions to maximize function. Restricted
to practicing physical therapists only.

PTH 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the
department on a chosen topic.

PTH 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the
department on a chosen topic.

PTH 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty
supervision.

PTH 6100. Differential Diagnosis and Medical Screening. 4 Hours.
Provides students an opportunity to obtain the knowledge and skills to
competently screen patients for non-neuromusculoskeletal conditions,
interpret clinical findings, and make sound clinical judgments that include
providing appropriate referral when beyond the scope of physical therapy
practice. Emphasizes diagnostics theory and process skills for a physical
therapist to perform a complete and thorough history and relevant
regional physical examination.
PTH 6102. Cultural Competency for Healthcare Providers. 1 Hour.
Seeks to address the American Physical Therapy Association's mandate that physical therapists have the necessary skills, knowledge, and attitudes to treat patients with a wide range of differences. These differences are not limited to race or ethnicity alone; therefore, it is not sufficient to instruct students in the characteristics of a particular non-Anglo-European culture. As noted in the Code of Ethics, physical therapists must be able to understand, value, and individualize patient communication and interventions to reflect these differences. Offers students an opportunity to begin developing an understanding and respect for cultural and personal differences and to build a foundation for further professional growth.

PTH 6103. Consultation, Delegation, and Screening. 1 Hour.
Offers parameters for legal and ethical delegation to others. Offers students an opportunity to obtain the knowledge and skills to determine when a person requires further evaluation by a physical therapist or referral to another healthcare professional when the findings are beyond the scope of physical therapy practice. In addition, students are expected to acquire skills in providing consultation to nonpatient groups and to individuals who are responsible for the health needs of the community. This may involve working with groups of clients, policymakers, healthcare providers, and community-service workers.

PTH 6104. Integumentary System. 2 Hours.
Discusses the physical therapist patient management process as it applies to the integumentary system. Examines the process of normal wound healing and the role of the physical therapist in the management of wounds. Covers pressure ulcers, ulcers due to venous and arterial insufficiency, diabetic ulcers, and burns. Details the examination, evaluation, diagnosis, prognosis, intervention, and outcome assessment of each wound category. Incorporates the use of case studies to integrate the information. Requires permission of instructor for students without a physical therapy degree.

PTH 6105. Metabolic Disorders. 2 Hours.
 Offers a clinically oriented course that discusses the physical therapist patient management process as it applies to metabolic disorders. Presents basic medical science and medical management of diabetes mellitus (DM), thyroid, parathyroid, and bone disorders, steroid therapy, liver disease, and metabolic syndrome. Details the role of the physical therapist in examination, evaluation, diagnosis, prognosis, intervention, and outcome assessment involving the most common endocrine and metabolic problems encountered in physical therapy practice. Includes the use of case studies. Offers students an opportunity to synthesize their own physical therapy diagnosis and plan of care for patients with metabolic disorders. Requires prior completion of degree in physical therapy.

PTH 6110. Diagnostic Imaging. 4 Hours.
Introduces the practicing physical therapist to clinical interpretation of various medical imaging techniques, including plain film radiography, magnetic resonance imaging, and computerized tomography. Emphasizes developing familiarity with the visual appearance of various image modalities, recognition and appreciation of common views employed, assessment of normal and abnormal anatomy, and avoidance of common pitfalls in clinical interpretation within the scope of physical therapy practice.

PTH 6120. Clinical Nutrition. 3 Hours.
Covers the fundamental role of nutrition in promoting health with special emphasis on the physiological functions of energy-providing nutrients in the body and their interrelationships. Offers health professionals an opportunity to learn how to effectively communicate public health promotion strategies, techniques used to teach diet and nutrition, and behavioral theories used in diet and nutrition intervention. Emphasizes clinical applications for the treatment of weight disorders, diabetes, cardiovascular disease, eating disorders, and nutrition in the life cycle. Examines nutrition across the life span along with the nutritional requirements needed to maintain good health and to promote healing and rehabilitation.

PTH 6130. Pharmacology. 3 Hours.
Covers advanced concepts of pharmacologic management of patients/ clients and the interrelationship of pharmacologic management with physical therapy interventions. This includes the physiological processes involved in pharmacodynamics as well as pharmacokinetics with nutrition, absorption, distribution, metabolism, and excretion. Offers students an opportunity to learn how to identify those drugs commonly taken by physical therapy patients and their side effects.

PTH 6140. Motor Control. 4 Hours.
Examines advanced topics in motor control and learning. Involves the study of mechanisms underlying the production, control, and rehabilitation of movement control and motor learning. The application of current research to clinical practice across a variety of settings is a vital component of this course. Discusses the behavioral, neural, cognitive, and physical components of motor control and learning, emphasizing the integration of these with physical therapy practice.

PTH 6220. Research Methods and Statistical Analysis. 5 Hours.
Presents a computer-oriented introduction to statistical methods with applications in life science. Incorporates descriptive statistics, correlation, probability and regression, and the fundamentals of statistical inference. Discusses the relevance of research and statistical analysis in determining the evidence for the effectiveness of physical therapy.

PTH 6222. Fostering Change in Health Behavior. 4 Hours.
Covers the health behavior theories that underpin interventions to promote change in health behavior. Includes theories that describe change within the individual; the family; in communities; and change in larger populations, including governmental health policy. Explores the technique of motivational interviewing. Offers students an opportunity to complete a case study incorporating all aspects of the course in unique situations.

PTH 6225. Health Promotion and Education. 4 Hours.
Covers prevention, health promotion, and wellness programs that reduce the risk of injury, disease, and disability of patients/clients. Includes screening, conducting fitness programs, assessing effectiveness, and referring out to other professionals or community programs when necessary. Requires students to critically analyze his or her individual program of health maintenance and health promotion.
PHYSICAL THERAPY 6235. Administrative and Management Keys for Contemporary Physical Therapist Practice. 4 Hours.
Introduces physical therapists to the latest delivery models of practice and offers the underlying rationale for recent and pending evolutionary reform changes affecting practice. Expounds upon both the clinical and administrative responsibility and accountability essential for all contemporary physical therapy practice success. Presents the clinical competencies that are essential and define direct-access physical therapy. Explores additional administration and management concepts with regard to developing a business plan; managing finances, facilities, and staff; assessing outcomes; and engaging in marketing and public relations. Reviews current trends in payment for physical therapy services as related to implementing the marketing strategies necessary to promote and defend autonomous, yet collaborative, models of physical therapy care.

PHYSICAL THERAPY 6400. Orthopedics: Shoulder. 4 Hours.
Designed to provide the clinician with the most current, pertinent scientific evidence and information regarding the rehabilitation of the shoulder. Through lecture, discussion, and case studies, offers students an opportunity to improve their critical thinking and decision making regarding the examination and treatment of selected shoulder disorders.

PHYSICAL THERAPY 6402. Orthopedics: The Cervical Spine. 4 Hours.
Addresses the foundations of clinical reasoning, differential diagnosis, and interventions for common cervical spine disorders. Includes interpretation and analysis of examination findings based on the patient/client management model; integration of evidence supporting the use of selected special tests; clinical presentations of common cervical spine disorders; effective evidence-based rehabilitation programs for common cervical spine disorders; and evidence-based case studies for patients with cervical spine disorders utilizing current evidence and the patient/client management model. Includes a critical review of the related evidence as it pertains to the appropriate topics addressed.

PHYSICAL THERAPY 6403. Orthopedics: Foot and Ankle. 4 Hours.
Focuses on foot and ankle pathology, common in physical therapy practice. Overuse injuries are often a result of abnormal foot mechanics or due to imbalances higher in the kinetic chain. Demonstrates how abnormal foot mechanics can contribute to lower extremity pathology. Uses lecture presentations, literature review, and discussion of clinical presentations and case studies to offer students an opportunity to gain an understanding of normal and abnormal gait as it relates to orthopedic dysfunction and to learn various treatment interventions to address faulty biomechanics.

PHYSICAL THERAPY 6430. Educational Strategies for Effective Healthcare Delivery. 4 Hours.
Explores the diverse and growing teaching expectations and opportunities for physical therapists, including the roles of educator with students, patients/clients, family members, and in the community with an emphasis on cultural sensitivity. The role of physical therapist as educator requires an understanding of educational theory and pedagogy in various settings, from one-on-one sessions with a patient/client, to classroom situations, to public speaking in front of large and diverse crowds.

PHYSICAL THERAPY 6440. Urban Health. 4 Hours.
Introduces the fundamentals of urban health and all associated aspects in relation to practice as a doctoring professional. Explores the concept of adapting practice by considering differences in culture, gender, age, sexual orientation, and disability or health status. Offers students an opportunity to participate in activities and critical inquiry so as to enhance awareness and self-awareness of cultural and individual differences and their relationship to professional practice and interactions, as well as to utilize epidemiological principles and data to promote optimal health and provide consultation for patients/clients in a variety of urban settings.

PHYSICAL THERAPY 6450. Orthopedics: Recent Advances for the Knee—Evaluation and Interventions. 4 Hours.
Designed to present to the clinician the most recent and state-of-the-art information in the evaluation and treatment of selected knee disorders. Seeks to provide the clinician with the most pertinent information regarding the rehabilitation of these pathologies based on current evidence and to provide the scientific and clinical rationale behind knee examination and treatment techniques.

PHYSICAL THERAPY 6460. Research and Grant Writing. 4 Hours.
Covers advanced topics in research. Offers students an opportunity to prepare to effectively and critically analyze research literature related to healthcare and, in particular, physical therapy practice. Includes elements of advanced research design and statistical analysis. The course serves as a basic introduction to grant writing, and all students are expected to develop a small grant proposal.

PHYSICAL THERAPY 6470. Business Management for Physical Therapists. 4 Hours.
Emphasizes the design of a business plan, community needs analysis, financial management, marketing and public relations, quality improvement, the role of technology, and networking. Explores the roles of the physical therapist as a consultant, conflict manager, negotiator, and advocate in numerous settings. Although this course may emphasize the private practitioner by covering business management, the information is beneficial for any physical therapist.

PHYSICAL THERAPY 6480. Evidence-Based Exercise for the Older Adult. 4 Hours.
Seeks to supply the clinician with the most current and pertinent scientific evidence regarding the role of exercise in older adults. Offers students an opportunity to learn best practices to create an exercise prescription. Employs lectures, discussion boards, and case-study analysis to investigate the cardiopulmonary, musculoskeletal, integumentary, and neuromuscular systems involved in health of older adults. Offers students an opportunity to design exercise prescriptions for special populations, including those individuals with osteoporosis, diabetes, arthritis, and cardiopulmonary disease.

PHYSICAL THERAPY 6490. Pediatric Physical Therapy: Emerging Topics and Evidence-Based Practice. 4 Hours.
Offers a forum for discussing current and pertinent scientific evidence on pediatric physical therapy. Topics include updated information on new medical diagnoses and the role of physical therapy (e.g., mitochondrial disorders), current evidence with regard to tests and measures, interventions, and adaptive equipment. Presents information on emerging and complementary and alternative therapies. Utilizes a variety of learning experiences, including online lecture, discussion, and case studies. Involves students in topic selection, literature presentations, and clinical case studies.
PTH 6560. Patient Management Models and Evidence-Based Practice in Orthopedics. 2 Hours.
Examines the differential diagnosis process as it relates to orthopedic physical therapy. Discusses systems of classification in diagnosis and how this relates to interventions and outcomes in orthopedic physical therapy. Focuses on analyzing the literature to include clinical predictor rules and discusses how evidence informs practice.

PTH 6561. Evidence-Based Examination and Outcomes for the Cervical-Thoracic Spine and Temporomandibular Joint. 4 Hours.
Reviews the anatomy and biomechanics of the cervical-thoracic spine and temporomandibular joint as it relates to musculoskeletal dysfunction. Presents an update on current medical and surgical interventions. Incorporates evidence from the literature to guide clinical reasoning, differential diagnosis, evaluation, and interventions for common cervical-thoracic spine and temporomandibular joint disorders. Interprets and analyzes the impact of pharmacology and diagnostic imaging based on the patient/client management model.

PTH 6562. Evidence-Based Examination and Outcomes for Upper Extremity: Shoulder, Elbow, and Hand. 4 Hours.
Reviews the anatomy and biomechanics of the shoulder, elbow, wrist, and hand as it relates to musculoskeletal dysfunction. Seeks to provide the clinician with current, pertinent scientific evidence regarding the rehabilitation of the upper extremity to inform evidence-based practice. Interprets and analyzes the impact of pharmacology and diagnostic imaging in guiding differential diagnosis based on the patient/client management model. Offers students an opportunity to improve critical thinking and decision making regarding the examination and treatment of selected upper-extremity disorders.

PTH 6563. Evidence-Based Examination and Outcomes for Lumbar Spine and Sacroiliac Joint. 4 Hours.
Reviews the anatomy and biomechanics of the lumbar spine and sacroiliac joint as it relates to musculoskeletal dysfunction. Presents an update on current medical and surgical interventions. Offers students an opportunity to use group case studies to improve their evidence-informed clinical decision making regarding the examination of the lumbar spine and sacroiliac joint. Analyzes the most current, pertinent scientific evidence and information regarding the rehabilitation of the lumbar spine and sacroiliac joint to include manipulation, imaging, and pharmacology.

PTH 6564. Evidence-Based Examination and Outcomes for Lower Extremity: Hip, Knee, Foot, and Ankle. 4 Hours.
Reviews the anatomy and biomechanics of the hip, knee, ankle, and foot as it relates to musculoskeletal dysfunction. Offers students an opportunity to use case studies to gain advanced understanding of normal and abnormal gait as it relates to orthopedic dysfunction and to learn interventions to address faulty biomechanics. Seeks to provide clinicians with the most relevant information regarding evidence-informed rehabilitation for lower-extremity examination and treatment techniques.

PTH 6900. Comprehensive Case Analysis. 4 Hours.
Offers students an opportunity to write a comprehensive and publishable case report, refine it, and analyze it with integration of the components of the patient/client management model, the processes of clinical decision making, and the effective and efficient use of resources. Cases include patients/clients from one of the four categories of conditions that make up the preferred practice patterns in the Guide to Physical Therapist Practice. This case includes information from all courses taken as part of the Doctorate in Physical Therapy and serves as a capstone for the program.

PTH 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

PTH 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PTH 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

PTH 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

PTH 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

PTH 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

PTH 6983. Topics in Physical Therapy. 4 Hours.
Provides students with an opportunity to study a specific area of interest that is not an elective already listed by completing a related course for credit as an elective in the DPT program. Requires the student to have the permission of the instructor as well as the director of the transitional DPT Program prior to taking the course.

PTH 6985. Psychosocial and Emotional Challenges Facing Older Adults. 4 Hours.
Analyzes and discusses the effects of the challenges on daily function of older adults, emphasizing the importance to the physical therapy clinician of recognizing and understanding these challenges. Along with significant physical changes that occur with aging, older adults often experience changes in cognition, socioeconomic status, psychological health, and stress on caregivers. Topics include depression, anxiety, PTSD, substance abuse, cognitive processing changes, family/caregiver burden, and the cumulative impact of loss and grief. Employs several learning activities, including online lectures, discussion of current research literature, and case discussions. Offers students an opportunity to develop a clinical case scenario and to propose an evidence-based solution to a problem faced by their “client.” The solutions provide a potential model of service that can be utilized by others.

PTH 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

**Physician Assistant (PA)**

PA 6200. Anatomy and Physiology 1. 3 Hours.
Considers the structure of the human body, highlighting features of clinical importance. Covers the musculoskeletal, neurologic, cardiovascular, respiratory, gastrointestinal, endocrine, and renal systems. Also includes cadaver laboratory sessions.

PA 6201. Anatomy and Physiology 2. 3 Hours.
Continues PA 6200. Considers the structure of the human body, highlighting features of clinical importance. Covers the musculoskeletal, neurologic, cardiovascular, respiratory, gastrointestinal, endocrine, and renal systems.

PA 6203. Physical Diagnosis and Patient Evaluation 1. 3 Hours.
Presents techniques to elicit accurate medical histories, perform appropriate physical examinations, make case presentations, and document patient information. Covers such issues as confidentiality and use of supervision. Emphasizes cultural issues in dealing with patients and working with terminally ill patients.

PA 6204. Physical Diagnosis and Patient Evaluation 2. 3 Hours.
Continues PA 6203.
PA 6205. Pharmacology 1. 2 Hours.
Covers the classification, mechanisms of action, and uses of a spectrum of therapeutic agents. Emphasizes dose response, side effects, adverse reactions, the meaning of taking medications, and the role of culture. Required for all students.

PA 6206. Pharmacology 2. 2 Hours.
Continues PA 6205. Examines the classification, mechanisms of action, and use of a broad spectrum of therapeutic agents. Focuses on dose response, side effects, adverse reactions, and the role of patient compliance in medication effectiveness.

PA 6207. Clinical Laboratory and Diagnostic Methods. 4 Hours.
Covers radiology, clinical laboratory tests, and electrocardiography. Includes basic principles of radiology and interpretation of clinical laboratory diagnostic tests, demonstration and practice of various laboratory methods, and EKG theory and interpretation.

PA 6208. Professional Issues for Physician Assistants. 2 Hours.
Offers students the opportunity to understand their professional environment, community resources, legal parameters, and ethical situations they may face. Also addresses interpersonal dynamics in working with physicians and other healthcare providers. Some material is covered in problem-based learning sessions.

PA 6311. Principles of Medicine 1. 4 Hours.
Presents a systems approach to the principles of disease processes in people. Topics include physiology, pathophysiology, the natural history of disease, diagnostic procedures, and nutritional and therapeutic measures. Usually covers pulmonology, hematology, immunology, rheumatology, endocrinology, and cardiology.

PA 6312. Principles of Medicine 2. 4 Hours.
Continues PA 6311. Usually covers infectious disease, oncology, gastroenterology, and dermatology.

PA 6313. Principles of Medicine 3. 4 Hours.
Continues PA 6312. Uses a case study format to involve students in planning the management of common disease states. Helps students understand the clinical use of common therapeutic agents and how to maximize compliance.

PA 6320. Principles of Obstetrics and Gynecology. 2 Hours.
Presents the anatomy and physiology of the human reproductive system and the methods, effectiveness, and contraindications of contraception. Emphasizes the causes, signs, and treatments of common gynecological problems, including the significance of early cancer detection. Addresses diagnosing and treating sexually transmitted diseases. Presents physiologic and psychological changes, nutrition, prenatal care, and medical and surgical complications during pregnancy, labor, and delivery. Also covers the emotional aspects and management of the pre- and postnatal periods.

PA 6321. Principles of Surgery. 2 Hours.
Studies major and minor surgical conditions, emphasizing indications for surgical intervention and pre- and postoperative management in both ambulatory and inpatient settings, and patients’ emotional responses to major surgery.

PA 6322. Principles of Orthopedics. 2 Hours.
Discusses common orthopedic problems, including those of the hand, knee, shoulder, and back. Examines special problems of acute trauma and managing uncomplicated orthopedic cases. Also considers such topics as how to complete an adequate patient medical history and perform a physical examination of an orthopedic patient.

PA 6323. Clinical Neurology. 2 Hours.
Presents the clinical application of neuroanatomy and neurophysiology. Offers the opportunity to develop an understanding of the nervous system's normal functioning as well as a clinical approach to assessing and managing nervous system disorders and disease states, and their effects on patients and their families.

PA 6324. Principles of Pediatrics. 2 Hours.
Provides an opportunity to understand how to work with patients and families exhibiting psychiatric problems. Includes such topics as psychological growth and development, psychiatric diagnoses, and the effect of social milieu on behavior, the psychological bases of drug and alcohol abuse, the dynamics of psychosomatic problems, the role of culture in self-concepts, and family attitudes toward mental illness as well as appropriate psychotropic medications.

PA 6325. Principles of Psychiatry. 2 Hours.
Provides an opportunity to understand how to work with patients and families exhibiting psychiatric problems. Includes such topics as psychological growth and development, psychiatric diagnoses, and the effect of social milieu on behavior, the psychological bases of drug and alcohol abuse, the dynamics of psychosomatic problems, the role of culture in self-concepts, and family attitudes toward mental illness as well as appropriate psychotropic medications.

PA 6326. Aspects of Primary Care. 4 Hours.
Studies approaches to and management of the patient in a primary care setting. Discusses specific diseases and medical conditions common to primary care, including HIV/AIDS. Considers psychosocial aspects of disease as well as aspects of prevention.

PA 6327. Emergency Medicine and Critical Care. 2 Hours.
Studies techniques of effective planning and decision making for patients with significant acute and chronic problems. Discusses the purposes, techniques, and potential of rehabilitation medicine. Also focuses on biological changes of aging and appropriate theories of management.

PA 6328. Aging and Rehabilitation Medicine. 2 Hours.
Studies techniques of effective planning and decision making for patients with significant acute and chronic problems. Discusses the purposes, techniques, and potential of rehabilitation medicine. Also focuses on biological changes of aging and appropriate theories of management.

PA 6329. Healthcare Delivery. 2 Hours.
Studies techniques of effective planning and decision making for patients with significant acute and chronic problems. Discusses the purposes, techniques, and potential of rehabilitation medicine. Also focuses on biological changes of aging and appropriate theories of management.

PA 6330. Research Design. 2 Hours.
Considers research methods and designs used in varied professional settings. Emphasizes development of research techniques, including the ability to define research problems; write hypotheses; review and interpret literature; apply research designs; organize, analyze, and present data; and draw relevant conclusions.
PA 6400. Applied Study in Medicine. 5 Hours.
Offers students the opportunity to take and record medical histories and perform physical examinations during this inpatient hospital rotation. Familiarizes students with the assessment and management of varied medical problems by attending medical rounds and conferences, performing diagnostic procedures, presenting case write-ups, recording progress notes, and working under the supervision of a physician. Emphasizes the skills of collecting, assessing, and presenting patient data for physician review; ordering appropriate laboratory and diagnostic studies; counseling patients about therapeutic procedures; and helping to coordinate the contributions of other health professionals involved in management of the patient. Requires successful completion of first-year physician assistant curriculum.

PA 6401. Applied Study in Ambulatory Medicine. 5 Hours.
Exposes students to aspects of ambulatory medical practice, emphasizing the patient as an individual and family member. Students typically encounter such common medical problems as hypertension, diabetes, and heart disease. Patient education, disease prevention, counseling, and integration of community services, as well as medical diagnosis and management, are a major part of this rotation. Requires successful completion of first-year physician assistant curriculum.

PA 6402. Applied Study in Family Practice. 5 Hours.
Affords students the opportunity to participate in providing healthcare to outpatients under the supervision of a primary care physician. Allows students to become involved in the initial assessment and management of individuals, as well as the ongoing assessment and management of patients with established diagnoses. Exposes students to common primary care problems and upper respiratory illness, constitutional complaints, and orthopedic injuries. Emphasizes assessing and managing both acute and chronic medical problems. Requires successful completion of first-year physician assistant curriculum.

PA 6403. Applied Study in Emergency Medicine. 5 Hours.
Familiarizes students with problems encountered in an emergency room. Students are responsible for taking medical histories and performing physical examinations on acute as well as nonemergent patients and presenting these to the medical preceptor. When appropriate, students perform necessary diagnostic and therapeutic measures. Exposes students, through clinical training and didactic sessions at the clinical site, to the emergency management and treatment of such conditions as trauma, shock, burns, asthma, poisoning, allergic reactions, seizures, and respiratory failure.

PA 6404. Applied Study in Obstetrics and Gynecology. 5 Hours.
Enables students to become involved with obstetrical and gynecological services provided by teaching hospitals. Emphasizes pre- and postnatal care, monitoring labor, assisting in deliveries, and developing the necessary skills to deliver a child in an emergency situation. Provides opportunities to take obstetrical histories and perform obstetrical examinations. During this rotation, students study how to assess and manage a variety of common gynecological problems and to counsel patients on family planning. Requires successful completion of first-year physician assistant curriculum.

PA 6405. Applied Study in Pediatrics. 5 Hours.
Develops students’ familiarity with outpatient pediatric problems in training clinics and private pediatric offices. Emphasizes caring for a child from birth through adolescence. Provides opportunities to take medical histories and perform pediatric physical examinations. Stresses diagnosing and managing common childhood illnesses and evaluating growth and development. Assists students in developing skills to counsel parents about immunizations, child visits, growth and development parameters, common psychosocial problems, nutrition, and accident and poisoning prevention. Students may also have the chance to learn how to administer immunizations and perform audio and visual screening. Requires successful completion of first-year physician assistant curriculum.

PA 6406. Applied Study in Surgery. 5 Hours.
Allows students to participate in varied surgical patient-care responsibilities under the supervision of a surgical resident or staff surgeon. Emphasizes general surgery, though students may have some exposure to other surgical specialties and subspecialties. Allows students to assist in surgical patients’ initial assessment, which includes obtaining accurate medical histories and performing physical examinations. As members of the surgical team, students participate in preoperative management, including patient education and procedures necessary to prepare patients for surgery. Allows students to assist surgeons in the operating room, when appropriate, and have an opportunity to become familiar with operating room procedures and equipment. Involves students in patients’ postoperative evaluation and management. When possible, students attend surgical grand rounds and other surgically oriented educational meetings. Requires successful completion of first-year physician assistant curriculum.

PA 6407. Applied Study in Mental Health. 5 Hours.
Exposes students to varied mental health problems in such settings as wards, clinics, and multiservice centers. Students are expected to perform mental status examinations and cognitive testing. Emphasizes recognizing various types of mental health problems that require referral to a specialist and managing problems that can be handled by the nonspecialist. Assists students in furthering their understanding of effective patient interactions and the mental health components of health, disease, and disability. Requires successful completion of first-year physician assistant curriculum.

PA 6408. Applied Study Elective. 5 Hours.
Provides exposure to an area of clinical medicine in which a student has a particular interest. Allows students to choose additional experience in an area covered in required rotations or select a subspecialty, such as orthopedics, cardiology, or geriatrics. Each elective rotation selection is reviewed and must be approved by the associate director. Requires successful completion of first-year physician assistant curriculum.

PA 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PA 6990. Thesis. 1-4 Hours.
Offers theoretical and experimental work conducted under the supervision of a departmental faculty. May be repeated without limit.
PHYS 1000. Physics at Northeastern. 1 Hour.
Intended for freshmen in the College of Science. Introduces freshmen to the liberal arts in general; familiarizes them with their major; helps them develop the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community; and helps them develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

PHYS 1111. Astronomy. 4 Hours.
Introduces modern astronomical ideas designed for nonscience majors. Topics include an introduction to the cosmos, Earth and its relation to the universe, our solar system (planets, moons, asteroids, and comets), the sun and how it works, stars and their classification, and the life and death of stars. Introduces various tools of the astronomer (the nature of light and radiation, telescopes, the types of spectra, and what they tell us).

PHYS 1121. Introduction to Science. 4 Hours.
Provides nonscience majors with an interdisciplinary treatment of the basic ideas of the natural sciences. Discusses concepts such as particles and waves, heat, optics, energy, gravity, and the atom, followed by a consideration of the ways in which atoms combine to form the substances that compose matter.

PHYS 1122. Modern Science: A Voyage into Matter, Life, and Mind. 4 Hours.
Offers an intellectual voyage into matter, life, and mind—the three pillars of modern science. It is a mosaic of different themes that offer a concise overview of science's greatest minds, ideas, questions, discoveries, theories, and methods while placing all of them within their historical contexts. Emphasizes the profound scientific revolutions of the 20th century—quantum mechanics, biogenetics, and artificial intelligence—that unlocked the secrets of the atom, unraveled the molecule of life, and created the electronic computer. Recognizes significant trends across a wide range of subjects, including medicine, biotechnology, computing and communicating, artificial intelligence and artificial life, and robotics. Discusses the synergy of science, technology, and business on future scientific development.

PHYS 1123. Physics for Future Leaders. 4 Hours.
Introduces basic concepts in physics and other sciences in a manner accessible to nonscience majors. Offers students an opportunity to learn to think scientifically about issues in the realm of public policy and current events. Topics may include fossil fuels and the energy economy, nuclear energy and nuclear weapons, radiation safety, alternative fuels and transportation, space exploration, climate change, and the greenhouse effect.

PHYS 1125. Introduction to Network Science: From the Human Cell to Facebook. 4 Hours.
Introduces network science as a way to understand complex patterns of connections and relationships in increasingly complex social, infrastructure, transportation, information, and biological networks, as well as business and consumer networks. Describes basic conceptual and computational tools to model networks and discusses applications of those tools through a wide range of examples from the World Wide Web to protein and gene networks to massive social networks such as Twitter and Facebook. Discusses both network structures and dynamical phenomena on networks, such as spreading of information, rumors, gossip, and epidemics.

PHYS 1130. Computing, Data, and Science. 4 Hours.
Introduces how to deal with data and computation problems through the use of computer languages commonly used in the sciences. Focuses on manipulating data, but symbolic calculations are also covered. Intended for science majors during the first summer, when such a course can act as a foundation for later work.

PHYS 1132. Energy, Environment, and Society. 4 Hours.
Seeks to provide nonscience students with a practical knowledge of our present use of the Earth's energy resources and the environmental consequences. Topics include fossil fuels for transportation and electrical power, global warming, nuclear energy, solar energy, wind power, biomass, electric and hybrid vehicles, and air pollution. No previous knowledge of physics is assumed; nevertheless, because of the nature of the subject, a significant part of the course includes simple quantitative reasoning.

PHYS 1141. General Physics. 4 Hours.
Covers mechanics, fluids, and vibrations and waves. Emphasizes the application of physics to a variety of problems in structural engineering. Mechanics topics include one-dimensional motion, forces, vectors, Newton's laws, equilibrium, work, energy, and power. Fluids topics include density, pressure, buoyancy, and fluids in motion. Vibrations and waves topics include mechanical vibrations and sound. Requires knowledge of algebra.

PHYS 1145. Physics for Life Sciences 1. 4 Hours.
Covers mechanics, fluids, and temperature and kinetic theory. The application of physics to a variety of problems in the life and health sciences is emphasized. Mechanics topics include one-dimensional motion, forces, vectors, Newton's laws, equilibrium, work, energy, and power. Fluids topics include density, pressure, buoyancy, fluids in motion, viscosity, and surface tension. Temperature and kinetic theory topics include temperature, thermal equilibrium, gas laws, ideal gas law, kinetic theory, vapor pressure, and diffusion. A laboratory is included.

PHYS 1146. Lab for PHYS 1145. 1 Hour.
Accompanies PHYS 1145. Covers topics from the course through various experiments.

PHYS 1147. Physics for Life Sciences 2. 4 Hours.
Continues PHYS 1145. Covers heat, electricity, vibrations and waves, sound, geometrical optics, and nuclear physics and radioactivity. The application of physics to a variety of problems in the life and health sciences is emphasized. Electricity topics include electrostatics, capacitance, resistivity, direct-current circuits, and RC circuits. Vibrations and waves topics include simple harmonic motion and wave motion. Sound topics include wave characteristics, the ear, Doppler effect, shock waves, and ultrasound. Optics topics include reflection, mirrors, refraction, total internal reflection, fiber optics, lenses, the eye, telescopes, and microscopes. Nuclear physics and radioactivity topics include atomic nucleus, radioactivity, half-life, radioactive dating, detectors, nuclear reaction, fission, fusion, radiation damage, radiation therapy, PET, and MRI. A laboratory is included.

PHYS 1148. Lab for PHYS 1147. 1 Hour.
Accompanies PHYS 1147. Covers topics from the course through various experiments.

PHYS 1149. Physics for Pharmacy. 4 Hours.
Offers an integrated lecture and laboratory course for pharmacy students.

PHYS 1150. Lab for PHYS 1149. 1 Hour.
Accompanies PHYS 1149. Covers topics from the course through various experiments.
PHYS 1151. Physics for Engineering 1. 3 Hours.
Covers calculus-based physics. Offers the first semester of a two-semester integrated lecture and laboratory sequence intended primarily for engineering students. Covers Newtonian mechanics and fluids. Stresses the balance between understanding the basic concepts and solving specific problems. Includes topics such as one-dimensional and three-dimensional motion, Newton's laws, dynamics friction, drag, work, energy and power, momentum and collisions, rotational dynamics, forces, torque and static equilibrium, pressure, fluids, and gravity.

PHYS 1152. Lab for PHYS 1151. 1 Hour.
Accompanies PHYS 1151. Covers topics from the course through various experiments. Requires concurrent registration in PHYS 1151 and PHYS 1153.

PHYS 1153. Interactive Learning Seminar for PHYS 1151. 1 Hour.
Offers interactive problem solving for PHYS 1151. Emphasizes organized approaches and use of mathematical techniques, including calculus, to solve a wide range of problems in mechanics. Topics include static equilibrium, applications of Newton's laws and conservation principles, rotational dynamics, and fluids. Requires concurrent registration in PHYS 1151 and PHYS 1152.

PHYS 1155. Physics for Engineering 2. 3 Hours.
Continues PHYS 1151. Offers integrated lecture and laboratory. Covers electrostatics; capacitors; resistors and direct-current circuits; magnetism and magnetic induction; RC, LR, and LRC circuits; waves; electromagnetic waves; and radiation.

PHYS 1156. Lab for PHYS 1155. 1 Hour.
Accompanies PHYS 1155. Covers topics from the course through various experiments. Requires concurrent registration in PHYS 1155 and PHYS 1157.

PHYS 1157. Interactive Learning Seminar for PHYS 1155. 1 Hour.
Offers interactive problem solving for PHYS 1155. Emphasizes organized approaches and use of mathematical techniques, including calculus, to solve a wide range of problems in electricity, magnetism, and waves. Requires concurrent registration in PHYS 1155 and PHYS 1156.

PHYS 1161. Physics 1. 4 Hours.
Covers calculus-based physics. Offers the first semester of a two-semester integrated lecture and laboratory sequence intended primarily for science students. Covers Newtonian mechanics and fluids. Emphasizes the underlying concepts and principles. Takes applications from a wide variety of fields, such as life sciences and medicine, astrophysics, and planetary physics, and so on. Includes topics such as forces, torque and static equilibrium, one-dimensional and three-dimensional motion, Newton's laws, dynamics friction, drag, work, energy and power, momentum and collisions, rotational dynamics, oscillations, pressure, fluids, and gravity.

PHYS 1162. Lab for PHYS 1161. 1 Hour.
Accompanies PHYS 1161. Covers topics from the course through various experiments.

PHYS 1163. Recitation for PHYS 1161. 0 Hours.
Accompanies PHYS 1161. Offers an opportunity for interactive problem solving.

PHYS 1165. Physics 2. 4 Hours.
Continues PHYS 1161. Offers the second semester of a two-semester integrated lecture and laboratory sequence intended primarily for science students. Includes topics such as electrostatics; capacitors; resistors and direct-current circuits; magnetism and magnetic induction; RC, LR, and LRC circuits; waves; electromagnetic waves; and fluids.

PHYS 1166. Lab for PHYS 1165. 1 Hour.
Accompanies PHYS 1165. Covers topics from the course through various experiments.

PHYS 1167. Recitation for PHYS 1165. 0 Hours.
Accompanies PHYS 1165. Offers an opportunity for interactive problem solving.

PHYS 1171. Physics 1 for Bioscience and Bioengineering. 3 Hours.
Designed for students in engineering and science majors with a biological related curriculum. Studies the fundamentals of calculus-based physics through a relationship with living systems. Includes topics such as kinematics of living systems, stress/strain/strength of biomaterials, fluid flow and boundary layers, aspiration and circulatory models, diffusion and random motion, and thermodynamics with examples from living systems.

PHYS 1172. Lab for PHYS 1171. 1 Hour.
Accompanies PHYS 1171. Experiments include measurement and error, forces in one dimension, work and energy on an air track, fluid flow, Brownian diffusion, uniform circular motion, and ideal gas laws. Requires concurrent registration in PHYS 1171 and PHYS 1173.

PHYS 1173. Interactive Learning Seminar for PHYS 1171. 1 Hour.
Offers interactive problem solving for PHYS 1171. Emphasizes organized approaches to solve a wide range of problems in the course. Requires concurrent registration in PHYS 1171 and PHYS 1172.

PHYS 1175. Physics 2 for Bioscience and Bioengineering. 3 Hours.
Continues PHYS 1171. Includes topics such as wave motion and hearing; electric fields (including application to biological membranes); direct current electrical circuits (including biological circuits); RC circuit models of ion channels; bioelectricity in marine organisms; electromagnetic waves and optics; modern physics (including radioactive decay, applications of radioactivity in nuclear medicine, and carbon 14 dating).

PHYS 1176. Lab for PHYS 1175. 1 Hour.
Accompanies PHYS 1175. Experiments include standing waves, electric charge/field, DC circuits, gel electrophoresis, geometric optics, light spectroscopy, and radioactive decay. Requires concurrent registration in PHYS 1175 and PHYS 1177.

PHYS 1177. Interactive Learning Seminar for PHYS 1175. 1 Hour.
Offers interactive problem solving for PHYS 1175. Emphasizes organized approaches to solve a wide range of problems in the course. Requires concurrent registration in PHYS 1175 and PHYS 1176.

PHYS 1211. Computational Problem Solving in Physics. 4 Hours.
Introduces students to computational problem-solving techniques with common computer languages used in the physical sciences. Begins with programming basics of data handling, visualization tools, random number generators, functions, and control statements and expands to more advanced topics of interpolation, numeric integration, numeric derivatives, ordinary differential equations, and some Monte Carlo techniques. Explores topics contextually using physical models and problems.

PHYS 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 2303. Modern Physics. 4 Hours.
Reviews experiments demonstrating the atomic nature of matter, the properties of the electron, the nuclear atom, the wave-particle duality, spin, and the properties of elementary particles. Discusses, mostly on a phenomenological level, such subjects as atomic and nuclear structure, properties of the solid state, and elementary particles. Introduces the special theory of relativity.
PHYS 2305. Thermodynamics and Statistical Mechanics. 4 Hours.
Focuses on first and second laws of thermodynamics, entropy and equilibrium, thermodynamic potentials, elementary kinetic theory, statistical mechanics, and the statistical interpretation of entropy.

PHYS 2371. Electronics. 3 Hours.
Covers the physics underlying computers and our modern electronic world. Focuses on principles of semiconductor devices (diodes, transistors, integrated circuits, LEDs, photovoltaics); analog techniques (amplification, AC circuits, resonance); digital techniques (binary numbers, NANDs, logic gates, and circuits); electronic subsystems (operational amplifiers, magnetoelectronics, optoelectronics); and understanding commercial electronic equipment. Lab experiments are designed to investigate the properties of discrete and integrated devices and use them to design and build circuits.

PHYS 2372. Lab for PHYS 2371. 1 Hour.
Accompanies PHYS 2371. Illustrates topics from the lecture course through various hands-on experimental projects. Covers the process of electronics design from a goal-oriented perspective. Students are expected to consider their own electronics design project and build a prototype device that accomplishes a specific purpose.

PHYS 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 3600. Advanced Physics Laboratory. 4 Hours.
Introduces research through experiments that go beyond the simple demonstration of basic physical principles found in introductory physics courses. Data are taken to higher precision and the analysis is more in-depth. Experiments focus on lasers, fiber-optic communication, spectroscopy, Faraday rotation, speed of light, semiconductor physics, Hall effect, fuel cells, and Fourier analysis of music and sound. Lab reports are assessed on organization, format, grammar, and style. Offers students an opportunity to significantly improve their abilities in written scientific communication.

PHYS 3601. Classical Dynamics. 4 Hours.
Covers advanced topics in classical mechanics including vector kinematics, harmonic oscillator and resonance, generalized coordinates, Lagrange's equations, central forces and the Kepler problem, rigid body motion, and mathematical methods in physics.

PHYS 3602. Electricity and Magnetism. 4 Hours.
Covers electrostatics and dielectric materials, magnetostatics and magnetic materials, currents in conductors, induction, displacement currents, computer solutions of EM problems, and Maxwell's equations.

PHYS 3603. Electromagnetic Waves and Optics. 4 Hours.
Focuses on electromagnetic waves in vacua and matter, electromodynamics and radiation, and computer visualization of electromagnetic fields. Also considers special relativity.

PHYS 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 4606. Mathematical and Computational Methods for Physics. 4 Hours.
Covers advanced mathematical methods topics that are commonly used in the physical sciences, such as complex calculus, Fourier transforms, special functions, and the principles of variational calculus. Applies these methods to computational simulation and modeling exercises. Introduces basic computational techniques and numerical analysis, such as Newton's method, Monte Carlo integration, gradient descent, and least squares regression. Uses a simple programming language, such as MATLAB, for the exercises.

PHYS 4621. Biological Physics 1. 4 Hours.
Offers an introduction to biophysics focusing on development and implementation of physical models for various biophysical processes that occur in living organisms and in living cells. Topics covered, some of which are explored through computational examples, include thermodynamics of solutions and cells, randomness, diffusion, entropy, membranes, electrostatics, and electricity in cells.

PHYS 4623. Medical Physics. 4 Hours.
Introduces the physical principles and basic mathematical methods underlying the various modalities of medical imaging. These include computed tomography (CT), magnetic resonance (MRI), positron emission tomography (PET), single-photon emission tomography (SPECT), and ultrasound. Covers nuclear physics and the interaction of radiation with biological matter with application to radiation therapy.

PHYS 4651. Medical Physics Seminar 1. 4 Hours.
Offers the first part of a seminar series conducted by expert practitioners from Boston-area hospitals. Examines the clinical applications of medical imaging methods (CT, MRI, and PET), the clinical applications of radiation therapy, and the clinical applications of lasers and optical techniques. Includes site visits to local hospitals and medical instrumentation companies.

PHYS 4652. Medical Physics Seminar 2. 4 Hours.
Continues PHYS 4651. Further examines the clinical applications of medical imaging methods (CT, MRI, and PET), the clinical applications of radiation therapy, and the clinical applications of lasers and optical techniques.

PHYS 4673. Project Laboratory. 4 Hours.
Allows students to select and carry out individual projects involving instrumentation and computation. Involves the development of some aspect of instrumentation and/or computation in an ongoing research project and the preparation of a final report. The student is supervised by the project leader and the course instructor.

PHYS 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

PHYS 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

PHYS 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

PHYS 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of a member of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHYS 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHYS 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.
PHYS 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement. May be repeated without limit.

PHYS 5111. Astrophysics and Cosmology. 4 Hours.
Introduces current ideas in astrophysics and cosmology, with emphasis on recent advances in this field. Topics include tools of the astronomer (telescopes, spectroscopy, and methods of distance measurement); the solar system; stellar properties (stellar spectra, stellar energy sources including gravitational or nuclear); Hertzsprung-Russell diagram; evolution of stars (birth, life, and ultimate collapse); our Milky Way galaxy; and extragalactic objects (galaxies, clusters of galaxies, radio galaxies, and quasars); cosmology (Olber's paradox, recession of galaxies, big bang theory, cosmic background radiation, formation of galaxies, and the future of the universe).

PHYS 5113. Introduction to Particle and Nuclear Physics. 4 Hours.
Introduces the physics of atomic nuclei and elementary particles. Topics include classification of nuclei, strong and weak nuclear forces, mesons and nucleons, quarks and gluons, and unified theories of elementary particle interactions.

PHYS 5114. Physics of Advanced Materials. 4 Hours.
Explores the physical properties of materials and how such properties are essential for developing advanced applications. Models the fundamental properties of semiconductors, superconductors, and magnetic materials by elementary theories. Introduces the ideas motivating the need for a quantum theory of solids and uses these theories to explain the electronic, optical, and magnetic properties of advanced materials, with a direct relevance to their applications in nanoscale electronic devices, solar cells, laser diodes, quantum computers, etc.

PHYS 5115. Quantum Mechanics. 4 Hours.
Focuses on observations of macroscopic and microscopic bodies. Covers the uncertainty principle and wave-particle duality; probability amplitudes; Schrödinger wave theory and one-dimensional problems, Schrödinger equation in three dimensions; and angular momentum and the hydrogen atom.

PHYS 5116. Complex Networks and Applications. 4 Hours.
Introduces network science and the set of analytical, numerical, and modeling tools used to understand complex networks emerging in nature and technology. Focuses on the empirical study of real networks, with examples coming from biology (metabolic, protein interaction networks), computer science (World Wide Web, Internet), or social systems (e-mail, friendship networks). Shows the organizing principles that govern the emergence of networks and the set of tools necessary to characterize and model them. Covers elements of graph theory, statistical physics, biology, and social science as they pertain to the understanding of complex systems.

PHYS 5117. Astrophysics. 4 Hours.
Applies physics concepts to processes in celestial objects, particularly stars. Topics include tools of the astronomer (telescopes, spectroscopy, and methods of distance measurement); stellar properties; nuclear fusion reactions; hydrostatic equilibrium and stellar models; stellar evolution and the Hertzsprung-Russell diagram; morphology and dynamics of galaxies; and high-energy astrophysical phenomena. Not open to students who have completed PHYS 5111.

PHYS 5118. General Relativity and Cosmology. 4 Hours.
Introduces basic concepts in the general theory of relativity, including Riemannian geometry and Einstein's field equations. These concepts are applied in studying the standard model of cosmology. Topics include thermodynamics in an expanding universe, dark matter and dark energy, and modern theories of cosmology. Not open to students who have completed PHYS 5111.

PHYS 5260. Introduction to Nanoscience and Nanotechnology. 4 Hours.
Focuses on reviewing the basic scientific concepts relevant to this field and also gives a broad overview of the current state-of-the-art in research and technology. Nanotechnology promises to transform twenty-first century technology by exploiting phenomena exhibited by nanoscaled materials. This technology is expected to have significant impact in diverse areas such as computers, electronics, health, etc. Successful technological advancement of this field requires that we have a fundamental understanding of the "science" of these materials. This course comprises a series of lectures on various topics: development of nanofabrication methods, advanced microscopy techniques, fabrication of novel nanomaterials, investigation of their fundamental properties and device applications. Provides a strong introduction for students interested in nanoscience and technology.

PHYS 5318. Principles of Experimental Physics. 4 Hours.
Designed to introduce students to the techniques of modern experimental physics. Topics include communication and information physics, signal processing and noise physics, applied relativity physics, detector techniques, semiconductor and superconductor physics, nanoscale microscopy and manipulation, and lasers and quantum optics.

PHYS 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of a member of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHYS 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHYS 5984. Research. 1-4 Hours.
Offers independent work under the direction of a member of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHYS 5996. Experiential Education Directed Study. 4 Hours.
Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement. May be repeated without limit.

PHYS 6900. Exam Preparation—Master's. 0 Hours.
Offers the student the opportunity to prepare for the master's qualifying exam under faculty supervision.

PHYS 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

PHYS 7000. Qualifying Exam. 0 Hours.
Provides eligible students with an opportunity to take the master's qualifying exam.

PHYS 7200. Methods of Advanced Problem Solving. 4 Hours.
Designed to improve the ability of students to solve physics problems, which are of the same degree of difficulty as problems that often appear on the qualifying exam.

PHYS 7210. Introduction to Research in Physics. 0 Hours.
Offers a weekly seminar to introduce first- and second-year physics graduate students to research being done in the Physics department by advanced physics graduate students and faculty. May be repeated without limit.
PHYS 7211. Introduction to Research 1. 1 Hour.
Offered to first-year students during the fall semester, this one-unit course introduces new students to the various fields of current research undertaken in the department and elsewhere. Students attend seminars given by faculty and advanced graduate students engaged in cutting-edge research. Students are required to evaluate and provide constructive feedback to the seminar speakers. Students also present research articles, chosen through interactions with the faculty and with advanced graduate students. Students receive a letter grade.

PHYS 7212. Introduction to Research 2. 1 Hour.
Offered during the spring semester, this one-unit course introduces a first-year student to one of the fields of current research undertaken in the department. Students can select a particular thrust area and join the adviser's group on a temporary basis. The purpose is to acquaint students with a group's field of research, establish close ties with advanced graduate students, and gain some hands-on research experience. Students are expected to attend group meetings, participate in group projects, and in some cases complete a project of their own. Students receive a letter grade from the individual faculty member.

PHYS 7221. Research 1. 1 Hour.
Offered to second-year students in the fall semester, this one-unit seminar course helps students select a potential field of research for a PhD thesis topic. Students attend seminars given by faculty and advanced graduate students engaged in cutting-edge research. Students are required to evaluate and provide constructive feedback to the seminar speakers. Students also present research articles, chosen through interactions with faculty and with advanced graduate students. Students receive a satisfactory/unsatisfactory grade.

PHYS 7222. Research 2. 1 Hour.
Offered to second-year students in the spring semester, this is a one-unit seminar course. Students at this time are expected to have selected a PhD thesis topic and a thesis adviser. Students present seminars on material related to their proposed thesis topic. Faculty and advanced graduate students evaluate and provide constructive feedback to the seminar speakers. Students receive a satisfactory/unsatisfactory grade.

PHYS 7231. Research Seminar 1. 1 Hour.
Offered in the fall semester, this one-unit seminar course is taken by students with advanced standing who have passed the qualifying exam and are registered for PHYS 9990 or PHYS 9996. Advanced graduate students attend oral presentations on current research topics and/or thesis topics proposed by the second-year students who have just started their PhD thesis research and also give oral presentations on current research topics (typically their thesis research). The course is designed to promote interactions between faculty, advanced graduate students, and second-year graduate students and to broaden their intellectual outlook from one that is simply focused in a specific research area. Student and faculty listeners give feedback via an "evaluation" form. Students receive a satisfactory/unsatisfactory grade based on their participation.

PHYS 7232. Research Seminar 2. 2 Hours.
Offered in the spring semester, this one-unit seminar course is taken by students with advanced standing who have passed the qualifying exam and are registered for PHYS 9990 or PHYS 9996. Advanced graduate students attend oral presentations on current research topics and/or thesis topics proposed by the second-year students who have just started their PhD thesis research and also give oral presentations on current research topics (typically their thesis research). The course is designed to promote interactions between faculty, advanced graduate students, and second-year graduate students and to broaden their intellectual outlook from one that is simply focused in a specific research area. Student and faculty listeners give feedback via an "evaluation" form. Students receive a satisfactory/unsatisfactory grade based on their participation.

PHYS 7301. Classical Mechanics/Math Methods. 4 Hours.
Covers mathematical methods of physics and classical mechanics. Topics include differential equations, boundary value problems, functions of a complex variable, linear vector spaces, Green's functions, Lagrangian and Hamiltonian mechanics, linear oscillators, and scattering. May include additional topics as time permits.

PHYS 7302. Electromagnetic Theory. 4 Hours.
Analyzes Maxwell's equations in vacuum and special relativity. Topics include electric and magnetic fields due to known sources with boundary conditions, radiation fields, bremsstrahlung, synchrotron radiation, the energy-momentum tensor for the electromagnetic field, fields in material media, boundary conditions at the interface between two media, and scattering of radiation. May include additional topics as time permits.

PHYS 7305. Statistical Physics. 4 Hours.
Briefly reviews thermodynamics. Topics include the principles of statistical mechanics and statistical thermodynamics; density matrix; theory of ensembles; Fermi-Dirac and Bose-Einstein statistics, application to gases, liquids, and solids; theory of phase transitions; and thermodynamics of electric and magnetic systems, transport phenomena, random walks, and cooperative phenomena.

PHYS 7315. Quantum Theory 1. 4 Hours.
Explores the experimental basis of quantum theory, the Schrödinger equation, and probability interpretation of wave mechanics. Topics include the uncertainty principle, application to one-dimensional problems, the harmonic oscillator, orbital angular momentum, and the central force problem.

PHYS 7316. Quantum Theory 2. 4 Hours.
Continues PHYS 7315. Topics include quantum theory of scattering; Born approximation; phase-shift analysis; introduction to S-matrix theory; general formulation quantum mechanics in Hilbert space; spin; identical particles and symmetrization principle; time-independent and time-dependent perturbation theory; semiclassical theory of radiation and atomic spectra; addition of angular momentum; Wigner-Eckart theorem; quantum theory of radiation; and absorption, emission, and scattering of photons. Also introduces free particle Dirac equation.

PHYS 7321. Computational Physics. 4 Hours.
Covers basic numerical methods for differentiation, integration, and matrix operations used in linear algebra problems, discrete Fourier transforms, and standard and stochastic ordinary and partial differential equations. Specific applications of these methods may include classical chaos, computation of eigenstates of simple quantum systems, classical phase transitions, boundary value problems, pattern formation, and molecular dynamics and classical/quantum Monte Carlo methods to simulate the equilibrium and nonequilibrium properties of condensed phases.
PHYS 7323. Elementary Particle Physics. 4 Hours.
呈 ΃ a survey of the present state of elementary particle physics, suitable for all graduate students. Topics include overview of strong interactions and their connection to nuclear physics; nonrelativistic quark structure of strongly interacting particles (hadrons); color; and the SU(3) Yang-Mills theory of strong interactions; coupling constant renormalization and asymptotic freedom; and the parton model of scattering. Covers weak interactions including phenomenology of the Fermi V-A theory; universality; and neutrino scattering. Studies the Glashow-Weinberg-Salam theory including unification of weak and electromagnetic interaction, neutral currents, the Higgs mechanism, quark masses and mixing, neutrino masses, and neutrino oscillation. Offers experimental support for the standard model. Also examines supersymmetry including the hierarchy problem and broken supersymmetry; role of supersymmetry in cosmology.

PHYS 7324. Condensed Matter Physics. 4 Hours.
Explores condensed matter physics. Topics include Drude and Sommerfield models of electrons in metals, crystal structure, one-electron states in crystal lattices, Bloch's theorem, semiclassical theory of conduction, semiconductors and semiconducting devices, effects of electron-electron interactions, lattice vibrations and the classical and quantum theories of specific heat, optical properties of solids, investigation of crystal structure and excited states of crystals by x-ray and neutron scattering, simple transport theory based on the Boltzmann equation, and magnetic properties of solids.

PHYS 7325. Quantum Field Theory 1. 4 Hours.
Introduces the principles of quantum field theory. Topics include canonical quantization of scalar and spinor fields, functional integral methods, perturbation theory, regularization and renormalization, and symmetry breaking. Emphasizes applications to particle physics and condensed matter phenomena.

PHYS 7326. Quantum Field Theory 2. 4 Hours.
Presents the quantum theory of gauge fields and their interactions, as well as advanced topics in quantum field theory. Additional topics covered may include Lie groups and Yang-Mills theory, asymptotic freedom, perturbation theory anomalies, and applications to phase transitions.

PHYS 7331. Network Science Data. 4 Hours.
Offers an overview of data mining and analysis and techniques in network science. Introduces students to network data analysis. Presents algorithms for the characterization and measurement of networks (centrality based, decomposition, community analysis, etc.) and issues in sampling and statistical biases. Reviews visualization algorithms and specific software tools. Offers students an opportunity to learn about working with real-world network datasets.

PHYS 7332. Network Science Data 2. 4 Hours.
Offers an interdisciplinary course focusing on practical exercises in real network data. Offers students an opportunity to learn how to retrieve network data from the real world, analyze network structures and properties, study dynamical processes on top of the networks, and visualize networks. The main programming language used in this course is the current industry standard.

PHYS 7335. Dynamical Processes in Complex Networks. 4 Hours.
Immerses students in the modeling of dynamical processes (contagion, diffusion, routing, consensus formation, etc.) in complex networks. Includes guest lectures from local and national experts working in process modeling on networks. Dynamical processes in complex networks provide a rationale for understanding the emerging tipping points and nonlinear properties that often underpin the most interesting characteristics of socio-technical systems. The course reviews the recent progress in modeling dynamical processes that integrates the complex features and heterogeneities of real-world systems.

PHYS 7337. Statistical Physics of Complex Networks. 4 Hours.
Covers applications of statistical physics to network science. Focuses on maximum-entropy ensembles of networks and on applicability of network models to real networks. Main topics include microcanonical, canonical, and grand canonical ensembles of networks, exponential random graphs, latent variable network models, graphons, random geometric graphs and other geometric network models, and statistical inference methods using these models. Covers applications of maximum-entropy geometric network models to efficient navigation in real networks, link prediction, and community structure inference.

PHYS 7731. Biological Physics 1. 4 Hours.
Introduces the major classes of biological macromolecules and the physics underlying their structure, interaction, and biological function. Emphasis is on physical techniques for characterizing the structure and dynamics of proteins. Students are required to present a written and oral report on a focused research topic in molecular biophysics, based on a critical review of current scientific literature. Topics may include introduction to biomolecular structure, aqueous solution physics and hydrophobic interactions, chemical thermodynamics and reaction dynamics, spectroscopic techniques, molecular force measurements, and protein dynamics.

PHYS 7733. Topics: Elementary Particle Physics and Cosmology. 4 Hours.
Covers unified theories including evidence for supersymmetric SU(5) unification of couplings, and the grand unified scale and proton decay. Discusses particle physics and cosmology including a brief introduction to Einstein’s theory of general relativity, candidates for dark matter, inflation and the primordial fluctuations, and the problem of the cosmological constant. Examines developments leading to string theory including normal mode expansion; open and closed strings; deduction of D-26 for bosonic and D-10 for superstrings; scattering amplitudes in strings; heterotic string; compactifications on the torus, orbifolds, and Calabi-Yau manifolds; 4-D strings; and superstring phenomenology. Explores physics with extra dimensions including gravity at small distances, branes, and new approaches to the hierach problem. May be repeated without limit.

PHYS 7734. Topics: Condensed Matter Physics. 4 Hours.
Covers selected advanced topics in the theory of solids to be chosen each time by the interested students and instructor. Topics may include theory of normal metals, Hartree-Fock and random phase approximations, optical and transport properties, solid-state plasmas, Raman spectroscopy, quasiparticles and collective excitations, quantum solids, and amorphous solids. May be repeated without limit.

PHYS 7735. Nonlinear Dynamics. 4 Hours.
Offers various topics, depending on the instructor. Covers introduction to the Hamilton-Jacobi equation; action-angle variables, and Liouville’s integrability theorem; nonlinear oscillators; chaos in Hamiltonian systems; and continuous media via the sine-Gordon equation, solitons/antisolitons, and nonsolitonic solutions, Lagrangian derivation of the field equations, and Klein-Gordon equation.
PHYS 7736. Material Physics. 4 Hours.
Studies the physical properties and applications of materials. Topics include crystalline and amorphous materials, metals, ceramics, glasses, polymers, materials characterization methods, such as x-ray diffraction, microscopies (optical, tunneling, and electron), susceptibilities (electric, magnetic), electronic transport in metals, semiconductors, superconductors, diffraction, defects, dislocations, specific heat, phonons, and thermal and electrical conductivities.

PHYS 7741. Biological Physics 2. 4 Hours.
Continues PHYS 7731. The first part of the course provides a foundation necessary to construct and implement models of neurons and networks of neurons. Topics include Hodgkin-Huxley form of the kinetic equations, single neuron models, dynamics of synapses, plasticity of synaptic strength, and neuromodulators. The second part covers nonlinear time series analysis and nonlinear dynamics in neuroscience. The goal is to provide a set of tools to analyze and model large multidimensional data sets encountered in many biological/neuroscience experiments. Topics include data testing of nonlinearity construction of linear and nonlinear models; spike sorting using independent component analysis and clustering algorithms; and analysis of continuous time series.

PHYS 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of a member of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHYS 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHYS 7990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 9955. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

PHYS 9984. Advanced Research. 1-8 Hours.
Provides an opportunity for advanced students to work with an individual instructor on a topic related to current research. The instructor and student negotiate a written agreement as to what topic(s) are covered and what written or laboratory work forms the basis for the grade. Viewed as a lead-in to thesis research. May be repeated without limit.

PHYS 9986. Research. 0 Hours.
Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

PHYS 9990. Dissertation. 0 Hours.
Offers experimental and theoretical work for PhD candidates. Requires written thesis and final oral exam. May be repeated once.

PHYS 9996. Dissertation Continuation. 0 Hours.
Offers experimental and theoretical work for PhD candidates. Requires written thesis and final oral exam. May be repeated without limit.

PHYS 1200. Physics 1. 3 Hours.
Offers the first semester of a two-semester introduction to calculus-based physics. Emphasizes the underlying concepts and principles. Introduces measurement, estimating, and Newtonian mechanics. Topics include kinematics and dynamics: translational motion, vectors, circular motion, gravitation, work, energy, power, momentum, and rotational motion. Introduces static equilibrium, elasticity and fracture, fluids, vibrations, and waves and sound.

PHYS 1201. Lab for PHY 1200. 1 Hour.
Accompanies PHY 1200. Covers topics from the course through various experiments.

PHYS 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 2200. Physics 2. 3 Hours.
Offers the second semester of a two-semester introduction to calculus-based physics. Emphasizes the underlying concepts and principles. Introduces temperature and kinetic theory, heat, the laws of thermodynamics, electricity, and magnetism. Topics include electric charge and fields, electric potential, electric current circuits, magnetic forces and fields, electromagnetic induction, and alternating current circuits. Introduces electromagnetic waves, the nature of light, and geometric optics.

PHYS 2201. Lab for PHY 2200. 1 Hour.
Accompanies PHY 2200. Covers topics from the course through various experiments.

PHYS 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHYS 4950. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

PHYS 4955. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

PHYS 4983. Topics. 1-4 Hours.
Covers special topics in physics. May be repeated without limit.
PHY 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHY 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

PHY 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

PHY 4994. Internship. 1-4 Hours.
Provides students with an opportunity for internship work.

PHY 4995. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

PHY 4996. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student's approved experiential activity and integrates it with study in the academic major.

PHY 6501. Forces, Energy, and Motion. 4 Hours.
Uses hands-on, inquiry experiences to offer students an opportunity to acquire an in-depth understanding of the following concepts and principles: position, distance, displacement, speed, velocity and acceleration (motion: kinematics), forces, Newton’s laws of motion and their application to one- and two-dimensional motion (motion: dynamics), work, mechanical energy (kinetic and potential), momentum, and energy conservation. This course aspires to immerse teachers in the process of inquiry, build teachers’ awareness of their role as facilitators in a student-centered environment, and help them address effectively students’ and their own common pre- and misconceptions specific to the curriculum materials.

PHY 6502. Electricity and Magnetism. 4 Hours.
Uses hands-on inquiry experiences to offer students an in-depth exploration of the following concepts and principles: reflection, refraction, interference of waves, electric and magnetic forces and fields, electrical circuits, electromagnetism and the electromagnetic spectrum. This course aspires to immerse teachers in the process of inquiry, build teachers’ awareness of their role as facilitators in a student-centered environment, and help them address effectively students’ and their own common pre- and misconceptions specific to the curriculum materials. This course is contextualized to the Full Option Science System (FOSS) “Magnetism and Electricity” and Active Physics “Home” and “Communication” curriculum modules.

PHY 6503. Advanced Placement Physics Institute. 4 Hours.
Provides intensive training to high school teachers and prospective teachers of advanced placement physics. Designed to develop the students’ abilities to read, understand, and interpret physical information (verbal, mathematical, and graphical); describe and explain the sequence of steps in the analysis of a particular physical phenomenon or problem; use basic mathematical reasoning, perform experiments, and interpret the results of observations, including making an assessment of experimental uncertainties. Offers participants time to exchange classroom strategies and to work on the syllabus for their own AP course.

PHY 6510. Energy and Motion. 4 Hours.
Focuses on the physics of energy. Studies the ways in which various toys work and how they are powered. Major concepts include forms of energy, transformation of energy, equilibrium, the various types of motion, forces, electricity and magnetism, the electromagnet, speed, and the properties of materials. All of these concepts are studied in relation to engineering design. Asks students to design a toy that meets a specific set of energy-related design criteria.

PHY 6511. Machines in Motion. 4 Hours.
Explores important concepts in physics using the playground as a laboratory. Offers students an opportunity to learn about simple machines, motion, forces, and balance. Explores the properties and behavior of air and, if a swimming/wading pool or a pond is a part of or adjacent to the playground, the basic properties of water and the principles of displacement and flotation.

PHY 6512. Light and Sound Extravaganza. 4 Hours.
Explores the properties of light and sound. Focuses on the two major sensory inputs of a night at a disco—sound and light—and on the eyes and ears, the sense organs used to process sound and light. Additionally, offers students an opportunity to apply the physical knowledge thus acquired to design and construct musical instruments.

PHY 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

PHY 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHY 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

PHY 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

PHY 6983. Topics. 1-4 Hours.
Covers special topics in physics. May be repeated without limit.

PHY 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

Political Science (POLS)

POL 1000. Political Science at Northeastern. 1 Hour.
Introduces first-year political science majors to the discipline, the department, and the University as a whole; familiarizes students with the skills needed for success as a university student.

POL 1140. Exploring Politics and Political Science. 4 Hours.
Introduces students to basic concepts and principles in politics and political science. Combines a study of contemporary political events with appropriate readings that provide a conceptual and theoretical context for understanding the political world.

POL 1150. American Government. 4 Hours.
Analyzes the system of politics and government in the United States. Topics include the philosophical basis, historical origins, design, and functioning of the Constitution as well as formal government institutions. Examines the influence of public opinion, political behavior and participation, parties, and interest groups.

POL 1151. Recitation for POLS 1150. 0 Hours.
Provides small-group discussion format to cover material in POLS 1150.

POL 1155. Comparative Politics. 4 Hours.
Presents a comparative study of political organization and behavior in a range of countries beyond the United States. Topics includes political culture, political economy, governing institutions, leadership, and political participation.

POL 1156. Recitation for POLS 1155. 0 Hours.
Provides small-group discussion format to cover material in POLS 1155.
POLS 1160. International Relations. 4 Hours.
Introduces a broad study of international relations, encompassing both theoretical perspectives and empirical knowledge. Reviews the role of states as well as international and nongovernmental organizations in dealing with security and war, terrorism, human rights, trade, globalization, and environmental protection, among other important contemporary issues.

POL 1161. Recitation for POLS 1160. 0 Hours.
Provides small-group discussion format to cover material in POLS 1160.

POL 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POLS 2325. Ancient Philosophy and Political Thought. 4 Hours.
Examines the philosophers of classical Greece, primarily Socrates, Plato, and Aristotle. These philosophers examined the nature of the material world, of the city, and of the person. The course takes up both the moral and political writings as well as the metaphysical writings. Devotes considerable attention to major works such as Plato’s Republic. Some time is given to early Greek philosophers, to the Sophists, and to later developments. Requires written analysis of philosophical texts. PHIL 2325 and POLS 2325 are cross-listed.

POLS 2326. Premodern Political Thought. 4 Hours.
Presents an analytical and historical examination of the great political thinkers and the main trends of political thought from classical Greece to the Renaissance.

POLS 2328. Modern Political Thought. 4 Hours.
Introduces students to a range of authors who are considered to be most influential in shaping Western political thought and who remain highly relevant in informing contemporary political debate. Offers students an opportunity to think critically about some of the fundamental questions pertaining to political practice—the nature of ideas, institutions, and processes and how to understand and evaluate them.

POLS 2330. American Political Thought. 4 Hours.
Analyzes the fundamental ideas in U.S. political thought that have shaped U.S. political institutions and policies, including liberalism, neoliberalism, conservatism, and nationalism. Examines the historic roots of each viewpoint and their impact. Major topics may include Locke and the liberal tradition, republicanism, Puritan political thought, the American Revolution, the writing of the Constitution, the growth of federal power, executive power, judicial review, and the debate over slavery. Explores the ongoing interaction of political thought and the political process in contemporary U.S. society.

POLS 2332. Contemporary Political Thought. 4 Hours.
Introduces students to a range of positions in contemporary political theory, familiarizing them with key texts, authors, and debates, such as those concerning critiques of power, global justice, and pluralism. Explores a range of methodological and theoretical approaches associated with these texts and examines some of their implications in the assessment of modern societies, their values, and institutional arrangements. Offers students an opportunity to develop the ability to critically reflect on the nature and scope of political discourse.

POLS 2333. Politics and Film. 4 Hours.
Analyzes interconnections between politics and film. Considering film as a political tool, includes such topics as political satire, propaganda, war, censorship, and nationalism. Case examples emphasize current events and contemporary issues.

POLS 2334. Bureaucracy and Government Organizations. 4 Hours.
Examines the general principles underlying the structures, processes, and operation of public organizations. Examines the role of bureaucracies within the larger political system as well as how public agencies develop and change over time.

POLS 2335. Budgeting and Taxation. 4 Hours.
Focuses on the politics of budgeting and taxation in the United States, with a particular emphasis on the federal government. Analyzes budgetary processes, participants, and outcomes as well as policy reforms. State, local, and comparative budgeting are also discussed.

POLS 2336. Politics and the Arts. 4 Hours.
Explores the various ways in which the visual (painting, sculpture, architecture, design, etc.) and performing (music, theater, film, etc.) arts relate to, and interact with, political and governing actors, institutions, and systems. Topics covered in this broad-based multimedia course include policy and administrative issues related to government patronage of the arts, how different political ideologies view art and artists, the arts and political legitimacy, propaganda and “official art,” censorship, issues in civil liberties and artistic freedom, art and political dissent, political and ethnic minorities in the arts, and feminist art. Many of the specific cases examined come from the United States, but the overall focus of the course is global and historical.

POLS 2340. Business and Government. 4 Hours.
Surveys the relationship between economics and politics in the United States. Considers the role of government in a market economy including the efforts to manage economic growth, prevent monopoly, promote social welfare, and balance the power of business with the demands of democracy.

POLS 2345. Urban Policies and Politics. 4 Hours.
Examines the political, administrative, economic, and social dynamics of urban areas. Highlights the diversity of political institutions and practices in American cities. Introduces key policy areas at the city level such as land use, economic development, and education.

POLS 2350. State and Local Politics. 4 Hours.
Examines the political and administrative context of the state and local government in the United States; surveys the structure, function, and politics of states and localities within the context of the U.S. federal system; and highlights the diversity of political institutions and practices at the state and local levels.

POLS 2355. Intergovernmental Relations. 4 Hours.
Analyzes the relationship among national, state, and local levels of government in the United States and the changing patterns of those relationships. Highlights the political, legal, and fiscal nature of intergovernmental relations.

POLS 2357. Growth and Decline of Cities and Suburbs. 4 Hours.
Introduces students to the field of urban studies. Focuses on these central issues: how cities and suburbs evolve, what makes a city or suburb a good place to live, and how cities and suburbs are (or are not) planned. Students review the ways in which urban scholars and practitioners study cities and suburbs, their research methodologies, definition of issues, and division of labor among different disciplines. Students explore the roles of individuals, communities, the private sector, and government in planning and shaping the city.

POLS 2360. Politics of Poverty. 4 Hours.
Explores how and why there is poverty, how it affects people’s lives, and how it can be eliminated. Examines the relations between poverty, racial and ethnic factors, and the economic, political, and administrative systems. Evaluates a number of alternatives and provides an opportunity for clarifying individual assumptions and feelings about poverty.
POLS 2368. Music and Politics in America and Abroad. 4 Hours.
Explores the role of music in politics and the extent to which songs and
their performers shape, frame, or otherwise influence political thought
among audiences and listeners. Emphasizes contemporary themes and
genres, with particular attention to protest songs. Examples are taken
both from the United States and abroad.

POLS 2370. Religion and Politics. 4 Hours.
Explores the role of religion to domestic and international politics.
Examines religion as a source of political tension and strife. Draws
examples from the United States and the developing world. Covers
Islamic fundamentalism in Africa and the Near East, Orthodox Jewish
parties in Israel, Catholic liberation theology in Latin America, and
Protestant fundamentalism and the religious right in the United States.

POLS 2375. Gender and Politics. 4 Hours.
Explores the relation between what is and what ought to be and why-in
the roles of women in American politics. Examines the traditional roles
of women in politics, the suffrage movement, the woman as citizen and
voter, the role of gender in achieving power and in political efficacy, and
the place of women in politics. Also covers political action to promote
women’s issues and modern feminism.

POLS 2380. Latino Politics in the United States. 4 Hours.
Focuses on the largest minority in the United States, Latinos. Explores
the unique aspects of this group within the U.S. political system in
addition to shared experiences with other minority groups, particularly
African Americans. Topics include bilingualism, immigration, relations
with other racial and ethnic groups, and relations with other countries of
origin.

POLS 2385. U.S. Health and Welfare Policy. 4 Hours.
Introduces students to U.S. social welfare policy. Emphasizes
contemporary debates over welfare, mental health, healthcare, education,
and Social Security reform. Examines key issues and processes related
to the politics, design, and implementation of public policy in the context
of the American governmental system. Incorporates multiple media and
methods of instruction into the course, including lectures, in-depth class
discussions, and documentary films.

POLS 2390. Science, Technology, and Public Policy. 4 Hours.
Considers the role of science and technology in the policymaking
process, not only as a tool but also as a subject of policymaking. Cases
include government involvement in innovation and economic growth, the
role of the military in the development of science and technology, the
governance and regulation of the effects of scientific and technological
progress, public funding of science and technology, and ethical aspects
of science and technology, including the emerging focus on anticipatory
and participatory governance.

POLS 2395. Environmental Politics and Policy. 4 Hours.
Examines the political forces, governmental institutions, socioeconomic
factors, and global trends that shape environmental policy at national
and subnational levels in the United States. A spectrum of different
environmental issues is discussed, with some comparison of policy
activity in the U.S., other nations, and at the global level.

POLS 2399. Research Methods in Political Science. 4 Hours.
Examines the range of research methods and designs used in political
science, based on applying the logic of social scientific inquiry. Reviews
experimental research, comparative methods, case studies, interviewing,
surveys, program evaluation, and other topics relevant to the discipline,
as well as questions related to the practice of research ethics. Course
activities include intensive writing assignments by students. Requires
prior completion of at least two of the following courses: POLS 1150,
POLS 1155, and POLS 1160.

POLS 2400. Quantitative Techniques. 4 Hours.
Studies methods of quantitative analysis including descriptive statistics,
hypothesis testing, cross-tabulation, analysis of variance, bivariate
regression and correlation, and multiple regression. Examines how to
generate and interpret statistical findings through use of Excel, SPSS,
and/or other software programs. Uses examples from political behavior,
public policy analysis, public opinion, comparative and international
politics, and other areas of political and social-science inquiry to
emphasize practical applications.

POLS 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.
May be repeated without limit.

POLS 2991. Research Practicum. 2-4 Hours.
Involves students in collaborative research under the supervision of a
faculty member. Offers students an opportunity to learn basic research
methods in the discipline. Requires permission of instructor. May be
repeated once for up to 4 total credits.

POLS 3100. Gender, Social Justice, and Transnational Activism. 4 Hours.
Introduces key issues, themes, and debates in feminist transnational
theory, practice, and activism in contemporary contexts and how it
has changed under socioeconomic, political, and cultural processes
of globalization. Examines differences among women relating to race,
class, sexuality, national identity, and political economy in reckoning
with possibilities for sustainable social justice. Students interrogate
the relationship between the local and global; the production of knowledge
in different regional spaces; the pragmatics of political mobilization; the
varying contours of "social justice"; and other key issues. Offers students
an opportunity to discuss the impact of globalization, neoliberalism, and
state and intimate violence on gendered politics and relations and to
contend with the politics of difference, to debate its challenges, and to
imagine possible futures for transnational gender justice. POLS 3100,
SOC1 3100, and WMNS 3100 are cross-listed.

POLS 3160. Campaign Strategy. 4 Hours.
Introduces students to the art of political campaigning in primary or
general elections. Utilizes a case-study format to approach various
aspects of campaign strategy by analyzing successful and unsuccessful
campaigns.

POLS 3162. Local Campaigns and Elections. 4 Hours.
Introduces students to the politics of local campaigns and elections.
Studies the history of local electoral systems. Utilizing outcomes of
recent local elections, offers students an opportunity to analyze the role
of voting behavior, campaign strategies, and money in shaping local
campaigns and elections.

POLS 3300. The U.S. Congress. 4 Hours.
Explores the structures, dynamics, and styles inherent in public
policymaking within the U.S. Congress. Focuses on elections;
representations of constituents’ interests; the roles that participants play:
the president, interest groups, and others; and how all of this is affected
by the structure of Congress and the process embedded in the legislative
body.

POLS 3302. Judicial Process and Behavior. 4 Hours.
Examines the nature of the judiciary in the United States. Focuses on
courts and various aspects of the judicial process, including judicial
selection, judicial decision making, the impact of judicial decisions
on society, and public opinion of courts. After exploring, from various
methodological perspectives, how and why courts behave as they do, the
course turns its attention to questions about the role of courts in U.S.
politics.
POLS 3304. Presidential Nominating Process. 4 Hours.
Offers students an in-depth examination of the process the two major American parties use to nominate their presidential candidates. Major topics include the history and evolution of the presidential nomination process; the contemporary rules regime; the behavior of candidates, voters, and the media; vice presidential selection; the role of the national conventions; and prospects for reform. Students who do not meet course prerequisites may seek permission of instructor.

POLS 3305. The American Presidency. 4 Hours.
Examines the presidential nomination and election processes and the constitutional and extra-constitutional powers of the U.S. president. Focuses on psychological “character types” of presidents as well as the concept of “presidential power.” Considers constitutional and extra-constitutional issues related to presidential disability and succession.

POLS 3307. Public Policy and Administration. 4 Hours.
Analyzes the structure of and dynamics inherent in public policymaking and public administration in the United States. Introduces such concepts as problem definition, agenda development, policy formation, program implementation, and policy evaluation. Covers key issues in public administration including budgeting, personnel, and organizational design.

POLS 3309. Lesbian, Gay, Bisexual, and Transgender Issues in Public Policy. 4 Hours.
Examines the politics and public policies of the movement for equality and social justice for lesbian, gay, bisexual, and transgender (LGBT) people in a wide range of state and federal policy areas such as same-sex marriage, military service, family adoption rights, and employment discrimination protection. Reviews the political history of LGBT communities and the treatment of LGBT people since the 1920s in the United States and globally. Analyzes the policy debates by considering voting behavior, trends in public opinion toward LGBT issues, and the political incorporation of LGBT people in the United States and around the world. Students who do not meet course prerequisites may seek permission of instructor.

POLS 3310. Public Opinion, Voting, and Elections. 4 Hours.
Analyzes how Americans think about politics, how they vote, and how the rules of the U.S. electoral system affect electoral outcomes. Major topics include the nature and content of public opinion, mass partisanship, issues and issue voting, presidential and congressional elections, turnout and participation, campaign finance, and recent trends in U.S. electoral behavior.

POLS 3315. Interest Groups and Public Policy. 4 Hours.
Surveys the roles of organized interests in American public policymaking. Examines why groups are formed, how they work, why they succeed or fail, and what cumulative impacts groups have on policy. Spans a variety of groups, from the traditional economic interests to social movements, public interest organizations, and professional lobbyists.

POLS 3320. Politics and Mass Media. 4 Hours.
Analyzes several facets of the mass media: the role of newspapers, radio, television, and the Internet in public opinion formation; their use and effectiveness in political campaigns; their objectivity and/or bias in reporting the news; and their impact on public policymaking.

POLS 3324. Law and Society. 4 Hours.
Examines the sociological understanding of legal phenomena. Places special emphasis on the role of the law in cultural and social conflicts in American society.

POLS 3402. Survey Research and Polling. 4 Hours.
Teaches how to conduct data collection via survey research including research design, sampling, survey instrument construction, and interviewing. Emphasizes survey research in the social and behavioral sciences, culminating in a survey conducted by the class. Prior completion of POLS 2400 or similar course in statistics recommended.

POLS 3405. International Political Economy. 4 Hours.
Addresses international political economy and how we can understand the phenomenon of globalization. Introduces the interaction between international politics and international economics in industrial countries and in developing countries. Covers several theoretical approaches to international political economy. Then analyzes some of the classic issue areas of international trade relations; foreign direct investment and outsourcing; the international monetary and financial system and the role of international institutions; debt and financial crises; and poverty and inequality. Concludes with analysis of how international political economy issues relate to governance, development, and the politics of economic reform.

POLS 3406. International Law. 4 Hours.
Introduces international law and how it redefines and shapes world politics. Offers students an opportunity to learn about the cornerstones of this area of the law: the state, organizations and their legal personality, diplomatic relations, treaties, extraterritorial jurisdiction, extradition, human rights and humanitarian law, the law of the sea trade/economic law, and international criminal law with a focus on the world courts. Considers the degree to which international law is pervasive in the life of individuals and states alike.

POLS 3407. International Organizations. 4 Hours.
Explores the powers, functions, and effectiveness of international institutions in the context of the growing interdependence of states. Examines international organizations such as the United Nations and European Union in their roles as part of international regimes that address issues such as international security, the international political economy, and human rights.

POLS 3408. International Security. 4 Hours.
Examines pressing problems in international security that are on the agenda of nation-states and international and nongovernment organizations. Examples include armed violence, terrorism, organized crime, nuclear proliferation, poverty, infectious diseases, energy security, and environmental degradation. Responses are typically sought through international cooperation and the establishment of international norms that apply to complex problems reaching beyond the borders of any one state.

POLS 3409. Global Governance. 4 Hours.
Introduces the concept of global governance, summarizes the core architectural elements of global governance, and examines the key policy purposes and processes, as well as the principal challenges that affect international security. Prior to the creation of the United Nations, global governance hardly existed—relations among states were largely characterized by power politics, and international cooperation was circumscribed to a few areas. Since the foundation of the United Nations, ever denser networks of international regimes were formed encompassing security policy, trade, finance, environment, human rights, the oceans, and diplomacy and covering all aspects of the life of states, which affects and alters international relations. Students who do not meet course prerequisites may seek permission of instructor.
POLS 3410. Nontraditional Security Issues. 4 Hours.
Focuses on nontraditional security issues and the importance of moving toward sustainability in a finite world. Emphasizes the challenge of balancing limited energy options, powerful negative externalities, and potentially unlimited energy demand. Using sustainability as a central theme, examines policies affecting such areas as water, food, and energy security. Considers the environmental, political, institutional, economic, and social contexts that delimit possible policy options, both nationally and internationally.

POLS 3412. Homeland Security Policy and Politics. 4 Hours.
Examines the issues surrounding homeland security and U.S. policy responses since the attacks of September 11, 2001. Examples include terrorism, cyber-attacks, natural and man-made disasters, infectious diseases, immigration, civil liberties, and infrastructure and community resilience. Emphasizes the evolution in strategy and organization for confronting threats along and within U.S. borders.

POLS 3413. Strategies of Conflict in International Relations. 4 Hours.
Examines concepts and strategies in international conflict. Utilizing theories of international relations and game theory, analyzes major concepts in international conflict, the logic of state preference, and interstate competition. Offers students an opportunity to conduct conceptual and empirical examinations of different types of conflict, including manifestations of war, sanctions, and diplomacy. Introduces strategies and tactics in diplomacy, international negotiation, and bargaining from a practical and theoretical perspective.

POLS 3415. Ethnic Political Violence. 4 Hours.
Analyzes the causes and consequences of contemporary ethnic political violence. Uses historical case studies and current events to provide students with examples and context. Analyzes and applies various strategies for conflict resolution.

POLS 3418. Nationalism. 4 Hours.
Explores contending theories of identity and nationalism—a powerful force in international and domestic politics. Examines topics such as the process of identity creation, the choice of national symbols, how group boundaries are established, the role of identity in conflict and state building, and the debate over nationalism's constructed or primordial nature.

POLS 3420. U.S. National Security Policy. 4 Hours.
Analyzes U.S. national security policy, with an emphasis on traditional and nontraditional threats, including threats from state and nonstate actors. Studies the national security policy process with special attention to developing countermeasures as well as resilience.

POLS 3423. Terrorism and Counterterrorism. 4 Hours.
Examines some of the core debates over terrorism and counterterrorism. Topics include what constitutes terrorism, why people become terrorists, which targets they attack, whether nuclear terrorism is a serious threat, the extent to which terrorism helps the perpetrators, and their motives. From there, the course introduces the student to viable counterterrorism strategies. Permission of instructor required for students who do not meet prerequisite.

POLS 3425. U.S. Foreign Policy. 4 Hours.
Examines the formulation and conduct of U.S. foreign and national security policy, with major emphasis on the period following the end of the Cold War.

POLS 3427. Civil-Military Relations. 4 Hours.
Studies the major themes and concepts of civil-military relations. Introduces the main theories of civil-military relations to provide context for analyzing the state of this relationship in democratic, nondemocratic, and transitional states. Topics include military professionalism, praetorianism, the role of the military in civil society, and challenges faced in multiethnic states and different threat environments.

POLS 3430. Revolution, Civil War, and Insurrection. 4 Hours.
Examines the causes and consequences of revolution, civil war, and insurrection as well as internal conflicts such as military takeovers. Considers strategies for resolving conflict and building peace. Analyzes various case studies such as Russia, China, Cuba, Iraq and Afghanistan.

POLS 3435. Politics and Governance of Europe and the European Union. 4 Hours.
Examines contemporary political and governance issues in Europe and their impact on Europe's present and future. In addition to considering the values and institutions underlying the European Union’s regional structure, including political, economic, military, social, monetary, and financial issues, the course also examines the issue of European identity and the impact of globalization on Europe.

POLS 3440. Politics in Northern Ireland. 4 Hours.
Analyzes contemporary politics in Northern Ireland and the Republic of Ireland. Emphasizes the conflict in Northern Ireland with particular attention paid to the roles played by the United States and Great Britain. Considers lessons for other countries.

POLS 3442. Europe and Its Eastern Neighborhood. 4 Hours.
Focuses on the competing interests of the European Union (and NATO) and Russia that dominate the politics of Eastern Europe. As EU interests expand farther eastward, Russia seeks to establish a sphere of influence to its west and south. States in an emerging buffer zone (Georgia, Ukraine, Azerbaijan, Moldova, and Belarus) find themselves competing for influence between Eastern and Western powers. The EU must balance its energy dependence on Russia, its need for new markets, and geopolitical stability in Eurasia with its concern for human rights, democratic governance, and self-determination. What trade-offs are implicit in Europe’s Eastern policy? What are the best policy approaches? What are the main opportunities and obstacles in a newly divided Europe? Students who do not meet course prerequisites may seek permission of instructor.

POLS 3445. Politics in Central and Eastern Europe. 4 Hours.
Studies the six former Soviet bloc socialist countries, as well as Albania and Yugoslavia, and examines political, economic, social, and international problems of postcommunist development.

POLS 3450. Government and Politics in Russia. 4 Hours.
 Presents an analysis of the roots of the collapse of the Soviet Union in 1991 and studies problems of political development after communism. Emphasizes the introduction of democracy, the movement toward a market economy, the reorganization of the military, and the control of interethnic strife.

POLS 3455. Russian Foreign Policy. 4 Hours.
Present an analysis of the goals, methods, and achievements of Russian policy in the post-Soviet era toward Eastern Europe, Western Europe, the Middle East, Central and East Asia, and the United States against the background of Soviet behavior toward these areas in the recent past.
POL 3457. Transatlantic Relations. 4 Hours.
Introduces a range of issues and questions surrounding transatlantic relations by providing an overview of the key theoretical frameworks within which transatlantic relations can be made intelligible (such as concepts of power, hegemony, empire). Offers students an opportunity to develop the ability to critically reflect on the nature, scope, and implications of relations between the United States and Europe.

POL 3460. Contemporary Government and Politics in Africa. 4 Hours.

POL 3465. Government and Politics in the Middle East. 4 Hours.
Examines political, economic, military, and ideological factors within the Arab states and Israel, inter-Arab politics, pan-Arabism, the Arab-Israeli conflict, and the great power rivalry in the region.

POL 3470. Arab-Israeli Conflict. 4 Hours.
Explores the history and politics of the Arab-Israeli conflict, examining the origins of the conflict, its development over time, the key events that have shaped it, and the different narratives and perceptions of these events. Offers students an opportunity to learn about the conflict from the emergence of Zionism and Arab nationalism up to present day. Emphasizes the Israeli-Palestinian dimension of the conflict.

POL 3475. Government and Politics in Latin America. 4 Hours.
Focuses on political change in governmental systems, political parties, socioeconomic problems, and foreign policies of Latin American states.

POL 3480. Government and Politics in Japan. 4 Hours.
Focuses on the development of Japan's political system since World War II. Examines Japan's political institutions and practice of democracy in the context of its political culture; the interrelationship between business and government; and Japan's foreign policy and security issues. Raises issues concerning Japan's economic success and the limitations of Japan as a model for other countries.

POL 3482. East Asian Politics. 4 Hours.
Examines the politics of East Asian societies as they cope with a variety of challenges. Focuses on economic development, environment, energy, and security in Japan, China, and the Koreas.

POL 3485. China: Governance and Foreign Policy. 4 Hours.
Focuses on China's political system and the major issues confronted: leadership recruitment and succession, economic policies and development, class and class struggle, political culture and socialization, human rights, civil society, the media, and both internal and external security concerns. Examines how ideology, development, culture, and the pursuit of China's national interest affect governance.

POL 3487. Politics of Developing Nations. 4 Hours.
Examines the political, governmental, social, economic, cultural, environmental, and geopolitical dimensions of change in nations regarded as “developing” by international standards. Covers a broad spectrum of types of nations including those in Eastern and Central Europe but pays particular attention to those in Asia, Africa, and Central and South America.

POL 3490. Democracy in Comparative Politics. 4 Hours.
Assesses the development of democracy in a variety of nations and examines the fundamental problems facing nations in establishing and maintaining democratic forms of government. Explores ways to evaluate democratic institutional performance and the difficulties inherent in making the transition from nondemocratic to democratic systems.

POL 3496. International Relations and Sports. 4 Hours.
Examines international sports competitions and sports events from the perspective of international relations theory. Explores the process of sports diplomacy; global sports governance; and specific issues such as amateurism, competition hosting, doping, and women in sports. Considers the Olympic Games and other relevant illustrations.

POL 3500. Sexuality, Gender, and the Law. 4 Hours.
Examines the legal regulation of gender and sexuality. Investigates concrete legal cases to study the history of constitutional interpretation and the current status of rights for women and sexual minorities. Focuses on important theoretical issues emerging in the writings of diverse feminist and queer legal scholars. Addresses debates over the value of conventional equality approaches in legal doctrine; equality vs. difference perspectives; ways in which legal language constructs gender and sexuality; the incorporation of sexuality and gender in ideologies of law; and the intersections of gender, sexuality, and race in legal doctrine and legal theory. PHIL 3500, POLS 3500, and WMNS 3500 are cross-listed.

POL 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POL 4500. U.S. Constitutional Law. 4 Hours.
Uses U.S. Supreme Court decisions and other reading materials to analyze theoretical, structural, and substantive issues inherent in, and relevant to, the American constitutional system.

POL 4505. U.S. Civil Liberties. 4 Hours.
Uses United States Supreme Court decisions and other reading material to examine the substantive and procedural guarantees of the Bill of Rights and the Fourteenth Amendment and their relation to a liberal democratic society.

POL 4575. Special Topics: U.S. Politics. 4 Hours.
Analyzes the constitutional, political, economic, and societal dimensions of selected contemporary public issues in U.S. politics. May be repeated without limit.

POL 4580. Special Topics: Comparative Politics and International Relations. 4 Hours.
Analyzes the constitutional, political, economic, and societal dimensions of selected contemporary public issues in comparative politics and international relations. May be repeated without limit.

POL 4620. Literature and Politics. 4 Hours.
Uses a variety of fictional readings to gain fresh insight into basic political concepts such as power, leadership, socialization, corruption, and electoral competition. Attention is also given to contemporary issues ranging from minority rights to tobacco control, abortion, or gun control.

POL 4701. Political Science Senior Capstone. 4 Hours.
Integrates and assesses the concepts and skills developed by students throughout the political science curriculum, including both experiential and classroom-based components. Requires extensive reflection by students on their various educational experiences as well as research projects involving individual and group presentations. Topics include contemporary political issues and relevant literature in the discipline of political science. Consideration is also given to career options for political science students. Required for political science majors and fulfills part of the experiential education requirement.

POL 4702. Senior Thesis Preparation. 4 Hours.
Offers students an opportunity to conduct a significant research project under faculty supervision on a topic within the discipline of political science. Research question is formulated and analyzed through data gathering and a review of relevant literature in political science and related fields. This is the first semester of research for the senior thesis.
POLS 4903. Senior Thesis. 4 Hours.
Continues POLS 4702. Offers students an opportunity to conduct a significant research project under faculty supervision on a topic within the discipline of political science. Research question is formulated and analyzed through data gathering and a review of relevant literature in political science and related fields.

POLS 4910. Model United Nations. 4 Hours.
Introduces students to model simulations as a means of learning about international relations, diplomacy, and international organizations. Offers students an opportunity to conduct research and represent countries in current and historical simulations of the United Nations, U.N. organizations/agencies, regional international organizations, and joint cabinet crisis scenarios. Participating students have an opportunity to be selected for an off-campus competitive conference experience. May be repeated without limit.

POLS 4915. Model Arab League. 4 Hours.
Offers students an opportunity to participate in teams that research assigned nations and represent those nations in a model Arab League role-playing exercise. Students may be selected to represent Northeastern University at the regional or national Model Arab League conferences in Washington, D.C., and different states. May be repeated without limit.

POLS 4917. Model European Union. 4 Hours.
Offers students the opportunity to participate in teams and conduct research on political issues in assigned nations and then represent those nations in a model European Union role-playing exercise. May be repeated without limit.

POLS 4918. Model NATO. 4 Hours.
Offers students an opportunity to participate in teams that research assigned nations and represent those nations in a model role-playing exercise of the North Atlantic Treaty Organization (NATO). Students may be selected to represent Northeastern University at the National Model NATO program in Washington, D.C. May be repeated up to two times.

POLS 4937. Dialogue of Civilizations: Government and Politics Abroad. 4 Hours.
Examines government and politics in another country or region of the world through faculty-led travel to that country or region. Offers students an opportunity to enhance their knowledge of government and politics by attending and participating in various educational activities in the country of study. The course begins in the United States with an introduction to the country or region and concludes with activities that facilitate reflection and learning related to the experience abroad. May be repeated without limit.

POLS 4938. Dialogue of Civilizations: International Politics Abroad. 4 Hours.
Examines issues in international politics through faculty-led travel outside the United States. Offers students an opportunity to enhance their knowledge of international politics by attending and participating in various educational activities in another country. Course topics cover a range of interconnected global issues that go beyond states’ borders, possibly including armed conflict, terrorism, organized crime, poverty, environmental degradation, the spread of nuclear weapons, and others. The course begins in the United States with an introduction to the relevant topics in international politics and concludes with activities that facilitate reflection and learning related to the experience abroad. May be repeated without limit.

POLS 4942. Internship in Politics. 4 Hours.
Gives students the opportunity to engage in a political or governmental internship under the supervision of a faculty member with departmental approval. Requires prior completion of 64 SH toward degree. May be repeated without limit.

POLS 4944. Student Leadership Practicum. 4 Hours.
Considers how undergraduate students make pivotal contributions to governance, services, and the quality of daily life at Northeastern University through student government and other activities, ranging from residential services to publication of the campus newspaper. Offers students involved in such on-campus leadership roles an opportunity to participate in a course-based seminar related directly to their service. The objective is to incorporate student leadership into the general framework of experiential education by such means as reflective discussions, meetings with University administrators, group projects, and exposure to academic perspectives on leadership. As part of this practicum, students participate in parts of the “President’s Leadership Institute,” a module-based exploration of leadership principles within both educational and community settings.

POLS 4947. Campaign and Elections Practicum. 4 Hours.
Offers students an opportunity to work on local and statewide political campaigns under the supervision of a member of the faculty and a campaign staff member. Students research the political climate and recent historical details of a campaign’s geographic area; apply facts, information, and campaign strategy to the process of campaigning; and discuss progress of their campaign experience in class sessions. Requires students to produce pre- and postelection analysis and reflection papers. May be repeated once.

POLS 4948. Community-Based Research Practicum. 4 Hours.
Involves students in applied social research projects that are defined in partnership with local civic, public affairs, and social service groups. Students collaborate on a final report that is presented to the community partner at the end of the course.

POLS 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

POLS 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

POLS 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POLS 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated once.

POLS 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

POLS 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.
POLS 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement. May be repeated without limit.

POLS 5101. Special Topics in Politics and Political Science. 3 Hours.
Examines current issues and special topics in the areas of political science, politics, and public affairs. May be repeated up to three times.

POLS 5976. Directed Study. 1-4 Hours.
Offers assigned reading under the supervision of a faculty member. May be repeated without limit.

POLS 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

POLS 5984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

POLS 6400. Planning Module in Urban and Regional Policy. 1 Hour.
Relates a professional activity to urban and regional planning. May be repeated without limit.

POLS 6525. Institutions and Public Policy. 3 Hours.
Blends theoretical literature and case studies to examine problems of policymaking and governance in contemporary political systems, emphasizing the policy impacts of political institutions. Studies systematic variations across types of political institutions and regimes in developed and developing nations and extends beyond the nation-state to address policy dynamics (e.g., harmonization, multilevel governance) in supranational and international systems. Establishes the broader political system contexts within which policy formation and implementation reside. Offers students an opportunity to learn to analyze, synthesize, and apply a range of theoretical literatures relevant to policy design and impact. POLS 6525 and PPUA 6525 are cross-listed.

POLS 6960. Exam Preparation—Master’s. 0 Hours.
Offers the student the opportunity to prepare for the master's qualifying exam under faculty supervision.

POLS 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POLS 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

POLS 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

POLS 7000. Qualifying Exam. 0 Hours.
Provides eligible students with an opportunity to take the master's qualifying exam.

POLS 7200. Perspectives on Social Science Inquiry. 3 Hours.
Explores the philosophy of science and the scientific method as applied to the social sciences and political analysis. Considers individualist perspectives (that is, rational choice), group perspectives (pluralism), structural/institutional perspectives (class analysis), and postmodern critiques.

POLS 7201. Research Design. 3 Hours.
Provides an overview of research methods and tools used by social scientists including survey research, elite interviews, statistical approaches, case studies, comparative analysis, use of history, and experimental/nonexperimental design.

POLS 7202. Quantitative Techniques. 3 Hours.
Teaches the use of social science quantitative techniques, emphasizing applications of value to public sector analysts and scholars alike. Includes descriptive statistics, hypothesis testing, cross-tabulation, bivariate regression and correlation, and multiple regression. Examines how to generate and interpret statistical analyses through use of SPSS.

POLS 7204. Seminar in Public Policy. 3 Hours.
Concentrates on the scope of the study of public policy, disciplinary contributions to policy analysis and the study of public policy, methods of policy analysis, and models of policy processes.

POLS 7205. Seminar in American Government and Politics. 3 Hours.
Focuses on major research approaches and corresponding academic literature in U.S. politics. Examines the scholarly analysis of key actors in U.S. politics, including the presidency, Congress, the judiciary, and political parties.

POLS 7206. Seminar in Comparative Politics. 3 Hours.
Focuses on major research paradigms within comparative politics, including political culture, structuralism, and rational choice. Examines major research fields in the discipline, including democratization, nationalism, ethnic politics, political economy, and political parties.

POLS 7207. Seminar in International Relations. 3 Hours.
Focuses on major research approaches and corresponding academic literature in international relations. Examines major fields of study, including international security, international regimes, international organizations, globalization, and international political economy.

POLS 7215. Advanced Quantitative Techniques. 3 Hours.
Covers multivariate statistical models and their applications to social science data. Covers the ordinary least squares (OLS) regression model and the assumptions underlying it in detail, as well as the techniques for analyzing data when OLS assumptions do not apply, such as simultaneous equation models, time series models, and maximum likelihood techniques for limited and discrete dependent variables. This is a second-semester course in quantitative techniques for graduate students in the social sciences.

POLS 7216. Applied Cases in Advanced Quantitative Methodology. 3 Hours.
Introduces special topics and techniques in advanced statistical analysis and related research methodologies for students preparing for administrative and analytical positions in nonacademic settings. Focuses on case-study material with an applied orientation to examine such topics as index creation, demographic analysis, administrative “report cards,” content analysis, program evaluation, survey research and sampling, and planning methodology. Requires prior completion of equivalent course work if prerequisite is not met.

POLS 7250. American Political Institutions and Processes. 3 Hours.
Analyzes the constitutional system and national government institutions, focusing on the executive, legislative, and judicial branches. Examines political parties and pressure groups and their role in the policy process.

POLS 7251. Congress and Policy. 3 Hours.
Assesses the role of Congress in making public policy. Examines the impacts of congressional elections, the structure of the legislative branch, and the effects of other actions (the president, mass media, or interest groups) on legislative branch behavior.
POLS 7252. The American Presidency. 3 Hours.
Studies the institutional and personal factors that affect the exercise of presidential power as well as the development of constitutional and extraconstitutional presidential powers. Examines the role of the president in formulating and executing domestic and foreign policy.

POLS 7253. American Constitutional History and Theory. 3 Hours.
Examines American constitutional history, with a particular interest in constitutional change. Examines how the Constitution was written and amended, and how the Supreme Court has interpreted the Constitution over time. Also focuses on how the Constitution serves as an instrument of popular power and a symbol of political ideals.

POLS 7254. Campaigns and Elections. 3 Hours.
Studies campaign tactics and strategies as well as classic and contemporary scholarly literature on elections.

POLS 7255. American Political Parties and Elections. 3 Hours.
Focuses on American political parties and includes analyses of party organizations and decision-making systems, leader/activist differences in policy and ideology, party reform, policy commitments, campaign finance, media, voting behavior, and an overview and assessment of contemporary elections and campaigns.

POLS 7257. The U.S. Judicial Process. 3 Hours.
Studies the judicial process in the United States, emphasizing federal courts. Focuses on theories and empirical research regarding judicial decision making, how and why judges decide what they do, and with what political effects.

POLS 7258. Interest Groups and Social Movements. 3 Hours.
Surveys the role of interest groups and social movements. Emphasizes the factors motivating elites and ordinary members to organize and participate in collective action.

POLS 7280. Ancient and Medieval Thought. 3 Hours.
Focuses on the development of political thought from Greek antiquity to the early modern period utilizing both historical and analytical approaches. Considers the cultural, social, and intellectual context within which political theories develop.

POLS 7281. Modern Political Thought. 3 Hours.
Examines political thought from the early modern period to the twentieth century. Considers the cultural, social, and intellectual context within which political theories develop.

POLS 7282. Contemporary Political Thought. 3 Hours.
Explores the main currents of political thought during the twentieth century, with emphasis on the relations between political theory, philosophy, and political science.

POLS 7283. Trends in American Political Thought. 3 Hours.
Examines intellectual concepts and movements that have informed and influenced American political life from the Revolutionary period to the present, with emphasis on those ideas that animate the making of public policy.

POLS 7312. Intergovernmental Relations. 3 Hours.
Offers an institutional-behavioral analysis of the changing relationship among the various levels of American government-national, state, and local-relating the pattern of change to the social and economic forces that underlie it.

POLS 7313. State Government. 3 Hours.
Appraises the problems of contemporary state government in the United States. Emphasizes the diversity of political institutions, political processes, and public policies in the states.

POLS 7314. Urban Government and Politics. 3 Hours.
Explores issues and problems in urban government, such as legal dependence, government finance and administration, rapid growth of suburban and metropolitan areas, and decline and decay of the central city.

POLS 7319. Business/Government Relations. 3 Hours.
Extensively examines the relationship between the United States government and the private economy from an historical and a contemporary perspective. Analyzes a number of public policy areas in which public and private actors interact. Examines stabilization policy, regulation, antitrust, and social welfare policy in the context of alternative interpretations of the United States political economy.

POLS 7325. Contemporary Issues in Third World Development. 3 Hours.
Examines the major themes in development studies today. Explores approaches to the development and production, population growth, equity and poverty, rural and urban development, health and nutrition, education, and the international context of development assistance. Students considering a development administration concentration should try to take this course as their first in the field of development.

POLS 7331. Environmental Policy and Politics. 3 Hours.
Explores debates surrounding the making of environmental policy in the United States and other nations. Examines the nature of environmental problems, how the structures of political systems affect policymaking, and the competing interests at work in environmental politics. Also discusses environmental policy in cross-national and international perspectives.

POLS 7332. Gender and Politics. 3 Hours.
Explores the relationship between gender and politics from cross-national perspectives with a focus on major policy issues, such as women’s political equality, reproductive rights, sports, sex trafficking, and the welfare state. Emphasizes how policies based on democratic principles premised on individual equality, compared to those based on group differences, generate opportunities or obstacles for women’s political inclusion.

POLS 7333. Science, Technology, and Public Policy. 3 Hours.
Discusses the impacts of breakthroughs in science and technology on politics and public policy making—and how politics in turn influences scientific research and technological development. Examines differences between scientific and democratic values, competing definitions of rationality, the nature of problems, policy-making processes, questions of intellectual property rights, and debates over risk assessment, including the “precautionary principle.” Focuses primarily on the United States but with comparisons to the European Union and other areas of the world. Anchors discussion in such areas as (for example) biotechnology, nanotechnology, alternative energy sources, and artificial intelligence.

POLS 7334. Social Networks. 3 Hours.
Offers an overview of the literature on social networks, with literature from political science, sociology, economics, and physics. Analyzes the underlying topology of networks and how we visualize and analyze network data. Key topics include small-world literature and the spread of information and disease. Students who do not meet course prerequisites may seek permission of instructor.

POLS 7336. Social Capital and Resilience. 3 Hours.
Examines the role of social capital as in trust, governance, and economics. Focuses on networks and connections in disasters and resilience around the world. POLS 7336 and PPUA 7336 are cross-listed.
POLS 7341. Security and Resilience Policy. 3 Hours.
Examines the post-9/11 evolution of security and the new emphasis on bolstering societal, infrastructure, system, and network resilience. Emphasizes the complex organizational; jurisdictional (international, federal, state, and local); private-sector; and civil-society issues associated with managing the risk of terrorism, cyber-attacks, and naturally occurring disasters. Topics include policy development and implementation of critical infrastructure protection, cybersecurity, supply chain security, disaster management, and community resilience. Requires concurrent registration in POLS 7342 for students in the College of Engineering and students in the MS program in security and resilience.

POLS 7342. Security and Resilience Studies Toolkit. 1 Hour.
Develops and applies theories, concepts, and policies in security and resilience studies. Requires students to complete assignments pertaining to security and resilience supplementary to existing course material. May be repeated up to three times.

POLS 7343. Counterterrorism. 3 Hours.
Examines the most important empirical and theoretical debates on counterterrorism. Analyzes the motives and strategies of key actors in the development of approaches to counterterrorism.

POLS 7344. Hard Power, Soft Power, and Smart Power. 3 Hours.
Examines different forms of power in an international context. Includes conceptual and empirical examinations of the various types of power, the actors who have power, and the contexts under which power is exercised.

POLS 7345. Theories and Concepts in Civil-Military Relations. 3 Hours.
Examines the nature of civil-military relations in a theoretical and comparative framework. Emphasizes the state of civil-military relations as having serious ramifications for state security, political stability, and democratic governance. Topics include coercion and governance, praetorianism, the role of the military in civil society, and the nature of civil-military relations in different threat environments.

POLS 7346. Resilient Cities. 3 Hours.
Examines the characteristics of resilient cities, especially those located in coastal regions. Investigates the capacity of cities to respond to major disruptions to their social and ecological systems. Includes extensive use of case studies, such as the 2004 Indian Ocean tsunami and Hurricane Katrina in 2005, as well as readings on cities and social systems. Offers students an opportunity to analyze an urban area and provide recommendations for improving its resilience. POLS 7346 and PPUA 7346 are cross-listed.

POLS 7347. Controversial Issues in Security Studies. 1 Hour.
Examines important issues and challenges in security studies. Includes interaction with local and international security scholars and practitioners. Analyzes security threats and challenges in practical and theoretical terms.

POLS 7348. Strategies of Conflict in International Relations. 3 Hours.
Examines different strategies and concepts in international conflict. Includes conceptual and empirical examination of the various types of conflict, including manifestations of war, sanctions, and diplomacy. Introduces students to strategies and tactics in international negotiation and bargaining.

POLS 7349. European Foreign and Security Policy. 3 Hours.
Examines the main debates surrounding European foreign and security policy, from an internal, European Union (EU) perspective as well as an external, global perspective. Topics include both theory and policy. Delves into the inner workings of the EU alongside the implications for NATO.

POLS 7350. Seminar in Comparative and International Politics and Policy. 3 Hours.
Highlights the nature of politics and public policy making in a comparative and global setting. Questions how policy making is affected by regime type, such as democratic or authoritarian governments. Ideology, culture, and the level of economic development are also important factors in shaping public policy. Emphasizes the role of international institutions, such as the World Bank and European Union, and the development of other transnational organizations in policy making in a global arena.

POLS 7351. Democratization and Governance. 3 Hours.
Explores the post-Cold War democratic challenge to authoritarian, military, one-party, and dictatorial regimes throughout the Third World. Examines criteria for assessing the strength and success of democratization and the methods of foreign donors to promote it. Also explores the linkage between democracy and development.

POLS 7352. Democratization: Basic Approaches. 3 Hours.
Examines the fundamental questions and the basic thinking that has guided approaches to the study of democratic development. Focuses on the works of such influential thinkers as Lucien Pye, Samuel Huntington, Guillermo O'Donnell, S.M. Lipset, Alfred Stepan, Robert Bates, Joseph LaPalombara, and others whose work set the parameters for study in institution building and political representation in emerging democratic societies.

POLS 7353. Comparative Democracies. 3 Hours.
Reviews recent approaches to studying and understanding democratic political development in selected areas of the world. Attention is given to Africa, Latin America, Eastern Europe, and Asia in differing degrees in various years and depending on ongoing developments. Focuses on the current research on institution-building including legislative assemblies, political parties and elections, and the democratic values of elites and masses, among other things, as they impact on the process of democratization.

POLS 7354. Comparative Political Parties and Electoral Systems. 3 Hours.
Examines the critical linkage function of political parties and elections in democratic societies. Explores materials on political parties in comparative perspective, including those in advanced democratic societies and emerging democratic nations. Focuses on the organization, coalitional nature, activities, and policymaking impact of political parties in furthering democratic ends and of electoral systems in providing different levels of political representation. Also analyzes the influence of comparative electoral arrangements and systems in shaping nature and quality of political representation.

POLS 7355. Comparative Constitutionalism. 3 Hours.
Compares dimensions of American constitutional law and civil liberties with developments in courts from around the world. Key readings include cases from Canada's Supreme Court, Germany's Bundesverfassungsgerichts, France's Conseil Constitutionnel, Britain's House of Lords, South Africa's Constitutional Court, and the European Court of Human Rights, dealing with freedom of expression, federal-state relations, church-state relations, freedom of conscience, equality and social welfare rights, and privacy and personal autonomy.
POLS 7356. Comparative Political Economy. 3 Hours.
Compares national economic policies in such areas as banking regulation, taxes, welfare, environmental protection, and privatization in up to five countries each semester. Examines the impacts of the type of political system (presidential democracy, parliamentary democracy, modernizing military regime, and so on) and the organization of the central government bureaucracy on public policy choices. Countries studied include both advanced industrial nations (the United States, Britain, Japan, France, or Germany) and developing countries (Mexico, Brazil, South Korea, or India).

POLS 7357. International Political Economy. 3 Hours.
Addresses international political economy and how we can understand the phenomenon of globalization. Offers a graduate-level introduction to the interaction between international politics and international economics in both industrial countries and developing countries. Introduces several theoretical approaches to international political economy and analyzes some of the classic issue areas of international trade relations, such as the international monetary and financial system; foreign direct investment and multinational corporations; debt, and development; the role of international political, economic, and financial institutions; and globalization.

POLS 7359. International Law. 3 Hours.
Investigates the development of legal principles and norms in relation to the international political system, particularly focusing on the role and interpretation of law within the United Nations and World Court contexts. Examines issues such as sovereignty and international jurisdiction, treaty interpretation, the peaceful resolution of disputes, and the use of U.N. peacekeeping forces.

POLS 7360. Ethnic Political Conflict. 3 Hours.
Analyzes ethnic political violence from an international perspective. Undertakes in-depth analysis of key international examples. Focuses on causes and consequences of ethnic conflict as well as policy options for conflict resolution.

POLS 7361. U.S. National Security Policy. 3 Hours.
Analyzes U.S. national security policy, with emphasis on the various forms of war that threaten the United States and world security.

POLS 7362. Nationalism. 3 Hours.
Focuses on contending theories of nationalism and nationalist movements. Topics include cultural particularism and the establishment of group boundaries, ethnic elites and cultural hegemony, mass mobilization, intergroup socioeconomic disparities, nationalism and modernity, nationalist parties and their policy strategies, and the "constitution" of race, particularly in the Americas.

POLS 7363. Politics of Revolution and Change. 3 Hours.
Analyzes revolution and political change with attention to both theory and practice. Discusses revolution, major trends in contemporary politics, and the relationship between political change and technological, scientific, or social change.

POLS 7364. Terrorism, Violence, and Politics. 3 Hours.
Analyzes the theory and practice of terror, violence, coercion, force, and threats in political life.

POLS 7365. Totalitarianism and Oppressive Government. 3 Hours.
Analyzes totalitarianism and dictatorship including a study of their historical background and fundamental characteristics, as well as theories of the origin, nature, and significance of totalitarianism.

POLS 7366. Genocide in a Comparative Perspective. 3 Hours.
Takes an interdisciplinary approach (that is, history, political science, and sociology) to the study of genocide. Examines the meaning of the concept in historical and philosophical terms, the societal and psychological causes of genocide, and specific cases throughout history, with emphasis on more recent episodes.

POLS 7367. U.S. Foreign Policy. 3 Hours.
Examines the theory and practice of U.S. foreign and national security policy. Focuses on selected issues since the end of the Second World War, with emphasis on contemporary policies and challenges.

POLS 7369. International Security. 3 Hours.
Examines key problems in international security that are faced by nation-states and international and nongovernment organizations. Examples include armed violence, terrorism, organized crime, nuclear proliferation, poverty, and energy security. Explores responses that include international cooperation and the establishment of international norms. Analyzes related literature and theoretical perspectives.

POLS 7370. Europe and European Union Governance. 3 Hours.
Surveys the institutions, processes, and value constructs that structure political, economic, military, monetary, financial, and cultural activity in Europe, with an emphasis on the effect of the European Union and the challenges it presents.

POLS 7371. Government and Politics of Central and Eastern Europe. 3 Hours.
Analyzes the politics of the former Soviet Bloc countries since the prospects for stable political development and successful economic growth in the postcommunist era.

POLS 7373. Government and Politics of Russia. 3 Hours.
Examines the roots and causes of the disintegration of the former Soviet Union. Focuses on postcommunist Russia's development of democracy, introduction of the free market, and maintenance of interethnic peace and national unity.

POLS 7376. Government and Politics of the Middle East. 3 Hours.
Examines the political and economic structures of the Arab states, Iran, Turkey, and Israel as well as inter-Arab politics and interstate conflict in the area. Emphasis is on Islam and politics, gender politics, and civil society.

POLS 7377. Arab-Israeli Conflict. 3 Hours.
Explores the history and politics of the Arab-Israeli conflict. Examines the origins of the conflict, its development over time, the key events that have shaped it, and the different narratives and perceptions of these events. Covers the conflict from the emergence of Zionism and Arab nationalism up to the present day. Examines the entire Arab-Israeli conflict but particularly emphasizes the Israeli-Palestinian dimension of the conflict.

POLS 7379. Chinese Politics and Foreign Policy. 3 Hours.
Examines the impact of ideology, development, and culture on the major issues in Chinese politics since the Communist Party took control in 1949. Issues include leadership recruitment and succession, economic development, class and class struggle, political culture, education, socialist democracy, socialist legality, and the evolving definition of socialism in the context of Chinese culture. Also examines major principles and issues in China's foreign relations, such as trade, investment, technology transfer, military and strategic policy, and China's role in the United Nations and other international organizations.
POLS 7380. Japanese Politics and Foreign Policy. 3 Hours.
Examines the development of Japan's political system since World War II. Focuses on Japan's institutions and democratic practices in the context of political culture, the interrelationship between business, politics, and government, Japan's foreign policy and international trade practices, as well as its business practices and media. Also looks at major social and political issues including the treatment of foreigners and minorities, the educational system, and the role of women.

POLS 7381. U.S.-East Asia Relations. 3 Hours.
Analyzes U.S. relations with the east Asian countries of Japan, Korea, and China. Topics include trade issues, human rights concerns, security arrangements, development and democratization, and investment and aid programs. Also discusses regional economic, trade, security, and development institutions—such as ASEAN, APEC, and ARF—as well as the role of the Asian Development Bank, the World Bank, and the International Monetary Fund in east Asia.

POLS 7382. Politics of Developing Nations. 3 Hours.
Considers the process of political development in the Third World including both internal and international issues such as leadership patterns, the role of the military and political parties, and underlying economic and social factors.

POLS 7383. Government and Politics of Latin America. 3 Hours.
Investigates contemporary Latin American politics, emphasizing formal political institutions and informal political processes under alternate national political “games,” such as traditional authoritarianism, populism, modernizing military rule, the postrevolutionary regime, and elite or mass democracy.

POLS 7384. Government and Politics of Africa. 3 Hours.
Compares the political systems and foreign policies of selected African nations south of the Sahara.

POLS 7385. Transatlantic Relations. 3 Hours.
Explores the issues and questions surrounding E.U.-U.S. relations. Offers an overview of different approaches and perspectives designed to help students to understand the transatlantic relationship. Examines specific themes and issue areas for E.U.-U.S. relations, such as those arising from the political, economic, security, foreign policy, and environmental spheres.

POLS 7386. Europe and Its Eastern Neighborhood. 3 Hours.
Examines competing interests of the European Union, NATO, and Russia in Eastern Europe. Offers students an opportunity to analyze Eastern European politics in many issue areas, including self-determination, democratic governance, human rights, domestic and international security, and economic growth and stability.

POLS 7387. Global Governance. 3 Hours.
Introduces the concept of global governance and the core architectural elements of the current system of global governance. Examines the key policy purposes and tasks carried out by global governance processes.

POLS 7388. Public Diplomacy. 3 Hours.
Explores the intersection of international relations theory and public diplomacy to explain how a nation’s government or society seeks to project itself to external audiences in ways that improve these foreign publics’ perception of that nation. Takes a comparative, case-study approach that includes the public diplomacy of China, India, the European Union, the United States, and others. Offers students an opportunity to obtain a foundation to understand the intersection of foreign policy, identity, and images of nations.

POLS 7389. International Relations of the Middle East. 3 Hours.
Examines the international politics of the Middle East region. Covers methodological and theoretical issues involved in the study of the Middle East as well as formation of the modern Middle East state system and the region’s history in the Cold War and post—Cold War periods. Addresses major themes and issues, including political economy, globalization, and the impact of states outside the Middle East on the region's international relations.

POLS 7390. Topical Seminar in American Politics. 3 Hours.
Examines current issues in the area of American government and politics. May be repeated without limit.

POLS 7391. Topical Seminar in Political Thought. 3 Hours.
Examines current issues in the area of political thought. May be repeated without limit.

POLS 7392. Topical Seminar in Public Policy and Administration. 3 Hours.
Examines current issues in the area of public administration. May be repeated without limit.

POLS 7393. Topical Seminar in Comparative Politics. 3 Hours.
Examines current issues in the area of comparative government and politics. May be repeated without limit.

POLS 7394. Topical Seminar in International Relations. 3 Hours.
Examines current issues in the area of international relations. May be repeated without limit.

POLS 7407. Internship in Politics and Public Administration. 1-6 Hours.
Offers work experience (at least fifteen hours per week) that includes planning, research, policy development, and other administrative aspects in a government or nonprofit organization. May be repeated up to five times for up to 6 total credits.

POLS 7441. Cyberconflict in the International System. 3 Hours.
Examines the literature, policy reports, and important news stories about the domain of cybersecurity and conflict. Analyzes contending perspectives on the role and impact of cybersecurity in the international system. Utilizes social science theories and methods to explore this method of conflict.

POLS 7442. Homeland Security and Resilience Law and Policy. 3 Hours.
Examines homeland security and resilience policy through the lens of its legal framework. Analyzes security and federal emergency management legislation, executive actions, and related case law in their effects on decision making related to homeland security and advancing societal resilience. Examines the multijurisdictional challenges associated with federalism as it relates to the development of security- and resilience-related law and policy.

POLS 7704. Critical Infrastructure Resilience. 4 Hours.
Explores the growing vulnerability of our human-made built environment to a range of risks. Using the new paradigm centered on the concept of resilience, examines how best to safeguard the critical foundations that provide transport, communications, water, energy, and other essential functions in the face of disasters, growing urbanization, climate change, and globalization. Identifies solutions that are scientifically credible, informed by data and sound engineering principles, while concurrently grounded in an understanding of social and policy imperatives. Offers students an opportunity to apply the skills and knowledge acquired in the course to a real-life example through a group project.

POLS 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
POLS 7976. Directed Study. 1-4 Hours.
Offers assigned reading under the supervision of a faculty member. May be repeated without limit.

POLS 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

POLS 7980. Capstone Project. 3-6 Hours.
Offers students an opportunity to complete a specialized research or applied project in political science or security studies as part of the master’s degree. Designed to meet the specific learning and research interests of the student. Learning experience is based on group or individual activities that meet agreed-upon benchmarks with the instructor and may involve activities with government or nongovernment organizations. Scope of the project varies by credit hours earned.

POLS 7990. Thesis. 1-6 Hours.
Offers thesis supervision by individual members of the department. May be repeated without limit.

POLS 7996. Thesis Continuation. 0 Hours.
Offers continued thesis supervision by individual members of the department.

POLS 8400. Planning Module in Urban and Regional Policy. 1 Hour.
Relates a professional activity to urban and regional planning. May be repeated without limit.

POLS 8407. Internship. 3,6 Hours.
Offers work experience (at least fifteen hours per week) that includes planning, research, policy development, and other administrative aspects in a government or nonprofit organization. May be repeated without limit.

POLS 8960. Exam Preparation—Doctoral. 0 Hours.
Offers the student the opportunity to prepare for the PhD qualifying exam under faculty supervision.

POLS 8966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

POLS 8967. Readings. 1-4 Hours.
Offers selected readings under the supervision of a faculty member. May be repeated without limit.

POLS 8982. Readings. 1-4 Hours.
Offers assigned reading under the supervision of a faculty member. May be repeated without limit.

POLS 8984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

POLS 8986. Research. 0 Hours.
Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

POLS 9000. PhD Candidacy Achieved. 0 Hours.
Indicates successful completion of the doctoral comprehensive exam.

POLS 9984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

POLS 9986. Research. 0 Hours.
Offers an opportunity to conduct full-time research under faculty supervision. May be repeated without limit.

POLS 9990. Dissertation. 0 Hours.
Offers dissertation supervision by individual members of the department. May be repeated once.

POLS 9996. Dissertation Continuation. 0 Hours.
Offers continued dissertation supervision by individual members of the department. May be repeated without limit.

POL 1120. International Relations. 3 Hours.
Introduces students to the core ideologies and methodologies of the study of international relations. Examines critical topics in international relations, such as war and diplomacy, international cooperation, and the nature of the international system. Emphasizes the nature of the international sphere and key topics currently affecting politics among states.

POL 1200. Comparative Politics. 3 Hours.
Introduces students to the comparative study of political organization and behavior in a variety of political systems present in a range of countries around the world. Examines different structures of political systems, governing institutions, leadership, political participation, major issues in political change, and sources of instability.

POL 1300. American Government. 3 Hours.
Introduces students to the American system of government, how it functions, and its politics. Studies early American history and philosophy as the source of the American Declaration of Independence, the design of the U.S. Constitution, and major issues in the development of the American political system. Examines the roles of public opinion, political behavior and participation, political parties, and interest groups in shaping American politics and policy. Includes a detailed analysis of major governmental institutions, their structures, and their operation.

POL 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POL 2315. State and Local Government. 3 Hours.
Examines the political and administrative context of state and local government in the United States. Surveys the structure, function, and politics of states and city/town government within the context of the U.S. federal system and studies comparatively the diversity of political institutions and practices. Examines the nature of local politics and political participation from a practical and theoretical standpoint.

POL 2320. Political Parties and Interest Groups. 3 Hours.
Examines the organization and role of political parties and interests groups within the American political system. Analyzes the historical and current establishment of political parties and interest groups, how they operate from state to state, and assesses their overall contribution to and value in the American political system.

POL 2430. Survey of Political Thought. 3 Hours.
Examines the most important writers and philosophical arguments relevant to main currents in political science today. Includes texts from ancient Greece up to the modern era.

POL 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POL 3126. Global Governance. 3 Hours.
Introduces students to the concept of global governance. Summarizes the core architectural elements of global governance and examines the key issues related to international organization and regime formation. Analyzes global, regional, and issue-based international organizations and regimes.

POL 3135. International Conflict and Negotiation. 3 Hours.
Examines various manifestations of international conflict, including the nature of conflict; various degrees of conflict; and how conflicts evolve, are managed, and are resolved. Analyzes key concepts and practices in the conduct of diplomacy and negotiation.
POL 3140. International Security. 3 Hours.
Examines key issues in international security that are prevalent in the foreign policy agendas of states, international organizations, and nongovernment organizations. Discusses critical issues in security, including the role of armed violence, terrorism, organized crime, and nuclear proliferation. Considers emerging challenges in areas of disease, food security, and cybersecurity in light of traditional and nontraditional responses to international and domestic threats.

POL 3210. Nationalism. 3 Hours.
Explores contending theories of identity and nationalism as a powerful force in international and domestic politics. Examines the process of identity creation, the choice of national symbols, how group boundaries are established, the role of identity in conflict and state building, and the debate over nationalism as a constructed or primordial nature.

POL 3220. Democracy in Comparative Politics. 3 Hours.
Assesses the development of democracy in a variety of states and examines challenges facing states in the establishment and maintenance of democratic political systems. Examines the process of democratization and institutional differences in democratic political systems. Analyzes methodological options for evaluating democratic institutional performance and political development.

POL 3310. Civil Liberties. 3 Hours.
Examines U.S. Supreme Court decisions, case studies, and other reading material to analyze the Bill of Rights, the 14th Amendment, and key U.S. laws. Analyzes the relationship of these rights and liberties to a liberal democratic society and discusses the challenges posed to these rights and liberties due to current issues and events.

POL 3320. American Foreign Policy. 3 Hours.
Examines the formation and conduct of U.S. foreign and national security policy. Analyzes modern and historic cases in American foreign policy. Emphasizes the period following the end of the cold war.

POL 3330. Politics and Mass Media. 3 Hours.
Analyzes several facets of the mass media, including the role of newspapers, radio, television, and the Internet in public opinion formation. Examines their use and effectiveness in political campaigns, their impact on public policymaking, and the degree of objectivity and/or bias in reporting the news.

POL 3400. Political Science Research Methods. 3 Hours.
Explores the range of research methods and designs used in political science and examines the logic of social scientific inquiry. Offers students an opportunity to learn to apply various methodologies, including experimental research, comparative methods, case study analysis, and survey and interview research. Requires students to complete an intensive writing assignment as part of the course.

POL 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POL 4850. Political Science Capstone. 3 Hours.
Integrates and assesses the knowledge and skills developed by students participating in the political science curriculum. Students conduct extensive research in a new area of analysis, culminating in the completion of a significant final paper or project. Students produce an intensive and scholarly written assignment as part of the capstone.

POL 4950. Seminar. 1-4 Hours.
Offers students the opportunity to integrate knowledge and abilities gained throughout the program. Concludes with a detailed research project.

POL 4955. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

POL 4983. Topics. 1-4 Hours.
Offers students the opportunity to examine a variety of subjects and themes in political science. Since topics change from quarter to quarter, and political science topics are dynamic, students may take this course more than once, provided they focus on a different topic each time. May be repeated without limit.

POL 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

POL 4991. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

POL 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

POL 4993. Independent Study. 1-4 Hours.
Offers students an opportunity to undertake special research.

POL 4994. Internship. 1-4 Hours.
Offers students an opportunity to undertake special research.

POL 4995. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

POL 4996. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student's approved experiential activity and integrates it with study in the academic major.

PORT 1101. Elementary Portuguese 1. 4 Hours.
Designed for students with very little or no prior knowledge of Portuguese. Presents essentials of Portuguese as it is spoken in Brazil through acquisition of basic skills in speaking, reading, writing, and aural comprehension.

PORT 1102. Elementary Portuguese 2. 4 Hours.
Continues the study of Brazilian Portuguese at the elementary level. Includes completion of basic grammatical usage, reading of contemporary Brazilian material, and increased emphasis on oral and aural skills.

PORT 1301. Elementary Portuguese Immersion 1. 4 Hours.
Designed for students who are in a Portuguese-speaking country, this is an off-campus immersion course. Offers students an opportunity to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

PORT 1302. Elementary Portuguese Immersion 2. 4 Hours.
Designed for students who are in a Portuguese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

PORT 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
PORT 2101. Intermediate Portuguese 1. 4 Hours.
Emphasizes further vocabulary building. Offers students an opportunity to master the fine points of grammar through written composition, prepared oral reports, and reading and discussion from contemporary Portuguese materials.

PORT 2102. Intermediate Portuguese 2. 4 Hours.
Builds on PORT 2101 and focuses on further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through written composition, prepared oral reports, and reading and discussion from contemporary Portuguese materials.

PORT 2301. Intermediate Portuguese Immersion 1. 4 Hours.
Designed for students who are in a Portuguese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

PORT 2302. Intermediate Portuguese Immersion 2. 4 Hours.
Designed for students who are in a Portuguese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

PORT 2501. Portuguese for Spanish Speakers. 4 Hours.
Introduces Portuguese to native and heritage speakers of Spanish and/or students who have completed at least one level of intermediate Spanish. Focuses on fundamental communication skills—speaking, aural comprehension, reading, and writing—with particular emphasis on those features of Portuguese that are most difficult for Spanish speakers, such as pronunciation, idioms, and grammatical structures particular to Portuguese. Also explores cultural elements of the Portuguese-speaking countries, with special emphasis on Brazil. Students who do not meet course prerequisites may seek permission of instructor.

PORT 2900. Specialized Instruction in Portuguese. 1-4 Hours.
Designed for individuals whose language skills are at the intermediate level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Students must have at least an elementary level of competence in the language. May be repeated without limit.

PORT 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PORT 3101. Advanced Portuguese 1. 4 Hours.
Continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

PORT 3102. Advanced Portuguese 2. 4 Hours.
Builds on PORT 3101 and continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

PORT 3301. Advanced Portuguese Immersion 1. 4 Hours.
Designed for students who are in a Portuguese-speaking country, this is an off-campus immersion course. Focuses on standard Portuguese as well as the local dialect. Offers students an opportunity to continue to develop grammatical and conversational competence.

PORT 3302. Advanced Portuguese Immersion 2. 4 Hours.
Designed for students who are in a Portuguese-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence.

PORT 3800. Special Topics in Portuguese. 1-4 Hours.
Focuses on a unique aspect of the Portuguese language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an intermediate level of skill in the language. May be repeated up to three times.

PORT 3900. Specialized Instruction in Portuguese. 1-4 Hours.
Designed for individuals whose language skills are at an advanced level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Requires at least an advanced level of competence in the language. May be repeated without limit.

PORT 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PORT 4800. Special Topics in Portuguese. 1-4 Hours.
Focuses on a unique aspect of the Portuguese language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an advanced level of skill in the language. May be repeated up to four times.

PORT 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PORT 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

PORT 4992. Directed Study. 1-4 Hours.
Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

PORT 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to three times.

PORT 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PORT 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.
PORT 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PRT 0910. New Trends for Teachers of Portuguese. 6.8 Hours.
Targets the implications of the new Portuguese Language Orthographic Agreement, approved in 1990, which changes the language dynamics and anticipates the expansion of Portuguese as a worldwide language. Already implemented in Brazil, the Orthographic Agreement goes into effect in Portugal on January 1, 2012. The different forms to write Portuguese among the Lusophone countries delay the language dissemination. Teachers of Portuguese must follow this new trend and offer an integrated perspective of Portuguese. Establishes a comparative analysis of the Portuguese-speaking countries, aiming at a successful integration in the teaching-learning process of the new rules. Exposes participants to content aligned with the system of assessment and certification of Portuguese as a Foreign Language (PLE).

PRT 6610. New Trends for Teachers of Portuguese. 4 Hours.
Targets the implications of the new Portuguese Language Orthographic Agreement, approved in 1990, which changes the language dynamics and anticipates the expansion of Portuguese as a worldwide language. Already implemented in Brazil, the Orthographic Agreement goes into effect in Portugal on January 1, 2012. The different forms to write Portuguese among the Lusophone countries delay the language dissemination. Teachers of Portuguese must follow this new trend and offer an integrated perspective of Portuguese. Establishes a comparative analysis of the Portuguese-speaking countries, aiming at a successful integration in the teaching-learning process of the new rules. Exposes participants to content aligned with the system of assessment and certification of Portuguese as a Foreign Language (PLE).

PDP 0101. Successfully Managing People. 1.4 Hour.
Focuses on key elements to help students meet the current challenges in a changing environment. One’s results as a manager are dependent upon the results of others; therefore, to be successful one must effectively manage others. Offers students an opportunity to learn how to apply proven leadership techniques for coaching, counseling, delegating, motivating, and getting the job done through their direct reports. Uses discussions, case studies, and role-plays to explore the best business practices to successfully manage people.

PDP 0104. Financial Management. 1.4 Hour.
Offers students an opportunity to obtain the tools necessary for a professional to properly analyze and present the financial data required to succeed. Growth in management increases responsibilities in many areas other than one’s organizations’ service or product. The ability to communicate knowledgeably and confidently in financial matters is critical for success and advancement. An understanding of finance and accounting functions are essential to a manager’s skill set.

PDP 0105. Communicating with Impact. 1.4 Hour.
Explores and simplifies tenets of good communication. Whether one-on-one dialogue or more strategic, organizational communication, we know when it goes wrong. Seeks to distill decades of ingrained but complicated communication philosophies into simple, practical, and natural processes that get to the heart of an issue and drive clarity, understanding, and agreed-upon action.

PDP 0106. Coaching for High-Impact Performance. 1.4 Hour.
Seeks to enable students to evaluate their own coaching capabilities and then further develop skills and gain new insights. Coaching is a powerful management tool designed to impact business results by propelling individuals to a higher level of performance. Uses skill-building exercises, group discussion, and minimal lecture to offer students an opportunity to become proficient in coaching as a means of impacting individual and team performance.

PDP 0107. Developing Your Leadership Skills. 1.4 Hour.
Focuses on the skills, qualities, techniques, and tools needed to effectively lead teams and individuals. Leadership is a learned and valuable skill. To work successfully with people so that they produce desired results while feeling respected and motivated is a challenge. The ability to effectively coach and motivate teams and individuals is critical to success as a leader and success of a working group. This is an interactive program.

PDP 0108. Effective Negotiation Skills. 1.4 Hour.
Offers students an opportunity to obtain the information, techniques, and skill building to help achieve better agreements with customers, suppliers, and colleagues. In working with people, different business requirements and interests are typical. Building productive, long-term relationships requires the ability to address these various requirements and interests through principled negotiation.

PDP 0109. Strategic Planning: Tools for Success. 1.4 Hour.
Offers students an opportunity to obtain the tools for strategic planning that achieve lasting results—how to write an effective plan and how to ensure that it is fully implemented at every level of the organization. Strategic planning has the potential to help any organization or department not just to survive but to thrive, adapt to change, and “invent its future.” Even when plans are intelligent, many organizations struggle to fully implement them.

PDP 0110. Influencing Without Direct Authority. 1.4 Hour.
Examines principles, strategies, and techniques involved in influencing through persuasion in order to achieve positive results. As more companies reorganize along horizontal rather than vertical lines, the need emerges for people who are not in authority to get action from others within the organization in order to achieve business objectives. Lacking such authority, people must rely on influencing others through persuasion rather than mandate.
PDP 0118. Dynamic Listening Skills. 0.7 Hours.
Offers students an opportunity to learn effective listening techniques and strategies, as well as how to harness and apply the power of listening. In order to manage successfully, generate a productive environment, maintain or establish high morale, and get bottom-line results, listening is essential and must be active, not passive. This is a highly interactive workshop.

PDP 0123. Effective Time Management. 0.7 Hours.
Offers students an opportunity to learn how to use time more effectively. Successful time management is a continuous process of self-management. Explores the barriers people face in managing time and discusses techniques for overcoming those barriers. While individuals are different and face different work challenges, this program seeks to identify successful ideas and strategies to help control time and make it a manageable resource.

PDP 0127. Leadership Evening Certificate Program. 3.6 Hours.
Designed to help leaders get ready for their new challenges and responsibilities. It has been said that managers are deployed while leaders deploy themselves. Managerial leaders are also confident decision makers, and good decision makers can be a company’s competitive advantage. In today’s environment, there is a worldwide need for corporate leadership in every industry who can build organizations that are fast, flexible, healthy, ethical, and responsive. Examines the heart, soul, and mind of true leadership. Offers students an opportunity to learn what people expect from and respect in leaders and how to develop their unique leadership style for maximum impact. Explores leadership roles as strategist, change agent, coach, manager, communicator, mentor, and team member. 

PDP 0128. Essentials of Project Management. 2.1 Hours.
Designed to deliver a competency-based technical project management boot camp to help early career project managers or those transitioning to the field to master fundamental project management competencies. Offers participants an opportunity to learn the practical and theoretical concepts needed to lead complex technical projects, avoid common project management pitfalls, and develop a solid understanding of appropriate tools and methodologies, such as Agile. Studies how to analyze and visualize data and to communicate analytical findings with stakeholders. Seeks to help participants obtain the collaboration and communication skills necessary to effectively work in teams to manage technical projects by working with others to complete the boot camp’s signature capstone project. Designed to prepare students to take the CAPM/PMP.

PDP 0129. Managing IT Projects. 2.1 Hours.
Offers students an opportunity to obtain the knowledge and processes to plan and manage scope, schedule, and risk for a successful IT project. Uses the PMBOK definitions to set the context for project processes, project life cycles, and project integration as well as industry-recognized processes to define scope, schedule, and risk for a project. Students work in small groups on a case study to analyze the process of producing a project charter, scope statement, work breakdown structure, schedule, and a basic risk assessment.

PDP 0130. Project Plan and Schedule Control. 1.4 Hour.
Covers the “nuts and bolts” mechanics of planning a project and developing an effective project schedule. Most project managers agree that the core of any successful project is the planning and development of the schedule. The course, compliant with the Project Management Institute's (PMI) framework, uses lecture, class discussion, and hands-on experience with a class case study.

PDP 0131. Project Management Simulation. 1.4 Hour.
Provides a comprehensive simulation of complex decisions typically encountered in the project environment. Using a simulation tool, students work in small groups to plan a project, allocate resources, and then assess the impact of their decisions made during the life of the project. Offers students an opportunity to make trade-offs on quality, customer satisfaction, schedule, and budget in a fun and engaging environment, as well as to see both the short-term and long-term impact of decisions and to have an opportunity to reflect on the decision-making process.

PDP 0132. Project Risk Management. 1.4 Hour.
Provides a comprehensive description of the necessary knowledge and procedures to identify, analyze, respond to, and manage risks on a project. Offers students an opportunity to produce the major components of a risk response plan. Students work in small groups on a case study to examine the process of producing key risk deliverables.

PDP 0133. Project Cost Management. 1.4 Hour.
Provides a thorough treatment of the PMBOK Project Cost Management knowledge area. Offers students an opportunity to be prepared in all aspects of the PMI “Project Manager Competency Development Framework.” It goes beyond PMBOK in addressing the cost and pricing issues in project selection, cost-benefit analysis, developing the business case, and then executing and controlling the project using current quantitative methods such as earned value management. Employs practical hands-on learning methods through the use of case studies and interactive discussion.

PDP 0134. Quality Management for Projects. 1.4 Hour.
Offers students an opportunity to learn how to combine project management with quality management. Focuses on the process from initiation to closure. Using an integrated case study, students develop and review typical management deliverables that illustrate the ability of the project manager to control the success of projects. Offers students an opportunity to practice some essential tools that may be helpful on future projects. 

PDP 0135. Communication Management for Projects. 1.4 Hour.
Focuses on the importance of having a communications plan, how information is distributed, reporting project progress, and creating useful project archives. Successful projects require effective communications among planners, stakeholders, and all concerned levels in an organization. Using an integrated case study, students are offered an opportunity to develop a plan that specifies the who, what, when, and how of the project communication. This course, based upon the PMBOK, covers how to complete projects in a timely manner by helping students work through the various processes of sending and receiving project information.

PDP 0137. Project Procurement and Contract Management. 1.4 Hour.
Offers project managers and project team members an opportunity to obtain both procurement and contract management information that helps create and maintain a positive environment for project success. Explores critical issues from the project manager’s perspective, highlighting his or her role and responsibilities to provide greater influence over how work is initiated, planned, executed, controlled, and closed.

PDP 0138. Effective Project Leadership. 1.4 Hour.
Presents the competencies needed to apply project leadership to create the positive project environment. Project managers must be able to assess situations quickly and accurately to maximize project resources and minimize project threats. Offers students an opportunity to complete a project leadership assessment tool, learn the various methods of leadership and how the methods interact to create the project dynamic, and how to lead project resources to project success as defined by the project sponsor.
PDP 0140. PMP Examination Preparation. 1.4 Hour.
Designed to present the best management practices for self- and group study preparation for PMI’s certification exam: Project Management Professional (PMP). Offers students an opportunity to create a baseline assessment of test readiness, a thorough and complete review of the theory of project management as detailed in PMI’s Project Management Body of Knowledge (PMBOK), and a final assessment with personal study strategies. Utilizes the five process areas, the nine knowledge areas, and the thirty-nine processes contained in PMBOK in a hands-on environment.

PDP 0141. Project Management Evening Certificate Program. 5.6 Hours.
Offers students an opportunity to earn the Project Management certificate by providing a firm base of the Project Management Institute’s (PMI’s) Project Management Body of Knowledge (PMBOK). Offers a balance of critical and technical skills, tips, tools, and techniques needed to be a successful project leader. Students work on a team project as well as individual case studies. Savvy clients demand higher-quality products delivered faster and with greater efficiency. The need for organizations to develop sound, effective project management principles and practices is critical. Companies succeed or fail based on their ability to bring quality products and services to market in a timely manner. Topics include all aspects of project management, focusing on what makes a great project leader.

PDP 0150. New Product Development. 2.4 Hours.
Designed to help an organization’s drive for process consistency and discipline in new product development. Although new product development is a key competitive capability for manufacturers worldwide, many companies are unable to launch a new product on a timely basis—consistently. Top-performing companies understand that properly training employees leads to direct, measurable bottom-line benefits. Several leading companies are already sponsoring New Product Development Professional (NPDP) certification across their corporations. The Product Development and Management Association (PDMA) is a nonprofit organization dedicated to advancing the art, science, and business of product development. The PDMA NPDP certification confirms mastery of NPD principles and best practices, enabling better job performance and helping corporations identify those with knowledge and experience to move into a leadership position.

PDP 0151. Project Management Simulation. 2.1 Hours.
Provides a comprehensive simulation of complex decisions typically encountered in the project environment. Using a simulation tool, students work in small groups to plan a project, allocate resources, and then assess the impact of their decisions made during the life of the project. Offers students an opportunity to make trade-offs on quality, customer satisfaction, schedule, and budget in a fun and engaging environment, as well as to see both the short-term and long-term impact of decisions and to have an opportunity to reflect on the decision-making process. Offers project and functional managers and project leaders an opportunity to assess the impact of their project decisions in a realistic project environment.

PDP 0153. Coaching Skills. 0.7 Hours.
Offers students an opportunity to evaluate their capabilities as a coach and practice strategies to further enhance their coaching skills. In today’s business world, coaching is an integral part of organizational life. Managers, supervisors, and team leaders need to be effective coaches who can support and instruct as well as motivate and empower their employees. Features a learn-by-doing format combining discussions, case studies, and role-plays. Offers students an opportunity to understand how to assess individual employee performance needs and how to choose the most appropriate coaching and leadership style.

PDP 0154. Optimizing Personal and Professional Effectiveness and Results. 0.4 Hours.
Explores various tools, skills, and behavioral drivers that influence productivity. Discusses enhancing and limiting behavioral styles. Offers students an opportunity to assess how various predominant behavior styles can impact their work.

PDP 0163. Strategic Thinking. 1.4 Hour.
Offers students an opportunity to understand how to address their own work challenges strategically and to learn about and practice using helpful tools and approaches that call on both analytical and creative skills. In today’s highly competitive world, strategy cannot be developed in isolation by a planning group or an executive team. It must be a continual process that is part of the culture and work of the entire organization. Includes discussions and many exercises to create an active learning environment.

PDP 0177. PMP Certification Preparation Boot Camp. 2.4 Hours.
Seeks to present the best management practices for self- and group study preparation for the Project Management Institute’s (PMI) certification exam Project Management Professional (PMP). Offers students an opportunity to create a baseline assessment of test readiness; a thorough and complete review of the theory of project management as detailed in PMI’s Project Management Body of Knowledge (PMBOK); a final assessment with personal study strategies; and an opportunity to work in a hands-on environment with the five process areas, the nine knowledge areas, and the thirty-nine processes contained in PMBOK.

PDP 0178. PMP Examination Preparation. 1.6 Hour.
Designed to present the best management practices for self- and group study preparation for the Project Management Institute’s (PMI) certification exam, Project Management Professional (PMP). Offers an opportunity to create a baseline assessment of the test readiness; a thorough and complete review of the theory of project management as detailed in PMI’s Project Management Body of Knowledge (PMBOK), and a final assessment with personal study strategies, as well as to work in a hands-on environment with the five process areas, the nine knowledge areas, and the thirty-nine processes contained in PMBOK.

PDP 0179. Project Planning and Schedule Control. 0.8 Hours.
Examines the “nuts and bolts” mechanics of planning a project and developing an effective project schedule using lecture, class discussion, and hands-on experience with a class case study. Most project managers agree that the core of any successful project is the planning and development of the schedule. This class complies with the Project Management Institute’s (PMI) framework.

PDP 0180. Essentials of Project Management and Schedule Control. 3.5 Hours.
Offers a broad overview of the concepts and practices used in managing projects. Students work in a hands-on environment with the five process areas, the nine knowledge areas, and the thirty-nine processes detailed in the Project Management Body of Knowledge (PMBOK). Uses practical exercises, class discussions, and lectures to offer students an opportunity to apply these best practices in a classroom environment. Covers the mechanics of planning a project and developing an effective project schedule. Utilizes lectures, class discussions, and hands-on experience with a class case study.
PDP 0181. Project Evaluation, Cost, and Earned Value. 3.5 Hours.
Covers the metrics for determining and reporting project performance. Examines both quantitative and qualitative approaches of evaluation, with an emphasis on earned value management, and stakeholder analysis and techniques for reporting performance results. Covers identification of stakeholder categories and methods for reporting progress to stakeholders. Offers project managers an opportunity to obtain the tools they need to develop reliable cost estimates by assessing necessary project resources, applying one or more cost-estimating methods, adjusting the estimates based on resource availability and project risk, and evaluating the quality of cost estimates prepared by others.

PDP 0182. Project Scope and Risk Management. 3.5 Hours.
Seeks to provide a comprehensive description of the necessary knowledge and procedures to identify, analyze, respond to, and manage risks on your project. Most project managers agree that the core of any successful project is the planning and development of the schedule. This course, compliant with the Project Management Institute’s (PMI) framework, covers the basic mechanics of scope management. Contains lecture, class discussion, and hands-on experience with a class case study. Offers students an opportunity to produce the major components of a risk response plan. Students also have an opportunity to work in small groups on a case study to learn the process of producing key risk deliverables.

PDP 0183. Project Management Simulation. 3.5 Hours.
Seeks to provide a comprehensive simulation of complex decisions typically encountered in the project environment. Using a simulation tool, students have an opportunity to work in small groups to plan a project, allocate resources, and then assess the impact of their decisions made during the life of the project. Uses a fun and engaging environment to offer students an opportunity to experience making trade-offs on quality, customer satisfaction, schedule, and budget. Allows for reflection on the decision-making process and to see both the short-term and long-term impact of decisions.

PDP 0184. Project Management Certificate Program Online. 1-4 Hours.
Offers a key applied-learning component of the Project Management Excellence Program (PMEP) offered at the Environmental Chemical Company. PMEP focuses on developing and enhancing capabilities of project managers as well as enhancing project management systems to ensure maintaining best-practice techniques and standards. Includes theoretical and practical aspects of managing projects.

PDP 0185. ECC Project Management Certificate Program Online. 9 Hours.
Focuses on developing and enhancing capabilities of ECC project managers, as well as enhancing project management systems, to ensure maintaining best-practice techniques and standards. This is a key applied-learning component of ECC’s Project Management Training Program (PMTP). Includes theoretical and practical aspects of managing projects. The online learning class gives ECC the opportunity to reinforce its vision and culture.

PDP 0186. Communication Management for Projects. 0.7 Hours.
Provides an in-depth review of project communications from project initiation through project closeout. Up to 90 percent of the job of project manager can be spent in communication. Communication can be formal or informal, written, spoken, or nonverbal. Course topics are practiced using client-selected projects.

PDP 0187. Earned Value Management. 1.4 Hour.
Designed to introduce the concepts of performance measurement using earned value. Earned value management is a technique used to quantitatively assess the real progress of a project by understanding the work that was completed, the time taken to complete it, and the actual costs or effort. Offers students an opportunity to learn the fundamental tools and techniques for measuring project performance and how to convey this information to management.

PDP 0188. Leadership for Project Management. 2.8 Hours.
Seeks to provide a comprehensive and practical "tool kit" of skills to more effectively lead and manage projects for a construction business. Covers many aspects of "high-performance" techniques and strategies, including negotiation skills, managing up, and effectively influencing others. Examines individual and organizational factors that hinder managerial and leadership performance. Also covers topics that focus on motivating, coaching, and developing employees.

PDP 0189. Transitional Leadership. 0.8 Hours.
Focuses on the student’s personal response to change and ability as a leader to help others with their responses to change. Change is a process of transformation, not an event. Though it may be precipitated by a specific action upon or reaction to the external environment, implementing it takes time, patience, and leadership. Different people respond and “come on board” (or not) in different ways and at different rates.

PDP 0190. High-Impact Coaching. 1.6 Hour.
Offers a workshop designed to provide participants with a common language, process, and practical tools needed for leading and coaching others. Offers students an opportunity to explore and practice strategies for effective coaching. This workshop utilizes learning activities, such as role-plays and personal assessments, to help participants improve coaching skills.

PDP 0191. Leading Project Teams. 0.8 Hours.
Offers a hands-on workshop in which participants have an opportunity to learn how to orchestrate a team for one or more of the organization’s projects. Participants have an opportunity to learn practical tools and best practices to be more effective in managing the project team from start to finish. Introduces techniques used to improve team success.

PDP 0192. Critical Decisions. 0.8 Hours.
Seeks to provide participants with tools to avoid potential decision-making traps and pitfalls, improve individual decisions, and enrich group and organizational decisions. The ability to make effective critical decisions is a valuable and critical skill for leaders.

PDP 0200. Principles of Project Management Certificate Program. 3.6 Hours.
Seeks to relate standardized project management principles to students’ day-to-day, on-the-job activities. Covers usable tips, templates, and other tools; easily accessible reference sources; up-to-date information about careers within project management; a real-world case study project; interactive discussion with other students and the course instructor. Aligned with the Project Management Body of Knowledge (PMBOK), 4th edition, the Project Management Institute’s published standard for project management. Provides an introduction to project management; effective project startup processes; plans to address project risk; tested practices for staffing and communicating clearly with your project team; methods for accurately scoping project requirements, schedule, and budget; examples of performance metrics to maintain project quality; tools for maintaining control of the project throughout its life cycle; practice questions for the PMP exam.
PDP 0210. Coaching in the 21st Century: Preparing Student-Athletes for Life on and off the Field. 1.6 Hours.
Offers students an opportunity to develop theory and practical coaching skills. Focuses on leadership, positive youth coaching, healthy lifestyle promotion, violence prevention, and sportsmanship. May be repeated without limit.

PDP 0300. PMO Workshop. 0.7 Hours.
Description unavailable.

PDP 0301. IT Project Management and Scheduling. 3.5 Hours.
Offers students an opportunity to obtain the knowledge and processes to plan and manage scope, schedule, and risk for a successful IT project. Uses the PMBOK definitions to set the context for project processes, project life cycles, and project integration. Students work in small groups on a case study and real projects to produce a project charter, scope statement, work breakdown structure, schedule, and a basic risk assessment.

PDP 0302. IT Project Management and Scheduling. 2.8 Hours.
Offers students an opportunity to obtain the knowledge and processes to plan and manage scope, schedule, and risk for a successful IT project. Uses the PMBOK definitions to set the context for project processes, project life cycles, and project integration. Students work in small groups on a case study and real projects to produce a project charter, scope statement, work breakdown structure, schedule, and a basic risk assessment.

PDP 0303. IT Project Time Estimating. 1.4 Hour.
Addresses the practical fundamentals of preparing time estimates for project tasks, using interactive case studies in which students are encouraged to apply the learning directly to their work-related projects. Covers time-estimating practices ranging from the default "expert judgment" to more defined methods of analogous/top-down, parametric, range estimates and the use of reserves to contravene "padding estimates." A variety of parametric or thumb-rule methods are brief, which may be calibrated to local practice based on recent project actual history. Demonstrates a computer-based tool that manages the estimating process to ensure consistent, credible results.

PDP 0304. Intermediate Project Management. 1.4 Hour.
Offers students an opportunity to obtain the knowledge and processes to plan and manage scope, schedule, and risk for a successful IT project. Uses the PMBOK definitions to set the context for project processes, project life cycles, and project integration. Students work in small groups on a case study and real projects to produce a project charter, scope statement, work breakdown structure, schedule, and a basic risk assessment.

PDP 0400. Behavioral Interviewing. 0.3 Hours.
Presents the behavioral event approach to interviewing job candidates. Examines the advantages of this approach over previous methods. Explores and discusses how to plan, conduct, and follow up effective selection interviewing in a format that is flexible and responsive to the needs of the audience. Discusses using behavioral event interviewing methods for obtaining the best insight into a candidate's strengths, weaknesses, and "job fit." Provides examples of appropriate questions and an opportunity to practice interviewing using this methodology.

PDP 0401. Customer Service Skills. 0.7 Hours.
Offers students an opportunity to learn how to identify and appreciate exceptional customer service principles and apply them to how they work; learn to change their customer service perceptions (mind-set) to be more successful; become adept at identifying the customer profile and the style; use goal-setting techniques for service providers; learn techniques to handle difficult customers and enjoy the job more; learn and use strategies to motivate internal customers; adapt communication style to gain the customer's confidence; learn to ask the right questions and go the "extra mile"; see requests and problems through to a satisfying resolution; manage the stress associated with providing quality customer service; and create a realistic workable personal action plan to apply the skills learned.

PDP 0402. Managing Change in the Workplace. 0.2 Hours.
Creates a framework and strategy for dealing with change and transition in the workplace. Through case study analysis, group discussion, and individual and group exercises, offers students an opportunity to learn how to deal with change and ongoing transition.

PDP 0403. Internal Consulting Skills. 0.2 Hours.
Covers the concepts, skills, and techniques needed to develop an effective internal consulting approach. Offers students an opportunity to learn how to share their expertise with their clients in a collaborative way, building commitment, and partnering for business success.

PDP 0404. Cost-Benefit Analysis. 0.7 Hours.
Intended for students who do not have financial backgrounds but do have an understanding of the importance of using financial concepts to analyze and make decisions that affect the bottom line in their daily work. Offers students an opportunity to learn, through a combination of lectures and hands-on activities, the meaning and significance of basic financial concepts. These concepts include return on investment, return on equity, present value, net present value, future value, capital budget, and time value of money. Discusses the use of cost-benefit analysis as a qualitative decision-making tool. Uses real-world problem scenarios illustrating these concepts to reinforce learning.

PDP 0500. Advanced Microsoft Excel for Windows XP. 0.7 Hours.
Offers students an opportunity to learn various advanced techniques for analyzing and manipulating data, including customizing the work area, advanced formula construction, using pivot tables, working with multiple worksheets, consolidating and analyzing data, using protection and display options, introduction to macros, and working with interactive Excel Web documents. Students should be familiar with Microsoft Windows or Excel, beginning and intermediate levels, or equivalent knowledge.

PDP 0501. Intermediate Microsoft Excel for Windows XP. 0.7 Hours.
Offers students an opportunity to learn the skills to represent data graphically, maintain and manage lists, sort and filter data, work with advanced formulas, and create and modify charts. Participants should be familiar with Microsoft Windows and Excel, beginning level, or equivalent knowledge.

PDP 0502. Intermediate Microsoft Word for Windows XP. 0.7 Hours.
Offers students an opportunity to learn Microsoft Word intermediate features for creating custom templates, managing tables and table data, inserting graphics, mail merges, sending form letters, and managing document changes. Participants should be familiar with Microsoft Windows and Word, beginning level, or equivalent knowledge.
PDP 0504. Intermediate Microsoft Outlook for Windows XP. 0.7 Hours.
Offers students an opportunity to learn how to sort, filter, and group items; use and create Outlook templates and forms; and share information by using public folders and Net Folders, as well as how to share and fax contacts, automatically record activities in the journal, and customize the Outlook environment. Students should have a basic understanding of Windows, the Internet, and the basic features of Outlook.

PDP 0505. Intermediate PowerPoint for Windows XP. 0.7 Hours.
Offers students an opportunity to learn how to customize templates and to make a presentation interactive by using hyperlinks and action buttons. Includes adding organization charts and diagrams, adding special effects, and creating Web presentations. Requires introduction to WindowsXP and PowerPoint, beginning level, or equivalent knowledge.

PDP 0506. Intermediate Microsoft Access. 1.4 Hour.
Offers students an opportunity to enhance their database designs by using the principles of normalization and table relationships and learn how to query multiple tables for data that is used in customized forms and reports, as well as create data access pages to share data over an intranet or the Internet.

PDP 0507. APICS Certified Supply Chain Professional (CSCP) Learning System. 3.9 Hours.
Offers students an opportunity to develop into a supply chain leader who can create and execute a supply chain strategy that meets customer needs, reduces costs, and increases profits by following the APICS Certified Supply Chain Professional (CSCP) program. Customers in today's complex global marketplace expect high quality, low prices, fast turnaround, and on-time delivery. To successfully compete, organizations have improved supply chain management practices. As a result, well-trained, well-educated supply chain professionals are playing an increasingly important role in their organizations, and an APICS CSCP designation increases value to employers. To earn the APICS CSCP designation, candidates must meet eligibility requirements and pass the APICS CSCP exam.

PDP 0508. Project Portfolio and Recovery. 2.1 Hours.
Focuses on providing students with the tools to manage multiple projects in a competitive, increasingly technical business landscape. An ever growing number of project managers are being asked to manage multiple, sometimes interrelated, complex projects. The ability to manage multiple projects, their resources, and interproject relationships is now a cornerstone skill for the senior project manager. Provides templates, tools, and information necessary to conduct successful, productive, and meaningful project reviews. Discusses regular progress reviews and project audits in-depth. Focuses on adapting the review structure to the performing organization's project methodology and avoiding and early detection of troubled projects.

PDP 0509. Develop Your Leadership Skills. 0.4 Hours.
Offers students an opportunity to evaluate and strengthen their current leadership practices and to learn to adapt to the challenges of modern business leadership, as well as to approach leadership as a collaborative process between leaders, their employees, and others in the organization.

PDP 0510. Develop Emotional Intelligence. 0.4 Hours.
Offers students an opportunity to identify their own challenges and explore tools, techniques, skills, and perceptions to perform their role and manage their emotions with confidence and positive results. The ability to deal effectively with emotions in the workplace is critical to success as managers and service providers. As the pace of the world increases and the environment makes more and more demands on cognitive, emotional, and physical resources, emotional intelligence is increasingly critical as a skill set. Uses skill-building exercises and group discussion.

PDP 0511. Conflict Resolution. 0.4 Hours.
Offers students an opportunity to learn how to deal effectively with interpersonal and group conflict. Organizations are faced with a greater potential for conflict than ever before. The uncertain marketplace, increased competition, and globalization all serve to magnify differences among people. People have conflicting ideas about what work is to be done and how it will get done. The challenge for managers is not to avoid conflict but rather to achieve productive conflict.

PDP 0513. Building Effective Teams. 0.4 Hours.
Presents a successful team development process that facilitates the development of a new team or the revitalization of an existing team. The team structure adapts most easily to changing conditions and has the greatest potential for creative solutions and new approaches to work challenges. Offers students an opportunity to learn how to rapidly increase a team’s effectiveness with the use of teamwork tools and skills.

PDP 0514. Listening Skills. 0.4 Hours.
Addresses a skill that is essential to everyone’s success—listening. This skill must be active, not passive, in order to manage successfully, generate a productive environment, maintain or establish high morale, and get bottom-line results. Offers students an opportunity to learn effective listening techniques and strategies as well as how to harness and apply the power of listening.

PDP 0515. Project Scope Management. 0.4 Hours.
Offers students an opportunity to learn the “nuts and bolts” mechanics of scope management. Most project managers agree that the core of any successful project is the planning and development of the schedule. This class, compliant with the Project Management Institute’s (PMI) framework, contains lecture, class discussion, and hands-on experience with a class case study.

PDP 0516. Influencing Without Direct Authority. 0.4 Hours.
Examines principles, strategies, and techniques involved in influencing through persuasion in order to achieve positive results. As more companies reorganize along horizontal rather than vertical lines, the need emerges for people who are not in authority to get action from others within the organization in order to achieve business objectives. Lacking such authority, people must rely on influencing others through persuasion rather than mandate.

PDP 0517. Positive Assertive Management. 0.4 Hours.
Offers students an opportunity to learn how to be empowered to state one’s case, resolve conflict, and negotiate positive outcomes—and provide fail-proof techniques to insure one is heard.

PDP 0518. Strategic Planning. 0.4 Hours.
Offers students an opportunity to obtain tools for strategic planning that achieve lasting results. Strategic planning has the potential to help any organization or department not just to survive but to thrive, adapt to change, and “invent its future.” Even when plans are intelligent, many organizations struggle to fully implement them.

PDP 0523. Earned Value Management. 0.4 Hours.
Introduces the concepts of performance measurement using earned value. Earned value management is a technique used to quantitatively assess the real progress of a project by measuring the work that was completed, the time taken to complete it, and the actual costs or effort. Offers students an opportunity to learn the fundamental tools and techniques for measuring project performance and how to convey this information to management.
PDP 0525. Technical Business Writing. 1.8 Hour.
Focuses on the principles of concise and effective writing for business. Offers students an opportunity to learn how to construct a direct, clear business letter and e-mail, how to construct a sentence, and how to organize and develop a paragraph. Emphasizes understanding the process and format of writing proposals and reports. Covers summarizing and writing a memo and short report. Since writing improves with rewriting, most of the class time is spent writing in class with instructor assistance. Reviews grammar and punctuation throughout the course.

PDP 0526. Construction Business Management. 3.6 Hours.
Offers students an intensive, practice-oriented introduction to construction law, with solid grounding in the legal principles on which the construction industry operates. Covers many aspects of “high-performance” techniques and strategies, including negotiation skills, strategic planning, and goal setting. Examines individual and organizational factors that hinder managerial and leadership performance. Focuses on effective operations management and an integrated operations management strategy to develop and maintain an efficient and smoothly run business. Includes budget formatting, budget development, budgeting techniques, variance reporting, and forecasting options.

PDP 0527. Assess Workplace Behavior. 0.4 Hours.
Explores the D.I.S.C. behavioral assessment tool to offer students an opportunity to learn how to accurately assess communication in the workplace. Most of us have learned that effective communication is driven by the right combination of voice tone, body language, and content. However, what can be difficult is finding the correct combination for any particular person. Intuitively, we may understand that some people need a more direct approach, while others might require more care and diplomacy.

PDP 0529. Construction Project Management. 4.5 Hours.
Covers best management practices for projects as identified by the Project Management Institute (PMI). These best practices address the nine knowledge areas of the Project Management Body of Knowledge (PMBOK): integration, scope, time, cost, human resources, communications, quality, risk, and procurement. Also covers earned value management and analysis, project selection, contract development, materials management, field operations, change management, project startup and alignment, submittal progress, productivity, scheduling, and contract changes.

Project Management - CPS (PJM)

PJM 5900. Foundations of Project Management. 4 Hours.
Examines the differences between general and project management responsibilities. Introduces the Guide to the Project Management Body of Knowledge (PMBOK), which provides a structured approach to understanding project process groups and knowledge areas needed to manage any size project through a complete project life cycle. Explains high-level distinctions between project, program, and portfolio management. Includes an introduction to Microsoft Project, which is one of the most widely utilized project management software tools. Strongly recommended for students with little or no formal project management experience.

PJM 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

PJM 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

PJM 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

PJM 6000. Project Management Practices. 3 Hours.
Provides an overview of the project management process. Emphasizes project definition, identification of project scope, project life cycle, and project planning. Uses case studies to examine best practices and common project management pitfalls.

PJM 6005. Project Scope Management. 3 Hours.
Offers insight into how projects are defined, evaluated, and ultimately translated into manageable project requirements and concrete deliverables. By learning how to identify stakeholder needs and convert those needs into viable, measurable project scope documentation, a project manager can successfully manage not only a project’s scope but also make informed recommendations when trade-offs between project scope, cost, and schedule become necessary.

PJM 6010. Project Planning and Scheduling. 3 Hours.
Offers students an opportunity to learn effective operations research tools and techniques that allow project managers to translate specifications to realistic project plans, minimizing bottlenecks and downtime, and to learn to identify and plan for resource needs, develop contingencies, and manage risk and scope creep. A well-thought-out and well-managed schedule is critical to successful project management.

PJM 6015. Project Risk Management. 3 Hours.
Examines quantitative techniques for risk assessment and decision making, as well as the steps and elements of a risk management plan, including the ongoing monitoring of risk factors. The accurate identification of risks, and understanding of how to account for the potential impact of risks, can greatly impact the likelihood of project success.

PJM 6020. Project Cost and Budget Management. 3 Hours.
Explores cost estimation methods, break-even analysis, earned value management, and developing confidence levels. Offers students an opportunity to learn to manage the project budget and revise cost estimates. Topics include outsourcing decisions and management, vendor selection and negotiation, and general cost containment.

PJM 6025. Project Scheduling and Cost Planning. 3 Hours.
Builds on the project schedule to explore cost estimation methods, break-even analysis, and earned value management. Studies effective tools and techniques that can allow project managers to translate specifications to realistic project plans that lead to a resource-loaded schedule and baseline budget. These tools and techniques can be used to minimize bottlenecks and downtime, identify and plan for resource needs, develop contingencies, and manage risk and scope creep. Topics include schedule development, cost estimating, and cost and schedule management through earned value management. A well-thought-out and well-managed schedule is critical to successful project management and is integral to the efficient management of project costs. Offers students an opportunity to learn to manage the project budget, revise cost estimates, and develop confidence levels.

PJM 6125. Project Evaluation and Assessment. 3 Hours.
Offers students an opportunity to learn to develop metrics for determining and reporting project performance. Examines both quantitative and qualitative approaches of evaluation, with an emphasis on earned value management. Examines stakeholder analysis and techniques for reporting performance results.
PJM 6130. Organizational and Financial Views of Projects. 3 Hours.
Designed to provide project managers with a basic understanding of the core financial concepts driving project management. Focuses on the use and application of financial techniques in managerial decision making. Covers financial statements, project costs and value, risk and return, and capital budgeting and financial strategy.

PJM 6135. Project Quality Management. 3 Hours.
Designed to provide detailed instruction in Project Quality Management (PQM) processes, one of the nine knowledge areas outlined in the Project Management Institute's Project Management Body of Knowledge. Discusses how to integrate PQM processes into the overall project plan and how to prepare a PQM plan. Encourages students to work together in a team environment to complete a PQM plan for a project.

PJM 6140. Managing Troubled Projects. 3 Hours.
Examines how to prevent failed and troubled projects, how to perform a project assessment/audit, how to develop a troubled project recovery plan, and how to develop a failed project shutdown plan. Includes team presentations of case study assignments to gain experience in managing and avoiding failed and troubled projects, one of the most significant assignments for a project manager.

PJM 6145. Global Project Management. 3 Hours.
Expands the detailed treatment of project management into the global areas of environmental factors, national differences, cultural differences, outsourcing, and virtual project management. The state of the art in project management has advanced to heavy use of global project management. Addresses the Project Management Institute’s Project Management Body of Knowledge practices as applied in the organization and the future of project management.

PJM 6150. Project and Portfolio Management within the Enterprise. 3 Hours.
Explores tools and techniques for identifying, selecting, and deselecting in order to develop a balanced and desirable mix of projects to nurture by means of project termination decisions and management. Project managers often find themselves managing multiple projects that are sometimes interrelated and complex. The ability to successfully manage multiple projects, their resources, and the interproject relationships is now a sought-after skill for project managers. Effective portfolio management improves the speed and quantity of multiproject flow through the organization by minimizing unnecessary multitasking and shifting of priorities.

PJM 6155. Project Planning, Scheduling, and Implementation. 6 Hours.
Offers students an opportunity to work with effective tools and techniques that allow project managers to translate specifications to realistic project plans, plan for resource needs, analyze critical path and contingency planning strategies, become familiar with cost estimation and budgeting methods, as well as how cost and budget management impacts the development and execution of the project plan. Emphasizes that a well-thought-out and well-managed schedule is critical to successful project management.

PJM 6160. Project Risk and Quality Strategies for Project Success. 6 Hours.
Focuses on how risk and quality management can positively or negatively impact project goals and outcomes. The accurate identification of risks and quality metrics and the understanding of how to account for the potential impact can greatly impact the likelihood of project success. Examines quantitative techniques for risk and quality assessment and decision making, as well as the steps and elements of a risk and quality management plan, including the ongoing monitoring of progress.

PJM 6165. Project Evaluation and Financial Analysis. 7 Hours.
Offers students an opportunity to develop metrics for determining and reporting project performance. Examines both quantitative and qualitative approaches of evaluation, with an emphasis on earned value management. Students create two separate evaluation plans—one for performance evaluation to report project status and the other to provide tactical approaches for getting the project back on track when variances are found. Examines stakeholder analysis and techniques for reporting performance results. Introduces core financial concepts driving project management, including financial statements, project cost and value, risk and return, and strategies for planning capital.

PJM 6170. Project and Portfolio Management. 7 Hours.
Defines the strategies, processes, methods of information, analysis, and preferred deliverables of an effective portfolio management approach. Focuses on how to select a balanced and desirable mix of projects, implementing enterprise-level project portfolio management (PPM) based upon the organization’s strategic business goals. Covers the design and implementation of a project management office (PMO). Also presents strategies to prevent failed and troubled projects, to perform a project assessment/audit, to develop a troubled-project recovery plan, and to develop a failed-project shutdown plan.

PJM 6205. Leading and Managing Technical Projects. 3 Hours.
Offers students an opportunity to learn about leadership and management skills and strategies needed to succeed in a demanding technical project environment. Many project managers understand the technical aspects of a particular project environment but lack these critical management and leadership skills. Topics covered include understanding the technical environment, managing and motivating team members, understanding organizational culture, interpersonal strategies, and developing a personal leadership approach.

PJM 6210. Communication Skills for Project Managers. 3 Hours.
Offers students an opportunity to learn strategies for communicating technical concepts in a clear, concise, and appropriate manner for both written and oral communication media. In all project environments, communication is critical for project success. The ability to craft project reports and to communicate with customers, clients, team members, and company executives is critical for anyone leading technical projects. Often, the project manager needs to communicate technical data to a nontechnical audience. Explores various communication models and approaches with a focus on applying those models in a real-world context.

PJM 6215. Leading Remote Project Teams. 3 Hours.
Offers students an opportunity to learn strategies for creating a cohesive, high-performing project team in a remote project environment. The challenges of leading a remote project team are apparent to anyone who has attempted it. The technological challenges are complicated by the reality that most teams have participants located around the world. Therefore, we face not only the standard fare of interpersonal challenges but also cultural challenges as well.

PJM 6220. Planning and Scheduling Technical Projects. 3 Hours.
Offers students an opportunity to learn to plan and schedule projects using a variety of techniques, such as agile, critical chain, and other appropriate methodologies. Technical projects can present unique challenges and opportunities. To meet these challenges and capitalize on the opportunities, a variety of planning and scheduling techniques can be applied. Students practice applying a variety of planning and scheduling techniques through the use of case studies and applied project assignments.
PJM 6705. Portfolio Management in the Enterprise Environment. 3 Hours.
Defines the strategies, processes, methods of information, analysis, and preferred deliverables of an effective portfolio management approach. An ever-increasing number of project managers are being asked to manage multiple, sometimes interrelated, complex projects. This is now a cornerstone skill for a senior project manager. Offers students an opportunity to learn how to identify, select, and de-select in order to develop a balanced and desirable mix of projects to nurture by means of project termination decisions and management, as well as to attain a knowledge of the components, significance, and challenges of implementing enterprise-level project portfolio management (PPM) based upon the organization’s strategic business goals.

PJM 6710. Introduction to Program and Portfolio Management. 3 Hours.
Examines project, program, and portfolio management with a primary focus on the similarities and distinctions between program management and portfolio management. Offers students an opportunity to develop and evidence a foundational understanding of program and portfolio management and the critical role these play within today’s global environment.

PJM 6715. Advanced Program Management. 3 Hours.
Offers students an opportunity to develop a deep understanding of program management and the program management life cycle. Covers best practices for developing and managing a program that is consistently aligned with the strategic direction of the organization, ensuring that stated benefits are realized. Uses case studies and real-world examples throughout to engage students in an experiential and applied manner.

PJM 6720. Advanced Portfolio Management. 3 Hours.
Offers students an opportunity to develop a mature understanding of portfolio management topics, techniques, and tools. Emphasizes learning to identify, prioritize, and oversee a portfolio of programs and projects that deliver value aligned with the strategic direction of the organization. Applied exercises and case studies used throughout the course are designed to ensure students are able to understand how to apply these competencies in a workplace-ready manner.

PJM 6725. Program and Portfolio Leadership. 3 Hours.
Discusses the leadership challenges and opportunities present to those who work in program and portfolio management roles, including engaging stakeholders effectively, communicating with senior-level executives, and managing the competing priorities associated with creating successful programs and a balanced and benefits-oriented portfolio. The ability to meet the leadership challenges inherent to program and portfolio management is essential for success in managing the dynamics of project management programs and portfolios.

PJM 6730. Program and Portfolio Evaluation. 3 Hours.
Offers students an opportunity to learn the skills and tools they need to evaluate and measure performance at the program and portfolio level with attention given to identifying and measuring benefits and their continued value to accomplishing the strategic goals of the organization. A key benefit of effective and impactful program and portfolio management is the ability to develop and utilize meaningful qualitative and quantitative metrics at the project, program, and portfolio level.

PJM 6735. Program and Portfolio Management Capstone. 3 Hours.
Offers students an opportunity to complete a capstone project that illustrates their mastery of competencies taught throughout the program. Capstone projects should evidence a student’s ability to apply their learning in an experiential manner to solve a real-world challenge faced by program and portfolio managers.

PJM 6740. Managing Program and Portfolio Risk and Complexity. 3 Hours.
Examines program and portfolio management with a primary focus on the development of risk-management plans and risk-response plans at the program and portfolio levels. Explores techniques to recognize and address complexity factors as well as developed enterprise-level risk-management challenges and opportunities.

PJM 6750. Strategic Management and Decision Making for Program and Project Portfolio Managers. 3 Hours.
Explores strategic management frameworks and decision-making models that can be applied to the creation and management of programs and portfolios. Program and portfolio managers are challenged to ensure that their collection of projects and programs optimizes realization of organizational strategies. Emphasizes the role of globalization and virtualization, as well as working in increasingly dynamic strategic environments. Topics include environmental analysis; analysis of strengths, weaknesses, opportunities, and threats (SWOT); strategy formulation; development of business cases; and strategy implementation.

PJM 6810. Principles of Agile Project Management. 3 Hours.
Provides an overview of the fundamentals of agile project management. Topics include agile vs. traditional approaches, the agile manifesto, and the development of agile as a value-added business practice. Introduces key agile project management practices, including communication management planning and risk-management planning. Reviews agile-specific practices and method tailoring from an application perspective. Investigates agile project management tools.

PJM 6815. Advanced Agile Project Management. 3 Hours.
Constitutes an advanced offering focusing on specific approaches to executing projects in an agile environment. Seeks to provide the student with a firm grounding and an applied, experiential understanding of specific agile approaches. Offers students an opportunity to engage in real-world-oriented case studies to evidence a strong understanding of the methodologies in a practical, experiential manner by planning and simulating an agile project using a methodology taught in the course.

PJM 6820. Agile Implementation and Governance. 3 Hours.
Explores the implementation of agile within an organization and the governance structure to support agile projects. Studies the use of change management techniques to address stakeholder needs as the organization moves from a traditional to agile or blended approach to projects. Reviews and applies advanced topics in program/portfolio management in agile environments. Offers students an opportunity to develop an implementation strategy and governance plan.

PJM 6825. Agile Lean Product Development. 3 Hours.
Offers a practical overview of modern lean/agile product exposure based on contemporary industry practice. To win in today's competitive market requires giving your business the ability to deliver highly profitable products faster than the competition. Covers the complete life cycle of product management, from identifying customers and users through to sales, marketing, and managing teams. Covers how to minimize investment and output while maximizing the information discovered in order to support effective decision making.
PJM 6910. Capstone. 3 Hours.
Offers students an opportunity to utilize all of the project management skills they have acquired in this master's certificate program to evaluate project processes and outcomes of a single project throughout the entire project life cycle. Examines both quantitative and qualitative methodologies, with an emphasis on tactical approaches and earned value management. Also examines stakeholder analysis and practical techniques for reporting performance results. Intended to be the final course in the project management curriculum after successful completion of all other courses.

PJM 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

PJM 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PJM 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

PJM 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

PJM 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

PJM 6980. Capstone. 7 Hours.
Covers the key elements of project management as defined by the "Guide to the Project Management Body of Knowledge." Offers students an opportunity to prepare individual sections of the plan (including a focus on stakeholder identification, scope, time, cost, quality, risk, communication, human resources, and procurement) and then integrate these sections; to review earlier sections as each new area is planned, revising them to coordinate with the recent added plans; to develop a change management plan to ensure that this integration and coordination is maintained throughout the project life cycle; and to conduct a "lessons learned" session and incorporate the suggestions from this review to improve and finalize their integrated plan.

PJM 6983. Topics. 1-4 Hours.
Covers special topics in project management. May be repeated without limit.

PJM 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

PJM 7976. Directed Study. 1 Hour.
Offers students an opportunity to carry out an individual reading and research project under the supervision of a faculty member. The directed study format allows for the thorough study of a particular topic not covered in-depth or the study of a subject not typically covered at all in the curriculum. A directed study proposal must be approved by the faculty sponsor, division head, and dean of academic affairs.

Psychology (PSYC)

PSYC 1000. Psychology at Northeastern. 1 Hour.
Introduces students to the major and to the professional and academic resources available to students at Northeastern University. Introduces students to their faculty, advisors, and fellow students; educates students about the cooperative education program; familiarizes students with undergraduate research and technological resources; and introduces problem-solving and leadership skills, which students need to succeed in school and in their professional endeavors. Students who do not meet course prerequisites may seek permission of instructor.

PSYC 1101. Foundations of Psychology. 4 Hours.
Surveys the fundamental principles, concepts, and issues in the major areas of contemporary scientific psychology. Approaches the study of psychology as a method of inquiry as well as a body of knowledge. Emphasizes the biological, behavioral, cognitive, and social factors that influence and regulate learning and motivation; personality dynamics; psychopathology and its treatment; life-span development; sensory and perceptual processes; and communication and social behaviors. The influence of cultural factors on psychological studies and theories is also explored.

PSYC 1200. Psychology of Women. 4 Hours.
Introduces students with little or no background in psychology to the current theories and research on the psychology of women. Critically examines psychological, biological, and social influences on gender differences, gender roles, and gender stereotypes in the light of scientific evidence and individual experience. Assesses their consequences for society. Uses the unique perspective generated in the field of the psychology of women to evaluate the traditional research methods in psychology as will as the major psychological theories formulated to explain women and the differences between women and men. Emphasizes critical thinking skills.

PSYC 1204. Psychology of Prejudice. 4 Hours.
Searches for universal characteristics of prejudice by examining its expression toward various minorities including colonized peoples, culturally Deaf people, Hispanic and African Americans, women, gays and lesbians, people with disabilities, and those with status in multiple minorities. Reviews research in social psychology on stereotyping and ethnocentrism for the insight it gives into the nature of prejudice. Uses selected films and student minority advocates to allow class members to hear the authentic voice of targets of prejudice.

PSYC 1208. Psychology and the Law. 4 Hours.
Traces the effects of psychological factors through the course of a trial including such issues as accuracy of eyewitness identification, plea bargaining, jury selection, persuasion tactics in the courtroom, presumption of innocence, jury size, jury decision rules, and sentencing and punishment.

PSYC 1210. Sports Psychology. 4 Hours.
Studies the physical, affective, and cognitive behaviors associated with sport participation and also examines the psychological theories and research related to sport and exercise behavior. Introduces students to the field of sport and exercise psychology by providing a broad overview of the major topics in the area, including the history of sport and exercise psychology, leadership, self-confidence, youth sports, aggression, moral development, team dynamics, anxiety and arousal, goal setting, imagery, and motivation. Covers the psychological makeup of athletes, how psychological factors influence involvement and performance in sport, and helps students acquire the skills and knowledge about sport and exercise psychology that they can apply to their everyday lives.
PSYC 1214. The Moral Mind: The Science Underlying Ethical Decision-Making and Virtuous Character. 4 Hours.
Offers a scientific lens through which to analyze the mental mechanisms and processes that guide moral and ethical decision making. Although the majority of the evidence and perspectives covered stem from psychological and neuroscientific work, the course is interdisciplinary in nature by incorporating relevant perspectives from behavioral economics, evolutionary biology, and philosophy. The primary goal is to offer insight, not only into how the human mind automatically parses ethical issues in given situations but also how control can be gained over such mechanisms, thereby allowing greater efficacy in guiding morality according to consciously embraced principles.

PSYC 1250. Drugs and Behavior. 4 Hours.
Provides beginning students with a general overview of the effects of drug use/abuse in many segments of society with particular attention placed on the collegiate population. Describes historical aspects of drug use for treatments of clinical disease states along with psychological theories of drug abuse and strategies for prevention of drug use/abuse. Covers biological effects emanating from several drug categories and the clinical use of drugs to promote positive therapeutic outcomes.

PSYC 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSYC 2101. Love and Hate: Social, Psychological, and Literary Approaches. 4 Hours.
Studies materials that define and describe love and hate from the fields of literature and literary criticism, social psychology, and criminology and criminal justice. “Love” and “hate” are small words describing powerful emotions with profound effects on individuals and on social groups. Focusing largely on contemporary examples, offers students an opportunity to analyze the differences and areas of overlap in the above fields’ approaches to love and hate, to discuss societal responses to these emotions, and to apply the methodologies of each field to research questions of their own. INSH 2101 and PSYC 2101 are cross-listed.

PSYC 2290. Inquiries in Psychological Science. 4 Hours.
Offers students an opportunity to learn to think like a scientist in the field of psychology. Science is not a static body of knowledge but rather a method for making new discoveries. Students consider a series of controversial issues in current psychology by reading and discussing primary research articles and reviews, critically assessing arguments on all sides, and coming to their own conclusions. Requires students to develop and present their own research proposals on topics of their choice, which encourages them to engage more deeply with the material.

PSYC 2300. Research in Psychology. 4 Hours.
Introduces research methods in psychology such as field research, content analysis, case research, survey methods, simulations, and laboratory experiments. Examines issues of research fairness and evaluating research methods. Explores basic statistical notions including sampling, variability, and correlation.

PSYC 2306. Food, Behavior, and Eating Disorders. 4 Hours.
Investigates what starts and stops eating behavior. Examines taste, nutrition, metabolism, the brain, food experiences, and societal factors that control feeding behavior. Emphasizes the biological/psychological interaction in normal eating and in pathological eating, such as anorexia, bulimia, and extreme obesity.

PSYC 2320. Statistics in Psychological Research. 4 Hours.
Offers an overview of descriptive and inferential statistics with a focus on psychological applications. Covers standard material in undergraduate statistics including distributions, central tendency, variability, z-scores, the normal distributions, correlation, regression, probability, hypothesis testing (using the z, t, F, and chi-square statistics), and confidence intervals. Should be taken before the end of the sophomore year.

PSYC 2352. Childhood Mental Illness. 4 Hours.
Focuses on mental illnesses that are first diagnosed in childhood—such as autism, phobias, conduct disorders, and attention deficit disorder. Overviews childhood depression and suicide and disorders of eating and sleeping.

PSYC 2356. Nonverbal Communication. 4 Hours.
Examines the messages we send by posture, facial expression, voice quality, gestures, touch, gaze, and interpersonal distance. Examines origins and consequences of these behaviors as well as differences related to culture, personality, power, gender, and age.

PSYC 2366. Psychology and Meditation. 4 Hours.
Introduces the interface between scientific psychology and meditation. Focuses on the scientific investigation of meditation, particularly mindfulness meditation. Draws upon scientific research and theory in the fields of neuroscience, cognitive science, learning and motivation, developmental psychology, and other areas to explore meditative experiences and their effects on the nervous system, behavior, intention, perception, attention, thought, and bodily functions. Also explores the practical applications and efficacy of meditation in dealing with stress, pain, and other medical and psychological problems.

PSYC 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
PSYC 3450. Learning and Motivation. 4 Hours.
Offers an introduction to the basic learning and motivational principles that permit humans and animals to adapt effectively to a changing environment. Emphasizes research and theories of operant and Pavlovian conditioning, with discussions of discriminations and generalization, avoidance and punishment, acquired motivational states (for example, addiction), concept formation, biological constraints on learning and behavior, animal cognition, and other related topics. Relates learning and motivational principles to the understanding and treatment of behavioral, affective, cognitive, and motivational disorders.

PSYC 3451. Learning Principles and Behavior Analysis. 4 Hours.
Introduces the basic concepts and theories of applied behavior analysis as they relate to learning and motivation. Topics include operant and classical conditioning, reinforcement, punishment, extinction, discrimination training, stimulus control, concept formation, and generalization. Throughout the course, offers students an opportunity to apply these principles to learning that occurs in their everyday lives as well as in the lives of individuals with developmental disabilities and other learning disorders.

PSYC 3452. Sensation and Perception. 4 Hours.
Discusses how our five senses work to aid us in perceiving states of the body and of the world, how our perceptions are modified by what we know and expect, and how sensation and perception develop (especially in infancy). Includes discussion of neural and anatomical bases of sensation and perception. PSYC 3458 is highly recommended.

PSYC 3458. Biological Psychology. 4 Hours.
Focuses on the relation between brain function and human behavior. Examines how nerve cells function individually and work together both in small networks and in the nervous system; the structure of the nervous system; how our sense organs provide the nervous system with information about the outside world; how the brain controls movement; and how psychological concepts from motivation to language and memory are represented in the brain.

PSYC 3464. Psychology of Language. 4 Hours.
Provides a basic introduction to psycholinguistics. Topics include the nature and structure of languages, processes involved in the production and comprehension of language, the biological bases of language, and aspects of language acquisition. Examines current theories of language processing and related experimental findings.

PSYC 3466. Cognition. 4 Hours.
Provides a basic introduction to human cognition. Topics include pattern recognition, attention, memory, categorization and concept formation, problem solving, and aspects of cognitive development. Examines current theories of cognitive processing and related experimental findings.

PSYC 3506. Neuropsychology of Fear. 4 Hours.
Explores our understanding of the physiological and cognitive aspects of fear, from early theories of emotion to current research in both humans and animal models. Emphasizes linking brain structure to function—how do different brain regions contribute to fear processing and expression? Also focuses on psychiatric illnesses whose symptoms suggest a maladaptive fear response, such as post-traumatic stress disorder and phobias. What causes these illnesses, and how does our understanding of the neural basis of fear inform our treatment strategies for these disorders? Students who do not meet course prerequisites may seek permission of instructor.

PSYC 3508. Behavioral Endocrinology. 4 Hours.
Presents an overview of the field of behavioral endocrinology from a psychological perspective. Examines how hormones influence brain structure and function; how hormones affect behavior and vice versa; sex differences in brain and behavior; and the role of hormones in mood disorders, cognition, and stress.

PSYC 3510. Brain, Behavior, and Immunity. 4 Hours.
Explores how our behavior is affected by (and how it affects) our immune system. The brain and the immune system regulate our behavioral responses to the world around us, which helps explain why we feel “down” when we’re sick and why we often catch a cold when we’re stressed. Offers students an opportunity to better understand how we have evolved to psychologically adapt to environmental challenges—and, importantly, how this can sometimes backfire with mental illness as an outcome. Students who do not meet course prerequisites may seek permission of instructor.

PSYC 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSYC 4505. Industrial/Organizational Psychology. 4 Hours.
Surveys the psychological fundamentals underlying performance in work settings. Topics include psychological testing; performance evaluation; training, motivating, and leading employees; and the social psychology of organizations. Emphasizes ethical and affirmative action issues.

PSYC 4508. Assessment and Data Collection in Applied Behavior Analysis. 4 Hours.
Offers an overview of methods used to identify, measure, and assess the behaviors of individuals using applied behavior analysis (ABA), including behaviors targeted for increase and decrease. In-depth topics include function-based assessment and treatment in behavior analysis; design and details of the assessment process, including selection of an appropriate assessment method; and the methodology, results, and recommendations derived from a functional behavior assessment.

PSYC 4510. Psychopharmacology. 4 Hours.
Examines interactions between drugs, brain, and behavior. Focuses on such topics as synaptic transmission, behavioral functions of specific neurotransmitter systems, pharmacological treatment of mental and neurological disorders, and drug abuse.

PSYC 4512. Neuropsychology. 4 Hours.
Examines the behavior of neurological patients and normal patients to develop an understanding of how the human brain works to produce higher mental functions. Topics include discussions of brain scans, human neuroanatomy, cerebral lateralization, language, memory, neurological disorders, and neural plasticity and recovery of function.

PSYC 4514. Clinical Neuroscience. 4 Hours.
Explores the neurobiological, genetic, and neurochemical etiology of mental illness as described and categorized according to the DSM. Discusses how psychology, neuroscience, pharmacology, and medicine come together to manage mental illness. Investigates, for each specific mental illness covered, how changes in physiology and biology might manifest in the aberrant behaviors that define psychopathology. Lastly, examines how pharmacology is often used to treat these various mental illnesses and how genetic expression is involved in predisposing some people to these disorders while sparing others.
PSYC 4520. Language and the Brain. 4 Hours.
Focuses on language behavior from a neuropsychological viewpoint. Examines models of how the brain controls the production and comprehension of language. Considers localization of cerebral functions and hemispheric lateralization; experimental and clinical evidence for functional models; aphasia, dyslexia, and other language pathologies; and evidence from neuroimaging studies.

PSYC 4522. Psychology of Reading. 4 Hours.
Provides an overview of issues in the psychology of reading. Topics include the nature of the reading process as a perceptual and cognitive activity, eye movement patterns in reading, stages of reading development, and dyslexia. Examines current theories of reading and text comprehension.

PSYC 4524. Cognitive Development. 4 Hours.
Explores cognitive processes in infancy and childhood, how those processes change with age, and theoretical explanations for those changes. Topics may include understanding the physical world, memory, categorization, reasoning, problem solving, social cognition, language and conceptual development, and individual and/or group differences in cognitive development. Emphasis may vary by semester.

PSYC 4526. Categorization and Reasoning. 4 Hours.
Examines one of the basic goals of cognitive psychology, which is to describe categorization—how humans organize what they know—and reasoning—how they use what they know to make guesses about what they don't know. Gives an in-depth look at psychological research and theory relevant to these issues. Topics include similarity, categorization, models of conceptual structure, inductive and deductive reasoning, mental models, problem solving, and expertise.

PSYC 4530. Sensory Processes. 4 Hours.
Studies our senses, with emphasis on vision, hearing, touch, taste, and smell. Focuses on how we measure our sensory abilities and relates findings to the functioning of sensory organs—eyes, ears, skin, mouth, and nose—and of the sensory nervous system.

PSYC 4534. Human Factors in Psychology. 4 Hours.
Introduces the application of information about human characteristics and behavior to the design of machines, environments, and systems. Emphasis is on the sensory, perceptual, and cognitive characteristics of people (for example, their ability to respond to differently colored warning lights, recall instructions, and make appropriate decisions), and how those characteristics interact with technological systems. Topics may include decision making, displays and warning signals, control devices, human-computer interaction, aviation and other transportation systems, consumer products, and medical systems.

PSYC 4570. Behavioral Genetics. 4 Hours.
Explores the genetic basis of behavior. Behavioral genetics is considered to lie at the intersection of psychology and genetics and is a dynamic field with plenty of possibility. Offers students an opportunity to hone and develop a stronger foundation in the principles of Mendelian population, and quantitative genetics. Studies the genetic basis for sleep, social behavior, responses to environmental stimuli, learning, memory, addiction, and the etiology of neuropsychiatric disorders.

PSYC 4600. Laboratory in Research Design. 4 Hours.
Addresses the theoretical concepts, design, execution, analysis, and communication of research in psychology. Provides students with various methods to acquire hands-on experience performing a research project of their own creation. Students move systematically through the research process, from refining their original idea in the context of existing literature to interpreting and communicating their results. Requires prior completion of research-area course.

PSYC 4606. Laboratory in Biological Psychology. 4 Hours.
Introduces the methods of research in psychobiology. Students work in small groups, conducting three to four hands-on laboratory exercises under supervised conditions. Students read selections of the relevant scientific literature, analyze the collected data, and write experimental reports.

PSYC 4610. Laboratory in Psycholinguistics. 4 Hours.
Provides students the opportunity to acquire firsthand experience in conducting research on issues in the psychology of language. Focuses on experiments and their implications for broader issues of language processing. Involves students in all aspects of each experiment including collecting and analyzing data and preparing lab reports.

PSYC 4612. Laboratory in Cognition. 4 Hours.
Provides students the opportunity to acquire firsthand experience in conducting research on issues in human cognition. Focuses on experiments and their implications for broader issues of cognitive functioning. Involves students in all aspects of each experiment including collecting and analyzing data and preparing lab reports.

PSYC 4616. Laboratory in Personality. 4 Hours.
Provides an introduction to the methods of social-psychological research. Assists students in developing the ability to read published social research with a critical eye, to pose questions in a testable manner, to apply experimental methods to social research, and to express themselves in APA journal style.

PSYC 4618. Laboratory in Social Psychology. 4 Hours.
Examines models of how the brain controls the production and interpretation. Critically examines representative published experiments. Students design, collect data for, assess, and write up several experiments.

PSYC 4620. Language and the Brain. 4 Hours.
Introduces the methods of research in psychobiology. Students work in small groups, conducting three to four hands-on laboratory exercises under supervised conditions. Students read selections of the relevant scientific literature, analyze the collected data, and write experimental reports.

PSYC 4622. Laboratory in Sensation and Perception. 4 Hours.
Focuses on experiments using psychophysical methods in the various senses, typically including audition, vision, and others. Students collect data on themselves, analyze the data statistically, and write reports. Critical thinking is stressed.

PSYC 4624. Laboratory in Affective Science. 4 Hours.
Provides instruction in the methods of affective science (i.e., the study of what emotions are and how they work). Students are expected to become members of a functioning lab team, which uses a multimethod approach combined with various theoretical frameworks to guide research in affective science. Offers students an opportunity to develop the ability to read the scientific literature; think critically about research questions; design, conduct, and analyze experiments; and write in APA journal style, as well as to gain valuable interpersonal and organizational skills that come from working on a team.

PSYC 4626. Laboratory in Life-Span Emotional Development. 4 Hours.
Studies life-span development and how emotional experience, perception, and regulation changes across the life span. Lab teams use a multimethod approach and theoretical frameworks to guide research in emotional development. Offers students an opportunity to learn how to read the scientific literature; think critically about research questions; design, conduct, and analyze experiments; write in the journal style of the American Psychological Association; and gain interpersonal and organizational skills while working on a research team. PSYC 3402 highly recommended.
PSYC 4628. Laboratory in Developmental Psychology. 4 Hours.
Offers students an opportunity to acquire firsthand experience in conducting research on issues in human development. Focuses on experimental and observational research across the life span. Involves students in all aspects of each research project, including designing original research, collecting and analyzing data, preparing lab reports, and presenting findings.

PSYC 4650. Seminar in Clinical Case Study. 4 Hours.
Offers students an opportunity to integrate clinical therapy within the larger framework of etiology, diagnosis, and treatment of specific disorders. Builds a structure within which to evaluate, critique, and clarify values around the mental healthcare delivery systems encountered, as well as to learn how to think about, discuss, and present individual cases among different clinical populations.

PSYC 4652. Seminar in Ethics in Psychology. 4 Hours.
Allows students to identify and reflect upon ethical concerns (that is, related to confidentiality, animal use, racism, designing and applying research) that they encountered in their prior co-op/research experiences. Considers historical, psychological, philosophical, sociological, and spiritual perspectives. Students use reflective conversation to guide their ethical thinking, research, and problem solving. Evaluates research projects through written and oral reports. Fulfills the College of Arts and Sciences experiential education requirement for psychology majors. Open to students with any professional-related experience (for example, co-op, directed study) in psychology or related discipline (education or human resources management).

PSYC 4654. Seminar in Behavioral Modification. 4 Hours.
Discusses topics in behavior modification in a seminar format.

PSYC 4656. Seminar in Biological Psychology. 4 Hours.
Offers intensive study, discussion, and practice in lab studies of physiological variables. Covers evolution of the nervous system, neurological disorders, motivation and emotion, sleep, attention and perception, learning, and memory.

PSYC 4658. Seminar in Psycholinguistics. 4 Hours.
Offers intensive study and discussion of issues in the psychology of language. Specific topics vary by semester.

PSYC 4660. Seminar in Cognition. 4 Hours.
Offers intensive study and discussion of issues in cognitive psychology. Specific topics vary by semester.

PSYC 4662. Seminar in Personality. 4 Hours.
Offers intensive study and discussion of issues in personality psychology. Allows students to examine selected topics and present their findings in class.

PSYC 4664. Seminar in Social Psychology. 4 Hours.
Provides an in-depth analysis of specific topics in social psychology. Students read original research and theory papers involving these topics, make presentations, and write papers related to their readings.

PSYC 4666. Seminar in Clinical Psychology. 4 Hours.
Focuses on psychotherapy: theory, methods, and outcome research. Provides an overview of clinical psychology; history, ethical and legal issues, the therapeutic relationship, cross-cultural counseling, the process of change. Students write and present papers on a topic of interest.

PSYC 4668. Seminar in Sensation and Perception. 4 Hours.
Expects students to present in class on topics such as how perceptions are organized, formed, and modified by sensory, attentional, motivational, and cognitive factors, how our sensory systems extract information from the environment in a consistent and logical manner, despite large changes in environmental conditions, and how to account for this in physiological terms.

PSYC 4674. Seminar in Cognitive Neuroscience. 4 Hours.
Offers intensive study and discussion of issues in cognitive neuroscience, the study of human cognitive processes, and their underlying neural substrates. Considers both theoretical and methodological issues, as well as applications to related fields of study. Specific topics vary by semester.

PSYC 4676. Seminar in Developmental Psychology. 4 Hours.
Offers intensive study and discussion of issues in developmental psychology, the study of how social, emotional, cognitive, and other psychological processes emerge and change over different periods of the life span. Considers both theoretical and methodological issues, as well as applications to real-world contexts. Specific topics may vary by semester.

PSYC 4695. Undergraduate Teaching Experience. 4 Hours.
Offers undergraduate teaching assistantships in psychology courses under the close direction of the course instructor. Assignments may include holding office hours and recitation/tutorial and review sessions, answering students’ emails, moderating discussion boards, helping to proctor exams and quizzes, (very) limited lecturing, or leading class discussions (only under faculty supervision). Requires minimum overall GPA of 3.33, and grade of A– or higher in the course for which the student will be an undergraduate teaching assistant; permission to enroll is further subject to the availability of an appropriate course assignment and instructor; prior arrangements must be made with the instructor at least one term before registration; may be repeated once but may not be repeated for the same course. May be repeated once.

PSYC 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

PSYC 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

PSYC 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSYC 4991. Directed Study Research. 4 Hours.
Offers research experience on a chosen topic under the direction of a faculty member. Research content and requisites depend on the instructor. Prior arrangements must be made with the faculty member at least one term before registration. May be repeated up to three times.

PSYC 4993. Independent Study. 1-4 Hours.
Offers a reading course for the student who wants guidance in the archival exploration and in-depth study of a topic of interest. Conducts study through a series of individual tutorials or discussions with a faculty member that typically involve an extensive, analytical review of the literature. Interested students should consult directly with the relevant faculty member or with a department advisor for guidance in locating the most appropriate faculty person at least one semester before the study is undertaken. May be repeated without limit.
PSYC 4994. Internship in Psychology. 4 Hours.
Offers supervised experiences in the application of psychology in instructional, clinical, or other applied settings. May be repeated without limit.

PSYC 5100. Proseminar in Psycholinguistics. 3 Hours.
Serves as first-level graduate course in psycholinguistics, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussions. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5110. Proseminar in Cognition. 3 Hours.
Serves as first-level graduate course in cognition, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5120. Proseminar in Sensation. 3 Hours.
Serves as first-level graduate course in sensation, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5130. Proseminar in Perception. 3 Hours.
Serves as first-level graduate course in perception, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5140. Proseminar in Biology of Behavior. 3 Hours.
Serves as first-level graduate course in the biological basis of behavior, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5150. Proseminar in Clinical Neuroscience. 3 Hours.
Serves as first-level graduate course in clinical neuroscience, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5160. Proseminar in Personality. 3 Hours.
Serves as first-level graduate course in personality, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5170. Proseminar in Social Psychology. 3 Hours.
Serves as first-level graduate course in social psychology, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5180. Quantitative Methods 1. 3 Hours.
Presents first course in a two-course sequence that surveys a variety of quantitative methods used in experimental psychology. Requires permission of instructor for students who are not enrolled in the PhD program in psychology.

PSYC 5181. Quantitative Methods 2. 3 Hours.
Continues PSYC 5180. Presents second course in a two-course sequence that surveys a variety of quantitative methods used in experimental psychology. Requires permission of instructor for students who are not enrolled in the PhD program in psychology.

PSYC 6130. Affective Computing. 4 Hours.
Studies affective computing—computing that relates to, arises from, or influences emotions. Offers an overview of the theory of human emotion (how it arises from and influences cognition, the body, and the social environment) and computational techniques for modeling human emotion processes as well as for recognizing and synthesizing emotional behavior. Discusses how these can be applied to application design. Offers students an opportunity to gain a strong background in the theory and practice of human-centered computing as it relates to games, immersive environments, and pedagogical applications. Brings together students from different disciplines to work together and learn from each other. CS 6130 and PSYC 6130 are cross-listed.

PSYC 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSYC 7200. Seminar in Psycholinguistics. 3 Hours.
Addresses current theoretical and empirical issues in psycholinguistics. Specific topics vary by semester. May be repeated without limit.

PSYC 7210. Seminar in Cognition. 3 Hours.
Addresses current theoretical and empirical issues in cognition. Specific topics vary by semester. May be repeated without limit.

PSYC 7220. Seminar in Sensation. 3 Hours.
Addresses current theoretical and empirical issues in sensation. Specific topics vary by semester. May be repeated without limit.

PSYC 7230. Seminar in Perception. 3 Hours.
Addresses current theoretical and empirical issues in perception. Specific topics vary by semester. May be repeated without limit.

PSYC 7240. Seminar in Biology of Behavior. 3 Hours.
Addresses current theoretical and empirical issues in the biological basis of behavior. Specific topics vary by semester. May be repeated without limit.

PSYC 7250. Seminar in Clinical Neuroscience. 3 Hours.
Addresses current theoretical and empirical issues in clinical neuroscience. Specific topics vary by semester. May be repeated without limit.

PSYC 7255. Window on the Brain: Methods and Applications in Magnetic Resonance Imaging. 3 Hours.
Covers basic principles of magnetic resonance imaging (MRI) with an emphasis on brain function and preclinical research. Lectures are complemented by virtual imaging sessions at the Center for Translational Neuroimaging. Research topics include imaging integrated neural circuits involved in emotion and cognition and the application of MRI to the study of Parkinson’s and Alzheimer’s disease. In addition to functional MRI, other topics include MR spectroscopy, diffusion tensor imaging, manganese tract tracing, PET, SPECT, and CT imaging. Requires permission of instructor for students who are not enrolled in the PhD program in psychology.

PSYC 7260. Seminar in Personality. 3 Hours.
Addresses current theoretical and empirical issues in personality. Specific topics vary by semester. May be repeated without limit.

PSYC 7263. Seminar in Abnormal Psychology. 3 Hours.
Addresses current theoretical and empirical issues in abnormal psychology. Specific topics vary by semester. May be repeated without limit.
PSYC 7270. Seminar in Social Psychology. 3 Hours.
Addresses current theoretical and empirical issues in social psychology. Specific topics vary by semester. May be repeated without limit.

PSYC 7275. Psychological Construction: Linking Mind to Brain. 3 Hours.
Examines the historical roots of the psychological construction approach (e.g., William James, Wilhelm Wundt) and traces conceptions of the mind over the past century, drawing on evolutionary arguments, neuroimaging research, and other evidence. For almost a century, psychologists have assumed that perception, cognition, emotion, and memory are separate faculties of the mind—distinctive mental states with distinct causes. Yet, there is another, earlier conception, called the psychological construction approach, in which perceptions, cognitions, emotions, and memories emerge from the stream of mental activity as momentary “gestalts” or ways of understanding the various states, actions, and feelings of waking life. Requires permission of instructor for students not enrolled in psychology.

PSYC 7280. Seminar in Learning. 3 Hours.
Addresses current theoretical and empirical issues in learning. Specific topics vary by semester. May be repeated without limit.

PSYC 7300. Advanced Quantitative Analysis. 3 Hours.
Covers selected advanced methods of quantitative analysis used in experimental psychology. Specific topics vary by semester. May be repeated without limit.

PSYC 7301. Research Methodologies Psychology. 3 Hours.
Introduces students to a range of conceptual and methodological issues in the conduct of experimental psychology research by department faculty members. Specific course content depends on which faculty members conduct the course in a given semester. May be repeated without limit.

PSYC 7302. Ethics and Professional Issues. 3 Hours.
Identifies and investigates ethical issues (such as privacy, fairness, social responsibility, or animal use) that research psychologists face in acquiring and using scientific knowledge. Also addresses broader professional issues relevant to pursuing a career as a research psychologist in an academic, government, or industrial setting.

PSYC 7990. Thesis. 3 Hours.
Conducts theoretical and experimental research for the master’s degree. May be repeated without limit.

PSYC 7996. Thesis Continuation. 0 Hours.
Continues research for the master’s degree.

PSY 8400. Research Lab. 1 Hour.
Offers laboratory work in experimental psychology. May be repeated without limit.

PSY 8401. Research Project. 3 Hours.
Conducts research project in selected area of experimental psychology. May be repeated without limit.

PSY 8402. Special Topics in Psychology. 3 Hours.
Offers in-depth analysis of critical topics in psychology. Specific topics vary by semester. May be repeated without limit.

PSY 8403. Research Issues in Psychology. 3 Hours.
Offers in-depth analysis of research issues in psychology. Specific topics vary by semester. May be repeated without limit.

PSYC 9000. PhD Candidacy Achieved. 0 Hours.
Indicates successful completion of the doctoral comprehensive exam.

PSYC 9984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

PSYC 9986. Research. 0 Hours.
Offers the student the opportunity to conduct doctoral research. May be repeated without limit.

PSYC 9990. Dissertation. 0 Hours.
Conducts theoretical and experimental research for the PhD degree. May be repeated once.

PSYC 9996. Dissertation Continuation. 0 Hours.
Continues research for the PhD degree. May be repeated without limit.

PSY 1100. Foundations of Psychology. 3 Hours.
Surveys the fundamental principles, concepts, and issues in the major areas of contemporary scientific psychology. Approaches the study of psychology as a method of inquiry as well as a body of knowledge. Offers students an opportunity to obtain a basis for more advanced study of the science of psychology. Examines origins and methods of psychology, including neuroscience, consciousness, cognition, development, nature and nurture debate, psychosocial development, learning and memory, language, motivation, personality, group dynamics, therapy, health psychology, and psychological disorders.

PSY 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSY 2230. Stress and Its Management. 3 Hours.
Offers a research-experiential approach to understanding stress and its effects on human behavior and physiology. Stress is an aspect of everyday contemporary life. Discusses the work of researchers and practitioners in stress management and considers the causes of stress from a variety of theoretical and practice-based perspectives. Topics include the relation of stress to health, communication, relationships, and academic and work performance. Examines the techniques and implementation of stress management in personal and professional arenas. Considers perspectives of stress and coping from various social and cultural standpoints.

PSY 2240. Human Sexuality and Love. 3 Hours.
Focuses on the historical, biological, psychological, developmental, and social/cultural influences on human sexuality and its expression. Sexuality lies at the core of our identities as human beings, yet many adults are uninformed of basic aspects of sexual anatomy and function. Topics include sexual anatomy and physiology, contraception and abortion, pregnancy and childbirth, gender identity, role and expression, romantic love, sexual minorities, media impact on sexuality, and attitudes toward contemporary issues.

PSY 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSY 3200. Social Psychology. 3 Hours.
Surveys the socialization process, including social motives, interpersonal perception, group membership and structure, gender and culture, attitudes, prejudice, and leadership. Social psychology is embedded in our professional and personal roles. Identifies key theories and frameworks to apply in today’s work and living arenas.
PSY 3210. Abnormal Psychology. 3 Hours.
Covers diagnosis, symptomatology, etiology, and therapy of anxiety, somatoform, and dissociative disorders. Introduces the major forms of psychotherapy, including psychoanalysis and client-centered, behavioral, and cognitive therapy.

PSY 3220. Cognition and Language. 3 Hours.
Offers an in-depth analysis of human cognition and language. Topics include pattern recognition, attention, memory, categorization and concept formation, problem solving, and aspects of cognitive development. Examines current theories of cognitive processing and related experimental findings. Introduces psycholinguistics, the nature and structure of language, its biological bases, acquisition, production, and perception.

PSY 3230. Development across the Life Span. 3 Hours.
Explores change throughout the life span. Focuses on the basic physical, perceptual, cognitive, and emotional capacities that develop from infancy through late adulthood. Emphasizes how biological inheritance interacts with the physical and social environment. Explores individual and cross-cultural differences in patterns of development.

PSY 3240. Sensation and Perception. 3 Hours.
Examines how our sensory organs—eyes, ears, skin, mouth, and nose—along with our sensory nervous system inform our awareness of the outside world and influence our internal perceptual world. Covers perception of light, space, form, motion, color, attention, speech, and music. Topics include visual and auditory perception, neural and anatomical bases, and early and ongoing influences on development of sensation and perception.

PSY 3450. Research in Psychology. 3 Hours.
Explores research methods in psychology including observational, correlational, survey, and experimental methods. Uses the scientific method in the design, execution, analysis, and communication of psychological investigations. Discusses the ethics of research and evaluation methods. Offers students an opportunity to conduct psychological studies using a variety of methods and to write a substantial research paper.

PSY 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSY 4220. Learning. 3 Hours.
Presents the basic learning principles that permit humans and animals to adapt effectively to a changing environment. Covers the research and techniques of classical and operant conditioning with discussions of discriminations and generalization, biological constraints on learning, and other related topics. Relates learning principles to the understanding and treatment of behavioral, affective, cognitive, and motivational disorders.

PSY 4230. Physiological Psychology. 3 Hours.
Explores the relationship between brain function and human behavior. Introduces how nerve cells function. Topics include localization of function in the brain, perception, learning, eating behavior, motivation, and the relation of emotion to nervous system activity.

PSY 4310. Personality. 3 Hours.
Focuses on behavioral, dynamic, and constitutional determinants. Includes concepts such as environmental and genetic contributions, assessment of personality, research, and a survey of the major personality theories.

PSY 4320. Motivation. 3 Hours.
Covers various aspects of motivation, a topic that concerns every area of society and living. Topics include primary and secondary reinforcement, unconscious motivation, avoidance and punishment, acquired motivational states such as addiction, the assessment of motives, and implications on everyday living.

PSY 4850. Senior Research Seminar in Psychology. 4 Hours.
Offers students an opportunity to independently investigate a topic of interest and present their findings to their peers. This capstone course for the undergraduate curriculum should be taken as close as possible to graduation.

PSY 4896. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major.

PSY 4950. Seminar. 1-4 Hours.
Offers an opportunity for small groups of students to meet to discuss topics of mutual interest in psychology. Requires students to independently investigate a topic of interest and present their findings to their peers. Each seminar has a different focus, depending upon the student group and the instructor. This capstone course for the undergraduate curriculum should be taken as close as possible to graduation.

PSY 4955. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

PSY 4983. Topics. 1-4 Hours.
Provides students with the opportunity to examine a specific topic in psychology. Since topics change from quarter to quarter, and the study of psychology produces new areas of interest constantly, students may take this course more than once, provided they focus on a different topic each time. May be repeated without limit.

PSY 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSY 4991. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

PSY 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

PSY 4993. Independent Study. 1-4 Hours.
Offers students an opportunity to undertake special research.

PSY 4994. Internship. 1-4 Hours.
Provides students with an opportunity for internship work.

PSY 4995. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

PPUA 4225. Special Topics in Public Policy and Urban Affairs. 4 Hours.
Covers special topics in public policy and urban affairs. Topics are selected by the instructor and vary from semester to semester. May be repeated once.

PPUA 4226. Recitation for PPUA 4225. 0 Hours.
Accompanies PPUA 4225. Offers a discussion section for students enrolled in selected sections of the course. May be repeated once.
PPUA 4701. Food Systems Sustainability, Health, and Equity Practicum. 4 Hours.
Offers students an opportunity to work in teams under faculty guidance on applied projects in food systems sustainability, health, and equity. Course readings focus on the design of applied analysis and on information needed to assess a given problem and provide solutions. Open to students who have completed at least two courses that satisfy the minor in food systems sustainability, health, and equity or who have permission of the instructor.

PPUA 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PPUA 5260. Ecological Economics. 3 Hours.
Introduces methods and tools of ecological economics, an interdisciplinary field that draws on theories, concepts, and tools from the physical, life, and social sciences; unites the relevant aspects of different disciplines; and generates new knowledge that can serve as a basis for investment and policymaking that is responsive to biophysical constraints on economic processes. Illustrates the use of ecological economics with empirical applications. Offers students an opportunity to apply ecological economics to a variety of environmental issues.

PPUA 5261. Dynamic Modeling for Environmental Decision Making. 3 Hours.
Introduces the theory, methods, and tools of dynamic modeling for policy and investment decision making, with special focus on environmental issues. Makes use of state-of-the-art computing methods to translate theory and concepts into executable models and provides extensive hands-on modeling experience. Topics include discounting, intertemporal optimization, dynamic games, and treatment of uncertainty.

PPUA 5262. Big Data for Cities. 3 Hours.
Investigates the city and its spatial, social, and economic dynamics through the lens of data and visual analytics. Utilizes large public datasets to develop knowledge about visual methods for analyzing data and communicating results. Offers students an opportunity to develop a critical understanding of data structures, collection methodologies, and their inherent biases.

PPUA 5263. Geographic Information Systems for Urban and Regional Policy. 3 Hours.
Studies basic skills in spatial analytic methods. Introduces students to some of the urban social scientific and policy questions that have been answered with these methods. Covers introductory concepts and tools in geographic information systems (GIS). Offers students an opportunity to obtain the skills to develop and write an original policy-oriented spatial research project with an urban social science focus.

PPUA 5264. Energy Transitions and Climate Resilience: Technology, Policy, and Social Change. 3 Hours.
Explores the renewable energy transition with an emphasis on social innovations in energy systems, climate resilience, and the interconnections among technology, policy, and social change. The transition away from fossil fuels toward more efficient, renewable-based energy systems includes much more than a technological substitution; this transition also involves social, institutional, and cultural change in how individuals, households, communities, and organizations relate to and use energy. The emerging concept of energy democracy provides an innovative lens to explore the transformative potential of the renewable energy transition. Tensions associated with systemic versus incremental change, centralized versus decentralized systems, and infrastructural lock-in versus flexibility will be explored through semester-long team projects in which students have an opportunity to contribute to existing, on-going, local energy transition initiatives.

PPUA 5265. Urban and Regional Policy in Developing Countries. 3 Hours.
Explores the issues facing rapidly growing cities in the developing world. By 2040, more than half of the world’s population will live in cities. Analyzes the forces driving a country’s economic development and social change. Focuses on urbanization in poorer countries by examining what causes rapid urbanization; why informal economies are so pervasive and how governments approach this issue; the implications increasing popular demands for involvement in decisions have for urban planning and policy; and how governments respond to globalization and with what distributional impacts. Addresses specific sectoral issues and approaches to urban planning and policy in such areas as housing, climate change and hazard preparedness, economic development, transportation, and urban design and public space.

PPUA 5266. Urban Theory and Science. 3 Hours.
Studies the evolution of urban science, looking at some seminal theories that seeded the field and the subsequent work they inspired, including the methodologies developed to examine them. For over a century, social scientists and policymakers have sought to better understand cities, asking important theoretical questions, such as: What is a neighborhood? How does a city grow? What is a city in the first place? Culminates in an examination of urban science in the digital age, exploring how modern technological trends, including “big data,” are posing new questions and offering new ways to answer them.

PPUA 5270. Food Systems and Public Policy. 3 Hours.
Explores the public policy dimensions of the contemporary food system. Utilizes scholarly readings and case studies to assess the role of governing institutions and political actors in shaping the food supply; the effects of energy, transportation, and urban policies on food access; the ecological dimensions of food production; impacts of international trade regimes on global food trade; and the potential impacts of climate change on food security. Compares the United States and other nations and explores alternatives to the dominant food system. Seeks to engage students in applied policy analysis of specific food system issues.

PPUA 5275. Philanthropy and Civil Society. 3 Hours.
Examines the history of philanthropy in the United States and the contemporary role of private giving in the economy and civil society. A comparison of philanthropic theories and models provides context for examining philanthropy’s impact on individuals, communities, social movements, and policy. Emphasizes the relationship between wealth and power in a democratic society.

PPUA 5301. Introduction to Computational Statistics. 4 Hours.
Introduces the fundamental techniques of quantitative data analysis, ranging from foundational skills—such as data description and visualization, probability, and statistics—to the workhorse of data analysis and regression, to more advanced topics—such as machine learning and networks. Emphasizes real-world data and applications using the R statistical computing language. Analyzing and understanding complex data has become an essential component of numerous fields: business and economics, health and medicine, marketing, public policy, computer science, engineering, and many more. Offers students an opportunity to finish the course ready to apply a wide variety of analytic methods to data problems, present their results to nonexperts, and progress to more advanced course work delving into the many topics introduced here.
PPUA 5390. Special Topics in Public Policy and Urban Affairs. 3 Hours.
Covers special topics in public policy and urban affairs. Topics are selected by the instructor and vary from semester to semester. May be repeated up to three times for up to 12 total credits.

PPUA 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PPUA 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PPUA 5984. Research. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PPUA 6201. The 21st-Century City: Urban Opportunities and Challenges in a Global Context. 3 Hours.
Offers multidisciplinary examination of the wonders and challenges of urban life, focusing on current dynamics of urban location and prosperity in the context of a global economy. Examines forces that shaped the evolution of cities and metropolitan regions; assesses a range of policy issues confronting metro areas today and the respective roles played by public and private sectors in addressing those challenges; explores global forces that are transforming cities and regions throughout the world; and addresses key questions of urban well-being, civility, and civic engagement.

PPUA 6204. Urban Development and Politics. 3 Hours.
Analyzes the creation and implementation of urban development policies and programs. Explores subsidies and taxes, housing, commercial and industrial development, and job creation and training projects in terms of their historical, political, economic, and social dimensions.

PPUA 6205. Research Design and Methodology in Urban and Regional Policy. 3 Hours.
Examines and applies the methodology of social science research to urban and regional policy issues. Focuses on identifying and framing research questions; formulating hypotheses; and following through on the design, development, and implementation of policy-relevant research.

PPUA 6206. Research Toolkit for Urban and Regional Policy: Geographic Information Systems. 1 Hour.
Develops and applies techniques of geographic information systems (GIS), with primary emphasis on urban and regional policy issues.

PPUA 6207. Research Toolkit for Urban and Regional Policy: Survey Techniques. 1 Hour.
Develops and applies survey research techniques to urban and regional policy issues.

PPUA 6208. Research Toolkit for Urban and Regional Policy: Qualitative Techniques. 1 Hour.
Develops and applies qualitative research techniques to urban and regional policy issues.

PPUA 6209. Research Toolkit for Urban and Regional Policy: Grant Writing. 1 Hour.
Develops and applies techniques of accessing and using available datasets to address urban and regional policy issues.

PPUA 6210. Research Toolkit for Urban and Regional Policy: Cost/Benefit Analysis. 1 Hour.
Develops and applies techniques of cost/benefit analysis and related techniques such as cost-effectiveness, economic impact, and social return on investment to urban and regional policy issues.

PPUA 6211. Research Toolkit for Urban and Regional Policy: Using Stata. 1 Hour.
Introduces the use of the statistical package Stata in social science research.

PPUA 6212. Research Toolkit for Urban and Regional Policy: Project Management. 1 Hour.
Introduces students to concepts of and tools used in project management as applied to urban and regional policy issues.

PPUA 6213. Research Toolkit for Urban and Regional Policy: Data Visualization. 1 Hour.
Focuses on how to interpret data visualization and assess the classic and emerging data visualization techniques and their strengths and weaknesses. Covers classic lessons learned from Edward Tufte to contemporary data visualization leaders such as Nicholas Felton and Jer Thorp. Offers students an opportunity to review and critique examples such as Hubway Data Challenge Visualizations to warm up for their own data visualization assignments.

Covers the use of Excel workbooks for policy research and analysis. Emphasizes the more advanced features, including text manipulation functions, data arrays and array formulas, table and chart customization, data simulation, and using macros and select developer tools.

PPUA 6215. Geographic Information Systems for Urban and Regional Policy. 3 Hours.
Introduces students to the use of a geographic information system (GIS) and explores the practical application of GIS in urban and regional policy analysis. Topics include the geographical basis of policy issues, demographic analysis, and spatial mapping as a tool in decision support and policy making. Offers students an opportunity to gain hands-on experience with a leading commercial GIS software package. Exercises explore data gathering, database manipulation techniques, spatial overlay analysis methods, cartography principals, spatial modeling tools, and heuristic problem solving.

PPUA 6216. Research Toolkit for Urban and Regional Policy: Grant Writing. 1 Hour.
Seeks to prepare students to pursue grant-based funding from a variety of funding agencies and foundations. Offers students an opportunity to develop practical skills in proposal writing and budget development. Examines all aspects of the proposal-writing process, from identifying high-potential funding opportunities to writing and submitting proposals. Assignments offer students an opportunity to apply their learning to real-world interests.

PPUA 6400. Planning Module in Urban Policy. 1 Hour.
Relates a professional activity to urban and regional planning. May be repeated without limit.
PPUA 6407. Internship in Public Policy and Urban Affairs. 3 Hours.
Seeks to provide relevant professional experience, to include planning, research, policy development, or implementation of policy, of at least fifteen hours per week with a public, private, or nonprofit institution that focuses on urban and regional policy. May be repeated once.

PPUA 6408. Internship Continuation. 0 Hours.
Offers a continued internship supervised by the faculty internship instructor.

PPUA 6410. Urban Informatics Portfolio. 1 Hour.
Guides urban informatics students through the process of developing a portfolio of professional-quality work. Requires students to submit a three-project portfolio developed from projects completed within courses taken as part of fulfilling the degree requirements. The projects must be presented in high-quality and concise visualizations and text.

PPUA 6500. Principles of Public Administration. 3 Hours.
Introduces students to concepts and approaches to analyzing significant factors and relationships in government agencies and public-oriented nongovernmental organizations as they function in their environments. Examines the legal and constitutional foundations of public administration, bureaucratic structure and administrative power, managerial accountability and ethics, human resource management, economics of organization, decision making, budgeting, implementation and “street-level” bureaucrats, and more recent developments in public administration, such as performance management and public management networks.

PPUA 6502. Economic Institutions and Analysis. 3 Hours.
Introduces the fundamentals of macroeconomics and microeconomics as well as the role of key economic institutions, such as the Federal Reserve. Includes analysis of government’s role in a market economy and introduces methods of economic analysis.

PPUA 6503. Public Personnel Administration. 3 Hours.
Introduces students to the public personnel function from a managerial standpoint. Addresses methods of constructive leadership of government personnel, leadership that encourages a more competent, motivated, and representative public administrative work force. Employs case studies and films, along with assigned readings.

PPUA 6504. Organizational Theory and Management. 3 Hours.
Examines the general principles underlying organizational structures and processes. Topics include models and ideal types, open systems theories, organizational technologies, decision making, and organizational development and change.

PPUA 6505. Public Budgeting and Financial Management. 3 Hours.
Surveys governmental budgeting at the federal, state, and local levels. Surveys major revenue sources and expenditure responsibilities. Discusses budgetary processes and politics, as well as resulting policies. Considers both proposed and implemented reforms. Also introduces financial management practices including cash management, fund accounting, debt financing, endowment spending and control, cost allocation procedures, and tax expenditures.

PPUA 6506. Techniques of Policy Analysis. 3 Hours.
Provides a systematic approach to understanding the origins, formulation, implementation, and impact of government outputs. Reviews key analytical concepts and competing theoretical perspectives. Considers both the political dimensions of public policymaking and the technical aspects of program design within the natural history of the policymaking process. Draws on case materials from a spectrum of policy areas.

PPUA 6507. Institutional Leadership and the Public Manager. 3 Hours.
Examines the problems and techniques relevant to effective management of a public agency in a complicated and often turbulent political environment. Topics include legislative relations, media relations, role of the courts, unions and advocacy groups, policy implementation and evaluation, and setting and working with high standards of integrity.

PPUA 6508. Capstone Seminar in Public Policy and Public Management. 3 Hours.
Offers an applied research project for students who have completed all or nearly all of their course work. Students work in teams to study a policy or public management issue currently facing a government agency. Teams conduct research and prepare an oral and written report for presentation to the agency as well as to the class. Readings focus on material needed to analyze the assigned issue as well as limited general readings on public policy and public administration. In addition, each student will complete a personal strategic plan that identifies career goals and assesses his or her current skill level and future skill needs to reach that goal.

PPUA 6509. Techniques of Program Evaluation. 3 Hours.
Reviews methodologies for assessing the impact of public policy. Includes experimental and quasi-experimental research design, the value and limits of case studies, political and organizational barriers to evaluation research, report writing, and procedures for instituting change.

PPUA 6510. Functions and Techniques of Public Management. 3 Hours.
Examines the problems and techniques relevant to management of a public agency, with an emphasis on internal issues that face public managers. Topics include planning and agenda setting; organizational design; agency budgeting; employee recruitment, selection, and development; and reporting, monitoring, and evaluation.

PPUA 6520. Managing Information Technologies. 3 Hours.
Explores the opportunities and challenges of devising, implementing, and managing information technologies in the public and nonprofit sectors. Focuses on potential benefits offered by a range of technologies, from smartphone apps to “Big Data” analytical systems, to gain more real-time information and deliver more timely, responsive, and effective services. Also covers implementation and management challenges and a range of broader societal issues, from citizen privacy to public accountability, that invariably arise with such technologies.

PPUA 6521. Administrative Law and Politics. 3 Hours.
Introduces students of American politics and policymaking with a segment of politics that concerns the relationship between administrative agencies and the courts that review them. Emphasis is on the development of important administrative law principles and the application of these principles to practical problems in public administration.

PPUA 6522. Administrative Ethics and Public Management. 3 Hours.
Analyzes ethical problems in American public administration including discussion of ethical dilemmas frequently faced by public managers.

PPUA 6523. Accountability, Performance Measurement, and Contracting in the Public Sector. 3 Hours.
Examines three important topics in public policy and administration: accountability, performance measurement, and contracting. These three topics are interrelated, and issues related to them often arise in contemporary public administration. Offers students an opportunity to explore these topics through assigned readings, cases, lectures, and class discussions.

PPUA 6524. Case Studies in Policy Analysis. 3 Hours.
Focuses on detailed analyses of selected issues and episodes in public policy development. Requires students to complete oral and written analyses of cases, applying a variety of relevant techniques.
PPUA 6525. Institutions and Public Policy. 3 Hours.
Blends theoretical literature and case studies to examine problems of policymaking and governance in contemporary political systems, emphasizing the policy impacts of political institutions. Studies systematic variations across types of political institutions and regimes in developed and developing nations and extends beyond the nation-state to address policy dynamics (e.g., harmonization, multilevel governance) in supranational and international systems. Establishes the broader political system contexts within which policy formation and implementation reside. Offers students an opportunity to learn to analyze, synthesize, and apply a range of theoretical literatures relevant to policy design and impact. POLS 6525 and PPUA 6525 are cross-listed.

PPUA 6530. State and Local Public Finance. 3 Hours.
Analyzes the fiscal dimensions of state and local governments in the United States. Examines the types and ranges of tax and nontax revenues available to local and state governments and factors shaping the types of revenue sources utilized. Also assesses local and state government spending trends, use of public funds for economic development and other goals, impacts of federal mandates on local and state budgets, distinctions between operating and capital budgets, and the overall legal and political factors shaping public finance.

PPUA 6551. Nonprofit Organizations and Social Change. 3 Hours.
Offers an overview of fundamental principles and practice in the nonprofit sector as they relate to social change. Topics include systems change and stakeholder identification, design thinking and human-centered design, theory of change and logic models, program design and evaluation, strategic and business planning, organizational structure and capacity building, governance, and communications and social media.

PPUA 6552. The Nonprofit Sector in Civil Society and Public Affairs. 3 Hours.
Examines the challenges facing the nonprofit sector, particularly as it relates to civil society and public policy concerns. Emphasizes current controversies in which the nonprofit sector is involved, such as the impact of changes in government spending and tax policy, the nature and legitimacy of nonprofit advocacy, the role of faith-based organizations in providing public services, accountability and oversight of nonprofit organizations, the growth of social entrepreneurship, and the work of nonprofits in fostering social capital and supporting civic engagement.

PPUA 6553. Nonprofit Financial Resource Development. 3 Hours.
Offers a comprehensive overview of resource development and financial management in nonprofit organizations. Topics include fund-raising and development planning, nonprofit budgeting and financial reporting, investments and earned income for nonprofits, and government contracting and grants.

PPUA 6554. International NGOs and Transnational Activism. 3 Hours.
Explores the theoretical, practical, and ethical elements of the nonprofit sector, which continues to play a critical role in responding to crisis, social and economic inequality, and propelling the human rights agendas forward in a rapidly evolving geopolitical landscape. Both nationally and abroad, nonprofit organizations are addressing society’s most pressing issues. These organizations are compelled to help meet basic human needs during natural and manmade disasters and fill gaps left by government and industry. However, their involvement isn’t without implications, both on the local and international level. Encourages students to consider the complex and sometimes contradictory work being performed by international nongovernmental organizations with an eye to sound program design and leadership.

PPUA 6861. Internship. 0 Hours.
Offers students an approved public- or nonprofit-sector internship that fulfills academic degree requirements. Students must complete minimum internship work hours as defined by academic program. Supervising faculty assign a final integrative or reflective project. May be repeated up to two times.

PPUA 6862. Internship with Research. 3 Hours.
Offers students who wish to pursue additional directed reading and independent research related to the internship placement an approved public- or nonprofit-sector internship. Students must complete minimum internship work hours as defined by academic program. Research project is determined in consultation with faculty. Supervising faculty assign a final integrative or reflective project. May be repeated once for up to 6 total credits.

PPUA 6960. Exam Preparation—Master’s. 0 Hours.
Offers the student the opportunity to prepare for the master’s qualifying exam under faculty supervision.

PPUA 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PPUA 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

PPUA 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

PPUA 7225. The Open Classroom: Public Debates on Public Policy. 3 Hours.
Offers special topics built around a series of public debates on selected issues of public policy. May be repeated without limit. LAW 7627 and PPUA 7225 are cross-listed.

PPUA 7226. Open Classroom Recitation. 0 Hours.
Provides a small-group discussion format to cover material in the corequisite lecture course. May be repeated without limit. LAW 7628 and PPUA 7226 are cross-listed.

PPUA 7230. Housing Policy. 3 Hours.
Examines the economic, social, and legal underpinnings of housing policy in the United States across a variety of topics, including housing finance and production, public and affordable housing, home ownership, and fair housing. Housing is both an essential human need and a critical sector of the U.S. economy. Presents the complicated and evolving roles of all those involved in housing policy, including federal, state, and local government, and the private and profit sectors. Guest speakers provide real-world insights into current housing policy challenges.

PPUA 7231. Transportation Policy. 3 Hours.
Examines the physical, technological, economic, social, cultural, and political underpinnings of transportation policy in the United States. Topics include intra- and interstate transportation, the comparative economics of different modes of transportation, the impacts of federal and state policies on transportation options, and the long-term effects of those choices on metropolitan development, housing, land use, energy, and the environment. Also involves comparisons with transportation systems in other countries.
PPUA 7232. Immigration and Urban America. 3 Hours.
Examines the policy impacts of legal and illegal immigration in the United States, emphasizing the ways immigration shapes urban America. Discusses trends in immigration; elements of U.S. immigration policy; impacts of immigration on labor markets, economic development, housing, education, healthcare, criminal justice, race relations, and social policy (e.g., welfare); and effects on broader mass culture. Also considers the range of policy tools available in addressing these impacts.

PPUA 7233. Contemporary Community Development. 3 Hours.
Explores the political and social dynamics of community development in urban America, with particular focus on the local politics of housing, economic development, jobs, healthcare, access to services, and community safety. Uses Boston and its region as a laboratory to examine the role of grassroots community groups in shaping their neighborhoods, set within the broader institutional contexts that affect their representation and impacts.

PPUA 7234. Land Use and Urban Growth Policy. 3 Hours.
Explores the evolution of land use and urban form in the United States and surveys different types of land-use and urban-growth management tools used by local, regional, and state governments. Examines the environmental, economic, spatial, and social impacts of different patterns of urban growth, including “sprawl” and “smart growth,” and the different philosophies and legal and policy approaches employed to manage those impacts. Also explores how land-use and urban-growth policy interacts with related priorities, including housing, infrastructure, and fiscal policy. Focuses on current and emerging issues and debates in land-use and urban-growth management, such as New Urbanism, livable communities, and transit-oriented development.

PPUA 7235. Urban and Regional Policy and Planning in Developing Countries. 3 Hours.
Explores the issues facing rapidly growing cities in the developing world. By 2040, more than half of the world’s population will live in cities. Analyzes the forces driving a country’s economic development and social change. Focuses on urbanization in poorer countries by examining what causes rapid urbanization; why informal economies are so pervasive and how governments approach this issue; the implications increasing popular demands for involvement in decisions have for urban planning and policy; and how governments respond to globalization and with what distributional impacts. Addresses specific sectoral issues and approaches to urban planning and policy in such areas as housing, climate change and hazard preparedness, economic development, transportation, and urban design and public space.

PPUA 7236. Introduction to Real Estate Development for Urban Policy Makers. 3 Hours.
Introduces the basic skills and knowledge of real estate development used within public-private partnerships to address policy and planning issues. Through a series of problem sets, offers students an opportunity to learn basic real estate finance and computation, including the fundamentals of pro forma modeling. Covers the entire real estate development process, from preliminary market and financial analysis through to construction management and property management using case studies and guest lecturers. Explores how public-private partnerships shape the outcomes of urban redevelopment within specific topics that may include affordable housing provision, brownfield redevelopment, transit-oriented development, sustainable urban development, and others.

PPUA 7237. Advanced Spatial Analysis of Urban Systems. 3 Hours.
Builds on skills covered in PPUA 5263. Offers students an opportunity to obtain greater depth in the analysis of urban spatial data focused on several urban systems (including social, built, and natural systems). Focuses on understanding the spatial relationships between various new and large urban datasets relevant to current policy challenges within cities. This is a project-based class.

PPUA 7238. Climate Change and Urbanization in Developing Countries. 3 Hours.
Focuses on the climate-change-related challenges that confront rapidly urbanizing countries, particularly the low- and middle-income countries of Asia, Africa, and Latin America. Many of the largest and most rapidly growing cities in these regions are in low-lying coastal cities in river deltas and, consequently, face significant dangers of flooding and eventual inundation. Climate change also has implications for access to freshwater and for the incidence of heat waves. The impacts of climate-change-related hazards tend to fall most heavily on the poorest, raising new issues of social inequality. This course examines concepts of urban vulnerability and resilience and climate change adaptation, as well as case studies of policy approaches for addressing the impacts of climate change on cities.

PPUA 7239. Problems in Metropolitan Policymaking. 3 Hours.
Examines the broad challenges that confront metropolitan areas-defined as including the center city, its immediate suburbs, and the broader periphery-including economic development, land use, transportation, housing, and the provision of basic services. Considers the array of tools available to policymakers, including planning, tax policy, pooling of services, and zoning.

PPUA 7240. Health Policy and Politics. 3 Hours.
Examines contemporary health care policies, programs, and politics. Discusses the structure of the healthcare system and its costs, efforts to develop universal health coverage, the spread of managed care, and related topics.

PPUA 7241. Issues in Health Policy and Administration. 3 Hours.
Discusses selected ethical and legal issues and the topics relevant to heath policy and administration, such as healthcare rationing, confidentiality of patient data, informed consent, end-of-life issues, physician-assisted suicide, and medical malpractice.

PPUA 7242. Mental Health Policy Analysis and Administration. 3 Hours.
Examines key issues in the development of mental health policy from both U.S. and comparative perspectives. Also includes discussion of implementation processes and barriers in the establishment of comprehensive systems of community care.

PPUA 7243. International Development Administration and Planning. 3 Hours.
Takes a “manager’s eye view” of the formulation, implementation, evaluation, and improvement of development projects in less developed countries. Also focuses on the planning dynamics of host-government, bilateral, and multilateral organizations as they analyze and tackle such problems as agriculture, education, health, population, and land reform. Employs simulations and case studies.

PPUA 7244. Comparative Public Policy and Administration. 3 Hours.
Considers explanations of variation between states and solutions to administrative problems by examining such issues as culture, organization, budgeting, recruitment, accountability, reform, and the politics of bureaucracy and public policy, among others, in a cross-national, cross-cultural, and international context. Uses examples from Africa, Asia, and Latin America, as well as from the United States and Europe.
PPUA 7245. Education Policy in the United States. 3 Hours.
Examines the major policies and political dynamics that shape the delivery of educational services in the United States. Reviews the historical role of public education in American society and examines the legal context and intergovernmental relationships that provide the political framework for public education. Explores school finance, accountability and assessment strategies, issues of race and poverty, as well as major reform initiatives. Focuses on elementary and secondary education.

PPUA 7247. Seminar in U.S. Health Policy and Management. 3 Hours.
Introduces issues surrounding U.S. health policy and management. Focuses on aspects of the Affordable Care Act and more recent reform efforts and analyzes the history, causes, and consequences of U.S. health system change over the past several decades. Emphasizes learning about the organization, financing, and delivery aspects of the present system including quality, health innovation, patient engagement, value-based reimbursement, and health workforce evolution. Introduces students to organizational, economic, and sociological theories for studying the healthcare system. Offers students an opportunity to apply course learning in practical ways. Designed to be of particular interest to doctoral students and advanced master’s degree students wanting to study and work in healthcare. Requires permission of department.

PPUA 7248. Urban Revitalization. 3 Hours.
Examines how and why cities grow and decline from both theoretical and empirical perspectives. Analyzes economic, spatial, and social aspects of growth and decline, mostly from the perspective of North American and European cities and mostly in the postwar period. Explores the conditions under which municipal governments and the private sector can revitalize declining neighborhoods and cities. Covers how cities revitalize in response to natural (e.g., hurricanes, floods) and technical (e.g., nuclear accidents, terrorist events, oil spills) disasters. Offers students an opportunity to understand how and why urban disinvestment happens; to become familiar with historical efforts to revive cities; and to be able to describe several urban revitalization strategies, critically analyze their objectives, and understand factors that are conducive to and barriers to their success.

PPUA 7249. Urban Coastal Sustainability. 3 Hours.
Focuses on the challenges facing coastal cities and the ecosystems on which they depend by exploring both threats such as climate change as well as adaptation measures that promote resilience. Aimed at students interested in the interface of science and public policy and those who wish to gain a deeper understanding of how coupled human-natural ecosystems operate.

PPUA 7336. Social Capital and Resilience. 3 Hours.
Examines the role of social capital as in trust, governance, and economics. Focuses on networks and connections in disasters and resilience around the world. POLS 7336 and PPUA 7336 are cross-listed.

PPUA 7346. Resilient Cities. 3 Hours.
Examines the characteristics of resilient cities, especially those located in coastal regions. Investigates the capacity of cities to respond to major disruptions to their social and ecological systems. Includes extensive use of case studies, such as the 2004 Indian Ocean tsunami and Hurricane Katrina in 2005, as well as readings on cities and social systems. Offers students an opportunity to analyze an urban area and provide recommendations for improving its resilience. POLS 7346 and PPUA 7346 are cross-listed.

PPUA 7380. Behavior and Public Policy. 3 Hours.
Examines how people behave in response to public policy incentives, how such behavior can be predicted, and how to evaluate the extent to which policies affect well-being. Predicting the impacts of policies requires that one anticipate how individuals will behave in response to change. Will income support reduce work effort or savings? Will longer sentences for convicted criminals lead to lower crime rates? Will managers maximize long-run corporate profits for shareholders? Starts with the explicit behavioral model used by economists (expected utility maximization) and its normative implications. Then seeks to understand why people do not behave as that model would predict. Finally, examines concepts about human happiness and its relation to life circumstances and assesses the guidance such concepts offer for policy design.

PPUA 7390. Special Topics in the Social Sciences. 3 Hours.
Examines selected topics in the social sciences and public policy. May be repeated up to two times.

PPUA 7673. Capstone in Public Policy and Urban Affairs. 3 Hours.
Offers an opportunity for student teams, in partnership with a local, state, or federal agency or nonprofit institution, to assess an urban or regional problem, produce a thorough policy analysis, and present it and recommended solutions to the agency or institution. Course readings focus on materials needed to assess the problem and provide solutions. This is a faculty-guided team project for students completing course work in urban and regional policy studies. May be repeated without limit.

PPUA 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PPUA 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PPUA 7978. Independent Study. 1-4 Hours.
Offers independent study under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PPUA 7990. Thesis. 1-4 Hours.
Offers thesis supervision by members of the department. May be repeated without limit.
PHTH 1121. Society and Health Recitation. 0 Hours.
Provides a small-group discussion format to cover material in the corequisite lecture course. PHTH 1121 and SOCL 1121 are cross-listed.

PHTH 1260. The American Healthcare System. 4 Hours.
Introduces the organization and dynamics of the healthcare system and the role of consumers. Explores basic elements of healthcare including financing, personal insurance, high-risk status, and patient rights within the context of the U.S. system. Central to this exploration is an analysis of healthcare issues requiring informed consent from patients: patient bill of rights, healthcare directives, and the use of a proxy for decision making. Introduces the roles and responsibilities of various healthcare workers within the framework of an interdisciplinary model of healthcare.

PHTH 1261. Comparative Healthcare Systems. 4 Hours.
Designed to enable health profession students to develop a basic understanding of health-delivery systems and key issues confronting healthcare in the United States and in the study country in this study-abroad course. Explores issues such as the affordability of medical care, patient rights, health risks and behaviors, disease prevention, quality and access to care, the growth of managed care and corporate influence on healthcare, new medical technologies, the aging population, the impact of biotechnology, and trends in employment of health professionals. Incorporates self- and group-reflection exercises, Internet and contemporary media exploration, and in-class discussions. Compares and contrasts key healthcare issues in the study country with those in the United States using literature, Internet and contemporary media, observations in the study country, and discussions with guest speakers.

PHTH 1270. Introduction to Global Health. 4 Hours.
Introduces global health in the context of an interdependent and globalized world focusing on four main areas of analysis: infrastructure of global health; diseases; populations; and terms, concepts, and theories. While the focus is on lower-income countries, the course examines issues in a broader global context, underscoring the interconnections between global health disparities and global health policy response. Applies case studies describing interventions to improve healthcare in resource-poor settings in sub-Saharan Africa and elsewhere to help illuminate the actors, diseases, populations, and principles and frameworks for the design of effective global health interventions.

PHTH 2210. Foundations of Biostatistics. 4 Hours.
Introduces the fundamental concepts of biostatistics. Offers students an opportunity to learn to apply statistical thinking to practical problems across several health disciplines. Draws examples and readings from clinical and public health literature. Introduces the Stata statistical software package.

PHTH 2211. Recitation for PHTH 2210. 0 Hours.
Offers small group discussion format to cover material in PHTH 2210.

PHTH 2300. Communication Skills for the Health Professions. 4 Hours.
Offers students in the health professions an opportunity to learn how to communicate effectively with patients, colleagues, and other professionals. Covers interpersonal communication with patients and families from culturally diverse backgrounds, public speaking and presentations, and communicating as a leader. Requires students to create/prepare and deliver several presentations throughout the semester.

PHTH 2301. Communication Skills for the Health Professions—Global. 4 Hours.
Studies how to communicate effectively with patients, colleagues, and other professionals—regardless of race, culture, or ethnicity—on interpersonal, organizational, and global levels. Introduces traditional and new media health communication strategies, public speaking/presentation techniques, and communication as leaders in a global environment. Compares cultures and healthcare systems in the country of study with the American system by engaging with health professionals, patients, caregivers, and communications and other specialists. Introduces students to art and techniques of health communication for informing and influencing patients, caregivers, and the community-at-large. Offers students in the health professions an opportunity to learn interpersonal, organizational, mass media, and global communication skills to empower individuals to become health literate and participate in their own healthcare. May be repeated without limit.

PHTH 2350. Community and Public Health. 4 Hours.
Provides students with a basic familiarity with and appreciation of public health and community-based methods for improving the health of populations. Explores the purpose and structure of the U.S. public health system, contemporary public health issues such as prevention of communicable diseases, health education, social inequalities in health and healthcare, public health responses to terrorism, and control of unhealthy behaviors like smoking, drinking, drug abuse, and violence.

PHTH 2515. Healthcare Policy and Administration. 4 Hours.
Focuses on management and policy issues in healthcare. Discusses management and administrative structures in hospitals and other healthcare organizations, including community clinics and health organizations, both private and public. Introduces the financial systems, economic information, and payment mechanisms necessary to understand healthcare financing. Also explores the variety of factors that influence population health from a healthcare policy perspective. Offers students an opportunity to learn how to analyze, prepare, and write policy briefs based on understanding the various economic, legal, and political forces shaping healthcare in the United States.

PHTH 4120. Global Perspectives on Discrimination and Health. 4 Hours.
Explores how discrimination can lead to population-level health disparities among marginalized groups globally. Topics include constructions of social categories, such as race and gender; differences in patterns of disease across populations, both intra- and internationally; how work from various disciplines, such as anthropology, medicine, and public health, inform understanding about how discrimination relates to health; and theoretical models from different disciplines that explain public health disparities.

PHTH 4511. Healthcare Management. 4 Hours.
Provides an opportunity to develop skills and abilities related to management within the context of interdisciplinary study. Students explore issues in healthcare management in small-group, case-based educational experiences or problem-solving approaches. Within the context of small groups, students explore complex problems frequently encountered in clinical practice. Group projects related to leadership, management, or administrative issues are pursued and developed as classroom or poster presentations.
PHTH 4515. Critical Issues in Health and Public-Health Policy. 4 Hours.
Explores public policy issues and their relation to U.S. healthcare reform. Emphasizes passage of the Affordable Care Act (ACA) and ongoing challenges in the public health arena. Uses historical, political, ethical, and other critical lenses to analyze a century of evolving U.S. healthcare reform efforts and the status of ACA implementation and to assess tensions between scientific, government, and broader public perspectives about current public health policy concerns. Explores the role of harm-reduction strategies, the impact of bioterror and emergency preparedness, privacy and other challenges of disease surveillance and population health-data collection, conflict regarding alternative strategies for infectious and chronic disease management, and the implications of the ACA for the future of public health.

PHTH 4540. Health Education and Program Planning. 4 Hours.
Offers a writing-intensive course that introduces concepts central to health education and the program-planning process. Examines current public health issues that require intervention through health education or other types of prevention programs. Studies and applies models and theories used in health education and program planning. Offers students an opportunity to conduct a needs assessment; design and plan a program for a public health issue; create a mission statement for the program as well as goals, objectives, and strategies; and design the intervention, develop an evaluation plan, and create a budget and marketing plan.

PHTH 4993. Independent Study. 1-4 Hours.
Offers students an opportunity to carry out independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHTH 5120. Race, Ethnicity, and Health in the United States. 3 Hours.
Explores the role of economic, social, and individual factors in explaining racial and ethnic health disparities and examines intervention approaches to eliminate them. Topics include genetic and social constructions of race and ethnicity, measuring race and ethnicity, and the differences in prevalence and patterns of disease across groups; cultural and structural factors that affect healthcare delivery, such as discrimination, racism, and health status; and public health approaches to prevention and improving healthcare delivery.

PHTH 5202. Introduction to Epidemiology. 3 Hours.
Introduces the principles, concepts, and methods of population-based epidemiologic research. Offers students an opportunity to understand and critically review epidemiologic studies. Lectures and discussions aim to serve as a foundation for training in epidemiology, quantitative methods, and population-based health research. The course is a required introductory course for students in the Master of Public Health program and is appropriate for students who are interested in epidemiologic research. Students not meeting course restrictions may seek permission of instructor.

PHTH 5210. Biostatistics in Public Health. 3 Hours.
Offers public health students an opportunity to obtain the fundamental concepts and methods of biostatistics as applied predominantly to public health problems and the skills to perform basic statistical calculations. Emphasizes interpretation and comprehension of concepts. Topics include descriptive statistics, vital statistics, sampling, estimation and significance testing, sample size and power, correlation and regression, spatial and temporal trends, small area analysis, and statistical issues in policy development. Draws examples of statistical methods from the public health practice. Introduces use of computer statistical packages. Requires permission of instructor for students outside designated programs.

PHTH 5212. Public Health Administration and Policy. 3 Hours.
Offers students an opportunity to obtain practical knowledge concerning the planning, organization, administration, management, evaluation, and policy analysis of health programs. Surveys what we know and think about public health administration and policy and what we do in practice. Introduces the main components of public health policy and administration using notable conceptual frameworks and case studies. Requires permission of instructor for students outside designated programs.

PHTH 5214. Environmental Health. 3 Hours.
Introduces the field of environmental health, which encompasses concerns related to physical, built, and social environments. Discusses the tools used to study environmental exposures and diseases. Examines environmental health hazards, the routes by which humans are exposed to hazards, various media in which they are found, and disease outcomes associated with exposures. Offers students an opportunity to become familiar with methods used to conduct environmental health research and with the federal and state agencies responsible for protecting environmental health.

PHTH 5220. Health and Human Rights. 3 Hours.
Addresses the growing recognition within the field of public health that attention to human rights is essential in developing effective and sustainable health policies and programs. Provides an overview of human rights and the international documents that establish them. Reviews the impact of globalization while providing an in-depth analysis of the human rights-based approach to health through the examination of multiple case studies. Offers students an opportunity to become familiar with a human-rights framework used to design and evaluate public health policies and programs. Additionally, emphasizes educational frameworks to increase awareness of the linkages between health and human rights. Requires permission of instructor for students outside designated programs.

PHTH 5222. Health Advocacy. 3 Hours.
Seeks to educate students about the role of advocacy in public health while providing tools and support to address current healthcare issues. Provides information and theory about advocacy, education, and community organizing in public health practice and skills geared toward direct application. Covers various techniques related to developing and conducting an advocacy project within a community setting. Offers students an opportunity to develop, communicate, and refine a community-based advocacy program. Requires permission of instructor for students outside designated programs.

PHTH 5224. Social Epidemiology. 3 Hours.
Focuses on social epidemiology, which is defined as the study of the distribution and determinants of health in populations as related to the social and economic determinants of health. Includes theories, patterns, and controversies, as well as programs and policies that can be applied to address health inequalities. Readings include articles that situate one dimension of social epidemiology with articles addressing the empirical patterns, address prevailing theories and controversies regarding the causes of the inequalities, as well as address interventions or policies that may be applied to address the inequalities. Requires permission of instructor for students outside designated programs.
PHTH 5226. Strategic Management and Leadership in Healthcare. 3 Hours.
Focuses on management challenges facing healthcare organizations, particularly community-based agencies and their role in the public healthcare delivery system. Introduces strategic thinking and leadership approaches that must be considered for managing a successful healthcare organization. Selected topics include strategic planning; organizational development and the barriers to organizational change; relationship management with key internal and external constituencies; marketing, financial management, and contract negotiation; evolving principles of health insurance and the changing role of the consumer; and the key elements for effective organizational leadership in today’s evolving healthcare marketplace. When appropriate, outside experts are used to supplement readings, case studies, and lecture and discuss practical real-world challenges in leading various healthcare initiatives. Requires permission of instructor for students outside designated programs.

PHTH 5228. Advances in Measuring Behavior. 3 Hours.
Examines current and emerging methods of measuring human behavior known to impact human health. Discusses some of the most common instruments used to measure everyday behaviors and considers how emerging technologies may change how these behaviors are measured in the future. Explores the measurement of behaviors such as activities of daily living, dietary decision making, patterns-of-eating behavior, physical activity, sedentary behavior/posture, screen time, activity in the community, social connectedness, stress and stressful events, affective state, medication adherence, use of alcohol and addictive substances, risky behaviors, and physiological states that can be measured using wearable devices in the field (e.g., heart rate and blood pressure). This is a survey and project-oriented course.

PHTH 5230. Global Health. 3 Hours.
Provides an overview of global health issues and focuses on less economically developed countries. Covers measures of disease burden; demography of disease and mortality; Millennium Development Goals (under the auspices of the United Nations); infectious diseases such as HIV/AIDS, tuberculosis, and malaria and their prevention; vaccine utilization and potential implications; chronic diseases; tobacco-associated diseases; nutritional challenges; behavioral modification; mother and child health; health human resources; and ethical issues in global health. LAW 7630 and PHTH 5230 are cross-listed.

PHTH 5232. Evaluating Healthcare Quality. 3 Hours.
Focuses on the conceptual and methodological foundations for evaluating the quality of care of healthcare providers—both individual providers and healthcare organizations. Aimed at students pursuing careers in public health, public policy, healthcare management, and the various health professions in the growing field of quality evaluation and improvement. Also designed to give healthcare providers an appreciation for how they may be evaluated. Examines scientific issues in the measurement of quality of care as well as key quality evaluation methods. Also covers the use of risk adjustment and other methodologies for comparing the quality of healthcare providers. Focuses on mechanisms that assess quality, including licensure, accreditation, and board certification.

PHTH 5234. Economic Perspectives on Health Policy. 3 Hours.
Uses basic economic concepts to illuminate the many factors that shape health, healthcare, and the healthcare system in the United States. Examines the role of these concepts in explaining the challenges faced in achieving three core goals of the healthcare system: increasing access, limiting cost, and improving quality. Explores how policy makers, market participants, and others can remedy access, cost, and quality deficiencies. Illustrates how economic concepts can be applied to the study of health and health behaviors.

PHTH 5240. Evaluating Scientific Evidence. 3 Hours.
Studies how to critically and systematically evaluate the merits of published research involving human subjects. Draws from literatures in public health, medicine, and psychology. Discusses and examines principles of hypothesis testing, study design, sample selection, validity, statistical significance, effect size, systematic reviews, ethics, and multiculturalism. Covers issues of statistical methods and data analysis. Requires no computation. Seeks to help researchers and practitioners become more informed consumers and eventual contributors of scientific information. Requires prior completion of at least one course in research methods or statistics (e.g., EXSC 6263, HLTH 5450, PHTH 5202, PHTH 5210); undergraduates, nondegree graduate students, and students who have not completed these courses are strongly encouraged to consult with the instructor prior to registering.

PHTH 5280. Food, Food Policy, and Health. 3,4 Hours.
Covers the importance of food and food policy in the lives of individuals and their families; the impact of different policies and practices on health, including disease prevalence and malnutrition; and the structure and functioning of a major sector of the economy in American political discourse, particularly in the last 75 years. Emphasizes the increase of overweight individuals since the 1970s and obesity as a driver of the rise of chronic diseases; the transformation of agriculture from small, privately owned farms to large megacorporations; the transformation of Americans’ eating habits and the growth in the importance of the fast-food industry; and recent trends toward smaller, organic farms and growing interest in sustainability and consumption of locally and regionally grown foods.

PHTH 5300. Project Management in Public Health. 1 Hour.
Presents principles of project management as applied to public health organizations and their programs. Offers students an opportunity to learn the components of the project management lifecycle, including human resource components, material resources, and related components.

PHTH 5310. Budget Principles in Public Health. 1 Hour.
Public health programs in public agencies and nonprofit organizations require managerial skills to assure that programs are implemented efficiently and effectively. Funding for public health frequently comes from governmental revenue sources—federal and state budgets or grants from government or foundations. It is critical that the funds are utilized well and appropriate to the objectives of the agency and program, so the development and management of solid budgets in these organizations is very important. This course details the public health revenue and funding environment, identifies key budget development functions, and describes the importance of utilizing the budget process for sound management of the programs. Advancing the environment for public health through effective budgeting and promotion of program impact is important to support the continued funding for public health. Takes students through these topics and offers them the practical experience of developing a budget for a public health program as the central activity.

PHTH 5320. Grant Writing in Public Health. 1 Hour.
Offers an opportunity for participants to develop their skills in grant writing and reviewing grants. Offers students an opportunity to explore the grant-funding landscape, identify different types of funders and grants, identify potential funders, develop a grant proposal, and understand the submission and peer-review process.
PHTH 5440. Community-Based Participatory Research: Environmental Health. 3 Hours.
Aims to prepare students for community-based participatory research (CBPR) through historical, theoretical, and methodological materials. Through visits with experienced CBPR researchers, studies the need for, benefits of, and challenges to community-grounded research. Uses the lens of local environmental justice issues to emphasize the importance of CBPR to environmental health and justice work. Offers students an opportunity to engage in hands-on labs, to develop research tools to study their own community as students, to critically analyze CBPR cases, and to develop their own strategic plan to research a pressing environmental health and justice issue through CBPR. Introduces students to critical studies of science and technology.

PHTH 5540. Health Education and Program Planning. 3,4 Hours.
Focuses on underlying concepts of health education and explores current health education issues that require intervention. Covers program planning models and theories used in health education. Offers students an opportunity to develop a working knowledge of the planning process for health education through the analysis of case studies and by creating a program plan to address a health issue of their choice. Provides health science students with preparation for HSCI 4710, in which they may choose to implement and evaluate their program plan.

PHTH 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHTH 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

PHTH 6200. Principles and History of Urban Health. 3 Hours.
Focuses on the aspects of urban development and life that impact the health and well-being of city residents. Offers students an opportunity to learn about the impact of migration patterns, built environments, occupational stratification, and other cultural and community contextual factors that impact health status and healthcare access. Examines the level of overall health and healthcare found in urban populations, particularly the urban poor, and the disproportionate impact on racial and ethnic minorities in the United States and elsewhere. Considers public policy approaches for addressing the unique health issues of urban areas. Examines urban health issues both from a national and international perspective. Requires permission of instructor for students outside designated programs.

PHTH 6202. Intermediate Epidemiology. 3 Hours.
Offers an intermediate-level course covering key principles, concepts, and methods of population-based epidemiologic research. Topics include observational study designs, measures of disease occurrence and association, validity and bias, confounding, effect modification, multivariate analysis for stratification and adjustment, critical appraisal and meta-analysis, mediation analysis, missing data analysis, and concepts and methods for strengthening causal inference. Offers graduate students unique opportunities to engage in practical applications, including critical reviews of published epidemiologic journal articles, and to conduct hands-on analyses of empirical datasets using SAS statistical software. Designed to serve as a foundation for further advanced training in specialized branches of epidemiology, quantitative methods, and epidemiologic research.

PHTH 6204. Society, Behavior, and Health. 3 Hours.
Explores individual, interpersonal, and social influences on health. Offers students in public health an opportunity to learn the application of the social and behavioral sciences. Examines foundations of public health, including prevention and the prevention paradox, theories of disease causation, and public health ethics. In addition, multilevel influences on health are examined, including behavioral theories and social determinants of health. Throughout the semester, attention is paid to disparities in health. Finally, we examine strategies to reduce health disparities, such as education, interventions, and policy-level changes, and discuss their relative effectiveness. Requires permission of instructor for students outside designated programs.

PHTH 6208. Urban Community Health Assessment. 3 Hours.
Offers students an opportunity to develop a basic understanding of the complex public health issues confronting urban communities across the nation. Uses a community organization and development framework for public health practice. Seeks to provide skills, tools, and experiential learning opportunities that result in community assessments that may be used in public health planning, programming, and policy. Covers key principles and methods for conducting community health assessments utilizing a range of quantitative and qualitative methods, including community epidemiology, major data sets, surveillance data, behavioral risk and other population-based surveys, as well as other primary and secondary data sources. Includes collaborative and interactive exercises, including self- and group reflection, Internet and contemporary media exploration, and in-class discussions. Requires permission of instructor for students outside designated programs.

PHTH 6210. Applied Regression Analysis. 3 Hours.
Builds upon the fundamental concepts and methods of biostatistics with applications to health disciplines. Topics include hypothesis testing, analysis of variance, linear regression, multiple regression, and logistic regression. Examples and readings are drawn from the public health literature. The SAS statistical software package is introduced and used throughout the course.

PHTH 6228. Public Health Nutrition. 3 Hours.
Covers public health nutrition issues among individuals, communities, and populations living in urban settings. Emphasizes issues about vulnerable populations, such as ethnic minorities, women, children, and the elderly. Topics include food and nutrition science; evaluation of specific nutrition programs; and the understanding of the role of public health services, policies and legislation, funding, marketing, and communication strategies for the development, evaluation, implementation, and dissemination of nutrition programs. Briefly reviews international public health nutrition issues such as world hunger and food insecurity. Incorporates a service-learning component, involving a partnership with a community-based organization. Requires students to commit two to five hours per week during the course to service-learning activities. Requires permission of instructor for students outside designated programs.
PHTH 6232. Neighborhood and Public Health. 3 Hours.
Examines how neighborhood features and processes affect population health. Introduces the sociological and health literature on neighborhood effects, segregation, and health. Addresses how social policies influence neighborhoods and, thus, population health, as well as how public health practitioners may collaborate with other disciplines to assess urban environments and enhance them to strengthen population health. Reviews a variety of assessment tools from sociology, urban planning, and public health in order to characterize neighborhoods in a systematic and rigorous manner. Covers useful data sources and measurements to examine neighborhood and health issues, as well as assessment tools used to examine whether urban environments are healthy. Requires basic statistics and data analysis skills; practical experience in urban public health is a plus but not required.

PHTH 6320. Qualitative Methods in Health and Illness. 3 Hours.
Discusses qualitative inquiry in general and specifically in topics related to public health and experiences of self, health, illness, and the body. Qualitative research aims to achieve in-depth and contextual understanding of people, culture, and societies and usually employs texts, interviews, published materials, images, and focus group discussions as sources of data. The course integrates theoretical and methodological readings and discussions with designing and conducting a qualitative project. Offers students an opportunity to understand meanings of health, illness, and the body in a variety of "local worlds" and reflect on their importance for informing policy, public health, research, and practice. Requires prior completion of one undergraduate- or graduate-level course in research methods.

PHTH 6350. Social Survey Research Methods. 3 Hours.
Offers an overview of social survey research methodology. Social surveys are widely used in the health and social sciences and they are sources of many important discoveries. Covers how theory and research objectives drive key decisions about the survey design process—which include sampling, measurement, and modes of data collection—in a framework that minimizes error at each step. Uses materials developed by leading academic social survey researchers and organizations as models for how students can use existing surveys and design their own surveys to accomplish their research goals. There are many lively debates about best practices as researchers adapt to new technologies, falling response rates, ethical quandaries about engaging human subjects, and increasing research costs.

PHTH 6400. Principles of Population Health 1. 3 Hours.
Seeks to provide students with historical background and methodological and critical-thinking tools needed to perform high-quality, interdisciplinary research in population health. Using a problem-solving and interdisciplinary framework, offers students an opportunity to gain the skills to develop research hypotheses, design research strategies, analyze data to test study hypotheses, and communicate their findings both orally and in writing. Also offers students an opportunity to gain experience in research methodology and application of basic methods for population health research, including epidemiological and biostatistical concepts. Finally, students demonstrate their mastery of these skills through problem sets and through written proposals that include communication of preliminary data.

PHTH 6410. Principles of Population Health 2. 3 Hours.
Continues PHTH 6400, exploring additional population health research topics and methods and applying more advanced biostatistical and epidemiological analysis methods.

PHTH 6440. Advanced Methods in Biostatistics. 3 Hours.
Explores in detail the analysis of complex survey design, including adjustments for cluster sampling, weighting, and stratification. Designs that incorporate clustering of data are common in health science research. These designs are characterized by data that capture nonindependent repeated measurements on primary sampling units or that collect data with schemes more complex than simple random sampling. The statistical analyses of these types of data need to include appropriate adjustments to provide proper estimates and accurate testing. The second part of the course investigates the use of mixed regression models to analyze repeated measurements on individuals, multilevel data, and growth models.

PHTH 6450. Systematic Reviews of Scientific Literature. 3 Hours.
Offers students an opportunity to learn how to conduct a systematic review of scientific literature, including developing a question of appropriate scope and clinical relevance, development of abstraction tool, selection of articles, and drafting of all sections of the review including tables and figures. Students produce a systematic review in a topic area of substantive interest.

PHTH 6460. Analysis of Messy Data. 3 Hours.
Covers the foundations and application to messy data for various statistical approaches, including generalized additive models, robust regression, blocking and matching, propensity score analyses, bootstrap and resampling methods, and classification trees. General linear models are widely used for exploring and testing associations in cohort and observational studies. When assumptions hold and the models are correctly specified, these approaches provide unbiased estimates and powerful tests that have very desirable properties. However, in applied health science research, one often finds one's data are "messy" and usual approaches need to be modified and adapted to provide valid inferences. Highly confounded variables, strong nonlinear associations, incomplete or missing data, or highly interacted associations can require special considerations.

PHTH 6800. Causal Inference in Public Health Research. 3 Hours.
Exposes students to causal inference approaches, including causal diagrams and counterfactual theory. Students are also asked to draw upon their own research experiences and prior epidemiology training to evaluate public health studies. Covers how to apply the fundamental concepts of counterfactuals and causal diagrams; assess threats to validity in study designs and analysis, including confounding, selection bias, and measurement error/misclassification; evaluate the validity of a public health research study's design and analysis with respect to addressing causal questions; and critically analyze scientific literature and apply findings to clinical or policy decisions. Offers students an opportunity to think critically and rigorously about the implications of study design and analysis toward addressing public health questions.

PHTH 6901. Capstone 1. 1 Hour.
Surveys professional development issues that are relevant to successful completion of the public health capstone project and future work as a public health professional. Offers students an opportunity to integrate theory and practice experiences through discussion and reflections. Covers major topics in professional development, such as presentation skills, time management, relationship management, cross-cultural issues in the workplace, and written communication skills. Includes issues that can stall a career in the public health field.
PHTH 6902. Capstone 2. 2 Hours.
Constitutes the second of three public health capstone courses. Students work on-site in a range of diverse public health practice settings reflective of their particular urban health focus. Offers students an opportunity to integrate their theory and practice experiences in a major research, program planning, program implementation, policy development, management, service delivery, or evaluation project. Capstone projects are student-led and designed in consultation with community partners and faculty advisors.

PHTH 6903. Capstone 3. 3 Hours.
Constitutes the third of three public health capstone courses. Students work on-site in a range of diverse public health practice settings reflective of their particular urban health focus. Offers students an opportunity to integrate their theory and practice experiences in a major research, program planning, program implementation, policy development, management, service delivery, or evaluation project. Capstone projects are student-led and designed in consultation with community partners and faculty advisors.

PHTH 6910. Public Health Capstone. 3 Hours.
Offers students an opportunity for scholarly work on-site in a range of diverse public health settings reflective of their particular urban health focus. Students have an opportunity to integrate their theory and practice experiences in a major research, program planning, program implementation, policy development, management, service delivery, or evaluation project. Student-led and designed in consultation with community partners and faculty advisors, seeks to support students in the implementation and completion of their projects.

PHTH 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PHTH 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

PHTH 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

PHTH 7976. Directed Study. 1-3 Hours.
Offers the student the opportunity to bring individual, concentrated attention to a particular public health topic or competency area as arranged and agreed upon in advance by a faculty member and the student. This option is generally recommended when the student desires a more intensive analysis of a particular subject. May be repeated without limit.

PHTH 8960. Exam Preparation—Doctoral. 0 Hours.
Offers students an opportunity to prepare for the PhD qualifying exam under faculty supervision.

PHTH 8984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

PHTH 8986. Research. 0 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

PHTH 9000. PhD Candidacy Achieved. 0 Hours.
Indicates successful completion of program requirements for PhD candidacy.

PHTH 9990. Dissertation. 0 Hours.
Offers doctoral students an opportunity to work with their advisors and doctoral research committees to perform their doctoral research and to write their dissertation. Restricted to Bouvé doctoral candidates only.

PHTH 9994. Dissertation Continuation—Part Time. 0 Hours.
Offers continued dissertation supervision by members of the department. May be repeated without limit.

PHTH 9996. Dissertation Continuation. 0 Hours.
Offers continuation of dissertation research to doctoral students. Restricted to Bouvé doctoral candidates only. May be repeated without limit.

PBR 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

PBR 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

PBR 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

PBR 6100. Introduction to Public Relations. 3 Hours.
Introduces the ideas, skills, and principles that underlie the public relations craft. Designed for career changers and those new to public relations. Offers students an opportunity to study the role and contributions of public relations practitioners in contemporary society; to learn about potential legal and ethical aspects of the practice of public relations; to study the communication process and how persuasion is used with various audiences; and to learn how to develop a strategic communication plan to achieve specific goals and objectives. Also introduces students to specialized practice areas within the public relations field, such as business and industry, government, nonprofits and associations, and healthcare.

PBR 6110. Public Relations Issues and Ethics. 3 Hours.
Focuses on identifying and solving ethical issues faced by public relations practitioners. Introduces useful ethical theories and reasoning models. Offers students an opportunity to understand how the public relations professional helps an organization develop and maintain a social consciousness. Explores mission statements and how statements affect corporate culture. Focuses on the delicate balance between a public relations practitioner’s obligation to the organization, the employer, the profession, the public, and to self. Uses case studies to illustrate the impact of good and bad ethical decisions.

PBR 6120. Public Relations Legal Issues. 3 Hours.
Examines legal issues that influence an organization and its communication with its many publics. Topics covered range from federal law and mandates—such as freedom of speech, corporate speech vs. commercial speech, defamation, copyright law, environmental policy, discrimination, and sexual harassment policy—to local regulations—such as zoning and other city ordinances. Offers students an opportunity to understand about how law and policies are created and the effects of lobbying on policy initiatives. Uses case studies to illustrate issues and implications for an organization.

PBR 6125. Community Relations and Corporate Social Responsibility. 3 Hours.
Explores why corporate social responsibility and strong community relations are increasingly important elements of business strategy. Considers the factors that enable an organization to build relationships with the broader community within which it operates. Offers students an opportunity to develop a corporate social responsibility campaign as a signature assignment that incorporates ethical considerations and multimedia methods of delivery.
PBR 6130. Public Relations Writing Seminar 1. 3 Hours.
Focuses on how to develop messages to influence specific audiences in support of organizational values and objectives. Offers students an opportunity to obtain knowledge of the various tools of the profession and where and when they are best applied—for example, news releases, newsletters, video, and digital communications—through frequent writing assignments and critical evaluations.

PBR 6135. Public Relations Strategy and Planning. 3 Hours.
Examines the role and responsibilities of public relations professionals in promoting brand identity and organizational reputation as a key element in an organization’s business strategy. Explores the skills and knowledge required for ensuring that strategic messages resonate with target audiences, both domestic and global. Offers students an opportunity to develop a strategic public relations strategy as a signature assignment.

PBR 6140. Public Relations Writing Seminar 2. 3 Hours.
Constitutes an advanced course that offers students an opportunity to use their research, creative, and writing skills to help an organization promote its products or services and express its organizational identity, mission, and values with the long-term goal of building reputation and achieving growth objectives. Examples of writing assignments include annual reports, CEO speeches, position papers on key issues, talking points, and other media that support institutional reputation management.

PBR 6205. Visual Communications and Desktop Publishing. 3 Hours.
Designed to enable students to produce simple and effective publications. Introduces students to graphic design and printing terminology needed to understand the design process. Offers students an opportunity to learn how to produce effective brochures, newsletters, letterhead, logos, and advertisements using InDesign, a new advanced desktop publishing program by Adobe.

PBR 6225. Advertising Marketing Theory and Practice. 3 Hours.
Covers basic marketing and advertising principles, such as positioning, branding, writing copy, and target marketing. Offers students an opportunity to develop an understanding of how advertising and public relations can complement each other through sharing common goals.

PBR 6710. Public Relations Research: Understanding External Audiences. 3 Hours.
Focuses on the important role of market research and the use of existing data to gain insights into the attitudes of a wide range of external stakeholders, including journalists, investors, and customers, as well as the role environmental conditions play in the overall media campaign process. Offers students an opportunity to gain in-depth knowledge of research steps—including surveys, focus groups, and psychographic data—and to identify and analyze attitudinal patterns in target audiences as the foundation for effective public and media relations campaign strategies.

PBR 6940. Public Relations Process and Practice. 3 Hours.
Offers students an opportunity to put theory and skills into practice by enabling them to work as a team to provide a public relations plan based on integrated marketing communications for an actual client. Desktop publishing skills are introduced so that students can visually present final work. Final work might include a PowerPoint presentation along with a portfolio of work, including the public relations plan, and collateral material, such as a brochure, news release, press kit, and an advertisement.

PBR 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

PBR 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PBR 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

PBR 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for work experience.

PBR 6970. Seminar. 1-4 Hours.
Provides an in-depth study of selected topics.

PBR 6980. Capstone. 1-4 Hours.
Provides students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

PBR 6983. Topics. 1-4 Hours.
Designed to offer students a specialized area of study. Topics vary and can include employee relations, sports public relations, entertainment public relations, or crisis communication. May be repeated without limit.

PBR 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

PBR 7961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

PBR 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.

PBR 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

PBR 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

PBR 7980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

PBR 7983. Topics. 1-4 Hours.
Covers special topics in public relations. May be repeated without limit.

PBR 7990. Thesis. 1-4 Hours.
Covers special topics in public relations. May be repeated without limit.

PBR 7994. Thesis Continuation—PT. 0 Hours.
Offers continuing thesis supervision by members of the department.

PBR 7995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

PBR 7996. Thesis. 1-4 Hours.
Covers special topics in public relations. May be repeated without limit.

PUR 0100. Essentials of Purchasing. 1.4 Hour.
Covers how to get the best deal from suppliers, develop and maintain a competent supplier base, understand the supply chain concept, implement the procurement card, negotiate successfully, inventory valuation techniques, the most important things to know about the legal side of purchasing, how to measure supplier performance, and much more.
PUR 0101. Advanced Purchasing Strategies. 1.4 Hour.
Offers purchasing professionals an opportunity to brush up on what they are doing as well as to become exposed to the most current purchasing techniques to allow the company to prosper and grow in these changing times. Significant changes are taking place in technology, organizations, and the role of purchasing.

PUR 0102. Legal Aspects of Purchasing. 1.4 Hour.
Offers solid, practical material based on vast experience and proven methods. Covers when a contract is a contract, the best way to determine the authority level of the seller, how to get an extended warranty at no extra cost, and the best remedy for avoiding and settling disputes.

PUR 0104. Improving Purchasing Performance. 1.4 Hour.
Designed to help buyers to identify, understand, and manage the involvement of nontraditional purchasing personnel in the purchasing process. The single biggest impediment to progress for the professional buyer is the high degree of purchasing done by nontraditional purchasing personnel. According to a study done by the Center for Advanced Purchasing Studies, a purchasing research organization, 59 percent of purchases are made by nontraditional purchasing staff.

PUR 0105. How to Purchase Services. 1.4 Hour.
Introduces the purchasing of services approach. When 73 percent of the workforce is employed by service industries selling to you, the traditional approaches to purchasing tangible items are ineffective. The purchasing of services approach is uniquely different, at least if you expect to negotiate the best contract, reduce and control costs, maximize and insure the quality of purchased services, and scrutinize supplier performance. This workshop offers purchasing professionals an opportunity to obtain the purchasing technology and know-how for being confident that the services purchased are as cost-effective as the products purchased.

PUR 0107. Contract Writing. 1.4 Hour.
Offers those involved in all stages of the contracting process an opportunity to understand, anticipate, and manage the consequences of the contracting process. Contracts are used in commercial situations for two primary purposes: first, to create a record of the terms of the agreement between the parties and, second, to protect the legitimate interests of those parties. Striking the appropriate balance between these is the challenge, often unappreciated, of the person drafting the contract.

PUR 0108. E-Business Purchasing. 1.4 Hour.
Covers and forecasts what the e-commerce professional needs to know now and do next in his or her company. The Internet revolution has and continues to impact the way business is conducted. Those in procurement or supply chain continue to be affected probably more than any other profession and need to know and understand the dynamics of this technology and how to harness and manage its power.

PUR 0109. Cost/Price Analysis. 0.7 Hours.
Offers purchasing professionals an opportunity to obtain the tools that can assist and guide them in ways to identify cost drivers and to use them effectively in negotiations. The pressure for people who have the responsibility for the purchase of goods and services is greater today than at any time in current history. As companies struggle with the rapid shift in technology and markets, purchasing is being challenged to reduce costs at an even higher level.

PUR 0111. Purchasing and Supply Management. 3.6 Hours.
Covers purchasing, contract management, cost/price analysis, contract law, and supplier issues. Offers supply professionals and purchasing managers an opportunity to obtain improved confidence when dealing with suppliers through negotiations, learn how to reduce time and money by eliminating suppliers that don't meet the organization's goals, learn what key cost drivers are and how to use them, develop new approaches to examining cost and price, improve efficiency in analyzing suppliers' costs, and obtain financial insight to best understand a company's performance and relevant issues that may affect future operations.

RGA 0502. Principles and Practices of U.S. Regulatory Affairs. 2.5 Hours.
Offers health regulators and biomedical industry representatives an opportunity to learn the core elements of contemporary medical device regulations. Emphasizes a life-cycle approach to viewing biomedical product governance. Covers such topics as good clinical practices and ICH guidelines, common technical documents and submissions, medical device nomenclatures and classifications, good manufacturing practices and ISO standards, labeling requirements, marketing and advertising, and adverse event reporting and postmarket surveillance. Focuses both on the differences between national regulatory systems and on the efforts to harmonize device regulations through such organizations as the Global Harmonization Task Force.

RGA 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

RGA 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

RGA 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

RGA 6000. Introduction to Food and Drug Administration (FDA) Pharmaceutical Regulation. 2 Hours.
Offers students an overview of pharmaceutical and biologic product clinical and regulatory development in addition to a description of the Food and Drug Administration’s (FDA’s) involvement in the process. Through course work and participation, offers students an opportunity to develop an understanding of fundamental pharmaceutical and biologic regulatory affairs from a U.S.-centric perspective. Reviews the historical development of U.S. pharmaceutical legislation and statute development, FDA and industry functions, as well as significant case law that has shaped the present state of regulation.
RGA 6001. Introduction to Food and Drug Administration Medical Device Regulation. 2 Hours.

Provides an overview of the medical device development process and the function of the Food and Drug Administration (FDA) as it relates to device product commercialization. Through course work and participation, offers students an opportunity to develop an understanding of fundamental medical device regulatory affairs from a U.S.-centric perspective. Reviews the historical development of significant U.S. medical device legislation, including the Medical Device Amendments of 1976. In addition, introduces the subject of quality system regulation (QSR) as it relates to device product design, clinical development, and compliance.

RGA 6100. Introduction to Drug and Medical Device Regulation. 4 Hours.

Provides an overview of drug, biologics, and device development and the FDA. Through course work and discussion, offers students an opportunity to gain the foundations necessary to build a strong understanding of regulatory affairs. Topics include the historical development of U.S. drug laws, law vs. regulation, FDA and industry functions, policy-guided science, and cases shaping history into the present state of regulation.

RGA 6101. Therapeutic Product Development: A Regulatory Overview. 4 Hours.

Examines every step of the therapeutic development and regulation process within the Center for Biologic Evaluation and Research (CBER) and Center for Drug Evaluation and Research (CDER), from preclinical testing through postmarketing adverse experience reporting. Offers students an opportunity to conduct a comprehensive and up-to-date analysis of the complete U.S. pharmaceutical and biological products approval processes. Considers FDA standards for nonclinical testing-quality assurance issues and good laboratory practice, investigational new drug (IND) applications, therapeutic market applications and review process initiatives designed to speed therapeutic product review, as well as current good manufacturing practice regulations to assure quality of marketed products.

RGA 6112. Biomedical Intellectual Property Management: Patents. 4 Hours.

Emphasizes the practical uses and financial benefits of sound patent, licensing, and trademark practices. One of the primary functions of the biomedical industry is to produce intellectual property (IP) in the forms of drugs, biologics, and medical devices. To protect these resources, industry leaders must make prudent IP decisions at the beginning of any product development. Through a careful examination of case studies and through multiple group projects, offers students an opportunity to become familiar with the relevant legal issues (e.g., pertinent case law and statutes), the “how-to-get’s” involving IP protection, and the strategies employed to license proprietary technology.

RGA 6200. Biologics Development: A Regulatory Overview. 4 Hours.

Offers students an opportunity to conduct a comprehensive and up-to-date analysis of the post-reform FDA Center for Biologics Evaluation and Research (CBER) and the complete U.S. biological product approval process, from preclinical testing to postmarketing regulatory requirements. Includes both CBER official and industry expert perspectives on quality assurance issues and related regulatory topics in successfully bringing biologics to market, as well as current good manufacturing practice regulations to assure quality of marketed products.

RGA 6201. New Drug Development: A Regulatory Overview. 4 Hours.

Examines every step of the drug development and regulation process, from preclinical testing through postmarketing adverse experience reporting. Considers FDA standards for nonclinical testing-quality assurance issues and good laboratory practice, investigational new drug application (NDA) and review process initiatives designed to speed drug review, and the Prescription Drug User Fee Act (PDUFA).

RGA 6202. Medical Device Development: A Regulatory Overview. 4 Hours.

Analyzes U.S. medical device development and approval requirements. Features detailed analysis of quality assurance issues and recent regulatory reforms implemented under the Food and Drug Modernization Act (FDAMA), in addition to providing a step-by-step guide through the Center for Devices and Radiological Health (CDRH). Covers CDRH’s reengineering initiatives and evolving investigational device exemptions, premarket approval, 510(k) application process, and product development protocol and review processes. Provides practical, in-depth analyses on how emerging developments and trends are reshaping medical device regulation in the United States. Offers students an opportunity to demonstrate an appreciation of the subjective and interpretive aspects of the regulations and an ability to think critically about the interaction between regulatory and development processes.

RGA 6203. Food, Drug, and Medical Device Law: Topics and Cases. 5 Hours.

Analyzes current food, drug, and medical device laws. Reviews legislation and landmark cases, as well as laws governing development, manufacture, and commercial distribution of drugs, biologics, and medical device products and how they relate to the biotechnology, pharmaceutical, and medical device industries.

RGA 6205. Emerging Trends and Issues in the Medical Device Industry. 4 Hours.

Focuses on trends expected to have a significant effect on the future of the medical device industry, including the aging population; the need for devices that treat chronic illnesses such as renal failure, congestive heart failure, heart abnormalities, arthritis, and diabetes; reimbursement issues arising from the huge financial burden placed on Medicare and insurance companies in picking up the increased cost of healthcare; lifestyle changes with an increased demand for devices that improve one’s quality of life or appearance; reuse of single-use disposable devices to cut costs; group purchasing practices, outpatient treatment; telemedicine, regulatory/legal requirements; and the movement of devices into new areas, such as coating stents with pharmaceutical/biological agents and using patches to deliver pharmaceutical agents.

RGA 6206. Practical Aspects of Regulatory Compliance. 4 Hours.

Uses a series of practical exercises and discussions designed to offer students an opportunity to develop the ability to translate regulatory requirements for pharmaceutical, biologic, and medical device products into practical documents and broadly applicable research solutions. Topics include how to create practical documents based on regulations and guidelines; how to complete production batch records; how to conduct product testing and perform inspections; and, in general, how to effectively utilize Current Good X Practices (cGxP) requirements. Includes assignments that require students to research applicable regulatory and industry information as well as activities designed to aid in the comprehension of the regulations and in the review of real-life industry issues.

Examines the structure of Common Technical Documents (CTDs) through study of regulatory requirements and example submissions. Offers students an opportunity to develop an understanding of the Food and Drug Administration’s (FDA’s) geographically specific electronic (eCTD) submission requirements. Reviews the basic structure and format of an eCTD submission and the differences between the electronic format and former paper-based CTDs. The CTD structure is the mandatory format for new drug applications (NDA) in the European Union and Japan and the required format for NDAs submitted to the FDA. As of May 2017, NDA, ANDA, and BLA submissions must be delivered to FDA in eCTD format, and beginning in May 2018, all commercial IND submissions, as well as Drug Master Files (DMFs), must also be filed in eCTD format.
RGA 6210. Strategic Planning and Project Management for Regulatory Affairs. 4 Hours.
Introduces the core concepts of strategic planning and project management. Seeks to equip regulatory professionals with the skills needed to join upper corporate management in choosing which products to pursue and how best to pursue them. Offers students an opportunity to learn how to guide medical device teams through the design and development stages. Emphasizes the role of product classifications in demonstrating the safety, efficacy, and performance of medical devices for human use. The curriculum and assignments offer a chance to carefully study the function and format of presubmission meetings with U.S. and other global regulatory agencies, as well as understand their role in gaining regulatory approval for market sale.

RGA 6211. Combination Products and Convergence. 4 Hours.
Examines the development of combination products, with an eye toward understanding FDA and international agency oversight, regulatory classifications, and interpretations of guidance documents. Medical products, no matter how well designed, can only do so much to address clinical problems today. In order to satisfy the therapeutic needs of the future, medical devices will be used in combination with drugs and biologics. This category of products covers everything from transdermal patches to drug-eluding stents. Tissue engineering, for example, employs cells (biologics) producing proteins (biotech drugs) growing on polymer substrates (medical devices). Through a detailed study of real-world case studies, offers students an opportunity to weigh the larger economic, social, political, and clinical dimensions of combination products.

RGA 6212. Introduction to Safety Sciences. 4 Hours.
Introduces safety and surveillance regulations and principles for drugs, biologics, and medical devices. Offers students an opportunity to become familiar with the U.S. and global safety regulations, as well as related guidance from FDA, ICH, WHO, and CIOMS. Adopts a life-cycle perspective, beginning with use of preclinical data to anticipate human safety issues and continuing through clinical development and postmarketing. Examines combination products, safety information in regulatory documents (INDs, clinical study reports, NDA submissions), safety data analysis, quality management and CAPAs, and global safety initiatives (e.g., the WHO Uppsala Monitoring Centre).

RGA 6215. Project Management in Early Drug Discovery and Development. 4 Hours.
Provides an overview of the processes common to researching and developing a new drug. Focuses on the early stages of this progression, from identifying active molecules to completing Phase 1 safety trials. Surveys the predominant biological and chemical techniques used in these efforts. Offers students an opportunity to prepare standard operating procedures and a pre-IND package. The lectures and reading materials focus on how to incorporate key data in writing the IND. Examines the procedures used to execute a Phase 1 safety study and the strategies available to prepare a persuasive clinical study report. Throughout the term, course material highlights the applicability and utility of project management tools.

RGA 6216. The Medical, Social, and Financial Dimensions of Orphan Drugs. 4 Hours.
Examines the orphan drug development process, from discovery to FDA regulatory approval to postapproval marketing and distribution. Using selected case studies, offers students an opportunity to gain a strong understanding of how novel biomedical discoveries are translated into products used to treat relatively rare diseases. Topics include the role of patient advocacy groups in lobbying for research and development, the influence of gender and racial considerations on policy decisions, and the capacity of the federal government to support the research and commercialization of orphan drugs. The course situates its study of orphan drugs within the context of pharmaceutical firms’ reluctant shift away from big blockbuster drugs in favor of more personalized medicines.

RGA 6217. Biomedical Product Development: From Biotech to Boardroom to Market. 4 Hours.
Examines the evolution of the medical device and pharmaceutical landscape from a technological, regulatory, and financial perspective, as well as from a societal and cultural framework. Begins by recognizing that significant differences exist between small and mid-to-large medical device and pharmaceutical companies with regard to key variables in the current business environment. These differences extend to the opportunities available as well as the limitations and challenges faced by each. Discusses the symbiotic and potentially synergistic relationship that has developed between small, yet established, biotechnology companies and large medical device and pharmaceutical firms, as well as the impact of these relationships on the general economic environment.

RGA 6218. Regulatory Affairs in an Entrepreneurial Environment. 4 Hours.
Covers the challenges shared by both the entrepreneur and the regulatory professional and how to successfully translate discoveries from the bench to the market. Since investors and prospective corporate partners view regulatory requirements a potential market barrier, it is crucial that the regulatory professional be able to demonstrate how the regulatory environment is conducive to a product’s development and commercial success. Using case studies and group projects, offers students an opportunity to develop regulatory strategies tailored to the characteristics of small and startup companies. Topics include developing a quality system from the ground up, assuring ongoing compliance with a minimum of resources, informing venture capital of regulatory hurdles, and employing regulatory considerations to create a sustainable competitive advantage.

RGA 6219. The Advertising and Promotion of Drug and Medical Device Products. 4 Hours.
Analyzes the regulatory and legal guidelines and standards applicable to the promotion of drug and medical device products in the U.S. market. Includes regulations and policies of the FDA, FTC, DEA, PHS, Office of the Inspector General (OIG), as well as professional guidelines of relevant organizations including Advamed, ACCME, ACP, PhRMA, and the AMA. Also explores marketing issues specific to brand-name (prescription and OTC), generic, and compounding pharmacy contexts, including continuing medical education, advertising of compounding products, off-label promotion, gifts to physicians, and direct-to-consumer advertising. Uses advertisements and case studies, including notable enforcement actions by the FDA and FTC, to illustrate and discuss subjects of interest.
Provides a comprehensive and up-to-date analysis of the biotechnology product approval process within each of the world’s three most critical biopharmaceutical markets. From preclinical product development to postmarketing approval, explores aspects of biopharmaceutical regulatory analyses in the three regions of the world that together represent more than 75 percent of the global market for biopharmaceuticals.

RGA 6221. European Union Compliance Process and Regulatory Affairs. 4 Hours.
Provides a clear-cut picture of the European Union (EU) and how EU directives impact international business. By illustrating how companies need to approach compliance, offers students an opportunity to be guided through compliance issues and to gain an understanding of the relationship between compliance and CE marking. Discusses the risks and rewards of CE marking and an overview of liability laws in the EU.

RGA 6222. European Medical Device Regulations. 4 Hours.
Covers European Commission directives and guidance documents; European Agency for the Evaluation of Medicinal Products, medical device guidance documents, and notified body guidelines and recommendations; Global Harmonization Task Force final reports; and mutual recognition agreements. Topics include biological and biotechnological products, CE marking, conformity assessment and notified bodies, the Global Harmonization Task Force, clinical trials, and standardization.

RGA 6223. Introduction to Canadian, Asian, and Latin American Regulatory Affairs. 4 Hours.
Covers the Common Technical Documents; General Guidance and GMPs; Global Harmonization Task Force documents; and regulatory affairs dealing with drugs, medical devices, biologics, and natural products. Examines multinational documents from Asia-Pacific Economic Cooperation (APEC), Association of Southeast Asian Nations (ASEAN), MERCOSUR, and Pan American and World Health Organizations. Discusses Latin American governmental regulations and guidance, as well as the guidance and regulations from FDA and General Agreement on Tariffs and Trade (GATT/WTO).

RGA 6224. Regulation of Biomedical Product Commercialization by Health Canada. 4 Hours.
Studies the regulatory requirements associated with all phases of biomedical product commercialization in the Canadian market by manufacturers. The Canadian market represents a significant opportunity for biomedical product manufacturers to export their goods into foreign geographies. Several factors have led patients in Canada to seek treatment modalities for their clinical symptoms and disease from both Canadian and non-Canadian sources. Reviews the Common Technical Document format for market approval applications, general Health Canada Guidelines, good manufacturing practices (GMPs), and Global Harmonization Task Force documents. Examines multinational requirements and recommendations, including those issued by the North American Free Trade Agreement, the World Health Organization, and the U.S. Food and Drug Administration. Reviews the requirements of submissions to Health Canada by biomedical product manufacturers.

RGA 6225. Japanese Medical Device Regulations and Registration. 4 Hours.
Offers new and experienced regulatory professionals the opportunity to gain the knowledge and insight needed to successfully obtain Japanese medical device approvals. Japan is the second largest medical device market in the world, generating more than US$18 billion in device sales per year. As Japanese regulations and guidelines become more transparent, U.S. and EU manufacturers are flocking to this lucrative market.

RGA 6226. Canadian and Australian Medical Device Regulations. 4 Hours.
Explores the Common Technical Documents, General Guidance, GMPs, and Global Harmonization Task Force (GHTF) documents for medical device requirements in Canada and Australia. Offers students an opportunity to learn how to put together a medical device submission, identify two key submission pathways per product classification, and outline the postmarket requirements in both the Canadian and Australian markets.

RGA 6227. Emerging Medical Device Markets. 4 Hours.
Covers the Common Technical Documents, General Guidance, GMPs, and Global Harmonization Task Force (GHTF) documents for medical device requirements in emerging markets. The United States, Europe, Japan, Canada, and Australia comprise the five founding member countries of the GHTF. Yet, the most vibrant and challenging regulatory arenas of medical device development are those in emerging markets (e.g., the Pacific Rim, East Asia, the Middle East, and South America). Offers students an opportunity to practice putting together a medical device submission, identify two submission pathways per product classification, and outline the postmarket requirements. These practical lessons and regulatory skills are an asset to any regulatory professional in the global marketplace.

RGA 6228. Managing International Clinical Trials. 4 Hours.
Focuses on initiating, collecting, and managing data from multicountry clinical trials. The assigned material documents the growing internationalization of clinical research in biomedicine. For example, even trials carried out under the aegis of the U.S. FDA are likely to involve investigators in the European Union, China, India, Africa, or Latin America. The global nature of this research is due to the advantages that certain countries offer, including lower costs, flexible health infrastructures, and the presence of treatment-naïve populations. Multisource studies, however, present their own practical, legal, and ethical challenges. Offers students an opportunity to study the steps needed to conduct regulatory-compliant international trials. Through case studies and group projects, examines strategies to integrate clinical sites along common protocols and deadlines.

RGA 6229. Biomedical Product Regulatory Affairs in Emerging Markets: Russia and Kazakhstan. 4 Hours.
Studies basic requirements that medical device and other types of biomedical product manufacturing companies need to commercialize products in the Russian and Kazakhstan markets. Today Russia, together with other former Soviet countries such as Kazakhstan, remain some of the world’s fastest-growing export markets. In spite of recent economic difficulties, these geographic areas present many opportunities for biomedical product manufacturing companies that seek to expand into new markets. Offers students an opportunity to develop a practical understanding of the associated regulatory processes, through focus on real-world examples, the types of obstacles that companies may face, as well as how to overcome them.
RGA 6230. Clinical Laboratory Management in Clinical Trials. 4 Hours.
Provides an overview of the management elements of the clinical laboratory aspect of clinical research. Offers students an opportunity to study the configuration of visits and identify the differences between safety-related testing, esoteric testing, and end-point testing. Identifies the challenges of qualifying a clinical laboratory and managing a clinical laboratory during the conduct of a clinical trial: protocol kits, logistics, local laboratory data, reference ranges, inspections, and regulatory requirements. Covers global aspects, such as data and method harmonization, blinding of data, transmission of data, and data amendments.

RGA 6233. Application of Quality System Regulation in Medical Device Design and Manufacturing. 4 Hours.
Introduces the Food and Drug Administration’s (FDA) Quality System Regulations (QSRs) and describes how these regulations can improve the safety and efficacy of medical device products. Discusses the legislative origins of QSRs, their historical evolution, as well as the details of how they are implemented. Examines case studies and empirical examples of QSRs that have been employed by individual medical device manufacturers during the product commercialization process. Offers students an opportunity to develop an understanding of FDA’s expectations for product design control; the structuring of quality system documentation; and principles of practical QSRs within the context of medical device manufacturing, packaging, and distribution. Encourages students to develop strategies for customizing QSRs to particular companies, device products, and manufacturing environments.

RGA 6234. Drug and Device Supplier Risk Management: Compliance and Processes. 4 Hours.
Seeks to provide a comprehensive overview of current supply chain risk-management practices and their impact on patient safety, product quality, and clinical effectiveness. Analyzes supplier oversight guidance documents, demonstrates how life-science companies strive to ensure compliance, and discusses the responsibilities of regulatory professionals in supply chain risk-management systems and regulatory issues stemming from poor supplier performance and management. Using case-based investigations and real-world examples, examines how to evaluate supply chain management systems as they relate to particular categories of biomedical products manufactured in specific contexts. Offers students an opportunity to obtain the skills and knowledge they need to customize effective supply chain risk-management methods within various global settings.

RGA 6235. Emerging Product Categories in the Regulation of Drugs and Biologics. 4 Hours.
Examines the development and commercialization pathways for several product categories, including new over-the-counter (OTC) products, nutraceuticals, nanotechnology products, and personalized medicine-based therapies. These emerging categories of drug and biologic products are not formally classified by FDA from a regulatory perspective. Evaluates the reasons why the regulatory paradigms for these products are not well established and analyzes how the relatively amorphous nature of these paradigms has impacted commercialization of these product categories in the U.S. market. Offers students an opportunity to gain a better understanding of how and why new product categories continue to emerge as existing regulatory classifications continue to evolve.

RGA 6240. The Evolving Indian Regulatory Landscape. 4 Hours.
Offers students an opportunity to explore the Indian regulatory landscape and its relationship to the building of the Indian healthcare system, growing biomedical industries, and India’s expanding international trade. Compares the regulatory environments in the United States, European Union, and other emerging economies. Specific content includes discussions of the Central Drugs Standard Control Organization, the Drugs Controller General of India, the Drug and Cosmetics Acts, and the mechanisms for ensuring compliance with recognized good clinical practices. Also examines the manufacturing, sale, and international distribution of generic drugs.

RGA 6245. Regulation of Generic Pharmaceutical and Biosimilar Products. 4 Hours.
Describes the contrasting history and implementation of generic drug and biologic legislation in the U.S. market. Explores the specific technical differences between drug and biologic products and highlights areas where regulatory approval of generic products must differ between the two categories. Offers students an opportunity to better understand how the nonclinical and clinical development programs of generic drug and biologic products are constructed. Examines the relatively advanced state of the regulatory paradigm for biosimilars in the European Union.

RGA 6250. Financing and Reimbursement in Biomedical Product Development. 4 Hours.
Introduces the complex discipline of market access and pricing strategy for medical device, drug, and biologic products. As cost and relative efficacy drivers become increasingly important to market biomedical products successfully, life-sciences regulatory professionals must evaluate regulatory compliance criteria in relation to reimbursement and product pricing concerns. Regulatory professionals must also be involved in demonstrating that utilization of new biomedical products is comparatively cost-effective when measured against standards of clinical care. Using specific case studies from the United States and abroad, offers students an opportunity to analyze these market developments, as well as their resulting implications for biomedical product development, manufacturing, and commercialization, with an overall objective to develop comparatively and financially informed regulatory systems.

RGA 6280. Advanced Writing on International Biomedical Topics. 4 Hours.
Seeks to hone the research and composition skills of regulatory affairs professionals. Offers students an opportunity to develop a highly efficient ability to craft accurate and detailed summaries, analytic essays, and research papers. Each term the course focuses on a particular country or region of the world. Specific topics include healthcare epidemiology; healthcare delivery and financial systems; progress in biomedical research; government involvement in the healthcare industry; regulatory systems governing drugs, biologics, and medical devices; and the conduct of clinical trials. Concludes by asking students to provide recommendations on how to improve biomedical research and markets in the focused country or regions.
RGA 6300. Practical Applications in Biomedical Product Global Regulatory Affairs. 4 Hours.
Uses a series of practical exercises and discussions designed to offer students an opportunity to exercise their ability to translate global regulatory requirements for pharmaceutical, biologic, and medical device product commercialization into submission-ready documents and broadly applicable regulatory science solutions. Topics include creating practical documents based on regulations and guidelines, completing production batch records, conducting product testing, performing inspections, and effective utilization of GxP requirements. Incorporates both group and/or individual assignments that require students to research applicable regulatory and industry information, as well as activities designed to aid in the comprehension of global regulatory issues. Uses case-based methodologies to enable real-world application of topics and regulatory issues discussed during the course.

RGA 6310. Regulatory Documentation Processes. 4 Hours.
Examines the nexus of professions, practices, and institutions that constitute the field of biomedicine. Explores the historical roots and cultural foundations of biomedicine. Maps the industrial terrain and identifies opportunities and issues for professional communicators. Students research and report on current changes in the biomedical industry, focusing on identifying new opportunities for writers in biomedicine. Offers students an opportunity to acquire research and writing skills and to develop the ability to think in terms of complex institutions so as to locate and articulate opportunities for professional communication.

RGA 6370. Regulatory Writing: Medical Device Submissions. 4 Hours.
Examines the process of writing medical device submissions for regulatory agencies both nationally and internationally. Topics include device regulations, the device development process, and clinical study documents. Offers students an opportunity to practice communicating complex scientific information in various documents, including investigators' brochures, clinical trial reports, and IDE/510k submission components.

RGA 6380. Regulatory Writing: New Drug Applications. 4 Hours.
Examines the process of writing drug submissions for regulatory agencies both nationally and internationally. Topics include drug regulations, the drug development process, and clinical study documents. Offers students an opportunity to practice communicating complex scientific information in various documents, including investigators' brochures, clinical trial reports, and IND/NDA submission components.

RGA 6920. Internship Reflection. 1 Hour.
Offers an independent study designed to allow students to reflect on both the theoretical knowledge that they have learned while pursuing their degree at Northeastern University and the practical experience that they have gained in an internship. Students should aim to create a unique, original, and ultimately applicable project that demonstrates an in-depth understanding of current markets, future trends, and global shifts in regulatory affairs.

RGA 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

RGA 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

RGA 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

RGA 6983. Topics. 1-4 Hours.
Covers special topics in regulatory affairs. May be repeated without limit.

RGA 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

RGA 7961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

RGA 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.

RGA 7976. Directed Study. 1-4 Hours.
Offers students an opportunity to carry out an individual reading and research project under the supervision of a faculty member. The directed study format allows for the thorough study of a particular topic not covered in-depth or the study of a subject not typically covered in the curriculum. A directed study proposal must be approved by the faculty sponsor, division head, and dean of academic affairs.

RGA 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

RGA 7980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

RGA 7983. Topics. 1-4 Hours.
Covers special topics in regulatory affairs. May be repeated without limit.

RGA 7990. Thesis. 1-4 Hours.
Offers thesis supervision by members of the department.

RGA 7994. Thesis Continuation—PT. 0 Hours.
Offers continuing thesis supervision by members of the department.

RGA 7995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

RGA 7996. Thesis Continuation. 0 Hours.
Offers continuing thesis supervision by members of the department.
RFA 6100. Introduction to Regulatory Affairs of Food and Food Industries. 3 Hours.
Introduces some of the diverse challenges with food regulation on a global scale. Offers students an overview of how food manufacturers and food products are regulated in the United States. Introduces the basic statutes governing food regulation and the mission, structure, and authority of the agencies responsible for implementing and enforcing food regulation. Studies how the regulatory process is shaped by bureaucratic constraints; scientific and policy concerns; and input from industry, consumers, and advocacy groups, as well as how regulatory developments influence food issues, in order to provide a solid foundation for other courses in the program. Covers the program goals pertaining to specialized knowledge, broad and integrative knowledge, applied and collaborative learning, civic and global learning, and experiential learning.

RFA 6110. From Farm to Family Table: Understanding the Food Regulatory Life Cycle. 3 Hours.
Studies the life cycle (stages such as preharvest, harvest/slaughter, processing, packaging, distribution, and retail) of different categories of food. This “farm-to-table” process requires the alignment and collaboration of diverse industry and regulatory stakeholders—often with very divergent interests. Offers students an opportunity to begin developing specialized knowledge, broad and integrative knowledge, applied and collaborative learning, and civic and global learning as they examine the dominant food distribution channels as well as the economic, scientific, and regulatory compliance considerations of big agribusinesses.

RFA 6120. Economic and Social Aspects of Food. 3 Hours.
Introduces students to the cause-and-effect relationship of geographic, political, economic, and social/cultural aspects of food. Offers students an overview of the forces that govern changes in policies as well as the demand, supply, cost, and perceived value of food in the United States. Explores societal factors in terms of their cause-and-effect relationship with the evolution of food throughout the 20th century in America. Studies the emerging and dominant trends in food purchasing and consumption and the roles of the government, industry, and consumers/citizens.

RFA 6130. Food Law in the United States. 3 Hours.
Studies key areas of food law, regulation, and policy that empower (and limit) the powers and jurisdictions of federal and state government regulatory agencies in the United States. Offers students an opportunity to practice specialized knowledge, broad and integrative knowledge, civic and global learning, and experiential learning through their study of food safety preventive controls, labeling, inspection/auditing, import/export, recent criminal cases, as well as contemporary food law issues (such as additives and coloring, claims and advertising, nutrition labeling, food defense, food fraud, intentional adulteration, and genetically modified organisms).

RFA 6200. Comparing U.S. Regulatory Systems and Agencies. 3 Hours.
Explores the history, the legal basis of regulatory authority, structures, and limitations within food regulatory environments. Reexamines the Food and Drug Administration (FDA) and the U.S. Department of Agriculture (USDA) from a comparative perspective and with a look at other federal and state agencies, as well as nongovernmental organizations (NGOs) and the role of advocacy groups.

RFA 6205. Key Submissions for Food Regulatory Affairs. 3 Hours.
Studies key regulatory submissions for food products, such as Generally Regarded as Safe (GRAS) applications, Registration of Novel Food and Novel Food Ingredients, Food Facilities Registration, Filing Prior Notice Documents for Imported Foods, New Dietary Ingredient Notifications, and others. Using current product examples, offers students an opportunity to produce sample documentation critical for product approval at various stages of the regulatory pathway.

RFA 6210. Food Safety and Modernization. 3 Hours.
Examines the central provisions of the Food Safety Modernization Act (FSMA), noting where the Food and Drug Administration (FDA) has assumed new authority and activities in order to prevent food safety problems before they damage the health of consumers. Students evaluate multiple aspects of FSMA implementation, such as the challenges faced by states, mandatory registration of food production facilities, the requirement that food facilities adopt hazard analysis critical control point (HACCP) plans, third-party auditors, the creation of food product tracing systems, and increased produce inspection.

RFA 6215. Risk Analysis and Hazard Analysis in the Food Industry. 3 Hours.
Studies the application of risk analysis and hazard analysis methods to the food industry. Topics include basic concepts and applications of risk analysis, the use of risk and hazard modeling, hazard and risk characterizations, risk management and risk communication, and the utility of adopting the hazard analysis critical control point (HACCP) system. Students practice applied and collaborative learning by creating a food industry training plan that reflects major concepts of this course. Offers students an opportunity to practice experiential learning through the analysis of discipline-specific content, classifying food risks (contaminants), listing potential risks to humans, and evaluating recent food adulterant events for gaps in risk hazard analysis.

RFA 6220. Food Safety and Surveillance: Concepts and Applications. 3 Hours.
Examines concepts and methods for conducting surveillance of food-borne diseases, both in humans and in animals. Topics include methods from epidemiology and public health to address problems that have often been kept within the Food and Drug Administration’s and U.S. Department of Agriculture’s domains; ways to improve coordination among human health organizations and food regulatory professionals; the relationship between municipal, state, and federal agencies governing food-borne disease; and the best means to enlist the food industry as partners in health surveillance.

RFA 6225. Introduction to Food Science. 3 Hours.
Offers students an opportunity to gain the requisite knowledge and skill sets to become proficient in the major elements of food science. Explores topics such as food chemistry, food nutrition, food microbiology, food drying, heat preservation, freeze preservation, food packaging, and irradiation. Studies these methods as they apply to different commodities. Designed for students with or without a strong scientific background.
RFA 6230. The Scientific, Social, and Commercial Aspects of Genetically Modified Foods. 3 Hours.
Examines technical, social, and economic aspects of genetically modified foods (GMFs), such as the scientific basis for genetic modifications; processes for mass production of transgenic crop varieties; the increase in food quality and quantity; the commodification of plants and animals; property and patent rights over genetic material; select groups’ protests and resistance against GMFs; unintended consequences of using genetically modified organisms; the use of biotechnology for farming in emerging economies; the regulatory differences over GMFs in Europe, Asia, and the United States; and the connection between GMFs and the commercial ascendance of alternative foods and agriculture.

RFA 6235. Regulatory Differences and Similarities: An International Investigation. 3 Hours.
Offers a cross-national comparison of regulatory environments. Examines various regulatory touch points along the food production life cycle; the legislative and bureaucratic basis of inspection and enforcement practices in several nations; and various governments’ interventions to prevent against contamination, adulteration, or loss. Offers students an opportunity to begin developing specialized knowledge, broad and integrative knowledge, and civic and global learning.

RFA 6300. Capstone: Regulatory Affairs of Food. 3 Hours.
Serves as the capstone course for students in the MS-RFA program at the College of Professional Studies (CPS). Uses practical exercises and discussions designed to offer students an opportunity to demonstrate that they have achieved program goals pertaining to specialized, broad, and integrative knowledge; applied and collaborative learning; civic and global learning; and experiential learning. Incorporates group and individual assignments that require students to extend and reflect upon their completed research of food industry, food regulatory policy, and food law on national and international levels. Emphasizes the comprehension of current global regulatory issues. Uses case-based methodologies to enable real-world application of topics and regulatory issues discussed throughout the RFA program. This course is taken in a student’s final term.

RFA 6310. Food Across International Borders: The International Food Trade. 3 Hours.
Analyzes key topics in international food trade, such as globalization and international agricultural commodity markets, food seizures at international borders, the imposition of tariffs and domestic support policies, the power and limits to the World Trade Organization and free trade agreements, country-of-origin labeling, and the relationship between cultural preferences and food imports.

RFA 6315. From Farm to Dinner Table: The Industrialization and Commercialization of Food. 3 Hours.
Traces the emergence and dominance of the industrialization and global commercialization of food production and food trade. Explores historical examples, sociological theories, legal case studies, economic trend data, and financial investment models.

RFA 6350. Political, Social, and Economic Influences on Food Law, Regulation, and Policy. 3 Hours.
Analyzes the food legal landscape, specifically the political, social, and economic influences that shape food regulations, laws, and policies. Offers students an opportunity to apply current case law to contemporary situations with topics that intersect with various themes present throughout core and elective courses.

RFA 6410. Landmark Changes in International Food Policy. 3 Hours.
Analyzes key U.S. food policies with international implications, as well as partnerships, agreements, organizations (such as the U.N., WTO, and WHO), and other international food policies that impact the regulation and inspection of exported foods. Examples include NAFTA, TPP, FSMA, C.O.O.L., and EFSA.

RFA 6411. International Surveillance and Regulation of Food. 3 Hours.
Builds upon earlier learning by guiding students as they analyze international issues behind the surveillance and regulation of food. Offers students an opportunity to research how food and food industries are regulated, examining the challenges faced by regulators as they attempt to monitor the production and distribution of food and food ingredients from dramatically different agricultural settings. Focuses on a geographic region of their choice for their analysis.

RFA 6415. Food Safety and Surveillance in Asia. 3 Hours.
Analyzes international issues behind the surveillance and regulation of food in Asia. Offers students an opportunity to research how food and food industries are regulated, examining the challenges faced by regulators as they attempt to monitor the production and distribution of food and food ingredients from dramatically different agricultural settings in Asia.

RFA 6420. Between Science and Governments: Food Regulations in the European Union. 3 Hours.
Analyzes international issues behind the surveillance and regulation of food in the European Union (EU). Offers students an opportunity to research how food and food industries are regulated—including the role of the European Food Safety Authority (EFSA)—examining the challenges faced by regulators as they attempt to monitor the production and distribution of food and food ingredients from dramatically different agricultural settings in member nations of the EU and of the EFSA.

RFA 6425. Food Safety and Surveillance in Latin America. 3 Hours.
Analyzes international issues behind the surveillance and regulation of food in the nations of Latin America. Offers students an opportunity to research how food and food industries are regulated, examining the challenges faced by regulators as they attempt to monitor the production and distribution of food and food ingredients from dramatically different agricultural settings in Latin America.

RFA 6430. Food Safety and Commercialization in Emerging Economies. 3 Hours.
Analyzes international issues behind the surveillance and regulation of commercialized food in emerging economies. Offers students an opportunity to analyze how food-related disease outbreaks impact commercial development, as well as economic and political stability in regions where government institutions have frequently faltered.

RFA 6920. Internship Reflection. 1 Hour.
Offers students an independent study designed to allow them to reflect on both the theoretical knowledge that they have learned and the practical experience that they have gained in an internship. Students should aim to create a unique, original, and ultimately applicable project that demonstrates an in-depth understanding of current markets, future trends, and global shifts in regulatory affairs of food.

RFA 7995. Project. 1-4 Hours.
Focuses on an in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated up to five times for up to 24 total credits.
Remote Sensing - CPS (RMS)

RMS 5105. Fundamentals of Remote Sensing. 3 Hours.
Provides an overview of remote sensing principles and their earth and environmental science applications. Covers four general categories: (1) physical processes/theories involved in remote sensing, e.g., the nature and properties of electromagnetic radiation and how it is affected by interactions with the atmosphere and earth’s surface; (2) different sensor types including optical, thermal, and microwave systems; (3) different applications of remote sensing such as land-use, land-change, vegetation, natural environmental, natural hazards, planetary environments, and military; and (4) methods of remote sensing as applied to analyzing images and extracting desired information.

RMS 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

RMS 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

RMS 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

RMS 6110. Digital Image Processing. 3 Hours.
Provides an overview of the basic techniques of digital image processing, including more specialized techniques such as synthetic aperture radar (SAR) data applications for land use and land cover and 3-D topographic mapping. Offers students an opportunity to learn modern approaches to image acquisition, image enhancement, and image analysis. Uses the algorithms involved in processing remotely sensed images, including spectral and spatial enhancement, image classification and clustering, spatial analysis, and linear transformations. Utilizes a variety of data types from high to low spatial and spectral information, SAR, and elevation data. Students perform independent lab exercises in order to apply some of the techniques they learn to their own area of expertise.

RMS 6210. Technology, Operations, and Requirements for Drones, Helicopters, and Airplanes. 3 Hours.
Covers the concept of command, control, communications, computers, intelligence, surveillance, and reconnaissance (C4ISR) via drones, helicopters, or airplanes that are manned, unmanned, optionally manned, or surrogate to requirements. Offers students an opportunity to obtain an in-depth understanding of the components of a C4ISR network, the functional aspects of operations ranging from planned to immediate response, and potential future demands. Focuses on skills needed to recognize, evaluate, and develop systems and overall networks for a range of functions in the military, security, scientific, and commercial applications in government and market ventures.

RMS 6215. Unmanned Aerial Systems for Geospatial Analysts. 3 Hours.
Explores elements of unmanned aerial systems (UAS) operations significant to geospatial project management. Changes in government regulations are expanding use of UAS as imaging platforms for commercial/government applications, enhancing geospatial data collection capabilities. Topics include applications, platforms, sensors, command and control, communication data linkage, launch and recovery, and human factors relevant to geospatial project integration and management.

RMS 6220. Geographic Information Systems for Remote Sensing. 3 Hours.
Explores geographic information systems (GIS) technology for remote sensing (RS) applications with respect to how GIS offers a rich source of computational alternatives for data extraction and analysis. The fields of GIS and RS have expanded considerably over the past decade, and the world has become richer in digital geographic information. Topics and techniques covered include spatial data collection, data accuracy, cartographic principles, spatial data analysis and visualization, digital elevation models, and class maps. Offers students an opportunity to gain hands-on experience with a leading commercial GIS software package.

RMS 6230. Remote Sensing and Global Change. 3 Hours.
Analyzes various components of the Earth systems and how those components are changing. Offers students an opportunity to make extensive use of observations and measurements from space. Focuses on global environmental change and climate change, that is, on the human impact on the planet and the modification of environments by human activity. Among the topics covered are ozone, SST, glacier distribution, and terrain impacts of human activity. Requires a research paper that includes elements of remote sensing data analysis.

RMS 6240. Introduction to Radar and LiDAR Remote Sensing. 3 Hours.
Introduces the techniques and methods used in radar and Light Detection and Ranging (LiDAR) remote sensing. Covers the underlying principles of the measurement techniques and the interaction of microwaves and LiDAR signals with natural surfaces and the atmosphere. With respect to radar, the course focuses on the role of synthetic aperture radar (SAR) systems and their application to monitoring aspects of the Earth’s surface, including 3-D interpretation. With respect to LiDAR, the course introduces the different airborne and satellite systems and applications in terrestrial surfaces, principally for urban applications.

RMS 6250. Remote Sensing of Vegetation. 3 Hours.
Focuses on vegetation remote sensing, including forests and agriculture. The synoptic perspective offered by satellites allows spatial patterns of surface phenomena to be studied and maps of vegetative features extracted from these data sets, then compiled and incorporated into a geographical information system (GIS). Students analyze images in order to extract desired information. Derived products are created, such as normalized difference vegetation indices, which are used to track the length of growing seasons and vegetation health and anomalies. Examines a variety of relevant data types, including high to low spatial and spectral data. Offers students an opportunity to understand how ranks and weights are applied to these products to produce a final map that highlights specific characteristics of vegetation they choose to highlight, using map algebra techniques.

RMS 6260. Remote Sensing for Archaeology. 3 Hours.
Provides an overview of the theory, tools, and techniques used in applying the discipline of remote sensing for the purposes of archaeological research and archaeological heritage management. Covers geomatic disciplines used in archaeology, practitioners of remote sensing in archaeology, spatial fundamentals underpinning archaeological theory, types of imagery, data portals, geomatics hardware and software, imagery transformations and analysis, contextual and spatial analysis via GIS, visualization and presentation of analysis, integration of remote sensing with survey planning and documentation, and application of remote sensing for archaeological heritage management.
RMS 6270. Remote Sensing for Disaster Management. 3 Hours.
Offers students an opportunity to understand the use of spatial information in disaster management and to acquire a comprehensive overview and hands-on skills in the application of remote sensing. The course is in five modules: (1) remote sensing theory, sensor/platform combinations, spectral imaging theories, atmospheric and radiometric correction, as well as sources for data download and analysis; (2) the use of remote sensing and GIS tools for use in wildfire management; (3) the use of remote sensing for flood mapping and analysis; (4) man-made disasters, such as oil spills, and consequence management of terrorist attacks or pre-event planning to mitigate effects of a terrorist attack; and (5) a final project in which students analyze a set of data and produce a final report.

RMS 6280. Automated Feature Extraction for the Geospatial Professional. 3 Hours.
Offers an introduction to machine learning and its use in image interpretation and automated feature extraction. Explores a variety of techniques and work flows associated with collecting features of interest from multiple data sources such as aerial and satellite imagery, as well as from light detection and ranging (LiDAR) and elevation data. Offers students an opportunity for hands-on experience using the software; to learn how to solve real-life problems in exercises that correspond to the concepts being introduced; and to learn how to create industry-standard products and processing models for automation. Covers the fundamentals of machine learning, supervised and unsupervised classification, hierarchical learning, post-processing, cleanup, automation, modeling, and publication.

RMS 6290. Spectroscopic Image Analysis. 3 Hours.
Explores the various techniques and work flows associated with nonliterature analysis using hyperspectral data from numerous airborne and space-borne hyperspectral imaging (HSI) sensors. The course is divided into four modules: (1) basic theoretical concepts that underpin HSI analysis; (2) data preparation and other ancillary concepts such as spectral libraries and radiometric correction that are critical to nonliterature analysis but are preprocessing steps; (3) nonliterature exploitation techniques, covered in sufficient depth to give the students an opportunity to understand the different methods and procedures used; and (4) a final project where students are expected to conduct nonliterature analysis of a hyperspectral image from pre- through post-processing. The ENVI software system is used extensively each week.

RMS 6292. Photogrammetry and GPS. 3 Hours.
Examines the theory, tools, and techniques used within the fields of photogrammetry and GPS. Emphasizes aerial photogrammetry and its utilization of GPS as well as discusses close-range photogrammetry. Studies cameras and imaging devices, image measurements, vertical photographs, stereoscopy, image rectification, ground control and aerotriangulation, digital elevation models, topographic mapping, and more. Discussions include an introduction to the fundamentals of geodesy and the concepts and calculations common to the mapping sciences, including datums, projections, coordinate systems, and scale.

RMS 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

RMS 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RMS 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

RMS 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

RMS 6968. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

RMS 6969. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

RMS 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

RMS 6978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

RMS 6980. Capstone. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

RMS 6983. Topics. 1-4 Hours.
Covers special topics in remote sensing. May be repeated without limit.

RMS 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

RMS 6996. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

RMS 6996. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RMS 6996. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

RPT 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

RPT 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

RPT 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

RPT 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

RPT 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RPT 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

RPT 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

RPT 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

RPT 6980. Capstone. 1-4 Hours.
Provides students with an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

RPT 6983. Topics. 1-4 Hours.
Covers special topics in respiratory therapy. May be repeated without limit.

RPT 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

RPT 7200. Advanced Cardiopulmonary Physiology. 4 Hours.
Covers advanced in-depth integrated physiology of the cardiovascular, renal, and pulmonary systems. Discusses the physiological dynamics, control mechanisms, and system interrelationships of the cardiovascular, pulmonary, and renal systems. Offers students an opportunity to make applications of advanced cardiopulmonary and renal physiology concepts to the management of neonatal, pediatric, adult, and geriatric patients requiring cardiovascular, pulmonary, and renal diagnosis and treatment.
RPT 7205. The Evolving Roles of Respiratory Care Professionals. 4 Hours.

Presents current and projected trends in respiratory therapy. Focuses on elaborating traditional and emerging roles for respiratory therapists, thereby highlighting numerous career opportunities in education, management, research, and other areas. Provides in-depth study related to a quality improvement project in a respiratory care department or educational program. Offers students an opportunity to develop three, five, and 10-year career and professional service plans.

RPT 7210. Research Design. 4 Hours.

Covers different types of designs used in medical research. Emphasizes the evaluation of research designs in peer-reviewed medical journals. Discusses the quality of published research articles and evaluation of levels of evidence produced by clinical research. Attention is given to review of medical literature to identify evidence for current or new standards of practice. Discusses development of research protocols, proposals for research funding, and the management of research projects.

RPT 7215. Applied Research in Respiratory Care. 4 Hours.

Offers a review and discussion of student research protocols and data analysis. Discusses how to prepare research abstracts, posters, and manuscripts under the guidance of departmental faculty. Integrates research outcomes to support clinical practice.

RPT 7300. Development of Clinical Practice Guidelines and Respiratory Care Protocols. 4 Hours.

Offers students an opportunity to gain the foundations necessary to build a strong understanding of how to complete systematic state-of-the-art reviews to summarize evidence based on a thorough literature search, critically appraise individual studies, and use statistical techniques to combine valid studies. Topics include meta-analysis, evidence-based clinical practice guidelines, and the GRADE (Grading of Recommendations, Assessment, Development, and Evaluation) approach to evaluate the supporting evidence and the strength of recommendations in healthcare. Also covers the criteria for establishing the scientific basis for protocol-directed respiratory care, evaluation of respiratory protocols efficacy in providing ICU care, and the use of respiratory protocols in providing non-ICU care.

RPT 7302. Respiratory Therapist Education. 4 Hours.

Offers students an opportunity to gain the foundations necessary to build a strong understanding of administration, fiscal planning, curriculum development, and outcomes assessment for baccalaureate or graduate respiratory therapist programs. Topics include preparation of a self-study for Committee on Accreditation for Respiratory Care (CoARC) accreditation; organization of clinical practice rotations; the role of advisory committees; and integration of didactic, laboratory, and clinical experiences. Covers the use of online instruction, clinical simulations, and other strategies to support learning outcomes.

RPT 7400. Pulmonary Diseases and Disorders. 4 Hours.

Offers students an opportunity to gain the foundations necessary to build a strong understanding of the pathophysiology of pulmonary diseases and disorders. Topics include obstructive airway diseases, infectious pulmonary diseases, pulmonary vascular diseases, chest and pleura trauma, disorders of the pleura and chest wall, environmental lung diseases, neoplastic disease, and chronic noninfectious parenchyma disease.

RPT 7401. Cardiopulmonary Assessment and Diagnostics. 4 Hours.

Describes patient evaluation and implementation of evidence-based respiratory care plans. Reviews and applies evidence-based practice and critical diagnostic thinking to the review of the medical record, patient interview, physical assessment, and evaluation of diagnostic studies. Reviews assessment of oxygenation, ventilation, and arterial blood gases. Discusses laboratory studies, imaging studies, and ECG monitoring and interpretation. Describes pulmonary function testing, diagnostic bronchoscopy, and other diagnostic studies. Also reviews acute- and critical-care monitoring, sleep studies, and maternal and perinatal/neonatal patient assessment.

RPT 7402. Adult Critical Care. 4 Hours.

Offers students an opportunity to gain the foundations necessary to build a strong understanding of how to manage airways, administer specialty gases, manage mechanical ventilation, and deliver pharmacologic agents. Topics include assessment of patient status and changes in status and anticipating care based on laboratory results and reports on imaging. Offers students an opportunity to build a strong understanding of the effects of pharmacologic agents, how to anticipate care needed based on nutritional status, how to prevent ventilator-associated pneumonia, recognize and manage patients with infections and sepsis, manage end-of-life care, and prepare for disasters.

RPT 7403. Neonatal and Pediatric Care. 4 Hours.

Covers evaluation of maternal history, neonatal assessment; patient history; physical examination; and results of laboratory studies, imaging, and other diagnostic tests. Topics include assessment and management of nine airways, administration and monitoring of specialty gases, management of ventilation and oxygenation, prevention of ventilator-associated pneumonia, and delivery of pharmacologic agents. Offers students an opportunity to build a strong understanding of how to assess patient status and to anticipate care based on laboratory results, nutritional status, and imaging reports. Other topics include anticipating the effects of pharmacologic agents, management of end-of-life care, preparing for disasters, and evaluating patient and family understanding of education on medications, equipment, and procedures.

RPT 7404. Pulmonary Wellness Education and Coordination. 4 Hours.

Offers students an opportunity to gain the foundations necessary to build a strong understanding of how to understand the pathophysiology of asthma and chronic obstructive pulmonary disease (COPD), factors contributing to acute/chronic asthma and COPD, patient and family assessment, and asthma and COPD management. Topics include asthma and COPD program planning and outcome evaluation, referral and professional networking, and best-practice clinical practice guidelines for asthma and COPD.

RPT 7405. Development of Patient Management Plans. 4 Hours.

Offers students an opportunity to gain the foundations necessary to build a strong understanding of how to evaluate ER patients for admission, assess hospital floor or emergency department patients for transfer and admission to ICU, manage complicated (complex) ventilator patients, manage upper-airway obstruction postextubation, manage and remove chest tube, airway assessment, documentation and airway management, endotracheal tube placement and associated tasks, and evaluate and manage obstructive disorders (asthma, chronic obstructive pulmonary disease). Topics include appropriate use of history and physical findings and diagnostic studies to formulate a differential diagnosis, making informed decisions about diagnostic and therapeutic interventions based on patient information and preferences, up-to-date scientific evidence, and clinical judgment.

RPT 7961. Internship. 1-4 Hours.

Provides students with an opportunity for internship work. May be repeated without limit.
RPT 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions.

RPT 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

RPT 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

RPT 7980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

RPT 7983. Topics. 1-4 Hours.
Covers special topics in respiratory therapy. May be repeated without limit.

RPT 7990. Thesis. 1-4 Hours.
Offers thesis supervision by members of the department.

RPT 7994. Thesis Continuation—PT. 0 Hours.
Offers continuing thesis supervision by members of the department.

RPT 7995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

RPT 7996. Thesis Continuation. 0 Hours.
Offers continuing thesis supervision by members of the department.

RSSN 1101. Elementary Russian 1. 4 Hours.
Explores the essentials of grammar, practice in pronunciation, acquisition of basic vocabulary, and idiomatic expressions of everyday Russian.

RSSN 1102. Elementary Russian 2. 4 Hours.
Continues RSSN 1101. Studies grammar and spoken and written forms of the language. Covers more advanced features of the language.

RSSN 1301. Elementary Russian Immersion 1. 4 Hours.
Designed for students who are in a Russian-speaking country, this is an off-campus immersion course. Offers students an opportunity to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

RSSN 1302. Elementary Russian Immersion 2. 4 Hours.
Designed for students who are in a Russian-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

RSSN 1501. Elementary Russian 1 for Heritage Speakers. 4 Hours.
Designed for students to whom Russian is a heritage language—students who can speak Russian from hearing it in the home but may not be able to read or write Russian or whose writing and reading skills may not be well developed. Heritage speakers also may not know the structure of the Russian language and its morphology. Offers students an opportunity to learn reading, cursive writing, the language structure, spelling rules, vocabulary, and to develop skills to express themselves in a more linguistically accurate and correct manner. Each grammar topic is based on a culturally related text, which is designed to help students gain cultural knowledge along with language skills.

RSSN 1502. Elementary Russian 2 for Heritage Speakers. 4 Hours.
Continues RSSN 1501. Offers students an opportunity to continue developing their proficiency in reading and writing, to continue to develop their understanding of the language structure and spelling rules, and to work on their vocabulary in order to develop skills to express themselves more fluently and accurately in Russian.

RSSN 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RSSN 2101. Intermediate Russian 1. 4 Hours.
Emphasizes further vocabulary building. Offers students an opportunity to master the fine points of grammar through written composition, prepared oral reports, and reading and discussion from contemporary Russian materials.

RSSN 2102. Intermediate Russian 2. 4 Hours.
Builds on RSSN 2101 and focuses on further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through written composition, prepared oral reports, and reading and discussion from contemporary Russian materials.

RSSN 2301. Intermediate Russian Immersion 1. 4 Hours.
Designed for students who are in a Russian-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

RSSN 2302. Intermediate Russian Immersion 2. 4 Hours.
Designed for students who are in a Russian-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

RSSN 2900. Specialized Instruction in Russian. 1-4 Hours.
Designed for individuals whose language skills are at the intermediate level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Students must have at least an elementary level of competence in the language. May be repeated without limit.

RSSN 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RSSN 3101. Advanced Russian 1. 4 Hours.
Builds on RSSN 2102. Continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

RSSN 3102. Advanced Russian 2. 4 Hours.
Builds on RSSN 3101 and continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

RSSN 3301. Advanced Russian Immersion 1. 4 Hours.
Designed for students who are in a Russian-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence.
RSSN 3302. Advanced Russian Immersion 2. 4 Hours.
Designed for students who are in a Russian-speaking country, this is an off-campus immersion course. Offers students an opportunity to continue to develop grammatical and conversational competence.

RSSN 3800. Special Topics in Russian. 1-4 Hours.
Focuses on a unique aspect of the Russian language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an intermediate level of skill in the language. May be repeated up to three times.

RSSN 3900. Specialized Instruction in Russian. 1-4 Hours.
Designed for individuals whose language skills are at an advanced level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Requires at least an advanced level of competence in the language. May be repeated without limit.

RSSN 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RSSN 4800. Special Topics in Russian. 1-4 Hours.
Focuses on a unique aspect of the Russian language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an advanced level of skill in the language. May be repeated up to four times.

RSSN 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

RSSN 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

RSSN 4992. Directed Study. 1-4 Hours.
Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

RSSN 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to three times.

RSSN 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

RSSN 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

RSSN 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

School of the Museum of Fine Arts (SMFA)
SMFA 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

School of the Museum of Fine Arts (SMFA)
SMFA 6000. Museum of Fine Arts Capstone. 1-12 Hours.
Offers capstone course work at the School of the Museum of Fine Arts. May be repeated without limit.

School of the Museum of Fine Arts (SMFA)
SMFA 6000. Museum of Fine Arts Studio. 2-12 Hours.
Offers course work at the School of the Museum of Fine Arts. May be repeated without limit.

School of the Museum of Fine Arts (SMFA)
SMFA 6000. Museum of Fine Arts Studio. 1-12 Hours.
Offers course work at the School of the Museum of Fine Arts. May be repeated without limit.

Science - CPS (SCI)
SCI 0901. E4 = Experiencing Evolution, Ecology, and Ethology. 6.8 Hours.
Offers students an opportunity to experience a series of high school-level laboratories, which are useful in mastering the fundamental principles of evolutionary biology. These labs, several of which include live animals as model systems, increase high school students’ interest in scientific inquiry by providing hands-on activities in the areas of animal behavior (ethology), ecology, and genetics. Participants are presented with both a lab manual and an instructor’s resource manual to foster the dissemination and the incorporation of these materials into their high school curriculum. Provides a vocabulary list, photocopies of specific readings and the accompanying questionnaires, important Web sites, and a CD with PowerPoint lectures to use as a reference. Complies with the pre-K–12 Learning Standards established by the Massachusetts Department of Education.

SCI 0903. Biology: Sharks, Skates, and Rays. 6.8 Hours.
Focuses on the basic biological principles surrounding this relatively ancient and incredibly well-adapted group of fishes. Includes their acute sensory abilities, unique physiological and anatomical features, behavior, and reproductive modes that characterize these fascinating cartilage-based aquatic organisms. Seeks to dispel popular myths surrounding the indiscriminate and dangerous nature sharks possess as man-eaters while shedding light on the incredible degree and rate by which humans have depleted global shark populations. Emphasizes methods to incorporate class lessons into individual classrooms.

SCI 0904. Geographic Information Systems (GIS) for Educators. 6.8 Hours.
Focuses on the use of geographic information systems (GIS) as a teaching tool in the classroom. GIS can help learners of all ages understand the ways that geography affects their lives and helps teachers and students engage in studies that require critical thinking and integrated learning. Offers students an opportunity to gain hands-on experience using ArcView GIS software, along with a series of lessons that can be adapted to the classroom.

SCI 0909. Inquiry as Content and Teaching Methods. 6.8 Hours.
Designed to increase students’ pedagogical knowledge of inquiry as content and teaching methodology as described in the National Science Education Standards. Discusses scientific inquiry abilities and understandings as they apply within the context of the state/local standards as well. This course is an adaptation of Biological Science Curriculum Study’s (BSCS) Keys to Science Institute.
SCI 0910. Machines in Motion. 6.8 Hours.
Focuses on the Massachusetts Elementary and Secondary Education Science and Technology/Engineering Curriculum Framework. Using the playground as the science laboratory, offers participants an opportunity to explore how this environment provides for inquiry-based, open learning through the basic processes of experimentation, allowing students to think about collected results and what they mean. Examines how to pose questions to students to allow knowledge in physical science to be built in a stepwise fashion. Emphasizes group situations, allowing for the development of shared learning experiences in a problem-based learning environment. Activities are directed at the evaluation and use of common school facilities and playground equipment to study simple machines, motion, forces, fluid flow, sound, and strength of materials.

SCI 0913. Surveys of New England Coastal Ecosystems. 6.8 Hours.
Explores the following New England coastal habitats as well as current research in each: rocky intertidal zone, sandy beach, salt marsh, and nearshore benthic (ocean floor) zone. Introduces and practices authentic research models, with the final day of the course spent participating in open discussions regarding how to replicate materials with students in and out of the classroom.

SCI 0920. Earth and Space Science. 6.8 Hours.
Offers content driven by the Massachusetts Department of Education Science and Technology/Engineering Curriculum Framework. Describes each topic covered in the context of comparative planetology, including planets around other stars. Includes a summary of the current state of understanding of the topic being addressed, followed by a description of scientific methods from current studies, stories of the scientists involved, and a discussion of the data and degree of certainty in the scientific conclusions.

SCI 0922. Understanding Science: A Writing Approach. 6.8 Hours.
Focuses on writing for the science classroom—abstracts, position papers, technical reports, and exploratory essays. Guided inquiry in the science classroom always involves writing. Scientists and science students regularly write a variety of reports. Offers participants an opportunity to develop variety of writing genres for the science classroom and to develop instructional strategies and assessment models for teaching science writing. Environmental themes—such as stewardship, global warming, and sustainability—are the science content models for the class. The writing supports the Massachusetts Science Curriculum framework.

Offers middle and high school teachers an opportunity for hands-on training to implement an innovative robotics curriculum that integrates concepts in engineering and technology with topics from the physical sciences. The engineering and technology concepts are derived from components of the Massachusetts Science and Technology/Engineering Curriculum Frameworks and presented for use in an inquiry-based learning environment. Using the engineering design process (EDP), offers participants an opportunity to identify a problem, design a solution with easy-to-use structural components, add appropriate automation and controls, and program and test their designs, as well as to develop experience using robotic components such as LEGO Mindstorms, TETRIX, and VEX Robotics. Emphasizes group situations, allowing for the development of shared learning experiences in a problem-based learning environment.

SCI 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SCI 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SCI 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SCI 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SCI 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

SCI 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

SCI 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

SCI 6209. Inquiry as Content and Teaching Methods. 4 Hours.
Designed to increase students’ pedagogical knowledge of inquiry as content and teaching methodology as described in the National Science Education Standards. Discusses scientific inquiry abilities and understandings as they apply within the context of the state/local standards as well. This course is an adaptation of Biological Science Curriculum Study’s (BSCS) Keys to Science Institute.

SCI 6503. Biology: Sharks, Skates, and Rays. 4 Hours.
Focuses on the basic biological principles surrounding this relatively ancient and incredibly well-adapted group of fishes. Includes their acute sensory abilities, unique physiological and anatomical features, behavior, and reproductive modes that characterize these fascinating cartilage-based aquatic organisms. Seeks to dispel popular myths surrounding the indiscriminate and dangerous nature sharks possess as man-eaters while shedding light on the incredible degree and rate by which humans have depleted global shark populations. Emphasizes methods to incorporate class lessons into individual classrooms.

SCI 6506. Research Experience for Teachers. 6 Hours.
Offers teachers an opportunity to participate in active research projects in professional laboratory settings. Seeks to provide participants with an extensive summer research experience and to make real connections between the research experience and the teacher’s classroom curriculum. Offers a comprehensive summer research experience within the research laboratories of CenSSIS for urban schoolteachers and an opportunity for participants to review and select research-based curriculum programs or units that are aligned with local, state, and national Frameworks, as well as the research experience.

SCI 6508. E4 = Experiencing Evolution, Ecology, and Ethology. 4 Hours.
Offers students an opportunity to experience a series of high school-level laboratories, which are useful in mastering the fundamental principles of evolutionary biology. These labs, several of which include live animals as model systems, increase high school students’ interest in scientific inquiry by providing hands-on activities in the areas of animal behavior (ethology), ecology, and genetics. Participants are presented with both a lab manual and an instructor’s resource manual to foster the dissemination and the incorporation of these materials into their high school curriculum. Provides a vocabulary list, photocopies of specific readings and the accompanying questionnaires, important Web sites, and a CD with PowerPoint lectures to use as a reference. Complies with the pre-K–12 Learning Standards established by the Massachusetts Department of Education.
SCI 6510. Threats to Marine Biodiversity. 4 Hours.
Focuses on the five primary threats the human race poses on the
diversity of ocean life. The vast biodiversity of our oceans is not only
a source of fascination and intrinsic value but provides sustenance
and key products globally relied upon by humans. However, it is the
human race itself that is both directly and indirectly exploiting these rich
ecosystems at an alarming rate. Addresses the modes in which these
threats have developed as well as their consequences, including the
continued population reductions of the most preferred fish and shellfish
species and marked changes in ecosystems dynamics. Explores the
overall health of our oceans, as well as potential reductions/losses of
species associated with current or potential biomedical products.

SCI 6512. Capstone Course: The Nature of Science and Inquiry. 4 Hours.
Explores the use of inquiry as a teaching method, as well as inquiry as
a content piece throughout the sciences. Students read and discuss
the most recent studies on inquiry as applied in K–12 settings. Studies
the National Science Education Standards, various state standards, and
local goals in the framework of inquiry. Offers students an opportunity to
challenge their own conceptions of inquiry and consider their work from
previous science courses while constructing lessons that are learner-
centered.

SCI 6520. Earth and Space Science. 4 Hours.
Offers content driven by the Massachusetts Department of Education
Science and Technology/Engineering Curriculum Framework. Describes
each topic covered in the context of comparative planetology, including
planets around other stars. Includes a summary of the current state of
understanding of the topic being addressed, followed by a description of
scientific methods from current studies, stories of the scientists involved,
and a discussion of the data and degree of certainty in the scientific
conclusions.

SCI 6521. Assessing Student Understanding in Today's Science
Classrooms. 4 Hours.
Seeks to provide students with an in-depth focus on authentic
assessment in the elementary science classroom and how to use the
results of assessment to chart more effective pathways for instruction.
Topics include the different types of assessment strategies, the
distinction between evaluation and assessment, the nature of authentic
assessment, and the design and use of rubrics and checklists. Seeks to
review research that shows how assessment can enrich and focus
learning, to examine national and state assessment items, to develop
model assessments to be shared on a database, and to experience ways
to evaluate student work to probe student understanding.

SCI 6522. Understanding Science: A Writing Approach. 4 Hours.
Focuses on writing for the science classroom—abstracts, position
papers, technical studies, and exploratory essays. Guided inquiry in
the science classroom always involves writing. Scientists and science
students regularly write a variety of reports. Offers participants an
opportunity to develop a variety of writing genres for the science
classroom and to develop instructional strategies and assessment
models for teaching science writing. Environmental themes—such as
stewardship, global warming, and sustainability—are the science content
models for the class. The writing supports the Massachusetts Science
Curriculum framework.

SCI 6523. Assessing Student Work in Science and Its Impact on
Instruction. 4 Hours.
Focuses on how to use assessment results to inform instruction in
science. Offers participants an opportunity to examine student work
critically in order to evaluate what students have learned regarding key
concepts in science. Explores how to edit and perfect teacher-developed
assessments to probe for deeper understanding and design learning
opportunities for students that deepen their mastery of content and
standards.

SCI 6524. Connecting the Classroom to Real-World Engineering
Experiences. 4 Hours.
Explores real-world teaching pedagogy and tools. Offers teachers an
opportunity to utilize real-life projects from industry formulated for
classroom delivery. High school teachers are immersed in an experience
that is based on the engineering design process (EDP) and designed
to help them teach science, technology, engineering, and mathematics
(STEM) subjects more effectively. Topics covered include inquiry, the
relationship between design and manufacturing, product design and
analysis, design tools, hands-on projects, and capstone-based pedagogy.
Participants should have a familiarity with EDP.

SCI 6530. AP (Advanced Placement) Environmental Science. 1–4 Hours.
Designed for educators who teach advanced or capstone environmental
science courses for high school juniors or seniors and who want to
prepare students for college-level work in environmental science or
for the College Board AP environmental science exam. Focuses on
college-level content and process skills such as lab experiments, problem
solving, open response writing, preparing students for assessments,
and integrating knowledge and results of scientific inquiry. It may also
touch upon three areas of importance to teachers in urban schools: (1)
how advanced work can be integrated into the typical urban high school
setting and used to increase rigor throughout high school programs at
all levels, (2) pedagogical strategies in science, and (3) capitalizing on
existing supports and resources.

SCI 6535. Energy 1: Integrating the Sciences through Energy. 4 Hours.
Offers a graduate-level science course designed for preservice and in-
service K–12 science teachers. Contextualized to the standards/inquiry-
based curricula found in the Massachusetts state curriculum standards.
Provides graduate-level content while modeling sound pedagogy. Aims
to use the concept of energy to integrate interdisciplinary relationships
between the biological, physical, chemical, and earth sciences. Using
current and future curriculum materials, as well as state and national
standards for the teaching of science at the middle-school level, this
course offers an in-depth exploration of energy and the fundamental
physical processes that shape climate (such as heat transfer, solar
variability, orbital mechanics, greenhouse gases, atmospheric and
oceanic circulation, volcanic aerosols, and biological cycles) and provides
evidence for past and present climate change.

SCI 6541. Backyard Ecology: Exploring the Local Ecosystem. 4 Hours.
Focuses on environmental science through an intensive field study in a
local outdoor ecosystem, working collaboratively to carry out an in-depth
exploration of that ecosystem. Some of the topics covered include the
six-kingdom classification system of organisms, characteristics common
to all organisms, plants and plant processes, weather conditions, the
use of taxonomic keys, food webs and food chains, predator/prey
relationships, producers/consumers/decomposers, interdependent
relationships, and soil types and conditions. Asks students to design and
carry out an inquiry-based project.
SCI 6542. Documenting Students’ Science Knowledge . 4 Hours.
Designed to help teachers learn how to determine what their students really know (or think they know) and understand about the science in their everyday world. A great deal of research has been focused on this subject because it is now known that students’ science misconceptions can actually interfere with learning new information. Offers participants an opportunity to explore ways to unveil student misconceptions and learn how to deal with them when they arise.

SCI 6543. Assessing Inquiry-Based Science. 4 Hours.
Designed to provide participants with an in-depth focus on authentic assessment in the elementary science classroom. Topics include the difference between formative and summative assessment, the distinction between evaluation and assessment, the nature of authentic assessment, the design and use of rubrics and checklists, and the use of assessment to improve planning and instruction. Covers questioning strategies and a protocol for looking at student work. Emphasizes how to use the daily science journal as an assessment of what students have learned.

SCI 6544. Integrating Technology into the Science Classroom. 4 Hours.
Seeks to broaden participants’ knowledge about and to strengthen their ability in the selection of software and identification of Web sites that can be integrated into the science classroom. Reviews the research supporting the use of software and Web sites in science classrooms at all levels. Offers participants an opportunity to select, review, analyze, and evaluate various software and Web sites and then design technology-based lesson plans to match the content that they teach in their own classrooms.

Offers middle and high school teachers an opportunity for hands-on training to implement an innovative robotics curriculum that integrates concepts in engineering and technology with topics from the physical sciences. The engineering and technology concepts are derived from components of the Massachusetts Science and Technology/Engineering Curriculum Frameworks and presented for use in an inquiry-based learning environment. Using the engineering design process (EDP), offers participants an opportunity to identify a problem, design a solution with easy-to-use structural components, add appropriate automation and controls, and program and test their designs, as well as to develop experience using robotic components such as LEGO Mindstorms, TETRIX, and VEX Robotics. Emphasizes group situations, allowing for the development of shared learning experiences in a problem-based learning environment.

SCI 6610. Machines in Motion. 4 Hours.
Focusses on the Massachusetts Elementary and Secondary Education Science and Technology/Engineering Curriculum Framework. Using the playground as the science laboratory, offers participants an opportunity to explore how this environment provides for inquiry-based, open learning through the basic processes of experimentation, allowing students to think about collected results and what they mean. Examines how to pose questions to students to allow knowledge in physical science to be built in a stepwise fashion. Emphasizes group situations, allowing for the development of shared learning experiences in a problem-based learning environment. Activities are directed at the evaluation and use of common school facilities and playground equipment to study simple machines, motion, forces, fluid flow, sound, and strength of materials.

SCI 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

SCI 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SCI 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

SCI 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

SCI 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

SCI 6980. Capstone. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

SCI 6983. Topics. 1-4 Hours.
Covers special topics in science. May be repeated without limit.

SCI 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

**Sociology (SOCL)**

SOCL 1000. Sociology at Northeastern. 1 Hour.
Intended for first-year students in the College of Social Sciences and Humanities. Introduces students to liberal arts; familiarizes them with their major; develops the academic skills necessary to succeed (analytical ability and critical thinking); provides grounding in the culture and values of the University community; and helps to develop interpersonal skills—in short, familiarizes students with all skills needed to become a successful university student.

SOCL 1101. Introduction to Sociology. 4 Hours.
Explores basic concepts and theories concerning the relation between individuals and society. Emphasizes the influence of culture, social structure, and institutions in explaining human activity. Discusses and analyzes social groups, socialization, community, class, power, and social change, among other substantive issues.

SOCL 1102. Sex, Gender, and Popular Culture. 4 Hours.
Examines how femininities, masculinities, and different forms of sexual identity are produced and represented within popular culture. Using theories and concepts from both feminist/sexuality studies and popular culture studies, analyzes popular texts and media for their treatment of gender and sexuality and the intersection of those categories with racial and class identities. Explores the visual representation of women (and men) and analyzes how visual and textual media shape our attitudes and identities. Required reading and assignments include close readings of texts, film screenings, class discussions and activities, writing assignments, and creative projects. SOCL 1102 and WMNS 1101 are cross-listed.

SOCL 1103. Women’s Studies. 4 Hours.
Surveys the issues and methodologies involved in the interdisciplinary study of women. Examines the political, economic, social, and historical processes that have created both the image and the reality of women in societies. Guest lecturers provide an overview of the diverse disciplinary approaches to the study of women.
SOCL 1120. Society and Health. 4 Hours.
Applies social scientific perspectives to the study of health, illness, and healthcare. Explores the ways that societal factors such as race, class, and gender interplay with health, healthcare, and health disparities. Studies neighborhoods and social networks in relation to health. Introduces basic sociological concepts relevant for the study of health and healthcare, such as social construction and medicalization. Offers students an opportunity to develop critical assessment skills while exploring a range of explanations for why, despite having the most expensive healthcare system, the United States ranks comparatively low in life expectancy and health and well-being outcomes. Uses lectures, case-based learning, and small-group workshops to explore the ways that our social environment shapes health in contemporary U.S. society. PHTH 1120 and SOCL 1120 are cross-listed.

SOCL 1121. Society and Health Recitation. 0 Hours.
Provides a small-group discussion format to cover material in the corequisite lecture course. PHTH 1121 and SOCL 1121 are cross-listed.

SOCL 1200. Sociology of Alcoholism. 4 Hours.
Focuses on social responses to alcohol use. Examines drinking cultures and drinking practices in the United States; processes by which people are labeled “alcoholics,” and the role of agencies of social control, such as the criminal justice system and the healthcare system, in labeling and rehabilitation.

SOCL 1215. Society and Culture in Russia. 4 Hours.
Focuses on contemporary Russian society. Emphasizes the current and recent social, economic, and political characteristics of Russia and the ways in which it has evolved in the post–Soviet period. INTL 1215 and SOCL 1215 are cross-listed.

SOCL 1220. Sociology of Boston. 4 Hours.
Examines Boston from the perspectives of environmental development, neighborhood and intergroup relations, institutional services, and symbolic meanings. Explores current issues in the city through term projects. Requires field trips.

SOCL 1222. Special Topics in Sociology. 4 Hours.
Designed as a specialized themes course for students in sociology and/or anthropology. Takes advantage of unique opportunities—visiting guests, special thematic interests—that are not part of the regular curriculum.

SOCL 1225. Aging in Society. 4 Hours.
Focuses on aging and the consequences of population aging. The population of the United States, as in many developed societies, has registered rapid growth in its elderly population. Examines the impact of an aging population on the healthcare system, family structure, the retirement system, and the economy. The policy implications of these changes are discussed with consideration of how policies addressing the elderly may affect other groups in society.

SOCL 1228. Social Problems. 4 Hours.
Analyzes both empirical and theoretical terms of many of the social problems currently facing Americans. Among these are deepening inequality and poverty among working and middle-class Americans, particularly racial minorities, women, and youth; related problems of racism and sexism; growing unemployment; international ecological crisis; deterioration of the health system; crime; and war and militarism. Strategies and political options for solving these problems are considered.

SOCL 1232. American Society. 4 Hours.
Focuses on American society, culture, and major social institutions: economic, religious, governmental, familial, educational, welfare, and recreational. Examines social classes and stratification, mobility, and individualism.

SOCL 1235. Social Psychology. 4 Hours.
Taught from a sociological perspective, social psychology represents the study of the relationship between the individual and society. Focuses on the ways human behavior is tied to social and cultural contexts, and how individuals shape and are shaped by group interaction. Topics may include socialization and how people develop a “social sense of self”; cross-cultural differences in interactional styles; pressures to conform to roles and stereotypes; identity formation and change, attitudes, interpersonal attraction, and prejudice and discrimination.

SOCL 1240. Sociology of Prejudice and Violence. 4 Hours.
Examines factors in the development and maintenance of prejudice and discrimination. Discusses American race relations, anti-Semitism, sex roles, and stereotyping.

SOCL 1241. Sociology of Violence. 4 Hours.
Examines the notion of violence and its pervasive presence in the social institutions we create and maintain every day. Conducts sociological analysis of the issues we address, borrowing from other disciplines as they prove helpful. Sociology tells us that beliefs, values, and norms that characterize the United States legitimize the preference for violence, largely through the obvious venues of the mass media that glorify violence but also in the subtler structural arrangements collectively constructed and maintained in our everyday behaviors. Offers students an opportunity to understand how the structure of our society and its social institutions inhibit or facilitate violent behavior.

SOCL 1245. Sociology of Poverty. 4 Hours.
Analyzes American poverty in historical perspective, drawing on comparisons with other countries. Critically evaluates sociological research and theories relating to poverty. Considers causes and effects of poverty as well as societal responses to poverty and its consequences. Suitable for students in applied fields, such as nursing, criminal justice, education, allied health, premed, and prelaw.

SOCL 1246. Environment and Society. 4 Hours.
Examines the social, political, and economic forces behind the global environmental crisis. Topics include such issues as global warming and climate disruption, world resource availability and the global economic crisis, environmental justice and social inequities in the exposure to ecological hazards, science and technology, environmental degradation in the Third World, globalization and unfair trade, state power and the role of the polluter-industrial complex in the United States, the history of the environmental movement, and exemplary environmental policies and programs. This theoretically oriented course also involves practical experience in environmental problem solving.

SOCL 1247. Urban Social Problems. 4 Hours.
Focuses on the foundations of urban life in historical perspective. Analyzes relation of city life to environment, population, social organization, technology, and cultural values. Examines growth trends, urbanization, urban planning, and citizen action.

SOCL 1250. Sociology of the Family. 4 Hours.
Focuses on families historically and across cultures and classes. Considers changes in contemporary families in terms of gender, family composition; women’s labor force participation, divorce, cohabitation, and other transformations. SOCL 1255 and WMNS 1255 are cross-listed.

SOCL 1256. Violence in the Family. 4 Hours.
Examines physical, emotional, and sexual violence in families. Covers definitions, prevalence, causes, prevention, and treatment of specific cases of domestic violence as well as social policy issues and problems of legal intervention. SOCL 1256 and WMNS 1256 are cross-listed.
SOCL 1260. Gender in a Changing Society. 4 Hours.
Considers why and how gender is socially constructed in U.S. society and looks at different theories of gender. Explores gender as an institution as well as different (cultural) expressions of masculinities and femininities. Includes topics of gender in everyday life as well as gender as an organizing principle in the institutions of families, education, workplaces, sexualities, religion, the media, politics, and forms of gender violence. SOCL 1260 and WMNS 1260 are cross-listed.

SOCL 1272. Social Roles in the Business World. 4 Hours.
Analyzes the social structure of corporate and business life in contemporary America. Presents and discusses case studies from major accounting and/or industrial firms. Examines the “career line” in the world of business and management, with a special focus on age/sex, racial/ethnic, and class/income barriers.

SOCL 1273. Sociology of Gender and Work. 4 Hours.
Explores how gender both shapes and is shaped by experiences in the labor market. Considers the extent to which work is “gendered” and the ways in which this influences the jobs that men and women perform, the rewards they receive for their efforts, and their experiences in the workplace and at home. Underscores the relationship between paid and unpaid work (especially household labor). SOCL 1273 and WMNS 1273 are cross-listed.

SOCL 1275. Social Stratification. 4 Hours.
Explores the causes and consequences of the unequal distribution of prestige, power, and wealth in human societies. Topics may include theories of social stratification; varieties of human stratification systems; various dimensions of stratification (race gender, class); and the ideologies used to justify (and criticize) inequalities. While the features of multiple societies are considered, primary emphasis is on the development and contemporary structure of the American class system.

SOCL 1276. Sociology of Occupations and Professions. 4 Hours.
Focuses on the meanings of work; division of labor and specialization; analysis of occupational structure and patterns of recruitment, training, and career preferences; and the classic professions and new trends in professionalization.

SOCL 1280. The 21st-Century Workplace. 4 Hours.
Analyzes dramatic changes occurring in the work lives of Americans and considers the future of American workers within the global economy. Explores emerging labor markets, gender, race, and technology in shaping contemporary American work settings.

SOCL 1283. Globalization and Social Change. 4 Hours.
Focuses on the economic, sociocultural, and political dimensions of globalization, emphasizing trends unfolding during the post–World War II era. Emphasizes the shifting organization of economic activity, the changing role of the nation-state, the emergence and spread of new cultural forms, and the linkage between global forces and urban and regional patterns of development. Additional topics include patterns and forms of social inequality, the relation between gender and globalization, the rise of transnational social movements, and the growth of global awareness.

SOCL 1285. Deviant Behavior and Social Control. 4 Hours.
Explores the conditions under which people categorize others as deviant; processes by which persons so defined are assigned deviant status and assume appropriate roles and self-images; development of deviant careers and their relation to deviant subcultures; and situations in which people transform deviant identity.

SOCL 1287. Sociology of Religion. 4 Hours.
Offers a comparative and analytic treatment of religion as a social institution, focusing on the relations between religious organizations and other social institutions, with particular emphasis on the American experience. Analyzes religion as an agent of social change and stability.

SOCL 1290. Juvenile Delinquency. 4 Hours.
Examines the sociological and psychological approaches to juvenile delinquency and their implications for a typology of delinquency. Discusses problems of prevention, treatment, and rehabilitation.

SOCL 1295. Drugs and Society. 4 Hours.
Focuses on historical and contemporary drug issues through the lens of classic sociological concerns. Rather than looking at only the legal/illegal discourse or historical/contemporary production, distribution, and use of drugs, the course frames drug topics around issues of class, race and ethnicity, age, and gender, asking the question of which drugs are used by whom and why at certain life stages. Specific topics include the high incarceration rates for nonviolent drug offenders; the role of drugs in death and dying via death penalty drugs and/or hospice care; mental health and drug treatment; and the potential perfidy of global drug testing and management.

SOCL 1297. Sociology of Popular Culture. 4 Hours.
Presents a sociological analysis of popular culture, focusing on the relationship between popular culture and social institutions such as religion, law, education, economy, and family; the organizations and artistic communities that produce popular culture such as the music industry, advertising, media, and television; and personal and political issues raised by popular culture.

SOCL 1298. Sociology of Hip-Hop: Politics, Identity, and Youth Culture in the Late 20th Century. 4 Hours.
Examines the global development of hip-hop and its manifestations in the realm of music, visual art, fashion, and language. Analyzes the antecedents of hip-hop and the development and emergence of this African-American expressive culture. Explores the social and political implications of hip-hop culture and the emergence of hip-hop in New York City in the 1970s through its evolution into a billion-dollar industry with wide global influence in marketing, film, music, and politics. Studies the dynamics of race, gender, youth, and class.

SOCL 1346. Environmental Activism and Movements: An Open Classroom. 4 Hours.
Offers an open-classroom experience focusing on the role of environmental activists and movements in addressing the global ecological crisis, emphasizing how to evaluate the organizing strategies, political tactics, organizational forms, and policy goals adopted by various environmental movement organizations (EMOs). Offers students an opportunity to understand the most effective means for bringing about meaningful social and environmental transformation. Includes numerous guest presentations from prominent environmental scholars, activists, filmmakers, and journalists, and includes guest panels and new film showings; these presentations are open to the larger Northeastern community.

SOCL 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOCL 2205. Law and Social Justice. 4 Hours.
Analyzes the impact of the legal system on the creation and perpetuation of criminality in contemporary American society. Devotes particular attention to the study of the creation of criminal law, the judicial process, and the role of law in the gap between crime and social justice. Suitable for students in prelaw, criminal justice, political science, and allied fields.
SOCL 2268. Social Movements. 4 Hours.
Introduces the social, cultural, and political dynamics that surround social movements, both historically and in the contemporary world. Emphasizes theory and research on national and transnational social movements, including studies of revolutions and political upheavals, demands for civil and human rights, movements for gender equality, and other instances of movements for social and political change. Emphasizes how structural factors shape social movement emergence and development and how social movements in turn shape the structure of societies.

SOCL 2270. Race and Ethnic Relations. 4 Hours.
Focuses on racial and religious groups, particularly with reference to the United States. Places special emphasis on historical development, specific problems of adjustment and assimilation, and present-day problems and trends.

SOCL 2300. Social Theory. 4 Hours.
Reviews the dominant theoretical traditions in classical and contemporary sociology, showing the links between the social thought of the eighteenth and nineteenth centuries and current social thought. Requires prior completion of two sociology courses numbered 1000 or above.

SOCL 2303. Gender and Reproductive Justice. 4 Hours.
Introduces the social, legal, and economic barriers to accessing reproductive healthcare domestically and internationally. Draws on various theoretical and analytic tools including critical race theory, critical legal theory, sociology of science, human rights, feminist theory, and a range of public health methods. Access to reproductive health services, including abortion, is one of the most contested political, social, cultural, and religious issues today. Covers domestic, regional, and international legal and regulatory frameworks on sexual reproductive health. HIST 2303, SOCL 2303, and WMNS 2303 are cross-listed.

SOCL 2320. Statistical Analysis in Sociology. 4 Hours.
Offers students an opportunity to obtain knowledge and skills essential for understanding the theory and practice of social statistics commonly used in social research. Topics covered include the operationalization of abstract concepts; descriptive statistics; correlation; bivariate regression; central limit theorem; confidence intervals; hypothesis testing; and key concepts such as association, causation, and spurious relationships. Statistical software is used to complete assignments.

SOCL 2321. Research Methods in Sociology. 4 Hours.
Introduces students to the range of research methods used by sociologists. Covers experimental research, field research, survey research, and historical-comparative research. Sampling, the rules of evidence in empirical research, research ethics, and the place of values are discussed. Required for sociology majors.

SOCL 2323. Ethnographic Methods. 4 Hours.
Focusses on the practical, ethical, and theoretical issues underlying qualitative field research. Emphasizes firsthand experience with participation, observation, interviewing, note-taking, data analysis, and ethnographic writing. Open only to sociology and anthropology majors.

SOCL 2324. Human Services Research and Evaluation. 4 Hours.
Covers basic issues in applied research and the evaluation of services including the purposes of evaluation, ethics, formulating questions and measuring answers, designing evaluations and planning oriented research, utilizing evaluation results, and the turbulent setting of action programs. Suitable for students majoring in human services, sociology, psychology, nursing, health education, and related fields.

SOCL 2358. Current Issues in Cities and Suburbs. 4 Hours.
Introduces students to pressing urban issues: urban sprawl, poverty, education, transportation, economic development, and housing, through an intensive analysis of the Boston metropolitan area. The course is cotaught by university faculty and practitioners in government, community, and nonprofit organizations throughout the metropolitan area. Offers students the opportunity to analyze Boston data, go on outings to see development in progress, and talk with urban practitioners about what they do, and conduct research on an urban issue of their choice.

SOCL 2359. Current Issues in Cities and Suburbs Abroad. 4 Hours.
Introduces students to pressing urban issues—urban sprawl, poverty, education, transportation, economic development, and housing—through an intensive analysis of the metropolitan area. Taught by university faculty and local practitioners in government, community, and nonprofit organizations. Offers students an opportunity to analyze urban data, to go on outings to see development in progress, and to talk with urban practitioners about what they do in urban contexts outside of the United States. To be taken as part of a Dialogue of Civilizations. May be repeated without limit.

SOCL 2450. Class, Power, and Social Change. 4 Hours.
Focuses on theories of social inequality as applied to the exercise of power and large-scale social change. Examines contemporary events in order to understand power structures.

SOCL 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOCL 2991. Research Practicum. 2-4 Hours.
Involves students in collaborative research under the supervision of a faculty member. Offers students an opportunity to learn basic research methods in the discipline. Requires permission of instructor. May be repeated once for up to 4 total credits.

SOCL 3100. Gender, Social Justice, and Transnational Activism. 4 Hours.
Introduces key issues, themes, and debates in feminist transnational theory, practice, and activism in contemporary contexts and how it has changed under socioeconomic, political, and cultural processes of globalization. Examines differences among women relating to race, class, sexuality, national identity, and political economy in reckoning with possibilities for sustainable social justice. Students interrogate the relationship between the local and global; the production of knowledge in different regional spaces; the pragmatics of political mobilization; the varying contours of “social justice”, and other key issues. Offers students an opportunity to discuss the impact of globalization, neoliberalism, and state and intimate violence on gendered politics and relations and to contend with the politics of difference, to debate its challenges, and to imagine possible futures for transnational gender justice. POLS 3100, SOCL 3100, and WMNS 3100 are cross-listed.

SOCL 3401. Social Policy and Intervention. 4 Hours.
Focuses on study of the formation of social policies in response to social problems. Analyzes policies and problems, supporters and opponents of policy change, conditions under which control agencies adopt new policies, and effects of policy change. Particular emphasis is on case studies of social action and legal change.

SOCL 3402. Feminist Perspectives on Society. 4 Hours.
Examines social science and interdisciplinary feminist literature that focuses on women in families and at work, and that deals with physical issues including violence against women and abortion. Incorporates the perspectives of women of color. Considers and evaluates women’s views of social life as well as recognizes the differences among women. SOCL 3402 and WMNS 3402 are cross-listed.
SOCL 3406. Class, Crime, and the Legal System. 4 Hours.
Presents major sociological theories of crime and of the functioning of the criminal justice system in the United States. Examines statistical data and research on crime and justice. Highlights influence of class, race, and gender in the production of crime and in outcomes of the justice system.

SOCL 3407. The Immigrant Experience: Ethnicity, Race, and Inequality in America. 4 Hours.
Explores the integration of today's immigrants into the housing and labor markets and political system by their ethnicity and race. Focuses on how immigrant children and the children of immigrants are incorporating into American society. Addresses several key questions, including: (1) How do white and nonwhite immigrants compare to native-born whites and nonwhites with respect to their residential attainment? (2) Do white and nonwhite immigrants negatively affect native-born white and nonwhite workers? (3) How politically active are white and nonwhite immigrants relative to their native-born counterparts? Students research how immigrants are incorporating into the Boston metropolitan area.

SOCL 3408. Sociology of Organizations. 4 Hours.
Examines sociological perspectives on the structures and processes of large-scale formal organizations in Western society and contemporary organizational theory and research, with illustrations from business, governmental, and other organizations.

SOCL 3411. The Networked Society Abroad. 4 Hours.
Introduces students to basic concepts and principles of social network analysis. Taught while abroad as part of a Dialogue of Civilizations program, it combines studying the different roles that social networks play in different institutions and societal settings with appropriate readings that offer a conceptual, theoretical, and applicable context for understanding the networked society. May be repeated without limit.

SOCL 3414. The Sociology of Campus Life. 4 Hours.
Focuses on campus life through the lens of classic sociological concerns of race, class, and gender. Offers students an opportunity to address core contemporary issues in higher education; to develop an understanding of campus life from the perspective of learning that occurs both inside and outside the classroom; and to assess how that learning impacts their views of themselves and their larger context. Also offers students an opportunity to develop an understanding of student commitment to issues of social change and social justice. HUSV 3414 and SOCL 3414 are cross-listed.

SOCL 3418. Greater Boston Urban Policy Seminar. 4 Hours.
Designed to introduce the advanced undergraduate sociology, political science, or economics student to the broad area of public policy related to the specific problems of large metropolitan areas. Throughout the seminar there will be a focus on greater Boston. Among the issues discussed are racial attitudes and residential segregation, the urban labor market, housing, urban sprawl and transportation, education, public health, and urban planning. Links between all of these issues are explored.

SOCL 3437. Children and Youth in Contemporary Society. 4 Hours.
Presents a sociological discussion of children focusing on race, gender, class, and childhood age as factors that children respond to as they go through their daily lives. Issues such as peer-group relations and special problems unique to childhood and their policy implications are also explored. Topics may include foster care, juvenile justice, youth pregnancy, and child labor among other issues.

SOCL 3440. Sociology of Human Service Organizations. 4 Hours.
Introduces selected theoretical perspectives on human service organizations, emphasizing defining organizational goals and effectiveness. Gives students the opportunity to become familiar with the nature of human service organizations, to compare these organizations to business and industrial organizations, to outline specific problems that human service organizations face, and to propose potential solutions.

SOCL 3441. Sociology of Health and Illness. 4 Hours.
Offers a substantial overview of the sociology of health and illness. Medical sociology is an important subfield of sociology with important links to public health, social psychology, psychology, and other medical fields. Emphasizes several critical areas: society and disease; theoretical understandings of health inequalities; medicalization and social control; healthcare professions and professionalization; and the American healthcare system. Offers students an opportunity to obtain analytical frameworks to explore other topics in medical sociology not covered in this course.

SOCL 3451. Privilege. 4 Hours.
Examines contemporary social inequality in the United States. Focuses on “how the elite obtain and maintain privilege and why.” Examines privilege as a system of advantages based on specific social characteristics (class, race, gender, and sexuality) and studies how privilege works in a variety of social institutions (e.g., family, housing, health, and crime). Students are charged to critically analyze stratification from a perspective of privilege rather than disadvantage and to consider how privilege shapes institutions and inequalities in U.S. society and their own lives.

SOCL 3455. Seminar in Urban Sociology. 4 Hours.
Focuses on important topics in the study of urban areas within sociology. Themes include residential segregation, suburbanization, neighborhood development and change, the economic development of cities, fiscal crisis, gentrification, urban crime, and public and private urban policies.

SOCL 3460. Sociology of Latino Society. 4 Hours.
Designed to familiarize students with the Latino population in the United States. Reviews economic, political, and social factors that have contributed to the presence of Latinos in the United States. Sociological perspectives are used to understand the social, economic, and political characteristics of the various Latino groups and how these relate to larger social and economic processes in the U.S. society.

SOCL 3465. Globalization and the Evolution of Human Societies. 4 Hours.
Examines current issues of globalization from a sociological viewpoint, emphasizing the forces that create ties between societies and the consequences of these ties. Analyzes the structures of human societies, the ways in which they change over long periods of time, and the consequences of changes for people's actions and beliefs. Stresses the importance of social “environments” in understanding social change and of the process of social adaptation. Uses sociological concepts to analyze current issues of globalization, their origins, and ways of dealing with them.

SOCL 3470. Social Conflict and Community Service. 4 Hours.
Offers a community service course supported by a grant from a Northeastern alumnus. The primary objective is to assist students in learning about the causes, consequences, and possible solutions for social conflict in the Boston area. Attention is also given to helping students see beyond their customary social experiences. Students work in teams on projects that deal in some way with social conflict, broadly defined. Reflections occur through team interactions, journal summaries, and focused discussions in weekly seminars. Each student writes an analytic paper that ties in sociological issues; some teams produce sets of papers that combine to produce reports for their host organizations.
SOCL 3471. Social Conflict and Community Services Abroad. 4 Hours.
Designed to assist students in learning about the causes, consequences, and possible solutions for social conflict by studying conflict abroad. Uses readings from sociology, political science, gender studies, education, and history about the nature of conflict and conflict resolution. Also designed to help students see beyond their customary social experiences and academic disciplines. Offers students an opportunity to work alone or in teams on projects that deal with social conflict, broadly defined. Requires community service in a specific organization in the country of stay. Uses team interactions, journal summaries, and focused class discussions to offer in-depth reflection on students’ project work, team-based experiences, readings, and related social issues. Requires each student to write an analytic paper tying theoretical issues with their research experiences. May be repeated without limit.

SOCL 3480. Comparative Political Economy. 4 Hours.
Designed to introduce the undergraduate student to competing paradigms in economic thought and public policy. The first third of the course is devoted to a brief overview of the historical, philosophical, and psychological roots of political economic ideology and socioeconomic institutions. The last two-thirds is spent in an inquiry into conservative, liberal, and radical political economic perspectives. Focuses on the role of government in political and economic affairs. Throughout the entire course, special attention is paid to an analysis of current economic conditions and policy in light of the theoretical models explored in class.

SOCL 3485. Environment, Technology, and Society. 4 Hours.
Focuses on the connections between the development of modern nation-states and the control of nature. Explores the role human societies play in such events as climate change, tsunamis, and droughts. Asks how industrialization and the process of science and technology development are related to our transforming environmental conditions, as well as how the social sciences, the sciences, and engineering are transforming to address these issues. Draws on social theory, environmental history, anthropology/sociology, art/design, and open-source technologies to investigate theoretically and methodologically the sources, experiences of, and solutions for environmental health questions.

SOCL 3487. Applied Sociology: Practice and Theory. 4 Hours.
Offers the academic component of the experiential education requirement for sociology majors; to be taken after students have completed the experiential component. Provides a seminar format in which students will reflect upon their approved experience (that is, co-op, internship, community service, and so on) and integrate it into a research project. Students who have completed study abroad or a service-learning course in the department may not have to take this course.

SOCL 3488. Doing Sociology in the City Abroad. 4 Hours.
Introduces students to the classic sociological method of urban ethnography by facilitating their independent ethnographic research while abroad. Designed to be taken as part of a Dialogue of Civilizations program. Students spend the term in a geographic location, or with a social group of their choosing, conducting participant observation and taking field notes in the Chicago School tradition. Supplements the experience of conducting fieldwork with readings and group reflection. Offers students an opportunity to engage with basic concepts of ethnography and the practices of conducting qualitative research, coding, interpretive analysis of data, and oral and written presentation of findings. May be repeated without limit.

SOCL 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOCL 4513. Political Sociology. 4 Hours.
Uses conceptual frames, theoretical perspectives, and case studies to explore the interplay between everyday life and macro-institutional dynamics of political power. Analyzes political contestation and negotiation via religious, spatial, gendered, national, and international aspects of power.

SOCL 4514. “The Wire” and the Study of Urban Inequalities. 4 Hours.
Offers a seminar examining a range of topics related to the issue of urban inequality. Uses the HBO series The Wire (which aired from 2002–2008) as a vehicle to explore how crime and social control, labor markets, housing policies, local politics, and other urban institutions both reflect and contribute to systemic inequality in U.S. cities. The material for this class consists of academic readings and seasons one through three of The Wire.

SOCL 4515. Public Policy Seminar. 4 Hours.
Designed to introduce the advanced undergraduate sociology, political science, or economics student to the art and science of public policy development, analysis, and evaluation. The first half of the course is devoted to a consideration of the social, political, and economic roots of public policy. The second half includes an inquiry into a range of issues having to do with the “art and science” of policymaking. A number of case studies are reviewed to provide examples of policy in action.

SOCL 4518. Law and Society in a Digital World. 4 Hours.
Explores the ways in which the legal system shapes and is, in turn, shaped by ideological and political movements. For example, the bitter controversy over whether runaway juries have created "jackpot justice" by awarding huge sums to plaintiffs is a reflection of deep cultural and political divides over individual rights and corporate power. Also examines new legal principles that are currently evolving to deal with such misdeeds as systematic corporate misconduct, cyber crimes, and harassment.

SOCL 4519. Seminar in Social Psychology. 4 Hours.
Explores in depth the ways sociologists study the interaction between individuals and social context.

SOCL 4520. Race, Class, and Gender. 4 Hours.
Considers the intersection of race, class, and gender in social structure, institutions, and people’s lives. Utilizes an interdisciplinary approach to focus on the socially constructed nature of these concepts and how they shape and create meaning in individual lives. Difference with an emphasis on inequality and varying life chances is central for understanding our society and is central to our work. Requires a significant amount of reading. Class format is like a seminar; students are expected to participate, take responsibility, and write a paper. SOCL 4520 and WMNS 4520 are cross-listed.

SOCL 4521. Ethnic, Racial, and Religious Identity. 4 Hours.
Explores some of the sociological assumptions about identity, identity politics, and the processes of assimilation and acculturation. Investigates the theories and methods used in the study of Jewish identity politics as a way of understanding a postmodern critique of the identity literature. Ends with a feminist critique of multiculturalism as a way of bringing together the academic study of identity, be it racial, ethnic, or religious, and political decision making.
SOCL 4522. Political Ecology and Environmental Justice. 4 Hours.
Engages advanced sociological research on topics relating to political ecology and environmental justice, with the goal of producing a publishable report(s) to be published and posted on the Northeastern Environmental Justice Research (NEJRC) website and circulated on various national environmental list-serves. Possible topics of investigation could include the power of the polluter-industrial complex in the American political system; the role of trade agreements in relation to the globalization and export of environmental hazards; climate justice, with an analysis of the manner in which climate change is exacerbating social and environmental injustices, especially for the poorest and most politically powerless populations in the world system; or many other important issues.

SOCL 4523. Sexualities. 4 Hours.
Offers a primarily sociological overview of the field of sexuality studies. Explores the ways in which sexual behaviors and identities are in fact shaped by social norms, values, and expectations; the meanings and statuses ascribed to sexual acts, behaviors, identities, and communities; and the interactive processes by which sexualities are achieved. Also brings an intersectional framework to discussions by emphasizing how our understandings of sexuality interact with categories of gender, race, nation, and class. Examines a variety of topics, such as transgenderism, power, extreme and illicit sex, socialization, pornography, and politics. SOCL 4523 and WMNS 4523 are cross-listed.

SOCL 4525. American Demographics. 4 Hours.
Offers an applied research experience in which students have the opportunity to study the major areas of demography. Focuses on the resources of the United States Census Bureau and, in particular, the data products available from recent census surveys.

SOCL 4528. Computers and Society. 4 Hours.
Focuses on the social and political context of technological change and development. Through readings, course assignments, and class discussions, offers students an opportunity to learn to analyze the ways that the internet, artificial intelligence, and other technological advances have required a reworking of every human institution—both to facilitate the development of these technologies and in response to their adoption.

SOCL 4530. Seminar in the Family. 4 Hours.
Explores issues facing contemporary families including combining work and family, single motherhood, fathers and children, family violence, and differences among families of different ethnicities, cultures, and classes.

SOCL 4535. European Union: Social and Political. 4 Hours.
Designed to provide a sociological introduction to the history and development of the common market, institutions, and policies of the European Union (EU). The EU began in the 1950s as a series of agreements on economic issues among a small number of countries, and has evolved to take on a role in various social, economic, and cultural areas in its member states. Emphasizes current challenges, issues, and debates in the EU, for example, the introduction of the euro; common policy areas including gender and racial equality; social policies and labor markets; migration and enlargement; the EU as an emerging international actor; and transatlantic relations.

SOCL 4580. Special Topics in Sociology. 4 Hours.
Designed as a specialized themes course for students with experience in sociology and/or anthropology. Takes advantage of unique opportunities —visiting guests, special thematic interests—which are not part of the regular curriculum. May be repeated without limit.

SOCL 4589. Senior Seminar. 4 Hours.
Offers students an opportunity to integrate and apply knowledge of the discipline by building on completed course work and conducting original research on a topic of their choice. Requires students to produce a research paper due at the end of the semester. This seminar operates as an intellectual workshop in which students share the process, as well as the results, of their research with the group. The class comes together to inform, guide, critique, and support one another’s research efforts in a collaborative fashion. Students are expected to make constructive comments on the work of others and to freely exchange ideas.

SOCL 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

SOCL 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

SOCL 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOCL 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

SOCL 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

SOCL 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

SOCL 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

SOCL 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement. May be repeated without limit.

SOCL 5976. Directed Study. 1-4 Hours.
Comprises reading and research directed by a faculty member. May be repeated without limit.

SOCL 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

SOCL 5984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

SOCL 6960. Exam Preparation—Master’s. 0 Hours.
Offers the student the opportunity to prepare for the master’s qualifying exam under faculty supervision.

SOCL 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
SOCL 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

SOCL 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

SOCL 7000. Qualifying Exam. 0 Hours.
Provides eligible students with an opportunity to take the master’s qualifying exam.

SOCL 7100. Queer Theory: Sexualities, Genders, Politics. 3 Hours.
Introduces the core texts and key debates that have shaped queer theory and examines the intersections between queer theory and feminism and critical race theory. Seeks to provide an understanding of expansive and radical contemporary queer politics by analyzing foundational queer and feminist texts, pushing beyond narrow constructions of identity politics, anti-discrimination policy, and rights-based reforms. Engages queer theory by means of a rich philosophical and political interrogation of the meaning and content of “queer.” SOCL 7100 and WMNS 7100 are cross-listed.

SOCL 7200. Foundations of Social Theory 1. 3 Hours.
Studies the classic theorists including Durkheim, Weber, Marx, and others.

SOCL 7201. Foundations of Social Theory 2. 3 Hours.
Reviews the dominant theoretical traditions in contemporary sociology, examining the key assumptions, terminology, weaknesses, and strengths of the pluralist, manageralist, neo-Marxist, feminist, and postmodern paradigms. Strives not only to expose students to the giants in the field but, more important, to give students the intellectual tools to situate entire theoretical traditions vis-à-vis one another. Introduces students to various schools of thought. Offers students the opportunity to learn “how to think” sociologically and theoretically—that is, to go beyond simplistic and descriptive accounts of social phenomena to offer more systematic and insightful explanations.

SOCL 7202. Feminist Theory. 3 Hours.
Considers major developments in feminist theory since the rise of the contemporary women’s movement. First looks at early socialist feminist and radical feminist theory and critiques of them, psychoanalytical feminist theory, postmodern feminism and its critics, and theories about exclusion and difference among women, particularly by women of color. Gender, sexuality, and power are central categories of analysis.

SOCL 7203. Contemporary Sociological Theory. 3 Hours.
Analyzes major contemporary theories, focusing on such themes as the relationship of criticism to theory, the dynamics of exchange and production in postnational economies, the socialization of “rational choice,” the theoretical significance of postmodernity and difference, the relation of the historical to the social dimension of social organization, the interaction of power and discourse, the operations of gender within theory, and the significance of class, race, and gender to models of the global political economy.

SOCL 7204. Ethnographic Theory. 3 Hours.
Examines ethnography, an approach mostly utilized in a “field setting” outside the university and its library. Calls for researchers to become directly involved or immersed in the everyday lives of individuals and/or groups in order to examine and explain the ways they subjectively perceive, feel, and give meaning to their world. The course’s main objective is to teach you the practicalities, realities, joys, and limitations of ethnography through the examination of some writings on ethnographies and a couple of actual ethnographies.

SOCL 7205. Law, Conflict, and Violence. 3 Hours.
Contrasts several major schools of thought about the relationships between law, conflict, and violence. Examines the differing assumptions about the law in legal realism, social choice theory, law and economics, Marxism, critical legal studies, functionalism, conflict theory, and natural law in order to reveal their explanations of crime and violence and the policies that arise from their theoretical assumptions.

SOCL 7206. Theories of Political Economy. 3 Hours.
Explores the basic philosophical, psychological, political, and economic underpinnings of contemporary public policy, with an emphasis on the United States. Considers the core philosophical and political theories of conservative, liberal, and radical political economy and examines the economic structures consistent with these competing theories.

SOCL 7210. Statistical Methods of Sociology. 3 Hours.
Introduces statistical methods relevant to sociology. Topics include tabular analysis, nonparametric statistics, analysis of variance, regression analysis, path analysis, measures of association, estimation, and univariate and multivariate hypothesis testing. A knowledge of elementary statistical theory is presumed.

SOCL 7211. Research Methods. 3 Hours.
Surveys methods of social research including field study and participant observation techniques, survey techniques, interviewing and questionnaire construction, sampling procedures, experimental design, content analysis, and use of available data. Examines the roots and consequences of violent behavior in society and the individual. Topics vary, but will include serial murder, massacres, hate crimes, workplace murder, group violence including cults, and mass media portrayals of violence.

SOCL 7212. Feminist Methodologies. 3 Hours.
Examines how feminist scholarship has challenged and reworked basic assumptions about the social world and the research that describes it. That requires three basic approaches: rethinking, reflecting, and rewriting. Examines the ways of knowing common to the social sciences and the ways in which new paradigms have or have not been integrated into the canons. Students are expected to do a close reading of the texts assigned and come prepared with questions and notes for the class meetings. Also requires one class presentation and one paper.

SOCL 7213. Advanced Research Methods. 3 Hours.
Presents quantitative techniques of analysis. Students are expected to conduct individual research projects.

SOCL 7215. Advanced Quantitative Techniques. 3 Hours.
Covers multivariate statistical models and their applications to social science data. Covers the ordinary least squares (OLS) regression model and the assumptions underlying it in detail, as well as techniques for analyzing data when OLS assumptions do not apply, such as simultaneous equation models, time series models, and maximum likelihood techniques for limited and discrete dependent variables. This is a second-semester course in quantitative techniques for graduate students in the social sciences.
SOCL 7219. Sociology of Mental Health and Illness. 3 Hours.
Provides an introduction to mental health and mental illness. Presents a number of perspectives on mental health and illness, including biological, genetic, and psychological approaches; however, the course focuses on the role of social factors in mental health and mental healthcare by examining the role of social factors in the etiology, course, and treatment of mental illness. Students have an opportunity to learn about the social consequences of mental illness, such as stigma, and explore ways to prevent these consequences. In addition, prevention, rehabilitation, and recovery are discussed. The social and political contexts within which mental health and mental illness occur are discussed as well as the role of professionals. This course is taught with attention to an interdisciplinary perspective.

SOCL 7220. Seminar in Qualitative Analysis. 3 Hours.
Studies qualitative techniques of analysis. Examines social-structure process and meaning in interacting groups. Students study a face-to-face group by means of participant observation using symbolic interaction concepts.

SOCL 7221. Globalization, Development, and Social Justice. 3 Hours.
Explores the rise of neoliberal globalization and its impact on local and national communities around the world. Examines complex patterns of resistance, including place-based struggles and transnational social movements. Combines theoretical analysis of global capitalism, development, the politics of resistance, and reformist/radical alternatives with the study of concrete struggles in defense of land, labor and human rights, indigenous cultures and identities, and ecological sustainability.

SOCL 7222. Gender and Globalization. 3 Hours.
Explores current issues and debates relating to the gendered effects of globalization and neoliberal reforms and the entanglement of their economic, social, and cultural effects. Gender research on globalization has expanded notions of work and migration to include the politics of location as well as the feminization of labor in transnational production. This seminar focuses on new forms of subjectivities, ideologies, sovereignty, and notions of citizenship in postindustrial and postcolonial settings. Topics may include, but are not limited to, poststructuralist feminist critiques, financial markets, migration, care and factory work, as well as the privatization of urban space.

SOCL 7225. Gender and Social Movements. 3 Hours.
Offers an in-depth examination of the sociological literature on the gender dynamics of social movements, both nationally based and transnational. Covers key questions, conceptual tools, and methodological frameworks in the study of social movements; the interplay of gender, the state, and social movements, including feminist and women’s movements; how social institutions and social norms may affect the course and outcomes of movements; and globalization, transnational social movements, and gender. Geared toward students who plan to do research on social movements or global social movements but also designed to be useful to those with interests in related fields.

SOCL 7227. Race and Ethnic Relations. 3 Hours.
Offers a graduate-level seminar in the sociology of race and ethnic relations. Explores the key social, economic, political, and ideological forces shaping race and ethnic relations in the United States, past and present, and the main theoretical, methodological, and substantive debates in the “race and ethnicity” subfield of sociology. Course topics include, but are not limited to, the conceptual and intellectual foundations of the study of race and ethnic relations; the sources and consequences of ethnic and racial identities; urban poverty and dynamics of racial residential segregation; the role of wealth in creating and perpetuating racial inequality; the “new black middle class”; and contemporary debates regarding racial prejudice, discrimination, and redistributive public policies in the United States.

SOCL 7230. Political Ecology of Global Capitalism. 3 Hours.
Analyzes the political economy of international capitalism, really existing state socialism, and the global environment. Includes philosophies of nature; laws of capital accumulation and ecological degradation; technology and the division of labor; combined and uneven development, imperialism, and ecological crises in the Third World; the relationship between economic and ecological crises; environmental policy, democracy, and the state; ecological racism, sexism, and classism; and the crisis of social movements in the United States.

SOCL 7231. Sociology of Prejudice and Violence. 3 Hours.
Examines the roots and consequences of violent behavior in society and the individual. Topics vary from semester to semester, but will include serial murder, massacres, hate crimes, workplace murder, group violence including cults, and mass media portrayals of violence.

SOCL 7232. Political Economy of Global Capitalism. 3 Hours.
Constitutes the required core course in the political economy concentration and serves as a theoretical introduction to neo-Marxian political economy. Includes historical materialism; the labor theory of value and elementary laws of capital accumulation; class, gender, race, and the division of labor; imperialism and underdevelopment; the state; political, economic, and social crisis theory; and debates concerning the restructuring of global capitalism.

SOCL 7234. Issues in Social Psychology. 3 Hours.
Examines human behavior from a sociological and psychological perspective. Gives special consideration to such topics as gossip and rumor, presentation of self, prejudice, and mass communication.

SOCL 7235. Urban Sociology. 3 Hours.
Discusses theories of the development of urban life. Compares preindustrial and industrialized urban areas. Presents methods for the study of urban social structure and change, and evaluates contemporary metropolitan action programs.

SOCL 7237. Women, Men, and Social Change. 3 Hours.
Looks at how the Industrial Revolution and the corresponding changes in the labor force and patterns of domestic life have altered the sexual division of labor. In postindustrial society, new institutional forms are recasting personal relations. Examines these forces of social change and their impact on gender roles.

SOCL 7239. Sociology of Occupations and Professions. 3 Hours.
Studies the relations between the occupations and professions and society. Topics may include occupational stratification, professional group behavior, recruitment and socialization of occupations and professions, and political activism.

SOCL 7240. Sociology of Deviant Behavior. 3 Hours.
Analyzes theories of deviance (anomie, differential association, control, conflict, and labeling). Examines their basic assumptions, focus, key concepts, general propositions, empirical support, strengths and weaknesses, and implications for social policy.

SOCL 7241. Sociology of Law. 3 Hours.
Discusses the relationship among law, ethics, and social policy, with emphasis on such issues as family violence, the management of AIDS, state regulation of public morality, and health maintenance and the provision of medical care. The course has an applied focus and emphasizes student participation and initiatives.

SOCL 7243. Sociology of Health and Illness. 3 Hours.
Studies social aspects of illness and medicine, historically and cross-culturally. Focuses on illness and the medical profession in modern society and their structural settings: the community, the hospital, the medical school. Critically examines research studies in the field and specifies problems for future research.
SOC 7245. Formal Organizations: Administration and Structure. 3 Hours.
Introduces and critically examines different theoretical approaches in an attempt to understand and explain how organizations work. Also examines the implications of organizational goals, structure, and control on society as a whole and organizational members in particular.

SOC 7247. Economic Sociology. 3 Hours.
Reviews recent writings in economic sociology. Economic sociologists see social activity as embedded in social networks, institutional structures, history, and culture, while classical economics tends to view economic actors as behaving rationally in relative social isolation. This scholarship traces its intellectual roots to Marx, Weber, Durkheim, Simmel, Schumpeter, and Polanyi, while mainstream economists employ the lessons of Adam Smith, Ricardo, Mill, Marshall, Keynes, and Samuelson.

SOC 7248. Race, Gender, Class: Feminist View. 3 Hours.
Analyzes the intersection of race, class, and gender in women’s lives and their meaning for equality and feminism. Includes work by and about men. An interdisciplinary approach focuses on the socially constructed nature of these concepts, how they shape social life, and create meaning. Difference has become a central category for understanding our multicultural social life, underscoring inequality, stratification, and divergent life chances and experiences in the United States. Examines struggles to analyze gender, race, ethnicity, and class simultaneously and to grapple with issues including theory, autobiography, sociological data and analysis, and popular culture.

SOC 7250. Seminar in Urban Social Policies. 3 Hours.
Offers an overview of the contemporary urban policy issues in the United States. Examines the relationship between economic and political forces and how these forces determine which urban social issues get priority over the others. Uses case studies of specific urban social policies that were implemented in different cities, and discusses the possibilities for their nationwide implementation.

SOC 7251. Community Analysis. 3 Hours.
Explores various approaches to the study of community, with emphasis on the politics of development and on neighborhoods. Also examines the importance of race, class, and ethnicity on emergence of new local social movements. Students are expected to do their own research project on specific community issues.

SOC 7252. Class Structure and Social Inequality. 3 Hours.
Places theories of inequality between groups in historical perspective, from classical to modern industrial times. Discusses and evaluates sociological research in social stratification with regard to different social and cultural groups. Emphasis is on American society.

SOC 7254. Social Movements. 3 Hours.
Examines how groups mobilize collectively to achieve sociopolitical, economic, and cultural change, with a particular focus on the United States. Introduces various social movements and the sociological theories that have attempted to explain them. Draws examples from labor, civil rights, women's, gay/lesbian liberation, student, antiwar, environmental, antiracist, urban, and global justice movements.

SOC 7256. Contemporary Issues in Sociology. 3 Hours.
Discuss contemporary issues in sociology. Include supervised readings and written reports on special problems. May be repeated without limit.

SOC 7257. Contemporary Issues in Sociology. 3 Hours.
Discuss contemporary issues in sociology. Include supervised readings and written reports on special problems. May be repeated without limit.

SOC 7258. Contemporary Issues in Sociology. 3 Hours.
Discuss contemporary issues in sociology. Include supervised readings and written reports on special problems. May be repeated without limit.

SOC 7259. Contemporary Issues in Sociology. 3 Hours.
Discuss contemporary issues in sociology. Include supervised readings and written reports on special problems. May be repeated without limit.

SOC 7260. Sociology of Science, Knowledge, and Technology. 3 Hours.
Offers an interdisciplinary seminar on the sociology of scientific knowledge and its consequences. Topics include the social construction of scientific knowledge and its use in controlling behavior and legitimating social inequality, the political economy of technology development and its cultural effects; and the processes by which society assesses (or fails to assess) and regulates (or does not regulate) the social and environmental consequences of science and technology.

SOC 7261. Computers and Society. 3 Hours.
Offers a graduate seminar on the social impact of the computer “revolution” on the contemporary world. Topic include conditions of work, education, recreation, privacy, the computer science profession, paradigms of human thought, politics, and social change in the world economy.

SOC 7263. Social Psychology of Stratification. 3 Hours.
Explores the social psychological dimensions of structured social inequality. Overviews the "social psychologies" embedded in the classical social theorists, then explores the literature on sociological social psychology (as opposed to its psychological cousin), identifying key theoretical frameworks and focusing on "social structure and personality" (or "social structure and attitudes") research. Explores relevant literatures on various “subjective” responses to stratification including the self-concept, stratum (that is, race, class, or gender) identification and consciousness, the process of legitimation, stratification beliefs (or stratification ideology), racial attitudes, and links between these phenomena and various policy attitudes and preferences (support for affirmative action, wealth redistribution, and so on). Also explores the ways in which such responses may contribute to the maintenance and reproduction of the status quo (social reproduction), and social change.

SOC 7264. Urban Poverty and Social Policy. 3 Hours.
Explores the causes and consequences of poverty and how it is experienced in America’s inner cities. Each week students are required to read a selected text that focuses on a sociological theory or concept related to urban poverty. Topics include employment, family structure, crime and social control, education, culture, and neighborhoods. One of the key objectives is to examine the advantages and disadvantages of various policies designed to address the persistence of poverty and/or its attendant problems and consider the effectiveness of these strategies for poverty reduction at the individual or community level.

SOC 7265. Sociology of Gender. 3 Hours.
Examines the origins of feminist sociology, its contributions to gender studies and to sociology, and directions of research. Covers feminist critiques of mainstream sociology, i.e., Parsonian structural functionalism, as well as of critical or Marxist sociology. Theoretical debates include critique of “sex role” theory and its replacement by multilayered notions of gender. That is, we conceptualize gender as macro-institutional and ideological, as an interactional accomplishment, and an aspect of identity. Includes intersectional theories and research, global/transnational concerns, studies of masculinities, and the place of the body and sexuality studies. This is a graduate seminar.
SOCL 7267. Environment, Health, and Society. 3 Hours.
Studies contested illnesses, which are diseases or conditions in which there is dispute over environmental causation. For many diseases and conditions attributed to environmental and occupational exposure, the disease or condition and/or its causes are discovered by laypeople in workplaces and communities, with considerable attention to chemical exposures. This seminar synthesizes a diverse set of fields, encompassing environmental sociology, medical sociology, medical anthropology, science studies, history of medicine, history of science, environmental health, community-based participatory research, environmental justice, and environmental public health. Emphasizes both political economic and ideological factors as determinants of contestation. Also examines issues of interdisciplinary collaboration between social scientists and environmental health scientists.

SOCL 7268. Globalization and the City. 3 Hours.
Considers the conditions of cities and their residents in the era of globalization. Cities have always been located at the center of regional and global networks of trade, capital, and culture. Even so, urban sociology has tended to treat cities as closed systems, defined more by internal logics than by broader social and economic forces. Since the early 1990s, however, shifts under way in the global economy, information and communications technologies, political movements, and cultural processes have altered the way that scholars (and policy makers, planners, architects, urban residents, etc.) look at cities. Increasingly, the world’s cities are regarded as nodes in global networks; and correspondingly, urban social and spatial processes are being viewed through global lenses.

SOCL 7270. Sociology of Work and Employment. 3 Hours.
Examines the ways in which work organizations powerfully shape individual and social life. Traces such influences with particular emphasis on how organizations differentially affect the distribution of job rewards across class, gender and racial/ethnic lines. Topics include the historical evolution of the management/worker relationship, job segregation by both race and gender, the impact of new technologies on social inequality, the relation between gender and professional careers, governmental efforts to ensure equal opportunity, and the impact of workplace transformation on racial and gender inequalities at work.

SOCL 7272. Globalization: Social and Political Theoretical Debates. 3 Hours.
Overviews contemporary theoretical debates over the social, political, and cultural dimensions of globalization and transnationalism. Examines challenges and effects of globalization on the core concerns of political sociology; and the future of democracy, the nation-state, the welfare state, and civil society including such transnational social movements as global feminism.

SOCL 7273. Gender and Social Policy. 3 Hours.
Provides an introduction to gender and social policy, with emphasis on intersections of inequalities based on class, race, and sexuality. The focus is on equality policies in employment including family-friendly measures and antidiscrimination policies. Includes those focused on child care, poverty, reproduction, and sexuality. Examines the intersections of family, economy, sexuality, and state from a variety of perspectives including cross-national and comparative analysis.

SOCL 7274. Cultural Studies. 3 Hours.
Introduces cultural studies as an interdisciplinary investigation of how modes and formations of difference among cultural practices are represented sociologically and historically in the social sciences and humanities. Is intended to elucidate debates among the various critical disciplines of the “human sciences” in regard to recent changes in the meaning and use of the term “culture” in history, sociology, literature, cinema studies, and politics. The form of this inquiry is critical. By this is meant that theory and method are conceived of qualitatively and as moments of conceptualization and self-reflection, and that the course draws on various literatures that now operate critically and self-critically at the intersection of the various academic fields including dialectics, structuralism and its critical variants, feminist theory, and writings on postcolonialism.

SOCL 7287. Social Movements in Health. 3 Hours.
Offers a graduate seminar centering on health social movements. Also explores general social movement theory and research. Uses concepts from science and technology studies and covers some core medical sociology concerns such as health inequalities; personal experience of illness; and lay-professional disputes over disease identification, causation, prevention, and treatment. Among the movements covered are disability rights, breast cancer activism, medical activism, black health movements, environmental justice, community health centers, patients’ rights, and health access movements.

SOCL 7291. American Society. 3 Hours.
Provides an introduction to mental health and mental illness. Presents a number of perspectives on mental health and illness, including biological, genetic, and psychological approaches; however, the course focuses on the role of social factors in mental health and mental healthcare by examining the role of social factors in the etiology, course, and treatment of mental illness. Students have an opportunity to learn about the social consequences of mental illness, such as stigma, and explore ways to prevent these consequences. In addition, prevention, rehabilitation, and recovery are discussed. The social and political contexts within which mental health and mental illness occur are discussed as well as the role of professionals. This course is taught with attention to an interdisciplinary perspective.

SOCL 7293. Public Policy Seminar. 3 Hours.
Concentrates on the scope of the study of public policy, disciplinary contributions to policy analysis and the study of public policy, methods of policy analysis, and models of policy processes.

SOCL 7294. Urban Policy. 3 Hours.
Designed to introduce the graduate political science, sociology, policy, or economics student to the broad area of public policy devoted to the specific problems of large metropolitan areas. Throughout the seminar series, there is a focus on Greater Boston. Discusses issues of racial attitudes and residential segregation, the urban labor market, housing, urban sprawl and transportation, education, public health, and urban planning. Explores links between all of these.

SOCL 7701. Tutorial in Teaching. 3 Hours.
Discusses issues and problems in teaching. This is a required course for all doctoral candidates and should be taken during a semester when the student has major responsibility for designing and executing a course in either sociology or anthropology. Open to doctoral candidates only. Master’s degree required.

SOCL 7962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
SOCL 7976. Directed Study. 1-4 Hours.
Comprises reading and research directed by a faculty member. May be repeated without limit.

SOCL 7978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

SOCL 7990. Thesis. 1-4 Hours.
Offers thesis supervision by members of the department. May be repeated without limit.

SOCL 7996. Thesis Continuation. 0 Hours.
Offers continued thesis work conducted under the supervision of a departmental faculty.

SOCL 8400. Planning Module in Urban and Regional Policy. 1 Hour.
Relates a professional activity to urban and regional planning. May be repeated up to three times.

SOCL 8673. Master’s Paper in Sociology. 3 Hours.
Comprises empirical or library research meeting the criteria for publication in a professional journal. Supervised by members of the department.

SOCL 8960. Exam Preparation—Doctoral. 0 Hours.
Offers the student the opportunity to prepare for the PhD qualifying exam under faculty supervision.

SOCL 8966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

SOCL 8982. Readings. 1-4 Hours.
Offers selected readings under the supervision of a faculty member. May be repeated without limit.

SOCL 8984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

SOCL 8986. Research. 0 Hours.
Offers the student the opportunity to conduct full-time research. May be repeated without limit.

SOCL 9000. PhD Candidacy Achieved. 0 Hours.
Indicates successful completion of the doctoral comprehensive exam.

SOCL 9984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

SOCL 9986. Research. 0 Hours.
Offers the student the opportunity to conduct full-time research. May be repeated without limit.

SOCL 9990. Dissertation. 0 Hours.
Offers theoretical and experimental work conducted under the supervision of a departmental faculty. May be repeated once.

SOCL 9996. Dissertation Continuation. 0 Hours.
Offers continued thesis work conducted under the supervision of a departmental faculty. May be repeated without limit.

SOCL 1100. Introduction to Sociology. 3 Hours.
Examines the basic theoretical perspectives, research methods, and concepts of sociology, including society, culture, institutions, status and role, socialization, social groups, and the role of the individual within society. Considers a number of specific topics to help explore these concepts, including crime, deviance, sexualities, gender, education, and the environment.

SOCL 1210. Sociology of Boston. 3 Hours.
Examines Boston from the perspective of environmental development, neighborhood and intergroup relations, institutional services, and symbolic meanings. The city is a laboratory for exploring the people's search for a lifestyle and the satisfaction of their needs. Offers students an opportunity to learn about urban sociology by using Boston as the case study. Examines the social history and historical development of contemporary Boston and analyzes selected current sociological issues.

SOCL 1220. Engaging Difference and Diversity. 3 Hours.
Introduces the issue of diversity in the United States and across the globe. All humans share the same basic capacity for thinking, feeling, and social and moral reasoning. This general capacity takes specific cultural shape as each group adapts to different environments and historical situations and over time constructs a cultural tradition. Offers students an opportunity to articulate this knowledge intellectually and to apply it to everyday living and practices.

SOCL 1230. Race and Ethnicity. 3 Hours.
Examines race and ethnicity as constructed differences. Explores the reasons for their existence, the power dynamics behind constructions of difference, the impact of difference on identity, and ways that visual and other presentations influence perceptions of self and others. Because human beings belong to different racial and ethnic groups, the study of these constructs is important to sociology. Explores the history of race and ethnicity and how history has influenced the study of these topics.

SOCL 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOCL 2100. Popular Culture. 3 Hours.
Explores the significance of expressions of popular culture such as film, television, music, and literature. Examines media production, organization, technology, and audience consumption. Discusses countercultures and subcultures, moral and ethical considerations, high and low culture, independent and corporate business influences, and consumerism and consumption. Topics include the effects of popular culture on race, gender, and class. Covers the relationship between popular culture and existing socioeconomic institutions.

SOCL 2200. Drugs and Society. 3 Hours.
Introduces the sociology of drugs. Examines social definitions of licit and illicit drugs, conditions of their use, and socialization into drug use. Surveys deviant drug use and the effects of social control on definitions and use of drugs. Applies the relevant sociological theories of deviance and social control.

SOCL 2220. Sociology of Drinking. 3 Hours.
Explores how different groups and societies organize drinking as a social act and the consequences of that organization. Covers the cultural meaning assigned to drinking, the social elements found in all drinking situations, how members of social groups learn how to drink, the social and psychological functions of drinking, and the impact on the body as well as society. Investigates the etiology of alcoholism and the epidemiology of this licit substance.
SOC 2240. Death and Dying. 3 Hours.
Examines the treatment of death and dying, including problems faced by health-care professionals, family members, institutions, the funeral industry, and the dying themselves. Covers cross-cultural perspectives, the social distribution of mortality, the changing nature of death, and the ethical problems in determining life and death. Emphasizes abortion, suicide, and ceasing medical intervention.

SOC 2320. Family Functions and Dysfunctions. 3 Hours.
Studies the family as a social institution in several cultures. Investigates family interrelations with political, economic, and educational institutions and the changing nature of the family. Examines the physical, emotional, and sexual violence that occurs in families, emphasizing child and spouse abuse. Analyzes definitions, prevalence, causes, prevention, and treatment of specific cases of violence. Focuses primarily on social, policy, and legal issues.

SOC 2340. Gender and Work Roles. 3 Hours.
Considers the impact of the changing roles of men and women in a relational institutional context, including a combined focus on gender role performance in the workplace and traditional gender demands imposed by family structure. Examines how workplace organization contributes to social inequalities. Topics include women's voice, the men's movement, gender and historical analyses, education and professionalism, comparable worth, and leadership and management styles.

SOC 2350. Power, Poverty, and Social Change. 3 Hours.
Offers students an opportunity to analyze uses of power in society and how change is facilitated. Evaluates sociological research and theories relating to the causes and effects of poverty and societal responses to it. Discusses theories of social equality and inequality as applied to the exercise of power and to the growth and development of social movements and group conflict.

SOC 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOC 2995. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for work experience.

SOC 4993. Independent Study. 1-4 Hours.
Offers students an opportunity to undertake special research.

SOC 4994. Internship. 1-4 Hours.
Provides students with an opportunity for internship work.

SOC 4995. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

SOC 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

SOC 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

SOC 5984. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

SOC 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

SOC 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SOC 6964. Co-op. 0 Hours.
Provides eligible students with an opportunity for work experience.

SOC 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

SOC 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

SOC 6980. Capstone. 1-4 Hours.
Offers students an opportunity to integrate their course work, knowledge, and experiences into a capstone project.

SOC 6983. Topics. 1-4 Hours.
Covers special topics in sociology. May be repeated without limit.

SOC 6995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

Spanish (SPNS)

SPNS 1101. Elementary Spanish. 1.4 Hours.
Designed for students with little or no knowledge of Spanish. Presents essentials of correct Spanish usage through acquisition of basic skills in reading, speaking, writing, and aural comprehension.

SPNS 1102. Elementary Spanish 2. 4 Hours.
Continues SPNS 1101. Includes completion of basic grammatical usage, reading of contemporary Hispanic material, and increased stress on oral and aural skills.

SPNS 1301. Elementary Spanish Immersion 1. 4 Hours.
Designed for students who are in a Spanish-speaking country, this is an off-campus immersion course. Focuses on standard Spanish. Offers students an opportunity to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.
SPNS 1302. Elementary Spanish Immersion 2. 4 Hours.
Designed for students who are in a Spanish-speaking country, this is an off-campus immersion course. Focuses on standard Spanish. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

SPNS 1402. Elementary Spanish 2 for Healthcare Professionals. 4 Hours.
Reviews the present tense of regular, irregular, yo form irregular, and stem-changing verbs for students who have completed one level of Spanish. Offers students an opportunity to practice different medical scenarios consisting of brief conversations in the consulting room/hospital with the pediatrician, gynecologist, and with the dietician. Explores all the parts of the body and how to conduct a physical exam with a patient in Spanish as well as converse with patients at an elementary level. Students who do not meet course prerequisites may seek permission of instructor.

SPNS 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SPNS 2101. Intermediate Spanish 1. 4 Hours.
Emphasizes further vocabulary building. Offers students an opportunity to master the fine points of grammar through written composition, prepared oral reports, and reading and discussion from contemporary Spanish materials.

SPNS 2102. Intermediate Spanish 2. 4 Hours.
Builds on SPNS 2101 and focuses on further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through written composition, prepared oral reports, and reading and discussion from contemporary Spanish materials.

SPNS 2151. Intermediate Spanish for Business Purposes. 4 Hours.
Emphasizes communicating in a business environment, tailoring grammar and sentence pattern coverage, vocabulary, and cultural topics to a business setting. Combines contemporary business topics and intermediate business Spanish. Offers students an opportunity to be prepared to communicate in speaking and writing in a business setting in Spain and parts of Latin America and with a better understanding of the current business culture in Spain and Latin America. Students who do not meet course prerequisites may seek permission of instructor.

SPNS 2201. Intermediate Spanish 1—BSIB. 4 Hours.
Designed to meet the special needs of international business students. Offers advanced grammar topics and continued stress on aural/oral acquisition. Provides some reading of literary texts as well as of popular media.

SPNS 2202. Intermediate Spanish 2—BSIB. 4 Hours.
Continues SPNS 2201. Designed to meet the special needs of international business students. Continues acquisition of all major skills in Spanish language. Provides increased reading of literary and popular culture texts. Also includes student projects.

SPNS 2301. Intermediate Spanish Immersion 1. 4 Hours.
Designed for students who are in a Spanish-speaking country, this is an off-campus immersion course. Focuses on standard Spanish. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

SPNS 2302. Intermediate Spanish Immersion 2. 4 Hours.
Designed for students who are in a Spanish-speaking country, this is an off-campus immersion course. Focuses on standard Spanish. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

SPNS 2401. Intermediate Spanish 1 for Healthcare Professionals. 4 Hours.
Reviews the present tense of regular, irregular, yo form irregular, and stem-changing verbs. Explores the preterite and imperfect tenses and the command forms formal (usted and ustedes). Topics also include por vs. para. Offers students an opportunity to practice a number of different medical scenarios in the emergency room, medical center, hospital, laboratory, and the X-ray room. Reviews the parts of the body and conducting a physical exam with a patient. Students practice taking a medical history and doing an extensive physical exam in Spanish.

SPNS 2402. Intermediate Spanish 2 for Healthcare Professionals. 4 Hours.
Reviews all the preterite and imperfect tenses and introduces the present subjunctive. Offers students an opportunity to practice the command forms formal (ud./uds.) and different medical scenarios as well as to learn a variety of medical procedures and treatments for different illnesses. The course is designed to prepare students to converse with their patients at an intermediate level and discuss a variety of treatments for different medical conditions.

SPNS 2900. Specialized Instruction in Spanish. 1-4 Hours.
Designed for individuals whose language skills are at the intermediate level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Students must have at least an elementary level of competence in the language. May be repeated without limit.

SPNS 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SPNS 3101. Advanced Spanish 1. 4 Hours.
Continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

SPNS 3102. Advanced Spanish 2. 4 Hours.
Builds on SPNS 3101 and continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

SPNS 3201. Advanced Spanish 1—BSIB. 4 Hours.
Designed to meet the special needs of international business students. Offers advanced grammar review and expanded student participation. Offers a major project in the language with the possibility of community work in the language.

SPNS 3202. Advanced Spanish 2—BSIB. 4 Hours.
Continues SPNS 3201. Offers advanced conversation and composition work for international business students. Is the final language course before students go abroad. Enhances and reinforces those practical language and communication skills students will encounter when they are abroad.

SPNS 3301. Advanced Spanish Immersion 1. 4 Hours.
Designed for students who are in a Spanish-speaking country, this is an off-campus immersion course. Focuses on standard Spanish as well as the local dialect. Offers students an opportunity to continue to develop grammatical and conversational competence.
SPNS 3302. Advanced Spanish Immersion 2. 4 Hours.
Designed for students who are in a Spanish-speaking country, this is an off-campus immersion course. Focuses on standard Spanish as well as the local dialect. Offers students an opportunity to continue to develop grammatical and conversational competence.

SPNS 3401. Advanced Spanish 1 for Healthcare Professionals. 4 Hours.
Reviews the command forms formal (ud./uds.), present subjunctive, and the imperfect subjunctive. Other topics include different medical conditions such as skin disorders and cardiovascular, pulmonary, gastrointestinal, genitourinary diseases, etc. Offers students an opportunity to practice having discussions with their Spanish-speaking patients regarding the different conditions that affect them and discuss a variety of treatment options. Focuses on preventative medicine—talking about the importance of a healthy diet, exercising, etc. The class is conducted totally in Spanish.

SPNS 3501. Advanced Spanish Conversation: Global Communication. 4 Hours.
Designed for nonnative and native speakers whose language skills are at the advanced level and who seek specialized conversational language instruction. Focuses on current global issues, with particular attention paid to events in the Spanish-speaking world and Latinos in the United States. Offers students an opportunity to enrich vocabulary and enhance oral and written communication. Students who do not meet course prerequisites may seek permission of instructor.

SPNS 3800. Special Topics in Spanish. 1-4 Hours.
Focuses on a unique aspect of the Spanish language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an intermediate level of skill in the language. May be repeated up to three times.

SPNS 3900. Specialized Instruction in Spanish. 1-4 Hours.
Designed for individuals whose language skills are at an advanced level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Requires at least an advanced level of competence in the language. May be repeated without limit.

SPNS 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SPNS 4201. Advanced Proficiency Spanish 1—BSIB. 4 Hours.
Designed for international business students to enhance their ability to communicate effectively in Spanish. Seeks to reinforce grammatical concepts and aims to enrich students’ vocabulary, with emphasis on business vocabulary. Focuses on drills, paired and group activities, dictations, role-playing, reading, translations, and listening to audio materials in order to achieve a living language experience. By engaging students in such activities, the course offers students an opportunity to further develop their cultural understanding and their use of Spanish for business purposes. Restricted to international business majors only.

SPNS 4202. Advanced Proficiency Spanish 2—BSIB. 4 Hours.
Designed for international business students. Offers students an opportunity to continue to develop their ability to communicate effectively in Spanish. Seeks to reinforce grammatical concepts and aims to enrich students’ vocabulary, with emphasis on business vocabulary. Focuses on drills, paired and group activities, dictations, role-playing, reading, translations, and listening to audio materials in order to achieve a living language experience. By engaging students in such activities, the course offers students an opportunity to further develop their cultural understanding and their use of Spanish for business purposes. Restricted to international business majors only.

SPNS 4800. Special Topics in Spanish. 1-4 Hours.
Focuses on a unique aspect of the Spanish language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an advanced level of skill in the language. May be repeated up to four times.

SPNS 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SPNS 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

SPNS 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

SPNS 5120. Spanish for Healthcare Professionals. 3 Hours.
Designed for students in healthcare programs who have little or no conversational fluency in Spanish. The goal of this course is primarily to develop speaking and listening skills with a particular focus on medical terminology and to give healthcare students the opportunity to learn the Spanish vocabulary for anatomy and physiology. Provides students with the opportunity to develop basic interviewing skills and the conversational skills necessary to conduct a basic physical exam and take a basic medical case history.

SPNS 5130. Spanish for Healthcare Professionals. 3 Hours.
Assumes that students have an elementary working knowledge of skills in Spanish. Aims to impart specialized medical terminology in Spanish that can be used in a range of healthcare settings. Offers students an opportunity to expand their Spanish oral skills (speaking and listening) and their Spanish literacy skills (reading and writing).

SPNS 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

SPNS 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.
SPNS 6320. Medical Spanish for Healthcare Professionals. 3 Hours.
Seeks to train students who have completed at least one year of elementary Spanish and have a working knowledge of the language to acquire specialized medical terminology in Spanish that can be used in a range of healthcare settings. Provides students with the opportunity to expand their Spanish speaking and listening skills and their reading and writing skills. Through a variety of simulations, students also have an opportunity to develop and enhance interview and conversational skills appropriate to a variety of medical settings. Requires prior completion of one year of elementary Spanish or permission of department.

SPNS 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Spanish - CPS (SPN)

SPN 0903. Spanish Language Immersion. 6.8 Hours.
Offers students an opportunity to sharpen their language skills and expand their vocabulary. Emphasizes oral communication and extensive conversation in pairs and groups. Students also have an opportunity to gain new perspectives on the culture of the Spanish-speaking world. Class discussion focuses on cultural and literary readings, current issues, videos, and the experiences of the Spanish-speaking people of Spain, Latin America, and the United States. Students watch a movie, listen to Spanish music, and complete a research project.

SPN 0910. Advanced Spanish Language and Culture through Latino Film. 6.8 Hours.
Discusses cultural components of countries of the Hispanic world using selected films from Spanish-speaking countries including Mexico, Dominican Republic, Spain, Argentina, Chile, and Peru. Films viewed for this course present a wide variety of themes, genres, and the day-to-day cultural experiences, such as life in Castro’s Cuba, the Spanish Civil War, the Mexican Revolution, and dictatorships in Argentina and Peru. Spanish-language classroom discussion explores expression of affection, feelings, nonverbal communication, and body language of the Hispanic world through the lens of film.

SPN 0920. Medical Spanish for School Nurses. 6.8 Hours.
Offers a basic course designed to provide school nurses with the fundamentals of the Spanish language and with the medical terminology that is important to their work. With a growing Hispanic population in our schools, the need for school nurses to have a grasp of medical Spanish is increasingly evident. Offers participants an opportunity to learn how to discuss basic health problems, eating habits, exercise, and leading a healthy lifestyle, as well as to gain the tools necessary to communicate with their students at a basic level and to master some essential vocabulary.

SPN 6610. Advanced Spanish Language and Culture through Latino Film. 4 Hours.
Discusses cultural components of countries of the Hispanic world using selected films from Spanish-speaking countries including Mexico, Dominican Republic, Spain, Argentina, Chile, and Peru. Films viewed for this course present a wide variety of themes, genres, and the day-to-day cultural experiences, such as life in Castro’s Cuba, the Spanish Civil War, the Mexican Revolution, and dictatorships in Argentina and Peru. Spanish-language classroom discussion explores expression of affection, feelings, nonverbal communication, and body language of the Hispanic world through the lens of film.

SPN 6620. Medical Spanish for School Nurses. 4 Hours.
Offers a basic course designed to provide school nurses with the fundamentals of the Spanish language and with the medical terminology that is important to their work. With a growing Hispanic population in our schools, the need for school nurses to have a grasp of medical Spanish is increasingly evident. Offers participants an opportunity to learn how to discuss basic health problems, eating habits, exercise, and leading a healthy lifestyle, as well as to gain the tools necessary to communicate with their students at a basic level and to master some essential vocabulary.

SSAM 5001. Summer Program. 0 Hours.
Offers students an opportunity to study in a summer program. May be repeated without limit.

Speech-Language Pathology and Audiology (SLPA)

SLPA 1000. College: An Introduction. 1 Hour.
Provides an introduction to the University, college, and health professions to enhance students’ understanding of self and the decisions they make academically and socially as members of the University’s diverse, multicultural community. Group activities and individual assignments along with active participation in a learning community help students adjust to life on an urban campus, develop a better understanding of the learning process, acquire essential academic skills, and make connections with the faculty and students in the college.

SLPA 1101. Introduction to Communication Disorders. 4 Hours.
Offers an overview of disorders of speech and hearing and their treatment, and a review of normal speech and hearing development. Requires clinical observations of persons with speech, language, and hearing disorders.

SLPA 1102. Language Development. 3-4 Hours.
Provides an overview of the development of the language system from birth to adolescence. Students compare different theories of language acquisition and understand their implications for intervention approaches; become familiar with broad developmental stages in infancy and childhood in the domains of motor skills, cognition, social skills, and speech and language, and the connections among these domains; understand the social dynamics between parents and children from which early gestures and prespeech vocalizations emerge; utilize some informal measures of language development covering form, content, and use; and understand broad differences in development in multicultural populations including Asian, Hispanic, and African-American children.
SLPA 1103. Anatomy and Physiology of Speech and Hearing Mechanism. 3-4 Hours.
Offers an in-depth study of the static structure, musculature, and physiology of the speech and hearing mechanism. Emphasizes current research in speech and hearing physiology.

SLPA 1200. Phonetics. 3-4 Hours.
Introduces students to articulatory, perceptual, and linguistic aspects of speech sounds, and phonetic transcription of normal and disordered speech using the International Phonetic Alphabet. Utilizes lectures, discussions, laboratory exercises, demonstrations, readings, audiotape exercises, problem sets, quizzes, and examinations.

SLPA 1202. Neurological Bases of Communication. 4 Hours.
Provides students with the opportunity to acquire a basic understanding of human neuroanatomy and neurophysiology as related to normal aspects of speech, hearing, and language. Central and peripheral nervous system anatomy and physiology are reviewed developmentally from the embryologic through the life-span perspectives.

SLPA 1203. Introduction to Audiology. 3-4 Hours.
Offers the opportunity to gain knowledge of the physics of sound and the anatomy/physiology of the human hearing mechanism, and how these two areas are interrelated. Familiarizes students with some of the diagnostic tests performed by the audiologist in order to assess the integrity of the hearing mechanism. Concludes with a brief overview of amplification and the rehabilitation process for hearing-impaired individuals.

SLPA 1205. Speech and Hearing Science. 3-4 Hours.
Introduces facts and theories related to the physical bases of sound as relevant to speech acoustics; anatomy of the hearing mechanisms; psychoacoustics; and speech perception. While primarily concerned with normal communication, the course also includes discussion of communication disorders. Lab demonstrations and problem sets augment lectures and discussions.

SLPA 1555. Communication Disorders in Movies. 4 Hours.
Seeks to increase student understanding of communication disorders through film. By watching Oscar-awarded, Oscar-nominated, and other Hollywood movies, students are offered an opportunity to develop a heightened sensitivity for how society views specific communication disorders. Through related lectures, discussion, structured activities, and assignments, studies the etiology and diagnosis of a variety of communication disorders and how individuals with these disorders may be helped.

SLPA 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SLPA 2000. Introduction to Co-op. 1 Hour.
Prepares students for all aspects of the cooperative education component of their curriculum by comparing the goals and expectations of co-op employer, co-op faculty, and students themselves. Through professional goal exploration, students gain an understanding of the policies and procedures of the Department of Cooperative Education. The spectrum of clinical settings for speech, hearing, and language professionals is examined as well as current trends in the job market. Effective job search strategies through developing rTsumTs, preparing for interviews, and making informed choices are targeted. Also examines on-the-job scenarios involving problem solving, ethical issues, and confidentiality, and discusses appropriate ways to handle difficult workplace situations.

SLPA 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SLPA 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SLPA 4501. Language Disorders in Children. 4 Hours.
Covers a variety of common speech and language disorders in children with both biological and environmental foundations. Covers models of speech and language processing, definitions of disorders in relation to those models, and a range of intervention methodologies. Considers issues of bilingualism and bidialectalism and how they impact speech and language learning and academic success. Also considers the implications of these disorders for academic achievement, particularly reading and writing. The course is taught using a case-based approach. A portion of the credit for the course is earned through Web-based learning.

SLPA 4650. Seminar in SLP and Audiology. 4 Hours.
Offers students a transition into clinical practice. Students develop hands-on skills in either assessment or treatment, understand the ethics of clinical practice, and develop professional communication skills in a clinical setting.

SLPA 4651. Speech Disorders across the Life Span. 4 Hours.
Offers students an opportunity to obtain the foundation needed to work with adults and children who demonstrate delays and disorders of speech production across the life span. Discusses articulation and phonological development and disorders, phonological differences, disorders of fluency of speech, and disorders of resonance and voice. Presents formal and informal diagnostic and therapeutic intervention for each disorder/difference and discusses the impact of these communication problems in relation to the individual and family.

SLPA 4652. Seminar in SLP and Audiology Abroad: Achieving Cultural Competency. 4 Hours.
Offers students opportunities to improve their cultural awareness; to develop their knowledge of different cultures; to increase their appreciation of—and sensitivity to—cultural differences; and to experience rehabilitation-related, culturally diverse experiences while abroad. Rehabilitation services are provided in a variety of educational, medical, and community settings. Effectiveness of rehabilitation across these settings is impacted by many factors, including the interaction between cultural influences of the clinician and the clients/patients with whom he or she is working. May be repeated without limit.

SLPA 4700. Directed Observation Workshop. 1 Hour.
Offers students an opportunity to learn about assessment and intervention of individuals with communication disorders across the life span through guided observation of speech and language sessions. Discusses integrating principles of evidence-based practice into intervention. Reviews recent journal articles regarding treatment options applicable to clients. As part of the course, students have an opportunity to accrue a minimum of four hours of videotaped observations toward the twenty-five observation hours required by the American Speech-Language Hearing Association (ASHA) to meet clinical requirements as part of ASHA standards.

SLPA 4701. Clinical Research Directed Study. 1 Hour.
Allows undergraduate students the opportunity to pursue a research interest beyond the confines of a specific course. Under the direction of a faculty adviser, students jointly develop a plan of study. Gives students a first exposure to all or some of the steps of the research process relative to their interest areas, beginning with the formulation of the problem and ending with the dissemination of the findings. May be repeated without limit.
SLPA 4702. Clinical Research Directed Study. 2 Hours.
Allows undergraduate students the opportunity to pursue a research interest beyond the confines of a specific course. Under the direction of a faculty adviser, students jointly develop a plan of study. Gives students a first exposure to all or some of the steps of the research process relative to their interest areas, beginning with the formulation of the problem and ending with the dissemination of the findings. May be repeated without limit.

SLPA 4703. Clinical Research Directed Study. 3 Hours.
Allows undergraduate students the opportunity to pursue a research interest beyond the confines of a specific course. Under the direction of a faculty adviser, students jointly develop a plan of study. Gives students a first exposure to all or some of the steps of the research process relative to their interest areas, beginning with the formulation of the problem and ending with the dissemination of the findings. May be repeated without limit.

SLPA 4704. Clinical Research Directed Study. 4 Hours.
Allows undergraduate students the opportunity to pursue a research interest beyond the confines of a specific course. Under the direction of a faculty adviser, students jointly develop a plan of study. Gives students a first exposure to all or some of the steps of the research process relative to their interest areas, beginning with the formulation of the problem and ending with the dissemination of the findings. May be repeated without limit.

SLPA 4891. Research Abroad. 4 Hours.
Offers an opportunity to conduct research under faculty supervision as part of an international study experience.

SLPA 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

SLPA 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

SLPA 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SLPA 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

SLPA 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

SLPA 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

SLPA 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

SLPA 4995. Practicum. 1-4 Hours.
Offers eligible students an opportunity for practical experience. May be repeated without limit.

SLPA 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using the course to fulfill their experiential education requirement. May be repeated without limit.

SLPA 5100. Diagnostic Audiometry. 3 Hours.
Presents an in-depth examination of the various uses of pure tone, speech, and impedance measures as they relate to the standard audiological assessment. Covers case history and case reporting.

SLPA 5101. Electrophysiology. 1 Hour.
Focuses on the interaction of measuring equipment and specific body responses to auditory stimulation. Explores in detail the acoustic and nonacoustic reflex, the otoacoustic emission, and the evoked auditory potential.

SLPA 5102. Anatomy and Physiology of the Ear. 2 Hours.
Details anatomy, physiology, and neurology of the outer, middle, and inner ear, as well as structure and function of the eighth cranial nerve.

SLPA 5103. Language Disorders in Children for Non–Speech-Language Pathology and Audiology Majors. 3 Hours.
Emphasizes current theories of language behavior and their practical application to the assessment and remediation of language disturbances in children. Uses lectures, discussions, and case presentations to focus on what constitutes a language problem, what assessment tools and therapeutic techniques are currently available, and what underlying principles are involved in selecting and organizing the content of a remediation program.

SLPA 5104. Differential Diagnosis in Audiology. 3 Hours.
Examines in detail the site of lesion test battery approach to differential diagnosis in audiology. Includes consideration of Bekesy, ENG, SISI, tone decay tests, ABLB, acoustic reflex, and auditory evoked potentials (ABR).

SLPA 5105. Auditory Pathologies. 3 Hours.
Provides an overview of temporal bone and eighth nerve anatomy. Discusses physiology of the auditory system. Covers the more frequently encountered pathologies affecting the auditory system as well as medical/surgical treatment of those disorders.

SLPA 5106. Amplification. 4 Hours.
Explores physical characteristics of hearing aids and their performance. Offers theoretical approaches to selection and fitting of hearing aids, and analysis of hearing aid dispensing systems.

SLPA 5107. Clinical Procedures. 3-4 Hours.
Reviews principles and procedures of the functional analysis of behavior and focuses on the application of behavioral theory and research to speech, language, and hearing training. Emphasizes clinical investigation in the experimental analysis of the behavior of communication disorders and experiences in the application of experimental procedures in assessment and treatment programs.

SLPA 5108. Rehabilitation Audiology. 3 Hours.
Provides information about the effects of hearing loss on communication, the role of the audiologist in the rehabilitation process, approaches to counseling, uses of amplification, and issues in industrial and educational hearing conservation.

SLPA 5109. Neurology of Communication. 3 Hours.
Provides students with the opportunity to acquire a basic understanding of human neuroanatomy and neurophysiology as related to normal aspects of speech, hearing, and language. Reviews central and peripheral nervous system anatomy and physiology developmentally from embryologic through the life span perspectives. Neurology of common speech-language pathologies are similarly addressed.
SLPA 5110. Language Disorders across the Life Span. 3-4 Hours.  
Offers students an opportunity to obtain the foundation needed to work with children and adults with frequently referred language disorders that are typical consequences of congenital and acquired central and peripheral nervous-system impairments. Emphasizes the anatomy/etiology/neurology/physiology of common disorders, characteristics of these disorders, and intervention approaches (diagnostic and therapeutic). Addresses prevention, outcome, efficacy, and service-delivery considerations.

SLPA 5111. Anatomy and Physiology of the Auditory System. 3 Hours.  
Details the anatomy, physiology, and neurology of the outer, middle, and inner ear, as well as providing basic coverage of the higher peripheral and central auditory mechanisms.

SLPA 5150. Early Intervention: Assessment and Intervention. 3 Hours.  
Offers an opportunity to learn the assessment models and multidomain tests used in early intervention. Familiarizes students with formal and informal tests. Offers an opportunity to learn a variety of intervention models, methods, and strategies.

SLPA 5201. Diagnostic Testing in Speech-Language Pathology. 1 Hour.  
Offers students an opportunity to review diagnostic tests and test manuals in the field of speech-language pathology and to practice their administration. Discusses information about test content, reliability, and validity. Principles of standardized testing, norm referencing, and test scoring are reviewed and practiced.

SLPA 5976. Directed Study. 1-4 Hours.  
Allows students to pursue topics of individual interest beyond the scope of formal course work under the direction of faculty. May be repeated without limit.

SLPA 5978. Independent Study. 1-4 Hours.  
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

SLPA 5984. Research. 1-4 Hours.  
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

SLPA 6208. Pediatric Audiology. 2 Hours.  
Familiarizes students with embryological development of the auditory system, structural lesions of the auditory system, categories of genetic and metabolic deafness, syndromes associated with deafness, contemporary neonatal screening, audiological assessment of the pediatric patient, test interpretation, and audiological counseling.

SLPA 6209. Psychoacoustics. 2 Hours.  
Explores the relationship between acoustic stimuli and psychological responses to sounds. Stresses the similarities and differences between the perception of normal hearing and among different types of impaired hearing. Topics include a general review of the physics of sound, detection, discrimination, masking, binaural hearing, and speech perception.

SLPA 6210. Psychosocial Aspects of Communication Disorders. 2 Hours.  
Covers the psychological, educational, and social aspects of communication disorders, particularly auditory impairment.

SLPA 6211. Research and Evidence-Based Practice. 3 Hours.  
Uses principles of evidence-based practice to prepare students primarily as consumers of clinically relevant research in the field of communication disorders. While consumers utilize research information in some shape or form in their daily practice, producers engage in the conduct of original or replicated research. Consumers and producers of research information should be concerned with internal and external validity of research. As consumers, for example, clinicians may consult research studies to determine suitable treatments for their clients. As producers, clinicians may document a treatment via the case study method or single-subject experimental research. Emphasizes the role of using research to guide practice, even though the role of clinicians as research producers is addressed as well.

SLPA 6212. Seminar in Hearing Science. 2 Hours.  
Offers individual research and/or critical review of the literature in the area of bone conduction of auditory signals, evoked response and audiometry, impedance, and audiometry, cortical processing of auditory input, and other related topics. Requires students to be responsible for class presentations of researched material. May be repeated without limit.

SLPA 6213. Pediatric Aural Rehabilitation. 2 Hours.  
Focuses on various approaches to rehabilitation for deafness in children. Intervention philosophy, style, and practice are analyzed in an effort to understand the rationale of a particular approach to rehabilitation. Among the various approaches are cochlear implant, American Sign Language, and total communication.

SLPA 6214. Noise and Hearing. 2 Hours.  
Covers such topics as different types of potentially hazardous sounds (that is, sound-level measurement and sources including personal stereos, recreational noises, industrial noises, and so on), how noise alters hearing, national regulations and reporting of noise levels, how to prevent noise-induced hearing loss, and how to educate and motivate people of different ages to prevent noise-induced hearing loss.

SLPA 6215. Pediatric Audiology. 3 Hours.  
Covers the embryological development of the auditory system, structural lesions of the auditory system, categories of genetic and metabolic deafness, and syndromes associated with deafness. Discusses contemporary neonatal screening methods and audiologic assessment of the pediatric patient. Reviews test interpretation, audiologic counseling, and amplification intervention options and verification procedures.

SLPA 6216. Physiological Acoustics. 2 Hours.  
Emphasizes the biophysics of the hearing mechanism, especially in terms of actual clinical utility. Stresses comparative anatomy and physiological analysis.

SLPA 6217. Noise and Hearing. 3 Hours.  
Covers topics related to the effects of noise on the auditory system and strategies for educating people about noise hazards. Primarily examines recent research in the field and then considers strategies for disseminating information regarding noise hazards to the public. Each student is asked to write educational pieces intended to inform the public about the effects of noise on the performance of the auditory system, to regularly read research articles related to course topics, and to participate in discussions of those articles.

SLPA 6219. Aural Rehabilitation. 3-4 Hours.  
Provides a detailed examination of various approaches to speech reading and auditory training as they apply to children and adults. Offers an integrated approach to management of hearing-impaired individuals.
SLPA 6220. Hearing Science. 2 Hours.
Provides a concentrated study of the physical sciences related to the practice of audiology, including waves, sound-unit conventions, sound propagation, filters, and sound technologies.

SLPA 6221. Hearing Science. 3 Hours.
Provides a concentrated study of the physical sciences related to the practice of audiology, including waves, sound-unit conventions, sound propagation, filters, and sound technologies. Seeks to provide the student with an in-depth understanding of hearing science through lectures, hands-on experiences, as well as assignments.

SLPA 6224. Psychoacoustics and Electroacoustics. 3 Hours.
Offers an in-depth, high-level look at signal processing, electronics, and physical principles associated with the sound perception, propagation of sound, electroacoustical devices, and technologies common to the practice of audiology and hearing science.

SLPA 6301. Speech Science. 3 Hours.
Focuses on normative aspects of speech acoustics, speech production, and speech perception, but will also include exploration of disordered speech and remediation of speech disorders. Laboratory exercises and class projects are used to augment class lectures and discussions.

SLPA 6303. Stuttering. 3 Hours.
Provides students with the information base needed to work with individuals of all ages who present with any type of fluency disorder. Focuses on theoretical background and assessment/treatment techniques for dysfluent individuals. Emphasizes outcome and efficacy considerations.

SLPA 6304. Augmentative and Alternative Communication. 3 Hours.
Provides an overview of augmentative and alternative communication (AAC) approaches for individuals with severe communication impairments. Helps students gain the foundation knowledge and skills for further independent study, continuing education, further course work, and practicum experience. For student who seek additional study or experience in AAC, the course should provide an enabling foundation for providing direct services in AAC or to serve as a consultant to meet the needs of individuals with severe communication impairments. For those who will not seek additional study in AAC, the course should provide the basic knowledge for appropriate referral and collaboration.

SLPA 6305. Articulation and Phonology. 3 Hours.
Familiarizes students with theoretical, empirical, and practical views of the etiology, assessment, and treatment of disorders of the speech sound system. Focuses on disorders that are developmental in nature (as opposed to emerging after normal speech sound development has occurred). Includes a review of articulatory phonetics, discussion of relevant linguistic principles, and study of theory and data relevant to the course of normal speech sound system development.

SLPA 6306. Speech-Language Disorders in Children. 3 Hours.
Covers a variety of common speech and language disorders in children with both biological and environmental foundations. Studies models of speech and language processing, definitions of disorders in relation to those models, and a range of intervention methodologies. Students consider issues of bilingualism and bidialectism and how they impact speech and language learning and academic success. Finally, students consider the implications of these disorders for academic achievement, particularly reading and writing. Is taught using a case-based approach. A portion of the credit for the course is earned through Web-based learning.

SLPA 6307. Voice Disorders. 3 Hours.
Examines voice disorders, which are prevalent across the life span in both professional and lay voice users. Evaluation and treatment of organic and/or functional vocal pathologies are key focuses of speech-language pathologists across clinical settings (educational and medical). Provides students with the information base needed to work with these interesting and rewarding populations. Emphasis is on anatomy and physiology of normal and impaired voice production, instrumental and noninstrumental assessment, and treatment techniques for remediation. Emphasizes prevention, outcome, and efficacy considerations.

SLPA 6308. Dysphagia. 3 Hours.
Evaluating and treating swallowing disorders are key focuses of the speech-language pathologies in most clinical work settings (educational and medical), with individuals of all ages. Provides students with the information base needed to work with these challenging and rewarding populations. Focuses on theoretical background and assessment/treatment techniques for dysphagia individuals. Emphasizes outcome and efficacy considerations.

SLPA 6309. Speech-Language Disorders in Adults. 3 Hours.
Examines speech, language, and cognitive-linguistic disorders, which are typical consequences of acquired central and peripheral nervous system adult impairments. Provides students with the foundation needed to work with frequently referred adult-impaired populations across clinical settings. Emphasis is on the anatomy/etiology/neurology/physiology of commonly acquired adult communication disorders (including aphasia, apraxia, dementia, dysarthria, and traumatic brain injury), characteristics of these communication disorders, and intervention approaches (diagnostic and therapeutic). Addresses prevention, outcome, efficacy, and service-delivery considerations.

SLPA 6311. Counseling in SLP. 3 Hours.
Provides students with a theoretical framework from which specific counseling strategies may be implemented for individuals and their families with various communication disorders. Stresses conversational interactive strategies. .

SLPA 6312. Audiology for Speech-Language Pathology. 3 Hours.
Provides speech-language pathology majors a review of standard procedures and an update of contemporary issues in audiology. Focuses on pathological disruption of the auditory system and on assessment. Covers case history and case reporting.

SLPA 6314. Professional Practice. 2 Hours.
Provides contemporary information relative to the practice of audiology and speech-language pathology. Includes such topics as planning a business practice, establishing a successful business operation, securing third-party reimbursement, and providing services within state licensing and ASHA ethical guidelines. May be repeated without limit.

SLPA 6315. Professional Practice. 3 Hours.
Provides contemporary information relative to the practice of audiology and speech-language pathology. Includes such topics as planning a business practice, establishing a successful business operation, securing third-party reimbursement, and providing services within state licensing and ASHA ethical guidelines. May be repeated without limit.

SLPA 6316. Assistive Technology. 2 Hours.
Provides students with an understanding of the use of technology to improve the lives of people with communication disabilities in this three-credit elective course. Students develop an understanding of the principles underlying human activity assistance technology from the perspective of both users and professionals. Includes demonstrations of technology and hands-on training in the use of computer software. Introduces both traditional and computer-based technology.
SLPA 6317. Sociolinguistics. 3 Hours.
Consists of basic sociolinguistic concepts including dialectal variations and other forms of language variation; attitudes toward language use and the speech community; language needs of multicultural children in educational settings, considering cultural attitudes of teachers and types of learning situations available; and social and cultural diversity and its effects on the individual’s communicative competence. Includes methods of sociolinguistic research, bilingual language development; language in the classroom; and sociolinguistic effects on reading, writing, oral language, and role relationships.

SLPA 6318. Speech-Language Pathology in the Schools. 3 Hours.
Prepares students for a potential career as a speech-language pathologist (SLP) in the public schools. The regular education classroom has been recognized as the least restrictive environment (LRE) for most children. Many schools now provide a variety of special education services within the classroom using specialized learning techniques infused with curricular content. This has challenged the manner in which SLPS plan and deliver services to children with communication impairments. Many experienced SLPS have long acknowledged frustrations inherent in traditional speech-language intervention, exemplified by goals and services only marginally related to classroom demands and fragmented objects in the individualized education plan. Helps students to avoid becoming a “broom-closet therapist” (Simon, 1987) and develop into a classroom-based communication specialist; a role supported by recent laws and legislation.

SLPA 6319. Speech-Language Pathology in the Medical Settings. 3 Hours.
Prepares students for a potential career as a speech-language pathologist (SLP) in a medical setting working with patients across the life span. Topics include scope of practice, the team approach, third-party coverage/reimbursement, ethics, healthcare reform, assessment of outcomes, documentation, care for the caregiver, and service delivery across the continuum of care. Addresses service delivery issues and concerns relevant to the following types of medical settings: acute care, acute rehabilitation, early intervention, chronic care, and home care.

SLPA 6321. Motor Speech Disorders. 3 Hours.
Focuses on the neurology, SLP evaluation, and SLP treatment of individuals presenting with any type/types of anarthria/dysarthria and apraxia/dyspraxia of speech. Many of the neurologically impaired children and adults that speech-language pathologists work with present with motor speech disorders. Diagnostically, studies how to complete oral motor examinations (including an assessment of those cranial nerves involved in respiration, phonation, resonance, and articulation) and intelligibility testing. Therapeutically, studies a variety of therapy approaches for the range of motor speech disorders based on severity of impairment and prognosis for recovery/improvement including verbal, nonverbal, prosthetic, and pharmacologic.

SLPA 6322. Language Literacy. 3 Hours.
Focuses on the development of language and literacy skills through storybook reading, the use of predictable and repetitive text, logical sequencing, and the provision of multiple opportunities to gain oral control over the language in texts. Discusses how to give children the opportunity to generalize use of storybook language in meaningful communication. Also explores techniques to expand and develop a child’s language.

SLPA 6323. Dialects, Bilingualism, and Accent Modification. 3 Hours.
Introduces students to current research into interlanguage phonology, considering both perception and production. With the increase in globalization and immigration trends in this country, there is a need for clinicians and researchers to be aware of the interactions between dialected speech and disordered speech. Focuses on the major language groups of the world. Discusses a variety of approaches to accent modification, including the use of computer-assisted and Web-based approaches. Offers a practice-oriented approach and introduces students to major issues of intelligibility and naturalness in minority populations. This elective course is offered every two years.

SLPA 6324. Workshop in Speech Pathology and Audiology. 3 Hours.
Offers workshops in a specific field of interest from time to time. These may include topical issues or new information in either theory or practice.

SLPA 6326. Genetic Communication Disorders. 3 Hours.
Introduces the basics of both clinical and molecular genetics. No single scientific discipline has had more impact on the understanding of diseases and disorders in humans than genetics. Describes the basics of heredity, how genes work and are expressed in people, how to gather information that might reveal a genetic basis for a communicative impairment, and the importance of understanding that basis. Also discusses syndromes that have a communication component, the diagnostic process, and syndromic implications for treatment.

SLPA 6327. Topics in Professional Practice. 2 Hours.
Identifies current issues in the fields of speech-language pathology and audiology relative to ethics, service delivery systems, acceptable standards of clinical practice, and emerging trends in diagnostics and treatment. Critical thinking and problem-solving abilities are utilized to analyze clinical and professional dilemmas. May be repeated without limit.

SLPA 6328. Seminar in Audiology. 2 Hours.
Offers advanced study of the development of principles and theories associated with modern procedures and methods used in audiology.

SLPA 6330. Language Literacy 1. 0.5 Hours.
Designed to teach students in the field of communication disorders about early childhood literacy skill acquisition, use, and challenges. Offers students an opportunity to learn how to deliver language-based early literacy services to young children in a manner consistent with the American Speech-Language-Hearing Association (ASHA) position that speech-language pathologists can and should play a critical and direct role in literacy development/use for people with communication disorders across the life span.

SLPA 6331. Seminar in Communication Disorders. 1 Hour.
Explores in-depth issues in communication disorders relating to current aspects of clinical management. May include a variety of specific topics. May be repeated without limit.

SLPA 6332. Seminar in Communication Disorders. 1-3 Hours.
Allows for the advanced study of current diagnostic and intervention strategies, applications of theoretical and applied research, and exploration of current topics in speech-language pathology. Topics may range from the treatment of undeserved populations to the analysis of complex clinical cases requiring interdisciplinary management. May be repeated without limit.

SLPA 6333. Seminar in Communication Disorders. 3 Hours.
Allows for the advanced study of current diagnostic and intervention strategies, applications of theoretical and applied research, and exploration of current topics in speech-language pathology. Topics may range from the treatment of undeserved populations to the analysis of complex clinical cases requiring interdisciplinary management. May be repeated without limit.
SLPA 6334. Seminar in Communication Disorders. 4 Hours.
Allows for the advanced study of current diagnostic and intervention strategies, applications of theoretical and applied research, and exploration of current topics in speech-language pathology. Topics may range from the treatment of undeserved populations to the analysis of complex clinical cases requiring interdisciplinary management. May be repeated without limit.

SLPA 6335. Early Intervention: Assessment and Intervention. 3 Hours.
Covers assessment models and the multidomain tests used in early intervention. Students become familiar with informal and formal instruments used in different areas including cognition speech and language, motor, and social/emotional domains. Explains the process and responsibilities for the writing of individualized service plans (ISPs), as well as variety of intervention models, methods, and strategies to be implemented in natural environments. Is taught by professors drawn from special education, speech-language pathology, counseling psychology, nursing, and physical therapy. Students participate in Northeastern's Global Early Intervention Network.

SLPA 6336. Instrumentation and Electronics for Audiologists. 3 Hours.
Details methods, instruments, and standards used for measurement and calibration of audiometric signals, including basic circuit interpretation, design, and construction.

SLPA 6337. Language Literacy Experiential Program. 0.5 Hours.
Offers students in the field of communication disorders an opportunity to obtain supervised off-campus clinical experience delivering language-based early literacy services to young children in a manner consistent with the American Speech-Language-Hearing Association (ASHA) position that speech-language pathologists can and should play a critical and direct role in literacy development/use.

SLPA 6338. Language Literacy 2. 2 Hours.
Designed to teach students in the field of communication disorders about literacy skill use and evaluation and treatment of literacy impairments beyond early childhood. Reinforces the knowledge and skills covered in SLPA 6330. Offers students an opportunity to learn how to deliver language based-services to middle-school-age children and adults in a manner consistent with the American Speech-Language-Hearing Association (ASHA) position that speech-language pathologists can and should play a critical and direct role in literacy development/use for people with communication disorders across the life span.

SLPA 6409. Audiology Clinic Seminar. 1 Hour.
Offers advanced study of the development of principles and theories associated with modern procedures and methods used in audiology. May be repeated without limit.

SLPA 6410. Audiology Clinic 1. 3 Hours.
Offers a supervised clinical experience in audiology designed for beginning graduate students. Includes practicum sites at the Northeastern University Hearing Language and Speech Center, satellite clinics, and/or educational settings. Requires student to be available a minimum of twenty hours per week during the academic year. Requires attendance at on-campus seminar meetings held weekly. May be repeated without limit.

SLPA 6411. Audiology Clinic 2. 3 Hours.
Continues SLPA 6410. Offers a supervised clinical experience in speech-language pathology and audiology for advanced graduate students. Uses practical experience to emphasize problem-solving techniques relevant to case management. Requires student to be available a minimum of twenty hours per week during the academic year. May be repeated without limit.

SLPA 6412. Audiology Clinic 3. 3 Hours.
Continues SLPA 6411. Offers a supervised clinical experience in speech-language pathology and audiology for advanced graduate students. Uses practical experience to emphasize problem-solving techniques relevant to case management. Requires student to be available a minimum of twenty hours per week during the academic year. May be repeated without limit.

SLPA 6413. Audiology Clinic 4. 3 Hours.
Continues SLPA 6412. Offers a supervised clinical experience in speech-language pathology and audiology for advanced graduate students. Uses practical experience to emphasize problem-solving techniques relevant to case management. Requires student to be available a minimum of twenty hours per week during the academic year. May be repeated without limit.

SLPA 6414. Speech-Language Pathology Clinic Seminar. 1 Hour.
Provides feedback and reflection on the clinical experience as students begin their entry into clinical practice on an individual and small-group basis.

SLPA 6415. Speech-Language Pathology Advanced Clinical Practicum 1. 3 Hours.
Offers supervised clinical experience in speech pathology for beginning graduate students. Includes practicum sites at the Northeastern University on-campus clinical site, satellite clinics, and/or educational settings. Requires student to be available a minimum of twenty hours per week during the academic year. Requires attendance at on-campus seminar meetings held weekly. May be repeated without limit.

SLPA 6416. Speech-Language Pathology Advanced Clinical Practicum 2. 2 Hours.
Offers supervised clinical experience in speech pathology at the Northeastern University Hearing, Language, and Speech Center, medical settings, educational settings, and rehabilitation centers. Uses practical experience to emphasize advanced diagnostic and management techniques, stressing the application of theory to practice. Requires student to be available a minimum of twenty hours per week during the academic year. May be repeated without limit.

SLPA 6417. Speech-Language Pathology Advanced Clinical Practicum 3. 2 Hours.
Offers supervised clinical experience in speech-language pathology for advanced graduate students, placing them in settings such as the Northeastern University Speech, Language, and Hearing Center, medical settings, educational settings, and rehabilitation centers. Uses practical experience to emphasize problem-solving techniques relevant to case management and continues to integrate theory and practice. Requires students to be available a minimum of twenty hours per week during the academic year. May be repeated without limit.

SLPA 6418. Speech-Language Pathology Advanced Clinical Practicum 4. 2 Hours.
Offers supervised clinical experience in speech-language management pathology for advanced graduate students, placing them in settings such as the Northeastern University Speech, Language, and Hearing Center, medical settings, educational settings, and rehabilitation centers. Uses practical experience to emphasize problem-solving techniques relevant to case management and continues to integrate theory and practice. Requires students to be available a minimum of twenty hours per week during the academic year. May be repeated without limit.

SLPA 6419. Audiology Clinic for Speech-Language Pathologists. 1 Hour.
Provides the SLP students with hands-on experience as well as general theoretical background to basic hearing testing, hearing aid fitting, and management. May be repeated without limit.
SLPA 6420. Practical Statistics for Speech-Language Pathology and Audiology. 3 Hours.
Introduces basic concepts in data collection, organization, and analysis using statistical methods with an overall focus on profession-specific application and interpretation.

SLPA 6706. Instrumentation. 3 Hours.
Describes and illustrates the basics of signal generation and control. Covers decibel notation and SPL, HTL, peSPL, and nHL. Describes in detail types of signals used in auditory measures as well as the methods used to calibrate those signals. Also describes and illustrates signal delivery transducers, including circumaural and insert phones, bone conductors, and loudspeakers with their driver amplifiers.

SLPA 6708. Speech/Language Clinic for Audiology Students. 1 Hour.
Offers audiology students a supervised clinical experience in speech-language screenings at the Northeastern University Speech-Language and Hearing Center, satellite clinics, and educational settings. Offers students the opportunity to gain experience screening adults and children. Requires students be available for seminar meetings on campus.

SLPA 6711. Scope of Practice in Audiology. 2 Hours.
Using ASHA documents entitled "Scope of Practice in Audiology," describes and defines the ASHA Code of Ethics, segments of FDA policy regarding audiological activities, and relevant legislation such as Massachusetts General Law and Chapter 93:71. Examines the limits of regulated practice and identifies examples of practice deemed to have exceeded the limits imposed by defining authorities.

SLPA 6715. Amplification 1. 3 Hours.
Explores physical characteristics of hearing aids and their performance. Offers theoretical approaches to selection and fitting of hearing aids and analysis of hearing aid dispensing systems. Introduces digital technology and contemporary software fitting systems as well as verification methods.

SLPA 6716. Amplification 2. 3 Hours.
Expands on SLPA 6715 and examines state-of-the-art digital technology and contemporary software fitting systems. Explores the use of computers to fit and validate hearing aids as well as computer approaches to document hearing aid benefit. Examines the limits of personally worn amplification and presents difficult-to-fit cases.

SLPA 6722. Evaluation and Treatment of Central Pathologies. 3 Hours.
Examines behavioral and electrophysiological assessment of central auditory dysfunction. Emphasizes audiological evaluation as well as neuropsychological and speech-language evaluations. Describes the importance of parent and teacher observation of child behavior. Discusses pharmacological treatment where appropriate. Discusses and demonstrates audiological intervention including formal and informal auditory training programs and the use of FM signal processors to facilitate auditory processing. Illustrates the role of the audiologist as a CORE team specialist and parental advocate. Offers hands-on experience during class time as well as through completion of assignments. Requires permission of instructor for students not enrolled in AuD program.

SLPA 6741. Pharmacology for Audiologists. 2 Hours.
Covers introductory information on pharmacological agents, their actions, and adverse reactions. Discusses the use of drugs to treat auditory disease, and analyzes the specific process of ototoxic reaction. Examines the use of drugs to treat tinnitus.
SLPA 6746. Implantable Hearing Devices. 2 Hours.
Examines implantable hearing devices, specifically cochlear implants (CI), middle-ear implants, and bone-anchored hearing aids (BAHA). Discusses cochlear implant candidacy, surgery, follow-up, and long-term training and education issues relevant to children. Covers in detail the performance, cost, and efficiency of middle-ear implants and BAHA.

SLPA 6747. Implantable Hearing Devices. 3 Hours.
Examines implantable hearing devices, specifically cochlear implants (CI), middle-ear implants, and bone-anchored hearing aids (BAHA). Discusses cochlear implant candidacy, surgery, follow-up, and long-term training and education issues relevant to children. Covers the performance, cost, and efficiency of middle-ear implants and BAHA in detail. Provides hands-on experience with programming of devices during class time and through completion of assignments.

SLPA 6751. Advanced Audiology Clinic 1. 2 Hours.
Introduces students to clinical process and provides an opportunity for self-reflection and evaluation. Offers students the chance to learn how to observe client behavior, how to write clinical reports, and how to recommend specific audiological treatment. This course offers a supervised clinical experience in audiology designed for beginning graduate students. Practicum sites include the Northeastern University Speech-Language and Hearing Center, area clinics or hospitals, and/or educational settings. Requires students be available a minimum of 20 hours per week during the academic year for clinical practicum and scheduled seminars.

SLPA 6752. Advanced Audiology Clinic 2. 2 Hours.
Offers students the opportunity to expand on clinical skills as well as self-evaluation skills that were introduced in SLPA 6751. Focuses on obtaining a basic case history, test procedures and skills, as well as providing results and recommendations to patients. This course offers a supervised clinical experience in audiology designed for beginning graduate students. Practicum sites include the Northeastern University Speech-Language and Hearing Center, area clinics or hospitals, and educational settings. Requires students be available a minimum of 20 hours per week during the academic year for clinical practicum and scheduled seminars. This is an intermediate level of clinical training.

SLPA 6753. Advanced Audiology Clinic 3. 2 Hours.
Expands on knowledge and skills covered in SLPA 6751 and seeks to further develop student self-assessment skills. Uses practical experiences to emphasize problem-solving techniques relevant to case management. Practicum sites include the Northeastern University Speech-Language and Hearing Center, area clinics or hospitals, and educational settings. Requires students be available a minimum of 20 hours per week during the academic year for clinical practicum and scheduled seminars. This is an intermediate level of clinical training.

SLPA 6754. Advanced Audiology Clinic 4. 2 Hours.
Provides practical experiences to emphasize problem-solving techniques relevant to case management and to continue to integrate theory and practice. Fosters greater independence in case management and follow-up. Practicum sites include the Northeastern University Speech-Language and Hearing Center, area clinics or hospitals, and educational settings. Requires students be available a minimum of 20 hours per week during the academic year for clinical practicum and scheduled seminars.

SLPA 6755. Advanced Audiology Clinic 5. 2 Hours.
Provides practical experiences to assist students in acquiring clinical skills and knowledge necessary to prepare them for the clinic internship. Focuses on student self-assessment skills as well as independent thinking and problem solving. Practicum sites include the Northeastern University Speech-Language and Hearing Center, area clinics or hospitals, and educational settings. Requires students be available a minimum of 20 hours per week during the academic year for clinical practicum and scheduled seminars. This is an advanced level of clinical training.

SLPA 6756. Advanced Audiology Clinic 6. 2 Hours.
Provides practical experiences to assist students in acquiring clinical skills and knowledge necessary to prepare them for the clinic internship. Focuses on assisting students in assigning priorities to clinical goals and objectives as well as independent thinking and problem solving. Practicum sites include the Northeastern University Speech-Language and Hearing Center, area clinics or hospitals, and educational settings. Formative assessment of emergent skills are performed as well as summative assessment of the complete clinician. Requires students be available a minimum of 20 hours per week during the academic year for clinical practicum and scheduled seminars. This is an advanced level of clinical training.

SLPA 6757. Advanced Audiology Clinic 7. 3 Hours.
Offers practical experiences that seek to assist students in acquiring clinical skills and the knowledge necessary to prepare them for the clinic internship. Focuses on assisting students in assigning priorities to clinical goals and objectives as well as independent thinking and problem solving. Practicum sites include the Northeastern University Speech-Language and Hearing Center, area clinics or hospitals, and educational settings. Formative assessment of emergent skills is performed as well as summative assessment of the complete clinician. Requires students be available a minimum of 20 hours per week during the academic year for clinical practicum and scheduled seminars. This is an advanced level of clinical training.

SLPA 6758. Advanced Audiology Clinic 8. 3 Hours.
Offers practical experiences that seek to assist students in acquiring clinical skills and the knowledge necessary to prepare them for the clinic internship. Focuses on assigning priorities to clinical goals and objectives as well as independent thinking and problem solving. Practicum sites include the Northeastern University Speech-Language and Hearing Center, area clinics or hospitals, and educational settings. Formative assessment of emergent skills is performed as well as summative assessment of the complete clinician. Requires students be available a minimum of 20 hours per week during the academic year for clinical practicum and scheduled seminars. This is an advanced level of clinical training.

SLPA 6761. Advanced Audiology Clinic 1. 1.5 Hour.
Introduces students to the clinical process. Affords students opportunities to learn how to observe client behavior, how to write clinical reports, and how to recommend specific audiological treatment. Offers a supervised clinical experience in audiology designed for beginning graduate students. Includes practicum sites at Northeastern University Speech-Language and Hearing Center, area clinics or hospitals, and/or educational settings. Requires students be available a minimum of one to two days per week during the academic year.

SLPA 6762. Advanced Audiology Clinic 2. 1.5 Hour.
Affords students the opportunity to expand on clinical skills that were introduced in SLPA 6761. Focuses on obtaining a basic case history, test procedures and skills, as well as providing results and recommendations to patients. Offers a supervised clinical experience in audiology designed for beginning graduate students. Includes practicum sites at Northeastern University Speech-Language and Hearing Center, area clinics or hospitals, and/or educational settings. Requires students be available a minimum of one to two days per week during the academic year.
SLPA 6763. Advanced Audiology Clinic 3. 1.5 Hour.
Expands on knowledge and skills acquired in SLPA 6761 and SLPA 6763 and helps students further develop self-assessment skills. Uses practical experiences to emphasize problem-solving techniques relevant to case management. Includes practicum sites at Northeastern University Speech-Language and Hearing Center, area clinics or hospitals, and/or educational settings. Requires students be available a minimum of one to two days per week during the academic year.

SLPA 6764. Advanced Audiology Clinic 4. 1.5 Hour.
Provides practical experiences to emphasize problem-solving techniques relevant to case management and to continue to integrate theory and practice. Fosters greater independence in case management and follow-up. Includes practicum sites at Northeastern University Speech-Language and Hearing Center, area clinics or hospitals, and/or educational settings. Requires students be available a minimum of one to two days per week during the academic year.

SLPA 6765. Advanced Audiology Clinic 5. 1.5 Hour.
Provides practical experiences to assist students in acquiring clinical skills and knowledge necessary to prepare them for the clinic internship. Focuses on student self-assessment skills as well as independent thinking and problem solving. Includes practicum sites at Northeastern University Speech-Language and Hearing Center, area clinics or hospitals, and/or educational settings. Requires students be available a minimum of one to two days per week during the academic year.

SLPA 6766. Advanced Audiology Clinic 6. 1.5 Hour.
Provides practical experiences to assist students in acquiring clinical skills and knowledge necessary to prepare them for the clinic internship. Focuses on assisting students in assigning priorities to clinical goals and objectives as well as independent thinking and problem solving. Includes practicum sites at Northeastern University Speech-Language and Hearing Center, area clinics or hospitals, and/or educational settings. Formative assessment of emergent skills are performed as well as summative assessment of the complete clinician. Requires students be available a minimum of one to two days per week during the academic year.

SLPA 6773. Topics Seminar. 3 Hours.
Provides a forum for students to examine contemporary issues in audiology as they relate to patient services and audiologist expertise. Requires students to extract from contemporary audiological literature a multitude of topics that reflect the current state of audiology. The instructor functions as a moderator/facilitator.

SLPA 6791. AuD Clinic Internship 1. 3 Hours.
Provides students with the first of three segments of a full-time clinical experience in a variety of off-campus settings, including hospitals, clinics, private audiologic practices, rehabilitation centers, and educational settings. Direct supervision is provided by off-campus licensed audiologists who are in contact with University faculty.

SLPA 6792. AuD Clinic Internship 2. 3 Hours.
Provides students with the second of three segments of a full-time clinical experience in a variety of off-campus settings, including hospitals, clinics, private audiologic practices, rehabilitation centers, and educational settings. Direct supervision is provided by off-campus licensed audiologists who are in contact with University faculty.

SLPA 6793. AuD Clinic Internship 3. 3 Hours.
Provides students with the final segment of full-time clinical experience in a variety of off-campus settings, including hospitals, clinics, private audiologic practices, rehabilitation centers, and educational settings. Direct supervision is provided by off-campus licensed audiologists who are in contact with University faculty.

SLPA 6812. Newborn Hearing Screening Diagnostic Follow-Up. 3 Hours.
Focuses on the various components of the newborn and infant audiologic diagnostic test battery. Through course lectures, case studies, and hands-on experience, offers students an opportunity to develop the skills and gain the confidence necessary to perform hearing testing on this particular demographic in a clinical setting.

SLPA 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SLPA 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

SLPA 6966. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

SLPA 6978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

SLPA 6984. Research. 1-4 Hours.
Affords students the opportunity to develop practical research skills through involvement in a research project. Requires students to submit their finished project to a state or national organization for possible acceptance as a poster presentation. Emphasizes research methods, including data collection and analysis, as well as writing skills. May be repeated without limit.

SLPA 6985. AuD Research Project 1. 1 Hour.
Offers a research course designed to provide the student with experience in conducting a literature review and in developing an experimental design. Seeks to give students an appreciation for the initial steps in the research process.

SLPA 6986. AuD Research Project 2. 1 Hour.
Offers a research course designed to provide the student with experience in recruiting subjects and participating in data collection. Offers students an opportunity to develop a database or other data-logging system to organize study findings.

SLPA 6987. AuD Research Project 3. 1 Hour.
Offers a research course designed to provide the student with experience in interpretation of research findings. Offers students an opportunity to formally present a summary of their research findings, including a proposal for follow-up research.

SLPA 6990. Thesis. 3 Hours.
Offers a research activity that is the first of a two-course thesis sequence with the recommendation of the adviser. May be repeated without limit.

SLPA 6991. AuD Thesis. 3 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

SLPA 6996. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience. May be repeated without limit.

SLPA 6998. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

SLPA 6999. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SLPA 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

STRT 4501. Strategy in Action. 4 Hours.
Provides for the integration and application of administrative theory, knowledge, skills, and experiences for effective strategic performance in an organization. Enables students to acquire a better understanding of the relevance and limitations of business and management concepts and techniques when making and implementing strategic decisions.
STRT 4514. Internal Case Competition Challenge. 4 Hours.
Covers integration and application of theory, knowledge, skills, and experiences for effective strategic performance in an organization. Offers students an opportunity to develop strong analytical, critical-thinking, team-building, and presentation skills to prepare them for addressing business problems strategically and to present their analysis and solutions effectively, both orally and in writing. A key element of this course is participation in an internal case competition sponsored by the D’Amore-McKim School of Business.

STRT 4516. External Case Competition Challenge. 4 Hours.
Covers integration and application of theory, knowledge, skills, and experiences for effective strategic performance in an organization. Offers students an opportunity to develop strong analytical, critical-thinking, team-building, and presentation skills to prepare them for addressing business problems strategically and to present their analysis and solutions effectively, both orally and in writing. A key element of this course is participation in external case competitions.

STRT 6200. Strategic Decision Making in a Changing Environment. 3 Hours.
Focuses on strategy development and implementation for a line of business and for the corporation as a whole by adopting a top management perspective. Beginning with developing a mission statement and goals for the firm, focuses on environmental scanning, incorporating economic, technological, sociopolitical, and legal trends in conducting industry analysis, thus assessing opportunities and threats and the firm’s capabilities before formulating strategy that represents a fit between the environment and the firm. Discusses how to develop competitive advantage and assess competitive positioning, and studies how organizational structure and systems contribute to implementing strategy. Stresses the role of leadership and motivation before moving on to feedback mechanisms to assess success in strategy implementation, leading to revision of strategic plans as needed.

STRT 6208. Strategic Decisions for Growth. 3 Hours.
Focuses on developing and implementing long-term strategy for businesses. Examines how businesses grow in the context of the external environment. Environmental, macroeconomic, and competitive analysis; industry structure analysis; and an evaluation of current and future resources available to a firm together help determine strategy choices in a world characterized by alliances, outsourcing, and mergers and acquisitions. Leadership, organizational structure, business processes, the quality of human capital, corporate social responsibility, and reward systems all affect strategy implementation. Measurement and control systems help determine strategic plan achievement and create a feedback loop for revising strategic plans for future periods. Requires prior completion of 25 semester hours of MBA core curriculum; open to finance students.

STRT 6210. Workforce Metrics and Analytics. 3 Hours.
Introduces how to measure and manage a workforce strategically, including (1) identifying the strategic work that is truly necessary to execute firm strategy; (2) investing in differentiated management systems that support that work; and (3) designing and implementing targeted measurement systems, such as human resources function and workforce scorecards, designed to help to hold line managers accountable for strategic talent. Emphasizes helping students move from a focus on levels associated with a particular workforce attribute (e.g., what is our cost per hire?) to understanding the impact of the workforce on business-level outcomes (e.g., how might an increase in the quality of our project managers affect new product cycle time?).

STRT 6220. Strategic Management for Healthcare Organizations. 3 Hours.
Offers students an opportunity to understand general business strategy concepts as they relate to the healthcare industry. Explores how to analyze market opportunities and challenges as they apply to various healthcare organizations, such as hospitals, physician organizations, and nursing homes. Presents and discusses analytical frameworks for making strategic decisions, drawing on different disciplines, including economics, management, and psychology. Strategic issues include mergers and acquisitions, vertical integration, joint ventures and alliances, performance-control systems, and organizational design.

STRT 6291. Changing the Strategic Viewpoint for Competitive Advantage. 2 Hours.
Studies different business strategy perspectives, examining how businesses create competitive advantage with strategy and how businesses can choose perspectives most relevant to their particular situation. Offers students an opportunity to develop the foundation to evolve new ways of thinking about strategy so they may view problems in ways their competitors haven’t yet discovered. Strategy perspectives include industry structure (focused on competitive forces such as customers, suppliers, and competitors); resource-based (focused on identifying what the firm excels at and finding opportunities to leverage it); and learning (focused on learning as a strategic asset where the company’s ability to learn and adapt quickly provides a competitive edge). Applies this range of strategy perspectives to generate useful strategic insights.

STRT 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

STRT 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated once.

ABRD 5100. International Study—Sweden. 20 Hours.
Offers an opportunity to study in Sweden. May be repeated without limit.

ABRD 5101. International Study—Australia. 20 Hours.
Offers an opportunity to study in Australia. May be repeated without limit.

ABRD 5102. International Study—Belgium. 20 Hours.
Offers an opportunity to study in Belgium. May be repeated without limit.

ABRD 5103. International Study—Egypt. 20 Hours.
Offers an opportunity to study in Egypt. May be repeated without limit.

ABRD 5104. International Study—Israel. 20 Hours.
Offers an opportunity to study in Israel. May be repeated without limit.

ABRD 5105. International Study—England. 20 Hours.
Offers an opportunity to study in England May be repeated without limit.

ABRD 5106. International Study—Ireland. 20 Hours.
Offers an opportunity to study in Ireland May be repeated without limit.

ABRD 5107. International Study—Northern Ireland. 20 Hours.
Offers an opportunity to study in Northern Ireland. May be repeated without limit.

ABRD 5108. International Study—Ghana. 20 Hours.
Offers an opportunity to study in Ghana. May be repeated without limit.

ABRD 5109. International Study—Spain. 20 Hours.
Offers an opportunity to study in Spain. May be repeated without limit.

ABRD 5110. International Study—Canada. 20 Hours.
Offers an opportunity to study in Canada. May be repeated without limit.
ABRD 5111. International Study—Mexico. 20 Hours.
Offers an opportunity to study in Mexico. May be repeated without limit.

ABRD 5112. International Study—Czech Republic. 20 Hours.
Offers an opportunity to study in the Czech Republic. May be repeated without limit.

ABRD 5113. International Study—Italy. 20 Hours.
Offers an opportunity to study in Italy. May be repeated without limit.

ABRD 5114. International Study—South Africa. 20 Hours.
Offers an opportunity to study in South Africa. May be repeated without limit.

ABRD 5115. International Study—SEA Education. 20 Hours.
Offers an opportunity to study under the auspices of the Sea Education Association. May be repeated without limit.

ABRD 5116. International Study—Singapore. 20 Hours.
Offers an opportunity to study in Singapore. May be repeated without limit.

ABRD 5117. International Study—France. 20 Hours.
Offers an opportunity to study in France. May be repeated without limit.

ABRD 5118. International Study—New Zealand. 20 Hours.
Offers an opportunity to study in New Zealand. May be repeated without limit.

ABRD 5119. International Study—Vietnam. 20 Hours.
Offers an opportunity to study in Vietnam. May be repeated without limit.

ABRD 5140. International Study—Argentina. 20 Hours.
Offers an opportunity to study in Argentina. May be repeated without limit.

ABRD 5141. International Study—Chile. 20 Hours.
Offers an opportunity to study in Chile. May be repeated without limit.

ABRD 5142. International Study—China. 20 Hours.
Offers an opportunity to study in China. May be repeated without limit.

ABRD 5143. International Study—Costa Rica. 20 Hours.
Offers an opportunity to study in Costa Rica. May be repeated without limit.

ABRD 5144. International Study—Middle East. 20 Hours.
Offers an opportunity to study in the Middle East. May be repeated without limit.

ABRD 5145. International Study—Japan. 20 Hours.
Offers an opportunity to study in Japan. May be repeated without limit.

ABRD 5146. International Study—Scotland. 20 Hours.
Offers an opportunity to study in Scotland. May be repeated without limit.

ABRD 5147. International Study—Greece. 20 Hours.
Offers an opportunity to study in Greece. May be repeated without limit.

ABRD 5148. International Study—Dominican Republic. 20 Hours.
Offers an opportunity to study in the Dominican Republic. May be repeated without limit.

ABRD 5150. International Study—Denmark. 20 Hours.
Offers an opportunity to study in Denmark. May be repeated without limit.

ABRD 5151. International Study—Turkey. 20 Hours.
Offers an opportunity to study in Turkey. May be repeated without limit.

ABRD 5152. International Study—Thailand. 20 Hours.
Offers an opportunity to study in Thailand. May be repeated without limit.

ABRD 5153. International Study—Netherlands. 20 Hours.
Offers an opportunity to study in the Netherlands. May be repeated without limit.

ABRD 5154. International Study—Central Europe. 20 Hours.
Offers an opportunity to study in Central Europe. May be repeated without limit.

ABRD 5155. International Study—Switzerland. 20 Hours.
Offers an opportunity to study in Switzerland. May be repeated without limit.

ABRD 5156. International Study—Peru. 20 Hours.
Offers an opportunity to study in Peru. May be repeated without limit.

ABRD 5157. International Study—Hungary. 20 Hours.
Offers an opportunity to study in Hungary. May be repeated without limit.

ABRD 5158. International Study—Korea. 20 Hours.
Offers an opportunity to study in Korea. May be repeated without limit.

ABRD 5159. International Study—Russia. 20 Hours.
Offers an opportunity to study in Russia. May be repeated without limit.

ABRD 5160. International Study—Brazil. 20 Hours.
Offers an opportunity to study in Brazil. May be repeated without limit.

ABRD 5161. International Study—Iceland. 20 Hours.
Offers an opportunity to study in Iceland. May be repeated without limit.

ABRD 5162. International Study—Benin. 20 Hours.
Offers an opportunity to study in Benin. May be repeated without limit.

ABRD 5163. International Study—Cuba. 20 Hours.
Offers an opportunity to study in Cuba. May be repeated without limit.

ABRD 5164. International Study—India. 20 Hours.
Offers an opportunity to study in India. May be repeated without limit.

ABRD 5165. International Study—Caribbean. 20 Hours.
Offers an opportunity to study in the Caribbean. May be repeated without limit.

ABRD 5166. International Study—Armenia. 20 Hours.
Offers an opportunity to study in Armenia. May be repeated without limit.

ABRD 5167. International Study—Morocco. 20 Hours.
Offers an opportunity to study in Morocco. May be repeated without limit.

ABRD 5168. International Study—Germany. 20 Hours.
Offers an opportunity to study in Germany. May be repeated without limit.

ABRD 5169. International Study—Serbia. 20 Hours.
Offers an opportunity to study in Serbia. May be repeated without limit.

ABRD 5170. International Study—Austria. 20 Hours.
Offers an opportunity to study in Austria. May be repeated without limit.

ABRD 5171. International Study—Lebanon. 20 Hours.
Offers an opportunity to study in Lebanon. May be repeated without limit.

ABRD 5172. International Study—Senegal. 20 Hours.
Offers an opportunity to study in Senegal. May be repeated without limit.

ABRD 5173. International Study—South Korea. 20 Hours.
Offers an opportunity to study in South Korea. May be repeated without limit.

ABRD 5174. International Study—Kenya. 20 Hours.
Offers an opportunity to study in Kenya. May be repeated without limit.

ABRD 5175. International Study—Syria. 20 Hours.
Offers an opportunity to study in Syria. May be repeated without limit.

ABRD 5176. International Study—Balkans. 20 Hours.
Offers an opportunity to study in the Balkans. May be repeated without limit.

ABRD 5177. International Study—Uganda. 20 Hours.
Offers an opportunity to study in Uganda. May be repeated without limit.
ABRD 5178. International Study—Rwanda. 20 Hours.
Offers an opportunity to study in Rwanda. May be repeated without limit.

ABRD 5179. International Study—Wales. 20 Hours.
Offers an opportunity to study in Wales. May be repeated without limit.

ABRD 5180. International Study—Portugal. 20 Hours.
Offers an opportunity to study in Portugal. May be repeated without limit.

ABRD 5181. International Study—Indonesia. 20 Hours.
Offers an opportunity to study in Indonesia. May be repeated without limit.

ABRD 5182. International Study—Trinidad and Tobago. 20 Hours.
Offers an opportunity to study in Trinidad and Tobago. May be repeated without limit.

ABRD 5183. International Study—Jordan. 20 Hours.
Offers an opportunity to study in Jordan. May be repeated without limit.

ABRD 5184. International Study—Ecuador. 20 Hours.
Offers an opportunity to study in Ecuador. May be repeated without limit.

ABRD 5185. International Study—Tunisia. 20 Hours.
Offers an opportunity to study in Tunisia. May be repeated without limit.

ABRD 5186. International Study—Cameroon. 20 Hours.
Offers an opportunity to study in Cameroon. May be repeated without limit.

ABRD 5187. International Study—Zambia. 20 Hours.
Offers an opportunity to study in Zambia. May be repeated without limit.

ABRD 5188. International Study—Taiwan. 20 Hours.
Offers an opportunity to study in Taiwan. May be repeated without limit.

ABRD 5189. International Study—Poland. 20 Hours.
Offers an opportunity to study in Poland. May be repeated without limit.

ABRD 5190. International Study—Iran. 20 Hours.
Offers an opportunity to study in Iran. May be repeated without limit.

ABRD 5191. International Study—Bonaire. 20 Hours.
Offers an opportunity to study in Bonaire. May be repeated without limit.

ABRD 5192. International Study—Grenada. 20 Hours.
Offers an opportunity to study in Grenada. May be repeated without limit.

ABRD 5193. International Study—Tanzania. 20 Hours.
Offers an opportunity to study in Tanzania. May be repeated without limit.

ABRD 5194. International Study—Oman. 20 Hours.
Offers an opportunity to study in Oman. May be repeated without limit.

ABRD 5195. International Study—Lithuania. 20 Hours.
Offers an opportunity to study in Lithuania. May be repeated without limit.

ABRD 5196. International Study—Oman. 20 Hours.
Offers an opportunity to study in Oman. May be repeated without limit.

ABRD 5197. International Study—Bhutan. 20 Hours.
Offers an opportunity to study in Bhutan. May be repeated without limit.

ABRD 5198. International Study—Jamaica. 20 Hours.
Offers an opportunity to study in Jamaica. May be repeated without limit.

ABRD 5199. International Study—Finland. 20 Hours.
Offers students an opportunity to study in Finland. May be repeated without limit.

ABRD 5200. International Study—Norway. 20 Hours.
Offers students an opportunity to study in Norway. May be repeated without limit.

ABRD 5201. International Study—Kazakhstan. 20 Hours.
Offers students an opportunity to study in Kazakhstan. May be repeated without limit.

ABRD 5202. International Study—Botswana. 20 Hours.
Offers students an opportunity to study in Botswana. May be repeated without limit.

ABRD 5203. International Study—United States. 20 Hours.
Offers students an opportunity to study in the United States. May be repeated without limit.

ABRD 5204. International Study—Croatia. 20 Hours.
Offers students an opportunity to study in Croatia. May be repeated without limit.

ABRD 5205. International Study—Panama. 20 Hours.
Offers students an opportunity to study in Panama. May be repeated without limit.

ABRB 5100. International Study—Argentina. 20 Hours.
Offers an opportunity to study in Argentina. May be repeated without limit.

ABRB 5101. International Study—Canada. 20 Hours.
Offers an opportunity to study in Canada. May be repeated without limit.

ABRB 5102. International Study—France. 20 Hours.
Offers an opportunity to study in France. May be repeated without limit.

ABRB 5103. International Study—Germany. 20 Hours.
Offers an opportunity to study in Germany. May be repeated without limit.

ABRB 5104. International Study—Ireland. 20 Hours.
Offers an opportunity to study in Ireland. May be repeated without limit.

ABRB 5105. International Study—Netherlands. 20 Hours.
Offers an opportunity to study in the Netherlands. May be repeated without limit.

ABRB 5106. International Study—Singapore. 20 Hours.
Offers an opportunity to study in Singapore. May be repeated without limit.

ABRB 5107. International Study—Spain. 20 Hours.
Offers an opportunity to study in Spain. May be repeated without limit.

ABRB 5108. International Study—Chile. 20 Hours.
Offers an opportunity to study in Chile. May be repeated without limit.

ABRB 5109. International Study—Mexico. 20 Hours.
Offers an opportunity to study in Mexico. May be repeated without limit.

ABRB 5110. International Study—China. 20 Hours.
Offers an opportunity to study in China. May be repeated without limit.

ABRB 5111. International Study—Italy. 20 Hours.
Offers an opportunity to study in Italy. May be repeated without limit.

ABRB 5112. International Study—Hong Kong. 20 Hours.
Offers an opportunity to study in Hong Kong. May be repeated without limit.

ABRB 5113. International Study—Greece. 20 Hours.
Offers an opportunity to study in Greece. May be repeated without limit.
Offers an opportunity to study in England. May be repeated without limit.

ABRB 5115. International Study—Costa Rica. 20 Hours.
Offers an opportunity to study in Costa Rica. May be repeated without limit.

ABRB 5116. International Study—Japan. 20 Hours.
Offers an opportunity to study in Japan. May be repeated without limit.

ABRB 5117. International Study—Brazil. 20 Hours.
Offers an opportunity to study in Brazil. May be repeated without limit.

Study Abroad - Law (ABRL)

ABRL 5100. International Study—Argentina. 0 Hours.
Offers an opportunity to study in Argentina. May be repeated without limit.

ABRL 5101. International Study—Chile. 0 Hours.
Offers an opportunity to study in Chile. May be repeated without limit.

ABRL 5102. International Study—Italy. 0 Hours.
Offers an opportunity to study in Italy. May be repeated without limit.

ABRL 5103. International Study—Mexico. 0 Hours.
Offers an opportunity to study in Mexico. May be repeated without limit.

ABRL 5104. International Study—Costa Rica. 0 Hours.
Offers an opportunity to study in Costa Rica. May be repeated without limit.

ABRL 5105. International Study—China. 0 Hours.
Offers an opportunity to study in China. May be repeated without limit.

ABRL 5106. International Study—Turkey. 0 Hours.
Offers an opportunity to study in Turkey. May be repeated without limit.

ABRL 5107. International Study—England. 0 Hours.
Offers an opportunity to study in England. May be repeated without limit.

ABRL 5108. International Study—France. 0 Hours.
Offers an opportunity to study in France. May be repeated without limit.

ABRL 5109. International Study—School of Law. 0 Hours.
Offers an opportunity to study off-campus with the School of Law. May be repeated without limit.

ABRL 5110. International Study—Colombia. 0 Hours.
Offers an opportunity to study in Colombia. May be repeated without limit.

ABRL 5111. International Study—Brazil. 0 Hours.
Offers students an opportunity to study in Brazil. May be repeated without limit.

ABRL 5112. International Study—South Africa. 0 Hours.
Offers students an opportunity to study in South Africa. May be repeated without limit.

ABRL 5113. International Study—Spain. 0 Hours.
Offers students an opportunity to study in Spain. May be repeated without limit.

Study Abroad - Science (ABRS)

ABRS 5120. International Study—Three Seas Program. 20 Hours.
Offers an opportunity to study in the Three Seas Program. May be repeated without limit.

Study Abroad - Social Sciences and Humanities (ABRH)

ABRH 5001. International Study—University of Amsterdam. 20 Hours.
Offers students an opportunity to study at the University of Amsterdam. May be repeated without limit.

ABRH 6000. Study Abroad. 1-12 Hours.
Offers students an opportunity to study abroad at a partner university. May be repeated up to 11 times for up to 12 total credits.

Study USA (ABRU)

ABRU 5100. Study in the United States of America. 20 Hours.
Offers an opportunity to study at an off-campus location in the United States of America. May be repeated without limit.

Supply Chain Management (SCHM)

SCHM 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SCHM 2201. Supply Chain Management. 2 Hours.
Analyzes the role and activities of those involved in supply chain management decision making. Emphasizes the importance of transportation planning, inventory control, warehouse management, development of customer service standards, and procurement in the design and operation of supply and distribution systems. Attention is given to the importance of information systems and the Internet in supporting such activities. Special attention is given to the need to develop close working relationships with managers in other functional areas including manufacturing, information systems, marketing, and international operations. This integrative approach to management is critical in supporting supply chain cost and service improvements.

SCHM 2301. Supply Chain and Operations Management. 4 Hours.
Focuses on the integrative management of business activities intrinsic to the smooth flow of goods or services, information, and financial transactions across firms from raw materials to the end customer. This collaborative approach creates competitive advantages for all members of a supply chain. Emphasizes the responsibilities of managers regarding decisions concerning the design, operation, and control of supply chains and operations. Considers customers, globalization, corporate strategy, resources, sustainability, ethics, and diversity. Topics covered include customer-centric management; supply chain and operations strategies; process structure and control; and supply, inventory, and quality management. Emphasizes the key role of information technology, logistics network design, supply chain relationships, and process evolution.

SCHM 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SCHM 3301. Global Supply Chain Strategy. 4 Hours.
Focuses on the managerial activities of those involved in supply chain management operations and planning for companies doing international commerce. Analyzes contemporary issues that affect the design of international supply chain systems, including sourcing, logistics, transactions, risk, sustainability, and ethical considerations. Examines the current status and future prospects of the modes of international transportation as well as international trade and development issues, not only from the corporate perspective but also in terms of government policy.
SCHM 3305. Sourcing and Procurement. 4 Hours.
Addresses the strategic and operational role of sourcing and procurement and its impact on the supply chain as it relates to the entire organization. The selection, contracting, development and monitoring/managing of the right supplier in the right location is more often a source of competitive advantage and a major contributor to a company's bottom line. The course focuses on a variety of aspects of this function—strategy development, organization, procedures, supplier selection, negotiations, buyer-supplier relationship management, quantity, quality, timeliness, and cost/price considerations for the purchase of goods and services.

SCHM 3308. Supply Chain Analytics. 4 Hours.
Examines state-of-the-art in analytics capabilities and how they drive supply chains, from marketing to sourcing. Examines how organizations use analytics to meet their strategic objectives, provide value to the business, and make decisions. Offers students an opportunity to develop strategic supply chain decision-making skills using the latest analytics capabilities as an enabler. Focuses heavily on industry best practices, including looking at some of the leading companies.

SCHM 3310. Logistics and Transportation Management. 4 Hours.
Examines the logistics and transportation operations, including the structure, challenges, and potential of the major modes of domestic transportation. Focuses on the interaction between logistics providers and shippers in the marketplace. Explores the major dynamics of the logistics marketplace and their impact on supply chain management. Seeks to provide students with a managerial perspective on controlling what is typically the most expensive component of supply chain management, transportation expenditures.

SCHM 3320. Demand Planning and Forecasting. 4 Hours.
Offers a practical introduction to demand (sales) planning and forecasting for business students. Focuses on the organizational processes in managing demand as well as generating a forecast, regression analysis, exponential smoothing, time-series analysis, judgmental forecasting methods, and evaluation of forecast quality. Uses real-life data and various software packages to illustrate basic concepts.

SCHM 3330. Sustainability and Supply Chain Management. 4 Hours.
Focuses on how to create sustainable supply chains that profitably yield high-quality, safe products without supply interruption while creating a net benefit for the employees, community, and the environment. Studies how companies measure environmental performance and use the data to motivate associates, suppliers, customers, policymakers, and the public. Also addresses the impacts of global sustainability frameworks and measures.

SCHM 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SCHM 4401. Advanced Problems in Supply Chain Management. 4 Hours.
Identifies and examines important issues that are of strategic importance to executives involved in supply chain management. Emphasizes the decision-making processes and tools employed by those executives in the context of corporate strategic management. While case studies are extensively employed, there is an important independent research component to the course, and research findings are discussed with the class and shared through presentations. Also involves companies and executives from supply chain service providers.

SCHM 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8 credit honors project. May be repeated without limit.

SCHM 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

SCHM 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SCHM 4993. Independent Study. 1-4 Hours.
Allows students who have received approval to undertake independent study in lieu of any course required in the various concentrations. Students present proposals to an Independent Studies Committee for evaluation and approval. Every proposal requires a detailed outline of the objectives and plan of study and must be accompanied by a supporting statement from the supervising faculty member under whose direction the study takes place. A copy of the final report prepared by the student is presented to the appropriate Independent Studies Committee. Further information about the Independent Studies Program can be obtained from concentration coordinators. May be repeated without limit.

SCHM 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

SCHM 5978. Independent Study. 1-4 Hours.
Allows students who have received approval to undertake independent study in lieu of any course required in the various concentrations. Students present proposals to an Independent Studies Committee for evaluation and approval. Every proposal requires a detailed outline of the objectives and plan of study and must be accompanied by a supporting statement from the supervising faculty member under whose direction the study takes place. A copy of the final report prepared by the student is presented to the appropriate Independent Studies Committee. Further information about the Independent Studies Program can be obtained from concentration coordinators. May be repeated without limit.

SCHM 6200. Supply Chain and Operations Management. 4 Hours.
Focuses on integrative management of the flow of goods, services, and related information from product development, sourcing and procurement, production operations and control, logistics management, and attendant management of relationships between firms through delivery to end consumer. Offers students an opportunity to gain foundational knowledge on supply chain and operations management concepts and techniques.

SCHM 6201. Operations and Supply Chain Management. 3 Hours.
Focuses on the integrative management of processes and activities involved in transformation and delivery of goods and services. Offers students an opportunity to obtain foundational knowledge on operations and supply chain management concepts, techniques, and functions. Topics covered include sourcing and procurement, manufacturing and service operations, process design and control, quality management, capacity planning, demand planning and forecasting, inventory management, transportation and distribution management, interfirm relationship management, and attendant information flows.

SCHM 6208. Managing the Supply Chain. 2 Hours.
Examines the decision-making process in supply chain management. Emphasizes an integrative management approach that not only links traditional logistics management to other corporate functions, such as manufacturing, marketing, and international operations, but also synchronizes these activities with the company's vendors and customers. Attention is also given to the importance of information systems and the Internet in supporting these linkages. This integrative approach to management is critical in supporting supply chain cost and service improvements.
SCHM 6210. Supply Chain Management. 3 Hours.
Analyzes the role and activities of those involved in supply chain management decision making. Emphasizes the importance of transportation planning, inventory control, warehouse management, development of customer service standards, and procurement in the design and operation of supply and distribution systems. Emphasis is on the importance of information systems and the Internet in supporting such activities. Special attention is also given to the close working relationships with managers in other functional areas including manufacturing, information systems, marketing, and international operations. This integrative approach to management is critical in supporting supply chain cost and service improvements.

SCHM 6211. Logistics and Transportation Management. 3 Hours.
Examines the logistics and transportation operations, including the structure, challenges, and potential of the major modes of domestic transportation. Focuses on the interaction between logistics providers and shippers in the marketplace. Explores the major dynamics of the logistics marketplace and their impact on supply chain management. Offers students a managerial perspective on controlling what is typically the most expensive component of supply chain management, transportation expenditures.

SCHM 6212. Executive Roundtable in Supply Chain Management. 3 Hours.
Structured around the participation of upper-level corporate executives in the classroom. Topics covered and executives participating are based on the most important contemporary issues in supply chain management. Operates on a seminar basis with extensive interaction between students and executives. Also comprises a strong individual research focus with students completing a major research paper during the term.

SCHM 6213. Global Supply Chain Strategy. 3 Hours.
Focuses on the managerial activities of those involved in supply chain management operations and planning for companies involved in international commerce. Analyzes contemporary issues that affect the design of international supply chain systems and strategies, including sourcing, logistics, transactions, risk, and ethical considerations. Examines the current status and future prospects of the modes of international logistics operations as well as international trade and development issues, not only from the corporate perspective but also in terms of government policy.

SCHM 6214. Sourcing and Procurement. 3 Hours.
Addresses the strategic and operational role of sourcing and procurement and its impact on the supply chain as it relates to the entire organization. The selection, contracting, development, and monitoring/managing of the right supplier in the right location is more often a source of competitive advantage and a major contributor to a company’s bottom line. Focuses on a variety of aspects of this function—strategy development, organization, procedures, supplier selection, negotiations, buyer-supplier relationship management, quantity, quality, timeliness, and cost/price considerations for the purchase of goods and services. Emphasizes the perspective of the sourcing and procurement manager. The key questions addressed in this course are: What does the manager need to know to be effective? How do they apply key concepts?

SCHM 6215. Supply Chain Analytics. 3 Hours.
Designed to develop strategic decision-making skills using the latest analytics capabilities and enabler. Examines the state of the art in analytics capabilities and how these drive supply chains, from marketing to sourcing. Also examines how organizations use analytics to meet their strategic objectives, provide value to the business, and make decisions. Focuses on industry best practices, including studying some of the leading companies.

SCHM 6216. Market-Driven Supply Chains. 3 Hours.
Introduces students to concepts of how companies may develop capabilities for managing rapid reconfiguration of supply chains, strategic outsourcing, capacity and information sharing, collaboration, contracts, and risk management. Exposes students to what suppliers need to develop to ensure responsiveness and efficiency in this changing environment. This may entail shared processes across multiple enterprises with high visibility and speed in an uncertain environment.

SCHM 6218. Offshore Outsourcing. 3 Hours.
Reviews models for offshoring activities. Explores the factors that help in deciding to offshore different business areas. Also reviews the pitfalls and the management actions needed to embark on successful offshoring. Examines the strategic and management issues generated by the outsourcing phenomenon. Supplements theoretical material with case studies of firms that have engaged in offshoring technology and product development, as well as other functions such as financial analysis, human resources, and legal services.

SCHM 6220. Growing and Protecting Business Value through the Supply Chain. 3 Hours.
Designed to provide insights into how supply chain innovators are elevating their strategic value within organizations. Focuses on a number of emerging leadership models by examining strategic, value-added opportunities for building supply chain management (SCM) innovation as a core competency; connecting SCM to boardroom goals; building an understanding of high-performance SCM systems; assessing and configuring innovative SCM strategies; and managing change in a dynamic global SCM environment. Offers students an opportunity to learn and practice the tools and frameworks and build their skills as well as diagnostically evaluate current operating models.

SCHM 6221. Sustainability and Supply Chain Management. 3 Hours.
Focuses on how to create sustainable supply chains that profitably yield high-quality, safe products without supply interruption while creating a net benefit for the employees, community, and the environment. Studies how companies measure environmental performance and use the data to motivate associates, suppliers, customers, policy makers, and the public. Also addresses the impacts of global sustainability frameworks and measures.

SCHM 6222. Managing Emerging Issues in Supply Chain Management. 3 Hours.
Focuses on developing competency in management of new and emerging issues in the supply chain across industries. Emphasizes strategic and tactical response to changes in the business environment that have major impacts on a company’s supply chain operations and competitiveness. Topics covered vary but may include supply chain changes due to mergers and acquisitions, security breach, product recalls, natural disasters, geopolitical events, sustainability, business-to-business relationship dynamics, etc.

SCHM 6223. Managing Healthcare Supply Chain Operations. 3 Hours.
Examines concepts and topics related to the design and management of supply chain operations in the healthcare sector. Focuses on activities and functions such as inventory control, order fulfillment, logistics, procurement, managing processes, relationship management, and information technology systems. Introduces various tools and techniques that enhance effective supply chain operations in healthcare organizations.
SCHM 6224. Demand Planning and Forecasting. 3 Hours.
Offers a practical introduction to demand (sales) forecasting for business students. Focuses on the organizational processes in generating a forecast, regression analysis, exponential smoothing, time-series analysis, judgmental forecasting methods, and evaluation of forecast quality. Uses real-life data and various software packages to illustrate basic concepts.

SCHM 6280. Strategic Management of Supply Chains. 3 Hours.
Analyzes the role and activities of those involved in supply chain management decision making. Emphasizes the importance of transportation planning, inventory control, warehouse management, development of customer service standards, and procurement in the design and operation of supply and distribution systems. Emphasis is on the importance of information systems and the Internet in supporting such activities. Special attention is also given to the close working relationships with managers in other functional areas including manufacturing, information systems, marketing, and international operations. This integrative approach to management is critical in supporting supply chain cost and service improvements in high-technology industries.

SCHM 6290. Sourcing, Making, and Delivering Goods in a Dynamic, Global Business Environment. 2 Hours.
Offers students an opportunity to understand the key trends and challenges associated with supply chain management (SCM), the importance of collaboration and information quality, the impact of SCM on financial performance, and emerging best practices in SCM. Specific topics in SCM, which encompasses all of the business processes involved in sourcing, making, and delivering goods, include analyzing models of SCM, strategies for synchronizing supply and demand; identifying the challenges and opportunities when supply chains are global; understanding the impact of logistics trends on the distribution-related processes of SCM; and exploring the impact of emerging trends such as sustainability, risk management, mobile and social media technologies, and regulations on the future of SCM. Open to high-technology students.

SCHM 6960. Exam Preparation—Master’s. 0 Hours.
Offers the student the opportunity to prepare for the master’s qualifying exam under faculty supervision.

SCHM 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SCHM 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.

SCHM 7976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.

SBSY 5100. Sustainable Design and Technologies in Construction. 4 Hours.
Covers theory of sustainability and green building procedures; sustainable design and construction practices; use of appropriate materials and systems with low environmental impact for creating energy-efficient buildings; green construction practices, including reducing pollution, emissions, and construction waste; and U.S. Green Building Council’s LEED rating system. May be helpful to students preparing for the LEED Green Associate examination.

SBSY 5200. Sustainable Engineering Systems for Buildings. 4 Hours.
Focuses on basic design and construction of mechanical/electrical/plumbing (MEP) systems in buildings. Covers MEP documentation, plumbing water supply, HVAC systems, electrical power supply and distribution, lighting systems, low-voltage electrical systems, and estimating and planning for these specialty areas. Also addresses sustainable design and construction practices for MEP, including minimization of energy consumption and carbon footprint.

SBSY 5300. Information Systems for Integrated Project Delivery. 4 Hours.
Focuses on new software systems for increasing efficiency of project delivery and facilitating design and construction integration through the use of BIM (Building Information Modeling) and related technologies. Exposes students to various software systems, including hands-on cases of BIM use, 4D (construction drawings linked to schedule) modeling, and 5D models (4D + cost). Covers the impact of new technology on project delivery, including owner’s perspective, advantages, and disadvantages. Also covers use and background of common industry systems to apply BIM concepts to construction projects.

SBSY 5400. Sustainable Building Systems Seminar. 0 Hours.
Features prominent speakers from the sustainable building design and construction industry to showcase new building technologies, tools, and projects and to discuss national and international trends in the industry. Offers students an opportunity to meet innovators and key players advancing the field of sustainable building systems.

Sustainable Urban Environments (SUEN)

SUEN 6110. Graduate Studio 1: Sustainable Urban Sites. 6 Hours.
Offers a studio-based graduate-level introduction to design and management of sustainable urban sites. Core topics include fundamental site analysis, formal organization, spatial definition, and site operations. Emphasizes the contextual, programmatic, performative, aesthetic, and experiential aspects of waterfront and brownfield revitalization, with a focus on urban and landscape ecology best management practices (BMPs). Key tools and media are introduced and practiced in increasingly complex applications, including basic drawing, modeling, and design software.

SUEN 6120. Graduate Studio 2: Sustainable Urban Systems. 6 Hours.
Offers a graduate-level studio following SUEN 6110 and introducing fundamental landscape planning, design, and strategic management of environmental infrastructures at the urban and regional scale. Core topics include the spatial and operational role in the built landscape of living systems—such as constructed wetlands, urban forests, urban wilds, and managed habitats—and their dynamic relationship to recreation, transit, food, housing, and industrial networks. Emphasizes the integration of constructed ecologies into the cultural landscape around issues of environmental justice. Continues the introduction of key tools and media from SUEN 6110, including advanced digital drawing, modeling, and design communication.

SUEN 6210. Implementation and Visualization for Urban Environments. 1. 4 Hours.
Offers an intensive introduction to site analysis and manipulation of earthworks, water, and vegetation, with a focus on disturbance regimes within waterfront and brownfield zones. Core topics emphasize the ecological services promoted by the urban environment, including urban soil structure; contouring the urban surface; regional plant communities; and storm water, surge, and tidal flux management. Supports development of implementation skills by training in vector, raster, and 3D modeling software. Constitutes the first half of a two-part sequence and provides the foundation for SUEN 6220.
SUEN 6220. Implementation and Visualization for Urban Environments 2. 4 Hours.
Constitutes the second half of a two-part sequence and builds upon material in SUEN 6210. Core topics include an introduction to regional landscape ecology in urbanized watersheds. Focuses on landscape-scale systems and soft infrastructure. Introduces GIS and geo-design software as a lens to learn about and visualize change in regional environments. Offers students an opportunity to advance landscape analysis and visualization skills through further training in vector, raster, and 3D modeling software.

SUEN 6310. Cities, Nature, and Design in Contemporary History and Theory. 4 Hours.
Offers a lecture course presenting a historical overview of evolving cultural, environmental, and technological influences on societal attitudes toward the relationship of cities, nature, and design. Core topics include the emergence of critical theories, aesthetic philosophies, and design typologies in the modern era of industrialization and the subsequent impact of information, participation, and globalization trends on twenty-first-century-designed urban environments.

SUEN 6340. Topics in Urban Environmental Design. 4 Hours.
Offers a lecture- and discussion-based course focusing on research themes relevant to the MDes-SUEN graduate program curriculum. Topics are developed based upon instructor’s research relative to particular urban, ecological, sociological, landscape architectural, or technical subjects. Exposes students to cutting-edge methods of research and practice in designed urban environments. May be repeated up to two times.

SUEN 6964. Co-op Work Experience. 0 Hours.
Offers eligible students an opportunity for work experience. May be repeated up to two times.

SUEN 6966. Practicum. 1-4 Hours.
Offers eligible students an opportunity for practical experience. May be repeated up to seven times for up to 8 total credits.

SUEN 7130. Master’s Research Studio: Design and the Resilient City. 6 Hours.
Offers an advanced graduate studio focusing on contemporary landscape and urbanism research strategies. Themes include ecological, economic, and social resiliency in urban environments. Offers students an opportunity to formulate original approaches to design research. Uses integrated analysis, visualization, and conceptualization skills to progress through group and individual exercises with a focus on design thinking for climate change, water rise, public health and security, and other issues of global relevance. Requires the formulation of a design thesis for resilient urban environments, presented and defended in written, oral, and digital formats, which provides the basis for development of individual design proposals in SUEN 7140. Requires permission of the Urban Landscape program for students without a BARCH, BLA, MARCH, MCP, MLA, MRP, MUD, or equivalent. May be repeated once.

SUEN 7140. Master’s Research Studio: Master’s Project. 6 Hours.
Constitutes the second half of the Master’s Research Studio sequence. Using the design thesis established in SUEN 7130, offers students an opportunity to formulate proposals for intervention into a specific urbanized environment. Individual projects progress with instructor guidance from schematic phasing through design development, with a focus on change management and vitalization of the ecological, economic, social, and aesthetic facets of contemporary cities and regions. Requires individual presentation and defense of master’s projects in written, oral, and digital formats. May be repeated once.

SUEN 7230. Urban Ecologies and Technologies 1. 4 Hours.
Offers a workshop-based course as the first in a two-part sequence. Lectures, in-class exercises, and site-based investigation use case-study methods to document ecotechnologies operating in the built environment, with a focus on design and implementation metrics, material life cycle management, funding models, and aesthetic and cultural aspects. Potential topics include green roofs, green walls, bioswales, pervious pavements, constructed wetlands, “complete streets” elements, geosensor networks, alternative waste management, water detention and energy generation methods, and living infrastructure for coastal environments.

SUEN 7240. Urban Ecologies and Technologies 2. 4 Hours.
Offers a community outreach course as the second in a two-part sequence and builds upon SUEN 7230. The core theme is development of innovative, market-based ecotechnology prototypes for the urban landscape that contribute to the environmental and cultural life of the city. With instructor guidance, offers students an opportunity to identify a potential ecotechnology project to design through engagement with community members, public, or institutional clients. The course outcome includes site documentation; a schematic design proposal produced by students working in groups; and, if appropriate in terms of time, budget, and scale, implementation.

SUEN 7320. Pro-Seminar: Issues in Designed Urban Environments. 4 Hours.
Offers an advanced graduate seminar examining the forces shaping designed urban environments in contemporary global culture. A diverse range of material from published design criticism to open source social media engagement provides basis for discussion and written and oral presentations. Course themes determined by the instructor parallel the studio sequence SUEN 7130 and SUEN 7140, although discussion topics are broadly presented to engage graduate students from any background. May be repeated up to three times.

SUEN 7978. Independent Study. 1-6 Hours.
Offers independent work under the direction of members of the department and/or interdisciplinary faculty. Course content is defined and approved by instructor. May be repeated up to 11 times for up to 12 total credits.

Swahili (SWHL)

SWHL 1101. Elementary Swahili 1. 4 Hours.
Designed for students with very little or no prior knowledge of Swahili. Focuses on developing the student’s competency in listening, speaking, reading, and writing Swahili. An important component in Swahili language is its unique cultural application, which aspects will be highlighted as necessary to help enhance learning. Swahili is the most widely spoken language in eastern Africa and parts of countries such as Somalia, Angola, the DRC-Congo, Burundi, and Rwanda. It is also spoken by a large number of people around the world in the diaspora. This course is designed to build the learner’s ability to communicate in Swahili in different social and professional settings.

SWHL 1102. Elementary Swahili 2. 4 Hours.
Continues to provide students with the opportunity to develop competency in listening, speaking, reading, and writing Swahili. Offers progressively more intense practice in spoken and written communication. An important component in Swahili language is its unique cultural application, which aspects will be highlighted as necessary to help enhance learning.
SWHL 1301. Elementary Swahili Immersion 1. 4 Hours.
Designed for students who are in a Swahili-speaking country, this is an off-campus immersion course. Focuses on standard Swahili. Offers students an opportunity to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

SWHL 1302. Elementary Swahili Immersion 2. 4 Hours.
Designed for students who are in a Swahili-speaking country, this is an off-campus immersion course. Focuses on standard Swahili. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

SWHL 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SWHL 2101. Intermediate Swahili 1. 4 Hours.
Emphasizes further vocabulary building. Offers students an opportunity to continue to master the fine points of grammar through written composition, prepared oral reports, and reading and discussion from contemporary Swahili materials.

SWHL 2102. Intermediate Swahili 2. 4 Hours.
Builds on SWHL 2101 and focuses on further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through written composition, prepared oral reports, and reading and discussion from contemporary Swahili materials.

SWHL 2301. Intermediate Swahili Immersion 1. 4 Hours.
Designed for students who are in a Swahili-speaking country, this is an off-campus immersion course. Focuses on standard Swahili. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

SWHL 2302. Intermediate Swahili Immersion 2. 4 Hours.
Designed for students who are in a Swahili-speaking country, this is an off-campus immersion course. Focuses on standard Swahili. Offers students an opportunity to continue to develop grammatical and conversational competence. Focuses on oral and aural skills that are enhanced by the immersion environment.

SWHL 2900. Specialized Instruction in Swahili. 1-4 Hours.
Designed for individuals whose language skills are at an advanced level and who seek specially focused language instruction. Such instruction might be the use of the language in specific settings, or it might be focused on specific conversational nuances of the language. Requires at least an advanced level of competence in the language. May be repeated without limit.

SWHL 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SWHL 3101. Advanced Swahili 1. 4 Hours.
Continues further development of vocabulary. Offers students an opportunity to continue to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

SWHL 3102. Advanced Swahili 2. 4 Hours.
Builds on SWHL 3101 and continues further development of vocabulary. Offers students an opportunity to master grammar and conversation through advanced reading, composition, grammar review, and listening skills. Whenever possible, offers students an opportunity to engage in local community activities to enhance communication skills and cultural knowledge.

SWHL 3301. Advanced Swahili Immersion 1. 4 Hours.
Designed for students who are in a Swahili-speaking country, this is an off-campus immersion course. Focuses on standard Swahili as well as the local dialect. Offers students an opportunity to continue to develop grammatical and conversational competence.

SWHL 3302. Advanced Swahili Immersion 2. 4 Hours.
Designed for students who are in a Swahili-speaking country, this is an off-campus immersion course. Focuses on standard Swahili as well as the local dialect. Offers students an opportunity to continue to develop grammatical and conversational competence.

SWHL 3800. Special Topics in Swahili. 1-4 Hours.
Focuses on a unique aspect of the Swahili language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an intermediate level of skill in the language. May be repeated up to three times.

SWHL 3900. Specialized Instruction in Swahili. 1-4 Hours.
Designed for individuals whose language skills are at an advanced level and who seek specially focused language instruction. Such instruction might be in specific settings, or it might be focused on specific conversational nuances of the language. Requires at least an advanced level of competence in the language. May be repeated without limit.

SWHL 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SWHL 4800. Special Topics in Swahili. 1-4 Hours.
Focuses on a unique aspect of the Swahili language. The specific topics are chosen to reflect current developments in the language and expressed student interests. Focuses on the use of the language for specific purposes or its use in specialized settings (e.g., media, business, health). Requires at least an advanced level of skill in the language. May be repeated up to four times.

SWHL 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

SWHL 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

SWHL 4992. Directed Study. 1-4 Hours.
Offers students a way of going beyond work given in the regular curriculum; may also enable students to complete major or minor requirements in certain situations. Priority is given to language majors and to juniors and seniors. May be repeated without limit.

SWHL 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated up to three times.

SWHL 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.
TCC 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TCC 2200. Introduction to Technical Writing. 3 Hours.
Presents the elements of technical writing: performing audience analysis, conducting content-focused research, planning and structuring content, and designing documents/media for targeted audiences. Applies the output of content development, the results of information-gathering techniques, and the structure of content to a variety of media such as printed and electronic documents, Web content, and instructional materials. Offers students an opportunity to practice organizing, designing, researching, authenticating, formatting, writing, and editing content used in a variety of technical documents/media and for a variety of technical/nontechnical audiences; to examine a variety of technical documentation/media types; and to describe objects, mechanisms, or processes.

TCC 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TCC 3200. Digital and Social Communication Technologies. 3 Hours.
Identifies and examines social media monitoring tools, language translation systems, document storage technologies, and content and learning management systems. Examines Internet (Web) delivery systems and describes social media platforms. Explores usability issues, digital file management fundamentals, and digital file naming systems. Offers students an opportunity to perform basic Web-oriented coding (HTML+); to describe the Web and the role of social media; to compare and contrast major Web technologies, content, and learning management systems; and to explore usability issues.

TCC 3210. Technical Editing. 3 Hours.
Examines the role of the technical editor in business, industry, the sciences, and within organizations. Identifies technical editorial techniques: proofreading, correcting grammar and syntax, correcting spelling, and researching technical terms and methods available for the analysis and critique of manuscripts/media. Describes working with authors, technical writers, and subject-matter experts (SMEs) such as scientists and engineers. Offers students an opportunity to practice technical editing skills, project editing, creating a consistent look and feel to documents/media, revising and rebuilding projects, working collaboratively, and presenting edits and corrections.

TCC 3220. Technical Promotional Writing. 3 Hours.
Explores the structure, style, and graphic presentation of technical content as rendered through promotional data sheets, brochures, and online advertisements for technical products and services. Describes the process of combining subject-matter knowledge and copywriting skills to design, develop, and produce professional-quality technical documents/media such as brochures, articles, product catalogs, demonstration kits, slide presentations, and Web pages. Offers students an opportunity to create technical writing content that persuades, such as election flyers and trade-show handouts; to examine and correct inaccurate and vague content descriptions, such as MSDS fact sheets and data analysis discussions; and to produce effective, persuasive written content, such as research laboratory annual reports and public policy news releases.

TCC 3230. Writing for the Biotechnology and Pharmaceutical Industries. 3 Hours.
Describes the content development process as it pertains to biosciences and pharmaceutical industries. Defines writing styles and document/media preparation appropriate for these industries. Explores the formal review cycle and then defines a formal review process. Explores bioethics, confidentiality policies, the need for quantification, and the detailed authenticating and referencing of source material. Offers students an opportunity to use corporate models and examples chosen from marketing, research, and sales for various technical documents/media such as abstracts, patient handouts, inserts and labels, and Web pages; to prepare medical data and research results for publication; to practice writing introductions, methods, and results; to create abstracts and summaries; and to participate in a peer-review process.

TCC 3240. Proposal and Grant Writing. 3 Hours.
Identifies techniques of effective argument and persuasive writing relative to proposal development. Compares and contrasts the various types of proposals generated by both nonprofits and industry and describes the importance of performing detailed audience analysis and researching funding opportunities. Lists and examines the elements of most proposals: cover letter, abstract/executive summary, needs statement, goals and objectives, project design, project evaluation, team members, budget, and time frame. Offers students an opportunity to prepare the elements of a proposal; to execute a step-by-step analysis of a request for proposal (RFP) or bid set; to create and then peer-review a mock proposal in a simulated situation through role-playing and participation on a proposal project team; and to execute collaborative writing assignments.

TCC 3450. Writing for the Web. 3 Hours.
Compares and contrasts how readers/viewers scan rather than read Web pages and why Web writing differs from traditional text/prose writing. Describes writing styles and how to structure information for the Web. Defines human factors and how they affect writing for the Web. Describes Web navigation and labeling, examines visualization concepts and theory, and presents the processes of evaluation and usability testing. This writing-intensive course offers students an opportunity both for hands-on laboratory-type experiences through planning, designing, building, and testing Web sites and for collaborative work with classmates.

TCC 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TCC 4896. Experiential Education Directed Study. 1-4 Hours.
Draws upon the student’s approved experiential activity and integrates it with study in the academic major.

TCC 4950. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.
TCC 4955. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student’s major field. May be repeated without limit.

TCC 4983. Topics. 1-4 Hours.
Covers special topics in technical communications. May be repeated without limit.

TCC 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TCC 4991. Research. 1-4 Hours.
Offers students an opportunity to conduct research under faculty supervision.

TCC 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

TCC 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic.

TCC 4994. Internship. 1-4 Hours.
Provides students with an opportunity for internship work.

TCC 4995. Practicum. 1-4 Hours.
Provides eligible students with an opportunity for practical experience.

TCC 6100. Introduction to Technical and Professional Writing. 4 Hours.
Introduces the basic principles of organizing, creating, and writing technical content. Reviews technical conventions such as headings, styles, and tone. Discusses the presentation of technical information to various audiences, including differences in prose style depending upon the audience. For example, reviews the differences in writing content for proposals, white papers, marketing, and end-user documentation. Emphasizes the concepts and skills for preparing content for technical manuals.

TCC 6101. Advanced Technical and Professional Writing. 4 Hours.
Introduces advanced aspects of technical and professional communication. Building upon TCC 6100, this course discusses the process of creating technical content. Offers students an opportunity to create both end-user and developer documentation. Investigates both formal and informal interviewing skills, required of technical communicators to obtain technical information. Reviews presentation principles, including how to use visuals to organize and prepare an effective talk. Discusses legal, ethical, and cultural issues pertaining to technical communication. A portion of this course covers the primary tools of technical communicators.

TCC 6102. Editing Technical Content. 4 Hours.
Introduces the practice of technical editing. Offers students an opportunity to learn the levels of editing, including developmental, technical, and copy editing. Other topics include the editor’s role in the publication cycle, the editor’s role within a technical publications department, working with writers in the department, and the creation and uses of style guides. The role of the editor in the online medium sometimes blurs distinctions between design, content, technical, and marketing, and this is assessed in the context of the evolving role of editing online content. Other issues discussed include word choice, consistency, and sentence structure. Uses weekly assignments to assist students to understand and master technical editing principles.

TCC 6110. Information Architecture. 4 Hours.
Introduces concepts important to the design of information architecture. Central to the course is an understanding of user-centered design principles. User-centered design requires that the information designer incorporate the end user into the design process. Offers students an opportunity to analyze and describe the design of an existing information appliance and then move on to the analysis of the design of an information architecture. Finally, students submit their own plans for an information architecture accompanied by a contextualizing document that describes the audience and circumstances for the use of the design.

TCC 6120. Usability and User Experience. 4 Hours.
Introduces and examines theories and practical application of research, evaluation, and design of information products, systems, user interfaces, and the wider user experience. Incorporates the user-centered design (UCD) process as the primary methodology. Reviews numerous usability methods in-depth, including usability testing; heuristic and expert evaluation; prototyping; user research (including surveys, user interviews, and the role of ethnography in this field); and the emerging methods in the field. Concludes with a look into the possible futures of usability.

TCC 6150. Writing Portfolio. 2 Hours.
Offers students an opportunity to complete a professional writing portfolio. Students are guided through critically evaluating their existing work and how best to present their work in a portfolio. Includes information regarding portfolio design, content, and delivery.

TCC 6200. Ethics in Technical Communication. 4 Hours.
Focuses on introducing students to definitions and philosophies of ethics as they pertain to technical communication. Examines both hypothetical and real-world scenarios encountered by technical communicators. Often, technical communicators face ethical dilemmas in creating technical documents, ranging from legal and confidentiality issues to honesty and conflicting cultural values. Offers students an opportunity to explore and analyze ethical decision-making scenarios and make recommendations for action on both personal and managerial levels.

TCC 6320. The Role of a Technical Communicator in a Biotech Startup. 4 Hours.
Seeks to prepare students to work as technical communicators in a biotech startup company. Describes the general function of the biotech industry and typical activities of a company with specific emphasis on the startup and related tasks of the technical communicator. Class topics and assignments accurately imitate project tasks in the biotech startup. A fictitious biotech company is described during the course. Offers students an opportunity to engage in delivery of technical communication activities vital to this company; to present scientific data, facilitate company visibility, and write sections of fund-raising proposals; to create a project schedule for delivery of assigned tasks using fictitious delivery dates assigned by the course instructor; and to explore various opportunities for the technical communicator in the biotech industry.

TCC 6330. Information Strategies for Biomedical Writers. 4 Hours.
Offers students an opportunity to develop proficiency in identifying the information needs and sources appropriate to biomedical writers, searching a variety of databases and the Internet for resources pertinent to the profession, and evaluating and using that information appropriately. Emphasizes searching medical, business, and government sources containing statistics of use in documentation and retrieving information as a practitioner not affiliated with a university or other research library.

TCC 6340. Biostatistics for Biomedical Writers. 4 Hours.
Introduces two main aspects of the use of statistics in biomedical fields to improve students’ skills as readers, writers, and editors of biomedical texts. Focuses on the ways in which statistics support arguments in biomedical fields and statistical terminology and tests.
TCC 6350. Ethical and Legal Issues in Biomedical Communication. 4 Hours.
Introduces ethical theory and codes of ethics. Focuses on the ethical issues confronted by the biomedical communicator, including questions of authorship, the issue of ghost writing, assignment of credit and acknowledgement, conflicts of interest, intellectual property rights, peer review, and corporate and individual responsibility.

TCC 6360. Research in Biomedical Communication. 4 Hours.
Introduces current research approaches—principally ethnographic and historical—in the field of professional and scientific communication. Examines the process of publishing original research in the field. By discussing and critiquing representative scholarly publications and their research design, and by preparation of a major research report, offers students an opportunity to develop proficiency in addressing a broad range of problems in both scholarly and workplace writing and publication.

TCC 6400. Structured Documentation. 4 Hours.
Introduces the process of analyzing, organizing, and presenting information using techniques for structuring and authoring data. Presents information types, presentation methods, XML, DTDs, and the principles of structured writing. Offers students an opportunity to use what they learn to design and generate documents that can be easily and efficiently assembled, published, and delivered to the intended audience.

TCC 6410. Online Documentation. 4 Hours.
Introduces students to the types of online documentation written by technical writers, including help messages, online reference guides, and tutorials. Discussions and demonstrations cover the techniques as well as the principles of online documentation design, production, and evaluation, with emphasis on current technologies and software.

TCC 6420. Information Design for the Web. 4 Hours.
Introduces students to the skills necessary for Web-based information design. Topics include basic Web concepts, creating text-based Web pages, working with Web graphics, building usable navigation, building page templates, using cascading style sheets, authoring for the Web, designing a Web site, and multimedia considerations. Offers students an opportunity to code their own Web pages, critique existing Web sites, structure information for online presentation, and create a complete stand-alone Web site.

TCC 6430. Writing for the Computer Industry. 4 Hours.
Introduces students to writing and editing professional-quality computer user documentation. Focuses on techniques for creating usable documentation, including attention to text organization and visual elements. Offers students an opportunity to design and write a computer user manual and collateral technical documents, given a functional specification and software developed from that specification. To simulate a common work environment, class members may sometimes work in project teams.

TCC 6440. Advanced Writing for the Computer Industry. 4 Hours.
Seeks to prepare students to work as writers in the computer industry by building on fundamental skills in producing user documentation. Offers students an opportunity to use single-source techniques to create a variety of computer documentation pieces for technical audiences. Rather than doing a complete, hard-copy computer user manual, students focus on techniques for developing an information base and using that base to create different types of software documentation for different audiences. Topics include analyzing the needs of highly technical audiences, developing strategies for different types of documents (including specifications, reference manuals, and white papers), honing writing techniques (including single-sourcing, writing for impaired audiences, and internationalization/localization), working with engineering and marketing, and building a long-term career in the computer industry.

TCC 6450. Managing Technical Publications. 4 Hours.
Investigates how to manage and facilitate teams and groups within the work environment. Focuses on such topics as perception, personality, conflict, and negotiating. Covers assessing the need for change and its impact on an organization, as well as understanding and managing resistance to change. Uses lectures, case studies, and group work to assist students to better understand management roles and requirements.

TCC 6470. Web Accessibility for Technical Communicators. 4 Hours.
Examines the key principles of Web accessibility and how it relates to documentation and content from the user’s perspective. Making Web content and information available to the widest possible audience is important from a legal standpoint but also from a business standpoint. Covers accessibility concepts and universal design as well as the methods people use to access Web content. Discusses rules, standards, and guidelines and how they relate to accessible content. Also touches on the relationship between usability and accessibility.

TCC 6480. Instructional Design for Technical Communicators. 4 Hours.
Focuses on the concepts and overview of instructional design for technical writers. Offers students an opportunity to analyze, design, and develop relevant and useful content for an intended audience, with a particular focus on materials with technical content. Course goals include building a foundation and conceptual framework surrounding the instructional design process. Emphasizes instructional strategies and skills to facilitate adult learning. Additional topics include determining the needs of the learner, techniques for stimulating and sustaining learner motivation, developing learning materials, using multimedia, and how to reinforce learning.

TCC 6490. Usability Testing for Technical Communicators. 4 Hours.
Introduces and examines how to plan, create, run, and facilitate usability testing based on best practices and known testing methodologies. These concepts and methodologies can be used to test products, services, websites, and documentation. Includes an overview of how to construct a usability test, recruit participants, facilitate test sessions, analyze results, and report findings. Emphasizes the emerging use of remote and mobile usability testing.
TCC 6495. Document Design. 2 Hours.
Covers both the principles of document design and the practical skill of using Microsoft Word (Windows and Mac). Explores basic text and paragraph formatting as well as more advanced topics such as page layout, creating styles, using themes, and editing/inserting graphics. Class assignments apply the techniques studied to actual documents. Discussions are an integral part of the course that broaden the classroom experience with issues designed to expand technical communication knowledge. Offers students an opportunity to learn how to solve documentation challenges—creating documents, revising existing documents, or converting older versions to newer versions.

TCC 6510. Ethical and Legal Issues in Financial Services Communication. 4 Hours.
Focuses on the legal, ethical, social, and economic influences as well as domestic and international cultural factors that affect financial services communication. Presents the many complexities involved with ethical decision making in the financial services arena. Offers students an opportunity to develop a better understanding of moral philosophies and how they apply to business communication. Topics include the foundations of personal and managerial ethics; business, government, and society interrelationships; the development of corporate codes of ethics; and the pressures of special-interest groups. Also exposes students to government regulations and legal scenarios that apply to management.

TCC 6520. Marketing Writing. 4 Hours.
Explores the role of the marketing writer in advertising, branding, public relations, and direct mail. Introduces genres, strategies, and scenarios, focusing on ethical considerations. Emphasizes the integration of marketing communications within corporate structures and on writing copy that sells products and services.

TCC 6530. Proposal and Prospectus Writing. 4 Hours.
Provides a workshop approach to writing proposals for submission to both public- and private-sector funding agencies. Assignments focus on the core elements of the proposal writing process, such as analyzing proposal opportunities and audiences, planning proposal writing activities, writing and designing specific types of proposals, and presenting finished products.

TCC 6540. Financial and Market Research. 4 Hours.
Introduces the domestic and international financial system and the institutions within it. Develops data and quantitative analysis tools utilized for economic and financial modeling and analysis. Emphasizes regression analysis and its application, including how to build and interpret statistical models. Topics include the major types of financial institutions that operate within the global economy and the financial instruments employed by them; how exchange rates, interest rates, and security prices are determined and how they affect the global economy; and how governments and central banks impact economic and financial conditions.

TCC 6550. Managing Financial Services Publications. 4 Hours.
Explores the intersections of management fundamentals and documentation systems for a range of financial writing projects, including prospectuses, annual reports, financial forecasts, and investment strategy planning. Readings introduce management fundamentals, principles, and case studies. Class meetings host guest speakers and discussions of readings and case studies. Assignments include individual reports and group projects.

TCC 6610. Prototyping. 2 Hours.
Covers the fundamental principles and methods of prototyping. A prototype is a vehicle that represents a design of something, such as a traditional user interface, a document, or a Web site. Discusses several of the most common methods used by content specialists. Investigates the uses and effectiveness of low-, medium-, and high-fidelity levels of prototyping methods. Reviews sketching, paper prototyping, and the most common prototyping software packages. A significant portion of the course involves collaboration and practical hands-on experience in the creation and iteration of various prototypes.

TCC 6620. Collecting User Data. 2 Hours.
Presents the different methods employed by content specialists to obtain feedback from users. Emphasizes understanding which data collection method is optimal for a particular context, environment, and information need. Focuses on different types of user groups and how they affect the way data collection is undertaken and completed. Also addresses data analysis, which is often the most challenging part of the process. Covers aspects of privacy and ethics, within the context of usability testing, and the Personally Identifiable Information (PII) Law in Massachusetts. Discusses the core methods of the basics of Web analytics, writing and administering surveys, and how to perform successful interviews.

TCC 6630. Introduction to XML. 2 Hours.
Presents an overview of the Extensible Markup Language (XML). In content-heavy technical communication workplaces, using structured XML content allows authors to produce consistent documentation. Offers students an opportunity to understand the basics of XML—including XML rules and syntax, structuring data with XML, and validating data with Document Type Definitions (DTDs) and schemas—and ample practice with XML. Also covers using cascading style sheets (CSS) and Extensible Stylesheet Language Transformations (XSLT).

TCC 6640. Wiki-Based Documentation. 2 Hours.
Offers students an opportunity to create their own wiki-based documentation project. Using wikis for writing technical documentation has been popular with open-source applications for many years. Today, wikis are increasingly being used by both nonprofit and commercial enterprises for their documentation needs. Students are expected to set up and edit their own personal wiki space as well as to collaborate with others to help develop their wiki pages. Also touches upon effective wiki design, usability, modular documentation, and collaborative writing and editing as part of understanding the best practices associated with creating wiki-based documentation.

TCC 6650. Practical Issues in Biomedical Publishing. 2 Hours.
Examines ongoing concerns within the field of biomedical publishing. Uses case studies to analyze issues related to proper citation and assignment of credit, peer review, redaction, publication bias, disclosure and conflict of interest, press releases, and media coverage of scientific meetings. Students are expected to work within virtual groups to discuss and present possible solutions to a specifically assigned case study.

TCC 6660. Biostatistics for Medical Writers. 2 Hours.
Introduces statistical concepts and analytical methods as applied to data that one might encounter in the biotechnology and the biomedical sciences. Offers students an opportunity to obtain a foundation to critically evaluate information to support research objectives and product claims and to better understand statistical design of experimental trials for biological products/devices.
TCC 6710. Content Strategy. 4 Hours.
Examines the emerging discipline of content strategy and its critical role and impact on design, creation, distribution, and governance of an organization's content. Explores a variety of issues relating to the life cycle of an organization's content, including strategy, audits, the role of legacy content, content migration, and content management systems (CMS). Reviews the role that staff, technical resources, and constraints play within content strategy and discusses the future role of content strategy within a variety of organizations.

TCC 6850. Technical Communications Capstone Project. 4 Hours.
Offers students an opportunity to use classroom learning to produce a final project, such as a technical manual, online help system, or Web-based assistance product. Offers practical advice and guidance on how to function effectively within the technical publications work environment. Seeks to prepare students for as many realistic situations as possible in the work environment, including how to deal with difficult people and situations. Reviews the most current research and trends in the profession. Students work both individually and within groups on various assignments and projects.

TCC 6961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

TCC 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TCC 6970. Seminar. 1-4 Hours.
Offers an in-depth study of selected topics.

TCC 6983. Topics. 1-4 Hours.
Covers special topics in technical communications. May be repeated without limit.

TCC 7961. Internship. 1-4 Hours.
Provides students with an opportunity for internship work. May be repeated without limit.

TCC 7976. Directed Study. 1-4 Hours.
Offers students an opportunity to produce an individual research paper under the supervision of a faculty member. The directed study format allows for the exploration of a particular topic not covered in-depth in the curriculum. A directed study proposal must be approved by the faculty sponsor, division head, and dean of academic affairs.

TCC 7983. Topics. 1-4 Hours.
Covers special topics in technical communications. May be repeated without limit.

TCC 7995. Project. 1-4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

TCM 6010. Business Fundamentals for Entrepreneurs. 3 Hours.
Introduces fundamental business practices for entrepreneurs. Presents subject areas in the sequence in which an entrepreneur starting a technology-based company might need them.

TCM 6020. New Venture Development 1: Starting a New Technology Venture. 4 Hours.
Offers a first-venture development course. The i-cubator commercialization process starts with student-generated ideas. Working with their faculty advisor, students are encouraged to perform an opportunity assessment to determine which projects are viable. Project teams are formed and a high-level project plan is generated. A series of seminars is offered on competitive product strategies for selected vertical industries.

TCM 6030. Intellectual Property Law and Management. 3 Hours.
Focuses on protecting an organization's intellectual property rights, which in this age of innovation is crucial to an organization's ability to survive. Offers students an opportunity to learn to protect their organizations from losing their right to intellectual property by understanding the legalities involved and proper management. Examines trademark, copyright, and patent law, as well as the legal remedies available for violations. Examines fair use and the assignment of property rights, along with managerial strategies employed to protect and capitalize on intellectual property.

TCM 6040. Accounting for Technology Startups. 3 Hours.
Examines the new and growing topic of accounting for new product development and its influence on project selection, product design, and later profitability. Topics include managerial and financial accounting, accounting for new product development, accounting for manufacturing and project costs, and business numbers.

TCM 6050. New Venture Development 2: Building a Prototype. 4 Hours.
Requires students to produce a means to evaluate their product concept through a prototype or some other means, by either working with an engineering partner or through their own technical work.

TCM 6060. Elements of Financing a Business. 3 Hours.
Covers, in part one, the special issues of entrepreneurial finance when moving toward commercialization in high-tech settings. These special situations arise because the length of time a startup is in the research and development stage may be years before any revenue is generated. In this context, students have an opportunity to learn about cash flow analysis, budgeting, and crunching the numbers. Part two covers the various avenues entrepreneurs can use to raise money. These include angels, venture capital, banks, and friends and family. Topics also include exit strategies, pro formas, and writing a financial plan.

TCM 6070. Entrepreneurial Marketing. 3 Hours.
Examines the marketing issues facing the creation of a new business and reviews how entrepreneurs create or discover new business ideas and test whether they are reasonable through opportunity assessment. Also covers general marketing in a high-tech context by focusing on topics such as going to market, pricing, and advertising.

TCM 6080. New Venture Development 3: Customer Evaluation. 4 Hours.
Offers students an opportunity to test the product concept with customers and to modify it according to feedback.

TCM 6090. Managing a Technology-Based Small Business/Strategic Business Unit. 3 Hours.
Covers the issues of managing a small business or strategic business unit within a corporation, as well as the special issues of managing a technology-based startup. Topics include creating a team, creating a culture, hiring/firing/incentives/reporting, operations, boards/advisors/managing up, dealing with suppliers, managing a crisis, supply chain, and writing an operating plan.
**Telecommunication Systems (TELE)**

**TELE 5310. Fundamentals of Communication Systems. 4 Hours.**
Explains the fundamentals of communication systems and their applications. Focuses on topics such as signal transmission, modulation techniques, and error correction codes. Introduces concepts related to digital and analog signals, and explores the basics of communication systems architecture.

**TELE 5320. Telecommunications Architecture and Systems. 4 Hours.**
Seeks to provide an understanding of the telecommunications network and how it is evolving. Focuses primarily on the Public Switched Telephone Network—architecture, network systems, and call control—and on cellular wireless systems. Topics include coding of audio and video sources, including PCM, compression techniques, standards; digital transmission, SONET/SDH, network synchronization, digital switching; and the optical core. Addresses network survivability, traffic engineering, routing, and numbering. Explores issues in call control, signaling, and telephony services including DTMF, SS7/CCS architectures and protocols, call models. Discusses cellular networks including review of radio communications, cellular concept, wireless access technologies, handoff, second- and third-generation standards, mobility management, voice and data architectures. Introduces evolution of the network to packet: media and signaling protocols, QoS issues, PSTN interworking.

**TELE 5330. Data Networking. 4 Hours.**
Provides the basics of data networking protocols and architectures. Topics include protocol architecture of the internet; application protocols such as FTP, SMTP and HTTP, web caching, DNS, CDNs, and P2P applications; use of TCP and UDP socket programming to develop network applications in Python; transport protocols, including TCP, UDP, and TCP congestion control; IP protocol, addressing, IPv4 and v6, NATs, ICMP, and tunnels; routing algorithms and OSPF; data link protocols, encoding, framing, error control, and PPP; switched LANS, ARP, Ethernet, and VLANs; wireless LANs and 802.11 protocols; and network security—encryption, message integrity, authentication protocols, key management, SSL/TLS, IPsec, and 802.11i.

**TELE 5331. Lab for TELE 5330. 0 Hours.**
Addresses a range of networking components, including routers, switches, and Linux servers, and how they are configured to create a virtual environment. Covers the installation and configuration of networking concepts such as DNS, DHCP, and firewalls and the creation of virtual environments. Requires students, working in teams, to configure one or more components; the teams then must interconnect the components to form a small network. In the process of configuration and integration, students are exposed to troubleshooting at various protocol layers and have an opportunity to become familiarized with different operating systems and networking tools.

**TELE 5340. Telecommunications Public Policy and Business Management. 4 Hours.**
Introduces students to business management issues, such as basic accounting, finance, marketing, and operations in the telecommunications field, and also topics such as the time value of money and decision making. Also includes issues of human relations, organizational behavior, and business strategy. Provides an understanding of the regulatory environment of the telecommunications industry. Topics include universal service, service quality tariffs, the Modified Final Judgment and Telecom Act of 1996, market restrictions and segmentation, the current competitive environment in the United States and internationally, interconnection including unbundling, collocation, economic issues, and global trends in market reform.

**TELE 5350. Telecom and Network Infrastructure. 4 Hours.**
Provides in-depth treatment of the wireline and wireless infrastructure of the network supporting all telecommunication, internet, and enterprise applications. Covers the basics of communications—source coding, baseband and broadband modulation and transmission, channel coding, spread-spectrum, multiuser radio communications, radio link analysis, and propagation. Also covers the wireline core network—digital and optical transmission, framing, network synchronization, asynchronous and synchronous multiplexing, cross connects, SONET/SDH, DWDM, OTN, protection switching, and network availability. Addresses wireline (DSL, digital cable, FTTx, PONs) and wireless access (cellular, Wi-Fi), frequency reuse, and handoff. Also addresses support of data transport (switched Ethernet, VLAN, IP, MPLS) and application networks (PSTN, mobile core, internet, IPTV, and virtual networks).

**TELE 5360. Internet Protocols and Architecture. 4 Hours.**
Provides in-depth treatment of protocols used in the internet, wireless access, and enterprise networks. Topics include protocols for network layer QoS (including DiffServ, ECN, RSVP, MPLS); protocols for security, including both access control and network-level security (e.g., X.509, SSL/TLS, IPsec, IKE, EAP); protocols for inter-domain routing (BGP); protocols to support multicast, broadcast, and streaming applications; protocols to support host mobility, large server deployments, content distribution, and enterprise networks (VLANs, etc); and protocols to support IPv6 (e.g., address assignment) and its interoperability with IPv4. Also covers network design architectures for cloud computing, data centers, content distribution, layer-2 networks, etc., and discusses general scaling issues for large networks.

**TELE 5600. Linux/UNIX Systems Management for Network Engineers. 4 Hours.**
Introduces UNIX/Linux in a networking/Internet environment. Covers operating system concepts, tools, and utilities; networking and security issues; and data and text processing using scripts and filters. Addresses basic administrative tasks such as managing users, file systems, security, and software. Covers networking topics such as network configuration, daemon processes, SSH, DNS, DHCP, diagnostic tools, and the use of scripts and automation to manage applications and systems, as well as security topics such as name and authentication services, access control lists, file modification protections, and firewalls.
TELE 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

TELE 5978. Independent Study. 1-4 Hours.
Offers work performed under individual faculty supervision. May be repeated without limit.

TELE 6100. Mobile Wireless Communications and Networking. 4 Hours.
Studies communications and networking issues in providing broadband wireless access to mobile applications. Discusses networking technologies required by converged IP-based applications. Covers converged network architectures and the interworking of different generations of access technologies with the Evolved Packet Core (EPC). Registration limited and by application only; it is expected that all students have prior knowledge of digital communications, radio propagation, cellular networks, and second-generation wireless standards.

TELE 6200. Advanced Data Networking. 4 Hours.
Addresses data networking topics not covered in TSMG 5330 and issues of topical importance in both the Internet and the enterprise. Takes a big-picture approach, looking at the network as a whole. Identifies and studies common architectural components, protocol mechanisms, and design/implementation principles and trade-offs based on scaling, performance, and security considerations. Focuses throughout on technologies being deployed in the network core (i.e., not access) to support the enterprise, content delivery, and virtualization. Typical technologies include VLANs, large flat Layer-2 network design, media streaming, multimedia protocols, P2P architectures and protocols, structured and unstructured overlays, content distribution, caching and replication, CDN architectures, data center networks, virtual routing, and load balancing. Uses case studies throughout.

TELE 6350. IP Telephony. 4 Hours.
Provides a comprehensive overview of IP telephony architectures and protocols, with emphasis on SIP, the Session Initiation Protocol. Topics include a review of classical circuit-switched telephony, especially signaling; a review of IP networking, especially routing and addressing: peer and master-slave protocols for IP telephony (SIP, H.323, MGCP); speech coding; the transport of real-time traffic over IP (RTP and RTCP); bandwidth control; and issues in network quality of service, such as traffic modeling, dimensioning, and QoS mechanisms. Emphasis on SIP includes call flows, network components, security, routing, and advanced services.

TELE 6360. Operation Support Systems in Telecommunications. 4 Hours.
Introduces Operation Support Systems (OSS) in telecommunications: their purpose, components, processes, and architectures. Covers OSS that support service and network provisioning, customer care, ordering, billing, network management among other support functions, and the telecommunication management network (TMN) architecture and network management protocols. Addresses the role of vendors in providing OSS and the range of services offered, including wireline voice and data; DSL; FTTP; wireless and mobile services; and video, cable, and integrated services. Seeks to provide understanding of how the Internet is changing OSS interconnections models and how the regulatory environment impacts OSS interconnections and architecture. Other topics include the impact of new services on OSS; new software technologies such as Web services, service-oriented architecture (SOA), work flow; and trends in next-generation OSS and OSS architectures.

TELE 6370. Perspectives in Telecommunications Policy. 4 Hours.
Examines the interrelationship of technological change, business objectives, and governmental policy goals on outcomes in telecommunications markets. Analyzes perspectives and cases from various nations to give students an opportunity to become familiar with public and private institutions, as well as other interest groups, that shape the agenda and outcomes of telecommunications policy in various countries. Emphasizes changing regulatory approaches, such as the increased reliance on network unbundling and the impact of technological changes on market forces and policy decisions. Examines how national policy objectives are formulated and issues associated with broadband deployment. Also evaluates policies designed to introduce competition into monopoly markets, the impact of Internet and wireless technologies on policy and markets, and emerging policy issues associated with network neutrality and Internet governance.

TELE 6380. Consulting Project in Telecommunications. 4 Hours.
Provides an opportunity to work on a consulting project with management from telecommunications companies and other companies with project needs relating to telecommunications. Projects may include assessing market, regulatory, and technology challenges involved in the implementation of broadband services; evaluating the impact of technology changes on specific market segments; researching needs for new functionality in telecommunications billing and operation support systems; valuing intellectual property in telecommunications companies and related industries; researching technological and business trends in the global telecommunications market. Gives students an opportunity to work in teams and be guided by a faculty advisor resulting in a presentation and report for the client company. Students also have an opportunity to develop teamwork, project management, and communications skills.

TELE 6400. Software-Defined Networking. 4 Hours.
Introduces the foundational theories and technologies of software-defined networking (SDN), a new paradigm in computer networking that allows a logically centralized software program to control the behavior of an entire physical network. Discusses SDN technologies, such as the OpenFlow specification and OpenDaylight controller, and introduces students to SDN applications and network function virtualization (NFV). Offers hands-on exposure to popular open-source software and technologies through student projects. Requires good knowledge of Java or Python.

TELE 6600. Special Topics—Telecommunication Policy. 1-4 Hours.
Covers state-of-the-art material of current interest. May be repeated up to eight times.

TELE 6603. Special Topics—Telecommunication Policy. 1-4 Hours.
Description to come. May be repeated up to eight times.

TELE 6604. Special Topics—Telecommunication Policy. 1-4 Hours.
Description to come. May be repeated up to eight times.

TELE 6605. Special Topics—Telecommunication Policy. 1-4 Hours.
Description to come. May be repeated up to eight times.

TELE 6606. Special Topics—Telecommunication Policy. 1-4 Hours.
Description to come. May be repeated up to eight times.

TELE 6607. Special Topics—Telecommunication Policy. 1-4 Hours.
Description to come. May be repeated up to eight times.

TELE 6608. Special Topics—Telecommunication Policy. 1-4 Hours.
Description to come. May be repeated up to eight times.

TELE 6945. Master’s Project. 4 Hours.
Offers theoretical or experimental work under individual faculty supervision.

TELE 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TELE 6964. Co-op Work Experience. 0 Hours.
Provides eligible students with an opportunity for work experience. May be repeated without limit.
TELE 6965. Co-op Work Experience Abroad. 0 Hours.
Provides eligible students with an opportunity for work experience abroad. May be repeated without limit.

Theatre (THTR)

THTR 1000. Theatre at Northeastern. 1 Hour.
Introduces new students to the communities and procedures of Northeastern University; the College of Arts, Media and Design; and the Department of Theatre. Offers insights into the study of the liberal arts in general and the creative facets of theatre study, including the rehearsal and production process. Emphasizes the departmental values of generosity, respect, and rigor and seeks to familiarize students with the arts and culture of Greater Boston.

THTR 1100. Production Experience 1. 1 Hour.
Offers lab practice in technical production; may be repeated for credit (maximum two credits). May be repeated once.

THTR 1101. Introduction to Theatre. 4 Hours.
Reveals the dynamic world of theatre by exploring the artistry, ideas, and techniques of actors, designers, directors, and playwrights. Goes behind the scenes in the study of theory and literature with both in-depth discussions and in-class performances. Includes a survey of significant movements in theatre history and analysis of diverse plays from contemporary drama. No theatre experience required.

THTR 1120. Acting 1. 4 Hours.
Focuses on the development of fundamental performance techniques and various significant acting methodologies needed by an actor to develop stage presence, strengthen the imagination, and increase freedom of expression. Studies, analyzes, and interprets contemporary texts through the performance of monologues and scenes.

THTR 1125. Improvisation. 4 Hours.
Introduces theatre improvisation principles through games, exercises, and readings. Offers a playful and rigorous environment for students to respond to unexpected situations with confidence and agility. In this experiential studio course, students participate in group and individual exercises that explore and practice creative impulses, adaptability, risk taking, intuition, and teamwork. Culminates in a self-reflection paper.

THTR 1127. Improvisation for Entrepreneurs—Abroad. 4 Hours.
Introduces students to theatre improvisation principles, games, and exercises. Offers a playful and demanding environment for students to recognize and develop their "soft skills" and to learn to read and react to unexpected situations with confidence and agility. This is an experiential studio course—sessions are comprised of a series of cumulative group and individual exercises to explore and practice spatial awareness, physical presence, mental agility, creativity, adaptability, risk taking, intuition, and teamwork. Using the required reading as a starting point, a final self-reflection paper gives students an opportunity to articulate their discoveries, their challenges, and their strategies. Taught abroad. May be repeated without limit.

THTR 1130. Introduction to Acting. 4 Hours.
Introduces techniques that awaken the creative mind, body, and spirit of the actor. Through theatre games and voice/movement exercises, offers students an opportunity to explore and develop skills used by actors in preparation for a role. Students rehearse and perform scenes from contemporary plays. Designed for nontheatre majors; previous stage experience welcome but not required.

THTR 1131. Technical Theatre 1. 4 Hours.
Surveys the technical and stagecraft skills that are essential knowledge for all theatre professionals. Offers students an opportunity to develop a hands-on understanding of the areas of scenery and costume construction, production management, stage management, sound engineering, and lighting. Covers the practical skills needed to participate in the creation, evaluation, and revision of a theatrical production in this laboratory-based course through participation in crew work for department productions. No previous theatre experience is required.

THTR 1135. Introduction to Acting Abroad. 4 Hours.
Introduces techniques designed to awaken the creative mind, body, and spirit of the actor. Through theatre games and voice/movement exercises, offers students an opportunity to explore and develop skills used by actors in preparation for a role. Students rehearse and perform scenes from contemporary plays. Designed for nontheatre majors; previous stage experience welcome but not required. Taught abroad. May be repeated without limit.

THTR 1150. Dance Performance and History: Modern to Hip Hop. 4 Hours.
Explores dance as both performance and history, practice, and theory. Examines the ways in which diverse dance genres—such as modern, jazz, American ballet, African-American, and hip-hop—embody ideas about culture, politics, race, and gender. Offers students an opportunity to rehearse and perform dance techniques of various styles and by significant choreographers. Includes research and writing assignments.

THTR 1160. The Professional Voice. 4 Hours.
Offers students across disciplines an opportunity to obtain techniques to enhance the quality of the spoken voice and improve clarity of expression in both professional and interpersonal interactions. Offers methods to release tensions that inhibit the clear communication of thoughts and ideas. Focuses on physical and vocal exercises drawn from acting technique and the direct application of these skills to various texts. Includes regular vocal exercises outside of class, readings, and self-reflection in writing. Requires proficiency in spoken English.

THTR 1165. The Professional Voice Abroad. 4 Hours.
Designed to help students across disciplines enhance the quality of their spoken voice and the clarity and urgency with which they express themselves. Includes practical tools to improve voice and speech in interpersonal interactions, based on the book Freeing the Natural Voice by Kristin Linklater and elements of the Alexander Technique. Offers students an opportunity to learn how to free the habitual tensions, holding patterns, and inefficient uses that block the clear communication of thoughts and feelings. Expects students to practice the exercises and to do a fair amount of preparation work outside the studio. Taught abroad. May be repeated without limit.

THTR 1170. The Eloquent Presenter. 1 Hour.
Designed to help students to enhance the effectiveness with which they present themselves in front of an audience. Uses the application of theatre training exercises and practical tools to offer students an opportunity to improve the quality of their spoken voice, the clarity with which they articulate their ideas, and their ability to command the attention of audiences in diverse interpersonal and professional interactions.
THTR 1215. Activism and Performance. 4 Hours.
Explores the intersection of theatre, politics, and social transformation by studying and experiencing the work of activist theatre artists in both traditional and nontraditional forms, such as docudrama, ritual, dance, street theatre, and community-generated performance. Examines the texts, theories, and practices of international theatre artists committed to ethical reasoning, social change, peace building, human rights, and community empowerment. Culminates in the creation of an original activist performance.

THTR 1220. African-American Theatre. 4 Hours.
Surveys the history of African-American theatre artists in America from the time of Ira Aldridge to the present day. Also examines the works of African-American playwrights from the Harlem Renaissance to the present, with an emphasis on the period beginning with Baraka's *Dutchman*.

THTR 1230. The Evolution of Fashion and Costume. 4 Hours.
Traces the evolution of fashion and costume in Europe from the beginning of the nineteenth century to the twenty-first century. Illustrated lectures focus on the history and meaning of clothing design and the development of style. Clothing has been used for centuries to protect, attract, and define one's identity. Examines the shifting trends of fashion for men and women within its historical, cultural, and economic contexts.

THTR 1233. 19th- and 20th-Century Fashion in Europe. 4 Hours.
Traces the evolution of fashion and costume in Europe from the beginning of the nineteenth century to the twenty-first century. Illustrated lectures focus on the history and meaning of clothing design and the development of style. Examines trends in fashion for men and women within its historical, cultural, political, and economic contexts. By studying fashion history in cities such as London and Paris, students have access to primary sources of fashion history, including paintings, sculpture, and textiles and garments from the periods being studied. Emphasizes current trends in fashion, with in-depth studies of the work of designers such as Dior, Chanel, McQueen, Westwood, Dolce & Gabbana, Versace, McCartney, and more. Taught abroad. May be repeated without limit.

THTR 1235. Fashion and Costume Design in Film and Television. 4 Hours.
Examines the role of costume and fashion design in media, from the movies of the Golden Age of Hollywood to the latest high-tech motion pictures to the most recent cable miniseries. Studies the history and social contexts of clothing in media, as well as the critical role of fashion in relation to the narrative, i.e., how it enhances the mood and propels the dramatic action of the production. Uses illustrated lectures, critical thinking and writing, and a major experiential component to focus on how/why clothing is worn, how fashion design and costume design intersect, and how we can understand the economic and cultural realities of the twentieth and twenty-first centuries through the shifting trends of fashion.

THTR 1236. Introduction to Global Fashion Studies: History, Theory, and Contemporary Practice. 4 Hours.
Offers students an overview of the most significant and relevant theories on fashion, focusing on the cultural significance of clothing and style. Examines the intersection of fashion and other areas of study including the arts, history, economics, business, sociology, and anthropology. Explores global issues of gender, race, class, identity, image, style, material culture, and sustainability. Examines how populations from several postindustrial nations think about fashion, how globalization impacts their cultures and identities, and how designers and trendsetters are emerging from the new capitals of fashion.

THTR 1237. Introduction to Global Fashion Studies Abroad: History, Theory, and Contemporary Practice. 4 Hours.
Covers the most significant and relevant theories on fashion and focuses on the cultural significance of clothing and style. Examines the intersection of fashion and other areas of study including the arts, history, economics, business, sociology, and anthropology. Explores global issues of gender, race, class, identity, style, material culture, and sustainability. Examines how populations from several postindustrial nations think about fashion, how globalization impacts their cultures and identities, and how designers and trendsetters are emerging from the emerging capitals of fashion. Taught abroad.

THTR 1240. Fashion Industry and Trend Forecasting in Europe. 4 Hours.
Examines the world of global fashion forecasting with industry professionals in European cities such as London and Paris. Studies how and why global fashion trends are designed, developed, and produced and how economic and cultural realities are revealed through the shifting trends of fashion. Recent developments in business, politics, economics, and culture all have a tremendous impact on trends in fashion. Examines the fashion industry in terms of the five basic pillars of the complex fashion system: cultures of design, production, representation, consumption, and disposal. The course includes illustrated lectures, site visits to couture fashion houses/studios, an experiential component (the global fashion trend presentation), and the development of a class blog dedicated to trends seen by the students on the streets of Europe. Taught abroad. May be repeated without limit.

THTR 1250. Voice and Movement 1 for Theatre. 4 Hours.
Focuses on vocal and physical exercises that enable the actor to connect with the voice through freeing the physical and emotional self. Vocal work emphasizes centering, physicalization, breath support, articulation, resonance, and projection. Physical work develops concentration, control, and stamina through exercise, relaxation, improvisation, manipulation of energy flow, rhythms, and imagination. Emphasizes using the body as an expressive instrument. Includes selected monologues and/or scenes for classroom analysis. The course uses the techniques of Linklater and Viewpoints.

THTR 1260. Movement for the Actor. 4 Hours.
Explores movement techniques that enhance the actor’s expressiveness, performance energy, and body awareness. Offers students an opportunity to experience diverse movement training theories such as Suzuki, Alexander, and Laban and synthesize them in the creation of an original ensemble-based performance. Focuses on physical exercises and processes that strengthen the body; enliven the imagination; enhance concentration; and improve flexibility, balance, relaxation, and posture. Seeks to empower actors to externalize the emotional and imaginative inner experience and maximize stage presence and power. No previous movement or acting experience required.

THTR 1270. Introduction to Theatrical Design. 4 Hours.
Introduces the principles of contemporary theatrical design and how to apply the creative process to scenery, costumes, and lighting. Offers students an opportunity to discover how design concepts are developed and relate to each other through research, script analysis, color theory, and visual composition. Seeks to develop the student’s capacity for collaboration and techniques for conceptualizing a play into a multidisciplinary work of art. No theatre experience required.

THTR 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

THTR 2000. Production Experience 2. 1 Hour.
Offers lab practice in rehearsal and performance for production; may be repeated for credit (maximum of two credits). May be repeated once.
THTR 2242. Fashion Retailing. 4 Hours.
Introduces fashion retailing. Analyzes the different types and sizes of fashion retail operations; physical site location, including omnichannel; store layout and design; advertising and display; relation of the store to its intended target market; and store organization.

THTR 2300. Classics of Global Theatre. 4 Hours.
Offers students an opportunity to discover the rich history of the theatre from Greek tragedies to Shakespeare's celebrated masterpieces, from Japanese Noh theatre to the witty Restoration comedies of the 1800s. Explores notable plays from Medieval and Elizabethan England, the golden age of Spain, 17th-century France, and the Italian Renaissance. Includes contextual study of the evolution of theatre and the artistic contributions to Western civilization by writers such as Sophocles, Marlowe, Calderón, and Molière.

THTR 2310. History of Musical Theatre. 4 Hours.
Traces the creative evolution of the stage musical from its 19th-century origins to current Broadway hits; from popular entertainment to an important theatrical art. Offers students an opportunity to examine this unique and original art form from multiple perspectives—historical, cultural, political, and aesthetic—and to develop insights into the concepts and methods of such pioneering composers, lyricists, and theatre artists as Gilbert and Sullivan, Cole Porter, Rodgers and Hammerstein, Leonard Bernstein, and Stephen Sondheim.

THTR 2315. Rebels of Modern Drama. 4 Hours.
Investigates groundbreaking classics by modern European playwrights (1890s–1950s) such as Henrik Ibsen, Anton Chekhov, August Strindberg, George Bernard Shaw, Bertolt Brecht, and Samuel Beckett. Reveals how these social and literary rebels broke with tradition and created new forms of theatre. Examines their significant works as literature, history, and performance, as well as their relevance today. Includes written and oral analyses of plays as performances and the creation of an original play or work of visual art.

THTR 2320. America Onstage: Dramatizing the Dream. 4 Hours.
Explores the dramatic truths and lies at the heart (and the art) of the American Dream through great theatrical works of the 20th century. This literature, together with the vision of the brilliant playwrights who created it, both reflected and shaped American culture and society. Includes significant playwrights such as Eugene O'Neill, Arthur Miller, Tennessee Williams, Lillian Hellman, Lorraine Hansberry, Edward Albee, Sam Shepard, and August Wilson. Examines topics such as politics, economics, religion, race, gender, family relationships, cultural assimilation, and the evolution of identity—both personal and national. Focuses on these modern classics as artistic, literary, and historical documents while also analyzing them for their relevance in contemporary society.

THTR 2325. From Script to Stage. 4 Hours.
Offers students an opportunity to develop the skills and techniques used by professional theatre artists to analyze a script and awaken the essence and meaning of a play in preparation for production. Examines structure and form, characters and action, symbols and metaphors, and the historical and social context in case studies of classic and contemporary plays.

THTR 2330. Playwriting. 4 Hours.
Offers a collaborative workshop environment for developing dialogue, scenes, and one-act plays. Analyzes the dramatic techniques of modern masters as well as acclaimed contemporary playwrights. Culminates in the development of original one-act plays and a presentation of workshop scripts by professional actors.

THTR 2335. Boston Theatre Experience. 4 Hours.
Offers a comprehensive experiential survey of professional theatre today. Students attend Boston-area productions that reflect a diverse range of styles and aesthetics, with special emphasis on the creation of new plays. Through preparatory readings and lectures, combined with postplay critical assessments (oral and in writing) and interactions with theatre artists (playwrights, actors, directors), offers students an opportunity to examine and discover how to interpret the art of contemporary theatre in the United States, from fringe companies to Broadway, as audience members and aspiring artists. Requires attendance at plays outside of class time.

THTR 2340. Theatre and Society. 4 Hours.
Covers several great practitioners of theatre. Focuses on how social behavior influenced the thought and craft of playwrights, actors, directors, designers, and theorists as well as how society was influenced by drama and theatre. Emphasizes how the play's ideas are translated into performance. Uses video, discussion, and live performance, when possible, as integral elements to the course.

THTR 2342. Acting 2. 4 Hours.
Continues THTR 1120. Focuses on developing the actor's sense of truth and emotional freedom. Emphasizes creating, developing, and sustaining character and developing ensemble. Includes monologues and scenes performed for classroom analysis.

THTR 2345. Acting for the Camera. 4 Hours.
Explores the craft and methods used by actors while working in front of the camera through monologues, scenes, and group projects. Provides students with techniques to identify and free their performance energy with a foundation on relaxation and authenticity. Includes the study and analysis of acting styles in diverse genres of film and television from situation comedies to dramas. Offers students an opportunity to explore a range of on-camera skills and acting techniques and apply them in filmed final projects. Previous acting experience suggested but not required.

THTR 2346. Viewpoints. 4 Hours.
Engages actors with an innovative technique that draws upon rigorous physical training exercises and practice in the nine areas of actors' concentration known as Viewpoints. Creative improvisational sessions provide an intuitive and dynamic approach to acting. Culminates in the application of Viewpoints to new scripted works.

THTR 2347. Voice and Movement 2 for Theatre. 4 Hours.
Continues THTR 1250. Offers students an opportunity to further develop and strengthen the body and the voice in the pursuit of eloquent speaking and compelling presence onstage. Vocal practice emphasizes breath capacity, resonance, and clarification of speech sounds through the study of the International Phonetic Alphabet. Physical practice emphasizes improvisation, coordination, stamina, and spatial awareness. Includes direct application of all skills to diverse dramatic texts.

THTR 2360. Stage Makeup. 4 Hours.
Studies the transformational principles and practical techniques used in makeup application for theatre, television, and film. Features methods to create character and fashion makeups, including techniques for aging, fantasy creatures, and special effects. Additionally, this studio course offers an overview of makeup design used for stage and screen. Requires lab fee for supplies.
THTR 2365. Technical Theatre 2. 4 Hours.
Continues THTR 1131. Covers the intermediate skills of technical theatre required for all theatre professionals. Students pursue more advanced technical skills in areas such as drafting, and the reading of technical drawings for both scenery and lights. A minimum of thirty hours of crew work is required per semester, along with attending both strikes for departmental shows. Assignments and hours are arranged with the area supervisor.

THTR 2370. Lighting Design. 4 Hours.
Examines basic principles and practices of stage lighting, including the qualities and functions of light, lighting instruments and controls, use of color and directionality, and script analysis for lighting design elements. Offers students an opportunity to develop foundational skills and practice systematic reasoning in the programming and operation of lighting computer equipment. Through group projects and individual lab work, students create and execute lighting designs. Includes work on electrics crews for university productions.

THTR 2380. Costume Design. 4 Hours.
Introduces the fundamentals of costume design and the artistic roles and responsibilities of a costume designer. Working on classical and contemporary texts, students examine the creative steps of the design process, including script analysis, character development, research, and collaboration. Through lectures, discussions, and projects, students create a design concept and communicate it through language and images. Includes experience with drawing and other costume rendering techniques such as painting, collage, and Photoshop. Does not require prior art or design experience.

THTR 2385. Fashion Construction and Pattern Making. 4 Hours.
Offers students an opportunity to develop the skills and techniques necessary for creating and using basic master patterns and dress forms to create skirts, dresses, trousers, and tops. Covers basic fashion construction, flat patterning, draping, and finishing techniques.

THTR 2400. Scenic Design. 4 Hours.
Introduces the theory and practice of theatrical design and the role of the designer in the production process. Through project work, examines the use of graphics tools—line, form, balance, color, rhythm, and so on—in the development of the design idea. Emphasizes understanding and utilizing spatial relationships; visually expressing conceptual themes; and understanding the various uses, problems, and practical considerations of proscenium, thrust, and arena staging.

THTR 2500. Breaking the Glass Ceiling: Women in Theatre. 4 Hours.
Surveys a wide range of dramaturgic forms, gender theories, and distinct theatrical techniques used by women artists to reveal larger social issues and encourage activism. Examines how the plays’ sociocultural contexts represent female playwrights’ diverse views of identity as well as their cultural, ethnic, racial, and geographical experiences. Identifies how women as artistic leaders are perceived and received by society and the industry. Analyzes why the issue of gender equity in theatre remains unresolved. THTR 2500 and WMNS 2501 are cross-listed.

THTR 2550. Mass Media and the Fashion Industry in Europe. 4 Hours.
Explores the relationship between mass media and the fashion industry from 19th century Paris to today’s new media platforms and globalized communication networks. Assesses the impact of traditional forms of fashion media including journalism, photography, film, and new media. Examines the media dialogue and diplomacy as well as its value arbitration, including topics of representation, taste, status, trend, and globalization. Offers students opportunities to share interviews, reports, and trend analysis on the class blog. Taught abroad.

THTR 2600. Voice and Speech for the Actor. 4 Hours.
Seeks to enhance the quality and power of the actor’s voice with a focus on the clarity, vitality, and eloquence with which they communicate themselves on stage. Following the pedagogy known as Freeing the Natural Voice, developed by Kristin Linklater, sessions provide a progression of physical and vocal exercises that free the habitual tensions and inefficiencies that block the clear communication of emotional and creative impulses. Offers students an opportunity to apply voice and speech training to diverse texts comprised of drama, poetry, and original writing. The goal is a free, healthy, confident voice that fully expresses the actor’s individuality and commands the attention of an audience.

THTR 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

THTR 3300. Devised Theatre Project: Collaborative Performance. 4 Hours.
Investigates innovative and experimental methods of making an original theatre performance in which the actors are also the creators. Functioning as a collaborative ensemble training, rehearsing, and performing together, students explore performance theories and rehearsal techniques using language, movement, music, images, and autobiography to create their own performative event inspired by a central theme drawn from literature, art, politics, or history. Culminates in a world-premier public performance.

THTR 3350. Fashion Marketing and Merchandising in Europe. 4 Hours.
Examines the fundamentals of fashion marketing and merchandising in the established fashion capital of the world, Paris. Explores how basic marketing principles govern the fashion industry. Analyzes and evaluates the role and function of day-to-day industry professionals working and succeeding in Paris through site visits; lectures with industry professionals; and visits to fashion shows, collections, and museums. Taught abroad.

THTR 3450. Acting 3—Playing Shakespeare. 4 Hours.
Explores ways to bring the texts of Shakespeare alive onstage. Using the First Folio, the course studies structure of the verse, rhetorical devices, figures of speech, in a variety of Shakespeare’s texts, including sonnets, scenes, and soliloquies. Sound and movement sequences revitalize the eloquent speaking of heightened texts and the personal connection to the characters.

THTR 3550. Directing for the Stage. 4 Hours.
Focuses on purposes and techniques of theatrical direction related to script analysis, production style, pictorial composition, rhythmic evolution, and empathic responses.

THTR 3570. Musical Theatre Performance. 4 Hours.
Applies acting technique to the performance of songs and scenes from the musical theatre canon. Offers students an opportunity to integrate acting, singing, and dancing through character development. Analyzes and interprets Broadway musical classics and contemporary musical theatre forms by artists such as Rodgers and Hammerstein, Stephen Sondheim, Jason Robert Brown, Jeanine Tesori, and Lin-Manuel Miranda. Culminates in a student showcase of solo, small ensemble, and large ensemble excerpts from musicals.
THTR 3700. Rehearsal and Production: The Art of Collaboration. 4 Hours.
Offers students an opportunity to experience the process of making imaginative, innovative theatre by collaborating on a theatre department production. Based on auditions, experience, skills, and interest, students rehearse and perform an acting role or collaborate in areas of design, stage management, dramaturgy, or production under the direction of faculty, staff, and guest artists. Students chronicle the process in a stage journal and in a final paper, identifying creative discoveries, accomplishments, and experiences. Fulfills the experiential education requirement for theatre majors. May be repeated up to three times.

THTR 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

THTR 4100. Senior Career Seminar. 1 Hour.
Seeks to prepare theatre majors to define their personal career goals and creative ambitions and to help students devise individualized strategies to achieve them. Offers students an opportunity to survey potential career paths in areas such as acting, design, stage management, tech/production, marketing, fundraising, literary management, and education/community outreach. Examines diverse employment and organizational structures of nonprofit theatres from fringe to Broadway. Includes seminars, discussions, and conversations with faculty and theatre professionals on a range of topics such as casting/auditions, design portfolios, and professional networking. Requires senior standing; juniors admitted by special permission.

THTR 4702. Capstone Rehearsal and Performance. 4 Hours.
Requires students to research, prepare, and perform either a substantial acting role, a design assistantship, a dramaturgy, a stage-management position, or other position of responsibility for a departmental production. Also requires an intensive-writing component enabling the synthesis of the theoretical, analytical, and artistic aspects of theatre production.

THTR 4880. Special Topics: Theatre History. 1-4 Hours.
Offers opportunity for in-depth examination of a subject of particular significance to the field. May be repeated up to four times.

THTR 4882. Special Topics: Theatre Performance. 1-4 Hours.
Offers opportunity for in-depth examination of a subject of particular significance to the field. May be repeated up to four times.

THTR 4888. Special Topics: Theatre Design. 1-4 Hours.
Offers opportunity for in-depth examination of a subject of particular significance to the field. May be repeated up to four times.

THTR 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

THTR 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

THTR 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

THTR 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

THTR 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

THTR 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

THTR 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

THTR 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement. May be repeated without limit.

TOXC 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

TOXC 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement. May be repeated without limit.

TOXC 4997. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

TOXC 4998. Experiential Education Directed Study. 4 Hours.
Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using it to fulfill their experiential education requirement. May be repeated without limit.

TOXC 5570. Clinical Toxicology. 2 Hours.
Examines the potential toxicity of drugs, commercial products, and environmental agents. Focuses on clinical manifestations, mechanisms of toxicity, principles of treatment, and prevention of acute and chronic poisonings.

TOXC 5572. Environmental Toxicology. 3 Hours.
Discusses the distribution, interaction, and effects of toxic agents on the biosphere. Applies the results of toxicology investigation to understanding the environment's chemical pollution.

TOXC 5574. Organ Systems Toxicology. 3 Hours.
Focuses on clinical manifestations, mechanisms of toxicity, principles of treatment, and prevention of acute and chronic poisonings.

TOXC 5576. Experimental Toxicology. 3 Hours.
Emphasizes the interpretation of toxicological literature. Employs structure activity and biochemical methods of assessment to evaluate mechanisms of toxicity of major classes of chemical compounds. Develops the ability to analyze and interpret data in the literature.

TOXC 5578. Biochemical Toxicology Lab. 4 Hours.
Introduces investigative methods for assessing toxicity. Develops the ability to analyze and interpret data generated in the lab and in the literature, and sharpens technical report-writing skills.

TOXC 5976. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.
TOXC 5978. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

TOXC 5984. Research. 1-4 Hours.
Offers an opportunity to conduct research under faculty supervision. May be repeated without limit.

TOXC 6962. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Urban Studies (URBS)

URBS 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

URBS 2357. Growth and Decline of Cities and Suburbs. 4 Hours.
Introduces students to the field of urban studies. Focuses on these central issues: how cities and suburbs evolve, what makes a city or suburb a good place to live, and how cities and suburbs are (or are not) planned. Students review the ways in which urban scholars and practitioners study cities and suburbs, their research methodologies, definition of issues, and division of labor among different disciplines. Students explore the roles of individuals, communities, the private sector, and government in planning and shaping the city.

URBS 2358. Current Issues in Cities and Suburbs. 4 Hours.
Introduces students to pressing urban issues: urban sprawl, poverty, education, transportation, economic development, and housing, through an intensive analysis of the Boston metropolitan area. The course is cotaught by university faculty and practitioners in government, community, and nonprofit organizations throughout the metropolitan area. Offers students the opportunity to analyze Boston data, go on outings to see development in progress, talk with urban practitioners about what they do, and conduct research on an urban issue of their choice.

URBS 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

URBS 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

URBS 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

Women's, Gender, and Sexuality Studies (WMNS)

WMNS 1101. Sex, Gender, and Popular Culture. 4 Hours.
Examines how femininities, masculinities, and different forms of sexual identity are produced and represented within popular culture. Using theories and concepts from both feminist/sexuality studies and popular culture studies, analyzes popular texts and media for their treatment of gender and sexuality and the intersection of those categories with racial and class identities. Explores the visual representation of women (and men) and analyzes how visual and textual media shape our attitudes and identities. Required reading and assignments include close readings of texts, film screenings, class discussions and activities, writing assignments, and creative projects. SOCL 1102 and WMNS 1101 are cross-listed.

WMNS 1103. Introduction to Women's, Gender, and Sexuality Studies. 4 Hours.
Offers an interdisciplinary course introducing key themes in gender and sexuality studies. Offers students an opportunity to learn core concepts that inform our understanding of how gender and sexuality are socially constructed and are experienced in everyday life. Drawing on women’s studies, queer studies, masculinity studies, and allied areas, the course analyzes gender, sexuality, and other dimensions of identity; explores critical issues of gender, sex, and power; and studies gendered/sexed identities in both national and transnational contexts. Topics include the gendered conceptions of love, sexuality, and violence; biological arguments about gender and sexuality; the social construction of sexuality and gender; intersections of gender, race, class, and sexuality; masculinities and femininities; theories of sexual difference; gender and the state; and gender and popular culture.

WMNS 1150. Sex, Power, and Oppression: An Introduction. 4 Hours.
Examines various philosophical issues that relate to gender and other forms of social identity, such as race, sexual orientation, and disability. Our genders (being male or female) shape not only who we are but also how we experience the world and possibilities that are open to us. Examines the ways in which these categories are socially constructed and looks at how they impact who we are, our autonomy/freedom, and our ability to be authentic. Examines philosophical articles and related pieces of popular media (newspaper articles, television clips, movies, etc.). PHIL 1150 and WMNS 1150 are cross-listed.

WMNS 1185. Gender in the African Diaspora. 4 Hours.
Studies variations in gender roles throughout the African Diaspora, from precolonial Africa to the modern United States. Areas of the African Diaspora include Africa, the West Indies, Latin America, Europe, and the Islamic world. Issues include sexuality, labor, reproduction, and social constructions of gender. AFRS 1185, INTL 1185, and WMNS 1185 are cross-listed.

WMNS 1225. Gender, Race, and Medicine. 4 Hours.
Examines the basic tenets of “scientific objectivity” and foundational scientific ideas about race, sex, and gender and what these have meant for marginalized groups in society, particularly when they seek medical care. Introduces feminist science theories ranging from linguistic metaphors of the immune system, to the medicalization of race, to critiques of the sexual binary. Emphasizes contemporary as well as historical moments to trace the evolution of “scientific truth” and its impact on the U.S. cultural landscape. Offers students an opportunity to develop the skills to critically question what they “know” about science and the scientific process and revisit their disciplinary training as a site for critical analysis. AFAM 1225, HIST 1225, and WMNS 1225 are cross-listed.

WMNS 1255. Sociology of the Family. 4 Hours.
Focuses on families historically and across cultures and classes. Considers changes in contemporary families in terms of gender, family composition; women’s labor force participation, divorce, cohabitation, and other transformations. SOCL 1255 and WMNS 1255 are cross-listed.

WMNS 1256. Violence in the Family. 4 Hours.
Examines physical, emotional, and sexual violence in families. Covers definitions, prevalence, causes, prevention, and treatment of specific cases of domestic violence as well as social policy issues and problems of legal intervention. SOCL 1256 and WMNS 1256 are cross-listed.
WMNS 1260. Gender in a Changing Society. 4 Hours.
Considers why and how gender is socially constructed in U.S. society and looks at different theories of gender. Explores gender as an institution as well as different (cultural) expressions of masculinities and femininities. Includes topics of gender in everyday life as well as gender as an organizing principle in the institutions of families, education, workplaces, sexualities, religion, the media, politics, and forms of gender violence. SOCL 1260 and WMNS 1260 are cross-listed.

WMNS 1271. Sex in Judaism, Christianity, and Islam. 4 Hours.
Explores approaches to gender, social organization of sexuality and gender, sexual ethics, and marriage in Judaism, Christianity, and Islam. Explores various sources within each tradition that serve as normative foundations, contemporary cultural and sociological dynamics that challenge those foundations, and psychological/existential considerations for understanding the general nature of human sexuality. Addresses how these traditions understand gender and gender roles, seek to shape and control interactions between men and women, regulate sexual relations outside of and within marriage, view sexuality education, regard homosexuality, and examine historical and contemporary approaches to marriage, divorce, and parenting. PHIL 1271 and WMNS 1271 are cross-listed.

WMNS 1273. Sociology of Gender and Work. 4 Hours.
Explores how gender both shapes and is shaped by experiences in the labor market. Considers the extent to which work is “gendered” and the ways in which this influences the jobs that men and women perform, the rewards they receive for their efforts, and their experiences in the workplace and at home. Underscores the relationship between paid and unpaid work (especially household labor). SOCL 1273 and WMNS 1273 are cross-listed.

WMNS 1281. Islam, Gender, and Fashion. 4 Hours.
Explores why the Islamic veil today is so “pregnant with meanings” and how this impacts the lives of not only Muslim women who cover but also of those who do not. Specifically examines the various things wearing a veil “can do,” that is, its political, social, economic, and moral power. Considers how colonialism, nationalism, and Islamic movements have affected the Islamic veil; how veiling affects educational and employment opportunities for Muslim women; how the veil is used as a symbol of cultural identity; and when the Islamic veil is also a fashion statement. PHIL 1281 and WMNS 1281 are cross-listed.

WMNS 1441. Topics in Women’s, Gender, and Sexuality Studies. 4 Hours.
Covers special topics in women’s, gender, and sexuality studies. May be repeated without limit.

WMNS 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

WMNS 2259. Sex and Gender in the Jewish Experience. 4 Hours.
Explores how sexuality and gender have shaped Jewish culture and religion throughout history. Studies how ideas about masculinity and femininity have varied dramatically over time and place within the Jewish community and have often departed considerably from those of non-Jewish society. Begins with the role of Biblical texts in the construction of Western conceptions of gender and sexuality and continues through medieval and early modern Europe, up to contemporary feminist Judaism and current Jewish ideas about “queerness” and non-normative ways of living. Uses a wide range of primary sources (memoirs, fiction, religious texts, etc.) and secondary literature from multiple disciplines. Seeks to answer: Does ethnicity have a sex? Is religious identity gendered? What do “Jewish femininity” and “Jewish masculinity” mean? JWSS 2259 and WMNS 2259 are cross-listed.

WMNS 2302. Gender and Sexuality: A Cross-Cultural Perspective. 4 Hours.
Examines popular and scientific notions about sex, gender relations, family, and kinship. Examines why our images of family, masculinity, and femininity are not universal by analyzing the patterns of sex roles, sexual practices, and kinship in other cultures. Discusses how and why relations between men and women change during times of socioeconomic and political change. ANTH 2302 and WMNS 2302 are cross-listed.

WMNS 2303. Gender and Reproductive Justice. 4 Hours.
Introduces the social, legal, and economic barriers to accessing reproductive healthcare domestically and internationally. Draws on various theoretical and analytic tools including critical race theory, critical legal theory, sociology of science, human rights, feminist theory, and a range of public health methods. Access to reproductive health services, including abortion, is one of the most contested political, social, cultural, and religious issues today. Covers domestic, regional, and international legal and regulatory frameworks on sexual reproductive health. HIST 2303, SOCL 2303, and WMNS 2303 are cross-listed.

WMNS 2304. Communication and Gender. 4 Hours.
Presents a theoretical and practical examination of the ways in which communication is gendered in a variety of contexts. Integrates into this analysis how different institutions and interpersonal situations affect our understanding of gender roles. COMM 2304 and WMNS 2304 are cross-listed.

WMNS 2373. Gender and Sexuality in World History. 4 Hours.
Introduces key concepts in the fields of gender and identity studies as they apply to world history since about 1800. Offers students an opportunity to understand the critical significance of gender, sex, sexuality, and identity to world events and how these contentious subjects influence the contemporary world. Surveys a series of major movements in geopolitics, labor, economics, culture, and society in order to analyze how individual and group identities, as well as mass assumptions about behavior and performance, have shaped these events. Gender, sex, and sexuality are integral to class discussions of work, welfare, art, culture, violence, war, and activism. HIST 2373 and WMNS 2373 are cross-listed.

WMNS 2441. Topics in Women's, Gender, and Sexuality Studies. 4 Hours.
Covers special topics in women's, gender, and sexuality studies. May be repeated without limit.

WMNS 2455. American Women Writers. 4 Hours.
Surveys the diversity of American women's writing to ask what it means to describe writers as disparate as Phyllis Wheatley, Edith Wharton, Toni Morrison, and Alison Bechdel as part of the same “tradition.” With attention to all genres of American women's writing, introduces issues of genre and gender; literary identification; canons; the politics of recuperation; silence and masquerade; gender and sexuality; intersectionality; sexual and literary politics, compulsory heterosexuality, and more. AFAM 2455, ENGL 2455, and WMNS 2455 are cross-listed.

WMNS 2480. Women and World Politics. 4 Hours.
Introduces a variety of issues facing women across the globe. Focuses on the gender dynamics of key issues in international affairs. These could include economic policy, conflict and war, human rights/women's rights, political power, and collective action. Draws on examples from various world regions since the twentieth century to analyze similarities and differences across cases around the globe. INTL 2480 and WMNS 2480 are cross-listed.
WMNS 2500. Women and Social Change in the Middle East. 4 Hours.
Introduces the complex position and changing role of women in the Middle East during the vast sociocultural and political transformation of the last 200 years. Focuses on the State of Israel, where the encounter between East and West has been most obvious. Based on sociohistorical research and documentaries, discusses the traditional position of women among the various religions and ethno-social groups in the Middle East and the impact of modernization, nationalism, and religion on their changing position and growing participation in society and politics. Examines the main issues and challenges women face; their achievements and disabilities in the family, professional, and public life; and the role of women’s liberation movements and organizations.

WMNS 2501. Breaking the Glass Ceiling: Women in Theatre. 4 Hours.
Surveys a wide range of dramatic forms, gender theories, and distinct theatrical techniques used by women artists to reveal larger social issues and encourage activism. Examines how the plays’ sociocultural contexts represent female playwrights’ diverse views of identity as well as their cultural, ethnic, racial, and geographical experiences. Identifies how women as artistic leaders are perceived and received by society and the industry. Examines the strengths and challenges that the digital world creates for feminist engagement. MSCR 2505 and WMNS 2501 are cross-listed.

WMNS 2505. Digital Feminisms. 4 Hours.
Explores the unique ways that feminist activism and theory are impacted by the increasing digital nature of our world. From hashtags to Tumblr, feminists are using digital tools and platforms to aid in the pursuit of social justice. Offers students an opportunity to develop a timeline that traces feminists’ engagement with the Internet, new media, and technological innovations from the late seventies to the present. Examines the strengths and challenges that the digital world creates for feminist engagement. MSCR 2505 and WMNS 2505 are cross-listed.

WMNS 2800. Sexual Orientation and Gender Expression in Practice and Policy. 4 Hours.
Introduces students to efforts among social and nonprofit organizations working to reduce heterosexism, homophobia, and transphobia in institutions, communities, and the society as a whole. Discusses practice across the life span for social professionals (social workers, counselors, advocates, and educators) in varied settings such as criminal justice, mental health, adoption, adult day health, and residential programs. Applies theories and current scholarship on LGBTQ identity development, social movements, media, and advocacy, offers students an opportunity to evaluate contemporary issues of controversy for institutions, social practitioners, and policy. HUSV 2800 and WMNS 2800 are cross-listed.

WMNS 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

WMNS 3100. Gender, Social Justice, and Transnational Activism. 4 Hours.
Introduces key issues, themes, and debates in feminist transnational theory, practice, and activism in contemporary contexts and how it has changed under socioeconomic, political, and cultural processes of globalization. Examines differences among women relating to race, class, sexuality, national identity, and political economy in reckoning with possibilities for sustainable social justice. Students interrogate the relationship between the local and global; the production of knowledge in different regional spaces; the pragmatics of political mobilization; the varying contours of “social justice”; and other key issues. Offers students an opportunity to discuss the impact of globalization, neoliberalism, and state and intimate violence on gendered politics and relations and to contend with the politics of difference, to debate its challenges, and to imagine possible futures for transnational gender justice. POLS 3100, SOCL 3100, and WMNS 3100 are cross-listed.

WMNS 3304. Communication and Inclusion. 4 Hours.
Explores theoretical and practical issues in the relationships between communication, social identity, and social inclusion. Focuses on how communication shapes perceptions and positions of salient social identity groups and how individuals and groups resist and transform identity and promote inclusion through communication. Specifically focuses on communication and inclusion in the contexts of gender, race, sexual identity, social class, ability, and age. Course topics cover a range of theoretical and practical issues, including diversity in organizational settings and the social construction of identity. COMM 3304 and WMNS 3304 are cross-listed.

WMNS 3392. Gender and Film. 4 Hours.
Examines the representation of gender in film. Uses concepts and research from film and media studies to investigate the influences and consequences of gender representations in film. CINE 3392 and WMNS 3392 are cross-listed.

WMNS 3402. Feminist Perspectives on Society. 4 Hours.
Examines social science and interdisciplinary feminist literature that focuses on women in families and at work, and that deals with physical issues including violence against women and abortion. Incorporates the perspectives of women of color. Considers and evaluates women’s views of social life as well as recognizes the differences among women. SOCL 3402 and WMNS 3402 are cross-listed.

WMNS 3441. Topics in Women’s, Gender, and Sexuality Studies. 4 Hours.
Covers special topics in women’s, gender, and sexuality studies. May be repeated without limit.

WMNS 3451. Women’s Studies Module. 1 Hour.
Permits specialized women’s studies topics to be studied as part of more general courses. May be repeated without limit.

WMNS 3500. Sexuality, Gender, and the Law. 4 Hours.
Examines the legal regulation of gender and sexuality. Investigates concrete legal cases to study the history of constitutional interpretation and the current status of rights for women and sexual minorities. Focuses on important theoretical issues emerging in the writings of diverse feminist and queer legal scholars. Addresses debates over the value of conventional equality approaches in legal doctrine; equality vs. difference perspectives; ways in which legal language constructs gender and sexuality; the incorporation of sexuality and gender in ideologies of law; and the intersections of gender, sexuality, and race in legal doctrine and legal theory. PHIL 3500, POLS 3500, and WMNS 3500 are cross-listed.
WMNS 3530. Communication and Sexualities. 4 Hours.
Analyzes the ways in which sexualities intersect with issues relating to interpersonal communication, mediated communication, popular culture, identity, and social movements. Discusses outing, media representations, queer identity development, and the HIV/AIDS epidemic. Covers theoretical perspectives from communication and other social science disciplines, gender and sexuality studies, and cultural studies. Students work with a variety of materials, contemporary and historical, theoretical and empirical, fiction and nonfiction. Offers students an opportunity to design, conduct, and write their own original empirical research paper relating to sexualities and communication using class content as a theoretical framework. COMM 3530 and WMNS 3530 are cross-listed.

WMNS 3580. Sexual Violence: Counseling, Programs, and Policy. 4 Hours.
Offers an in-depth examination of sexual violence, its effects, and the resources available to assist survivors. Presents an overview of the criminal justice, medical, legal, and counseling systems and the impact these interweaving systems have on survivors. Offers students an opportunity to develop crisis counseling competency through group exercises and experiential activities. HUSV 3580 and WMNS 3580 are cross-listed.

WMNS 3610. Communication, Politics, and Social Change. 4 Hours.
Examines the place of race, gender, and sexual identity in American politics and public discourse. Emphasizes the role of communication in public attitudes toward identity, the role that identity plays in electoral politics, and how public policy and social change are made. Explores how public debate on issues related to identity influences how Americans think about the rights and place of minorities in society. Public discourse is defined broadly here—it encompasses different types of communication, from news stories and presidential speeches to sermons by clergy, television sitcoms, and film. COMM 3610 and WMNS 3610 are cross-listed.

WMNS 3676. Representing Gender and Sexuality in Literature. 4 Hours.
Investigates the construction of gender and its representation in relation to sexuality, power, and subjectivity in a variety of texts. May be repeated without limit. ENGL 3676 and WMNS 3676 are cross-listed.

WMNS 3678. Bedrooms and Battlefields: Hebrew Bible and the Origins of Sex, Gender, and Ethnicity. 4 Hours.
Considers stories from Hebrew Scripture in English translation, beginning with the Garden of Eden through the Book of Ruth, asking how these foundational narratives establish the categories that have come to define our humanity. Analyzes how the Bible’s patterns of representation construct sexual and ethnic identities and naturalize ideas about such social institutions as “the family.” ENGL 3678, JWSS 3678, and WMNS 3678 are cross-listed.

WMNS 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

WMNS 4520. Race, Class, and Gender. 4 Hours.
Considers the intersection of race, class, and gender in social structure, institutions, and people’s lives. Utilizes an interdisciplinary approach to focus on the socially constructed nature of these concepts and how they shape and create meaning in individual lives. Difference with an emphasis on inequality and varying life chances is central for understanding our society and is central to our work. Requires a significant amount of reading. Class format is like a seminar; students are expected to participate, take responsibility, and write a paper. SOCL 4520 and WMNS 4520 are cross-listed.

WMNS 4523. Sexualities. 4 Hours.
Offers a primarily sociological overview of the field of sexuality studies. Explores the ways in which sexual behaviors and identities are in fact shaped by social norms, values, and expectations; the meanings and statuses ascribed to sexual acts, behaviors, identities, and communities; and the interactive processes by which sexualities are achieved. Also brings an intersectional framework to discussions by emphasizing how our understandings of sexuality interact with categories of gender, race, nation, and class. Examines a variety of topics, such as transgenderism, power, extreme and illicit sex, socialization, pornography, and politics. SOCL 4523 and WMNS 4523 are cross-listed.

WMNS 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

WMNS 4991. Research. 4 Hours.
Offers an opportunity to conduct research under faculty supervision.

WMNS 4992. Directed Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

WMNS 4993. Independent Study. 1-4 Hours.
Offers independent work under the direction of members of the department on a chosen topic. Course content depends on instructor. May be repeated without limit.

WMNS 4994. Internship. 4 Hours.
Offers students an opportunity for internship work. May be repeated without limit.

WMNS 4996. Experiential Education Directed Study. 4 Hours.
Draws upon the student's approved experiential activity and integrates it with study in the academic major. Restricted to those students who are using the course to fulfill their experiential education requirement. May be repeated without limit.

WMNS 6100. Theorizing Gender and Sexuality. 3 Hours.
Seeks to challenge and expand our understanding of the relationship between biological sex; gendered identities; and sexual “preferences,” practices, and life ways. This interdisciplinary course offers debates around sex, gender, sexuality, and the body that push beyond binary models reliant on a simple “nature/culture” distinction. Focuses on dynamic and variable aspects of sexuality, sex, and gender within and across cultures, representational forms, and historical periods, analyzing the circumstances in which they undergo significant challenge or transformation. Uses particular paradigmatic “case studies” to push hard at the boundaries of sex and gender and to dialogue around contesting conceptualizations of “the body,” “sex,” and “gender,” particularly as they circulate in specific discourses of feminism, queer theory, and poststructuralism; ethnic studies; critical race theory; and cultural studies.
WMNS 7100. Queer Theory: Sexualities, Genders, Politics. 3 Hours.
Introduces the core texts and key debates that have shaped queer theory and examines the intersections between queer theory and feminism and critical race theory. Seeks to provide an understanding of expansive and radical contemporary queer politics by analyzing foundational queer and feminist texts, pushing beyond narrow constructions of identity politics, anti-discrimination policy, and rights-based reforms. Engages queer theory by means of a rich philosophical and political interrogation of the meaning and content of “queer.” SOCL 7100 and WMNS 7100 are cross-listed.

WMNS 7615. Feminist Inquiry. 3 Hours.
Investigates theories and practices of feminist inquiry across a range of disciplines by studying a series of pairings of humanist and social science works by feminist scholars. Reflects on the ways that feminist inquiry/ies transform knowledge and inform varied forms of activism. Functions as an interdisciplinary course and engages students in questioning disciplinary assumptions and methodologies, seeking new ways to frame scholarly questions, and reconsidering the relationship between subjects and objects of study. Offers students an opportunity to meet with several of the feminist scholars read over the semester and to focus on specific theoretical and methodological choices as these are evidenced in practice.

WMNS 7635. Understanding the Pornographic and the Obscene. 3 Hours.
Introduces feminist scholars’ criticisms and celebrations of pornography as well as more ecumenical efforts to study and understand what pornography is and has been and its adjacency to other media. Offers students an opportunity to develop an understanding of how pornography has been defined by various cultures and across time periods throughout history; how it is produced and consumed and by whom; the impacts of pornography consumption on individuals, families, communities, and societal norms; and how pornography interacts with the multiple forms of oppression and expression, based on race, class, national identity, gender, and sexual identities.

WMNS 7642. Gender, Race, and the Complexities of Science and Technology. 3 Hours.
Builds on work that examines the social construction of scientific enterprises to analyze how strictures around gender, race, and other forms of identity restrict wider access to and understanding of the production of scientific knowledge and technologies. Offers students an opportunity to participate in innovative, problem-based learning, develop critical faculties as investigators, and learn tools and processes for teaching and engagement with wider communities.

WMNS 7645. Motherhood and Mothering: Theory, Discourse, Practice, and Change. 3 Hours.
Explores the complex intellectual and practical issues contemporary American motherhood raises for feminist scholars by drawing on rhetoric and sociology to examine motherhood as an intellectual concern, a social institution, and a site of competing discourses. Interweaves theory, discourse, practice, and change as students develop knowledge regarding a variety of approaches to motherhood and mothering as key theoretical concerns and as pivotal sites of women’s resistance, social action, and change.

WMNS 7900. Special Topics in Women’s, Gender, and Sexuality Studies. 3 Hours.
Examines selected topics in women’s, gender, and sexuality studies. May be repeated up to five times.

WMNS 7976. Directed Study. 1–4 Hours.
Offers independent work under the direction of members of the department on chosen topics. May be repeated without limit.
