617.373.8714 (fax)
Maribel Pereira, Administrative Secretary, m.pereira@northeastern.edu

Studies in modern psychology focus on mind, brain, and behavior. Based on empirical research with both humans and animals, psychologists investigate and seek explanations for the behavior and mental life of individuals and develop assessment tools and treatment options for addressing clinical problems.

The psychology curriculum explores such topics as how brain function determines behavior; how we see, hear, and learn; what constitutes normal and abnormal personality; the nature of language and cognitive processing; how emotions affect behavior; and how individuals work in groups. Through laboratory practice and experimentation, individual research projects, and small-group seminars, the program provides the opportunity for critical evaluation and in-depth exploration across the diverse topic areas that constitute modern psychology.

Students are eligible for directed study courses, which are individualized research experiences under the supervision of a faculty member. The department also offers honors sections of various courses. Co-op placements are varied and include both community (often mental health) and laboratory settings, depending on a student’s interests.

A solid scientific background in psychology helps prepare students for academic careers in teaching and research, as well as professional careers in business, public and social services, education, mental health, law, and medicine. It also provides a strong foundation for graduate study in all areas of psychology, including clinical programs.

Note: A double major in psychology and behavioral neuroscience is not offered due to the similarity in the course curricula of these majors.

Academic Progression Standards
Students who fail to maintain a minimum grade-point average of 2.00 will be placed on probation. Three consecutive academic terms on probation will result in dismissal from the major.

Programs
Bachelor of Science (BS)
• Psychology (http://catalog.northeastern.edu/undergraduate/science/psychology/psychology-bs)
• American Sign Language and Psychology (http://catalog.northeastern.edu/undergraduate/social-sciences-humanities/cultures-societies-global-studies/american-sign-language-psychology-bs)
• Computer Science and Cognitive Psychology (http://catalog.northeastern.edu/undergraduate/computer-information-science/computer-information-science-combined-majors/computer-science-cognitive-psychology-bs)
• Criminal Justice and Psychology (http://catalog.northeastern.edu/undergraduate/social-sciences-humanities/criminology-criminal-justice/criminal-justice-psychology-bs)

• Information Science and Cognitive Psychology (http://catalog.northeastern.edu/undergraduate/computer-information-science/computer-information-science-combined-majors/information-science-cognitive-psychology-bs)
• Linguistics and Psychology (http://catalog.northeastern.edu/undergraduate/science/linguistics/linguistics-psychology-bs)

Minor
• Psychology (http://catalog.northeastern.edu/undergraduate/science/psychology/psychology-minor)

Courses
Psychology Courses
PSYC 1000. Psychology at Northeastern. 1 Hour.
Introduces students to the major and to the professional and academic resources available to students at Northeastern University. Introduces students to their faculty, advisors, and fellow students; educates students about the cooperative education program; familiarizes students with undergraduate research and technological resources; and introduces problem-solving and leadership skills, which students need to succeed in school and in their professional endeavors. Students who do not meet course prerequisites may seek permission of instructor.

PSYC 1101. Foundations of Psychology. 4 Hours.
Surveys the fundamental principles, concepts, and issues in the major areas of contemporary scientific psychology. Approaches the study of psychology as a method of inquiry as well as a body of knowledge. Emphasizes the biological, behavioral, cognitive, and social factors that influence and regulate learning and motivation; personality dynamics; psychopathology and its treatment; life-span development; sensory and perceptual processes; and communication and social behaviors. The influence of cultural factors on psychological studies and theories is also explored.

PSYC 1200. Psychology of Women. 4 Hours.
Introduces students with little or no background in psychology to the current theories and research on the psychology of women. Critically examines psychological, biological, and social influences on gender differences, gender roles, and gender stereotypes in the light of scientific evidence and individual experience. Assesses their consequences for society. Uses the unique perspective generated in the field of the psychology of women to evaluate the traditional research methods in psychology as well as the major psychological theories formulated to explain women and the differences between women and men. Emphasizes critical thinking skills.

PSYC 1204. Psychology of Prejudice. 4 Hours.
Searches for universal characteristics of prejudice by examining its expression toward various minorities including colonized peoples, culturally Deaf people, Hispanic and African Americans, women, gays and lesbians, people with disabilities, and those with status in multiple minorities. Reviews research in social psychology on stereotyping and ethnocentrism for the insight it gives into the nature of prejudice. Uses selected films and student minority advocates to allow class members to hear the authentic voice of targets of prejudice.

• Information Science and Cognitive Psychology (http://catalog.northeastern.edu/undergraduate/computer-information-science/computer-information-science-combined-majors/information-science-cognitive-psychology-bs)
• Linguistics and Psychology (http://catalog.northeastern.edu/undergraduate/science/linguistics/linguistics-psychology-bs)
PSYC 1208. Psychology and the Law. 4 Hours.
Traces the effects of psychological factors through the course of a trial including such issues as accuracy of eyewitness identification, plea bargaining, jury selection, persuasion tactics in the courtroom, presumption of innocence, jury size, jury decision rules, and sentencing and punishment.

PSYC 1210. Sports Psychology. 4 Hours.
Studies the physical, affective, and cognitive behaviors associated with sport participation and also examines the psychological theories and research related to sport and exercise behavior. Introduces students to the field of sport and exercise psychology by providing a broad overview of the major topics in the area, including the history of sport and exercise psychology, leadership, self-confidence, youth sports, aggression, moral development, team dynamics, anxiety and arousal, goal setting, imagery, and motivation. Covers the psychological makeup of athletes, how psychological factors influence involvement and performance in sport, and helps students acquire the skills and knowledge about sport and exercise psychology that they can apply to their everyday lives.

PSYC 1214. The Moral Mind: The Science Underlying Ethical Decision-Making and Virtuous Character. 4 Hours.
Offers a scientific lens through which to analyze the mental mechanisms and processes that guide moral and ethical decision making. Although the majority of the evidence and perspectives covered stem from psychological and neuroscientific work, the course is interdisciplinary in nature by incorporating relevant perspectives from behavioral economics, evolutionary biology, and philosophy. The primary goal is to offer insight, not only into how the human mind automatically parses ethical issues in given situations but also how control can be gained over such mechanisms, thereby allowing greater efficacy in guiding morality according to consciously embraced principles.

PSYC 1250. Drugs and Behavior. 4 Hours.
Provides beginning students with a general overview of the effects of drug use/abuse in many segments of society with particular attention placed on the collegiate population. Describes historical aspects of drug use for treatments of clinical disease states along with psychological theories of drug abuse and strategies for prevention of drug use/abuse. Covers biological effects emanating from several drug categories and the clinical use of drugs to promote positive therapeutic outcomes.

PSYC 1990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSYC 2101. Love and Hate: Social, Psychological, and Literary Approaches. 4 Hours.
Studies materials that define and describe love and hate from the fields of literature and literary criticism, social psychology, and criminology and criminal justice. “Love” and “hate” are small words describing powerful emotions with profound effects on individuals and on social groups. Focusing largely on contemporary examples, offers students an opportunity to analyze the differences and areas of overlap in the above fields’ approaches to love and hate, to discuss societal responses to these emotions, and to apply the methodologies of each field to research questions of their own. INSH 2101 and PSYC 2101 are cross-listed.

PSYC 2290. Inquiries in Psychological Science. 4 Hours.
Offers students an opportunity to learn to think like a scientist in the field of psychology. Science is not a static body of knowledge but rather a method for making new discoveries. Students consider a series of controversial issues in current psychology by reading and discussing primary research articles and reviews, critically assessing arguments on all sides, and coming to their own conclusions. Requires students to develop and present their own research proposals on topics of their choice, which encourages them to engage more deeply with the material.

PSYC 2300. Research in Psychology. 4 Hours.
Introduces research methods in psychology such as field research, content analysis, case research, survey methods, simulations, and laboratory experiments. Examines issues of research fairness and evaluating research methods. Explores basic statistical notions including sampling, variability, and correlation.

PSYC 2306. Food, Behavior, and Eating Disorders. 4 Hours.
Investigates what starts and stops eating behavior. Examines taste, nutrition, metabolism, the brain, food experiences, and societal factors that control feeding behavior. Emphasizes the biological/psychological interaction in normal eating and in pathological eating, such as anorexia, bulimia, and extreme obesity.

PSYC 2320. Statistics in Psychological Research. 4 Hours.
Offers an overview of descriptive and inferential statistics with a focus on psychological applications. Covers standard material in undergraduate statistics including distributions, central tendency, variability, z-scores, the normal distributions, correlation, regression, probability, hypothesis testing (using the z, t, F, and chi-square statistics), and confidence intervals. Should be taken before the end of the sophomore year.

PSYC 2352. Childhood Mental Illness. 4 Hours.
Focuses on mental illnesses that are first diagnosed in childhood—such as autism, phobias, conduct disorders, and attention deficit disorder. Overviews childhood depression and suicide and disorders of eating and sleeping.

PSYC 2356. Nonverbal Communication. 4 Hours.
Examines the messages we send by posture, facial expression, voice quality, gestures, touch, gaze, and interpersonal distance. Examines origins and consequences of these behaviors as well as differences related to culture, personality, power, gender, and age.

PSYC 2366. Psychology and Meditation. 4 Hours.
Introduces the interface between scientific psychology and meditation. Focuses on the scientific investigation of meditation, particularly mindfulness meditation. Draws upon scientific research and theory in the fields of neuroscience, cognitive science, learning and motivation, developmental psychology, and other areas to explore meditative experiences and their effects on the nervous system, behavior, intention, perception, attention, thought, and bodily functions. Also explores the practical applications and efficacy of meditation in dealing with stress, pain, and other medical and psychological problems.

PSYC 2990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSYC 3358. Behavior Therapies. 4 Hours.
Offers a study of successful projects that have provided effective remediation and rehabilitation in institutions for the mentally ill, the mentally retarded, and the developing human (schools).

PSYC 3400. Personality. 4 Hours.
Offers a systematic study of the normal personality and its development. Focuses on behavioral, dynamic, social, and cognitive determinants, assessment of personality, and current research topics; surveys the major theories of personality.

PSYC 3402. Social Psychology. 4 Hours.
Provides an introductory survey of social psychology. Topics include aggression, attribution, attitude formation; and change, attraction, gender and culture, conformity, impression formation, and group processes.
PSYC 3404. Developmental Psychology. 4 Hours.
Examines change throughout the life span in social relationships, emotional functioning, language, cognition, and other psychological domains, with emphasis on infancy through adolescence. Introduces major theories of development. Stresses the interaction of social and cognitive factors in development, and the interaction of the developing person with the environment. Also explores individual and cross-cultural differences in patterns of development, and research issues in developmental psychology.

PSYC 3406. Abnormal Psychology. 4 Hours.
Surveys patterns of psychological abnormality. Addresses diagnosis, theoretical perspectives, anxiety, and defense mechanisms. Examines the symptomatology, etiology, and treatment of a number of disorders including anxiety, dissociative, somatoform, affective (depression, mania), and schizophrenic disorders.

PSYC 3450. Learning and Motivation. 4 Hours.
Offers an introduction to the basic learning and motivational principles that permit humans and animals to adapt effectively to a changing environment. Emphasizes research and theories of operant and Pavlovian conditioning, with discussions of discriminations and generalization, avoidance and punishment, acquired motivational states (for example, addiction), concept formation, biological constraints on learning and behavior, animal cognition, and other related topics. Relates learning and motivational principles to the understanding and treatment of behavioral, affective, cognitive, and motivational disorders.

PSYC 3451. Learning Principles and Behavior Analysis. 4 Hours.
Introduces the basic concepts and theories of applied behavior analysis as they relate to learning and motivation. Topics include operant and classical conditioning, reinforcement, punishment, extinction, discrimination training, stimulus control, concept formation, and generalization. Throughout the course, offers students an opportunity to apply these principles to learning that occurs in their everyday lives as well as in the lives of individuals with developmental disabilities and other learning disorders.

PSYC 3452. Sensation and Perception. 4 Hours.
Discusses how our five senses work to aid us in perceiving states of the body and of the world, how our perceptions are modified by what we know and expect, and how sensation and perception develop (especially in infancy). Includes discussion of neural and anatomical bases of sensation and perception. PSYC 3458 is highly recommended.

PSYC 3458. Biological Psychology. 4 Hours.
Focuses on the relation between brain function and human behavior. Examines how nerve cells function individually and work together both in small networks and in the nervous system; the structure of the nervous system; how our sense organs provide the nervous system with information about the outside world; how the brain controls movement; and how psychological concepts from motivation to language and memory are represented in the brain.

PSYC 3464. Psychology of Language. 4 Hours.
Provides a basic introduction to psycholinguistics. Topics include the nature and structure of languages, processes involved in the production and comprehension of language, the biological bases of language, and aspects of language acquisition. Examines current theories of language processing and related experimental findings.

PSYC 3466. Cognition. 4 Hours.
Provides a basic introduction to human cognition. Topics include pattern recognition, attention, memory, categorization and concept formation, problem solving, and aspects of cognitive development. Examines current theories of cognitive processing and related experimental findings.

PSYC 3506. Neuropsychology of Fear. 4 Hours.
Explores our understanding of the physiological and cognitive aspects of fear, from early theories of emotion to current research in both humans and animal models. Emphasizes linking brain structure to function—how do different brain regions contribute to fear processing and expression? Also focuses on psychiatric illnesses whose symptoms suggest a maladaptive fear response, such as post-traumatic stress disorder and phobias. What causes these illnesses, and how does our understanding of the neural basis of fear inform our treatment strategies for these disorders? Students who do not meet course prerequisites may seek permission of instructor.

PSYC 3508. Behavioral Endocrinology. 4 Hours.
Provides an overview of the field of behavioral endocrinology from a psychological perspective. Examines how hormones influence brain structure and function; how hormones affect behavior and vice versa; sex differences in brain and behavior; and the role of hormones in mood disorders, cognition, and stress.

PSYC 3510. Brain, Behavior, and Immunity. 4 Hours.
Explores how our behavior is affected by (and how it affects) our immune system. The brain and the immune system regulate our behavioral responses to the world around us, which helps explain why we feel “down” when we’re sick and why we often catch a cold when we’re stressed. Offers students an opportunity to better understand how we have evolved to psychologically adapt to environmental challenges—and, importantly, how this can sometimes backfire with mental illness as an outcome. Students who do not meet course prerequisites may seek permission of instructor.

PSYC 3990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.

PSYC 4505. Industrial/Organizational Psychology. 4 Hours.
Surveys the psychological fundamentals underlying performance in work settings. Topics include psychological testing; performance evaluation; training, motivating, and leading employees; and the social psychology of organizations. Emphasizes ethical and affirmative action issues.

PSYC 4508. Assessment and Data Collection in Applied Behavior Analysis. 4 Hours.
Offers an overview of methods used to identify, measure, and assess the behaviors of individuals using applied behavior analysis (ABA), including behaviors targeted for increase and decrease. In-depth topics include function-based assessment and treatment in behavior analysis; design and details of the assessment process, including selection of an appropriate assessment method; and the methodology, results, and recommendations derived from a functional behavior assessment.

PSYC 4510. Psychopharmacology. 4 Hours.
Examines interactions between drugs, brain, and behavior. Focuses on such topics as synaptic transmission, behavioral functions of specific neurotransmitter systems, pharmacological treatment of mental and neurological disorders, and drug abuse.

PSYC 4512. Neuropsychology. 4 Hours.
Examines the behavior of neurological patients and normal patients to develop an understanding of how the human brain works to produce higher mental functions. Topics include discussions of brain scans, human neuroanatomy, cerebral lateralization, language, memory, neurological disorders, and neural plasticity and recovery of function.
PSYC 4514. Clinical Neuroscience. 4 Hours.
Explores the neurobiological, genetic, and neurochemical etiology of mental illness as described and categorized according to the DSM. Discusses how psychology, neuroscience, pharmacology, and medicine come together to manage mental illness. Investigates, for each specific mental illness covered, how changes in physiology and biology might manifest in the aberrant behaviors that define psychopathology. Lastly, examines how pharmacology is often used to treat these various mental illnesses and how genetic expression is involved in predisposing some people to these disorders while sparing others.

PSYC 4520. Language and the Brain. 4 Hours.
Focuses on language behavior from a neuropsychological viewpoint. Examines models of how the brain controls the production and comprehension of language. Considers localization of cerebral functions and hemispheric lateralization; experimental and clinical evidence for functional models; aphasia, dyslexia, and other language pathologies; and evidence from neuroimaging studies.

PSYC 4522. Psychology of Reading. 4 Hours.
Provides an overview of issues in the psychology of reading. Topics include the nature of the reading process as a perceptual and cognitive activity, eye movement patterns in reading, stages of reading development, and dyslexia. Examines current theories of reading and text comprehension.

PSYC 4524. Cognitive Development. 4 Hours.
Explores cognitive processes in infancy and childhood, how those processes change with age, and theoretical explanations for those changes. Topics may include understanding the physical world, memory, categorization, reasoning, problem solving, social cognition, language and conceptual development, and individual and/or group differences in cognitive development. Emphasis may vary by semester.

PSYC 4526. Categorization and Reasoning. 4 Hours.
Examines one of the basic goals of cognitive psychology, which is to describe categorization—how humans organize what they know—and reasoning—how they use what they know to make guesses about what they don’t know. Gives an in-depth look at psychological research and theory relevant to these issues. Topics include similarity, categorization, models of conceptual structure, inductive and deductive reasoning, mental models, problem solving, and expertise.

PSYC 4530. Sensory Processes. 4 Hours.
Studies our senses, with emphasis on vision, hearing, touch, taste, and smell. Focuses on how we measure our sensory abilities and relates findings to the functioning of sensory organs—eyes, ears, skin, mouth, and nose—and of the sensory nervous system.

PSYC 4534. Human Factors in Psychology. 4 Hours.
Introduces the application of information about human characteristics and behavior to the design of machines, environments, and systems. Emphasis is on the sensory, perceptual, and cognitive characteristics of people (for example, their ability to respond to differently colored warning lights, recall instructions, and make appropriate decisions), and how those characteristics interact with technological systems. Topics may include decision making, displays and warning signals, control devices, human-computer interaction, aviation and other transportation systems, consumer products, and medical systems.

PSYC 4570. Behavioral Genetics. 4 Hours.
Explores the genetic basis of behavior. Behavioral genetics is considered to lie at the intersection of psychology and genetics and is a dynamic field with plenty of possibility. Offers students an opportunity to hone and develop a stronger foundation in the principles of Mendelian, population, and quantitative genetics. Studies the genetic basis for sleep, social behavior, responses to environmental stimuli, learning, memory, addiction, and the etiology of neuropsychiatric disorders.

PSYC 4600. Laboratory in Research Design. 4 Hours.
Addresses the theoretical concepts, design, execution, analysis, and communication of research in psychology. Provides students with various methods to acquire hands-on experience performing a research project of their own creation. Students move systematically through the research process, from refining their original idea in the context of existing literature to interpreting and communicating their results. Requires prior completion of research-area course.

PSYC 4606. Laboratory in Biological Psychology. 4 Hours.
Introduces the methods of research in psychobiology. Students work in small groups, conducting three to four hands-on laboratory exercises under supervised conditions. Students read selections of the relevant scientific literature, analyze the collected data, and write experimental reports.

PSYC 4610. Laboratory in Psycholinguistics. 4 Hours.
Provides students the opportunity to acquire firsthand experience in conducting research on issues in the psychology of language. Focuses on experiments and their implications for broader issues of language processing. Involves students in all aspects of each experiment including collecting and analyzing data and preparing lab reports.

PSYC 4612. Laboratory in Cognition. 4 Hours.
Provides students the opportunity to acquire firsthand experience in conducting research on issues in human cognition. Focuses on experiments and their implications for broader issues of cognitive functioning. Involves students in all aspects of each experiment including collecting and analyzing data and preparing lab reports.

PSYC 4614. Laboratory in Social Psychology. 4 Hours.
Provides an introduction to the methods of social-psychological research. Assists students in developing the ability to read published social research with a critical eye, to pose questions in a testable manner, to apply experimental methods to social research, and to express themselves in APA journal style.

PSYC 4616. Laboratory in Personality. 4 Hours.
Provides an introduction to the methods and areas of personality research. Discusses problems of measurement, control, and interpretation. Critically examines representative published experiments. Students design, collect data for, assess, and write up several experiments.

PSYC 4622. Laboratory in Sensation and Perception. 4 Hours.
Focuses on experiments using psychophysical methods in the various senses, typically including audition, vision, and others. Students collect data on themselves, analyze the data statistically, and write reports. Critical thinking is stressed.
PSYC 4624. Laboratory in Affective Science. 4 Hours.
Provides instruction in the methods of affective science (i.e., the study of what emotions are and how they work). Students are expected to become members of a functioning lab team, which uses a multimethod approach combined with various theoretical frameworks to guide research in affective science. Offers students an opportunity to develop the ability to read the scientific literature; think critically about research questions; design, conduct, and analyze experiments; and write in APA journal style, as well as to gain valuable interpersonal and organizational skills that come from working on a team.

PSYC 4626. Laboratory in Life-Span Emotional Development. 4 Hours.
Studies life-span development and how emotional experience, perception, and regulation changes across the life span. Lab teams use a multimethod approach and theoretical frameworks to guide research in emotional development. Offers students an opportunity to learn how to read the scientific literature; think critically about research questions; design, conduct, and analyze experiments; write in the journal style of the American Psychological Association; and gain interpersonal and organizational skills while working on a research team. PSYC 3402 highly recommended.

PSYC 4628. Laboratory in Developmental Psychology. 4 Hours.
Offers students an opportunity to acquire firsthand experience in conducting research on issues in human development. Focuses on experimental and observational research across the life span. Involves students in all aspects of each research project, including designing original research, collecting and analyzing data, preparing lab reports, and presenting findings.

PSYC 4650. Seminar in Clinical Case Study. 4 Hours.
Offers students an opportunity to integrate clinical therapy within the larger framework of etiology, diagnosis, and treatment of specific disorders. Builds a structure within which to evaluate, critique, and clarify values around the mental healthcare delivery systems encountered, as well as to learn how to think about, discuss, and present individual cases among different clinical populations.

PSYC 4652. Seminar in Ethics in Psychology. 4 Hours.
Allows students to identify and reflect upon ethical concerns (that is, related to confidentiality, animal use, racism, designing and applying research) that they encountered in their prior co-op/research experiences. Considers historical, psychological, philosophical, sociological, and spiritual perspectives. Students use reflective conversation to guide their ethical thinking, research, and problem solving. Evaluates research projects through written and oral reports. Fulfills the College of Arts and Sciences experiential education requirement for psychology majors. Open to students with any professional-related experience (for example, co-op, directed study) in psychology or related discipline (education or human resources management).

PSYC 4654. Seminar in Behavioral Modification. 4 Hours.
Discusses topics in behavior modification in a seminar format.

PSYC 4656. Seminar in Biological Psychology. 4 Hours.
Offers intensive study, discussion, and practice in lab studies of physiological variables. Covers evolution of the nervous system, neurological disorders, motivation and emotion, sleep, attention and perception, learning, and memory.

PSYC 4658. Seminar in Psycholinguistics. 4 Hours.
Offers intensive study and discussion of issues in the psychology of language. Specific topics vary by semester.

PSYC 4660. Seminar in Cognition. 4 Hours.
Offers intensive study and discussion of issues in cognitive psychology. Specific topics vary by semester.

PSYC 4662. Seminar in Personality. 4 Hours.
Offers intensive study and discussion of issues in personality psychology. Allows students to examine selected topics and present their findings in class.

PSYC 4664. Seminar in Social Psychology. 4 Hours.
Provides an in-depth analysis of specific topics in social psychology. Students read original research and theory papers involving these topics, make presentations, and write papers related to their readings.

PSYC 4666. Seminar in Clinical Psychology. 4 Hours.
Focuses on psychotherapy: theory, methods, and outcome research. Provides an overview of clinical psychology: history, ethical and legal issues, the therapeutic relationship, cross-cultural counseling, the process of change. Students write and present papers on a topic of interest.

PSYC 4668. Seminar in Sensation and Perception. 4 Hours.
Expects students to present in class on topics such as how perceptions are organized, formed, and modified by sensory, attentional, motivational, and cognitive factors, how our sensory systems extract information from the environment in a consistent and logical manner, despite large changes in environmental conditions, and how to account for this in physiological terms.

PSYC 4674. Seminar in Cognitive Neuroscience. 4 Hours.
Offers intensive study and discussion of issues in cognitive neuroscience, the study of human cognitive processes, and their underlying neural substrates. Considers both theoretical and methodological issues, as well as applications to related fields of study. Specific topics vary by semester.

PSYC 4676. Seminar in Developmental Psychology. 4 Hours.
Offers intensive study and discussion of issues in developmental psychology, the study of how social, emotional, cognitive, and other psychological processes emerge and change over different periods of the life span. Considers both theoretical and methodological issues, as well as applications to real-world contexts. Specific topics may vary by semester.

PSYC 4965. Undergraduate Teaching Experience. 4 Hours.
Offers undergraduate teaching assistantships in psychology courses under the close direction of the course instructor. Assignments may include holding office hours and recitation/tutorial and review sessions, answering students' emails, moderating discussion boards, helping to proctor exams and quizzes, (very) limited lecturing, or leading class discussions (only under faculty supervision). Requires minimum overall GPA of 3.333, and grade of A—or higher in the course for which the student will be an undergraduate teaching assistant; permission to enroll is further subject to the availability of an appropriate course assignment and instructor; prior arrangements must be made with the instructor at least one term before registration; may be repeated once but may not be repeated for the same course. May be repeated once.

PSYC 4970. Junior/Senior Honors Project 1. 4 Hours.
Focuses on in-depth project in which a student conducts research or produces a product related to the student's major field. Combined with Junior/Senior Project 2 or college-defined equivalent for 8-credit honors project. May be repeated without limit.

PSYC 4971. Junior/Senior Honors Project 2. 4 Hours.
Focuses on second semester of in-depth project in which a student conducts research or produces a product related to the student's major field. May be repeated without limit.

PSYC 4990. Elective. 1-4 Hours.
Offers elective credit for courses taken at other academic institutions. May be repeated without limit.
PSYC 4991. Directed Study Research. 4 Hours. 
Offers research experience on a chosen topic under the direction of a faculty member. Research content and requisites depend on the instructor. Prior arrangements must be made with the faculty member at least one term before registration. May be repeated up to three times.

PSYC 4993. Independent Study. 1-4 Hours.
Offers a reading course for the student who wants guidance in the archival exploration and in-depth study of a topic of interest. Conducts study through a series of individual tutorials or discussions with a faculty member that typically involve an extensive, analytical review of the literature. Interested students should consult directly with the relevant faculty member or with a department advisor for guidance in locating the most appropriate faculty person at least one semester before the study is undertaken. May be repeated without limit.

PSYC 4994. Internship in Psychology. 4 Hours.
Offers supervised experiences in the application of psychology in instructional, clinical, or other applied settings. May be repeated without limit.

PSYC 5100. Proseminar in Psycholinguistics. 3 Hours.
Serves as first-level graduate course in psycholinguistics, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussions. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5110. Proseminar in Cognition. 3 Hours.
Serves as first-level graduate course in cognition, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5120. Proseminar in Sensation. 3 Hours.
Serves as first-level graduate course in sensation, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5130. Proseminar in Perception. 3 Hours.
Serves as first-level graduate course in perception, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5140. Proseminar in Biology of Behavior. 3 Hours.
Serves as first-level graduate course in the biological basis of behavior, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5150. Proseminar in Clinical Neuroscience. 3 Hours.
Serves as first-level graduate course in clinical neuroscience, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.

PSYC 5160. Proseminar in Personality. 3 Hours.
Serves as first-level graduate course in personality, focusing on theoretical, experimental, and methodological issues. Includes faculty lectures, student presentations, and discussion. Requires permission of instructor for students who are not enrolled in the PhD program in psychology. May be repeated without limit.
